Initially the navy had planned to use it as a base for its submarines and hence it requested the state for only a small chunk of land. But with the Defence Ministry opting for a more powerful navy, the base underwent a major modification. The emphasis was to plan for the next 30 years using Karwar as the key naval base. The navy now plans to have submarine pens, dry docks, missile silos and a fleet air arm. An estimated 10,000 sailors or something around a fourth of India's naval personnel are to be stationed at Karwar making it necessary for the navy to acquire so much land. Said the expert: "With Karwar we will be able to establish our maritime superiority in the Indian Ocean."

But the navy did not reckon with the stiff resistance being put up by the villagers. The fishermen in the area have long since understood the value of the Karwar coastline. Said Pittamber Tandel, 48, of Arge, who owns a fishing trawler: "Here we can fish all year round because the sea is not rough. Putting us elsewhere is not just a matter of building us a house. Can the Government find a coastline like this for us?" In Binaga, Chindiya Tandel, 31, said: "Apart from fishing we don't even know how to cycle. If the Government does not take care of us properly we would be beggars soon."

As it is the fishermen are angry with the Government for allowing a caustic soda factory to be set up. The factory sends its effluents into the sea via a 3-km-long pipe. But the pipe is breached at many places and the effluents spill into the harbour itself. Fishermen complain that the fish stock has been depleting after that. The factory is owned by the powerful Thapar group and many eyebrows have been raised over the fact that although the navy has imposed a rule that all "commanding-view cliffs" around the base would be under its control and no development would be allowed within a 4 km radius, strangely enough the factory is exempted while the fishermen have been asked to move on.

The agriculturists in the area too are upset. Said Ram Gopal Naik: "You can compensate for land lost and trees cut but can you really compensate for the human being who is uprooted? None of the rehabilitation measures has any human component in it." The people have had firsthand experience of those measures when the state Government shifted 4,000 people to Ramnagar to make room for the Kalinadi hydro-electric project 100 km away. Once a thickly forested area, Ramnagar is now a ghost town with the lands having become barren and the residents living in abject misery. Said Pal: "The Government treats rehabilitation projects as though it is doling out charity."

The mood of the "would-be displaced" people is militant and the Indian Navy has found to its dismay that it has an unusual battle on its hands long before it can even get cracking on its naval base. It must come up with solutions quickly if it does not want to be a fish out of water in Karwar.

CALCUTTA HIGH COURT

Out of Order

"Publicity is the very soul of justice. It is the keenest spur to exertion, and surest of all guards against improbity. It keeps the judge himself while trying under trial..."

JEREMY BENTHAM

PHYSICIAN heal thyself. The old maxim quite aptly describes the state of the Calcutta High Court today. Once the supreme arbiter in the country, the high court has fallen from grace in more ways than one. Just how steep the descent has been was reflected in a couple of shattering judgements by the Supreme Court in recent months. According to the judgements, the high court has long been indulging in a practice that "has done incalculable harm" and could "have the unpleasant effect of undermining public confidence in the courts".

The Supreme Court's observations were prompted by its discovery of the frequency with which the high court granted interim orders that are effective till the passing of the final judgements. Apparently the high court often passed such orders on oral application, that is, for the mere asking. Not only did the judges sometimes not bother to find out whether there was any legal justification for passing such orders, they also chose to pass them in the privacy of their chambers rather than in open court.

Jolted by this discovery, Supreme Court Justice O. Chinnappa Reddy was forced to declare that such a procedure "is likely to lead to vicious and pernicious results". Stressing that the maintenance of records was essential to a court of law, he observed that passing orders without documenting why they were passed "is a practice reminiscent of the feudal days when the French nobility could procure a *lettre de cachet* under the sovereign's seal authorising a subject's imprisonment without trial and without mention of any reason... a practice that strikes at the very root of the system of open and even-handed justice".

The first discovery that led to the broadsides against Calcutta High Court was due to a Kafkaesque case involving the issuing of a liquor permit in far-off Andaman islands. A Calcutta High Court judge issued an interim order staying the liquor permit awarded by public auction from becoming effective on the basis of an oral application moved in his chamber by well-known advocates representing someone called S. Samuel, a person who subsequently denied that he had anything to do with the case. The advocates had evidently been taken for a ride and had to admit that the man who had posed as Samuel was nowhere to be found.

Calcutta High Court: fall from grace

The remarkable fact in this case, Justice Reddy pointed out in a judgement last November, is that the judge did not make "the slightest attempt to indicate even briefly the facts told to him, the question of law, if any, raised before him and the reasons that prompted him to make the order he did... in fact the order made no provision to protect anyone from resulting mischief".

The second volley against the high court was triggered off by a central excise case involving Dunlop India Limited. The company had claimed an excise exemption of Rs 6.05 crore although the Excise Department had maintained it was not entitled to the exemption. The high court passed an interim order allowing the company to collect its goods after furnishing a bank guarantee for Rs 2.93 crore. The Supreme Court while vacating the order stated that "we do not have the slightest doubt that the orders of the learned/single judge as well as the division bench are wholly unsubstantial and should never have been made".

The Supreme Court bench, shared by Justices E.S. Venkataramiah, O. Chinnappa Reddy and A.P. Sen, took this opportunity to castigate the high court for its propensity to grant interim orders at the drop of a hat. It listed the havoc caused by such orders:

- ► collection of public revenue has been seriously jeopardised and budgets of governments and local authorities seriously affected;
- ► dealers in foodgrains and essential commodities have been allowed to take back the stocks seized from them as they permit them to continue with the practice which they were told to stop;
- ► collection of monthly rentals payable by excise contractors have been stayed with the result that at the end of the year the contractor has paid nothing;
- ► buses and lorries are being run under court orders though they were earlier denied permits or their permits had been cancelled.

The list is practically endless. Last [illegible] night, the Supreme Court had to set aside the high court's orders staying the Union Government from withholding goods of a firm accused of import and misutilisation of animal tallow. Pointing out that the high court should never have passed such a stay, Justices P.N. Bhagwati and A.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digit

S. Mukhopadhyay: lone crusader

Even the Supreme Court declared that action defeated the Union Government's abeyance order.

In West Bengal, the consequences of the Calcutta High Court's generosity in granting interim orders appear to have "crippled" the government administration, senior bureaucrats confide. The Special Inspector General of Police A.P. Mukherjee said: "We are finding it impossible to bring about probity and discipline within the force due to the high court, and this is bound to find reflection in the law and order situation." Corrupt police officers, even if detected, cannot be transferred, let alone dismissed.

The Contempt of Court Act is being used as an instrument of oppression and intimidation," contends the Calcutta Collector of Customs, Sukumar Mukhopadhyay, who has earned the reputation of being a lone crusader against the Calcutta High Court. Having decided to go the whole hog in exposing what he considers to be the "blatantly illegal orders" of the high court, Mukhopadhyay has become resigned to living with contempt cases, of which there are 77 against him and his department.

The most startling of all Mukhopadhyay's allegations is that COFEPOSA detainees from all over the country are coming on the Calcutta High Court because of its reputation of being liberal in granting injunctions. He has prepared a list of all "alleged smugglers" who have succeeded in procuring stay orders on the government's proceedings against them.

Fortunately, the Supreme Court's observations seem to have paid off and recently the number of interim orders on Calcutta has fallen appreciably. Judges have given up the practice of granting stays in the privacy of their residences or chambers except in exceptionally urgent cases. But it will take years for Calcutta High Court to live down the two landmark judgements of the Supreme Court.

Technological courtesy, GCEL.

Those days of the communication gulf have gone with the wind. Now you can dial from any place where there is no telephone exchange to any place where there is one. With GCEL as your operator.

Because GCEL, among other things, has provided the communications world such electronic marvels as the Multi Access Radio Telephone (MART) system—simply mount on a tree or pole and dial, the UHF Radio Relay Equipment—for point-to-point communication within line of sight; the PCM MUX; even telephone instruments guaranteed for a million operations. Indeed, the GCEL connection has been a priceless asset to the ONGC, Posts and Telegraphs, Railways, Indian Oil Corporation.

GCEL. At the helm of electronics.

GCEL has linked its destiny with India's future in electronics. In the short span since 1975, when it embarked on its mission as a public sector undertaking, GCEL has already achieved national stature.

It has emerged as a reliable source of highly sophisticated professional grade communication and electronic equipments. Relied upon, to advantage, not only by Indian aviation authorities but also by the Posts and Telegraphs, Railways, Doordarshan, Defence Services and the like.

And today, GCEL has taken electronics even beyond the realm of mere manufacture. To turnkey projects.

GCEL

In step with the world.

CRICKET

Season of Discontent

THE POST-match scene at Kanpur's Green Park cricket stadium said it all. There was David Gower, the beak-nosed English captain waving a glass of champagne. Mike Gatting, Allan Lamb, Richard Ellison—each of his men trooping out of the modest pavilion had plenty of the bubbly drink to guzzle—and to spray ecstatically over one another. Gower, till the other day hailed as the most consistent captain England had ever had in terms of suffering defeat, was hoisted on his team-men's shoulders, holding aloft the Anthony D'Mellow trophy, the reward for his team's exertions through a winter of shifting fortunes.

A few paces to the left stood Gavaskar with his men, joining the round of clapping by gently tapping the cup of tea he nursed in his right hand. On Indian faces, the trauma of defeat was writ too clearly for anyone to miss. Said Ravi Shastri in resignation: "What do we say now? This is one series we should have won." And there was a touch of irony as Gavaskar added: "We have saved English cricket, haven't we?" The Kanpur pitch lay in the background, unscathed from five days of battering, showing a frustrating frigidity to both pace and spin.

Forgetting a whole string of its own follies spread over three months, the Indian camp was now letting out all its pent-up ire on the pitch and its creator, Anand Shukla. After Gavaskar's public plea for a spinning wicket, a worried Gower had complained to accompanying English newsmen that he anticipated a Bunsen burner for a pitch at Kanpur. What Shukla created, instead, could give Faisalabad a fright. In fact, so sure was the Indian camp of hitting a turning track that this was considered reason enough for not dropping Kirmani, who had been sluggish behind the stumps. The idea, a selector explained, was to avoid exposing a relatively green wicket-keeper to a spinning wicket.

The Indian camp's desperate quest for a doctored wicket was, in fact, the most telling commentary on the lack of confidence prevailing even before the final Test began. The comprehensive defeat following the gift of a Test match in Delhi shattered a side which had hardly been able to recover poise after the 3-0 drubbing at the hands of the West Indies men in the 1983 series. But now, with their cup of sorrow full to the brim, it was time for introspection. Sometimes grudgingly, and often with bitter candour, players, selectors, officials and experts all speak out now and mention the following as the factors behind the debacle:

► A waning team spirit, particularly after the Gavaskar-Kapil controversy.

► Total lack of a strategy for the series.

► Indifferent fielding, particularly close-in positions.

► Inability of key batsmen to get at crucial times at the necessary pace.

► A weak attack. Kapil's inadequ... Sivaramakrishnan's fade-out and ... stri's decline into a mere stock bowler.

In a way, the first encompasses ... rest. All along the series, there was ... tinct, unabashed disinclination to ... close-in positions for fear of injury w... could keep one out of the Benson ... Hedges bash later this month in Au... lia. The series was, in fact, a sickeni... ectacle of spilled catches with the ... fielders notching up a record of nine ... first innings at Madras as the English ... notched up 654 for 8 and put the ... beyond doubt. At Kanpur too, Gower ... let off twice as his team stood at 294 ... with 60 runs still to go to avoid the fo... on. Time and again as English bats... took wild swipes at the spinners, the ... in fielders took evasive action rather ... wait for a mishit or edge, in contrast ... unhelmeted Eknath Solkar or Abid ... the early '70s. But those were days ... cricketers had just begun getting ... donna status and big money.

The same lack of team spirit was ... ble in the reluctance of the cl... fielders to make frequent appeals ... settle the batsmen, now an acce... tactic in cricket. In the English tea... the third man fielder would thro... hands to the heavens the moment th... hit the pad. Barring a few honourable ... ceptions, outcricket lacked verve ... short, if a batsman got a good score ... bowler bowled a good spell he was ... umed to have done his bit. Azharuddin: record run

HARUDDIN

Rising Star

CRICKET buffs have a talent for endowing their heroes with imaginative tags such as Tiger and Little Master or Typhoon Tyson and Sunderbar Hindlekar. So when fans in Hyderabad conjured up a name for the new batting sensation, they chose Mohammad Azhar for what seemed to them a good reason. He could see the early, even as it slipped out of the bowler's fingers and played it with immense confidence for hours as if he was glued to the wicket. "I believe in playing from session to session—start to finish, lunch to tea and tea to close and steadily go for my runs," said the capable batsman who got his third successive Test century in as many successive Tests on February 1 to become the first one ever to do so.

To score a hundred on earning a Test cap is a tension-filled task which only 51—eight Indian— players around the world have done so far. When Azharuddin scored the second hundred at the Chidambaram stadium in Madras, he joined a select band with similar impressive debuts—Bill Ponsford, Frank Walters and Alvin Kallicharran. The third Test hundred came over two days at the Green Park stadium in Kanpur, created a world record achieved by no one, including the first day's play at Kanpur. Azharuddin in 16 minutes flat on the morning scored the fastest fifty, belying fears that he might not make it. "I found it difficult to sleep when Azharuddin did not complete his century at the draw of stumps, though Azharuddin himself said he had slept well," said Vice President R. Venkatraman in Hyderabad on receiving the thrilling news. Through all the jubilation, the hero of the moment and his family have remained quietly exhilarated by the achievement "I thanked Allah and immediately thought of my grandfather even as those in the field came forward to shake hands in the first few moments," said Azharuddin coolly. And in his home in Himayatnagar in Hyderabad, Azharuddin's parents, three brothers and two sisters, all younger, glued to their TV, cheered wildly and embraced each other as Azharuddin took a two off Foster to make the century. Later the proud father, Mohammad Azizuddin, an accounts officer with the state electricity board, declared: "I am happy he has done it."

Initiated into cricket in 1973, Azharuddin was in the All Saints High School team playing in the Hyderabad cricket league from the 1977 season. Recalling his early performance, Hyderabad Cricket Association Secretary P.R. Man Singh said: "He showed the flair to go for the runs and so quickly found his way into the Deccan Blues team. His level-headed approach to the game helped him improve his play." Later playing for Nizam College he represented Osmania University in inter-varsity tournaments and Hyderabad in the Ranji Trophy competitions since 1981-82. "My maternal uncle Mir Zainulabiddin who captained the Osmania University inspired me to take to cricket while my grandfather Mir Vajehuddin who brought me up took care of me and paid for the cricket gear. Sadly for me he died in November last without knowing of my selection for the Test series," Azharuddin said.

In his short cricket career Azharuddin has scored 26 centuries and two double centuries. Playing consistently well in the 1982-83 and 1983-84 seasons, he scored 2,648 runs in 49 innings and 2,499 in 60 innings, and scored centuries in both innings of the Ranji Trophy match against Andhra at Machilipatnam in the 1984-85 season. He has been to only two coaching camps —one conducted by Lala Amarnath in Hyderabad in 1977 and the other by Keki Tarapore in Bangalore in 1980. The first time he saw a cricket Test was when he was picked for the series against England in Calcutta.

Thrust out of his anonymity, Azharuddin received a hero's welcome when he returned to Hyderabad for a brief stay before the Australian tour. Crowds roaring "Azhar Zindabad" lined the 7-km route that he drove down in a jeep preceded by mounted police guards. Overnight the cricketer had become the most popular man in the city.

The incredible feat has brought othere rewards. His employers, the State Bank of India has promoted him to the officer rank and brother K.M. Joseph, rector of his old school has presented him with Rs 10,000 in cash. Azharuddin said: "My ambition is to play the game in the spirit of the game—to stay as long as I can in the middle to score as much as I can." Asharuddin, whom Mansur Ali Khan Pataudi describes as "the player of the decade", will go places.

and jaded and had stated that if the selectors restored him as captain, it would be a retrograde step. But when they took the step in September last year, Gavaskar accepted the mantle. He however, justifiably contends that he could not have declined the appointment, although he admits that the tensions of the game worked decisively on his nerves after the Delhi Test. "When I got the 65 in Delhi I thought I was getting the form back," he said, "but what happened afterwards made it impossible for me to concentrate."

Captaincy is a demanding business and not meant for one who has been struggling against form, age, groupism and hostility from a powerful section of the press. That Gavaskar has learnt his lessons now was evident last fortnight in his letter to the national selection committee on the eve of the team's departure to Australia. Gavaskar said he was unavailable for the captaincy after the tour down under. But he does want to keep his place in the team and, with the worries of captaincy off his head may still be able to sort things out with himself. His intention to fight for a place in the side is clear from his firm refutation of the charge that he has no motivation left after having achieved all those world records. Said he: "Playing for India is motivation enough." A few good scores in Australia could be his key to survival.

Yet, Gavaskar was only one of the heroes who failed India. There was the other superstar Kapil Dev, the spearhead of the Indian attack who ended up with a mere 10 wickets in the series. In fact he had just seven before the last five overs in the England second innings at Kanpur, when he gobbled up the tail. Missing all through the series were his classic run up to the final stride, the leap and side-on delivery. A pale shadow of his past, Kapil was reduced to a mere bundler, failing to generate the kind of pace or swing that has placed him in sight of the world record for the highest tally of Test wickets. Apart from the internecine strife and his temporary sack, Kapil was certainly bothered by his recently repaired knee. "The doctor says it is perfectly fine now and I should enjoy myself," he said, "but I feel slightly reluctant to strain it fully."

With Kapil ineffective, Siva losing form midway through the series and Shastri accurate but not penetrative, the Indian attack had no ability left to bowl out twice in a match even a side of such mediocre batting abilities as England. Coupled with the dozens of dropped catches and benign pitches, this came to Gower as an unexpected windfall and contributed to his post-series arrogance: "Don't ask me about the Indian cricket team. I can understand your concern about it but please understand that it is not mine," adding facetiously: "My only problem in this whole tour of India were the telephone operators."

Gavaskar: a lean series

Among the batsmen, besides Gavaskar, Vengsarkar too failed to live up to his promise, notching up a century only in his last innings of the series. Said he, ruefully: "I really should have got at least one more hundred. This attack was nothing compared to the West Indians".

Shastri in comparison showed vast improvement as a batsman but somehow failed to push the scoring rate at Calcutta when in sight of his century. He pleads that there were no instructions to push the score and that the ball was swinging about in the humid conditions. While Anshuman Gaekwad fell by the wayside, Srikkanth flowered rather late. Gavaskar summed it up by saying: "The pity is we never got a good opening stand nor a good opening spell of bowling." Therein lay the key to disaster.

Yet another star to disappoint was Kirmani who, in spite of getting plenty of runs, consistently dropped catches behind the stumps. He seems to be bothered by a torn heel tendon and age, as in case of Gavaskar, is not on his side. Indian selectors should thus be keenly watching the performance of young Sadanand Viswanath, Kirmani's Karnataka understudy, in Australia.

Another man who will need watching, is Mohammed Azharuddin, the 22-year-old bank officer (*see box*) from Hyderabad. With his three hundreds and a fifty, and even more than that a visible sense of aggression and purpose on the crease he has hit the Indian cricket scene much in the fashion of a Gundappa Viswanath or Gavaskar. British cricket commentator Christopher Martin-Jenkins was moved to say: "The Australians do not know what a surprise they have coming for them."

But in the one-day contest in Australia individual brilliance will hardly be sufficient to bring about results, a fact made clear in the course of the 1-4 drubbing that the World Cup champions suffered at the hands of England. While the whole team will have to bowl and field better, Gavaskar will need to show more positive and aggressive planning if there is to be no repeat of the kind of capitulation at Cuttack last month, or the mid-innings stupor in Chandigarh that cost India the match by a mere seven runs. Gavaskar himself said: "My greatest disappointment of the series were the one-dayers. We really should have done better." The knowledge that in Australia he will be leading India for the last time in his career should spur him just that bit more.

In fact, the tournament in Australia will indicate the shape of things to come for Indian cricket. While Azharuddin faces a test merely to confirm his known abilities, Sadanand Viswanath and seam bowler Chetan Sharma will have to do useful work to establish themselves. An intriguing choice for the contest is Sivaramakrishnan, since legspinners are considered an irrelevancy for one-day cricket. Ravi Shastri, who is hailed as future captaincy material, also to needs to dispel the lingering doubts about his bowling ability. "I think I need to do more work on my bowling," he said, making it clear that his ambition is to become a good all-rounder and not merely a batsman.

A heartening sign is that most of the new claimants to slots in the national team are barely out of their teens and, as Mohinder Amarnath said, can easily take a two to three year banishment in their stride. Among themselves, they represent the brave new world of Indian cricket and with the old heroes fading fast, will have to quickly assert their presence on the international cricket scene. If they fail to do that, the future will be as dismal as the recent past.

"Mirror, Mirror, on the wall, who is the Fairest of us all ?"

JAILENE

Sure enough, Jailene is the whitest of all the indigenous polyester fibres. Tests prove this.

On the Elrepho instrument which measures whiteness on a scale of 100, Jailene records values around 83–84, while other polyester fibres lag behind at 74–76. The polymer used in making Jailene is the purest, thanks to SPL's "Continuous Polycondensation and Direct Spinning Technology."

This technology assures that not only is Jailene the fairest of them all, but also displays high tenacity and good dyeability, which are a rare combination.

In normal cases, higher tenacity always leads to lower dye uptake, but not with Jailene: dyeability is 10–15% better than other fibres in its tenacity range of 6.5–6.8 gms/denier.

In all respects, Jailene is best.

Never a Week behind.

When the standing world record in cricket was equalled by the legendary batsmanship of Sunil Gavaskar, people were reading the breathtaking details before the match was over.

In The Week.

The first weekly to cover the event.

The magazine is two years old. And not a week has passed it by. Each issue is on the stands ahead of time. And ahead with in-depth analyses of the latest events.

Because The Week believes in discussing events while they still matter. When the assassination of Indira Gandhi paralysed the entire nation, seven hundred million people were crying out for more information. And The Week was there. With in-depth coverage, special features, photographs... a multi-faceted view of the shattering moment. Once again the first weekly to put you in the picture.

That's why, more and more people look into The Week for a sound, wide perspective. Of the ins and outs of politics. The ups and downs of people. And the changing face of today's world.

More and more people are discovering The Week. And putting their faith in it. Because they know that whatever happens — the breaking of a record, or the making of history — they're bound to read about it in the next Week.

VISVA-BHARATI

Winds of Change

VISVA-BHARATI, the university founded by Tagore on the red soil of Santiniketan, 161 km from Calcutta, was designed by the poet to be a university with a difference. *Yatra visvam bhabatyekanidam* (where the world makes its home in a single nest)—reads the beautiful motto of the university. But its non-formal, residential and cosmopolitan character was soon lost after it became a central university in 1951. Foreign students, and students from outside West Bengal, shunned it and the depleting ranks of residents found to their dismay that they were getting swamped by children of the newly-affluent peasantry from the two rice-rich neighbouring districts of Birbhum and Burdwan. It was a losing battle against mediocrity and neo-literacy.

But the scenario promises to change dramatically. Last December, Nemai Sadhan Bose, a 53-year-old and sharp-witted historian with strong Congress(I) credentials took over as the vice-chancellor. And, from the first day, Bose made it clear that unlike a typical historian he would only gaze straight ahead into the future with plans to bring the university "in tandem with the modern age". This is saying a lot, because till now the authorities were undecided on the basic issue: whether Visva-Bharati should strive to become an experimental university based on Tagore's ideals of non-formal education, or should it play safe and, in the process, become yet another nondescript clearing house for degrees.

Last year, Mrs Gandhi, an ex-student of the university and its *acharya* (chancellor) for 16 years, took personal interest in getting the Visva-Bharati Act drastically amended, as a result of which the all-powerful executive council (Karma Samiti) became entirely non-elective (and ex-officio) in character. That was the first step towards selecting a dynamic vice-chancellor. And Bose was Mrs Gandhi's personal nominee. The proposal to nominate Bose was one of the last files cleared by Mrs Gandhi. When the Government changed, her wish was honoured and Bose was formally and unanimously chosen by a panel of three experts which included Justice (retired) M.H. Beg, chairman of the Minorities Commission.

Since his appointment, however, there are winds of change blowing across the campus (students—3,270: teachers—426). The most notable among the indications of change is the renewed effort to restore the residential character of the university, and to

TARUN CHAKRAVARTI

Vice-Chancellor Bose: looking ahead

modernise its facilities which, as Bose says, "cannot continue virtually at the level of the hermitages described in the *puranas*." In the final three months of the current financial year, the university is spending the residual Rs 1.5 crore from its Sixth Plan allocation—or Rs 1.4 lakh a day—on new hostel buildings, on the air-conditioning of the museum and the archives, microfilming facilities, advanced recording systems for the music college, and computers.

As the Seventh Plan period begins this year, the main thrust of the university will be towards setting up a few new institutes which, as Bose says, "can make the university relevant again". The most significant among them is the plan to install at Kala Bhavan, the college of fine arts and crafts, a new Institute of Visual Communication. K.G. Subramaniam, the well-known painter and professor in the department of fine arts, who is working on the project, is confident that the new institute—which will also include courses in television and video-filming—will give a fillip to the entire communication business in eastern India.

The other shining Seventh Plan proposal of the university is to set up a Centre for National Integration, named after Mrs Indira Gandhi, to carry out research into areas of ethnic, linguistic and religious tension. It is being planned as a centre to study the "socio-cultural interfaces" not only in India but in South and South-East Asia.

These are ambitious schemes, but the very toying with these ideas shows an anxiety to put an end to the present moribund state of the university. And one of the main reasons that have contributed to the present state of affairs is the shrinking of the residential facilities. In 1951, well over 75 per cent of the students were residents. But last year, only 1,249 of the 3,270 students were inmates of the hostels, the rest being day-scholars—many of them being first-generation literate. This problem had another side-effect: the share of students from outside West Bengal and those from abroad had been considerably depleted.

The Seventh Plan target is to raise the resident/day-scholar ratio to at least 1:1, and this may require spending around Rs 80 lakh in buildings alone. As an executive council member explained: "To enable Visva-Bharati to create any kind of impact, the Plan allocation needs to be raised at least 100 per cent, which calls for better relations with the Centre. Earlier Amlan Datta lacked it. But Bose's equation with the Congress(I) may help this time."

Bose himself left no one in doubt as to where his preferences lay. He met Rajiv Gandhi twice in the past five weeks. Finally, he proposed the name of Rajiv as the new chancellor at a meeting of the executive council last fortnight. All the 17 of the 21 members, who were present, supported him.

The university, since its beginning in 1921, has produced many outstanding personalities, such as Nandalal Bose, the celebrated art teacher, Ram Kinkar, the sculptor, and Binod Behari Mukherjee, the painter—not to speak of Satyajit Ray and Indira Gandhi. But Bengalis also associate Visva-Bharati with a measure of arty affectation—best seen in the election graffiti for the December polls at Santiniketan which implores the people to vote for 'Rajiv-da'. The point is, the university itself has voted for 'Rajiv-da' and is keenly expectant to see the results.

Very proper. Very British. Very Zodiac.

Zodiac is all the rage in London. Because the British know good taste when they see it. Quietly understated when occasion demands. Suitably bold when called for. Zodiac Menswear. At Selfridges in London. And at shopping spots in New York. Frankfurt. Zurich. Geneva. Dusseldorf. Hamburg. Munich. Vienna. Stockholm. Gothenburg. Amsterdam. Brussels. Antwerp. Hanover. Bonn. Cologne. And other international fashion centres.

ZODIAC

Proper anywhere.

Shirts. Ties. Belts. Wallets. Handkerchieves. Socks.

A lot of people seem to think of Dodsal as just a pipeline construction company. In fact, a major part of Dodsal's activities involve plant construction. Dodsal takes on entire projects single handed: Civils. Mechanicals. Electricals. Instrumentation. Everything up to commissioning and start up. To date, over 75 projects worldwide. **Across South East Asia, Africa, India and the Middle East, this Indian company is sketching a new skyline for the earth.**

OIL AND GAS FIELD FACILITIES BY DODSAL

The Greater Rima Oil Field Development Project, Oman: 40,000 barrels per day.

Complete civils, mechanicals, electricals and instrumentation. Overhead power transmission lines network. Well-head installation. Flow lines for a 40,000 BPD production station and a 10,000 BPD gathering station. All systems erection up to ready-to-commission status by Dodsal.

DODSAL'S PLANT DIVISION: THE TRACK RECORD

In just 25 years, Dodsal has emerged as a major international force in plant construction.

Over 75 projects worldwide: Refineries. Petrochemical and fertilizer complexes. Industrial and steel plants. Nuclear and thermal power stations. And desalination plants.

Every single project completed on or ahead of schedule.

Dodsal has a mobile task force of 500 engineers and 3,500 technicians. And equipment bases in Singapore, Baroda and Muscat.

HEAVY LIFTS

Dodsal is one of the few companies in India to specialise in heavy equipment lifts. Dodsal's crane (Manitowac 4600: Series 3 with Ringer Series 4) has a lifting capacity of 700 MT and a boom of 80 metres.

OTHER DIVISIONS:

Pipeline ■ Manufacturing ■ Transmission towers ■ Civil engineering ■ Operation and maintenance

Does the future mean insecurity for life?

Read how an investment in Ansals Palam Vihar can mean life-long security.

Does the word 'future' create dark images? Is it really a thing to fear? Or is it something to be sure of? If you believe in the latter, you've just begun to read about the biggest investment opportunity of your life.

The future is here.

About 7 kms from Palam Airport and 24 kms from Connaught Place, connected by a main road, are 500 acres of sprawling land. And this is where Palam Vihar is developing.

All plans for the colony have received Government approval and implementation is already underway. In a fast-paced, phased manner of development, Palam Vihar will, within the next two years, be transformed into a bustling locality of 50,000 residents — a completely self-sustained colony, with its own commercial centre, shopping complex, schools, hospitals, cinemas, clubs and parks.

Palam Vihar — a new way of life.

Aimed at improving the overall standard of life, Palam Vihar will offer exclusive features and facilities. Like a beautiful wood, 30 odd parks and various green belts, a special jogging track plus a number of tennis courts, swimming pools and playgrounds.

The layout of the colony itself is a heartening difference. All roads, lanes and by-lanes will run parallel and at right angles to each other — creating a perfect matrix for easy vehicle movement.

Vital services like post offices, police stations, bus stops, hospitals, medical stores and grocery shops have been placed at vantage points.

Behind Palam Vihar are Ansals.

The facilities will give the colony a new flavour of modern, twentieth century living. In the words of Mr Sushil Ansal, the Chairman and Managing Director of Ansal Properties & Industries (P) Ltd., "..(I)...am sure Palam Vihar will soon become one of the most prestigious colonies in and around Delhi..... it'll be difficult to believe that there was bare land here.."

Mr Ansal's confidence has something to it. ***Ansals have been in the construction business since 1940!*** And have been responsive to the country's growing commercial and housing needs. Ansals are acclaimed pioneers all over North India, with a number of distinguished buildings to their credit in Delhi itself — Vikas Minar, Nirman Bhawan, Surya Kiran, a part of Nehru Place and almost all the recent developments in Connaught Place. Ansals have also gone overseas, with giant projects in the Gulf.

But the end-benefit of Ansals experience is yours!

The instalment idea.

Ansals have developed comfortable pay-back schemes, distributed over one to three years. And you pay only as the development takes place! So you can be sure your investment is secure with Ansals.

But as you will see, this is not the only reason why Palam Vihar is such an attractive proposition.

Developed plots and ready-made houses.

In Palam Vihar there is virtually a plot for everyone — from sizes of 225.5 sqm to 836 sqm — and ready for possession! And for built-up houses there's an unbeatable variety in space and style — from single-unit houses to duplex' to palatial Continental and French Villas, with prices ranging from Rs.1,95,000 to Rs.8,75,000/-. And the best part is that you don't have to get into problems of construction and supervision. Ansals will do that for you. All you have to do is choose the house of your dreams!

But like everywhere else the saying is true for Palam Vihar too; ***the sooner the better!*** Because Palam Vihar is still reasonably inexpensive and with the fast-paced development taking place the prices may not remain the same for long. In fact, a few kms away from Palam Vihar land prices are already ten times higher.

So consider what you've got going for you at Palam Vihar. Think about the future, think about security, but act now!

You can contact, or write to Ansals at:
Ansal Properties & Industries (P) Ltd
115 Ansal Bhawan,
16, Kasturba Gandhi Marg,
New Delhi-110 001. Tel: 323755, 323001.

Please tick the box for detailed literature on the free-hold property of your choice.

Writing on Walls

THE WARLIS, TRIBAL PAINTINGS AND LEGENDS
BY YASHODARA DALMIA
Chemould Publications and Arts
Pages: 70; Price: Rs 90

PAINTED MYTHS OF CREATION: ART AND RITUAL OF AN INDIAN TRIBE
BY JYOTINDA JAIN
Lalit Kala Akademi
Pages: 100; Price: Rs 90

JUST AS the art of bookmaking and bookwriting has come a long way, so also has the initiation into subjects that today's authors are beginning to tackle for wider audiences. Almost a decade ago Yves Vequaud's book took Mithila's Madhubani wall paintings to the world. Now there are two handsome and serious books bringing more writings on walls to the fore.

Walls, preceded by nature's rock surface and tree barks, are possibly the oldest man-made canvas for expressing creativity. Considering that these arose in the context of personal shelter, it is not difficult to imagine how their ornamentation shows some of the earliest myths and goals in an unbroken tradition.

In the foothills of the Sahyadri mountains of Thane live the Warli tribals In the caves that take the memory back to where the first man lived. Yashodara Dalmia writes of them with lyrics that matches their white paintings in rice paste. Although the hand of the Warli artist may look naive and basic, a closer examination of the details —the sitting postures, the animation of narratives, life under water and in the trees, the trellis of leaf and fern designs all explain the complexities of the Warli mind.

In the absence of a bibliography and much material on the subject, she obviously writes from conversations with the tribals. Her story combines well the 'mythic vision of the Warlis' and how their legends, gods and beliefs add to their insular life-style. The danger in such a preliminary approach to research is the simplistic conclusions one may be forced to draw. For example, the head of the village is the sarpanch whose main work is "to settle quarrels arising because of the women wanting to leave their husbands", she concludes. While the three and a quarter page introduction to the book suffers from this weakness, it guarantees itself being read as opposed to the many pages of tedious research. Dalmia's text is highly readable and instructive—particularly the legends that illustrate the plates.

Over a decade ago, the publishers of the book, Khorshed and Kekoo Gandhi of the Chemould Gallery, Bombay, taking their tip from the Handicrafts and Handlooms Export Corporation of India, became the great protagonists of the Warli paintings. It was the urban popularisation of this art form, just as his book is their product. Priced at a reasonable Rs 90, it will make a perfect gift while also initiating laymen to a better class of ethnabilia.

Ritual paintings in a Rathva home

What may otherwise have appeared as a cyclostyled thesis has worked out to be an interesting mix between academics and coffee table book. *Painted Myths of Creation*'s credentials are very impressive; and introduction on the first of the Loka Kala Series by artist K.K. Hebbar, chairman of the Lalit Kala Akademi, followed by a foreword by the knowledgeable. Pupul Jayakar, which is followed by an elaborate preface by the literary Kapila Vatsyayan.

Jain begins by explaining the method in his madness—if such detailed field-work and hair-splitting of information shouldn't be so called. But reason shows from the start when he writes "there is a widely prevalent misconception that all regional cultural phenomena are vernacularised offshoots of the sanskritic 'great tradition'...". The indiscriminate use of the words 'fertility', 'mother', 'symbolic', 'tantric', 'magical', etc to define almost anything unintelligible in local cults is due to the scarcity of relevant and well-researched local background material. This is the gap the book under review very nobly fills.

The ritual wall paintings of the Rathva tribe of central-eastern Gujarat are a living tradition where Jain deals "with a shifting reality which is continuously undergoing change". His research shows how much he has had to pursue the many truths that add up to make his conclusions. He leads us to look beyond the ornamental factor in these paintings to the more meaningful body of private discoveries like the possible unearthing of the lost cult of Indra or the fact that the length of the *talas* (beats) of the Rathva tribal music do not exist in contemporary classical music, a fact disclosed in the appendix by David Roach).

Most of the text is of value to serious students. While this will limit the readership, the book will sit solidly on posterity's shelves, a complete archive when the Space Age will take its toll and no one may recall how the mud walls were painted and by what technique, what were the themes behind the iconography and how the images were consecrated and propitiated.

New from GENELEC

'Slim' Patti with new generation choke and starter

Genelec Patti (Batten)

Sleek yet robust. Made from special CRCA steel, super stove enamelled. Fitted with the new low watt-loss Genelec choke and instant starter with unique radio interference suppression.

Genelec Choke (Ballast)

Guaranteed for 5 years

- Totally safe.
- Saves up to 40% energy over ordinary chokes.
- Designed to last a lifetime.
- Unique screwless connection locks wires in place.
- Works silently.

If your choke fails during the guarantee period, Genelec will replace it. No questions asked.

Genelec Starter

- Unique nylon housing makes it totally safe and dent-proof.
- Starts tube instantly, without flickering.
- Radio interference-free performance.

When you buy a Genelec Patti you buy the best. Get Genelec and make life brighter for years.

Genelec chokes and starters are available for your existing pattis and tubelight fittings.

THEATRE

The Play is the Message

THIS is a play without any frills. It has no plot, no sets, no costumes. The amateur actresses who put it on happily switch parts, depending on who is available for a performance. The playwright is a mother of two who had never published a line earlier. Yet, since it was first produced in mid-1983 *Mulgi Zhali Ho* (A Girl is Born) has been performed at least 200 times in various schools, factories, colleges and clubs in Maharashtra and demand for it continues unabated. It has been translated into Hindi from the original Marathi and will soon be a movie with Vasantdada Patil's daughter Vijaya in the lead role.

Last month, *Mulgi* went on the road. Most of its performances so far have been in Bombay, but now under the banner of the Stree Mukti Yatra, it took its message into the sugar-cane country of western and southern Maharashtra. The play tries to bring out the feminist viewpoint in a humorous way and depicts characteristic vignettes from a woman's life: the mother-in-law blaming the daughter-in-law for giving birth to a daughter as she too was once blamed, until the chorus gives her a lesson on chromosomes; the mother curbing her daughter's ambition to study further, telling her she must know her place; a would-be groom's family inspecting the prospective bride as if she was an object piece of merchandise. Only adding to the charm are the catchy folk tunes that accompany them.

And the rural audiences seemed to lap it up. In Baramati there was a several-minute standing ovation after the show. In Sawli near Miraj 1,400 of the 1,500 inhabitants of the town attended the performance and the audience insisted on collecting a rupee from each family. Whether in the city or the country, *Mulgi* seemed to strike a chord common to all women. In a Dalit hostel in Gargotri there were tears in many of the young women's eyes, and in a discussion after the play a woman labourer was moved to publicly confide to the audience about her drunken husband who refused to look after the children while she came to the show.

The surprising acceptance of the yatra is due not just to *Mulgi*, however, but the enthusiasm of the women behind the show. They have come from several organisations, most notably the Stree Mukti Sanghatana and Maitrini. Among them are Chaya Datar, who is studying the tobacco workers of Niphad, Sharada Sathe, a labour lawyer and Jyoti Mhapsekar, Mulgi's author, who is a librarian. They made a few exploratory trips to the countryside to contact volunteers six months earlier. The readership of *Stree*, a Marathi magazine widely read in the area also proved helpful. And *Mulgi* was not the only drawing card. It was accompanied by sale of feminist literature, a poster exhibition and group discussions.

S.N. KULKARNI/Femina

A scene from *Mulgi* (above) and a young participant from the audience

The yatra hoped to create a new awareness among the women of Maharashtra about the oppression of their sex and the way they have been conditioned to accept their lot unquestioningly. In discussions, it is pointed out how this discrimination, subtle though it may be, begins from birth. When a boy is born *pedas* are distributed; when a girl is born, the inferior *burfi* is distributed. Fasts by women are always for the welfare of the menfolk. To bring the point home a volunteer asks rural girls why their mothers earn only Rs 4 a day while their fathers make Rs 6. "Everywhere we went," says Datar, "there was tremendous enthusiasm, even if they were not willing to accept all the concerpts."

But there was some initial hostility too. In Gargotri and Gadhinglas a local daily sensationalised and distorted an interview with Datar to imply that the yatra members were advocating free sex. But the many male college students who came to hoot and jeer were disappointed when they found the yatra members were dedicated middle class housewives and professionals who used their precious time to propagate the cause.

Queries by local girls during the yatra related mostly to dowry and eve-teasing. In separate discussions with groups of college boys the most frequent comment was: "Girls dress very fashionably and lure us." Yatra members pointed out that in fact the local girls dressed very soberly in ankle-length ghaghras and high-necked blouses and the men had a stereotyped image of women from the movies. Quite a few boys retorted: "What will happen to Indian culture if the girls get above their station?" But in general the men were fairly sympathetic.

One of the poignant vignettes in *Mulgi* has the mother singing to her daughter that once she is married she will wash her hands off her, then letting love get the better of tradition and asking the daughter to come back if she is unhappy. Many felt this brought home the rallying call of the yatra which is "Stree mukti kunachi? Tumchi, amchi, saravanchi!" (Whom does woman's liberation concern? You, me and everyone else.) *Mulgi* has made a significant step in getting the message across.

3-D FILMS

The Gold Rush

THERE'S a new superstar in the south: Arrivision, the 3-D camera system. Not since colour revolutionised the cinema scene in the '70s has there been so much excitement in the dream factories of Madras. The third dimension—whose significance producers are only just realising—is worth at least several crores. For the first time the dream merchants are running not after top heroes or heroines, but after Arrivision. As the top Malayalam star Prem Nazir put it: "The 3-D boom in the south is like the California gold rush. Every 3-D producer is saying that if Appachen can make 10 crore out of nothing, I will make at least a crore."

Appachen is really the man who turned everything in Madras' conventional film world upside down with a little film that turned big: *My Dear Kuttichathen*. Originally made in Malayalam, *Kuttichathen* was later dubbed into Tamil, Telugu and into Hindi, as *Chhota Chetan*. It went on to become the mega-success of the decade and perhaps of all time. Appachen, its producer and the bringer of 3-D into India is expected to rake in a cool Rs 10 crore and more by the end of the year.

Few outside the film industry realise the magnitude of what is happening. In the last four years, there have been only 16 such films made in the world—mostly Hollywood—but in the last two months alone, a dozen 3-D films have been announced in Madras and three have already reached completion stage. Dejected producers have found a glittering new weapon to beat the video; which in the past few years has quietly stolen many avid cinema-goers. The only snag in the boom is the shortage of 3-D cameras. Arrivision is the new hero and Arrivision is hard to get. Romu Sippy, the first to make a Hindi 3-D film, *Shiva Ka Insaaf*, used Arrivision and the results are reported to be mind-boggling and according to experts, better than Stereovision that Appachen used for *Kuttichathen*. Said *Kuttichathen* cameraman Ashok Kumar: "The 3-D off-screen effects in the Arrivision system are more sharp than Stereovision and above all the Arrivision system is more sophisticated and yet simpler to use than Stereovision." For *Shiva*, Sippy imported three

(From top) Kranti Kumar, a scene from *Shoo Mantra Kali* and a scene from *Sagar*: dazzling effects

...rrivision 3-D cameras at a staggering ...of Rs 20 lakh each.

After Shiva was completed, Sippy sent ...of them to Madras. These cameras ...now become the hottest property of ...south. Ramesh Prasad, son of the ...legendary L.V. Prasad, is their local guar... there. Said he: "As long as the 3-D ...lasts, the Arrivision 3-D cameras ...the real heroes. The two cameras that ...Sippy has entrusted me with are ...booked till the end of 1986." They are ...being rented out at an astronomical sum ...of Rs 10,000 per camera per eight-hour ...shift and still the producers are queuing ...up. Gone are the days of the fastidious ...and heroines, producers have no ...for them. Said Dandayuthapani, ...producer of the Tamil 3-D film *Annai* ...and son of the late Chinnappa ...: "3-D is currently the biggest ...who gives you no hassles and ...and assures you of a super hit." In ...Dandayuthapani dropped his regular ...Rajanikant from his 3-D venture and ...him with Vijaykanth—the poor ...Rajanikant—because Rajanikant ...could not adjust his dates with those of ...Arrivision camera.

The producers who have access to the ...cameras at the moment are in a ...rush to beat each other to the ...-face. Each film project is shrouded ...in the deepest secrecy. Ashok Kumar is ...working in a Telugu 3-D block... *Shoo Mantra Kali* supposed to be a ...of fantasy and magic and inspired by ...-dozen English films including ...*Stone, King Kong* and *The Blue* ...The highlights include sizzling 3-... sequences by Silky Smitha. Said ...: "The gimmicks will keep the audience ...to their seats."

Sagar is another 3-D film being made ...Telugu. Its claim to fame is that it is "In... first underwater 3-D film shot in ...". The story is about a young boy af... with cancer wondering whether ...go to heaven or hell. Said producer ...Kumar: "In heaven we will show ...effects like flowers and classical ...while in hell we get an opportun... to frighten the audience with skele... skulls, flames and other terrifying ...". His trump card, however, is the ...American 3-D documentary called *Sea* ...which he has incorporated into ...and which he promises will give the ...a real "3-D treat". The third 3-D ...in the race in Devar Films' *Annai* ...which is being made simulta... in Tamil and Kannada. It will ...nearly 45 special effects.

...there is more hot news on the 3-D

APPACHEN

Midas Touch

FROM the dizzy heights where he sits now, the world can only look good to Appachen, the 57-year-old creator of *My Dear Kuttichathen*. This one 3-dimensional film alone has catapulted the relatively unknown Appachen right past the Manmohan Desais and Prakash Mehras of the Bombay film world. The top distributors today want only Appachen and almost everyone in the film industry is heralding him as one of the greatest producers of all time.

Appachen

Appachen — whose real name is M.C. Punnose—and his films are rapidly moving on to create Indian motion picture history. *Kuttichathen* was originally made in Malayalam at a cost of Rs 35 lakh. The inspiration behind the film, really, was Appachen's eldest son Jijo who saw a number of 3-D films in Hollywood and wanted to make one at home. Appachen was very reluctant to take the risk initially, he thought he would lose everything he had. But Jijo had faith in the film and Appachen had faith in Jijo. Before taking the plunge, however, Jijo spent a year in Los Angeles studying the Stereovision system. Both father and son decided that it was better than Arrivision despite the fact that Stereovision hires out its equipment only with its own technicians. Appachen brought to India three cameras and three technicians and spent a year shooting his film. Said he: "I am sure these new 3-D quickies shot in Arrivision won't give the same off-the-screen impact."

But how did this man from Alleppey edge past almost every established film maker in Bombay to make one of the top money-spinners of all time? Said Prem Nazir, a close associate of Appachen: "I have been seeing this man for the last 35 years. Not only does he know the pulse of the audience but also all aspects of popular cinema." He started as production controller to his elder brother Kunchacko, the owner of the first film studio in Kerala—Udaya Studios at Alleppey. Together they made 82 films, from 1948 to 1975, before they split. In 1976, Appachen decided to branch out on his own and started his own production company—Navodaya.

Everything he touched turned to gold. Appachen's greatest strength always has been his innovative ability. He became the first producer in Kerala to make a cinemascope film *Thacholi Ambu*. It resulted in a cinemascope boom. In 1980, he produced *Manjil Virinju Pookal*, a sentimental love story with newcomers made at a cost of Rs 7 lakh. It went on to gross over Rs 1 crore in Kerala.

Two years ago, still setting trends, Appachen made *Padayottam*, south India's first 70 mm film. It was his only flop in the last eight years. Last year he made a low budget film *Ente Mamati Kuttiamma* starring a five-year-old girl—baby Shalini. The film became a super hit and baby Shalini is today the highest paid child artiste in India.

But they say behind every successful man there is a woman. In Appachen's case it's his wife Baby who looks after all his production details. The rest of the family also gives him complete support. Jijo, looks after most technical aspects of film production. The younger son, Jose, 25, is a chartered accountant whose worries are increasing with the film's success. "It is going to create tax problems for me," laughs Appachen.

Now that he's made his millions, what does he plan to do? Well, for a start, Appachen is planning to create an amusement park akin to Disneyland at his 75-acre Navodaya Studios at Trikakara, about 15 km from Cochin. Moreover, if the 3-D sensation continues, Appachen plans to do a sequel to *Kuttichathen*. When asked the secret of his success, his wife Baby said: "We are originally farmers from Kuttanad, the one-time rice bowl of Kerala where the rice cultivation is under water. There is always an element of risk involved in this cultivation which may be washed away if the bunds get damaged. The risk element is in our blood." Appachen has always had the courage to take those risks and they have also always paid off.

Let me deliberate

To invest in Madhya Pradesh, or not to invest, is the question.

No question about it. If you trust the judgement of companies like Modi Rubber, JK's, Ranbaxy, Hindustan Motors, Eicher Mitsubishi, Bajaj Tempo, Kinetic-Honda, Kores India and Crompton Greaves, all of whom have chosen to come to M.P. recently, then M.P. is the state for you. These, and a host of dynamic, high efficiency and nationally known companies, too many to list, will keep you company in M.P.

So stop deliberating, and start acting. Jet into Bhopal or drop us a line -

ASK

Consultants India / AVN/04

ASK is a division of M.P. Audyogik Vikas Nigam Ltd.

grapevine. *Pournami Rathri* is a Malayalam film being produced by S. Kumar, the producer of half-a-dozen "show all" medical films. This one, supposed to be a rehash of *Tarzan the Apeman* stars Vijayendra, the flop Hindi hero as Tarzan and Pavitra—who has acted in a couple of semi-erotic south films—as our Bo Derek. It promises a couple of "hot" 3-D scenes and the distributors are supposed to have lapped up the film even before it is complete. All these 3-dimensional wonders under production have been billed at an astounding Rs 1 crore and above.

The road to those crores, however, is strewn with problems. For a start, a well made 3-D film requires a well-equipped cinema theatre to get maximum mileage out of the gimmicks. Said Appachan: "We faced a lot of problems screening *Kuttichathen*. In most of the theatres in India the projection and sound systems are in a very bad condition which effects the 3-D films."

Some of those headaches are going to be suffered by the censor as well. With sex and violence leaping straight off the screen, censors will have to completely rethink censorship guidelines. In *Shout Mantra Kali*, for instance, the 3-D effects will show Smitha practically in the audience's laps. Said R. Mahadevan, regional officer, Central Board of Film Certification, Madras: "We will judge each 3-D film in its entirety from the point of view of its overall impact."

Another trade-off of the 3-D upsurge is a new cottage industry of polarised glasses. The producers are charging an extra Re 1 for the special glasses required to view their films. Appachan has reportedly made Rs 1 crore on just the glasses for *Kuttichathen*. Under normal circumstances, the same pair of polarised glasses can be used for over 50 shows and the cost per set is only Rs 3. Said S. Kumar: "In an age where the video monster has eaten up the film industry, 3-D is the only way out. Any way you look at it, there is big money in it and above all for the time being video cassettes of 3-D films cannot be made."

Nothing succeeds like success and Hollywood—not to be left out while the going is good—has also begun sending its block-busters eastwards. Expected in the near future are films like *Magnificent Bodyguards*, *Ten Shogun Women* and the ultimate 3-D film, *Jaws 3-D*. With this kind of glut in the cinemas—and given the transience of new fads—it may not be long before the boom goes bust.

ASTROPHYSICS

The Mysterious Force

WHY HAS the earth's magnetic field periodically flipped, taking the magnetic north pole to the geographic south pole and back again every now and then? Why has sea level changed over the eons? What has caused the formation of continents and the re-sculpting of seabeds from time to time? Why have certain forms of life from primitive organisms to giant dinosaurs, gone extinct at the time they did?

Questions such as these, some only of academic interest, others holding the key to more complete knowledge of the earth's evolution in its four billion-odd years of existence, have long tantalised scientists. Some scientists—two of them Indian—now believe that they are within reach of theories which will unlock some of the secrets of the past. And they have hypothesised that events such as these which have long been believed to be random occurrences, are in fact governed by some extra-terrestrial force emanating from the Milky Way, the galaxy of which the earth and its solar system are a part.

The idea of a yet-to-be-identified force which works in still-to-be-explained ways isn't as fanciful as it sounds. The existence of an extra-terrestrial pacemaker dictating the pulse of certain events on earth was first put forward some 18 months ago by two Hyderabad scientists, Janardan G. Negi, 49, a deputy director at the National Geophysical Research Institute and his doctoral student, R. K. Tiwari, 32. And last month, it was corroborated by independent research published in two science journals, London-based *Nature* and the Washington-based *Science* by two teams, one of astrophysicists in New York and the other of palaeontologists in Chicago. The implications of the hypotheses and findings are potentially revolutionary to geology, palaeontology and astrophysics.

The Hyderabad team of scientists based itself on studies of very long term astrophysical activity of the earth's crust and its interior and found that they appeared to coincide with the movement of the sun around the centre of the Milky Way. Plotting the periodicity of changes in the sea level on earth—which has varied as much as about 550 meters in the past 500 million years—Negi and Tiwari found it to match remarkably well with the oscillation of the sun around the Milky Way. Was it possible, then, that just as the movement of the earth around the sun causes the seasons or the orbiting of the moon about the earth creates the tides, that the planar oscillation of the sun around the centre of the Milky Way, which occurs once every 280 million years, was also causing certain events on earth?

A. PRABHAKAR RAO

Negi and Tiwari: cosmic theory

The scientists found that the periodic reversal of the earth's magnetic field also correlated highly with the galactic motions of the solar system. The hypothesis was truly astounding: rocks brought up from ocean beds and from volcanic eruptions show that the earth's magnetic field has completed such cycles with intervals in between that have ranged from roughly about 10,000 to more than 10 million years.

In findings published in the August 1983 issue of *Geophysical Research Letters*, a technical publication of the American Geophysical Union, Negi and Tiwari plotted data going back 570 million years and found that the earth's magnetic field had flipped at intervals of 285, 114, 64, 47 and 34 million years. Explaining how they were able to discover these statistically significant periodicities, Tiwari says: "We decided to look at magnetic reversals as they are excellent time markers," leaving their mark indelibly on ancient rocks.

These numbers proved to be of great significance when astrophysicists Michael R. Rampino and Richard B. Stothers of the Goddard Institute of Space Studies, New York, independently came up with very similar numbers in looking at other geophysical phenomena. Studying the data, the New York team found that changes in sea levels, in seabeds and in certain rock formations occurred over two dominant time spans of 32 and 260 million years. This corresponded to the periodicity of 34 and 285 million years discovered by the Hyderabad scientists. Said Negi: "The variation in the figures by a few million years is not wild, but acceptable in theoretical macrophysics." In fact, Negi and Tiwari found that long term sea level changes occurred around 380, 280, 143, 71, 44 and 32 million years ago—numbers which coincide remarkably well with their findings on the earth's magnetic field.

Further corroboration came from two palaeontologists at the University of Chicago who looked at marine fossils going back 250 million years. David M. Raup and John J. Sepkoski discovered that life forms have vanished at surprisingly regular intervals of 26 million years. The Chicago scientists didn't search further back because fossil records older than that become too sparse. Raup did look at the phenomenon of magnetic flips in the earth's field and came up with similar time spans as the Hyderabad team, and suggested that they were caused by the same force.

Exactly what this force is remains a mystery. Rampino and Stothers theorise that it comes from collisions or close encounters between the solar system and clouds of inter-stellar gas or dust as the sun and its planets move cyclically around the Milky Way. Other theories have been advanced, such as the existence of a companion star to the sun which causes periodic destruction on earth when it comes close to the sun every 30 million years or so. But they remain unproven.

The only consolation is that whether it is mass extinctions or geophysical changes, mankind is in no immediate danger. The last changes occurred 11 million years ago, so the next round isn't due for at least 15 million years. Whatever this extra-terrestrial force may be, Negi and Tiwari depict it with a drawing of Shiva performing his cosmic dance, an uncanny coming together of Hindu philosophy and modern science.

Vessels made out of Salem Stainless Steel are available at all leading vessel stores.

"After running a household of two fussy children and a choosy husband for six years, I know a thing or two.

Shopping, for instance.

I look around. I ask around.

Till I'm fully convinced the things I buy for my family are the best I can get. At the right price.

And I rarely go wrong.

Whether it's a pant length for my husband sewing machine for myself or playthings for my children. Or expensive things like TV, fridge or cooking range.

And vessels, of course.

Whenever I go shopping for them, I'm particular about what I get – vessels made out of Salem Stainless. Vessels that don't pit corrode or stain. Vessels that brighten up my kitchen, keeping their shine even after years of use.

And strong enough to last a lifetime.

As I tell my friends, don't just ask for Salem Stainless. Insist on it!

STEEL AUTHORITY OF INDIA LIMITED

The disputed land holding (left) and Bose: complicated case

HAMILTON ESTATE

Deepening Mystery

IT'S NOT often that a state government finds that the very land on which it thrives is slowly being parceled out by unscrupulous operators exploiting loopholes in the law. Horrified by disclosures that about 20,000 acres of rich cultivable land along a 12-km stretch between Baripada and Betnoti were being skilfully used by a clutch of individuals to their advantage (INDIA TODAY, September 30, 1984), the Orissa Government quickly galvanised its Department of Vigilance to set about uncovering the racket. As officials last fortnight prepared to draw up a charge-sheet against the offenders, it became increasingly clear that the mystery had certainly inexorably been complicated further.

Registered under the Sir Daniel Hamilton (Charitable) Trust, the land holding was operated by a lone trustee, Subodh Kumar Bose, 72, who was arrested six months ago on charges of cheating the state Government and forgery of a document entitling him to the illegal possession of land belonging to the Hamilton estate. He was later released on bail. But, with Hamilton's moves being traced to Scotland, vigilance officials were initially excited when Interpol, the international police organisation, got back to them with information from the Scottish police: one, that Daniel Hamilton had died leaving no heirs; two, that he had had no children; three, that the will and other documents—including declination papers made out by three churches, and the coopting of Bose to manage the holdings being cited by Bose as proof of the genuineness of his trusteeship of the estate were, in fact, authentic and duly registered in the public records office in Scotland. With this, their hopes of a quick indictment of Bose were soon dashed. As Ranjit Mohanty, former chairman of the Bar Council of India, and now counsel for Bose, pointed out, this evidence only serves to strengthen his client's case.

The case begins in the princely state of Mayurbhanj, long before the state of Orissa was formed in 1936, when the then ruler leased 2,000 acres of land to Daniel Meckinn Hamilton, popularly known as the pioneer of the cooperative movement in the country. The land was to be used to start a model agricultural farm and a cooperative training school. But when Hamilton died in 1939, he had managed to multiply the 2,000 acres into 20,000 acres which passed into the hands of other members of the Hamilton family and to three churches—the Church of England, Church of Scotand, and the London Missionaries Society through a will made by Sir Daniel. When the last of the Hamilton men died, the power of attorney over the land holding was supposedly given to Bose and Gopinath Berman, manager of Hamilton's properties in Calcutta. When again the churches and Berman relinquished their rights to the property, Bose, who began his working life as a clerk in the '40s, found himself in the '70s a rich man indeed.

In the right royal manner of a true born landlord, Bose managed to escape the tentacles of the Land Ceiling Act by quickly acquiring a certificate classifying the entire area "privileged ryot land", and, in 1972, registered it in the name of the Sir Hamilton (Charitable) Trust. By the '80s, the land holding had begun earning huge revenues. Aided by shrewd advisors, he sold part of the land and the timber, often to various government departments themselves. This would have continued indefinitely had a government pleader in Baripada not suddenly got wise to the goings-on. When papers pertaining to land compensation of a staggering Rs 8 lakh payable to Bose in lieu of 150 acres being taken over by the state Government came to him, Sushil Chandra Dash's suspicions were thoroughly aroused, and investigations set in motion.

Vigilance officials now argue that the land should automatically have passed into government control after the death of Lady Hamilton in 1946. Mohanty, however, maintains that by law, a charitable trust can never die, even if the trustees die. Whatever the legal ramifications, official sources disclosed that steps were being taken to cancel the privilege ryot certificates that had been granted to Bose, and to takeover the land holding. Taking a cue from the West Bengal Government, which took over land similarly acquired by Hamilton in Gosaba, the Orissa Government is contemplating terminating the lease, they said.

Obviously for the state Government it is also a matter of ruffled feelings over its having been taken for a ride by either the Hamilton clan or by the inheritors. And going by the first of Interpol's disclosures, it is not going to be smooth.

GOPAL SHETTY/Midday

Tayabji and Mallya: united

◆ Something's been brewing in **Vijay Mallya's** life—and it's not just liquor. Last week, the country's most eligible bachelor—who heads the United Breweries group with a turnover of Rs 700 crore—wed air hostess **Sakina Tayabji** in a private but grand ceremony in Goa's Fort Aguada. Mallya, also known as the playboy of the eastern world, has always had a reputation for high living, not to mention high flying. He has a passion for fast cars and horses and has sponsored both the Bombay Derby and the Grand Prix. The wedding, of course, was something else. Mallya reportedly booked up the entire hotel in Goa, mailed return air tickets with invitations and gave his guests and his bride a beach party to remember. With a wedding like that, who needs a honeymoon?

◆ "Murder" the environmentalists have been intermittently shouting as the NDMC Horticultural Department's axe has been falling on tree after beautiful tree in the capital. In the hue and cry few have heard the pleas of K.C. Sharma, the beleaguered director of the department, insisting that the trees were top-heavy, diseased and dying. Come April and they would bloom again. "For the last two years, we've been planning to prune them, but the tree lovers scared us off," said Sharma who almost lost his job 18 years ago when he trimmed the Ashoka trees of Lodhi gardens. This year, he finally decided to grin and bare it. Over 500 trees have fallen by the wayside and several more are going to load-shed in the next few months, but the new growth, Sharma promises, will be better and more luscious than ever before. In other words: leave and let leaf.

Trees: cut to cure

PRAMOD PUSHKARNA

◆ "I could've danced all night," went the song from *My Fair Lady*. Well, one fair lady did. **Kumari G. Sarala**—Kuchipudi dancer from Hyderabad—danced all night and all day as well. The principal of the Natya Veda Institute of Classical Dances in Hyderabad, Sarala eclipsed the 18-hour world record of dance maestro Gopi Krishna by performing a 24-hour non-stop marathon Kuchipudi dance last fortnight. "I could have gone for another three or four hours easily," said the marathon woman, "but the VIP's were there and so I stopped as originally planned."

A. PRABHAKAR RAO

Sarala: no brake dance

◆ Last fortnight, Bombay went berserk. Into the city's busiest commercial hub, the Fountain, poured hundreds of schoolchildren carrying banners and shouting slogans: "Politicians, shame shame" "Losers never win, winners never lose. Let's keep Bombay clean." The children, accompanied by their school bands, beat their drums and blew their bugles and raised such a shindy that all traffic came to a standstill. From the tall surrounding buildings heads popped out to see what the commotion was all about. The little demonstrators, it turned out, had been invited by the municipal corporation ward officer to protest against the defacing of the city walls by politicians with posters and wall writing. Now, that is what is called good, clean fun.

School kids: up in arms

ROCHA/Free Press Journal

◆ **Tommy Babu** was picked up as a young, handsome and smart independent candidate by the largely Naxalite-dominated Massaurhi assembly constituency of Patna district. Babu, his supporters promised, would provide a clean administration if made chief minister. But, on February 6, when Babu—dressed in a spanking white kurta and pyjama—flanked by two bodyguards and followed by hundreds of supporters, went to file his nomination papers he was in for a rude shock. "Sorry, I cannot accept your nomination," said the returning officer, "as his name is not on the voters' list." The dejected supporters expressed deep anguish and then led Tommy Babu, a young street dog, into the city streets singing: "In our system, clean and honest people like Tommy Babu have no future."

FOCUS THIS FORTNIGHT

Buoyant Mood

The Budget season finds the economy buoyant and most economists optimistic about the future, despite a difficult fiscal situation. There seems good reason to believe that the Indian economy is now launched on an accelerating growth curve.

COVER STORY 62

Repeat Performance

Next fortnight's assembly elections in 11 states and one Union territory is virtually a mini-general election. Coming three months after the Lok Sabha poll that gave the Congress(I) a massive mandate, the electoral dice is heavily loaded in the ruling party's favour.

ELECTION SPECIAL 18

Controversial Killing

The slaying of Rajasthan MLA Raja Man Singh in a police 'encounter' last fortnight has come as a severe jolt to the Congress(I)'s efforts to woo the state's powerful Jat electorate. The bizarre episode led to the resignation of chief minister Shiv Charan Mathur.

CURRENT EVENTS 44

Dangerous Limbo

The stalemate over the Punjab crisis continued with Home Minister S.B. Chavan unable to make any headway in his negotiations. But INDIA TODAY has obtained handwritten notes by H.S. Longowal which give an insight into the current Akali thinking.

CURRENT EVENTS 50

Awaiting Judgement Day

Abdul Rehman Antulay is battling for survival in more ways than one. The former Maharashtra chief minister has been hospitalised for cardiac problems while disclosures in his court battle seem to have damaged his case and his future political career.

SPECIAL FEATURE 74

Paradise Lost

Sri Lanka's escalating ethnic crisis has gouged permanent scars across the socio-economic face of the island and shattered President Junius Jayewardene's dreams of taking the country down an open, free economy road.

STP LIMITED. That's the new name for Shalimar Tar Products (1935) Limited. Quite simply, because the company with an unmatched 50-year record in waterproofing and anti-corrosion protection has come to mean so much more than tar.

Today our leadership extends to bituminous protection systems as well and our expertise in handling civil construction projects is recognised throughout the country.

Our new name symbolises the spirit of the company that is constantly seeking innovative changes. In new product development, sophisticated protection systems, expert consultancy services and new business opportunities. Two major new diversification projects will soon take us into totally new and challenging fields.

So though we expect our record will get even longer, you'll still know us by the shortest name!

STP Limited

GLIMMER OF HOPE

It is unwise to dub the forthcoming assembly elections "An Unequal Battle", (February 28). The same had been suggested about Mrs Gandhi following the Janata wave in 1977, but by 1980 she had been resurrected. This could happen in 1985 too, if sympathy for the vanquished opposition put them back on the rails. While they may have lost a battle, they have certainly not lost the entire war.

Bangalore RAMANAND SHARMA

RESIDING RIGHTS

It is amazing that the BJP president, Atal Behari Vajpayee has asked the Government to permit presidents of recognised parties to retain their government accommodation ("Life After Defeat", February 28). Has he forgotten the fact that the Janata government denied free accommodation to Mrs Gandhi after her '77 defeat? When a person who ruled the country for 11 years (till 1977) was refused this concession, mere presidents of parties have no right to ask for this favour.

Sangareddy T. SUDARSHAN

COPYRIGHT CONFUSION

In the books section (February 28) your reviewer attributes the authorship of my book *The Warlis: Tribal Paintings and Legends* to Yashodhara Dalmia who has in fact written only the introduction to it. I quote—"Dalmia's text is highly readable and instructive particularly the legends that illustrate the plates". Yashodhara Dalmia had nothing whatever to do with the legends, I did the translation and retelling, as both editor and author of the book.

Bombay LAKSHMI LAL

The error is regretted. —*Editor*

SELLING SECRETS

In the cover story "The Spy S tion" (February 15) your view that Alexander was in no way involved treachery and therefore need not paid the 'heavy price' cuts across the principle of executive responsibility accountability of the bureaucracy surprising that his private secretary involved in the espionage for the last years and Alexander was not aware He has miserably failed in his accou bility to the country and deserves a harsher punishment.

Bombay A.Y.

■ In "The Spy Sensation" you said that the French Deputy Mi Naval and Air Attache Colonel Bolley was present at the Army Day eption at the residence of the Se hyaksh on January 15. He was neither vited nor present at the reception.

GOOD SIGNS

"People's expectations are scary" (Fe-
...15) was an excellent interview
...the prime minister. It is a good sign
...Rajiv Gandhi is scared of the nation's
...expectations of him. This only
...that he is fully aware of the respon-
...put upon him and the party by
...voters. His intention to bring about a
...change in the approach to the
...system is noteworthy. He does
...want the system to churn out "li-
...but "uneducated" people. He has
...the crux of the problem.

S.E. MEERZA

TRYING TASK

All the best to Rajiv Gandhi in his
...for people to propel India into the
21st century ("New Ministers: Style and Substance", February 15). It seems to me, however, that he has an uphill task ahead if his settling for Bir Sain as minister of state for environment is any indication. Is the environment so unimportant that Bir Sain who thinks the dinosaur is an endangered species should be made minister because of the Harijan lobby?

Providence, USA — DHUN M. WADIA

DREARY FARE

The article "Doordarshan: The Sitcom Success" (February 15) stated that there was a bureaucratic objection that *Mashoor Mahal* was not educational enough. But what this "not educational enough" means is not clear. Does education hover round the sphere of bookish information only? It is true that bookish knowledge makes a person intellectually sound but can he manage to hold his own little niche in these feverish days by being intellectually aware only?

Calcutta — MOM MUKHERJEE

■ You have been unreasonably kind to the serial *Hum Log*. It is true that initially it did interest the viewers, but now if people are discussing it at parties and dinner-tables it is only to complain about the weak storyline being stretched beyond the limit of endurance. Put in a short and compact form it might have sustained the viewers' interest. In contrast, serials like *Yeh Jo Hai Zindagi* and *Idhar Udhar* are enjoyable and with a little more polish they could easily be taken as good replacements for the foreign humour serials. But as for *Star Trek* it should have been allowed to continue in the interest of the science-fiction addicts since we have no serial that can replace it.

Mhow — SUSMITA BHATTACHARYA

■ I was greatly surprised to read that the "popular foreign serials are being rudely elbowed out by the locally produced ones". Nothing could be farther from the truth. More than anything else, it is the policy of the Government that is mainly responsible for the virtual eclipse of the foreign programmes which are way above in quality, content and appeal. Barring *Yeh Jo Hai Zindagi*, the fare dished out to the starved audiences is terribly unappetising. *Hum Log* is so morbid and the dreary *Anveshan* very soporific. Even *Idhar Udhar* had a flat beginning. To have wholesale import of foreign serials is a moot point but it is very essential to have a healthy blend.

Delhi — SANDEEP KHANNA

TRADING DEGREES

"Degrees of Fraud" (February 15) sketches the true picture of the state of affairs in the Bihar University. Teachers, students, examinations and degrees all take a backbench in front of money. The teachers want their salaries and the students their degrees anyhow. It is ironical: the B.A. exam for 1984 began in September and still goes on. It is really a hotbed of corruption.

Samastipur — RAVINDRA KUMAR MISHRA

JETTISONING JUNK

Your report on the proposed induction of Pepsi-Cola into the Indian soft drinks market ("Cola Pep", February 15) made interesting reading. What struck me was the proferred deal—that the benevolent Pepsico will undertake to export 'non-traditional agro-based produce' from India in return for being allowed to peddle its fizz drink in this country. Incidentally, the 'non-traditional agro-based produce' singled out so far is 'canned fruit drinks'. That Pepsico will be licenced to trade junk for fruit has at least been mentioned in your article even if not emphasised. Will we never learn? Are we any better today than the gullible Africans of yore who happily yielded their ivory and gold for glass beads and cheap trinkets dangled before them by clever European merchants? Or is it that in our grossly undernourished country we are experiencing an unmanageable surplus of edible fruits?

Delhi — MANU TAYAL

IRREVERENT RACE

By publishing an article like "Passing on the Mantle" (February 15) you are assuming an ungodly rat race among the Sisters of Charity. I do hope that these revered souls do not pay any heed to the article, and carry on their work serving Jesus Christ among the poorest of the poor without caring for holding any office.

Calcutta — SUBIR K. LAHIRI

PREVALENT POLLUTION

The article titled "Waters of Woe" (February 15) is a very grave indicator of what dangers stalk our people. Turning a blind eye to such large-scale water pollution would only end up in disaster of the Bhopal kind and it is time somebody instilled some sense of responsibility into the minds of those in power.

Madras — V.M. RAJASEKHAR

Power transmission lines that talk

Power Line Carrier Communications from BPL. For better management of electrical power.

Simply put, it means an effective voice and data communication system that uses existing power lines in the Electricity Board network.

In operation for over 12 years in Electricity Board networks all over the country, Power Line Carrier Communication units help monitor and control critical factors in electrical power management.

Communication electronics from BPL also means Telemetry, Supervisory and Control Systems, Telephone and Switching Equipment.

There are other vital areas that BPL serves too. With Instrumentation (Industrial, Medical & Measurement), Computers, Components, Office Automation and Consumer Electronics.

Behind this diverse product range is a vast corpus of knowledge that BPL has acquired over the last two decades. This knowledge has been integrated through technical tie-ups with international brand leaders like Siemens, West Germany; RFL, U.S.A. and Trench Electric, Canada. And through an infrastructure that's unique only to BPL: Seven integrated factories, three R & D groups, in-house manufacture of critical components, a nationwide marketing network and an independent company exclusively employed for servicing. The result? Products that are better suited for local conditions. And user needs.

Yes. Satisfying user needs is, ultimately, the only objective BPL has.

BPL-INDIA

In pursuit of perfection

Computers • Communication • Components

The Rule of Law

CONTRASTS are often instrumental in teaching the right lessons. The death of Man Singh, MLA from Deeg, and two political associates has been followed promptly by the appointing of a judicial inquiry into the confused circumstances surrounding his killing at the hands of the police. This is as it should be: people were killed; a civilised society wants to know why and by whom. The contrast sits sadly with the handling of the killing of several hundred people, mostly Sikh, in the aftermath of the assassination of prime minister Indira Gandhi. A police inquiry has been set up to look into the conduct of the police forces in Delhi during those few days of bloodshed, to be sure, but the Government has so far declined to appoint an appropriate authority to try and ascertain who was responsible for the carnage.

The Government believes, and the prime minister has said as much, that a judicial inquiry would work to the detriment of the Sikhs. Government spokesmen, including the prime minister, go no further but the unspoken fear is that a judicial inquiry, by definition a public washing of dirty linen, would once again excite passions best left quiescent. And the Sikhs would be shown up in bad light because it would establish that members of their community celebrated the assassination of the prime minister.

It is, indeed, a conundrum and the Government obviously believes that the cure would be worse than the disease. But hoping that the problem will go away on its own, or will recede when a solution is found to the larger Punjab imbroglio clearly no answer. For one, there hasn't been anything like this in India's experience since Partition and the scale and the circumstances in which the killings occurred demands that justice should be seen to be done.

For another, trying to sweep the episode under the carpet betrays an ignorance of or insensitivity to the depth and extent of the horror and trauma caused by the killings. The post-Partition carnage embittered Hindus and Muslims so deeply that Muslims have ever since been on notice to prove their fidelity to this country. More damaging has been the periodic eruption of communal riots which have taken many thousands of lives since they increased in frequency in the early 1960s.

Now, something similar is happening with the Sikhs. The emotional gap that exists between the Sikhs and Hindus in Punjab is not getting narrower, and there is a very real danger that a whole generation is growing up in Punjab and in those areas of Delhi and elsewhere where the November killings occurred fed on a diet of anger and even hate. As a series of private reports—most recently that of the Citizen's Commission led by Justice S.M.Sikri and made up of veteran administrators—amply demonstrate, the sense of injury among innocent Sikhs will simply not evaporate.

The truth of the matter is that the story of those traumatic days is fertile with instances which will generate more rather than less resentment. First, it is true that some misguided Sikhs rejoiced over the killing of Mrs Gandhi and that there were precious few who found the courage to stand up and condemn it in the first few days just as few opinion leaders or Sikh politicians had earlier condemned Bhindranwale and his desecration of the Sikh places of worship. But it is not true that all Sikhs deserved to be tarred with the same brush. The average person, whether Sikh, Hindu or Muslim, wants to have nothing to do with violence and tension. There are some eyewitness accounts of retribution being spontaneous and swift—however illegal—with some who displayed their glee at the news of Mrs Gandhi's assassination, but it is also true that most of those who suffered, the menfolk who were killed or those whose homes were looted and burnt, were innocent.

Second, there is a growing body of evidence that testifies to the thoroughness with which the killings, looting and arson was conducted. Some, and only some of it was a spontaneous reaction to Mrs Gandhi's assassination. Much of it was orchestrated by individuals whether criminally or politically motivated, to either loot or teach the Sikhs a lesson. And it bears repeating that victim after victim has named names, and that some of those identified belong to the Congress(I), a fact that no giant margins of election victories can erase.

Ultimately, however, it is necessary to remember that murder is murder, whether in the assassination of a prime minister or in the discovery of an unidentified body in a sack as happened the other day in Delhi—or as the end result of a mob on the rampage. And no one who upholds the rule of law can ignore this fact or the basic tenet of a civilised society that one who breaks its laws must suffer for it. At the moment, there is the prospect that scores of killers, looters and arsonists will get away scot-free, and that is intolerable.

Justice must be done and must be seen to be done, but it doesn't have to be done to the beat of loud drums. If the Government is unwilling to risk arousing passions in a public inquiry into the circumstances in which so many people were killed in the four days after Mrs Gandhi's assassination, it can do so quietly. Exceptional conditions demand exceptional measures, and there is no reason why an inquiry cannot be held in circumstances which would keep a check on the public display of the evidence, on the manner in which its proceedings are covered in the media or portrayed before the public. And if such an inquiry should come up with the indictment of some Sikhs for having rejoiced in the hour of gloom, it would be a salutary lesson just as it would be lesson for all law-breakers if those guilty of calculatedly killing the innocent are arraigned before the bar of justice.

Yes, on the day of her marriage, Sudha discovered, her husband was already married... to the bottle!

Now, while it's the drinks for him, for her it's tears.

A happy married life nipped in its bud, when it ought to have bloomed, as alcohol takes its toll. For the newly-wed wife it becomes a nightmare.

The signs are unmistakable:

* The peace, prosperity and happiness of family start to take severe punishment.
* The husband staggers home at irregular hours.
* All that the wife gets are bitter quarrels. And beatings....

Let not alcohol rob you of a loving wife. Avoid drinking. All it needs is the intention...and a bit of will power.

It's liquor ...
or your married life

Put your conference on its feet without running around in circles

Hand it over to the professionals. Air-India's Congresses and Conventions team will set the stage and see it successfully through.

They'll offer you all their experience in convention planning — absolutely free! They'll work with you right from inception by helping you bid for India as the conference venue. Promoting your conference abroad. Liaising with your delegates. Assisting in Preparing their kits. Arranging hotel bookings. And transporting them to Delhi or any other city in India. On a wide range of low, low group and individual fares.

What's more, they'll even provide brighter services at special rates. In case you need to fly in special equipment for the conference.

Of course, they're backed by Air-India's worldwide network of 145 offices. And by Delhi's superb conference venues. Like the Talkatora Stadium or the Indoor Sports Complex. Ideal for large conventions ranging from 3000 to 25000. Or, the 9 new hotels in Delhi, most of which offer excellent conference facilities.

Or even the ultra-modern Shere-e-Kashmir Conference Centre at Srinagar. Which offers you a choice between two large and two small conference rooms as well as a 600 seat auditorium with simultaneous translation facilities in five languages and film projection facilities for both 16 mm and 35 mm. Plus four committee rooms, exclusive documentation and communication equipment, banquet space for 500 persons, an exhibition gallery and a press room. All attached to the superb 5-star Centaur Lake View Hotel right next to Dal Lake.

Naturally, with such services, it's no surprise that Air-India has been closely involved with the 12th International Leprosy Congress, the World Mining Congress, the 59th International Convention of World Association of Detectives Conference and many more.

When you're planning your next conference, get in touch with us at the following address. So as your conference takes off you'll still have both feet on the ground.

at home inside giant plants, covering the risks in steelmaking.

Huge buckets carrying tonnes of molten, white hot steel. Overhead cranes moving about menacingly. The deafening clang of metal upon metal. Sparks flying about everywhere.

This is life inside a steel plant. With its constant risk of accident... either during operation or from overlooked errors in the construction of plant and machinery, that could result in loss to life and installation.

All this only shows the imperative for comprehensive coverage when you're dealing with multicrore rupee projects like steel plants. The kind of coverage one has come to expect from National Insurance. Because, even though National is, essentially, an insurance company, it has field personnel who know steel plants and their problems like the back of their own hands.

Now, this makes a world of difference when you're looking for insurance that provides comprehensive cover in high-risk, high-investment projects. National does it–foolproof. And within your budget.

National Insurance. Well connected with India's core industries. Not just iron ores and steel, but oil, tea, jute, shipping, chemicals–the lot.

National Insurance Company Limited
(A Subsidiary of General Insurance Corporation of India)

TOILET CASE

■ There is never a dull moment when West Bengal Public Works Minister Jatin Chakravorty is around. Some time ago, he hit the headlines when he banned Usha Uthup from warbling in an auditorium. His latest escapade is less spectacular but as controversial: a toilet.

Now, this is no ordinary toilet. Placed on the first floor of the secretariat, its fittings sparkle, the sandstone-coloured tiles do not intrude upon the gentle thoughts that people indulge in during ablutions, and the soft lights make people believe they are in heaven. For only the very select, however, for the paradise is meant only for departmental secretaries.

Coincidentally or otherwise, the toilet is situated right next to the finance minister's office, who disapproves of Chakravorty's style of functioning. Construction took place about the time a furious chief minister was hauling Chakravorty over the coals on account of the poor condition of the state's roads. But it is unlikely the rebukes will cause Chakravorty to turn a new leaf. After all, a man who could paint the tip of Calcutta's Shaheed Minar a ghastly bright red, in the teeth of opposition from people like Satyajit Ray, is no ordinary mortal.

SELF STYLE

■ Another extraordinary mortal is Ramdas Nayak of the BJP, guide, friend and philosopher to the assembly constituency of Kherwadi in Bombay. Nayak has hit the stands with a fast-selling pamphlet listing his achievements as MLA for Kherwadi from 1978 to 1980.

Nayak claims he got a total of Rs 5.25 crore sanctioned for his constituency, which went into the building of latrine-blocks, an assortment of water pipelines, wider roads, a dozen bridges, over 2,500 rooms for hutment dwellers, the renovation of temples and masjids, nearly 2,000 power connections, 1,940 ceiling fans for government employees and, the *tour de force*, "cancellation of second show in drive-in-theatre by amending the Maharashtra Cinema (Regulation) Act, 1953".

In between, Nayak found time to help "thousands of people procure cement on ration cards", and wake up the chief minister at 1.45 a.m. on Christmas day, 1978—to secure the release of 102 people "mercilessly beaten" by police officers.

Not for nothing does Nayak claim that "there is no gap between the voter and myself". All this and the literary touch too—"Elected as President of the prestigious National Library".

CAUGHT NAPPING

■ The mills of government in West Bengal, run with an exquisite mixture of lethargy and confusion, grind languidly at the best of times. Last month, they ground to a halt, because of the owl and the pussycat.

The owl was sleeping soundly, perched on a beam across the main entrance to the protected area of Writers' Building. All through the day clerks and investigative newshounds stared at it and gossiped and quoted ominous lines from Shakespeare, putting a temporary halt to affairs of state.

The pussy was also sleeping, on a ledge under the air-conditioner which blew cold into a minister's room. When it awoke, it discovered it couldn't get down and wrote the minister a complaining letter. A fire tender arrived, and an impressive telescopic hoist shot up. When the fireman called for a stick and brandished it, the cat calmly jumped down and sped off leaving him stranded outside a minister's ledge looking not too concerned about it.

Nobody did any work in Writers' Building that day. Some unkind passers-by were heard to remark that it was business as usual.

HERD INSTINCT

■ Hannibal used elephants to cross the Alps and attack Rome. Porus used them to try and frighten away Alexander. Neither succeeded but that was not the fault of the elephants. They are very persistent as students of the R.V. Engineering College on Mysore Road in Bangalore found out rather suddenly a couple of months ago.

At about 3 one morning hostel residents were woken up by loud trumpeting from the courtyard. They rushed to their windows. What did they see but 11 male elephants, eight cow elephants and two calves raising merry hell. The police and the forest officials arrived quickly but after that it was anyone's day as battle royal raged to drive the animals back into the Bannerghata forests.

It was not a simple job. The 100 forest officials who sallied out to the fray, beating drums, bursting crackers and shooting in the air, found to their chagrin that the elephants had got used to the noise. Finally, thankfully, the herd retreated into the trees, and the Tarzans went back to bind their wounds and await the next assault.

Thousands of children go blind every year due to preventable reasons. One of the major causes of childhood blindness is due to accidents.

A little care can safeguard your child from injury.

Some times, the simple games that children play can cause injury to the eye and lead to blindness. *Gulli-danda*, bows and arrows and lower branches of trees are a constant threat to children's eyes. So are sharp household objects like knitting needles and kitchen knives. Equally dangerous are fireworks.

When despite precautions, injury does take place, consult your doctor or the nearest government health centre, at the earliest. Remember to wash your hands with soap before examining the eyes yourself. Also, when washing them, always use clean water and a clean cloth for wiping.

For a free booklet on the prevention of blindness in children, write to the following address indicating the language of your choice: Voluntary Health Association of India, C-14, Community Centre, Safdarjang Development Area, New Delhi 110 016.

Life piled on life will be of no avail if the gray spirit yearning in desire does not 'follow knowledge like a sinking star beyond the bound of human thought' Perfection is not the prerogative of mortals but to try to drink knowledge to the lees and not to miss significant knowledge in the underwood of details must be the endeavour of every managerial aspirant. Knowledge must be unified and not disparate; if not, it degenerates into acquisition of isolated facts and we may lament 'where is the knowledge we have lost in information?' Effective use of knowledge combined with a capacity for guidance and direction is the very essence of leadership and managers are leaders.

ASSEMBLY ELECTIONS

Repeat Performance

NEXT week India will once again go to the polls for the second time in three months in what amounts to a virtual mini-general election. With 2,534 assembly seats in 11 states and one union territory up for grabs, it could hardly be anything less. Which is why the assembly elections, though bereft of the urgency and vocal antagonism of the December polls, is nonetheless crucial for the main contestants. For the rejuvenated Congress(I) a drop in votes would imply a major hiccough in its runaway popularity. For the Opposition the polls represent a final test of their credibility and indeed their future.

The pre-poll scene was, if anything, symbolic of the confidence or lack of it, in the respective camps. Like his mother before him, Raj Gandhi firmly established himself as the ruling party's star campaigner, crisscrossing all the states that comprise the 280 million electorate for the polls.

But it was clearly going to be a one-sided victory once again for the Congress(I) with only Andhra Pradesh and Sikkim appearing to be in a comfortable position to return an opposition party to power. But less predictable has been the discernible and vital changes in the national election scenario. INDIA TODAY *correspondents in various states report on the pre-poll situation in all its variety.*

UTTAR PRADESH

One-way Battle

THE CHOWK, in old Lucknow, today symbolises a lot more than the colourful past of the kingdom of Avadh. The city's social centre of yesteryear is now the favourite pulpit for vote-seekers of all parties. Thousands of posters, banners, buntings and flags bedeck the small area and sum up the assembly election scene in Uttar Pradesh.

Predictably, a large majority of the posters belong to the Congress(I). And practically all of these have been there since the days of the Lok Sabha election two months ago. As the Congress(I) workers explain, they hardly needed to put in any extra effort and change anything. After all, the strategy, slogans, promises and offerings are all the same as they were in December. So is the electorate. For the Congressmen in Uttar Pradesh, thus, it is a case of resuming from where they had left off in December.

There are very few takers for the half-hearted offerings of the opposition leaders who hold meetings off and on. Their message is no longer an alternative to the Congress(I). In a belated sense of realism what they promise now is an effective opposition to control the massive majority that has already been handed out to the Congress(I) at the Centre. At his many public meetings, BJP President Atal Behari Vajpayee has been trying to put this across saying: "You have already created this large luxury train of 401 bogeys. What you have forgotten to do is to make provision for effective brakes in case, some day, it threatens to run us all over."

If only that kind of realism had permeated deep enough it may still have been possible for the Opposition to make a contest out of this walkover. But it is not so. Said senior BJP leader Murli Manohar Joshi: "I have toured the whole state and found the Congress(I) an absolutely divided house. The same is true of the DMKP. Our party only stands to gain." And following the same myopic calculations, the BJP, which has not won more than 92 seats in the 425-member house at the best of times, had put up 375 candidates in these, the most dismal of times.

> **In what is considered the power base of the country, all factors—including the Opposition—seem to have come together in a conspiracy to help the ruling party.**

But boundless optimism is one trait the politician does not lack, for despite the writing on the wall, the election has seen a fairly heavy rush for even the opposition parties' tickets. The DMKP, for example, had a list over 5,000 to choose from. And even though small when compared to the Congress(I)'s 80,000-plus,it must have been flattering to Charan Singh whom the Congressmen now often ridicule in campaign speeches as "*Shahenshah-e-alam, Dilli se Palam.*" (The king of the world whose domain stretches from Delhi to Palam). Even Rashtriya Sanjay Manch has put up a self-ingratiating 150 candidates. The consequence is the collection of as many as 1,146 candidates of the various major opposition parties challenging the Congress(I). And this is one figure that does not lie, for it speaks of the confusion, lack of vision and political pragmatism among the opposition ranks.

But that does not mean there is absolutely no challenge, for some of it comes from within.In its quest for a cleaner image the party decided to deny tickets to half of the sitting legislators, emboldened by the Lok Sabha election. Overnight, of 153 of the 306 sitting legislators were denied tickets it amounted to letting loose an army of disgruntled men. Add to this the other rejects, who touch the 80,000 mark, and it brings the party leaders in the state face to face with a virtual insurgency. As Chief Minister N.D. Tiwari confessed: "There is no point denying that we are having a problem from these people. We divide this challenge in two parts. The first is from rejected ticket-seekers who are not campaiging for the party. The second is from rebel candidates."

Reluctant campaigners include prominent men like former assembly speaker Dharam Singh, and former minister Kashi Nath Mishra, Saidul Hassan, Raj Singh Khanna and Abdul Rehman Nastar. Says Shyamlal Bajpayee, who has been denied a ticket from his constituency of Haidergarh in Barabanki district: "Now it is difficult for me to go and campaign for the party as the voters ridicule me for being a reject." He adds, bitterly: "This arrogance and overconfidence will not help the party in the long run. Today we have a situation where votes are floating about in sewerage drains. We just have to bend down and scoop them up by the bucket. But times may change. Remember 1977?"

But as of now no one seems to be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

S. PREMI

Rajiv addressing an election rally: growing confidence

very much about the harm the purge could do in the long run and, making light of the rebel activity, no one in the party seriously foresees any reverses. "Rajiv Gandhi has generated tremendous enthusiasm", said Irrigation Minister Vir Bahadur Singh, adding, "why should anyone vote for the Opposition now?" And without hesitating for a moment he predicts over 350 seats for his party.

The same spirit of overconfidence also prevails in the party headquarters which has settled for a relatively low-key campaign. Contrary to the originally agreed amount of Rs 50,000, only Rs 10,000 has been given to each candidate. The candidate has also been denied the customary gift of a jeep for the election period. As for rebel activity, the party high command's approach is to put it down with a show of firmness and the leaders are not exactly bashful of doing this publicly. An example, last fortnight, was Rajiv's almost open snub to Ashok Vajpayee at an election meeting in Allahabad. He said: "*Ashok jo tum kar rahe ho woh theek nahin hai. Apna rawaiya badaliye.*" (Ashok you are not doing the right thing. Change your attitude). Ashok Vajpayee was barely able to regain composure when Rajiv stepped into the car and drove away. Said Arun Munna, a state minister: "Whatever has been decided by the party leadership is final and those who work against it must face action."

This show of confidence stems from the party leadership's conclusion that the election result is a *fait accompli*. While efforts are still being made to assuage the feelings of rebels in certain crucial constituencies, in many more they are being dismissed as eminently ignorable clutter. As Vir Bahadur Singh puts it: "What can they do except causing a little nuisance here and there?" Besides, the party also benefits from dissensions within the opposition parties. Former chief minister Ram Naresh Yadav has led a factional walkout from the DMKP and has put up his own candidates. Even the BJP has had the rebel problem. In Allahabad city it has already conceded two seats by default with the mysterious withdrawal of its candidates.

In such a background, Congress(I) leaders expect their first challenge only after the elections—when they face the task of choosing the new chief minister. A strong power struggle has been on in Lucknow for some time with Vir Bahadur Singh making a bid for the chair. Also, waiting in the wings is Lokpati Tripathi, son of the Congress(I) Working President Kamlapati Tripathi. This did come to the fore in the course of the ticket distribution with both Tiwari and his irrigation minister lobbying for their candidates. As to who succeeded in pushing how many of his men through, estimates in Lucknow may vary from 25 to 250, depending on the predilections of the political observers. But more realistically, when the crunch comes, who has how many supporters in the Assembly will hardly make a difference. The Congress(I)'s style is to "evolve" a consensus in favour of the man the high command chooses.

Thus, in what is considered the power base of the country, all factors—including the Opposition—seem to come together in a conspiracy to help the ruling party. And it is these that make it such a non-election, a bout which begins with one of the contestants lying with his shoulder-blades inextricably embedded in the mat.

—SHEKHAR GUPTA in Lucknow

KARNATAKA

The Last Stand

AS THE ill-fitted lamps on either side of the open hatch atop the *Jaya Vahini* cast shadows on his wan face, the deepening darkness almost seemed symbolic of the times to come for Chief Minister Ramakrishna Hegde. And as the strenuous campaign for the ensuing assembly elections to 224 seats in the state neared its end this fortnight, Hegde seemed to be slowly fading out of the political climes of Karnataka. Gone was the fire from his speeches that, only two months before, had impelled his massive audiences to thunderous applause. In its place was a tone of quiet acceptance, a tiredness tinged with relief. But neither his calm nor his wit had deserted him.

Lowering his head from the hatch, Hegde told INDIA TODAY with a twinkle in his eye: "I feel like some kind of a sadhu who keeps popping out to say a few pithy words to the multitude and then retreats to a shell again to meditate." As the van sped towards another meeting and wife Shakuntala dozed on his shoulder, Hegde turned reflective. "This time, the people's mood is mysterious," he said. "They are holding their cards close to their chests. There seems to be no spontaneous outburst of feeling." Gently rousing his wife he added with a smile: "But Shaku feels that this is a good sign for me. In the Lok Sabha elections the people came to my meetings in large numbers and there was so much goodwill for me. She feels that they came only to tell me they liked me but wanted to vote for the Congress(I) at

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Hegde at an election rally: quiet acceptance

the Centre. This time they have already made up their minds to vote for me and therefore there was no need to come for my meetings. Should I go by a woman's instincts?"

Obviously, Hegde has not lost hope and his subdued campaign is part of the strategy to evoke sympathy among the voters. He tells them everywhere that he had kept his word—that if he lost the majority in the Lok Sabha elections he would resign. He then speaks softly about his government's performance: how he brought drinking water to villages, exempted tenants who claimed land under the land reforms act from paying compensation to the owners, started schools and colleges, helped pregnant women and widows with grants of money and restored the pride of the Kannadigas which had fallen during Congress(I) rule under Gundu Rao.

Once warmed up, he puts on a forgiving expression and tells the people, like he did in the small town of Bagepalli in Kolar last fortnight: "OK. So you had sympathy for Mrs Gandhi and voted for her son Rajiv although he is a raw boy of only 40 years. But if you vote for him again he will not come as chief minister. You know all the other faces who would come." Someone yelled "Gundu Rao". Hegde chuckled: "No, no. He has been banished. They will either bring Moily who tried to bribe an MLA with two lakh rupees to defect, or even Bangarappa who can never take his eyes off the chief minister's chair. Now choose between these fellows and a clean government like ours which has done good work."

Working on a campaign plagued by the usual delays and cancellations, Hegde was invariably four hours late for his meetings. Yet people waited to greet him and listened to what he had to say, suggesting that their much-beleaguered chief minister still held considerable sway over their emotions. In fact, if there is anything that might help Hegde scrape through, it is the sympathy factor. In most villages, people admitted that he was a likable leader and that during his reign the *chakoo-churi* (dagger and knife) culture that Gundu Rao had ushered in was gone. Doddanarayan Reddy, a farmer from Chaintamani, said: "We are reaping the fruits of Hegde's Government right now. Why should we throw him out?"

Hegde has not lost and his subdued campaign is part of the strategy to evoke sympathy among the voters.

Another plus factor for Hegde is the absence of a credible state leader in the Congress(I) ranks—a fact he keeps reminding the voter about at every opportunity. Moreover, the Congress(I)'s selection of greenhorns has invited the wrath of older members who are now working against the party. T.C. Narayanappa, a former block Congress president, said: "This is not the same Congress that I knew. Overnight we have become Janata sympathisers." Cutting away from the Bharatiya Janata Party (BJP) in this election may have eroded the Janata's support in at least two dozen constituencies, but it has, at the same time, helped it win over a sizeable section of the Muslim community which is disgruntled with the Congress(I) over the matter of selection.

But the backward classes and Scheduled Castes are still solidly behind the Congress(I). Said Hegde regretfully: "We should have given more tickets to them and won them over. But I was not able to convince my party on this count." The Janata is identified with the dominant communities, the Lingayats and Vokkaligas. Its campaign has been marred, too, by infighting leading to the expulsion of more than 25 rebel candidates, now working against them. Adding to his embarrassment is the resignation of horticulture minister Vyjanath Patil who was unhappy with the selection of candidates in his home district, Gulbarga.

In sharp contrast, the Congress(I) was functioning like a well-oiled machine. Apparently infected with the computer culture of their high command, local party workers were busy in their asbestos-roofed Karnataka Pradesh Congress(I) Committee (KPCC-I) office in Bangalore, churning out figures of the chances in various constituencies. Taking them as 'good', 'moderate', and 'poor', they estimated that they had a good chance of winning in at least 1[illegible] constituencies. With two central observers stationed in Bangalore to coordinate the campaign, five others were sent into the districts to report on the campaign's progress.

Following a well-conceived plan of action, party workers were told to idea-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"centres of influence" in each constituency and win them over. In Bidar, for instance, when they found that their Muslim candidate was weak and unlikely to garner Hindu support, they mobilised Veerashetty Kushnoor, a former MLA from the constituency, into campaigning for him. The main campaigner was, of course, Prime Minister Rajiv Gandhi who touched more than 10 districts in the state. When he stressed the need for a Congress(I) government in Karnataka in order to maintain harmonious relations with the Centre for quick progress, Hegde was quick to respond and accuse Rajiv of following in his mother's footsteps by crushing the Opposition and pushing the country to unitarism.

Their confidence settling in to complacency, Congress(I) workers were, in fact, behaving as though they had already won the elections. Commented Margaret Alva, union minister of state for parliamentary affairs, in charge of the campaign in Bangalore, brashly: "We don't topple opposition governments any more. We defeat them." However, the Congress(I) campaign is hampered by insufficient funds with the high command having allotted only Rs 30,000 and 1,100 posters per candidate. There are problems of internal dissension too. Says Harnahalli Ramaswamy, KPCC(I) member: "We are not afraid of the Janata Party but of the dissatisfaction of Congress(I) workers which may affect at least a quarter of the constituencies."

Unwilling to risk comparisons with Hegde, the Congress(I) high command decided to keep Gundu Rao out of the campaign. But it did not fight shy of mobilising its bevy of stars. Vyjayanthimala was roped into the effort without ado while Amitabh Bachchan was given a call to show his face. Not to be outdone, the Janata too enlisted the support of popular film stars, brothers Anant and Shankar Nag, and put up actor Chandru as its candidate in Gauribidnur.

However, even if the Congress(I) wins, it will have trouble aplenty choosing a chief minister to cement the disparate elements in the party. So far it has chosen to play down this issue, but a strong lobby is clearly emerging for Union Minister of State for Finance Janardhan Poojari, whose image in the state remains tarnished. Meanwhile, Hegde remains as cool as ever about his poll prospects. He hopes to win 120 seats in the Assembly, but in the face of possible defeat he remains just as unfazed. "I'll take a long holiday," Hegde remarks quite calmly.

—RAJ CHENGAPPA

ANDHRA PRADESH

Keen Contest

TWO YEARS after it was unceremoniously dumped by the electorate, the Congress(I) is bidding strongly for a come-back. That the party means business was made clear enough when Prime Minister Rajiv Gandhi himself launched the party's campaign in Hyderabad in mid-February and spent five more days last fortnight at 30-odd meetings in various parts of the state. Criticising the priorities of the Telugu Desam Government and dismissing Chief Minister N.T. Rama Rao's charges that the Centre was starving the state of funds, the prime minister set the tempo of the campaign which was then turned over to a battery of senior Congress(I) leaders including Union minister T. Anjaiah, former chief ministers J. Vengala Rao, K. Brahmananda Reddy and K. Vijaybhaskara Reddy.

For the first time, the party has also released a manifesto for the state which includes, among other things, the two populist schemes of NTR, with some changes. The Congress(I) offers to make rice available at Rs 1.90 a kilo—10 paise cheaper than that promoted by the Telugu Desam, and extend the mid day meal programme to all primary schoolgoers instead of restricting it to those belonging to the weaker sections. The manifesto states that the "present election to the Assembly provides a unique opportunity to the Telugu people to join the mainstream of national life. They can demonstrate to the world that they are second to none in defending the unity and integrity of the country".

While the major effort of the Congress(I) is to counter the regional pull of NTR and his populist schemes, the lack of a strong crowd-puller is a distinct disadvantage. Consequently, its campaign centres on attacks on NTR's incapacity to keep his party together and the non-performance of his government. Said AICC(I) General Secretary A.K. Antony: "NTR is not a democratic leader, for only one of three MLA's elected on his party ticket in 1983 are with him. A third of the MLA's were dropped by him and the remaining third has gone with Bhaskara Rao." But he is evasive about the disunity in his own party ranks. The induction of nearly 150 new faces as party candidates is bound to create heartburning, though Antony is quick to explain that "the disappointment over the selections was quickly forgotten and the major task was to build up the party workers' morale to campaign for the new look contingent". The party, however, is not taking any chances and its travelling team of leaders will come together for a three-day finale when they tour the major towns in the state, starting March 1, and speak from the same platform in at least a show of makeshift unity.

A. PRABHAKAR RAO

Cutouts of NTR and of Rajiv shaking hands with actor Krishna

For the Telugu Desam, NTR continues to be the star performer. Continuing an unrelenting tirade against the Centre, accusing it of neglecting the state, he informs enraptured crowds that the Centre gave only Rs 54 crore when the state asked for Rs 900 crore for drought relief.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

> "While the major effort of the Congress(I) is to counter the regional pull of NTR and his populist schemes, the lack of a strong crowd-puller is a distinct disadvantage."

adding: "We are not beggars to ask for charity or alms. We are entitled for legitimate and due shares from the Centre." The drama notwithstanding, his party has, however, not issued any new manifesto though it has renewed its old pledges of protecting the "self-respect of the Telugus" and implementing welfare programmes for the underprivileged and the poor. Commenting on the NTR offensive, the Congress(I) party leader in the state legislative council, K. Rosiah, observed: "Playing on emotions is an effective gimmick to get votes. But that cannot go on endlessly. Let NTR substantiate the charge of neglect and we will respond point by point." Said Coordinating Committee Chairman K. Brahmananda Reddy: "No new projects, whether in the field of irrigation, power or industry, were launched by him (NTR). His complaint is like creating a ghost and claiming that he alone was fighting it." At least one tenacious Congress(I) campaigner, V. Hanumantha Rao, who lost the December Lok Sabha election from the Hyderabad constituency, has an answer to NTR. For the final 10 days of campaigning, travelling in a minibus Yuva Shakti Ratham, he chased NTR and his Chaitanya Ratham in a schedule staggered to be 24 hours behind NTR. He followed up NTR by playing speeches and tributes to Indira Gandhi through a public address system and then appealed voters to support the Congress(I) candidate in that area.

And all is not hunky-dory with the Telugu Desam. Besides the differences and internal dissent within its electoral allies—the BJP, Janata, CPI and CPI(M)—from whom support may be minimal, its own fabric is falling apart with several party activists campaigning for the Congress(I) or the breakaway Democratic Telugu Desam of Nadendla Bhaskara Rao. Among those suspended from the party or dismissed were two former legislators, including Eli Varalakshmi who was elected in a by-election following the death of her husband and Telugu Desam endowments minister, Eli Anjaneyulu in 1983. Another setback for the party was the resignation of G. Hanumantha Rao from the chairmanship of the Prakasam zilla parishad and the Telugu Desam as he was not consulted in the selection of candidates in the district, including his native Martur constituency which he had vacated for NTR's son-in-law Dr Venkateswara Rao. This time Venkateswara opted for Parchur in the same district.

Another challenge the Telugu Desam may face is from the Democratic Telugu Desam which has also fielded young and new faces. It is finally contesting 222 seats. Says party General Secretary Turlapati Satyanarayana: "Our confidence has increased with the involvement of the backward communities which did not even get tickets from parties like the Congress(I) over the years. Our party will be a formidable force." But Bhaskara Rao, who toured the state like NTR did not display such optimism, and his campaigning was low key, restricted to giving away badges with his photograph, cassettes of his speeches, and copies of the manifesto offering sops. Most candidates of the party were left to fend for themselves.

The party appeared to be concentrating heavily on Malakpet in Hyderabad, from where Bhaskara is contesting, and in 50 other constituencies where it sees better prospects. It is depending heavily on Muslims and government employees —the prime beneficiaries of decisions taken during Bhaskara Rao's brief tenure as chief minister. Only eight of the 25 ex-MLA's in the breakaway Telugu Desam group, are contesting.

However, despite the threats from within and without, Telugu Desam General Secretary P. Upendra was able to confidently observe: "We will win 230 of the 249 seats we are contesting. It will be a spectacular victory." And perhaps it will be for many political analysts feel that the Telugu Desam is riding high because nothing dramatic of any serious consequence has happened between the Lok Sabha elections and now that would make the Andhra voter change his mind in favour of the Congress(I) or any other party. Said one: "If the death of Mrs Gandhi could not trigger off sufficient support, the new Central Government measures like the anti-defection bill or other declarations of good intentions cannot provide the Congress(I) the decisive edge." Edge or no edge, one certainty seemed to be that Bhaskara Rao, who virtually forced the election, will find his party's symbol of the rising sun is more like the setting sun. —AMARNATH K. MENON

MAHARASHTRA

Pawar Play

WHO WILL be the next chief minister of Maharashtra? Judging from the characteristic self-confidence with which Sharad Pawar of the Congress(S) strides on the state's political stage, he seems to think he might well be. His arch-rival and incumbent Chief Minister Vasantdada Patil, on the other hand, has gone further and forgetting his earlier protestations to the contrary, actually announced last week that yes, indeed, he would be the

> "The going may not be quite as good as the Congress(I) imagines. It is not quite as advantageously placed this time."

next chief minister—only to be snubbed by the party high command. AICC(I) General Secretary Srikant Verma pointed out that "the leadership issue is still open" and MPCC(I) President N.M. Kamble said pretty much the same thing.

That uncertainty is being exploited by Pawar and his Progressive Democratic Front (PDF) to the hilt. "They don't know who will be the next chief minister. What kind of a team is it that asks to be elected when they can't tell who is the captain?" Pawar asks derisively. In fact, the very issues of strong leadership and party unity with which the Congress(I) played the Opposition so effectively during the Lok Sabha campaign are now in the Opposition's favour. Indeed, the PDF, composed of the Congress(S), BJP, Janata and the PWP, has shown a high degree of togetherness and had little trouble with seat allotments in contrast to the situation during the Lok Sabha poll.

The Congress(I), on the other hand, has still to recover from the shock of 13 of its MLA's, including 13 of the 29 ministers being dropped in what is referred to here as the "midnight massacre". At 43 Pawar represents youth and dynamism and Vasantdada, at 67 leaning heavily on his walking-stick, symbolises age. Pawar can boast that his PDF's two-year government in 1979-80 had a fairly good record, while

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Just a year ago Vasantdada had described his own administration as crippled.

The enmity between the chief minister and his former protege began in 1979 when Pawar, then in the Congress(U) quietly deserted his mentor to bring down Vasantdada's coalition government and install himself in power with the help of the Janata Party. The two rivals share several characteristics: both are Maratha peasant leaders from the sugar-rich area of western Maharashtra who have strong grassroots support in their regions. Both are pragmatic and wily and according to their detractors not to be trusted. And both have been encouraging rumours about the other cannot count on his party's loyalty.

In fact, Pawar has been touring the state with his sights set on the chief ministership for the last two years. Though he himself won the Baramati Lok

Patil and Pawar (below) addressing public meetings: chief contenders

Sabha seat convincingly in December, he has made it clear all along that his real target was the assembly poll. The BJP and Janata, in a chastened mood after the Lok Sabha defeat, are ready to go along with Pawar. In the ticket distribution the Congress(S) got 124 seats, the BJP 66, Janata 61 and the leftist PWP 29.

Despite the PDF unity, however, other opposition parties will cut into the anti-Congress vote. The multiplicity of parties is most apparent in Bombay city which has 34 seats. The contenders include Datta Samant's Kamgar Aghadi Party, the two Muslim Leagues as well as the Shiv Sena, which was rapidly jilted by the BJP after a disastrous association and the RPI, the CPI and CPI(M), angry that they have been kept out of the new front to make room for the BJP.

This led actor and MP Sunil Dutt to belittle the Opposition by saying: "While the Congress(I) is a happy home where parents and children live peacefully, the Opposition is nowhere near a house and is no family at all." But his analogy was not apt. The Congress joint family was far from happy, with 28 rebels in the fray including a dozen MLA's. One of them, Shalutai Buddhiwant from Parvati, Pune embarrassed the party by claiming that the Congress(I) had misused her signature to falsely announce that she had withdrawn. "I am very much a contestant", she said at a press conference where she explained how the party tried to fob her off with an MLC seat which has so far not materialised.

In west Nagpur, former minister Satish Chaturvedi, denied a ticket, is standing as an independent against the convenor of the notorious National Students Union of India (NSUI) conference held last year in the city, Avinash Pande. In Jalgaon another MLA and former chairman of the state transport corporation, Suresh Jain, is contesting on the Congress(S) ticket, which has created some unpleasantness in the PDF camp.

More dangerous than the rebels whose numbers are comparatively small are the senior partymen who have been unceremoniously dismissed and are sulking in the sidelines. These include Vasantdada's recent cabinet ministers Shivajirao Patil Nilkangekar, Pratibha Patil and Baliram Hiray as well as sugar barons Y.J. Mohite from Karad, Ratnappa Kumbhar from Ichalkaranji and Shankarrao Kolhe from Kopargaon. Also bypassed have been former deputy chief minister N.K. Tirpude and N.M. Tidke from Vidarbha and Baburao Kale from Marathwada. While the majority of Sanjay Gandhi youths has been junked, about 40 Youth Congress activists have been given tickets, they being part of a significant new lobby emerging in the state encouraged by the prime minister and Arun Nehru.

To silence the oldsters, the Congress(I) offered the sop of tickets to their relatives instead. Baliram Hiray's ticket went to his wife Indirabai, who will now be contesting against her sister-in-law Pushpa Hiray of the Congress(S). N.K. Tirpude's ticket has gone to his son Rajkumar. Nilkangekar's son Dilip has been substituted for him and Pratibha Patil's husband Devisingh Shekhawat will be her proxy. Another dropped minister, Kallappa Awade, has been replaced by his son Prakash. One deserving relative who was denied a ticket, however, is the chief min-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ister's dynamic and controversial wife Shalini Patil. Rejected for a ticket from Kopargaon she seemed visibly upset as she remarked: "I feel I was being taken advantage of in time of need and side-tracked when the going was good."

But the going may not be quite as good as the Congress(I) imagines. Though it won 51.2 per cent of the popular vote and 43 of the 48 Lok Sabha seats in December, it is not quite as advantageously placed this time. "The issues of an assembly poll are different," points out Pawar, who has based his campaign on "bringing back for Maharashtra its lost prestige". In one-party rule, he said, the chief minister will mortgage the interests of the state to the Centre just to ensure that he is not dislodged. Pawar argues that non-Congress governments such as those in Karnataka, West Bengal and Andhra Pradesh have received a better deal than Congress(I)-ruled states. But in all this Pawar makes no criticism of Rajiv Gandhi aware as he is of the young prime minister's personal appeal in the electorate.

In Marathwada, where in 1980 the Congress(S) won 17 out of 48 seats, all PDF candidates have posters and banners projecting Pawar as the leader while the Congress(I) relies only on Rajiv Gandhi. Vidarbha in eastern Maharashtra with 66 seats is another region which could prove fertile territory for the Opposition. Last week Congress(I) Vidarbha candidates sent an SOS to Parliamentary Affairs Minister H.K.L. Bhagat, who is the observer for the state, protesting that the chief minister Vasantdada Patil, MPCC(I) President N.M. Kamble and Central ministers Vasant Sathe, Narasimha Rao and Ghulam Nabi Azad have not bothered to campaign here. In contrast the PDF campaign is off to a good start.

Considering the Lok Sabha results, however, the mood in the Congress(I) continues to be buoyant. Vasantdada talks confidently of 235 out of 288 seats. Pawar puts his estimate for the PDF at a more modest 170, which Vasantdada dismisses as empty bravado. The prime minister, in Kopargaon last week, compared the PDF to a torn umbrella which would not withstand the rain. But what Pawar would like to know is that if the Congress(I) is so confident of Maharashtra "how come Rajiv Gandhi is touring Karnataka and Maharashtra for 11 days out of his total 20-day election programme?" The answer will soon be forthcoming.

—COOMI KAPOOR

HIMACHAL PRADESH

Worthy Fight

WHO IS the Opposition's best friend in Himachal Pradesh? Who else but Bhajan Lal, the ambulatory chief minister of neighbouring Haryana. Bhajan Lal has helped breathe new life into the Himachal opposition and its hope of undoing the hopelessly one-sided verdict of December 1984. This is one of the factors which has given a competitive edge to the forthcoming election to the 68-member Assembly in the small, partly snowbound hill state. The one person who is not amused is Himachal Pradesh Chief Minister Virbhadra Singh, who has to face a rejuvenated opposition and the thought that he may have lost some of the advantage which prompted him to gamble on a mid-term election in the wake of the parliamentary landslide.

> "The Congress(I) wave has not fully abated. But the advent of local factors, have made it a fight worth fighting for the Opposition."

How has Bhajan Lal wrought this magical transformation for the Opposition? Simply by suggesting that Himachal Pradesh be merged once again with Haryana and Punjab. So, what may have been meant as a warning shot to force the Akalis in Punjab to the negotiating table, has backfired on his counterpart in Himachal, who goes around the state protesting that he will never accept Himachal's merger with its neighbours. But the main opposition party, the Bharatiya Janata Party (BJP) and its electoral allies, the Janata and DMKP have seized with alacrity the opportunity to parade as protectors of Himachal's identity in the face of Bhajan Lal's expected onslaught. Virbhadra Singh's hopes of a replay of the December verdict may not have evaporated, but they are certainly going to be harder to fulfil.

All this could change and the merger issue still be defused if Prime Minister Rajiv Gandhi categorically scotches it on his election-eve swing through Himachal on March 3. Till that happens the BJP and its allies will continue to argue that a Congress government in the state, bound by party discipline, would not be able to oppose merger if the Centre eventually decides on it. Only an opposition government in Himachal could do that, they say.

But anticipating that Rajiv may kill the merger talk, the BJP is keeping another potent election issue in reserve: a promise to supply all Himachalis with subsidised atta (wheat flour) at Re 1 a kilo, rice at Rs 2, and salt at 10 paise a kilo. This could prove to be a potent vote-getter, agrees Ram Lal, former chief minister who sits sulking in his Shimla home, annoyed that he has not been asked to help the party in electioneering. Ram Lal says he knows from experience that NTR in Andhra Pradesh succeeded in winning a lot of sympathy simply by giving people subsidised rations. The promise of cheap atta and rice "could work" in Himachal too, says he. Subsidised foodgrains were a subject of discussion wherever people gathered. "Even if we manage to get atta at Rs 1.50 a kilo instead of Re 1, it will be something great," they said.

Former speaker of the Assembly, Thakur Sen Negi, 75, a crusty bureaucrat who retired as chief secretary before entering politics, agrees that the foodgrains issue must be kept warm. Bhajan Lal, argues Negi, is not the kind of person to talk so loudly about merger on his own. "There is definitely some inspiration behind it." He says Rajiv could have refused outright to turn the clock back on history, "but he

hasn't.... so we are right in sounding the alarm". If it comes to a choice between believing Virbhadra Singh or Bhajan Lal, most people, Negi included, would believe the latter. Bhajan Lal's finely honed instinct of self-preservation would not let him stick his neck out unless he knew the merger move was blessed from above.

Ironically, the ubiquitous Congress posters proclaiming the message *"Congress Lao, Pradesh Badhao"* are gleefully interpreted by opposition candidates as proof that the Congress wants the state to be enlarged, merged with adjoining states. The BJP has cleverly put up its own posters alongside, countering *"Himachal ko bachao*, BJP *ko jitao"*. This apart, opposition unity and the presence of half a dozen serious Congress rebels in the fray, including some former ministers, has led to direct contest. The Himachal Pradesh Congress Committee(I) has had to expel several former ministers and an AICC member Mrs Bimla Mahajan, who are contesting as independents after being denied the party ticket.

All this is not to say that it is still an equal contest in Himachal. Negi concedes that the Congress(I) wave has not fully abated and women may still turn out largely to vote for the Congress. But the advent of local factors, the personality of the candidates and the new issues raised have made it a fight worth fighting for the Opposition.

Other issues were also sought to be raised by BJP President Atal Behari Vajpayee when he stopped at Shimla at the end of a bone-chilling tour through Himachal which was punctuated by rain,sleet and snow. Vajpayee likened the Central Government to a train, with colourful new bogies, a spanking new engine and even a new driver. The train was speeding along obsessed only with speed. But the train lacked brakes and was in danger of capsizing or overrunning all obstacles. The Opposition could function as the brake to control this runaway train, said Vajpayee. Judging from his arguments it was clear that the BJP and the Opposition had decided not to dwell in the past and to look ahead. Quite appropriately, Vajpayee's meeting ended with loudspeakers blaring out the song *"Murh murh kay na dekh"*. Whether the coming assembly election will really give the BJP and the Opposition in Himachal Pradesh a chance to put its bleak past behind it, only the election results will determine.

—RAMINDAR SINGH in Shimla

BIHAR

Rebel Rousing

THE SOUNDS of celebration after last December's stunning Lok Sabha victory have been overtaken by the din of revolt in the Congress(I). In spite of efforts at all levels to control the situation and bring the recalcitrant in line, the party officials in Bihar discovered last fortnight that at least 18 MLA's and as many as 150 party workers including district-level functionaries were still in the arena posing a challenge to official candidates. "The fight this time is not between the Congress(I) and the Opposition but it is going to be Congress(I) versus Congress(I)," admitted a senior party leader.

The widespread rebellion has set off ripples of fear among party leaders who feel they may not be able to repeat their performance of the December elections.

The distribution of tickets last month has triggered off the present crisis in the Bihar Pradesh Congress(I) Committee (BPCC-I). As many as 70 sitting MLA's, most of them considered men of considerable clout and responsible for Congress(I) victories in the past, were dropped from the list. Consequently, many aspirants including a number of DCC presidents who had sought party tickets were openly trying to sabotage the prospects of the official nominees. Though BPCC(I) chief Bindeshwari Dubey admitted "some of the defected partymen are working behind the scene to defeat Congress(I) nominees," he asserted that the presence of rebel candidates would not really affect the prospects of the party. But many of his supporters said that Dubey himself was feeling unsure in the Shahpur constituency in Bhojpur district.

The threat is no trifling matter, for last fortnight the high command rushed Union Works and Housing Minister and former chief minister Abdul Ghafoor to contain the situation and assess the mood of the partymen. In some of the more sensitive districts, the situation has assumed unmanageable dimensions. Muzaffarpur is dotted with rebels and the chances of the official candidates are far from comfortable in six of the 11 constituencies. Most of the rebels who include prominent citizens like *mukhiyas*, members of the zilla parishad, chairmen or members of the regional party divisions, are known supporters of Chief Minister Chandrashekhar Singh. In each of the 16 constituencies of Purnea district, every official candidate is facing two or three rebels.

In Nalanda's Biharsharif constituency, posters of the official candidate Shakil-uz-Zaman, BPCC(I) minority cell convenor, were destroyed by party workers protesting the denial of a ticket to Dr R. Isri, the DCC chief who had already filed his nomination in anticipation. It was only when Dr Khalid Rashid Saba, minister of state for urban development, interceded and persuaded the local leaders to cooperate with the party that peace was made between the two camps. However, Dr Isri boycotted both the chief minister's and Jagannath Mishra's election meeting when they were held in Biharsharif.

Dubey too was at the receiving end of protest. On his way to a meeting in Dhanbad, Dubey, who is also president of the Indian National Trade Union Congress (INTUC), was greeted by black flags and slogans. The meeting itself was disrupted and the local Congress(I) MP Shankar Dayal Singh had to be rescued by securitymen. The reason for the altercation was, as elsewhere, "wrong selection" of the candidates for the eight seats in Dhanbad. Trouble started when one of the candidates complained that party workers were sabotaging his campaign. The workers led by Mannan Mallick, DCC president, retorted that the candidate was not even a member of the Congress(I) party.

The widespread rebellion has set off ripples of fear among party leaders who feel they may not be able to repeat their spectacular performance of the December elections. Privately some leaders admitted that the Congress(I) could not expect more than 250 seats though in the Lok Sabha elections they had led by a wide margin in 276 of the 321 constituencies going to the polls. Said J.P. Choudhary, former AICC member and party leader from Ranchi: "For the first time the party is immobilised and people are not showing any enthusiasm due to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the confusion created by the leaders." Even if the party receives a massive victory, it will not be because of the efforts of the state party leaders, but "because the people have no alternative," he added.

Kamalnath Singh Thakur, MLC, and Mishra supporter feels that regional issues are of no consequence and that Rajiv Gandhi remained the most important issue to the electorate. "Rajiv Gandhi's determination to check black money had created tremendous psychological impact on the minds of the poor and middle class people," he asserted.

K.M. KISHAN

Jagannath Mishra at an election meeting: internal squabbles

The indiscipline in the ranks was not the only issue worrying party leaders. With caste an important consideration, distribution of tickets defying this tradition has been resented. Maithili Brahmins of the Darbhanga region were sore that many of their leaders had been ignored. Sensing the mood of the crowds in Darbhanga last fortnight, a constituency the Congress(I) lost to the DMKP in the general elections, Rajiv Gandhi during his two-day electioneering in the state told his audience that it was untrue that those denied tickets were corrupt. The party wanted to introduce new faces as an experiment, he said. Interestingly, Jagannath Mishra, a Maithili Brahmin and sole member of the central campaign committee was conspicuous by his absence at this meeting. Bhumihars were annoyed that their leader Ramashray Singh had been denied a ticket. The Kaisthas were unhappy that only one ticket had been given to them. And the Yadavs were indignant that the five MLA's their leader Ramlakhan Singh Yadav had brought to the Congress(I) had been sidelined.

To make things worse the non-gazetted officers in the state began an indefinite strike last fortnight, which was called off after three days, further blackening the Congress(I)'s chances. "If the strike continued and if the Government failed to concede their demands the party may lose many seats because the employees had been a deciding factor in many ways," said a Congress(I) leader. The chief minister has been under attack in this issue for not negotiating immediately to settle the strike and also for trying to create a "third force" outside the Congress(I). Defending himself hotly against such a charge, Singh said: "Only a fool can say this about me. Those who coined the idea should know that in the Congress(I) there is neither first force, second force nor third force. Congress(I) is a well-organised national party led by Rajiv Gandhi and we all are committed to his leadership and the party."

Attempting to restore discipline, the BPCC(I) called a meeting of PCC presidents last fortnight to prepare a list of "rebels" for expulsion from the party. attendance was dismal and no consensus could be reached. Dubey conceded that it would be wrong to expel the rebels before the poll was held. The meeting decided that the party leaders would continue their efforts to persuade the rebels to give up their fight. Acting on Dubey's suggestion it was decided that three lists would be prepared: of rebels in the field, of those working against official candidates and of those who filed nominations, withdrew their candidature and are now working for the party.

In spite of the strife, the Congress(I) hopes to benefit from the disunity among the opposition parties. Interestingly, in only one constituency is the fight straight and in another triangular. In 88 constituencies the number of candidates ranges between four and nine, while in the rest there is a multi-cornered contest. As many as 2,755 candidates out of a total 4,320 are independents. Among the major opposition parties the DMKP has fielded 282, followed by Janata 236, BJP 250, CPI 160, Congress(J) 75, CPI(M) 47, and Congress(S) 42 to fight elections to the 321 constituencies going to the polls.

Pitted against an opposition so divided, the Congress(I) appears set to win the next round—but the fight is not going to be so easy since the party is currently suffering much the same fate in Bihar.

—FARZAND AHMED

MADHYA PRADESH

No Contest

WITH a record number of 112 rebel candidates in a house of 320 and a three-month-long student agitation on a sensitive issue like reservations showing signs of hotting up as the assembly elections draw nearer, Madhya Pradesh Chief Minister Arjun Singh is having to fight just that much harder to deliver the goods this time round. What is not worrying him, however, is the prospect of facing any tangible threat from the main opposition party in the state, the BJP. The party is limping along in disarray after a humiliating defeat in the recent Lok Sabha elections where the ruling party made a clean sweep of all the 40 seats.

> **"Singh can afford to be optimistic with the BJP in no position to capitalice on the Congress revolt and anti-reservation stir."**

But Singh is going to have a lot of explaining to do to the people as the anti-reservation agitation which began on November 18 and was spearheaded by the students, spread to 25 of the state's 40 districts. Over the past three months, there have been numerous processions, incidents of stone-throwing, road blockades, and slogans against what the students see as disproportionate concession to the weaker and backward sections for job and admission reservations, in an obvious bid to win votes.

According to the agitating students, there was already a 55 per cent concession for Scheduled Castes and Scheduled Tribes. On November 18, shortly before the Lok Sabha elections, a further 25 per cent concession was announced, covering also the backward classes, women, the handicapped, and other economically deprived classes. The net result has been that 1,358 of the 1,725 seats for engineering students are already reserved even before a student appears for the competitive examination. Similarly for the polytechnic courses, of the 3,720

seats in the state 2,831 seats are already reserved.

"What about us, who do not fit into any of these categories?" asks Shailendra Singh, a student leader and secretary of the Students Action Committee. "We thought it was time we brought it up and we choose the election time to do so because we can at least hope to drive home our point now," he says. He and other student leaders presented a memorandum to Prime Minister Rajiv Gandhi when he visited Bhopal to address an election rally. Arjun Singh, who is otherwise known to rise to most occasions and effectively at that, has chosen to take the easy way out. He has so far neatly evaded any statement that may suggest a reversal of his policy. He merely appealed to the students to call off the agitation and promised to meet them after the election.

But the fact that the issue has become something of embarrassment cannot be denied. In fact, even the BJP has remained pretty much non-committal on the issue. This is probably because neither party wants to take any particular stand. With 70 per cent of Madhya Pradesh consisting of the tribals, Scheduled Castes, and other backward classes, the outcome of the polls depends largely on their votes. While some sympathy is evident in the towns for the anti-reservationists, in the rural areas the agitation is actually expected to strengthen the Congress(I) chances. Therefore, naturally, the Congress(I) lost no time in laying the blame at the BJP's doorstep. Congressmen like Motilal Vohra, PCC(I) president, charged the BJP with supporting the agi-tation—a charge which was quickly and vehemently denied by the state's BJP leaders.

Though the issue involved a large number of students of no particular political affiliation there was evidence to suggest that disgruntled Congressmen may be involved in fuelling the agitation. After having been unceremoniously denied tickets to contest the assembly elections, most of them were too frustrated and cut up to hide their glee when the agitation picked up. "I am only hearing pro-Rajiv and anti-Arjun Singh slogans," claimed one prominent dissident gleefully.

At Arjun Singh's election meeting in Shahdol, where former Madhya Pradesh law minister, K.P. Singh who was denied a ticket and was present as an official party observer, anti-reservationists created a stir by setting fire to some huts in the town. K.P. Singh denies that he had anything to do with the agitation. "I was away for most of the time and I actually persuaded the students to give up the agitation," he says. According to the chief minister's supporters the agitation began in Rewa from where another prominent dissident Srinivas Tiwari hails. From Rewa to Shahdol the agitation spread through the prominent dissident areas like Jabalpur, Chattarpur, Sagar and finally Bhopal. Strangely enough, at many places, leaders of the National Students Union of India, the student's wing of the Congress(I), were seen inciting the agitationists.

The dissidents obviously aim to prove that Arjun Singh does not have the capacity to capitalise on the ruling party's recent electoral success. And it is probably their last chance to voice their disapproval of the dropping of as many as 92 MLA's including 14 former ministers and corporation chiefs. "This is a revolt of unprecedented proportions," says a dissident.

Says Suresh Seth, a former mayor and minister who has been denied a ticket and is now contesting the Indore seat as an independent with the support of the BJP, "Arjun Singh wants only yes-men around him and he is harbouring visions of being the prime minister." While Arjun Singh insists that the expulsions will have no effect on the party's performance, the revolt is likely to put paid to any ambition on the part of the ruling party to attempt a repeat performance of the Lok Sabha elections.

However Singh can afford to be optimistic with the BJP in no position to capitalise on the Congress revolt and anti-reservation stir. In the Madhyabharat region of the state which was considered

Anti-reservationists block roads in Bhopal: emotive issue

R.C. SAHU

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the BJP's strong base, the party secured lead in only six of the 102 assembly segments. In Chattisgarh where there are 90 assembly segments, the party did not get a lead even in one while in Mahakoshal region which had 76 seats, the party gained a lead only in one assembly segment. Their staggering defeat earlier has forced even BJP leaders like Sunderlal Patwa to fight the assembly elections from two constituencies, Bhojpur and Manasa in Mandsaur district where he comes from. "I am fighting from two constituencies on the direction of my party," he says. Just how difficult a task he faces is evident from the question of Ram Singh, a villager in Bhojpur. "Who is Patwa? If you want the patwari he is not here."

And Patwa is not the only one fighting the gruelling battle with his back to the wall. Former Janata Party minister and the BJP's favourite 'Mr Clean', Kailash Joshi who has all along been winning from Bagli, was also affected by the party's near-neurotic fear of being routed and filed his nomination from two more places. But at the last moment decided to fight only from Bagli where no one is betting on his chances. In fact, so great is the BJP's fear of defeat that as many as 16 former MLA's refused tickets.

To make matters worse, former chief minister, V.K. Saklecha, who is now contesting the election as an independent has clearly got the support of the Congress(I), though this is only because the official nominee of the Congress(I) failed to arrive in time to file his nomination. Saklecha who has formed his own party, has three nominees fighting against the official BJP nominees. Significantly, Arjun Singh's Government which launched a case against him when he was in the BJP seems to have conveniently forgotten all about it. And it is to Singh's credit that he has also managed to get his most outspoken critic Rama Shankar Singh, a former Lok Dal nominee, to fight on a Congress(I) ticket. There is certainly enough indication that Singh is not a politician to be trifled with, that the high command is still quite convinced that revolts and agitations notwithstanding, Singh is still their best bet. In fact, so great is the party's faith in him that he was allowed virtually a free hand in distributing tickets in the state, and is the only chief minister in the country to have the maximum number of nominees of his own choosing. Though he has yet to justify this faith in him, for the wily Singh, this is the stuff chief minister's dreams are made of—full party support and an overwhelming majority in the state.

—RAJU SANTHANAM in Bhopal

ORISSA

One Man's Hope

IF TEAR-JERKING statements at public meetings could arouse sympathy and win votes, then the veteran Janata Party leader Biju Patnaik, 73, would romp home against all odds. Biju tells his audiences: "March 5 is my birthday. Give me your vote as a last gift, elect me as your chief minister as I may not survive long. I want to die serving my state and the people." He harks back to the illustrious days in the state during his chief ministership two decades ago and tells people that they can change the course of history. At least while he is talking to them, very few in the audience realise that Biju's party had only 14 members in the outgoing Assembly and even if it retained its strength this time, it would still be hardly anywhere near capturing power, leave alone Biju Patnaik becoming the chief minister.

The charisma that he still displays in Orissa appeared to be the only saving grace for Biju Patnaik.

Political realities have it that his party led in only 16 assembly segments and that too mainly in the coastal areas. In the last assembly elections, his party had so few members in the house that it could not get recognition as the main opposition party. Biju had then out of disgust vacated his seat. Many hope that if the situation repeats itself this time, he would have to again leave the Assembly. The prospects apart, his party is heavily criss-crossed from within with a silent war launched by a group known as the 'salseed lobby' to instal as leader Ram Chandra Rath, the former Union minister of state. Backed by powerful industrial and agricultural interests, the group was able to pressurise Biju into accepting many of its proteges for party tickets.

Tensions with the Rabi Ray group of former socialists had also brought about acute disenchantment among many party workers seeking to contest in the poll. As many as 25 of them left the party and have filed nominations as independents in open rebellion against the party. Biju is stated to have denied tickets to even those whose names were cleared by the party's parliamentary board. Worse, he is said to have gone about changing candidates even after the date of withdrawal, thus causing much resentment among the rank and file of the party. Surendranath, former president of the state unit of Janata Party, who resigned protesting

Biju Patnaik campaigning: with hope

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

against Biju's 'dictatorial attitude', said the only intention of Biju was to capture power with the help of his 'yes-men'. The result has been that the party's campaigning has not picked up at all what with Biju's own ill-health and his having to concentrate on his Bhubaneswar constituency.

Another factor that may thwart his bid to return to power in Orissa was the party's failure to arrive at an understanding with the other major opposition parties like the CPI. The idea of forming a regional party was deliberated on the eve of the poll but it could not materialise in spite of the best efforts of the salseed lobby which is known to be interested in taking the state unit of the party away from the national mainstream. In all this confusion, Biju has consequntly not only ended up leaving his party almost resourceless but has also driven the warring opposition parties to limits of exasperation. The Congress(I), on the other hand, has steadily managed to effectively control its campaign to what may prove to be to its ultimate advantage.

Rajiv Gandhi's open praise of the state administration in its bid to modernise Orissa too came as a boost to the local leadership everywhere. In many respects this has quite completely taken the thunder out of Biju's campaign. Last fortnight, all he could single out as an issue was the failure of the state Government to set up the state's second steel plant at Daitari—an issue that could be hardly considered significant enough to arouse the masses. This was in sharp contrast to the kind of campaigning that Biju carried out during the Lok Sabha poll when he highlighted local issues, pointed to the seeming corruption in the J.B. Patnaik Ministry, saying openly that if he was voted to power he would "put all corrupt Congress(I) people behind bars".

The charisma that he still displays in Orissa appeared to be the only saving grace for Biju Patnaik. It had been this single factor that had spurred him on every time he set his foot on the campaign trail. It was also largely because of his hopes in Orissa that his party could tot up as many as 35 lakh votes against Congress(I)'s 46 lakh in the recent Lok Sabha poll. His supporters have fondly hoped that if the party could increase its number of votes by just another 10 lakh, they would have as good a chance of forming a ministry as the Congress(I). But simple arithmetic often does not work in politics as Biju Patnaik and his followers may discover at the hustings.

—FARZAND AHMED in Bhubaneswar

GUJARAT

Testing Time

AS AGITATIONS go, the anti-reservationists last fortnight stole the headlines with their acts of violence and arson in different towns of Gujarat. The massive campaigning for the upcoming assembly poll to that extent was relegated into the background. They had created cause enough for the Madhavsinh Solanki Ministry to spend sleepless nights at a time when it could sit back and expect to repeat the party's Lok Sabha poll performance of near-total rout of the Opposition.

The agitation led mostly by anonymous students in many towns all over Gujarat against the revised reservation policy of the state Government have cast their long shadow over the assembly poll. With the annual examinations approaching and the high court's stay order on the policy, it was anybody's guess how the shadows would lengthen, although it must be said in favour of opposition parties that none of them has made any visible attempt to capitalise on the issue. In fact, their reactions have been as low-key as to be almost minimal. And understandably so because at least 75 per cent of the people in the state stand to benefit by the revised reservation policy.

To that extent, the Solanki Government's political sagacity in announcing the revision virtually on the eve of the poll can be properly appreciated. But to the extent that the policy only gives a new fillip to casteism of a reverse kind, the change has been universally castigated almost from the day it was announced in mid-January.

The latest agitation started a month later at the L.D. Engineering College, Ahmedabad, where the students were having their semester examinations. The college management was asked to postpone the exams and in view of widespread incidents of arson and rioting in the city, the Government took the peremptory step of closing 54 colleges of Gujarat University affecting some 50,000 students. All secondary and high schools in the state were asked to close down till March 15, the obvious calculation being that the Government wanted no trouble during the assembly poll.

Even as the agitation spreads to newer towns, some thoughts are being spared for what is described as the 'half-baked' policy of reservation. The state Cabinet had made a low-key announcement through Welfare Minister Devjibhai Vanvi that on the recommendations of the Rane Commission, some 82 backward castes be accorded more reservation to the tune of 18 per cent in medical and engineering colleges as also in govern-

Students protest: unpopular policy

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment jobs. This raised the total reservation from 31 per cent that had already been in existence and had been so violently objected to four years ago to a whopping 49 per cent.

What the state Government did not reveal from the Rane Commission's findings soon came to light and it transpired that Justice Rane had in fact based his report on the premise that caste should not be the basis for reservations but new parameters of backwardness should be formulated. These, he is said to have suggested, should be based on the income and educational level of the family, its occupation and its landed property among other things. The Government which had been deliberating over the report for the previous 18 months has not made the report public and the impression has spread that it had interpreted Justice Rane's recommendations out of context.

Notwithstanding that the anti-reservation agitation has had its impact, this is likely to be neutralised in the countryside where Solanki has his real mass base.

Yet the vehemence with which the issues are debated in the streets and the media would make it seem that a drastic social change is sought to be introduced by the Solanki Government. In reality, it marks only a further spurt in the change that has been visible in Gujarat over the past few years, especially the five years of the Solanki Ministry. Explaining the ideological basis for the policy a few days after the changes were announced Solanki told INDIA TODAY in New Delhi: "The poor farmers and tribals need a break if they are to catch up with the modern-day world. Education is the only effective medium through which this can be brought about. Other communities have had their say for centuries. It is now time for the lower and the underprivileged classes to come up." But the bias in favour of the neglected communities, Solanki insisted, is not necessarily against the traditional upper classes. It only means that they would have to strive that much harder.

Much of this rationalisation is, however, drowned in the cacophony of arguments and allegations, especially against the backdrop of hectic campaigning across the state. There is much truth in the general view that the agitation is confined to the urban areas. Even Solanki had cited instances where urban feelings made no difference to the overwhelming support the ruling party received during the Lok Sabha poll. Anti-Kshatriya feelings in the heart of Kaira district had led to massive booth-capturing in a prosperous Patel-dominated town like Dharmaj, but the final result showed that other communities turned up in bigger strength elsewhere to vote for the party candidate. This kind of backlash cannot be entirely ruled out for the assembly poll either.

On other counts, the very fact that so many of the party's candidates are new has given a new dimension to an otherwise lack-lustre campaign as the Opposition does not make any bones about its strength in most constituencies. No meaningful unity could be achieved and in most constituencies the opposition candidates are fighting against each other as also against the formidable Congress(I) candidates. On its part, the Congress(I) had reason enough to feel happy because for the first time, the dissidents within its ranks have been virtually wiped out. Exulted Solanki: "The very fact that many professionals from various areas have been included shows the eagerness of the party to infuse new blood and introduce a new political culture."

Among the new faces in the fray is Nalin Patel, president of the Gujarat Chamber of Commerce. Says Patel: "The newcomers will be enthusiastic and clean. This is the right time to strengthen the hands of the Government." Among the more glamorous personalities are Upendra Trivedi, the popular hero of Gujarati films who is contesting from his home town Bhiloda in north Gujarat, and Urvashidevi, daughter of the former Maharaja of Baria.

Notwithstanding the shadow of casteism, the voting pattern may change at best only marginally. Some surprises in the urban areas may initially create the impression that the anti-reservation agitation has had its impact, but this is likely to be neutralised in the countryside where Solanki has his real mass base. Nonetheless, what is also clear is that the agitation is not something to be taken lightly.

—C.J. PATEL and RAMESH MENON

RAJASTHAN

The Jat Factor

EVEN in its wildest dreams, the Opposition would not have expected the kind of windfall that came its way when a relatively unknown independent MLA from Deeg was killed in what was officially described as an 'encounter' with the police early last week. The chain of events that hit the headlines in newspapers across the country led to the resignation of chief minister Shiv Charan Mathur, the swearing-in of a comparative newcomer to the political arena in the state and finally to a perceptible erosion of the ruling party's image just a few days before the state was to go for the assembly poll.

It all depends on how the Opposition capitalises on the killing of Man Singh. If no wave of any significance develops, the Congress(I) has no reasons to lose sleep over the episode.

Even before the dramatic turnabout, Rajasthan's opposition parties had showed an unusual propensity for unity in the face of the worst kind of adversity they found themselves in following the December poll for Lok Sabha when the Congress(I) captured all the 25 seats. In fact, this times round, Rajasthan became the first state in the country to witness seat adjustments among major opposition parties. The BJP, the DMKP and the Janata Party had hammered out a consensus to put up single candidates over as many as 185 of the 200 assembly seats. This was in sharp contrast to the total lack of understanding between and among these parties only two months ago. In as many as 16 Lok Sabha constituencies, candidates of two of the major opposition parties and in seven constituencies, candidates from all the three opposition parties were battling it out with the Congress(I) candidate. Small wonder all they managed to do

New from GENELEC

'Slim' Patti with new generation choke and starter

Genelec Patti (Batten)

Sleek yet robust. Made from special CRCA steel, super stove enamelled. Fitted with the new low watt-loss Genelec choke and instant starter with unique radio interference suppression.

Genelec Choke (Ballast)

Guaranteed for 5 years

- Totally safe.
- Saves up to 40% energy over ordinary chokes.
- Designed to last a lifetime.
- Unique screwless connection locks wires in place.
- Works silently.

If your choke fails during the guarantee period, Genelec will replace it. No questions asked.

Genelec Starter

- Unique nylon housing makes it totally safe and dent-proof.
- Starts tube instantly, without flickering.
- Radio interference-free performance.

When you buy a Genelec Patti you buy the best. Get Genelec and make life brighter for years.

Genelec chokes and starters are available for your existing pattis and tubelight fittings.

Classic introduces a unique travelling style.

Custom crafted by Gordon Woodroffe.

The Classic Saddle

An exclusive carry-all for the connoisseur

From Europe comes a totally new concept in luggage. The Classic Saddle Bag. Crafted from thick, soft, expensive leather. In a rich shade of burgundy.

The Classic Saddle Bag. You can sling it over your shoulder. Or simply 'saddle' it on your briefcase to make one compact carry-all. Either way the saddle will surprise you with its design comforts. Spacious, separate sections for everything— from trousers and shirts to socks, slippers, shaving kit, even papers and files.

The Classic Saddle. It's a different class.

Available in major department stores and exclusive retail outlets in Calcutta, Bombay, Delhi, Madras, Bangalore, Hyderabad, Ahmedabad and Kanpur, and at selected Welcomgroup Hotels.

CONFESSIONS

of a Hostess.

"Parties at home spelt big trouble until I discovered Insulated Casseroles from Eagle".

Share a secret with this experienced hostess who enjoyed having guests over but... "all through my parties I found myself mostly in the kitchen heating the food. I couldn't circulate among my guests. It totally ruined my evening."

"And then came the Eagle Casserole. No more hassles. No more reheating."

"Once food was prepared it stayed hot for hours in the Eagle Casserole. This gave me enough time to meet my guests without the worry of food getting cold."

"Believe me, our parties got perkier with Eagle Casseroles and that's no small talk."

Eagle Casseroles are part of the exciting Eagle Thermoware range, available in convenient sizes, exciting colours, with stainless steel inners and attractive Kunststoff bodies.

Thermoware is insulated with Eagle's Imported and Patented Poly-Insulux.

"Poly-Insulux is a wonder insulation," says Eagle.

"It's made from Polyurethane and can retain temperature for hours. What's more only Eagle Thermoware has it."

was to cancel each other out.

Now it seems that the lessons of the rout have been learnt. Opposition leaders for once shelved exaggerated claims of influence and tried to sort out personal differences. The agreement could not have come a day too soon: the assembly poll is a struggle for survival.

Not that the odds are not heavily stacked against them. Consider the facts: not only had the ruling party captured all the 25 Lok Sabha seats, it also led by overwhelming majorities in as many as 187 of the 200 assembly segments. Moreover, what no claims of opposition harmony could conceal was that the victors had romped home with huge majorities. In 132 segments, the Congress(I) received more than 50 per cent of the votes. Significantly enough, even if the total votes polled by BJP, DMKP and Janata were to be clubbed together, it was all too apparent that the Opposition could lead in only 38 segments.

But the opposition parties were determined to reverse the trend. The campaign strategies as they unfolded over the past month further reinforced the impression. As the BJP state unit President Hari Shankar Bhabhra says: "We are not going to be drawn into any discussion with regards to the Centre." Bhabhra says that the opposition's campaign moved around the theme of Rajasthan's backwardness and the feeble efforts of the Government to fight it. Bhairon Singh Shekhawat who masterminded the unity talks and is projected as the alternative leader of Rajasthan, says: "We tell the voters that if the results now are the same as the last time, we will end up with a one-party system. The Opposition will become irrelevant and there will be no avenue left for people to air their grievances. We will have a one-party dictatorship."

In contrast, the Congress(I)'s poll strategy has been built around the new prime minister and a harking back to his family's contribution to India. Says Nawal Kishore Sharma, the Rajasthan PCC(I) president and Union minister of state for petroleum, quite frankly: "Rajiv is our trump card. His image among the people is very good and we are going to cash in on it."

AMLOK PATNI

Chief Minister Deopura being sworn in: comparative newcomer

Opposition leaders, on the other hand, hope that the extraordinary margins of their defeat will in a sense work in their favour. They claim that even at village level there is concern over the decimation of the Opposition that the Lok Sabha elections brought about. They in effect seek the sympathy vote which the Congress(I) itself sought earlier.

Added to that is now the Jat factor after the killing of Man Singh who belonged to the Jat community. A wave of Jat anger started sweeping eastern Rajasthan and threatened to engulf the entire state barely a week before the poll. The spate of violence and demonstrations that followed the cremation of the Bharatpur Maharaja's brother was clearly underplayed by the new government headed by Hiralal Deopura. In the election speeches, party candidates either side-tracked the issue or made passing remarks about the new ethos of discipline the party exuded. They even put up a nonchalant front. Says Pradyuman Singh, former minister of state for home and a recent rejectee at the party ticket distribution: "I don't think the incidents will affect votes in more than about three assembly constituencies near Deeg. Man Singh was hardly a great social worker. Why should people be expected to respond?"

AZAD SHARMA

BJP, Janata and DMKP leaders releasing joint manifesto: real unity

Others were even more harsh in their comments. Sharma says: "He was an eccentric and what he did was the action of a madman. His killing has undoubtedly hurt the sentiments of a section of people. But even under normal circumstances, police action arouses anger. So it is not unexpected. But the reaction is by and large nominal."

Notwithstanding this kind of bravado, the party echelons were clearly taut with tension. The Jats are spread over Bharatpur, Dholpur, Alwar, Sikar and Jhunjhunu districts. Above all, since the state historically consisted of scores of old princely states like Bharatpur, the sentiment among the masses has been always sympathetic to the former rulers. How important is the support of the old princely families for political gain is exemplified by the ruling party itself for its having nurtured virtually dozens of them. In the latest election campaign, the party was fervently hoping that Lt. Colonel (retd) Bhawani Singh of the former Jaipur royal family would actively campaign for the party. He had earlier given his oral support to the party and if he indeed openly campaigned, for the party the Congress(I) felt that the impact could be significant at least in and around Jaipur. On the other hand, if he too kept out as many others of his kind were beginning to do, the party may have a difficult contest ahead.

Barring these factors, however, it all depended on how the Opposition capitalised on the killing of Man Singh. Waves of any kind take an incredibly short time to spread and it cannot be entirely ruled out that a Jat wave or a pro-princes wave might yet develop in Rajasthan. If no wave of any significance develops, the Congress(I) leaders have no reason to lose any sleep over the whole episode.

BHAWAN SINGH

RAJASTHAN

Controversial Killing

ON THE face of it, it sounded like a cops-and-cowboy melodrama out of a curry Western: people's hero is humiliated, wreaks revenge to restore honour, then falls in full public view to a hail of bullets on the main street of his one-horse town. But in reality, there was something peculiarly and inimitably Indian about the bizarre incident in Deeg last week, in which Raja Man Singh, local MLA and scion of the ruling house of Bharatpur, first smashed the chief minister's helicopter in a fit of rage and then came to a sticky end at the hands of the police.

If Man Singh was promptly catapulted to martyrdom by his Jat followers, the police action aroused violent public reaction, and the Government was left in a deeply compromising situation politically at the crucial time of the assembly elections (*page 38*). The scenes of public protest that followed Man Singh's killing forced the Rajasthan chief minister Shiv Charan Mathur to resign (*see interview*) and, by week's end, the police officer who ordered the firing, had been suspended and a judicial inquiry had been ordered into the matter.

Meanwhile, the immediate repercussion was a daunting prospect for the ruling party. The princely family of Bharatpur being the only Jat ruling house in the country, the reaction to the ex-Raja's bloody death could reverse an already reluctant Jat vote that the Congress(I) has fervently nurtured in as many as six Jat-dominated assembly constituencies in and around Bharatpur.

Curiously enough, the whole episode occurred in the heat of the election campaign. And while it may be easy to cast the 64-year-old Independent political leader in the role of the half-demented feudal going on a rampage, and equally expedient to imagine that the policemen, led by Deputy Superintendent Kahn Singh Bhati, fired in the interest of public safety, both possibilities seemed improbable at closer investigation. The massive turnout at Singh's funeral in Bharatpur signified that he was, in fact, a much-loved and popular figure.

Man Singh (above) and massive crowds following the funeral cortege: spontaneous support

His eccentricities notwithstanding, the fact that he had retained his assembly seat uninterrupted since 1952 is clear indication of the confidence he inspired in his mandate. And the growing number of eyewitness reports to the shootout, which happened after all in the crowded main street of Deeg in broad daylight, suggest

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

BHAWAN SINGH

that the police firing was both hasty and unjustified. There is no proof to suggest that Man Singh was armed (his revolver was later found packed away in a trunk at his camp) and though a single *katta* (country-made pistol) was recovered from the party of about 16 men travelling in his vehicle, it cannot be assumed with certainty that it was used.

What is certain is that the police party led by Bhati fired several rounds, first to puncture the tyres of the vehicle, and then shot at him in the arm and back, killing him on the spot, and two of his supporters who died on the way to hospital. Vijay Singh, Man Singh's son-in-law who was sitting beside him, ducked when he heard the bullets whizzing past and was later dragged out by the police and hit on the head with rifle butts. "It was definitely a planned murder," says Singh, who is married to Man Singh's third daughter Deepa. "It was the police jeep that rammed into Raja Sahib's vehicle, and not the other way round. Ask anyone on the street as they all saw it."

The damaged helicopter (above) and Man Singh's widow with daughters

BHAWAN SINGH

In fact, Singh claims that his father-in-law was going to give himself up for arrest when he heard that he was charged under Section 307 of the IPC with an attempt to murder, after he had rammed his World War II weapon carrier truck repeatedly into the chief minister's helicopter parked at Deeg, thus imperilling the pilot's life who leapt out to safety in the nick of time.

Last week, the three-seater Turbo Bell helicopter owned by Maneckji Aviation Pvt Ltd of Bombay, was lying abandoned in the school compound where it had first landed on the fateful afternoon of February 20. Its fibreglass bubble was broken and its engine badly damaged. Evidently the incensed Man Singh had rammed his one-tonne vehicle into the helicopter not once but several times, as sweet revenge for Congress(I) workers tearing

S.C. MATHUR

"I followed my conscience"

WHEN Shiv Charan Mathur, 59, took over as chief minister of Rajasthan, he was a surprise choice. But by the time he resigned last fortnight, he'd been in the job longer than anyone other than Mohan Lal Sukhadia. Mathur came into politics with a byelection from Bhilwara in 1964. Re-elected in 1967, he was first minister for education and then for agriculture and civil supplies. But in 1968, he had resigned following opposition allegations that he had acquired some land illegally. He resumed his post after an inquiry found the charges to be false. Mathur lost the 1977 election, and although re-elected in 1980, kept a low profile till he was asked to replace Jagannath Pahadia.

As news of Man Singh's slaying spread through the state and tension rose, Mathur at first carried on as normal. Finally, at 12.30 p.m. on February 23, three days after the incident, and prompted by a firm message from the high command Mathur drove to Governor O.P. Mehra's residence and emerged an hour later having submitted his resignation. Later that evening, Revenue, Labour and Mines Minister Hiralal Devpura was asked to take over as chief minister. Three hours after he resigned, Mathur spoke to Jaipur Correspondent SREEKANT KHANDEKAR. *Excerpts from the interview:*

Q. *Why did you resign? Should a chief minister be responsible for the acts of each of the thousands of government employees?*

A. I want to maintain the high traditions set in the party as shown by Shastriji when he resigned, particularly because this incident occurred at the time of elections and involved a person who was himself a candidate. The judicial inquiry will determine the truth of the incident, but what is undeniable is that he was killed. By resigning, I have sought to assuage the feelings of the contesting parties.

Q. *Does this mean that were the elections not being held and had a legislator been killed by the police, you would not have resigned?*

A. Had the circumstances been different I would not have quit. The im-portant thing was that the person shot was a contestant.

Q. *When did you actually decide to quit?*

A. The matter had been lurking in my mind ever since the death (February 21). And last night (February 22) after electioneering during the day I reached a decision and informed Delhi—I decided not to delay it further.

Mathur: relieved

Q. *Was it your own decision, or did the prime minister ask you to step down?*

A. The prime minister did not ask me. I followed the dictates of my conscience. After sending off the letter to the prime minister's office, I spoke to his aides who felt that my stepping down would enhance my prestige as well as that of the party.

Q. *What difference would the killing of Man Singh have made on the elections had you not resigned?*

A. It would have affected us in only three or four constituencies in the Bharatpur area. That's all.

Q. *How did you react to the helicopter episode? The allegation is that you asked the local police to take strict action.*

A. I did take the incident very badly, but I made it clear that the law should take its own course.

Q. *How will this move affect your political career?*

A. The last time I resigned (in 1968) it made a good impression. In fact, there were several editorials in leading dailies praising my action. This time too I am sure the people will be convinced that what I have done is in keeping with the highest traditions of democracy. As for the future, I don't think one should look upon politics as just a career. I am willing to perform any duty or accept any charge that the party gives me. I wouldn't mind working as even an ordinary party worker.

Q. *How do you feel after quitting?*

A. (Smiling) Don't you think I look relieved and composed?

down his personal yellow-and-blue flag with the figure of Hanuman emblazoned in the centre and also destroying his campaign posters.

"A nobleman will tolerate any humiliation, but not that of his personal standard being insulted," explained Man Singh's distraught wife later at his Moti Jheel Palace in Bharatpur where he was cremated amid a vast crowd of supporters who spontaneously turned up to shout slogans like *"Giriraj Maharaj ki jai"* and *"Raja Man Singh amar rahe"*. Other family members, a wide cross-section of Rajput nobility from distant parts of the country who had turned up in mourning, echoed Man Singh's white-haired widow's sentiments of the unholy desecration of the royal standard which her husband had also adopted as his political symbol.

In the streets of Deeg, any feeling of half-hearted regret at Man Singh's action was eclipsed by outrage at the manner of his death. Balkishan, a pavement boot-polisher whose stall lies exactly opposite the scene of the police confrontation, claimed in a voice heavy with emotion that Man Singh was shot at pointblank range without provocation. "He was butchered in cold blood and the whole bazar saw it," he said.

BJP leader Bhairon Singh Shekhawat, former chief minister of Rajasthan, who was at the funeral, was yet more explicit about the cause of the slaying. "The chief minister made a very provocative speech saying that Man Singh would be taught a lesson. Next day he was taught that lesson by gunshots. If, in fact, the Raja had caused a provocation by damaging the chief minister's helicopter they should have arrested him, not murdered him," he said vehemently.

An indication of the emotions aroused in the Jat community was available when the congregated mob following the funeral cortege around Bharatpur city set alight four police jeeps. Two days later three people were killed when the police opened fire to disperse angry crowds that gathered outside a guest-house in Deeg where a new DSP was staying. Much of the mob fury was focussed against the ruling party, in particular the Congress(I) MP Natwar Singh, now minister of state for steel, who was advised against attending the funeral.

While the Deeg election has been countermanded (curfew was clamped in the town after the police firing) the killing has at once provided an opportunity for Bharatpur's erstwhile ruling family to temporarily paper over their political differences as well as given opposition par-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ties in the Jat belt of Rajasthan-Uttar Pradesh-Haryana an unexpected fillip. At least four of Bharatpur district's nine assembly constituencies are Jat-dominated but the ripples could rock the ruling party's chances further afield. When the Deeg by-election is called, it is likely that Deepa will contest. "My father used to take me everywhere on his political campaigns," she told INDIA TODAY last week, "and he often suggested to me that I should take a more active interest in politics."

OTHER family members are also trying to cash in on the widespread sympathy the tragic death has effected. Man Singh's younger brother's son, Arun Singh, was claiming that if the Government did not arrest Bhati forthwith, he would immolate himself in the main public square of Bharatpur. And his cousin, Vishwendra Singh, son of Man Singh's older brother Maharaja Brijendra Singh of Bharatpur, was suddenly extolling his deceased uncle's virtues when it is a well-known fact that there was no love lost between the brothers. "Because he didn't have a son, he treated me like one," he said. In last year's parliamentary election, while Brijendra Singh had backed the Congress(I) candidate Natwar Singh (also distantly related to the ruling family), Man Singh, ever the contentious younger brother, obstinately refused to do so, and in fact filed his own nomination papers. It was with difficulty that he was persuaded to withdraw his candidature but even so, in the Deeg assembly segment, Natwar Singh lost with a margin of 6,000 votes.

As tangled as the saga of the Bharatpur ruling family's politics are the twists in the personality of a man who straddled them firmly for a span of 33 years. From all accounts Man Singh was a forceful, capable and effective leader, scrupulous in his dealings and amazingly intuitive in capturing the pulse of the people in every election. Although he changed his constituency on more than one occasion, he eschewed political alignments throughout his public career except once when he fought the election on a Swatantra Party ticket because it represented the interest of the princely families. And despite his idiosyncracies such as sudden fits of uncontrollable rage or an unabashed propensity to liquor, he was not the cantankerous, high-handed loon that the helicopter incident makes him out to be. Nephew Vishwendra Singh is probably right in describing him as a "strong-minded figure, aware of his heritage and roots and a totally public man". In short, he possessed unquestionable qualities of leadership—a fact emphasised by the unanimity of Jat anger at his killing and the tension it has created in the area.

Deserted main street in Deeg

"It was definitely a planned murder. It was the police jeep that rammed into Raja Sahib's vehicle, and not the other way round."

—VIJAY SINGH

The killing apart, the anger is fuelled by the ham-handed way the whole episode was handled by the state authorities. A full day elapsed before any moves were initiated to arrest Man Singh, and it is clear that the police party were given no instructions on how to handle him. Nor was the arresting officer chosen with care: Bhati has been involved in controversial incidents before where lives have been lost, and caution alone demanded that a more senior officer be deputed for such a delicate task.

How, if at all, the ruling party will manage to assuage the hurt sentiments of a community will depend as much on Congress(I) strategy and leadership in the few days left before the poll. Accepting the chief minister's resignation is a step in the right direction. So is ordering the suspension of new Bhati and summoning all the policemen involved for further investigation. But it will take considerably more to offer a proper requiem to a man whose hold upon his mandate was unshakeable. Eccentric prince he may have been, but his uncanny awareness of the working of grassroot politics was immeasurably superior to that of local Congress(I) leaders.

TAMIL NADU

Straws in the Wind

BUT FOR the histrionics, the political developments last fortnight in the ruling AIADMK in Tamil Nadu were like the closing shots of a typical MGR film. The hero and his heroine, Rajya Sabha MP and former propaganda secretary of the party Jayalalitha Jayaram, who had been estranged for a few agonising months thanks to MGR's hospitalisation in New York, were to all appearances happily reunited. Although there have been no violent staircase encounters between the convalescing hero and the "villains" who kept Jayalalitha away from him during his illness, an articulate AIADMK partyman predicted: "MGR is going to slowly rehabilitate Jayalalitha. He may not do anything dramatic immediately, but she will be built up again over a period of time."

The signs of MGR's Jayalalitha tilt are pretty obvious. The new 17-member state cabinet has been described by political commentators as a compromise effort aimed at continuing the status quo because important ministers had been retained. On the other hand it shows subtly but surely where the new MGR wind is blowing. The composition of the cabinet was a sure snub to the so-called coterie of Information Minister R.M. Veerappan, Finance Minister V.R. Nedunchezhiyan and MGR's wife V.N. Janaki with whom Jayalalitha had waged an open and direct war of words on the eve of MGR's return.

> **The composition of the cabinet was a sure snub to the so-called coterie with whom Jayalalitha had waged an open and direct war of words on the eve of MGR's return.**

Confirming the trend S. Thirunavukarasu, the leader of the AIADMK's youth wing and a strong ally of Jayalalitha, who had been demoted from the excise, commercial taxes, handlooms, and textiles portfolio in the caretaker cabinet by Nedunchezhiyan supposedly on MGR's orders, has been elevated to the higher food portfolio in the new cabinet. Thirunavukarasu had even gone to the extent of announcing his resignation from the caretaker cabinet, questioning whether MGR's decision to demote him was an independent one or an influenced decision. MGR persuaded him in a confidential tete-a-tete soon after his return to revise his decision. Significantly the chief minister, unable to utter more than a few monosyllables, had waved Janaki and

Thirunavukarasu (top) and Krishnaswamy: restoration rites

Nedunchezhiyan out of the room when Thirunavukarasu came for his meeting. Thirunavukarasu's berth in the new cabinet has come in spite of all the talk in the Veerappan camp about the certainty of his being dropped to add new significance to the murky drama.

Nor was Thirunavukarasu the only straw in the wind. K.A. Krishnaswamy, the earlier minister for dairy development, one of those party leaders who had privately questioned the correctness of Nedunchezhiyan professing to act for a hospitalised MGR, has now been rewarded with the additional portfolio of labour. On the other hand, S. Raghavananadam, former labour minister known to have been one of the critics of Jayalalitha, lost his ministership in spite of the attention he sought by publicly announcing a visit to Tirupati to thank Lord Venkateswara for saving MGR from death. C. Ponnaiyan, former industry minister who was close to Veerappan, has now been cut down to law. MGR himself is retaining the industry portfolio.

The other former ministers who were dropped were all either critics of Jayalalitha or people who owed their induction in the cabinet to the fact that they were loyalists of the former AIADMK food minister S.D. Somasundaram from the Thanjavur-Tiruchi-Pudukottai belt. Somasundaram, who was dismissed from the cabinet and expelled from the party (INDIA TODAY, September 30, 1984), was a virulent critic of Jayalalitha, but had considerable clout in the Tiruchi-Thanjavur region. MGR's tactic to undermine his strength had been to take his loyalists and followers into the cabinet. People like S.R. Radha, T. Veerasami, R. Arunachalam, K. Kalaimani, and S.N. Rajendran, the other five ministers who have been dropped, all fall into this category. From the earlier cabinet of 25, P. Kolandaivelu has been elected to the Lok Sabha and M. Vijayasarathy lost the assembly election.

If these aren't pointers enough, MGR's defiance of the Veerappan-Nedunchezhiyan clique has been consistent even otherwise. On the eve of his return from New York, when there was still considerable speculation about the actual state of his health, Nedunchezhiyan had ventured to comment that MGR might be a minister without portfolio for a while so that he could take time off to fully recover from his illness. Nedunchezhiyan would not like to be reminded of this public statement of his now because MGR has taken on a host of important portfolios, like home, public and general administration and industry, at least for the time being.

The shape of things to come was fairly evident even when MGR, after being sworn in as chief minister for the third time, lost absolutely no time in restoring his trusted lieutenant and confidant, the Director-General of Police K. Mohandas, to his earlier post of DGP (intelligence) from the innocuous designation of special officer, training and administrative reforms. Mohandas had been dethroned on the eve of MGR's return in a move widely known to be Nedunchezhiyan's.

But the coup de grace to the Veerappan clique came with Jayalalitha's ultimate success in meeting MGR. Meeting MGR itself had become well nigh impossible for Veerappan's opponents in the party. Thirunavukarasu had only to announce that he was going to New York to see his leader when pat came a telex message from MGR in Brooklyn asking him to hold on in Madras. And ever since MGR entered Apollo Hospital in Madras on the midnight of October 5, Jayalalitha had been consistently denied access to him. She made several unsuccessful attempts to see him at the hospital. Wiser by Thirunavukarasu's experience, she did not attempt to go to New York.

Even when she went to Meenambakkam airport in the early hours of February 4 with a very weighty and impressive garland with which to welcome her leader back home, Jayalalitha was not allowed to see MGR. She waited for over three-and-a-half hours at the airport VIP lounge, but all to no avail. But the ice thawed ultimately, and the two had a full hour's meeting at the secretariat on the morning of February 19. And this was amidst widespread rumours that they had met privately earlier. Looking very cheerful and happy, Jayalalitha emerged with MGR from the secretariat after that meeting and saw him off to his car before driving away. That evening MGR issued a statement arguing that "no significance need be attached to the meeting", claiming it was a routine courtesy call by Jayalalitha, but the very fact that MGR saw the need to issue such a statement spoke its own story.

That is where things stand now in the silent political movie lorded over by a speechless MGR. The shots have frozen where the hero has again apparently made peace, in sign language, of course, with his heroine. But how exactly the villains are going to be vanquished and made to eat humble pie yet remains to be seen.

PUNJAB

A Dangerous Limbo

BLUE is fast yielding ground to saffron in Punjab's "blue belt"—the southern districts in the Malwa region so dubbed because of the blue turbans the Akalis wear. Malwa has traditionally been Akali country. But saffron or *kesri*-coloured turbans are now seen as often. Senior Punjab officials touring the state have recently been greeted by a sea of saffron turbans at public meetings and functions everywhere. Saffron is the colour signifying sacrifice and; in this case, defiance of Central authority.

This is only one of the signs of a growing sullenness, a mood of resentment. "The *kesri* turbans are only a straw in the wind but they are indicative of a trend," said a senior Punjab official concerned with the maintenance of law and order in the troubled state. "Today it is only the colour of the turban, tomorrow this defiance could take a more direct form," said the official. Other pointers are the attacks on the two head priests, and the recent wave of arson incidents involving government-run schools. "There will be more such incidents," he fears.

The mounting anger among the youth of the state has left an extremely thin dividing line between extremists and non-extremists. The people arrested in connection with the most serious offences in recent weeks are all youth who have no previous criminal record. Neither Darshan Singh nor the four associates arrested after their abortive bid to kill the head priest of the Akal Takht, Giani Kirpal Singh, have a criminal record. Darshan Singh told the police that he and his co-conspirators had harboured a grudge against Kirpal Singh for making a statement on television that the Golden Temple was not damaged during Operation Bluestar. He allegedly added that since that day he had been looking for an opportunity to kill the jathedar.

Following this disclosure, the Punjab police is reported to have told the Central Government that the lives of the jailed Akali leaders would be in danger if they were released. "They don't want police guards or gunmen, and safeguarding their security will be a serious problem," said the official. This is not to say that the Government was planning to release the jailed Akali leaders. Home Minister S.B. Chavan, who sits on the three-man cabinet committee on Punjab, made it clear to INDIA TODAY that the time had not yet come for direct negotiations with the detained Akali leaders. "It has been made clear that the Akali leadership has to unequivocally say that it will not insist on the Anandpur Sahib resolution. This is a precondition for any negotiations with the Government," Chavan declared. He said the Akalis had disapproved of extremist violence "but let them say unequivocally they don't approve of the use of violence for solution of problems". However, even as Chavan was still talking of the Anandpur Sahib resolution, Prime Minister Rajiv Gandhi in his latest speeches before

H.S. LONGOWAL

Cautious Tone

AT THE small Udaipur airport the sight of any Sikh passenger gets the rather oversized police detail visibly stiff. And the reason for this is more than the background of a hijacking from here in the past. In a stately Rajasthan State Electricity Board guest-house on the outskirts of the town now stays Sant Harchand Singh Longowal, dictator of the Akali Dal morcha launched from the Golden Temple three years ago. And the initial police reaction invariably is that every Sikh alighting at Udaipur either wants to contact Longowal on the sly or attempt to do something else, perhaps even more felonious.

Yet, people have made it to the makeshift prison, often with official backing and kept the old leader in communication with the key surviving leaders of his party through a regular exchange of letters. In some of these he has answered crucial questions on the Akali perception of the present situation, their attitude towards the Government and terms for a possible solution. Last fortnight, INDIA TODAY was able to get access to some of these, scribbled in Punjabi and signed by Longowal himself. The following are some of the key statements he makes:

► "It just so happened that two emotional youths got after Sant Bhindranwale but he did not actively support Khalistan. He passed on the buck to me saying that if Sant Longowal supports Khalistan I too would. But neither did the Akali Dal support Khalistan, nor was there any transmitter for contact with Pakistan. Nor, I will state categorically, has the Akali Dal ever supported extremism or secessionism.

"I will state categorically, the Akali Dal has never supported extremism or secessionism".

SANT HARCHAND SINGH LONGOWAL

► "Following its philosophy of peace the Shiromani Akali Dal is agitating for its just rights in a way acceptable to any free country. An evidence of this is the courting arrest of over 3.35 lakh people up to June 3 without any violence in

> "The Akali leadership has to unequivocally say that it will not insist on the Anandpur Sahib Resolution. This is a precondition for any negotiations."
>
> S.B. CHAVAN
> *home minister*

the assembly elections dropped insistence on the resolution and laid down two simple preconditions for talking to the Akalis: that they disown the terrorists and that they raise only such demands as could be discussed within the framework of the Constitution. This appeared to be a climb-down from his earlier uncompromising position, and one that could open the door for negotiations.

It would only be fitting for Rajiv to take the initiative himself on Punjab in the light of the fact that people like Chavan are not even aware that there are two versions of the Anandpur Sahib resolution. Chavan admitted as much, but added he was sure the version of the resolution he had seen must have been the "authentic one".

The Akali leadership on its part is in a quandry. The second string leaders acting as the party's spokesmen are hardly in a position to know the mind of the detained leaders. Yet what they say is being taken by the Government to represent Akali thinking. And the Government itself refuses to say whether or not it is talking directly to the detained Akalis. Despite reports of a Longowal-Subrahmaniam meeting (*see box*), Chavan insisted, "If Subrahmaniam has met detained Akali leaders he has not reported to us (the cabinet committee) what transpired. I am not quite sure whether he has met them or not. We have not been sending any emissaries from the Government. But private efforts are always there; volunteers are trying to help."

With the Government undecided about talking directly to the detained Akali supremos or at least reluctant to admit it was opening a channel to Longowal, the situation appeared for the moment to be hanging in a limbo probably awaiting the assembly elections to be over so that the issue could once again go to the top of the Government's agenda.

Meanwhile the proposal to create a 500-yard-wide belt of no-man's land along Punjab's extremely porous 350-mile border with Pakistan, appeared to have run into trouble with the state agriculture department strongly opposing it. The department has told the Government that the cost of acquiring over 65,000 acres of this extremely fertile and expensive land would run into hundreds of crores, not to mention the value of the crops that would be lost. A small state like Punjab cannot afford the luxury of letting this fertile soil lie uncultivated. "In any case this is a hare-brained scheme," commented a senior Punjab official, and it would not help a great deal in preventing exfiltration of Punjab youth across the border. A better way of tackling this problem and that of terrorists who sneak in from Pakistan would be to use the newly constituted anti-terrorist cell of 700 to 800 men drawn specially from the Border Security Force and the CRPF

Another development which could worry the detained Akali leaders is the emergence of the National Sikh Forum in Punjab, with Amrinder Singh of Patiala and Lt-General J.S. Aurora as its co-convenors. For the moment the forum appears to have decided to stay out of the political arena and not to challenge the Akali Dal's authority in Punjab. But Amrinder is known to harbour strong political ambitions and is keen to fill Punjab's leadership vacuum. For the moment, however, the council's first priority is to defuse the tension in the state and secure a return to some semblance of normalcy. But how soon, remains anybody's guess.

—RAMINDAR SINGH

---

spite of the death of 300 of them at the hands of the Government. Lakhs of Sikhs had taken the oath of remaining peaceful at the Akal Takht sahib in the presence of the head priests. How can a Sikh defy such an oath?

▶ "At the time of Independence Mahatma Gandhi was against the division of the country. But those who had the hunger for prime ministership and power did not bother. The comrades (communists) spoke the same language too.

▶ "What has happened in Delhi has deeply shocked me. The community will not be able to make up for the loss in a long time. But I believe that the same thing would have happened some time even if Mrs Gandhi was not killed. It is said that the very community which stood for the welfare of the whole mankind has itself been terrorised like this.

▶ "This question, I have often been asked, that who should the Sikhs support in the elections. I strongly feel that our fight is with the Congress and not with the Hindus. So we should determinedly defeat the Congress—but the final decision on this is with the party executive and Mr Thekedar. We should be in touch with the other opposition parties. But in times such as these we must tread carefully."

Longowal's tone conforms to his utterances of the past. But in spite of the clear statement of support for the country's integrity there is a certain amount of hesitation in talking about the Anandpur Sahib resolution directly. That is the most crucial part on which emissaries have been trying to get a conciliatory statement out of him.

And there has been no dearth of such emissaries in Udaipur. The traffic began with sundry, middle ground Akali sympathisers such as Giani Gurdit Singh, of the Singh Sabha Shatabdi Samiti who met Longowal within a fortnight of his arrest. He was followed on August 29-30 by Akali Dal MP Lehna Singh Tur who also happens to be the son of a former Akali Dal morcha dictator and strongman Mohan Singh Tur. After the assassination, Buta Singh was immediately sent to Udaipur in the second week of November. His was not a particularly successful mission as Longowal refused to talk to him till the high priests' excommunication order on him was operative.

The Government acted more diplomatically now by sending soft-line Akalis, Ravi Inder Singh, the former Punjab assembly speaker and Raja Narendra Singh of Nabha, a former legislator. The two, on return, reported that they found him in a conciliatory mood. This, understandably, is what prompted R.V. Subrahmaniam, senior advisor to the Punjab governor to visit Udaipur.

As the most powerful Akali leader, Longowal faces daunting compulsions. From the prison, he has no control over the party rank and file. At the same time, if released, he would face physical threat from the extremists who accuse the party leaders of having fled from the Golden Temple. Yet, as his statements and reports of the emissaries show, he is not averse to conciliation. That is an encouraging sign, for any effort to resume the dialogue on Punjab obviously has to begin at Udaipur.

MANIPUR

Bloody Encore

THE MARAUDERS were the same, weapons similar and the spot on the winding hill road chosen for the massacre not too far from where Manipur Chief Minister Rishang Keishing's convoy had been ambushed during the December election campaign. Only the victims this time were different—a junior commissioned officer (JCO), 12 jawans of the army's Grenadiers Regiment and a circle officer with two jawans of the Village Volunteer Force (VVF), an armed rabble raised from among the local population to counter insurgency in the villages. But the message was the same as in December, that the 2,000-strong National Socialist Council of Nagaland (NSCN) is getting impatient with the change in the insurgency scene elsewhere in the northeast and wants to reassert its presence.

The ambush, which left all the 13 armymen and the VVF circle organiser dead and another wounded marked a serious turn in the situation which has been building up in the past few months, beginning with a series of small incidents in Nagaland's Mon district, then at Pfutsero in the Sema Naga country.

But last fortnight's ambush is by far the most serious in this series and is almost as significant as the infamous massacre of 22 troops and a major of the 21st battalion of the Sikh Regiment at Namthilok, in Ukhrul district in February, 1982. As a senior army officer stated, "Since the days of high insurgency in the '60s there have not been more than a dozen times that the army has suffered so many casualties in one ambush. It has been a folly to think that the Naga insurgency is a thing of the past."

Like the Namthilok ambush the latest one, which took place between Chassad and Kangpat on a decrepit second world war road connecting Ukhrul with the border tracts along Burma (*see map*), was planned meticulously and with firm knowledge of the truck's arrival. The truck, on a routine "administrative move" was trapped on a sharp, blind bend. The men had no chance. Recovery of empty shells from the spot indicates that some of the jawans fired back. But the resistance was obviously disorganised. Highly placed sources also say that the empty shells of weapons used by the ambushers bear Chinese markings. But the most intriguing factor is the role of a VVF man. Of the three VVF men in the truck, one, the circle organiser, died, one was found wounded and the third was missing. He was the one who first reached a nearby village and informed people of the ambush. Intelligence agencies suspect that he was in league with the rebels and has now escaped to Burma along with them. Else, they say, there was no chance of his survival.

The search has yielded nothing so far. Patrols are now scouring the adjoining Burmese jungles in tow with the Burmese army. According to initial reports, however, the ambush was led by the same self-styled lieutenant Livingstone who pulled off the Namthilok massacre. He, along with the NSCN "Foreign Secretary" Angelus has been occasionally seen by intelligence operatives in the area.

The location of the ambush and (above) Livingstone: deft planning

The ambush, security agencies feel, is a clear indication that the rebel activity is part of a conscious plan to stir up trouble. Further evidence to back this theory was available later last week when yet another band of NSCN guerrillas got into an accidental scrap with a routine patrol of Nagaland police near Dimapur, the state's railhead bordering Assam. The short, bloody ecounter left three guerrillas and a police sub-inspector dead. Two of the fleeing rebels were caught after a long pursuit and officials say their interrogation may help find out more about the NSCN plans.

Senior officials in the Home Ministry ascribe the renewed violence to the growing feeling among the NSCN that it is being isolated now with the capitulation of the Peoples Liberation Army (PLA) in the Imphal valley following Bisheshwar Singh's entry into the Assembly and the near-agreement between the Government and the Mizos. Since the bulk of the pro-Phizo Naga Federal Government (NFG) men have already come overground after the Shillong peace accord, that would leave the NSCN almost alone to fight the Government's might. Officials say the renewed activity is meant to pressurise the Government into approaching the NSCN for negotiations.

But reports from Kohima indicate that as far as the state Government is concerned such pressure is irrelevant since Congress(I) Chief Minister S. Chubatoshi Jamir has been in constant contact with the NSCN through emissaries. During the assembly election in November 1982 the NSCN had issued a circular soliciting votes for him. Since then, even the Centre is in the know of at least three groups of emissaries sent across the border by Jamir to contact NSCN men. Jamir has been defending this liaison by arguing that since his arch-rivals in the Naga National Democratic Party (NNDP) keep contact with NFG it is unavoidable for him to be on talking terms with the other group. The NSCN and NFG have a long history of fratricidal conflict. But so far the Centre has not made up its mind on opening another front for negotiations.

But this indecision has led to a paradox which the Manipur Government finds upsetting. The NSCN the best trained among all the insurgent groups in the northeast has still not been outlawed despite requests from the Government. Officials admit that this has been done under pressure from the Nagaland Government which argues that there is no point banning the NSCN since it hardly exists within Indian borders.

Last fortnight, while further reinforcements were sent to Ukhrul, the Manipur Government had intensified its campaign for the ban. And if it wins this time, the murderous NSCN bands will have only themselves to blame.

FASHION SCENE SUMMER '85

THE SPOTLIGHT'S ON THE REFINED MASCULINE LOOK.

By Dinky Mascarenhas, Menswear Stylist & Wardrobe Consultant, Charlie, Bombay.

"The highlights of the season are dignified classics inspired by the on-going dialogues between Indian and Western fashion sensibilities.

A. THE SUMMER TUXEDO: It heralds a new urban ease in formal evening wear. With a superbly crafted off-white jacket cut away from the shoulder, to bring the bodyline into sharp focus. And ably supported by an off-white dress shirt, slim brocaded Bow-Tie, jet black Tuxedo trouser, black socks, and patent leather black dress shoes.

B. THE JODHPURI: Universally acclaimed as the "Nehru Coat" it returns home to the fashion mainstream this season. The styling details include a shoulder-to-hip parallel cut, a slight tapering at the waist, a valet pocket and self-fabric buttons.

A

B

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

C. THE KURTA CHURIDAR: In styling, simple to the point of ingenuity. The detailing is minimal, but clever—an asymmetrical opening that runs vertically, and is fastened by 24 carat gold buttons.

D. THE SAFARI: Designed to take the starch out of summer, with easy-to-wear shapes and a decidedly more elegant look. The styling emphasis is on relaxed contours and out- sized geometric pockets.

INTERNATIONAL FILM STAR: KABIR BEDI

E. THE SHIRT & TROUSER: In combinations that allow a variety of summertime sartorial options, for anytime dressing. The striped look is 'in'. And soft-line designer trousers put a spring in your step this summer."

Fernandez (above) and Anthony addressing the Bangalore meeting, with Barrow to his right; rift in the ranks

ANGLO-INDIANS

Tiff at the Top

MANY familiar greyheads in Parliament have fallen and made way for younger men after Prime Minister Rajiv Gandhi took charge. But one of the few to be retained is the venerable Frank Anthony. The 75-year-old Anglo-Indian leader was renominated to the Lok Sabha for the seventh time last month, along with another veteran, A.E.T. Barrow. For more than three decades now Anthony, who heads the powerful All India Anglo-Indian Association (AIAA) has remained the unchallenged leader of the nearly one-lakh Anglo-Indians in the country.

But not any more. Last fortnight, soon after Anthony's renomination members of the Anglo-Indian Guild, a breakaway group of the AIAA met in Bangalore and shot off an angry letter to the prime minister informing him that these "two aged men" had done nothing for the community for the past 20 years and that they should be "retired" immediately.

Guild members argue that Anthony's only contribution has been the setting up of Anglo-Indian schools. But these had become so elitist that the children of the community could not afford to go to them. They accuse him of ignoring Anglo-Indians in the south, where the bulk of the community exists, and point out he has not visited the four southern states since 1975. Joss Fernandez, a former MLA and guild chairman, says expressively: "Mr Anthony's contribution has been a big fat zero. He is totally out of touch with the needs of the Anglo-Indians."

A rather hurt Anthony immediately issued a press statement dubbing the charges that he had neglected Anglo-Indians in south India as "not only deliberate but malicious untruths". He dismissed the guild as not being a representative body of the Anglo-Indians and said that the AIAA had 70 branches in the country and had always been recognised by the Congress party. It was through his own "unremitting work and unsparing dedication", says Anthony, that the AIAA had been built up. He added: "The position of recognition and continuing respect the community holds in independent India has been due entirely to the work and achievements of the All India Anglo-Indian Association." About the age factor Anthony says: "I am 75 and, touch wood, very fit."

Anthony points out that the guild is not representative of the entire Anglo-Indian community. But within two years of its inception it claims to have captured the support of a majority of the Anglo-Indians in Karnataka. Two years ago the official candidate of the AIAA for nomination in the state Assembly was rejected by Chief Minister Ramakrishna Hegde, who chose Fernandez (under the Constitution the Anglo-Indians have been allotted two seats in the Lok Sabha for their nominees and one each in all state assemblies.) The guild is popular because its members have visited many of the areas where Anglo-Indians live in penury and have tried to better their condition. Tyrone Pope, 28, who lives in a small house in the outskirts of Bangalore and works as a broker, says: "Joss really cares for the poor Anglo-Indians here. But who is Frank Anthony? I think the last time I had a glimpse of him was 10 years ago."

If the guild is winning the Anglo-Indians' sympathy in Karnataka it is because the bulk of the community who at one time were well-to-do have now fallen on bad times. Most of them have lowly paid jobs and cannot send their children to school. They live in tiny outhouses in the outskirts of Bangalore with improper drainage facilities. Many of the youth have taken to drugs and the women to prostitution. Don White, a retired brigadier and vice-president of the guild, says: "What has our member of Parliament done for these people? They were nominated to protect our interests but instead it has been eroded and eroded till it has touched rock-bottom. Now most of our people live in hovels."

But the real bone of contention is Anthony's contribution to the field of education. Anthony's "dream" was to start 20 schools that would be administered by Anglo-Indians. With this in mind he set up the All India Anglo-Indian Education Institution which has so far established five schools that have been named after him and impart a fairly high standard of education. In fact these schools have been so successful that by the end of last year the institution had built up a bank balance of Rs 1.13 crore. But guild members point out that the community as a whole has hardly benefited from these schools. Although they were started with the idea that the bulk of the students would be Anglo-Indians, in the Bangalore Frank Anthony Public School, for instance,

Today, every other stereo system becomes yesterday's!

Orson presents the Sony Series 44 Stereo System.

At last there's a new stereo system in India that isn't old hat in the rest of the world.

The Sony Series 44 Stereo System. From Orson.

We can't list all its features. We can only whet your appetite for more!

Take the Sony TC-FX44 Cassette Deck. It employs the Dolby C noise reduction system DD.* When the best Indian decks have just about graduated to Dolby B DD.* The silence speaks!

The Sony TA-AX44 Amplifier gives you 240 watts of total peak music power. It reduces harmonic distortion to 0.008% – when other amps still boast of 0.05%!

The 3-way SS-S440 Sony Speaker System brings you "live performance" quality. These are the only speakers in India with solid state tweeters for high frequency response.

And now, for the first time, you've got a choice of a remote control unit. No stirring out of your comfortable armchair.

Incidentally, you can buy the equipment separately. If you're forced to!

Orson brings it all to you

When Sony was looking around for someone to bring the best equipment in the world to you, the decision was easy . . .

Orson.

Not just because Orson has the kind of manufacturing facilities that Sony was impressed by.

But also because Orson has the same attitude towards quality as Sony.

So now you can get the best without leaving home.

There's Sony.
The name the world trusts.
And Orson.
The name Sony trusts.

they form hardly 5 per cent of the students. Says Fernandez: "The community members are not in those schools. Most of them are out of it because the fees are too prohibitive."

But William Marley, president of the state branch of the AIAA, says: "No Anglo-Indian child has been turned away from these schools. Our problem is that many of them do not apply at all even though we are willing to help the poorest of the poor with freeships and the rest with fee concessions." Anthony adds: "Our community is only a microscopic minority and naturally the representations in our school is low. There are only about 250 Anglo-Indian students in, say, Delhi and we cannot afford to run a school unless we take non-Anglo-Indian children too." Guild members however feel that the institution should have started vocational schools. This is because the average Anglo-Indian youth hardly finishes his secondary certificate and usually drops out of school. They also feel that the real issue was securing job reservations for the community and low cost housing to improve their living conditions.

Meanwhile, a regular slanging-match has begun between the guild and the AIAA. Last year after Fernandez carried out what Anthony calls a "vicious and false campaign garnished with virulent lies" against him, Anthony filed a defamation suit against Fernandez. Undaunted, the guild set up a Joss Fernandez Fund so that he could raise the money to defend himself in the case. An all-out battle of wits now seems to be on the cards, and whatever the outcome, the community is bound to be more vocal about its problems than before.

—RAJ CHENGAPPA

KERALA

Finance Fuss

COME budget time and finance ministers come under the glare of public spotlights. Kerala's Finance Minister K.M. Mani, however, is one member of the breed who is in the limelight for the wrong reasons—an attack from totally unexpected quarters, the ruling Front's coalition partner the Congress(I). Detailed notes prepared by the party's economic cell sharply criticise Mani for the manner in which he has handled the finance portfolio in the past five years and

Mani: under unexpected attack

particularly for benefiting affluent Christians in the districts of Idukki and Kottayam.

The author of the note is P.K. Gopalakrishnan, former planning secretary of the Kerala Government and now head of the Congress(I)'s economic cell. Analysing the economic policy of the past few years, Gopalakrishnan says that "most of the subsidies and largesse have gone not to the really poor and deserving section but to the comparatively affluent and richer section". Singling out the two districts which have been the backbone of the Congress(I) in the state, Gopalakrishnan says that the lobby of rubber, cardamom and pepper farmers is so powerful that the agricultural tax on cash crops has come down by 12 per cent. He also argues that despite the construction boom in Idukki, the sales tax revenue had dropped by 21 per cent in the last five years. In contrast, in other parts of the state, it had doubled. Worse, out of scores of sales tax recovery cases about some Rs 88 crore, there had been stay orders on amounts totalling more than 44 crore.

The net result, continues the note, is that the state Government today finds that its resource position is unprecedentedly tight at a time when it is finalising its Seventh Five-Year Plan. The forbidding projections are that the current year's deficit will be Rs 290 crore and the deficit at the end of the seventh plan will be at least Rs 800 crore while the finance commission had projected a surplus of Rs 635 crore for the state.

While no cogent explanations as to where things went wrong are forthcoming from any source, there seems general unanimity over the view that much will depend on the stand the Centre takes over the state's mounting deficit. Mani is hopeful that the Centre would agree to his request to convert this deficit into a long-term loan. The Centre on its part would, of course, insist on firm assurances from the state that it would exercise economy and mobilise additional resources.

What the state does to meet these requirements should become clear when the budget is actually presented. For the time being, however, the unflappable finance minister concentrates his attention on explaining the phenomenon of heavy deficits. He told INDIA TODAY that the present economic situation in the state was not the result of any flaw in financial management but simply because of the excess of expenditure over all possible sources of revenue. He points out that against the total allocation of Rs 1,550 crore, the expenditure had gone up to Rs 1,630 crore. Added to this, he says, have been some unexpected administrative expenditures due to which the state's commitments had increased to Rs 620 crore. To offset this, the Centre gave Rs 136 crore for the two years preceding 1984, thus leaving a liability of Rs 484 crore. Mani claims that by raising an additional Rs 200 crore by way of sales tax and general financial discipline, the deficit would be reduced to Rs 268 crore by January-end and insists this problem be viewed from this point of view. Says he: "Even though we are trying to keep the overdraft within permitted limits, the situation might become difficult since the Government has had to pay a sizeable amount to its employees in February on the encashment of privilege leave account."

Taking a realistic view of things, Mani insists that even if the state started with a clean slate in the financial year 1985-86, it will still have to face a huge deficit at the end of next year in the normal course. He estimates that this may be as much as Rs 1,100 crore at the end of the Seventh Five-year Plan. On the drop in agricultural revenue, Mani argues that concessions were granted to improve the state's agricultural economy.

While Mani is prepared to be sanguine on this score, independent sources convey a different strain of music. Marxist economist Dr Mathew Kurien, director of the Indian Institute of Regional Development Studies, says that the Congress(I) in its anxiety to shield the Centre is putting the blame entirely on the regional parties. If this was so, it would appear that Mani is only a pawn in a larger political game that has been played out on the fragile canvas of Kerala.

"The structure of the large stadium was a challenge...and TISCON gave us the answer."

— F Bennet Pithavadian
Architect of Chepauk Stadium
Madras.

Mr Pithavadian, with several major projects in India to his credit and who has served as a Consultant in Bangkok, Jordan and Cyprus, strongly believes that good architecture depends as much on materials as on design. While working on the Chepauk Stadium he undertook challenging innovations because he could depend on Tiscon reinforcing bars for the structural solution he needed. Let's find out from him why he found Tiscon suitable.

"They made the pillars strong enough to withstand the heavy load."

"You see, we had this 28 metre span roof. But we couldn't place any supporting pillars in front of the gallery as they would block the spectators' view. We decided to place pillars only along the centre of the gallery. This called for a large cantilever span. Which meant a great portion of the roof had to be left without any support. And that's where Tiscon bars proved their worth. They made the pillars strong enough to withstand the heavy load."

"They give you far superior grip."

"Same goes for the innovative structure of the SPIC Centre here in Madras. The building doesn't have any peripheral columns in the upper floors. The sunbreakers act as pillars. This could only be conceived when Tiscon was available.

Because Tiscon bars have a superior rib pattern, they give you far superior grip and yield stress."

Not only Mr Pithavadian. Most top designers and engineers in India now prefer Tiscon. The proof can be seen in almost every major project in the country. And all because of Tata Steel's commitment to developing superior products to meet specific customer needs.

For more information write to any of our Sales Offices.

ADMINISTRATION

Switching Tracks

WAS IT only an electoral gimmick or was it a genuine attempt to make the bureaucracy more responsive to the needs of the new Government? The latest round of reshuffling involving every second secretary-level appointment at the Centre seems to have been a generous mix of both. When the contents of an official order signed by Additional Secretary and Establishment Officer Roop Krishna Tikkoo containing the names of 34 officials hit the front page of national dailies last fortnight, it was interpreted as a drive to clean up the administration. In one bold move, 15 secretaries were changed, 15 additional secretaries promoted and four others reverted to their states. The transfers followed the appointment of a new cabinet secretary and secretaries in the Home, Commerce and Finance ministries.

However, the transfers and postings were not confined to ministries and departments. The prime minister's office, too, saw the induction of two joint secretaries. Admitted a senior bureaucrat affected by the reshuffle: "It is the first time since Independence that so many top level changes have been made in one order. The new Government has opted for a wholesale change at the top rather than gradual, selective changes. Let us wait and see how it works."

On the face of it, this game of bureaucratic musical chairs defies logic. But a study of the transfers throws up a pattern in which some basic designs emerge. For example, the current reshuffle has affected not only the Prime Minister's Secretariat, which has never before had so many incumbents of the rank of joint secretary and higher, sensitive departments like Petroleum, Finance, Personnel and Defence Production have all been affected. Moreover, IAS men have been given preference over technocrats and professionals in key positions.

The winds of change blew immediately after the resignation of the prime minister's principal secretary P.C. Alexander in the wake of the spy scandal, and the replacement of cabinet secretary C. Krishnaswamy Rao Sahib by P.K. Kaul. Prime Minister Rajiv Gandhi quickly followed up on these changes by a review of top civil servants aimed at replacing controversial civil servants as well as rewarding those who had maintained a clean image.

As a fallout of these conversations, a list of over 100 civil servants posted at the Centre and in states was prepared for possible re-allotment of posts. With the departments of Revenue, Steel, Petroleum, Personnel, and Civil Supplies considered crucial to government, a policy decision was soon taken to replace their secretaries. As a result, K.N. Singh (Revenue), U.C. Aggarwal (Personnel), and A.S. Gill (Petroleum) made way for V.K. Dhar, K. Ramanujam, and K.V. Ramakrishna respectively. Gill, earlier superseded by Kaul for the post of cabinet secretary, went on leave, Aggarwal was appointed officer on special duty in the Cabinet Secretariat, and Singh was given the insignificant post of secretary, Department of Statistics.

In another spin-off, changes in the departments controlled by the prime minister himself or his office covered Culture, Space, Atomic Energy, Personnel, Tourism, Petroleum, Wildlife, the Cabinet Secretariat, and Youth and Sports. All of them will have new secretaries or additional secretaries after the transfer and promotion of officials. For instance, Y.S. Das, additional secretary, Atomic Energy, has been promoted as secretary, Culture, and T.N. Seshan, additional secretary, Space has been promoted as secretary, Forests.

But the most significant appointments are those of Manishankar Aiyar, a Doon School and Oxford-educated IFS official and R.V. Vasudevan, an IAS man from Uttar Pradesh. While Aiyar will aid Information Advisor H.Y. Sharada Prasad till the latter retires three months hence, Vasudevan is likely to help Gopi Krishna Arora, an additional secretary in the prime minister's office. This renders the prime minister's office the most powerful new-look secretariat in the Central Government, composed as it is of three parliamentary secretaries, one secretary, two advisors, one additional secretary, five joint secretaries, and a dozen director and deputy secretary-level officials.

Contrary to the widely-held impression that the prime minister prefers decentralisation of the decision-making process, the expansion of the Cabinet Secretariat has, on the other hand, served to fuel the belief that a new concentration of power at the top has begun. For the first time, the secretariat, which reports to the prime minister, will have three secretary-level officials: with Kaul and Aggarwal is Mohinder Singh, also officer on special duty.

Given its tasks of processing intelligence reports, planning, foreign affairs, and monitoring the functioning of departments, it may well become the core of decision-making. Evidently, it is believed that a stronger Cabinet Secretariat would aid the implementation of new work ethics and make the administration result-oriented. Commented a senior Home Ministry official: "The Cabinet Secretariat will now work as a think-tank. It will provide guidelines and give an administrative boost to put into practice the new philosophy of the young and dynamic prime minister." But only time will tell what results will ensue, and if they will.

THE ECONOMY

Buoyant Mood

THE CONTRASTS are obvious. Five years ago, it was a scene of enveloping gloom; today there is a sense of things going well. Then, prices were running amuck, having just risen 22 per cent in one year; now, inflation is running at no more than 5 per cent. Then, there were long queues for diesel and kerosene, and cement was being sold in the black market; today, there are no queues and cement production has risen more than 50 per cent in five years.

In 1979-80, agricultural production had just nose-dived by a frightening 23 million tonnes (18 per cent); in 1984-85, the economy is coasting along on the strength of successive bumper harvests, and the Government's grain silos are over-full with record stocks of more than 22 million tonnes. Then, industry was on the skids as the industrial production index registered a drop of 1.4 per cent; now, the industrial sector is building on a 4.5 per cent growth last year and is expected to top that with 7 per cent growth this year. Then, coal was in short supply after production had stagnated for four years, and the power stations were registering their lowest ever levels of capacity utilisation; today, coal production has risen almost 50 per cent in five years, and the power shortage is estimated at a bearable 5 per cent: much less than normal. Immediately after the 1979 oil shock, domestic oil production had stood at barely 11 million tonnes. But five years later, the figure is almost three times as high at 30 million tonnes. Then, it seemed that the economy had pretty much run aground; now it seems ready for a lift-off.

Quite naturally, there is no sense of crisis. As the Central budget gets readied for presentation to Parliament and a new five-year plan is due to get under way next month, the nightmare of 1979-80 and its immediate aftermath are forgotten. In their place, there is a mood of optimism about the future, a sense of economic well-being that compares favourably with almost any other period of the last two decades.

There are problems too, of course. Both the Planning Commission and the Government are faced with a serious shortage of hard cash with which to finance fresh investment for future growth (*see box*). If, despite these, the mood is not affected by the fear of harsh taxation or a call for the tightening of belts, it is partly because the Government itself has refused to talk the language of bleak austerity.

This may or may not be justified, but underlying the conscious talk of a brightening future is the increasing pace of economic growth. Over the last five years, the economy has grown at around 5.4 per cent, repeating the 5.2 per cent achieved in the fifth plan period (1974-79). Even after taking into account the drop in gross national product (GNP) during the intervening year 1979-80, overall growth in the last decade has averaged 4.5 per cent a year. This is well above the average of the previous decade, and the myth about the economy being stuck at a 'Hindu rate of growth' of 3.5 per cent has been shattered.

Few economists doubt that the economy could now be set for still faster growth ahead. Says veteran administrator and economic pundit L.K. Jha: "I believe it is possible to grow faster, and some of the new policy thrusts are in the right direction." Adds C.H. Hanumantha Rao, member of the Planning Commission: "It is not unrealistic to plan for a 5 or 6 per cent rate of growth. This is certainly achievable."

A faster growth rate will cause a more than proportionate increase in per capita incomes. For with population growing at 2.2 per cent annually, an over-all economic growth rate of 3.5 per cent means that per capita incomes increase at a slow 1.3 per cent annually. But if economic growth is now stepped up to a little over 5 per cent, per capita incomes will grow at 3 per cent—more than twice the earlier rate. So while the last 30 years have seen per capita incomes rise at an average by about 45 per cent, the next 10 or 12 years could see another 50 per cent rise in average incomes.

The new mood of optimism in most circles is also justified for another reason. Between the mid-'60s and mid-'70s, the world economy had been growing rapidly. Japan, South Korea, Singapore and other countries were emerging as the global high-fliers. The contrast in India was then painfully apparent, with a slow growth rate and missed economic, industrial and trade opportunities staring everyone in the face.

But the story of the last decade stands out in sharp contrast, and is as different from the previous 10 years as cheese is from chalk. The world economy has been buffeted by two successive oil shocks, global trade has shrunk for two or three years running, and most national economies have been caught in a deep recession that some compare to the Great Depression of the 1930s. In this difficult and gloomy environment, the Indian economy has done surprisingly well. Far from slowing down, it has accelerated its growth rates, it has successfully avoided the debt trap while keeping foreign exchange reserves at a manageable level, it has sustained and increased investments, and it has been on an expansionary surge that few others have achieved. Says former finance minister Pranab Mukherjee: "Our faster growth has been achieved despite the difficult global situation, and despite two droughts at home, and this is a very creditable performance." While Indian income levels are much lower than elsewhere, and poverty levels much more stark, Prime Minister Rajiv Gandhi had a point when he said at an election meeting last fortnight that the Indian economy has been growing faster than the American, British or Japanese econo-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mies. However qualified this success, and however limited a point such a comparison makes, it remains undoubtedly a noteworthy success.

Yogendra Alagh, chairman of the Bureau of Industrial Costs and Prices, argues that the Indian economy perhaps "took off" around 1976-77. "That was the year in which gross investment became more than 20 per cent of the gross

domestic product (GDP). That was also the period when the Government started changing its industrial policies. I believe that the Indian economy achieved a structural transformation somewhere around that period." Alagh and others in fact argue that the economy has been growing much faster than the official figures indicate, because a lot of what is produced is not reported in order to evade taxes, or is not reflected in the official figures for other reasons. So while the official figures suggest that industry has been growing at between 5 and 6 per cent annually, Alagh guesses that the actual growth has been at least around 7.5 per cent. "This is certainly reason for optimism," says Alagh.

If an investment rate now of around 25 per cent of GNP (compared to around half that level 30 years ago) is one reason for the improved performance, there are several other reasons why things have been getting better. One is plain good management. Another is improved luck with the rains, and a third (in relation to the handling of the foreign exchange reserves) is the large remittances from Indian workers abroad, helped by new savings and investment policies announced by the Government.

The optimism about faster growth is not, of course, shared by everyone. Some economists have argued that if anything Indian industry has been slowing down over the years. Isher Ahluwalia, author of a recently published book (*Industrial Growth In India: Stagnation since the mid-sixties*), says, "Heavy industry has slowed down over the years, and there has been overall industrial stagnation. What is worse, productivity has been dropping in industry." But discussions with a number of economists, both in and outside the Government, suggest that the majority are inclined to take an optimistic view of the recent record. And eminent economist K.N. Raj argued recently in the *Economic and Political Weekly* that industrial growth has picked up since the mid-'70s.

Some of the optimism can be explained by what a senior government official described as "a spirit of can do". Five years ago, the economy seemed caught in the familiar vicious cycle of shortages of power, coal, steel and rail transport, combined with a potentially disastrous oil situation. But whereas the problems seemed insoluble then, they seem manageable now, because the last five years have shown that many of the problems have in fact been tackled. Said the official: "The oil production has been troubled, there is no noticeable railway bottleneck, and plenty of coal is available. So if some problems still remain, like the power shortage, it should be clear that when the Government gets down to it the problem can be solved. There is no need for any sense of defeatism about this."

He certainly has a point. If the oil situation seemed near hopeless five years ago, and is well under control today, the explanation lies with the much maligned public sector. For the Oil and Natural Gas Commission marshalled all its men, money and materials to achieve an expanded production target dead on time. Good management once again holds the explanation for the sudden turnaround in the railways, which because of sheer sloppiness had failed to register any increase in freight carried for around four years.

But one good man at the top, in the form of M.S. Gujral, changed that overnight. Good management was once again on display in keeping prices under check, even during the difficult year of 1982-83, when the rains failed.

While the improvements of the last five years are undeniable, it would be wrong to link this to the transition from Janata to Congress(I) rule. The economy in fact performed reasonably well during 1977-78 and 1978-79, before the setbacks of 1979-80; and the first year of renewed Congress(I) rule, 1980-81, was particularly undistinguished, and marked by a definite drift.

Nevertheless, government policy has played its role in building confidence. The policy on granting letters of intent and industrial licences has been greatly liberalised so that much larger numbers of new projects have got cleared, and Indian industry has started on a long-delayed process of modernising its technological level because the Government has eased up on foreign collaborations and allowed more generous royalty payments. Finally, as Pranab Mukherjee points out, new stock-markets have been opened in a number of small towns, and the capital market has been booming. Till the late 1970s, less than Rs 100 crore used to be raised in the stock-markets every year to finance new projects. For the last three years, the figure has been closer to Rs 1,000 crore.

The new Government is now further bolstering confidence because of the tone of its public comments. Cleanliness is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

once again an officially sponsored virtue (no more talk of corruption being a global phenomenon), there is a promise to clean up the administration, and telephone users are not being told that if they don't like the service they can return their telephones. Instead, an ambitious programme is under way to deliver telephones on demand in five years' time, and to introduce new electronic technology for the country's telephone exchanges.

Rajiv Gandhi has consciously tried to bolster the positive mood. Addressing a gathering of the electronics industry last fortnight, he said: "The problem will not be with government constraints or restrictions, or time taken by the Government. But can you keep up with what we are doing?" Earlier, addressing a full meeting of the Planning Commission, he said the effort should be to anticipate economic problems and get ahead of them, rather than forever trying to catch up with demands. In his campaign speeches, he has promised a new industrial policy, an impetus for modernisation and raising the quality of products, the wiping out of the black money menace, a new agricultural policy, further simplification of procedures, and much else. Industry Minister Veerendra Patil has in turn promised to de-licence a number of industrial areas, while policy announcements have already been made that enable manufacturers in a number of areas to adopt flexible production strategies.

While the promises and statements of intention are yet to be matched by hard decisions, so that it is not really clear what exactly the Government is talking about, the intention seems to be to allow industry more elbow room, provide greater scope for private investment, and to pull the public sector out of unnecessary areas. However, as an economist in the Government pointed out: "This does not mean any really fundamental change in policy. The stress is still on self-reliance, on public sector investment, on anti-poverty programmes. We are not about to go in for a free enterprise system, we are not going to try and be another Singapore. I think the stress is more on streamlining, on making things work better."

Meanwhile, the promises have flowed so thick and fast that there is the real danger now of expectations being raised to a level where they cannot possibly be met. Thus, Raja Chelliah, a tax expert who is now a member of the Planning Commission, lists a number of reasons why it is difficult to eradicate black money: "Promoters of companies want to take out their share of the total investment by inflating construction costs, over-invoicing of imports is a common practice, smuggling is a major problem, many foreign companies pay 3 to 7 per cent commissions to people, and illegal activities of various sorts generate black money. The underlying causes are basically human greed, shortages, high taxes and controls. So it is not an easy problem to tackle."

"I believe it is possible to grow faster, and some of the new policy thrusts are in the right direction."

L.K. JHA
veteran administrator

"It is not unrealistic to plan for a five per cent plus rate of growth. This is certainly achievable."

C.H. HANUMANTHA RAO
member, Planning Commission

Despite such known difficulties, however, the popular mood is one of expectation, reflecting a confidence that the Government means business. Even the well-known fact of a difficult budgetary situation has failed to douse expectations, as would normally have been the case in the pre-budget season.

In yet another vital area of national effort, the transition has been made from gloom to hope: agriculture. As recently as three years ago, the accepted wisdom was that the green revolution had lost steam, and that the growth rates of the past could not be expected to continue indefinitely. Foodgrain production had peaked at 132 million tonnes in 1978-79 and had not crossed that level since then. But the record harvests of the last two years have changed all that. Even more important, there is now firm and incontrovertible evidence that the green revolution has spread beyond Punjab, Haryana and western Uttar Pradesh into central and eastern Uttar Pradesh. This is an area much larger than either Punjab or Haryana, and the potential for increasing food production here is therefore enormous. Agricultural economists now talk in almost lyrical terms of the enormous potential of the region, and of the possibility of the green revolution spreading in time to neighbouring north Bihar. Yogendra Alagh, who was earlier chairman of the Agricultural Prices Commission, recalls a jeep drive from Lucknow to Gorakhpur some time ago, and talks of the evidence that hit his eyes of a new farmer awareness, of wheat yields having risen from the normal 10 or 11 quintals per hectare in the area to 18 and 19 quintals per hectare. In the best cases, the yields had touched 25 quintals, which compares with Punjab's 29 quintals. Says Alagh: "We must remember that Haryana achieved an average of 19 quintals per hectare of wheat only around 1973. So central and eastern Uttar Pradesh are at most only a dozen years behind." He goes on to point out that in the last decade, the increase in wheat production in Uttar Pradesh has been more than the total wheat production in Punjab today: around 9 million tonnes. And the increases are now definitely greater in the eastern districts than the already advanced western districts.

C.H. Hanumantha Rao, a well-known agricultural economist,

echoes these findings. Recalling a tour of the eastern states during the last monsoons, Rao says that his tour was "an eye-opener". "I was very impressed by the farmer's awareness and his willingness to use new technology. It was quite clear that the extension network has made considerable progress, and there is no doubt in my mind that eastern Uttar Pradesh is on the move." Characterising the growth in wheat output in the region as "phenomenal", Rao said that the rate of growth for wheat in the region is an astounding 6 to 7 per cent.

There are problems of course. Rice is the major crop in the region, and rice harvests are still plagued by the absence of as developed a technology package as in the case of wheat. Also, rice is grown in the wet season, when there is a serious problem of waterlogging and drainage. Wheat remains unaffected by this because it is a winter crop. Says Rao: "This means that the problems of agriculture in the area are crop-specific, and not related to the farmer's ignorance or other social problems normally associated with the area." And he discloses that the Seventh Five-Year Plan will have a special programme package to tap the region's enormous groundwater potential so that assured irrigation is provided.

If eastern Uttar Pradesh is on the move, can north Bihar be far behind? The two regions are economically, socially and geographically one contiguous entity divided by an artificial state border. And the agricultural economists have no doubt that the next spurt in crop production will be in north Bihar.

This is of truly enormous significance, not merely for Indian agriculture but for employment and prosperity in what has often been derisorily dismissed as the country's cow belt, perennially backward and incapable of achieving rapid progress.

Irrigated agriculture is far more employment-intensive than rainfed cropping, as Punjab and Haryana have conclusively shown, and the impact of substantial sums of money coming into farmers' hands cannot be minimised. Also, Uttar Pradesh has already overtaken Haryana as the second largest contributor to the central grain pool. So while Food Minister Rao Birendra Singh may have been sounding off when he said last fortnight that India would soon be exporting foodgrains (half the country is still under-fed, after all), the underlying optimism about the country's agricultural and food outlook seems entirely warranted.

A buoyant agriculture can only be good news for industry, guaranteeing as it does both raw materials and a market for finished goods. Sharayu Daftary, managing director of Bharat Radiators in Bombay, has little to do with agriculture, but she is on target when she says that "the agricultural base should be made more stable, with a more extensive irrigation network. We are basically an agricultural economy, and a strong agricultural base is good for everyone."

"When there are shortages, controls and high taxes, it is not easy to eradicate black money."

RAJA CHELLIAH
tax expert

"The increase in wheat production in Uttar Pradesh in the last decade is more than the total wheat production in Punjab."

YOGENDRA ALAGH
economist

Daftary's fellow-businessmen, meanwhile, have been buoyed by the promise of sweeping changes in industrial policy. Even within the Government, there is now the widespread realisation that many of the policies of the past have proved counter-productive, rendering industry both high-cost and inefficient. Restrictions on production capacities and new entrants into industrial fields have if anything enabled manufacturers to make fat profits on shoddy products, and restricted competition while preventing the realisation of economies of scale, technological upgradation and the building up of exportable surpluses. High taxes have converted consumer conveniences into luxury commodities and helped smuggling to flourish, while at the same time provided an impetus for tax evasion and the creation of black money. So a climate of opinion has built up in favour of opening up the economy, and encouraging competition so that it is the consumer who is protected rather than the producer.

A growing body of opinion now backs the Government in its bid to undertake reform of industrial policy. L.K. Jha says: "We should allow people the freedom to produce and to diversify, and not stifle competition among the giants. And we must stop refusing to give licences on the ground that enough licensed capacity already exists, because this shelters the inefficient." He argues that the opposition to this is likely to come not from the left (because this now has only a small voice left in Parliament) but from the right: "Industrialists have always known that they are more pampered rather than hampered by the licensing system."

There are in fact some businessmen who view the promised liberalisations with suspicion. Shyam Sundar Kanoria, who is in jute, cotton textiles and chemicals, says: "Import liberalisation will do incalculable harm to the economy since a large amount of productive capacity in the domestic economy would be under-utilised."

While some businessmen are still non-committal because they say that the Government has not really announced anything concrete yet, several industrialists are all in favour of expanding capacities and giving industry a free rein. Says Virenchee Sagar, managing director of Nirlon Synthetic Fibres and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Chemicals: "The Government must recognise the need for economies of scale, and I hope this will be reflected in allowing nylon and polyester plants to expand to a proper capacity." Adds Rohit Patel, managing director of Rohit Pulp and Paper Mills: "We should be allowed to import technology freely if we are to improve our product and reduce costs."

While the new Government's policy package for industry is still being worked out, the turnabout in the field of electronics gives some indication of which way the new policy is likely to be headed. Right through the 1970s and early 1980s, the Government had turned its back on the electronics and computer giants of the West, believing in a go-it-alone policy.

But with the evidence mounting that this was proving counter-productive and that India was missing the electronics bus, the Government has done an about-turn and announced a new open-door policy that allows more open competition and beckons international companies to start new partnerships with Indian firms. Numerous electronic super-giants are now beginning to set up hardware and software facilities in the country, while the tax concessions announced earlier have resulted in some lowering of prices and faster growth of the market.

A similar open-door policy has been allowed in the automobiles sector, where a lot of industrial investment is due to take place as manufacturers update their products and new producers ready to enter the market. This is in sharp contrast to the attitude six or seven years ago, when the existing car companies were denied access to new technology, and the Government was in fact threatening to nationalise both the car producing firms.

If all this has generated new enthusiasm, it is partly because of the discovery that people in India do have the money to spend. Five years ago, official committees were estimating demand for colour television sets in thousands, whereas sales are now in hundreds of thousands. And few could have forecast that the promise of a modern car would find 135,000 people willing to put in deposits of Rs 10,000 each for the pleasure of waiting in line. Clearly, there is a larger market waiting for goods than had been believed, and people clearly have the money to both save and spend: a realisation that has altered perceptions even in government.

A number of economists in the various ministries confessed last fortnight that they had initially felt the decision to go in for colour television was a wasteful mistake, but that they had been forced to

BUDGET

Taxing Time

A STATE Government finds that its total tax revenue is less than the salary bill of its employees. The Central Government finds that tax revenues have suddenly failed to keep pace with economic growth. And the country's planners find that the seventh plan may not get off the ground for want of money. Put all three together, and there is a fair chance that budget day will bring bad news.

It is an odd paradox: the economy is doing well, but tax revenues are far from buoyant. And both the Central and state governments are strapped for cash in a way that they have not been for a long time. The states have run up overdrafts with the Reserve Bank of over Rs 2,000 crore, and the Central budget might show an equivalent deficit, making for around Rs 4,000 crore. Apart from the fact that this would be an all-time record, it spells trouble for plan investment.

The financial experts in the Planning Commission say that while the proposed seventh plan outlay is Rs 180,000 crore, the money is short by over Rs 39,000 crore. Various efforts are on to reduce this, but with what success remains to be seen. At the moment, the annual plan for 1985-86 is likely to see only a small increase in investment levels. In some sectors, there might be no increase at all, marking a very inauspicious start to the seventh plan.

"There has been a runaway increase in non-Plan expenditure," says Finance Minister Vishwanath Pratap Singh in explanation for the difficult financial position, and he specially mentions additional dearness allowance payments to government employees as an important factor. His predecessor, Pranab Mukherjee, says the problem has its root in the fact that 73 per cent of what is called revenue expenditure (as different from capital expenditure) is accounted for by just three items: defence, interest payments on government loans and subsidies on items like food, fertiliser and exports. What is unstated is that the last year was a pre-election year, and both the Central and state governments went on a spending spree.

Uttar Pradesh, for instance, has always been among the states with a relatively good fiscal record. This year, however, the state has not only exhausted its normal loan limit for contingencies but also run up an RBI overdraft of Rs 260 crore. Chief Minister Narayan Datt Tiwari comments blandly that "yes there is an overdraft, but this is due to certain reasons and will be taken care of". Nevertheless, there is reason to believe that the state consciously ran up its overdraft in protest at other states being allowed to get away with perennial overdrafts and because the Centre has not released money which the state Government says was promised to it. Whatever the reason, the Centre was forced to step in last month and ask the RBI to dishonour cheques issued by the state Government. A crisis was averted only when the overdrafts were quickly brought down to more acceptable levels.

But a fresh crisis is inevitable because the state Government's salary and wage bill of Rs 825 crore is more than its total tax collection of Rs 775 crore. Kerala's condition is not much better, with two-thirds of its tax revenue going into salaries. And of the state's sixth plan investment of Rs 1,630 crore, no less than Rs 1,260 crore came from the Centre.

There are several other pointers to a worsening crisis. For several years, the Central Government used to have a surplus on its revenue account which was used to finance investment expenditure. Since 1977-78, however, the Government has consistently run up deficits on even its revenue budgets. What this means is that the Government has been borrowing money not to finance investment but to meet its day to day expenditure. Such borrowings have climbed from Rs 128 crore in 1978-79 to a staggering Rs 2,325 crore this year.

The results now stare the Government in the face, because an increasing share of its expenditure is paid for not by taxes but by borrowings from the capital market. Such borrowings accounted for only 6.4 per cent of total developmental expenditure in 1975-76, but have climbed quickly to 16.2 per cent this year. The Government's market borrowings in 1974-75 totalled no more than Rs 481 crore. Ten years later, the figure is an astonishing Rs 4,100 crore, an increase of around 800 per cent. The Government is therefore caught now in a debt trap, with interest payments on loans climbing from Rs 1,228 crore in 1975-76 to Rs 5,674 crore this year.

One reason for this growing problem is clearly the fact that the progressive

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

reduction of tax rates has not delivered results in terms of reduced tax evasion and therefore higher revenues. Pranab Mukherjee himself admits that "lower taxes have only marginally improved tax compliance," but argues that "we need more time to see the effect of lowered taxes". Meanwhile, M.Govinda Rao of the National Institute of Public Finance and Policy, finds from his research into the subject that "in the short-term, a reduction in income tax rates leads to a drop in revenue. What the long-term results are we don't really know". But the figures certainly show that taxes as a percentage of gross domestic product (GDP) have been dropping. C.H. Hanumantha Rao, member of the Planning Commission, says that in 1977-78 Central taxes accounted for 11 per cent of GDP, and points out that this has fallen slowly since then to between 10 and 10.5 per cent. "A 1 per cent tax increase in relation to GDP should yield Rs 10,000 crore in five years," he says.

The question is whether this will tempt the Government to reverse its policy of recent years of gradually reducing tax rates where possible. The maximum income rate has been reduced over the years from an expropriatory 97.75 per cent a decade ago to 66.25 per cent now, while the tax exemption limit has gradually been raised from Rs 8,000 in the mid-1970s to Rs 15,000 now. The income tax rates were lowered both last year and the year before, while wealth tax exemption limits have been raised. There has also been a lowering of excise and customs duties on electronics goods, on refrigerators, tyres and motor vehicles, among others. Veteran administrator L.K. Jha, who has over the years submitted a series of tax reports to the Government, argues that some of these did in fact lead to industrial growth and therefore to higher tax revenue.

The gradual reduction of tax rates on a selective basis was initiated because, as the Government said last year in its annual Economic Survey, "the scope for further increase in... tax rates is likely to be limited" — a statement that has more than a grain of truth. But the overall picture today is not very bright and a hard pressed finance minister might well be tempted to change course again, at least in relation to indirect taxes like excise and customs duties.

If falling tax revenue has been one problem, the performance of the public sector enterprises has been another. Most of them have consistently failed to generate a proper return on the Rs 30,000 crore invested in them by the Government. A Finance Ministry official points out that budgetary support for railway investment during the sixth plan was to have been Rs 2,200 crore, but that this had to be increased to Rs 4,400 crore because the railways did not make enough money to invest. And at the state level, a 1982 estimate says that the electricity boards, road transport corporations and industrial development corporations suffered a loss of Rs 2,200 crore. As a member of the Planning Commission said, "If large sums of public money keep getting invested in public sector units without any return, a crisis is bound to come."

Singh: looking for answers

The widespread raids launched last fortnight in Bombay on the office and residential premises of a number of businessmen were designed at least partly to try and raise some additional revenue during the current year. But such exercises are known to have limited effect, and Vishwanath Pratap Singh will have to look for more convincing solutions to the problem he faces.

Evasion is known to be a serious problem: Govinda Rao says that a study of the textile industry revealed that taxes evaded amounted to an astonishing 47 per cent of the taxes paid by the industry. And other estimates by fiscal experts suggest that the total tax evasion might be in the region of 20 per cent: around Rs 5,000 crore.

Any remedy on this front will have to be multi-pronged. For a start, the tax administration will have to be licked into shape, because even simplified income tax assessment procedures are followed in such a lax manner that the average tax realisation per assessee has been dropping sharply in places like Bombay and Delhi. On the excise front, the figures show that out of more than 1.2 lakh excisable units in the country, effective excise control is exercised on no more than 18,000, while thousands of small-scale units are left completely outside the excise pale.

The tax laws themselves deserve to be simplified for easier administration, and tax rates will have to be rationalised and lowered where necessary. For instance, the wealth tax, gift tax and estate duty together yield barely Rs 125 crore as revenue, but provoke the maximum amount of tax evasion.

An effective tax administration must also make penalties for evasion a perceptible threat. At the moment, as a tax expert said, "Honesty is taxed, and dishonesty is not penalised." Clearly, the solution to the entire problem lies in replacing high tax rates with moderate ones, but simultaneously transforming a lax and ineffective tax administration into a strict and watchful organisation.

This has been the task before the tax administration for a number of years. In the recent past, the Government has made a beginning on one front, but the results have been disappointing because there is as yet no action on the second front. When this changes, and if expenditure is brought under greater check than it has been so far, the Government's financial situation should begin to show some improvement.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

revise their opinions. Said one of the economists: "For a long time, the concept of development in India had nothing to do with goods for the consumer. We talked of steel and aluminium and power. But as income levels rise, you have to provide for more consumer goods, and this change has begun to take place."

Naturally, those consumers who have the money to spend are now happy. Indeed, the last few years have seen a veritable explosion in the number and range of consumer goods on offer to a rapidly growing clientele all the way up and down the income ladder. But many still make the valid point that it would be wrong for the Government to encourage untrammelled spending on consumer goods when half the population is still below the poverty line. Said an economist in the Planning Commission: "I would be in favour of a policy that persuaded the relatively better-off to restrain themselves and to keep in mind Gandhi's dictum that the rich should use their assets as trustees of the national wealth."

Ironically enough, the thrust towards liberalisation is despite the fact that the past measures aimed at opening up the economy have delivered somewhat questionable results. The progressive reduction of tax rates has not reduced tax evasion, as had been argued, and has in fact resulted in the Government finding its tax resources getting tight. Hanumantha Rao points out that Central taxes had totalled 11 per cent of the GDP in the late 1970s, but that this is now down to marginally more than 10 per cent.

Then, the permission to regularise production capacities in excess of the licensed limits has resulted in very little action (partly because of some continuing roadblocks), and the exclusion of production meant for exports has not produced the export boom that had clearly been hoped for. Numerous industrial units have not yet taken advantage of the permission to automatically expand capacities by 25 per cent every five years. And the schemes for setting up more free trade zones and for encouraging 100 per cent export-oriented units have still to get off the ground.

Most apologists for a more liberal industrial policy argue that this is because results don't come overnight, and because the steps taken so far are not yet a complete package. Isher Ahluwalia argues that "you can't expect too much from marginal adjustments. The liberalisations so far have only made a dent in the problem. And I don't expect quick results even now. These things take five years and more to show results."

It is also argued that even if the results so far are not quite what had been trumpeted, the reforms were inescapable anyway. When large areas of industry are obsolete and out-of-date, there is no escape from easing the restrictions on foreign technology tie-ups. The regulations governing industrial behaviour were clearly not achieving the desired results, so a change was unavoidable, besides which, Indian industry has been overregulated anyway, and far too much of the Government's energies have been spent in trying to say what companies can or cannot do, with little ultimate purpose or achievement. If anything, a lot of the policies are now clearly seen as having been counterproductive. As a top-rung official in the Planning Commission argued, "The new policies are in some ways an act of faith, but they are necessary. We could not have continued in our old way for much longer, because we were not getting anywhere."

"The Government must recognise the need for economies of scale and allow expansion to proper capacities."

VIRENCHEE SAGAR
managing director, Nirlon Synthetic Fibres and Chemicals

"We should be allowed to import technology freely if we are to improve our product and reduce costs."

ROHIT PATEL
managing director, Rohit Pulp and Paper Mills

But if the new thrust to economic policy is indeed an act of faith, several question marks must remain over their ultimate success in getting the economy moving further ahead at a faster pace. Indeed, some of the current buoyancy in both economic performance and mood must also be attributed to the succession of good harvests, while the five-year stability in international oil prices has also helped save money for other badly needed imports.

If these conditions change, if the weather gods turn unkind, if the fiscal crunch is not tackled, and if the new economic policies do not ultimately help deliver the goods, then the national mood could turn distinctly less buoyant, and the balloon could get pricked.

Right now, however, things certainly seem pretty hunky-dory. The growth rates have improved, prices are under control, there is relative peace among industrial labour, the economy is no longer plagued by shortages, new opportunities are being presented to industry, and the enormous agricultural potential of eastern Uttar Pradesh has begun to get tapped.

The fundamental transformation has in any case been made by a country that was once viewed as an international basket-case and which is now viewed by most international businessmen as a place of economic and industrial opportunity. That is not a small achievement. Even if it is by no means a complete achievement, it has at the moment given the economy a sense of confidence about itself as it gets ready for a new set of policies designed to chart a course through new waters.

WEST BENGAL

Deep in the Red

THE FINANCIAL situation of many state governments has become precarious in recent times, but the West Bengal case is in a class by itself, and should serve as a warning to other states of the danger of economic stagnation if financial prudence is thrown to the winds. The discontent of the people of Bengal with the Left Front Government is linked to its disastrous financial record.

To start with, what are the facts? The 1984-85 financial year is drawing to a close, but the state's annual plan is yet to be finalised. In the first four years of the Sixth Five-Year Plan, the state has been able to spend only Rs 1,791 crore out of its total plan allocation of Rs 3,500 crore. Out of its expenditure so far, the state Government's contribution has been only Rs 152 crore, with the rest of the money coming from the Centre, from market borrowings and from Reserve Bank overdrafts. Perhaps West Bengal is the only state whose contribution towards plan expenditure is totally insignificant. And by the end of March, when the Sixth Five-Year Plan ends, it will be the only state in the country that failed to spend close to 40 per cent of its plan outlay. As a matter of fact, out of the Rs 2,200 crore that the state Government is likely to spend over the five-year period, about Rs 2,000 crore will have been provided by the Central Government. The state Government was supposed to contribute Rs 2,177.99 crore to its sixth plan, but in actual fact it will contribute less than one-tenth of that.

In the current year, for instance, the Left Front Government insisted on an annual plan of Rs 758 crore. But the state's own resources were no more than Rs 148 crore. As regards Central assistance, since almost all the assistance allocated for the sixth plan has already been used up, only a balance of Rs 43 crore is left for the closing year of the plan. The state's share in government loans is Rs 163 crore. So the truth is that there is money for an annual plan of only Rs 354 crore.

Even this is an unduly optimistic figure, because in none of the past years has the state Government been able to contribute as much as Rs 148 crore to the annual plan. In some years, the state Government has contributed nothing at all to plan investment. Thus, in 1981-82, the actual plan expenditure was Rs 454 crore, and the state's contribution (after making an allowance for overdrafts from the Reserve Bank) was minus Rs 3.92 crore. The following year, while the actual plan expenditure was Rs 437 crore, the state's contribution was again negative, minus Rs 49.45 crore. And in the year after that, the state was able to make a positive contribution to plan spending only because the Centre gave a Rs 73.72-crore medium term loan. So in the last three years, the state Government has contributed nothing to its plan expenditure. So in these three years, if it were not for assistance from the Centre and for overdrafts from the Reserve Bank, the state would have had no annual plan at all.

Chart by B.K. SHARMA

When the Sixth Plan ends, West Bengal will be the only state that failed to spend close to 40 per cent of its plan outlay. Despite this, the state has been on overdraft for an average of 200 days a year since 1977-78.

How did such a situation come about? At the risk of boring the reader, some more statistics are necessary. In 1971-72, when the Congress came back to power after a period of Left rule in West Bengal, plan expenditure was 9.68 per cent of the state Government's total expenditure. By 1976-77, which was the last full year of Congress(I) rule in the state, this figure had been raised to a very creditable 21.89 per cent. But since then, it has been a steady downhill road under Left Front rule. And in 1982-83, which is the latest year for which there are statistics, plan expenditure accounted for only 13.51 per cent of state government spending. This kind of decline can only be because the Left Front Government sees no distinction between plan and non-plan expenditure, and they have a different set of priorities.

There is a third way of showing the state's financial indiscipline. West Bengal has been on overdraft since 1977-78 on an average of 200 days a year, ranging from 165 days in 1978-79 to 299 days in 1981-82. Although the exact figures are not available for 1984-85, the picture will not be different from the earlier years. While it is true that many states have been on overdraft for a large number of days, there is no state which has been on overdraft in every year consistently for so many days. In fact, when the sixth plan funding arrangements were finalised, it was assumed that the state would not resort to overdrafts at all to finance the plan, or to bridge the gap in its revenue receipts.

The Left Front Government has repeatedly argued that all the problems it faces is because of the non-implementation of the recommendations of the Eighth Finance Commission. But the first four years of the sixth plan were covered by the Seventh Finance Commission, and the state Government received all the money it was entitled to in those years.

Also, all the states are governed by the same constitutional arrangements, the Gadgil formula for distributing money and other modes of transferring resources. There is no question of any discrimination to West Bengal. The real answer to the state's financial woes lies in the attitude of the state Government. Thus, the salary bill of the state Government has climbed from Rs 244 crore in 1976-77 to Rs 790 crore in 1983-84. And despite the fact that the state Government has been able to exceed its target of additional resource mobilisation, the erosion of its resource base is estimated at Rs 1,300 crore over the five-year period. The state which has the fifth highest per capita income in the country (Rs 1,267) should have been able to do better. The simple truth cannot be evaded. What has happened to the West Bengal economy is largely self-made. It can still be revived if corrective steps are taken. But is this going to be done?

A.R. ANTULAY

Awaiting Judgement Day

ABDUL Rehman Antulay, former Maharashtra chief minister, arraigned for over three years for alleged corruption and other criminal offences, will most probably hear the judicial pronouncement on him lying in bed in his cabin on the tenth floor of Bombay Hospital. He suffered a cardiac arrest on January 8, and was rushed to the intensive care unit where he lay for 25 days. A week before that, he and his fledgling Bharatiya Congress, comprising rebels from the Congress(I), were badly mauled in the Lok Sabha polls. And now, as his trial enters the closing chapters in the court of Justice Dinshaw Mehta at room No. 13 on the ground floor of the greystone Bombay High Court building, there are all signs of the one-time 'sultan' of Bombay running up against a solid and impregnable wall.

Justice Mehta will pronounce his judgement this fortnight on a complaint filed by Ramdas Nayak, a leader of the Bharatiya Janata Party (BJP), which said that the former chief minister had indulged in cheating, bribery, extortion and corruption during his term in office between June 1980 and January 1982. The crux of the complaint is that Antulay had passed off his five personal trusts as government trusts and then collected donations for them from the public in consideration of distributing official largesses, such as cement, enhanced quota of industrial alcohol, and permissions to build and transact in real estate. An adverse judgement could mean fines and a maximum punishment of up to seven years imprisonment, though the road of appeal to the Supreme Court would still be open to both the parties. As a senior counsel of the high court said: "We've come close to a turning point in judicial history. No matter what the judge finally says, it'll be the first pronouncement by the judiciary on the honesty of a public servant following a complaint made not by the state but by a member of the public."

Though Nayak is the main complainant in the case, it is his senior counsel, Ram Jethmalani, a former MP of the BJP and the country's ace criminal lawyer, who has stolen the show as Antulays' star adversary. Jethmalani dug his teeth into

NAMAS BHOJANI

A.R. ANTULAY

"I shall live on and fight on"

THE ATMOSPHERE on the 10th floor of Bombay Hospital is a curious blend of incapacitation and political flurry. For all practical purposes, it is from here that Abdul Rehman Antulay, 56, is fighting his battles, all of them—medical, legal and political. Sadly though, each front is in the throes of crisis. Antulay's doctors are worried over the condition of his heart which, they say, has been rapidly deteriorating since early this year. They advise a diagnostic check-up, followed, if necessary, by bypass surgery in the US in April. The other piece of advice, given tacitly, is to bid goodbye to politics. Although the second is endorsed by wife Nargis, her husband would rather die than give up politics.

Workers of Antulay's Bharatiya Congress Party throng the hospital every morning, led by Bhaurao Patil, party general secretary and member of the outgoing assembly. With the former chief minister out of action in the assembly poll campaign, audio and video cassettes of his speeches are made in this hospital room, for use at rallies. Outside, at the door, his lawyers wait patiently—they are the least welcome because they rarely bring news to cheer. And in the changed circumstances, son-in-law Mushtaq has taken charge of the long evening consultations which take place in the Antulay home, Al Sabah Court.

Still, Antulay has his wits about him and flaunts his two best-known assets—a toothy smile and irrepressible bluster—as he tries to rally the minorities round in the light of his party's alliance with the Samyukta Republican Party, which is dominated by the Scheduled Castes, and a splinter group of the Dalit Panthers and the new Dalit Muslim Minorities Suraksha Mahasangh floated by the controversial Haji Mastan. Last fortnight, warned by his doctor to "talk slowly and without emotion", Antulay spoke to Principal Correspondent SUMIT MITRA. *Excerpts:*

On his future line of legal defence:

I don't know. I believe in the ultimate court, which is God's. God knows I've not committed anything wrong. I've taken money in cheques from those who are rich for the uplift of the poor. I have not misspent a single paisa from that. I did it because it was my conviction that the rich should pay for being rich, and the poor should get paid for being poor. I don't wish to give it any label, but this is my faith. My enemies are seeking a judicial verdict on this faith.

On Rajiv Gandhi:

After Sanjay's death, I, as the chief minister of Maharashtra, was the first high-ranking politician in the country to announce that Rajiv should be brought in as leader. I met him immediately after that and told him that he should contest from Amethi and not from Allahabad. Yet Rajiv opposed me. You may be surprised to know that Rajiv

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the case as early as September 1981—shortly after the media disclosures of Antulay's trust scandals—when he took up Nayak's brief on the criminal complaint simultaneously with the civil suit filed by Mrinal Gore, P.B. Sawant and others. While Ashok Desai, another luminary of the Bombay bar, who was the counsel for Gore, was finally able to argue the case successfully, leading to Justice Lentin pronouncing that there was indeed a 'nexus' between the donations and the largesses, Jethmalani plodded along a more circuitous way to put Antulay in the dock for trial in the criminal case.

Antulay in his hospital room: back to the wall

Jethmalani, and his suave, Oxford-educated son, Mahesh, have for the past few months slogged 14 hours a day on the case, returning all other briefs in dozens. Stacks of the files and papers related to the Antulay case have piled up on virtually every square-inch of available space in their Nariman Point office. Though they have argued the case entirely free of cost, so high has been the public interest in it that donations amounting to nearly Rs 75,000 have come along to Nayak to meet the incidental expenses, often from anonymous contributors and in denominations as small as five rupees. Said an exhausted but unfazed Jethmalani: "I've given my life's best in this case. I sink or swim with it."

Antulay, on the other hand, had mostly reverses coming his way. His worries are hidden adroitly behind a screen of bluster. "By God's grace, I shall win the case and prove that I'm the cleanest politician to take on Mr Clean," he says, archly referring to Rajiv Gandhi with his customary self-righteousness. But the die is clearly cast against him.

And Jethmalani feels he is getting closer to his quarry whom he has stalked all these years. He first ripped through Antulay's defence in 1982 when the Supreme Court upheld a high court judgement that the Maharashtra governor could sanction Antulay's trial without consulting the state cabinet, many of whose members were Antulay's cronies. Thereafter, Antulay's second line of defence also came down crumbling: it was that being an MLA, he was a public servant, and therefore he could be tried only with the sanction of his 'appointing authority', the speaker of the Assembly. The Supreme Court bluntly stated that an MLA was no public servant. Thus Antulay was up for trial by a special judge of Bombay High Court, on criminal charges, like any other ordinary accused.

Though the trial still has a long way to go—even if the charges are ordered to be

concluded his campaign before the Lok Sabha at my constituency. He said that some people had tried to raise funds by misusing his mother's name, and that they should be defeated. It was a call to defeat me. But what happened? Two days later, the candidate of his own party, the Congress(I), got such a drubbing at the hands of the electorate that he lost his deposit. True, I was defeated. But I managed to get 118,000 votes—only 34,000 votes less than the PWP candidate who won. But the Congress(I) candidate became one of the few in the country who lost their deposits.

On his legal expenses:

I can't tell you how much I've spent on my cases. This isn't a fair question. But I must tell you that I have proof that the Congress(I) bore the entire expense till I resigned from the party in mid-November last year. And Rajiv knew about it. It was in his presence on a number of occasions that M.L. Fotedar (the prime minister's political aide) handed out money to me.

By the grace of God, I shall live on, and fight on. I'm better placed than the Opposition. I shall prove that I'm the cleanest politician to take on 'Mr Clean'.

On Indira Gandhi:

She had a lot of affection for me. I met her first when I was a student in England and she had come there with her father in 1953, for the coronation of Queen Elizabeth, and stayed at Claridge's. I at once pledged my loyalty to her. Four years later, in 1957, when I was elected member of the AICC, I wrote to U.N. Dhebar, the then AICC president, that he should quit to make way for younger people like Indira Gandhi. As in Rajiv's case, I was the first to start the 'draft Indira' campaign too. As you know, she did become AICC president in 1959. She always had a soft corner for me, though I can't say she very much appreciated it when Sanjay wanted me chief minister of Maharashtra in 1980. She had other nominees in mind. But Sanjay had his way. Again, in December 1981, Mrs Gandhi remarked about my continuing in office that everything depended on the "outcome of the case". As you'll remember, Justice Lentin's judgement came in January 1982. On that day, Sanjiva Reddy, the President of India, was in Bombay and he invited me to a hockey match. I declined because I knew the judgement (on the civil case) would come that day. It came at 2:30 and I resigned at 4 p.m. even though 211 of the 234 Congress(I) MLA's requested me not to submit my resignation.

On his future plans:

Maybe this bypass surgery will give me a new lease of life. By the grace of God, I shall live on, and fight on. I'm better placed than the Opposition. I shall prove that I'm the cleanest politician to take on 'Mr Clean'.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

framed, Antulay will have a right to cross-examine the witnesses all over again—the case has altered his quick, electric personality. He now needs the support of a wall to shuffle up to the telephone, barely a few yards away from his bed. A connoisseur of sumptuous biryanis, he eats two frugal meals a day. There is a reiterative reference to 'God's court', as if the court on this side has already delivered its judgement. And, bereft of an inner will to battle on, his familiar smile, often found sinister by many, looks pathetically vacuous now.

The case, numbered Special Case 24 of 1982, was transferred for trial from the Supreme Court last year by the order of a five-judge bench. Since April last year, it has been heard for well over 80 days, involving 53 witnesses, and has hogged media space like no other case in recent times. The essence of the complaint is that Antulay is guilty of having conceived a scheme of aggrandisement involving obtaining of funds from the public and then putting the funds substantially under his control. In the process, he is alleged to have committed offences of:

- cheating, under Section 420 of the Indian Penal Code (IPC) for having 'dishonestly induced' builders, sugar cooperatives capable of manufacturing industrial and potable alcohol, and property owners in making large contributions to the trusts;
- extortion, under Section 384 of IPC, for having intentionally put the makers of alcohol in fear of losing business by imposing cuts on their licensed quota in order to secure donations from them;
- bribery, under Section 161 and 165 of IPC, for having accepted illegal gratification by way of the donations in spite of being a public servant; and
- corruption, being a public servant, as defined in Section 5 of the Prevention of Corruption Act, 1947.

The first major break in the ding-dong legal battle, however, came in the civil case when Justice Lentin of the Bombay High Court stayed the operation of the trusts' accounts in January 1982 and held that there was a quid pro quo involved in the donations made to them and favours shown to the donors. Antulay, who was at a meeting when the judgement came, drove straight to his residence, called a press conference, and announced his decision to resign.

But he was still able to block criminal proceedings on the ground that no chief minister could be tried without the governor's sanction for offences allegedly committed during his tenure in office. It took Jethmalani six months, and two appeals, to get an order out of Supreme Court that the governor could indeed sanction such trial on his own, without consulting the cabinet, that is. The judgement came on July 27, 1982, and the Governor, I.H. Latif, gave his sanction the next day.

HEMANT PITHWA

"I've given my life's best in this case. I sink or swim with it."

RAM JETHMALANI

But Antulay's trial before a special judge again got interrupted by a shrewd defence argument that the assembly speaker's sanction was also necessary. After the Supreme Court also waved it aside, Justice S.N. Khatri was appointed trial judge and the trial began in right earnest in April 1984. In August, Justice Khatri resigned voluntarily following some charges levelled at him by the prosecution, and Justice Mehta stepped in.

The striking feature of the trial is that it combines the hearings with an ongoing investigation. Antulay had indeed been indicted by the press through a series of investigative reports long before the case went to court. But the press focussed on circumstantial evidence which strongly, but obviously not conclusively, suggested that there was a link between the donations received by Antulay for the trusts and the favours shown to the donors by his government. The thesis had to be proved in court, and what the prosecution needed were nuggets of solid documentary facts, which they could come by only if the state machinery did not stand in the way.

Ironically, the case reached its final crescendo soon after Mrs Gandhi's death on October 31 last year, when a number of state government officials, as though reassured by the fact that there would be no retribution for them if they came up with evidence, began coming forward as witnesses for the prosecution, providing crucial testimony, explaining various anomalies in the documents already placed before the court, and throwing new light on the bizarre working of the state Government under the controversial chief minister.

The most prominent among these witnesses were V.T. Chari and Vijay Singh, former secretaries in the department of food and civil supplies; L.S. Lulla, a former Maharashtra chief secretary who had officiated as officer-on-special duty (OSD) in Antulay's secretariat; additional chief secretary B.K. Halwe; D.V. Ekbote, a superintendent in the food and civil supplies department. Except Lulla, all of them are in government service now and it is the opinion of lawyers—without meaning any prejudice to the integrity of the witnesses—that the officials would have been "inhibited" had Vasantdada Patil, the Maharashtra chief minister and Antulay's staunch foe in the field of politics, not taken such a tough stand with regard to him.

"Who am I to encourage or discourage court witnesses?" Patil asked INDIA TODAY. But the officials in his government, one and all, sang in unison against Antulay at the court, levelling charges such as:

- the written recommendations of Antulay for release of cement to builders who had donated money to his trusts were not recommendations but "orders

For certain people who expect a lot more from a fan than just a lot of air

Wind Elegance by Crompton Greaves

Heritage

A 'punkah' with a difference. Give a delightful ambience to a room. With ornamental brass fittings. And fancy pull-cord facility for on/off operation and for regulating speed. In a striking brown combination. With provision for incorporating under-light, if you want it.

CHANDEL'AIR

It's a fan! It's a light! It's a fan that lights up your kind of living. A revolutionary concept, Chandel' Air is a fan with special under-lighting. 4 blades with unique, decorative shanks. Choice of electronic or choke type regulator.

Dec'Air

A piece of art. It's a masterpiece in performance as well as in looks. In an elegant copper brown finish. Has a classic, timeless appeal that never goes out of style. 4 blades with metallized brass-finish shanks. Choke type regulator.

Crompton Greaves LIMITED

Built with care, built to last

to be given effect to";

▸ Pesi D. Tata, Antulay's friend who died in 1982, was actually the link between him and the businessmen who benefited from ad hoc allotments of cement and alcohol quota;

▸ that Antulay attempted to substitute official notes containing references to Pesi Tata by other notes, "less embarrassing to the Government", but also carrying his signature; and,

▸ that he indulged in overwriting on government files as the hearing on the earlier civil case began in September 1981, while he was still in office.

Also revealing are the depositions of builders, shopowners, manufacturers of industrial and potable alcohol and other private citizens who pointed accusing fingers at Antulay. Examples:

▸ Rajan and Deepak Raheja of Rajdeep Raheja Constructions said Pesi Tata had approached them with the offer of cement against a donation of Rs 40 per bag to the trusts;

▸ Mahesh Sadarangani of the K. Raheja group said that his company got 1,654 metric tonnes of cement after donating Rs 8,82,000 to Konkan Unnati Mitra Mandal, one of the trusts floated by Antulay;

▸ Lalchand Rohra, Mukesh Dadiani and Ramesh Merchant of Nanubhai testified that they had donated Rs 8 lakh to the Indira Gandhi Pratibha Pratisthan (IGPP) in exchange for a no objection certificate (NOC) from Antulay to sub-let its premises to the Indo-Suez Bank at a rent of Rs 1.2 lakh per month. Merchant, who had once been Antulay's tailor, deposed that he negotiated the price with Antulay himself at *Varsha*, the chief minister's official residence in the Malabar Hills area, where Antulay demanded Rs 10 lakh but it was bargained down to Rs 8 lakh; and

▸ Anilkumar S. Ruia, joint managing director of Kolhapur Sugar Mills, disclosed that his three companies paid Rs 4.25 lakh as donation to the Konkan Unnati Mitra Mandal in consideration of restoring cuts in their allotment of industrial alcohol, the figure being arrived at on the basis of "25 paise per bulk litre".

As against the impressive list of witnesses coming forward to depose against Antulay, those whose testimonies are regarded by the prosecution as "hostile" are very few: only Ajit Kerkar, managing director of India Hotel Company which owns the Taj group, and two builders, Niranjan Hiranandani and Mahendra Gala. Both Hiranandani and Gala, who had obtained cement from Antulay's ad hoc quota and had also donated to his trusts, said the two had no interrelation, which negates the crux of the prosecution argument. And Kerkar, who was himself a trustee on the IGPP, in addition to denying the suggestion of any quid pro quo, said that the Taj group had deposited Rs 1 crore with the Sethia Foundation Trust, yet another of Antulay's creations, not for any permission to build another Taj hotel on the premises of the National Council of Performing Arts (NCPA) at the prestigious Nariman Point but to ensure that the Taj employees, many of whom came from the Konkan area where the Sethia Trust proposed to set up a hospital, got medical facilities.

> **"There is very little hope left for Antulay really. All his braggadocio and rhetoric come from an illusion of power to which politicians often fall victim..."**
>
> ASHOK DESAI,
> *eminent lawyer*

Antulay's two young counsels, Nitin Pradhan and Vidyasagar Kanade, exuding the never-say-die spirit, think there are yet some "bright silver linings" on the dark clouds created over the case by "adverse media reportings on the trial". According to Pradhan, the versions put out by Kerkar and the two other builders corroborate the defence contention that there was indeed no "nexus" between the donations and the official favours. He also thinks it involves stretching the Evidence Act "a bit too far" to prosecute his client largely on the basis of words and deeds of Tata, "a man dead and gone long ago".

But Mahesh Jethmalani thinks he and his father have an "air-tight case". Says Ashok Desai: "There is very little hope left for Antulay really. All his braggadocio and rhetoric come from an illusion of power to which politicians often fall victim. It is ironic that even Antulay, who has a background in law, left his hoof marks all over on the files while taking decisions for which he was fit to be hauled over coals." Desai should know, because he and Antulay did their bar-at-law in London together.

The present trial of Antulay defies all set categorisation because it is indeed difficult to say where prosecution begins and investigation ends. But, as the hearings end this fortnight, the judge may either dismiss the complaint, thus giving Antulay a clean chit, or ask the charges to be framed, which means admission of a prima facie case against him. That will leave Antulay with another opportunity to cross-examine the witnesses, and prove his innocence. But an order to frame the charges, if given, is a development serious enough because it will definitely amount to adverse judicial pronouncement on the former chief minister in a criminal case.

Though the court holds the key to Antulay's survival, it is by sheer force of habit that he is seeking election again in the assembly election from the Sriwardhan constituency in coastal Maharashtra. He may win simply because he led his nearest rival in the assembly segment by nearly 18,000 votes in the Lok Sabha elections. But full five fathoms deep lie his chances of getting immunity from law again as an MLA in view of the earlier Supreme Court judgement.

Nor is there any hope that the Congress(I) leadership will extend its protective wing to him. Said Vasantdada Patil: "I really don't know by what accident this Antulay became the chief minister of Maharashtra. His chief ministership was a disgraceful chapter anyway."

Still, more than merely deciding the fate of Antulay, the clawing legal battle has derived its uniqueness from its unparalleled feature of combining trial with investigation. Witnesses have been called out not only to corroborate charges but to disclose new facts and unleash new evidence against the accused. "What can I do," asks Jethmalani, "when the law does not permit me to seize documents firsthand and to get at the concrete facts?" The trial has also redefined the level of public servants' immunity against law, and has broadened the scope and meaning of the word 'corruption' to include in its sweep even professedly altruistic exercises.

But, above all, and irrespective of Justice Mehta's final word on the case, it has shown the extent to which the court can go on doggedly pursuing a complaint when all other institutions of democracy seemed to have got stymied with fear and suspicion and the people had begun entertaining doubts about the fairness of the executive. The implications of the case have at last far surpassed Antulay, the man.

JAPAN

Hi-Tech Extravaganza

Bird's eye view of Tsukuba Expo '85: glimpse of the future

WELCOME to the 21st century! Here are two robots doing an elaborate courtship dance, the lady robot playing typically hard to get till just before the proverbial happy ending. There's another gazing at someone's face and sketching a surprising likeness on a sheet of paper. A fourth robot, named Fanuc Man, picks up a set of dumb-bells weighing 200 kg and raises them like a medal-winning weight-lifter.

A computer makes a film of a voyage through a crystal of ice. Another simultaneously translates a document in four languages. A train magnetically levitates a centimetre above a pair of rails and, with no friction to slow it down, glides off towards its destination. Looming large over it all is a 40 by 25 metre television screen, a camera mounted on top which homes in on a viewer standing 200 metres away and projects his face 10 metres high.

The 21st century? Well, perhaps not quite but Japan's newest extravaganza, Expo'85 which opens mid-March for six months at Tsukuba near Tokyo, promises to give a tantalising glimpse of what's in store in the next century now a mere 15 years away. The theme is ideally suited to high-tech Japan: Science and Technology for Man at Home. And even though the foreign pavilions (which understandably do not include an Indian exhibit) far outnumber the Japanese, it is the Japanese who will steal the show.

Nobody is likely to grudge them that. They are the hosts and will, by the end of it all, have spent something like 645 billion yen (Rs 3,250 crore) to make the show a success. If past performance is anything to go by, a success it most certainly will be. The last Japanese Expo—at Osaka in 1970 which had an Indian pavilion—attracted 40 million visitors, 40 per cent above target.

The target for Tsukuba is 20 million visitors but Expo'85 Secretary General Yoshinori Ihara says: "We've really become even more ambitious, and we expect even more will come." The organisers also expect that half of all visitors to Tsukuba will be younger than 20 years. Why? Because today's children are the first generation of the 21st century. "We need to give dreams to the young," says the designer of the robot dance.

The dreams will, of course, be based on hard scientific reality. The dancing robots, for instance, aren't toys: they operate on complex systems which permit two robots to communicate with each other independently of human beings. The robotic artist may not be a fifth generation thinking computer for which the Japanese are going hell for leather, but it does demonstrate the immense possibilities of giving robots "visual" capabilities. Fanuc Man is really no weight-lifting novice: existing industrial computers can't manage more than 10 kg per arm.

The levitating train, a prototype which has yet to be given the go-ahead for commercial development, is Japan's answer to the energy crisis and urban congestion. The 66 km journey from Tokyo's Narita Airport to the city centre is at least an hour and Rs 750 by taxi; the High Speed Surface Transport (HSST) would cut travel time to 15 minutes and the fare to a fraction. More significantly, since it is propelled by linear induction motors and doesn't have wheels or any other parts in physical contact, the ride is incredibly smooth. The HSST can travel at 500 kmph, as fast as the swiftest cruising propeller driven planes, but its designers say that at that speed it encounters difficult aerodynamic problems, and the ideal speed of a train of eight carriages each carrying 100 to 120 passengers is 300 kmph. The Japanese, who pioneered the concept of the Shinkansen bullet trains are also working on a new kind of faster and energy saving intercity bullet train for the 21st century.

But scientific development isn't all so black and white, and there are some grey areas at Tsukuba as well, gadgetry that looks impressive but doesn't seem to have a ready application or, if it does, at what

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

currently a prohibitive cost. There's an obvious use for a computer that can handle four languages at the same time and is programmed to weed out linguistic absurdities. But the one being used for this purpose at Tsukuba is reportedly the world's largest commercially produced unit and it's taken several very expensive months to programme. "We understand it graduated from high school recently," quipped the scientist responsible for its education, "and we are confident it will graduate from college by the time the exposition starts." The cost of tying down a machine of this kind for a year is prohibitive and it isn't at all clear that the effort is actually worth it.

A computer that can be programmed to create and visualise through computer graphics what the human eye can never hope to see—a crystal of ice from the inside or the fusion of hydrogen atoms—probably has practical applications in helping scientists understand certain processes or design hardware to cope with them. Its handiwork, molecules of water dancing on a giant hemispheric screen forming themselves into hexagonal ice crystals as the temperature drops, is breathtaking seen in 3-D through tinted glasses. But the computer has taken a year to make the film.

The giant television screen is another dubious merit. Sony, its makers, acknowledge that they haven't actually found a use for their jumbotron, as it is called, though the same principles could yield smaller screens for advertising purposes. But the jumbotron is slated for the trash can: it is too big to store and too expensive to move. And though several tens of crore rupees have been spent on making it, come September, the screen will simply be torn down.

So will all the pavilions, all the buildings, the 250-acre site, the amusement park with the world's tallest Ferris wheel—85 metres tall ("because it is Expo '85"). If that seems a bit of a waste, nobody is shedding any tears over it in Tsukuba, for by the time the Expo is over, it will have served its other major objective directing attention to what Tsukuba really is, a self-contained science city like

A giant TV screen and (below) a prototype high-speed surface vehicle

which there is only one other, in the Soviet Union.

Expo officials are prone to admit that it all boils down to a massive promotion job for Tsukuba Science City. Tsukuba, like Chandigarh, was built from green fields to be a sort of science capital of Japan. The first land was bought in 1969 and the first research institute opened its doors in 1972. Since then another 45 government-funded research institutes and two universities have shifted to the city whose population is now 143,000.

Among them are national centres for a whole range of the sciences, construction research institutes including one for disaster prevention, engineering institutes, environment research centres, biological and agricultural research. It hasn't come cheap: the Government has poured in 1.2 trillion yen (Rs 6,000 crore) and it now feels that it was time that the Japanese private sector started picking up the tab.

More than half the spending on Expo'85 has been aimed at bringing the city closer to Tokyo. A new 400 billion yen (Rs 2,000 crore) expressway, which must be the most expensive road in the world with its high steel baffles on either side to protect the surrounding areas from the noise of the traffic, cuts city centre travel time to just an hour. New hotels built for Expo'85 will now cater to Science City visitors. And, above all, the Expo grounds will form the nucleus of an industrial estate to give the private sector what it needs: factories to give birth to industrial R & D.

But a more serious question is worrying some Japanese who have leaped from ruin to riches in the space of just four decades, and now lead the world not only in industry and business, but in several fields of technology. For, as Tsukuba's Director of Planning, Hideo Nakanishi says: "For us to create a good 21st century, we have to ask ourselves questions about science and technology." What kind of questions? Is the heady pursuit of technological excellence not creating a rootless society? Is Japan, which is so conformist in its personal relationships and has such a highly developed sense of harmony in its patterns of life, in danger of cutting itself off from its traditions?

No visitor to Japan can fail to notice the physical absence of the ancient Japan. There are museums and art collections, yes, but apart from Kyoto and Nara, and areas like the Imperial Palace in Tokyo, Japan is almost wholly post-War, a country rebuilt from the most widespread destruction that any nation has experienced. The concern for traditions is understandable, given this past, but perhaps the destruction also explains why Japan's adaptation to the world of science and technology has been so remarkable and why it is so appropriate that if there had to be a science and technology exposition, it should be held in Japan.

SRI LANKA

PARADISE LOST

"IN SRI LANKA one learns to expect the unexpected" is the catchy advertising slogan emblazoned across the Indian Ocean island's glossy tourist brochures. A better example of tongue-in-cheek copywriting would be difficult to find. The sad and inescapable truth is that the slogan applies more to the island's currently irascible population of 15 million than it does to the dismayingly dwindling number of tourists, baulked by the Frankenstein-like dimensions of Sri Lanka's rapidly escalating ethnic strife.

Tourism is merely the most visible victim of the unfolding tragedy. In the past three years, the battle between the Government's trigger-happy security forces and obdurate Tamil separatists, though largely confined to the north-east, has gouged deep and painfully permanent scars across the island's once-idyllic socio-economic face, in physical as well as psychological terms. To assess the overall impact of the trauma, largely overlooked by the media so far, Associate Editor DILIP BOBB *talked to a wide cross-section of Sinhalese society including businessmen, top-rung professionals, politicians, diplomats, bureaucrats and ordinary people during a visit to the island last fortnight. His report:*

AT TIMES, he resembles a professional mourner or even an undertaker with his perpetually melancholic mien and severe raiment. Add a sinister-looking cowl and he could be straight out of the Inquisition, an image reinforced by the priest-like robes he favours. Even his smile is slow and sad, forming new and enigmatic patterns in the deep wrinkles on his elongated face. He had made the acronym 'JR' famous long before the American soap opera, *Dallas*, gave it dubious immortality.

The symbolism is, if anything, increasingly sepulchral. At an age when most politicians are haltingly dictating their memoirs, Junius Richard Jayewardene, 78, is quite literally, riding a tiger into an unknown sunset. Eight years ago, when he first wrested power from his arch-rival Sirimavo Bandaranaike, he boldly steered Sri Lanka onto a tack intended to transport the 25,000 square mile island to a modern-day Garden of Eden. Proclaiming, *sotto voce*, the war cry "Let the robber barons come", Jayewardene joyfully jettisoned Bandaranaike's "era of controls, ration cards and queues" and instead put Sri Lanka firmly on an open, free market highway modelled on some of the more prosperous and western-oriented, South-East Asian economies.

Today, his dreams seem as mockingly empty as the hotels strung out like modern museum pieces on Colombo's Galle Face Esplanade, the stretch of prime real estate made immortal by writers like Somerset Maugham. The latest five-star showpiece, the Meridian Galadari, had a total of 15 guests in the third week of December, normally the peak of the tourist season. Rooms originally priced at US $80 are currently negotiable at $30 or less and so cut-throat is the competition that the Meridian is now reduced to carefully noting birthdates on guests' passports and then sending them greeting cards anywhere in the world to try and lure them back. The venerable Galle Face Hotel, known for its olde worlde charm and its enviable sea front location, is the only hotel in Colombo that has stubbornly refused to slash prices. It has been averaging an occupancy rate of less than 5 per cent in the current tourist season and a ratio of about 20 employees to each guest. "Tourism is a very sensitive industry and it's been hit the hardest by the ethnic problem," says Ken Balendra, the affable managing director of Walker Tours, the leading tour operators in the island.

Jayewardene: caught in a cleft stick

RAGHU RAI

Just how hard is reflected somewhat in the latest statistics of the Ceylon Tourist Board. Tourist arrivals dropped by 17 per cent in 1983, the year when the July ethnic riots engulfed the island. In 1984, the figures registered a further drop of 5.9 per cent. Overall occupancy rate in graded hotels dropped to 35.9 per cent in 1983 and 1984 has been even worse. "Hotels are a disaster area," says Askar Moosajee, one of the biggest and best-known businessmen in the country, "you are losing money every minute."

DILIP BOBB

Colombo's Galle Face hotel: deserted

Tourism is necessarily the most high-profile sign of the times but it also symbolizes the sudden and traumatic turnaround in almost every aspect of the island's economic life. The crunch has come just when the industry was poised on the crest of a boom and new hotels, including the impressive Taj Samudra and the neighbouring Oberoi Lanka, were just opening their gleaming glass doors. Room capacity in graded hotels had jumped by 17.4 per cent in 1983, the year when disaster dawned and occupancy rates plummeted. In an ironic twist of fate, Indians have now toppled the West Germans from their traditional spot as number one generators of tourist traffic to Sri Lanka for the second year running.

Outside Colombo, the smaller hotels are already reversing the high staff to client ratio by retrenching personnel with a resultant drop in standards and service. The hardest hit have been the handicraft and batik shops catering exclusively for the tourist trade, many of which have downed shutters or merely gone bust. Once the second largest foreign exchange earner, tourism has now dropped to fourth place after tea, foreign remittances and garments.

The Government, having enjoyed the fruits of the boom—an abnormally high 20 per cent business turnover tax on hotels and crippling electricity charges—has now been forced to hastily revise its policies. The turnover tax has been slashed to 5 per cent and other conscience-salving concessions introduced like rescheduling of debts and lowering of interest rates. But even that is a case of too little too late. All development plans for tourism have been put on the backburner and investment has come to a screeching halt. The future seems as bleak and forlorn as the weather-beaten Sheraton Hotel hoarding above an empty plot of prime land on Galle Road.

THAT depressing scenario is being duplicated much beyond the tasselled borders of the tourism industry and the shockwaves are just beginning to be heard and felt. "It's like playing Russian roulette", says Moosaji, "no expansion is taking place and people are just not prepared to commit any money on new investments. It's a very small island and any breakdown in communications and supply lines sends everything out of synch." Moosaji, a highly respected businessman with an extensive range of business interests, illustrates his point with a personal example. Ten months ago, he imported 500 tonnes of urad dal from India.The consignment was cleared in January, nine months later, when the interest alone has turned the venture into an unacceptable loss.

Moosaji typifies the dedicated breed of Sinhalese whose business savvy, honed by Harvard and other educational points West, have allowed them to strike it rich in Sri Lanka's relaxed, laid back and somewhat protective business ambience. They also have no qualms about showing it. His huge mansion in the heart of the city is artfully furnished with valuable antiques and the gleaming waters of the large swimming pool in the backyard offsets the quiet elegance of the cultured Muslim atmosphere. But the real ripples are below the surface. "I am trying to convince my son to set up something abroad. Opportunities here have now become severely limited," he says gloomily.

For Sri Lanka's fragile local business infrastructure, the crunch could not have come at a worse time. Not only have ethnic jitters stopped expansion and diversification plans, but, more serious, the internal structure of most large com-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

panies and business houses has experienced a major and debilitating upheaval. The root cause is the panicked exodus of a large and growing number of Tamils from Sri Lanka, specially after the July 1983 anti-Tamil riots that overnight left hundreds of Tamil businessmen and entrepreneurs bankrupt. According to official statistics, 122 industrial establishments suffered an estimated US $70 million worth of damage. Over 30 production units were totally destroyed and 15,000 manufacturing jobs were lost.

The negative results from that have been double-edged. The more widely-felt shock wave has been the sudden loss of what represented the backbone of Sri Lanka's business infrastructure—Tamil professionals. "It's been an accelerated brain drain," laments C.P. de Silva, chairman and managing director of Aitken Spence & Co, one of the largest business houses in the island.

Tamils occupied the top rungs of the corporate ladder in numbers quite disproportionate to their 12 per cent share of the island's total population. More important, they were prominent in key sectors like accountancy and engineering as well as forming the bedrock of the clerical staff in almost all Sri Lankan companies, and their sudden departure has left many businesses in disarray. "The sudden dislocation of the staff has been traumatic. We have lost some excellent people who will be difficult to replace. It could be disastrous if the situation continues," says D.S. Jayasundera, chairman and chief executive of the many-tentacled Hayleys Group. Jayasundera, who also doubles as chairman of the Sri Lankan chamber of commerce, says that many of Hayleys site operations have been delayed or even stopped because of key Tamil engineers who have upped and left.

In the wider context of the ethnic effect, Hayleys, like its competitors, has been also hit by the dislocation of distribution channels for durables and the bottlenecks in the movement of funds. "All our salesmen who were operating in the north are all sitting on their hands in Colombo," he says. The north is also where all the island's cement factories are which is one reason why construction activity in Sri Lanka has been stagnant for the third year running.

The corporate sector is not the only one affected. Last fortnight Health Minister Ranjith Attaputu, speaking at a wild-life preservation meeting, quipped that it was the country's medical profession that was "close to extinction" at the rate doctors and nurses were leaving the country. But for the ones who have opted or been forced to stay, the future is bleak. The mental pressures they are being forced to work under has seriously affected their output. Most of the middle and lower level Tamils working in Colombo have their families in Jaffna and the constant tension is crippling their aptitude for work. Says Moosaji: "From the backbone of almost all companies they have now become marginal entities. Their loyalty is suspect and their insecurity has drastically reduced their productivity level. I, for one, have stopped employing Tamils."

The overall economic picture is also looking through a glass, darkly. The contents of the Central Bank of Ceylon report for 1983, the most authoritative official publication available, is like perusing the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

obituary columns of the island's combative newspapers. Some excerpts:

- Factory industry and small industry showed a dismal 2.2 per cent growth against 9 per cent the previous year.
- The manufacturing sector registered a growth rate of 0.8 per cent.
- Private sector activity in construction registered decline for the third consecutive year.
- Public sector production, which accounts for 60 per cent of total industrial output, declined in real terms by 15 per cent. Says the report: "Some of the industries in the state sector showed stagnation and were seemingly lacking in growth potential." A third of all state-owned industries ran at a loss.
- Outlays on imports, which have been growing steadily in recent years, declined in 1983, bringing the level of imports to double that of exports. As the report warns: "The underlying trends are unfavourable for the Balance of Payments".
- Real capita income registered a decrease from 3.3 per cent in 1982 to 2.5 per cent in 1983.

MUCH of the blame must necessarily be attributed to the Government's policies, now almost totally centred around the ethnic problem and the current search for a military solution. Crucially-needed funds for development and other economic targets have been diverted into other areas, mainly defence. From some 50 million Sri Lankan rupees (Indian Rs 25 million) a decade ago, Sri Lanka's defence budget has soared to an incredible Rs 4 billion (Indian Rs 2 billion) currently. Only recently, the Sri Lankan parliament rubber-stamped another Rs 100 million (Indian Rs 50 million) for the army over and above the budget, an act that is becoming increasingly frequent. Other scarce resources have been inexplicably diverted for subsidising unprofitable areas. At the country's only urea fertilisation plant, production costs were $240 a tonne when the world market price was $140 a tonne. Commented the *Financial Times* in a recent report on Sri Lanka: "About 25 per cent of government capital spending consists of transfers to the state corporations which require twice the capital per employee to achieve half the labour productivity of the private sector." Such policies have only introduced a further drag on overall economic growth. In its latest report on the Sri Lankan economy, the World Bank sternly noted that: "the Government's budgetary management has been the major source of instability in the economy in the

past few years." Both the World Bank and the International Monetary Fund (IMF) have expressed deep concern at the high rate of public spending. The country's Finance Minister, Cambridge-educated Ronnie de Mel, agrees. "If this sort of thing continues, the economy can't come back," he stated. Except he was referring to the Tamil problem rather than the Government's financial policies over which, at this moment, he has little control.

In that sense, the outward prosperity of Colombo is illusive, and extremely symbolic. Flashy Toyotas and Mercedes jostle for parking space with 1950 vintage Austins, the only cars allowed as public taxis. Shops overflow with the latest in electronics, home entertainment and clothes but there is a paucity of customers. Inflation has been running at around 17 per cent on a year to year basis and the Colombo Consumers Cost of Living Index registered an increased of 21 per cent, this despite a major reduction in oil prices in 1983.

In the larger context, the crunch could not have come at a worse time—just when foreign investment and foreign exchange was desperately needed to help pay for massive public expenditure on the controversially ambitious $2 billion (Rs 26 billion) Mahaweli hydro power and irrigation scheme, ironically touted as a major boost for the economy. In fact, Sri Lanka's economic planners have blissfully operated in the belief that soaring capital expenditures and the resultant large budget deficits would simply be financed by aid, concessional borrowings and commercial loans. Sri Lanka is currently the most aid-dependant country in the world—aid accounted for almost 60 per cent of government expenditure in 1983, resulting in a dangerously high debt service ratio of 20 per cent.

The price is being paid now. Sri Lanka's failure to solve its ethnic crisis and the economic instability has turned the country into a high-risk investment as far as aid donors and banks are concerned. Warned the Central Bank: "The prospects for concessional aid are uncertain and further large-scale borrowing is imprudent in view of the dire consequences of debt servicing. The volume of exports has stagnated and pressures will mount for increasing reliance on foreign savings or curtailment of government and private sector investment."

In fact, Sri Lanka's economy has been riding out this year on a tide of tea. The sharp hike in tea prices, up by almost 70 per cent in 1984 and helped further by the Indian Government's ban on export of CTC teas, has saved Colombo the embarrassment of having to go hat in hand to the IMF for a standby loan. Says Jayasundera, wearing his chairman, chamber of commerce cap: "If tea prices were not what they are, the economy would be in serious trouble."

But even the island's tea kettle could boil over. Despite the record prices, tea production in 1983-84 at 179 million kgs was the lowest recorded since 1956. Though this was largely the result of unfavourable weather conditions there were obviously other factors at work. Says the *Financial Times*: "Traditionally the strongest element in the economy has been the tree estate crops, tea, rubber and coconut. But 15 years of poor management and lack of foresight in replanting has led to a deterioration in quality and output." Even the Central Bank report states that: "inadequacies in management in the state plantations sector continued to afflict the tea and rubber industries."

Tea plantation workers: keeping the economy afloat

Industrial prospects also suffer from a legacy of the Mrs Bandaranaike government—protectionism, a policy faithfully followed by former industry minister Cyril Mathews before he was sacked by Jayewardene late last year. One prime example is that of Union Carbide, the US multinational, which was asked by the Government to cut back production of electric batteries last year by 25 per cent to allow a local company to increase its sales. Remarked the *Financial Times*: "There is a vital need to reduce protectionism and encourage a diversified and faster growing export sector to offset the trade imbalance."

It could, however, be too late. The protectionist attitude has ensured, for one, that foreign and private investors have confined their investments to quick-return ventures like hotels, garments, real estate and trading, all of which have now reached saturation point. To find new areas of investment will be doubly difficult because of the higher risk entailed and longer term payback involved.

Since 1977, foreign companies have invested about $240 million in Sri Lanka in something like 300 ventures, more than half in the free trade zone outside Colombo. Since 1983, the process has gone into reverse gear. Agrico, a US agricultural chemicals company has abandoned its $300 million superphosphate plant project estimated to earn $100 million a year in foreign exchange. Two other US companies involved in electronics, Motorola and Harris Electronics, have also reportedly backed out of earlier commitments.

To add to the island's woes is the fact that the Sri Lankan rupee is pegged to the US dollar. With the dollar having become abnormally strong, the local currency is at a distinct disadvantage in terms of exchange rates. European travellers, for instance, find their marks and pounds drastically reduced in purchasing power, affecting not just tourism but a wide range of export activity. "The local industry is fragile and easily hit", says C.P. de Silva, "and with exchange rates unfavourable, it's become impossible to plan your next move." The greater problem, however, is the nervousness of foreign investors because of the ethnic problems. "The impression outside is that it's a civil war going on here. Foreign clients and investors think it's not a safe place to be and it takes a lot of convincing on our part to reassure them," says Jayasundera.

Reassurance, unfortunately, is at a premium at the moment. The ethnic problem has completely thrown the Sinhalese onto the defensive psychologically, to an extent where, in the words of a veteran diplomat, "they have started

The safety of your family is in your hands

Your scooter is also your family transport. Make sure it is the safest available two-wheeler.

Avanti is specially engineered with safety and dependability taking precedence over all other considerations. It is, therefore, a totally balanced vehicle with a centrally mounted engine which does not pull you and the vehicle to one side or the other. Because of this unique design feature, tragic accidents due to locking during critical bends are totally avoided. This stability is also vital when you have to straighten out after taking a sharp bend. Please do not under-estimate this very vital factor.

Avanti has the widest wheelbase, 1305 mm, which again ensures extreme stability during cornering and specially when urgent manoeuvring becomes necessary.

This wide wheelbase will resist skid and prevent over-steer.

Avanti's new breed high performance engine provides the necessary 'torque' or 'surge' required to avoid sudden obstacles or a collision.

Avanti is fitted with two additional shock absorbers up front in order to 'dampen' road bumps, pot-holes, etc. and to neutralise any instability caused when driving on rough roads.

Avanti is the only high powered 150 cc scooter giving you a phenomenal 55 km per litre of fuel economy.

AVANTI 150 cc Scooter, and the 50 cc Moped
manufactured in technical collaboration with
AGRATI-GARELLI S.p.a., Italy.

THE NEW

Vijai SUPER mark II

Scooters India Limited

There's no 150 cc scooter to match it for ECONOMY POWER SAFETY.

FEATURES	Brand X	Brand Y	Vijai Super Mark-II
FUEL ECONOMY Kms/litres	40±6	40	56±6
POWER BHP	6.3	6.5	9.6
SAFETY Engine Mounting	Right hand side	Central	Centrally aligned

Its here. New Vijai Super Mark-II. The latest model from Scooters India Limited — successors to Innocenti of Italy. Pioneers in scooter manufacture. Vijai Super. The winner of Grand Prix in India and abroad.

Super Economy: 56±6 kms per litre

A new variable venturi carburettor, improved cylinder design, increased compression ratio and modified gear ratio impart optimum fuel economy. SAVING FUEL.

Super Power: 9.6 BHP

Goes from 0 to 60 kms in 12.75 seconds flat. Negotiates gradients with ease. And keeps ahead of others.

Super Safety

Centrally mounted engine, low centre of gravity and wider wheel base make it safer even at high speeds, on curves with load.

Super Durability

Modified material composition of cylinder, chrome plated piston rings and the use of solid lubricant enhance engine life. That is why it carries a warranty of 15 months or 10,000 kms (whichever is earlier) — the longest on any two wheeler.

It undergoes over 1,000 quality checks before it leaves the factory.

Vijai Super Mark-II. Distributed and serviced countrywide through 225 outlets.

Exported to many technologically advanced countries including Italy — its birth place.

behaving like a minority, trotting out long lists of grievances at the drop of a hat". The resultant atmosphere is a complex and sometimes comic concoction of chauvinism, nationalism and militarism, all dangerously new to the island's traditionally easy-going, entertainment-oriented population.

The signs were overly evident last fortnight as Sri Lanka prepared to celebrate 38 years of independence. The day before, Prime Minister Premadasa had issued a public appeal asking all vehicles to sport the Sri Lankan flag. Those that didn't would be hauled up by traffic patrols. Even the parade itself was markedly different. Traditionally, it has been dominated by the army. This year, there was no signs of soldiers except for the heavy security around the VIP's, a symbol of the changing times and the military's preoccupation with the fractious war in the north.

But if all this represents new and unfamiliar elements in Sinhalese life, it has been embraced with surprising fierceness and militancy. Almost every day, blood donation camps and fund-raising benefits are held for the benefit of "our gallant soldiers in the north". Till a few years ago, they were merely rusty cogs in what was a largely ceremonial army, trotted out on independence day parades and never forced to fire a shot except at the practice range. Today, they dominate Sinhala life to an exaggerated and dangerous degree. One shot fired in Jaffna is a thunderclap in Colombo.

All that is welcome grist to the political mill. The Tamil problem is the first and biggest crisis Sri Lanka has faced and the resulting xenophobia has perforce painted the Indian Government as the villain of the piece. The anti-Indian feeling, even in the gay environs of Colombo, is irrationally high. "Don't tell the taxi-driver you are an Indian," warns a solicitous Sinhala journalist, while the taxi-driver himself prattles on about the holiday he had in Madras two years ago and how much better he found the roads.

The xenophobia obviously hasn't tarred all Sinhalese. In the roof-top restaurant of the Intercontinental Hotel, P.C.S. Fernando, a gentle, soft-spoken man, shrugs philosophically. "We've had a good innings. But nobody can stay insulated from outside influences forever." Fernando, former chairman of Shaw Wallace and of the Sri Lanka Tourist Association, represents the well-educated upper and upper middle class of Sinhala society that is genuinely concerned about the crisis and its effects and also realises that much of the rhetoric, the 'war' psychosis and the India-baiting bears more relation to myth than reality. In a Colombo bar, a bent old man, recognising an Indian, introduces himself and insists on paying for the drinks. It turns out he is an old schoolmate of Jayewardene and, in fact, still keeps in touch. "Ah that old fox," he says sipping his Black Label, "he's the same age as me but the difference is he's a hundred times fitter and he's still got his wits about him."

The sentiments are expressed in admiration, echoes of which are found in conversations with almost all Sinhalese, whatever their political or professional hue. That, unfortunately, seems to be also part of the problem. In the art of politics, JR is streets ahead of anybody else on Sri Lanka's political stage. In terms of personal political stability, he is probably the most secure leader in the entire region. In the eyes of the Sinhalese, who constitute 74 per cent of the population, he has acquired political sainthood. "Whatever happens, none of the dirt ever rubs off on JR. He sits on a different pedestal," says a journalist."

Political opposition is virtually non-existent, both inside and outside his dominant United National Party (UNP). It is common knowledge in Colombo that Jayewardene has the undated resignations of every cabinet minister in his voluminous pocket. Last December, when he sacked anti-Tamil hardliner and industry minister Cyril Mathew, nothing more than the occasional eyebrow was raised.

The once-formidable Sri Lanka Freedom Party (SLFP) of Bandaranaike is discredited and in complete disarray and, as a reflection of the somewhat quixotic nature of Sri Lankan politics, the new opposition hope is a breakaway faction led by Bandaranaike's daughter Chandrika and film star son-in-law, Vijay Kumaratunge.

Kumaratunge is the Amitabh Bachchan of Sri Lanka in cinematic terms and like Bachchan uses his film star appeal to good effect. His rallies are always well-attended, though that is no indication of popular political support, and his oratory is effectively histrionic. At one recent meeting, he told the crowd: "If Gautama Buddha were to come to Sri Lanka tomorrow he would be asked for his identity card. As an Indian, he wouldn't have one and would then be hauled off to the nearest police station and remanded as a terrorist." As a whole, however, the opposition parties are riven with factional quarrels and a proclivity for meaningless debates.

Float at Independence Day parade last fortnight: a new militancy

In that context, there is a widespread belief, shared by the Indian Government, that Jayewardene can solve the Tamil issue if he really wants. He has no election to fight and his presidential term lasts till 1989. The 1979 "Gaullist" constitution which replaced the Westminster model, centralised power in an executive presidency and the 1982 violence-marred referendum, described by the SLFP as a "dubious exercise", gave the present UNP-dominated parliament another six years of life.

Neither does there seem to be any truth in the oft-quoted theory that he is under pressure from the hardliners and the Buddhist clergy. His peremptory dismissal of Mathew is clear proof that he can handle the hardliners if he is of a mind to. The faction-ridden Buddhist clergy have debased much of their own credibility by indulgence in widespread and blatant corruption. "The Mercedes Benz Bhikkus" is how they are scornful-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ly described. Nor, for that matter is there any political truth in Jayewardene's own plaintive stand that to grant any level of autonomy to the north would require amending the constitution. "He had no hesitation in amending the constitution when it came to pitching the TULF (Tamil United Liberation Front) out of parliament," observes a diplomat.

The theory floating around in the musty corridors of the Indian High Commission is that Jayewardene feels that any concessions he makes will be construed as a sign of weakness in the eyes of the highly-politicised electorate. "Weakness and federalism have become synonymous", says an Indian High Commission source, "but only a strong man can delegate power and not a weak one."

But Jayewardene also has to play out his own political games by the rules of current compulsions. The present rivalry between Premadasa and National Security Minister Lalith Athulathmudali has led to a polarisation of UNP politics with both camps jockeying for power in the event of Jayewardene's departure—at 78 he isn't expected to last the presidential course till 1989. This suits Jayewardene admirably. His political strategy has always been to pick up people, usually in pairs, and project them as likely successors, but making sure they are people with no power base like Athulathmudali and Premadasa. He then steps backstage and lets them do all the running and foaming at the mouth while forming their respective camps. Then, as abruptly as he elevated them, he drops subtle hints that one or both are no longer in favour. The entire polity hangs on to his every word to catch a hint of who the next star will be while frenetically trying to regroup.

Political analysts in Colombo harbour a sneaking suspicion that 'JR' has acquired an Indira Gandhi-type obsession with the belief that only a member of the Jayewardene family can rule the island effectively. His son Ravi Jayewardene has displayed his disinterest in politics and his avidness for wheeling and dealing as a middle man, and a highly successful one at that, for getting government deals, including arms sales.

THEY see a possible successor in the young and presentable Ranil Vikramasinghe, currently minister for education who has married into the Jayewardene family. Vikramasinghe has a reputation as a hardliner and the publicity he gets is hardly in keeping with his official position. Whatever Jayewardene's plans, Vikramasinghe is being touted as the new political star on Sri Lanka's picture postcard horizon. At the moment, however, he seems to be drifting with prevailing winds. Phrases like "The TULF cannot be trusted to keep their word; statements by India are subject to a different interpretation here; the Indian Government's constant identification with the TULF and the instant access they are allowed is of concern to us; this is not an ethnic conflict, it is something much wider" trip off his tongue with practised ease. But he has a sharp and incisive mind and, were conditions different, Vikramasinghe would singh a different song.

An anti-Indian stance is currently very *de rigeur* in political circles. Much of the "big bad wolf" image that India is saddled with, however, is unfortunately the creation of the media that is currently, with a few glaring exceptions, locked in tune with the rambunctious rhetoric of the political leadership. Nobody can testify to that more agonisingly than S.S. Chatwal, the harassed Indian high commissioner in Colombo. His must be the most unenviable job going in Sri Lanka at the moment, considering the kind of disadvantage he is forced to operate at. His last meeting with President Jayewardene was on January 31 when he passed on India's renewed suggestion that he resume the aborted dialogue with the TULF. The meeting was confidential and private with just the two of them present. On February 6, the entire contents of the meeting was the subject of a lead story in the *Island*, a paper generally acknowledged to be under the influence of Premadasa. As a deliberate leak it could not have been more clumsily done but it had the desired effect of once again putting the Indian side at an embarrassing disadvantage. Twice before, verbatim reports of his confidential meetings with Foreign Minister Hameed have figured prominently in the *Island*. The overall effect is like a chess game with one player blindfolded.

There are disquieting signs that Jayewardene is in no mood to resume the dialogue with the TULF in the near future, a situation that has pushed hopes for a solution to the ethnic crisis further into the background. In any event, Colombo is firmly convinced that the TULF, the most moderate of the groups demanding

Train blown up by Tamil rebels in the north and (right) their concept of Eelam

VIJITHA YAPA ASSOCIATES

Map by B.K. Sharma

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Eelam, or a separate Tamil state, no longer has any control over the separatists.

Colombo is equally convinced that India is still providing sanctuary and training to Tamil rebels in Tamil Nadu-based camps, a charge repeated once again last week by Jayewardene. The Indian Government is still pushing for an early meeting between Rajiv Gandhi and Jayewardene in the hope that a face-to-face encounter will convince the latter of India's urgent desire to stop the brutal killings and the influx of Tamil refugees into India, now approaching close to a mind-boggling 50,000.

In certain quarters of the Sri Lankan leadership there is an obvious and growing realisation that Rajiv Gandhi is unencumbered by the political compulsions that guided his mother's policies vis a vis Sri Lanka. But growing realisation is a far cry from conviction and, in any event, Jayewardene himself has political compulsions that compel him to opt for a military solution at the present. That will hardly be easy. In spite of British and Israeli help, Sri Lanka's fighting forces are in no position to stamp out the rebel movement. The rebel forces in the north are giving as good as they get and seem determined to obtain Eelam at any cost.

In that stalemated no-win situation what price the solution to the Tamil crisis? The suspicion in Colombo's socially-hyperactive diplomatic circles is that Jayewardene, having fancied himself all along as a world statesman, has finally been given the chance to prove it. Colombo-watching is a new word in the international media's lexicon but it seems here to stay and indicates the high profile the island now enjoys in the eyes of the watching world. Jayewardene has been dispatching envoys with almost indecent frequency to western capitals to drum up support both moral and physical while his trigger-happy soldiers continue to massacre Tamils with unbridled abandon. Though the latter have had more success than the former, there is a growing feeling that Jayewardene is determined to milk the crisis for everything it is worth before finally, and dramatically, coming up with a diplomatic compromise acceptable to the Tamils, many of whom are wearied of the constant harassment.

BUT THEREIN lies the rub. The kind of international attention Sri Lanka is attracting could boomerang badly. The well-stocked bar at Colombo's popular Supper Club nightspot is currently frequented with the new kind of tourist the island has been attracting lately—arms dealers. With their arrival has emerged from the panelled woodwork the ubiquitous Coomar Narains of Colombo, influential middle men with cash registers where their hearts should be. In the current situation, with Israeli Mossad and British Special Air Services (SAS) personnel engaged in training and equipping Sri Lanka's unruly armed forces, there is not much that is secret about Sri Lanka's defence or diplomatic plans. In an interview to a Colombo journalist last year, an Israeli spokesman frankly admitted that "this marks our return to Asia". The insecurity has opened other negative avenues. Under an agreement with the US, a transmitter has been erected ostensibly for the use of the Voice of America. Significantly, Colombo has no editorial control on the programmes and even more significantly it happens to be the most powerful VOA transmitter anywhere outside the US. Defence analysts view it as a possible communication relay facility between Diego Garcia and the Pine Gap communication centre in Australia and deem it capable of jamming Indian defence communication systems.

The greater danger is of course, one that normally confronts tinpot dictators of banana republics—the possibility of an army coup. There is little likelihood of that happening while Jayewardene is alive and kicking but the moment he bows out would make for a different ball game altogether. The Sri Lankan army is universally acknowledged as one of the worst and the most indisciplined in the world. After having been confined to the parade ground for the last 30 years, they are now suddenly the focus of international attention. In many Sri Lankan minds, they have already acquired the image of knights in burnished armour, saving their daughters from a fate worse than death from the savage and marauding Tamil Huns. More significant, the top brass, who have so far exercised little control over their men, are becoming alarmingly ambitious. Already, they have been given a blank cheque in running the north and north-east and under the emergency regulations, extended once again last week, are accountable to nobody. More important, their numbers are rapidly increasing. In 1982, the total strength of the armed forces was slightly over 16,000. Within two years, it has almost doubled and recent recruitment drives have received enthusiastic response.

All that makes the situation fertile for an eventual army take-over, specially since Jayewardene's absence will be the signal for a bruising and possibly bloody succession battle. Any politician of any worth in Sri Lanka has private goon squads which have come to represent a political status symbol. If the post-Jayewardene situation gets out of control, it will offer the army the perfect excuse to step in and take over. But whatever the future, Sri Lanka currently symbolises a classic case of Paradise Lost. And Jayewardene, the man who holds the key to success or disaster, only seems to be getting increasingly trapped between the devil and the deep blue sea that has, till now, enfolded Sri Lanka in profitable embrace.

From a sea of water to a dewdrop, Thermax shows you how to purify water.

Imagine the many different sources of water. From the very large to the very small. From the highly pure to the very impure. Should you ever need to purify any type of water, Thermax can do it for you.

Because Thermax's in-depth understanding of the chemistry of water and our capability in process design help us offer you any water treatment service you need. The Thermax Water Treatment Division is a highly professional group with the ability to handle any water purification project from concept to completion. Don't worry about how large or small your requirement of pure water is. We'll find you a solution that gives the best results.

Thermax: Concept to Completion

Thermax involvement starts with a feasibility study. A meticulous exercise, from raw water analysis to scanning of various possible treatment schemes, through the different stages of aeration, coagulation, clarification, filtration, softening and demineralisation. During this crucial stage, our engineers work closely with the scientists from our R&D Department.

Using the sophisticated facilities available in-house, our highly experienced design and project engineers offer you cost-effective design and selective procurement. Our field engineers and chemists ensure time-bound erection, commissioning and plant performance to your satisfaction.

Thermax. Connections

Our manufacturing and design collaborators for water treatment plants are Permutit Inc. of U.S.A., a company in the Zurn group.

We market TULSION exchange resins which are manufactured to international standards in collaboration with IONAC Chemical Division, a unit

of the Sybron Corporation, U.S.A.

Thermax. Certificates of Merit

Thermax was the first in India to introduce a range of macroporous resins; a truly weakbase macroporous anion exchange resin; and tailor-made resins to suit indigenous water conditions.

Thermax was the first to develop a microprocessor-based programme controller for complete automation for water treatment plants.

Thermax has installed plants ranging from capacities of a few litres per hour to one of the largest plants in India at the Chandrapur power station, which has a softening and demineralising capacity of 400,000 litres per hour.

Thermax customers include thermal and nuclear power stations, refineries, and fertilizer and petrochemical projects in India and abroad.

Whether a water treatment project is as large as Chandrapur, as complex as the plant for the Thal Project, or as compact as our installation for Modi Rubber, Thermax will give it everything we've got, which is everything you'll ever need.

Thermax Water Treatment Division

Can tame any water into an absolute state of purity.

SALARIES

Timely Demands

INDIAN civil servants may have reason to thank Coomar Narain. By implicating many of their number in his alleged treachery, Narain has inadvertently highlighted the sorry condition of the nation's bureaucracy. The message is loud and clear: lowly-paid middle and senior level bureaucrats are increasingly susceptible to monetary temptation. And the Government seems to have heeded the warning. Last month Prime Minister Rajiv Gandhi directed Minister of State for Personnel and Administrative Reforms K.P. Singhdeo to look into the pay and perks of government servants and see if they were commensurate with their jobs.

"The whole exercise," admitted a senior Home Ministry official, "is aimed at insulating our bright and experienced administrators and planners from any external pressures—monetary or political." Singhdeo did not have to go far to begin his investigations. His own department was chock-full of memorandums and reports on the subject compiled by the Union Government. Only two furlongs away, the office of the Fourth Pay Commission at Vigyan Bhavan was flooded with representations from over 50 organisations representing government servants, all asking for more.

The Pay Commission's report is expected only at the end of this year, but the Central Government has already begun to look at the salary structure and promotional avenues open to Indian Administrative Service (IAS) personnel who occupy key positions both at the Centre and in the states. The findings are thought-provoking. Over the years, while other services such as the defence forces have been given a 20 to 30 per cent hike in their salaries and perks, IAS officials have found their spending power shrinking. "My personal secretary takes home only Rs 200 less than me and is under no obligation to maintain the same social status," says a senior official in the Commerce Ministry. When he began his career, he earned three times as much as his secretary.

Nor are IAS personnel the only ones pressing for pay hikes. Many representations with the Pay Commission come from other organisations on behalf of 1.5 crore Central and state government employees. While middle level officials recruited through the Central Secretariat Service (CSS), Indian Police Service (IPS) and the Provincial Civil Services (PCS) in the states have sought parity of pay with the IAS after the first promotion, junior employees like stenographers, clerks, typists and assistants—who constitute over 70 per cent of the bureaucracy—have demanded merger of dearness allowance with basic pay, higher house-rent allowance (HRA), more promotional avenues and higher increments. Says B.L. Sharma, general secretary of the National Organisation of Government Employees: "Since the Government depends on the bureaucracy to implement its policies, it must look after their minimum needs of housing and medical facilities."

At present clerks are entitled to the ridiculously low annual increment of Rs 10, and over 90 per cent of them retire as they started out: as clerks. Though most senior officials are provided government accommodation, less than 10 per cent of all government employees live in official housing. For those not provided housing the average HRA is Rs 50 to Rs 100 per month. Says a clerk in the Municipal Corporation of Delhi: "With Rs 50 I cannot even live in a jhuggi."

But the most detailed argument in favour of better pay and facilities is the 100-page memorandum presented to the Pay Commission recently by the IAS (Central) Association. The 4,000-member strong IAS lobby has not only demanded an approximately 100 per cent hike in pay and other benefits but has also asked that its supervisory and elitist character be maintained. The association has demanded a minimum basic pay of Rs 2,000 for an under-secretary as against Rs 700 now and Rs 8,500 for a secretary to the Central Government or chief secretary to a state, both of whom now earn a basic salary of only Rs 3,500 per month.

Low salaries have served to draw the cream of talent away from the once-prestigious IAS to the more lucrative private sector. In fact the number of candidates appearing for the all-India services has declined by about 20 per cent during the last five years. The IAS memorandum points out: "The pay and emoluments of the officers who take important decisions affecting the interests of the people, disburse large sums of money, give largesse from the state exchequer to trade, industry and commerce should not be kept at such low levels as may draw away all talent from the public service."

Indeed, the irony is that highly paid officials of the private sector are frequent supplicants of low paid government officials who wield vast powers over them. And the bureaucracy's case for higher salaries is based on the contrast in benefits available not only to comparable officials in the private sector but also those in state-owned public sector corporations and even the defence services. A joint secretary in the Commerce or Finance ministry who has the power to grant an import licence or allow loans from foreign banks is

Chart by B.K. SHARMA

member entitled to an entertainment allowance or an official car, and takes home Rs 1,500 a month. Says a senior Finance Ministry official: "In the present scale of salaries, the sharply visible privation of a senior government functionary places him manifestly at a disadvantage in dealing with functionaries of non-governmental organisations whose well-being is so often the outcome of government actions and decisions."

MANY government officials admit they are prone to occasionally bend the rules as they feel obliged to reciprocate the hospitality extended to them by officials in other organisations or their counterparts abroad. With their skimpy budgets, however, they cannot afford to spend their own money. As a result it is not uncommon to see secretaries, additional secretaries and other officials force the various public sector undertakings under their administrative control to organise entertainment for them in five-star hotels. These corporations even put fleets of cars at the officials' disposal because no official is entitled to a car for his exclusive use.

Further, no official, not even a secretary, can be dropped home in an official car if he is leaving his office on time. J.S. Deswal, former director of the Central Bureau of Investigation (CBI) used to hitch a lift home in a friend's car. To avoid this kind of embarrassment, the IAS Association has demanded Rs 400 per month as transport allowance for car-owning officials and a loan of Rs 50,000 with which to buy a car. At present no government official receives a transport allowance.

Complains a deputy secretary in the Department of Energy: "It is ridiculous to expect a senior official holding sensitive posts to travel either by public transport or in a vehicle provided by a friend."

The housing problem for IAS officials is especially acute. With their services transferable from state to state and the Centre, finding a house in a new city is a recurring nightmare. In states like Punjab and Haryana officials returning from deputation to the Centre have to wait a year before they are given official accommodation. During this period they are given only 15 per cent of their salary as HRA, or about Rs 375 for a joint secretary.

But as befits a group who have run the machinery of the country since Independence, the most significant demand of the IAS Association has less to do with material benefits and more with power and its exercise. By defining an IAS official's role as that of captain and coordinator of a team, the association has pleaded for both higher grades for its members as well as allocation to them of all the important posts of departmental heads in the state and Central governments.

The association feels that its members joined the service attracted by its elitist character. Says its memorandum: "This element of elitism—based solely on merit—has enabled the IAS to play an invaluable role not only in the usually recognised spheres of public life but also in certain other spheres which are not always appreciated. It may therefore not be an exaggeration to say that the IAS is one of the most effective links between the state and the citizen." A superior status for IAS men is justified on the grounds that the IAS has succeeded in "maintaining the integrity of the country, ensuring a political administration, and the continuity of the decision-making process."

Concomitant with the appeal for a superior status, the memorandum also reflects the generalist-specialist conflict and makes a strong plea that specialists like engineers and scientists be kept under the control of IAS officers. The bureaucracy also certainly seems determined to frustrate any attempt to give more independence to the uniformed forces, including the police. "The supremacy of the civic officials over uniformed personnel is an integral part of the democratic system," says an official in the Home Ministry. Whether or not that is acceptable to the higher reaches of government, the bureaucracy's need to redefine its role and its rewards has never been greater.

INDO-US RELATIONS

Changing Images

IN NO COUNTRY in the world are images made and unmade more quickly than in the United States of America. In the months since the assassination of Indira Gandhi, Americans have discarded most of their decades-old ideals of India and sculpted a new image that is part soap opera, part celluloid technicolor and part wonder at the sudden metamorphosis of the Indian political scene. The soap opera elements come from the drama of the assassination, the succession and its rapid electoral legitimacy. The technicolor is provided by nostalgia about the once-immortal "jewel" in the British crown, brought home again to audiences by films of Anglo-India—*A Passage to India*, *The Far Pavilions*, *Heat and Dust*, and *Kim*, an extravagant recreation of the make-believe romance and adventure of sanitised, gentrified imperialism that is as far from historical realities as El Dorado is from the Sahara. India has indeed become a sudden rage in the United States—but which India is it, whose India?

A lot of Americans have, however, been truly impressed by the inner strength and vitality of Indian democracy, of its extraordinary ability to haul out a generational change in politics through the non-revolutionary electoral process. Many Americans articulate a sense of wonder that India could so easily absorb the shock of the murder of Indira Gandhi, and that the assassination should unite rather than divide the country, and that Indians should hand over the destiny of their ancient nation to a 40-year-old while America itself remained mesmerised by the charisma of a 74-year-old warrior!

The American image of the new Indian regime is a collage of romance, Americanism, and anti-Soviet gall. Romance comes from the youthful telegenic visage of Rajiv Gandhi, his Italian wife, his background as a pilot, his public school upbringing. Americanism sees the new regime as one comprising technocrats and managerial experts who should prefer computer technology to political ideology, and whose modernism must somehow open their minds to the technological power of the United States. Many Americans therefore expect India's new prime minister to be less beholden to Moscow than his mother had been. Isn't he young and modern? Doesn't he represent the post-Independence generation? Isn't his first priority to modernise India? How then can he remain an ally of the Soviet Union?

This great expectation has triggered an all-round American enterprise to woo the India of Rajiv Gandhi. The enterprise has mobilised Congressional leaders, corporate chieftains and academic specialists to look at the new India and tell Washington how to cultivate it. Since November, seven senators, four of them Democrats, a Congressman, a former secretary of state and a former chairman of the Senate Foreign Relations Committee, 60 presidents, vice-presidents or senior executives of multinational corporations, and two dozen academicians have been to India. The American delegation that came to the funeral of Mrs Gandhi had four former ambassadors to India—Daniel Patrick Moynihan, John K. Galbraith, Robert Goheen and John Sherman Cooper. Each of them met with friends and contacts in the Indian Government, political parties and the intellectual community to explore how Indo-US relations could be improved. Secretary of State George Shultz who led the team of mourners, later despatched no less a personage than Henry Kissinger to Delhi to prepare the "philosophical ground" for a possible shift in America's South Asia policy.

Americans derived some strength from reports involving the Soviet Union, Poland and East Germany in the spy supermarket run in New Delhi for years by an Indian entrepreneur with the help of an army of stenographers and personal assistants employed in sensitive offices of the Indian Government. Almost every report of the espionage scandal printed in the American press took care to repeat the alleged involvement of the three communist powers (and France), and to mention that none of the arrested persons had openly implicated the CIA. Americans hoped that sooner or later the disclosures would throw a certain chill on Indo-Soviet relations.

At the same time, it is clear that the US is not willing to change its South Asia policy in order to move closer to India. General Zia-ul-Haq will continue to be in control of the anti-Soviet resistance in Afghanistan. To keep him on its side, the United States must go on supplying Pakistan all or most of the arms and weapons General Zia would ask for. There are powerful elements in the Pentagon and the White House who regard Pakistan as being a far more important ally than India in the Persian Gulf region and who openly oppose the State Department's "soft" stance on India. Overall, Americans are waiting for Rajiv Gandhi to go over to them.

But some do see the folly of this attitude. "We lost the first generation of Indians to the Soviet Union by pursuing a pro-Pakistan policy. Must we lose the second generation of Indians too?" asked one of the few friends of India in Washington. He was not entirely without hope that Washington's policy might change, especially due to the fact that in the corridors of power there are now loud whispers of a superpower trade-off on Afghanistan. Zbigniew K. Brzezinski, Jimmy Carter's national security adviser, has suggested a Soviet role in the Middle East in return for withdrawal of Soviet troops from Afghanistan. Others have suggested a lowering of US military presence in the Indian Ocean region.

Meanwhile, the Indian rage is being raised to a high pitch; its culmination will be the Festival of India. Coinciding as it will with the prime minister's visit to the United States, Americans are determined to make the festival one of the great media events of the Reagan Administration. The greatest American enterprise to woo India is on. Its political result will bear close watching.

Here you get some idea of how complex and varied paper products have become in the age of technological man.

As a member company of the Wiggins Teape Group, UK, who make more papers for more uses than anyone else in the world, Tribeni Tissues have been responsible for every major advance in speciality paper manufacture that India has seen since 1947. Ever sensitive to the developmental needs of Indian industry, our marketing and R & D divisions have been known for their timely response—substituting expensive imports, upgrading manufactured goods, introducing production economics, pioneering and perfecting the papers of tomorrow.

INDIAN ARMY

Polishing the Brass

FOR OVER three months, it was the subject of intense mess and barrack gossip and guesswork in army establishments spread all over the country. But last fortnight, when the vital army appointments were finally announced after unprecedented hedging, the package was not without its surprises, a quick round of musical chairs which also amounted to being a step forward in the direction of choosing a new army chief when General Arun Shridhar Vaidya retires on January 31 next year.

Round one had been widely anticipated. Lt-General K. Sundarji, GOC-in-C Western Command, was moved to South Block as the new vice-chief of army staff, filling up the vacancy following the retirement of Lt-General G.S. Rawat on December 31 last year. Another longstanding vacancy, caused by the retirement of Lt-General Tirath Singh Oberoi on November 30 was filled with the elevation of Lt-General Ranjit Singh Dyal, Sundarji's deputy at the Western Command, as the new southern army commander. But the interest in the package was concentrated on the transfer of Lt-General Hridaya Kaul, the deputy chief in Delhi, to take over the Western Command. For long considered a contender for the next chief's post, along with Sundarji, the one qualification Kaul continued to lack so far was the command of an army. He will now have almost a full year at the head of Western Command by the time the final crunch comes.

If seniority were to be the criterion Sundarji, an entrant through the Officers Training School (OTS) would be the most obvious choice. By January 31 all the generals senior to him would have retired and he would still have six months to go. On appointment as the chief, an officer serves up to the age of 60 instead of the usual 58. Kaul, in fact, happens to be a course junior to him. Sources point out that both have had brilliant careers and have commanded key formations. But there are other factors. Sundarji is reputed to be an innovating type, one with a yen for mechanised warfare and modernisation. Kaul is a tank-man and there are doubts as to the wisdom of having two armoured corps officers as successive chiefs. Yet again, Sundarji has the disadvantage of having commanded Operation Bluestar, which the Sikhs do not exactly remember with relish. Yet, on the face of it, it would be difficult for the Government to apply the merit or combat experience criterion and supersede Sundarji.

Sundarji, Dyal and Kaul: moving up the ladder

Superseded Generals Balaram and Tuli

The recent changes have, however, proved that the Government is no longer bashful about supersessions. But it tends to hedge its bets as shown by the elevation last week of two principal staff officers to the status of vice-chief after they had been superseded. The Government's explanation for the supersession was that the two, Lt-General K. Balaram, who is the adjutant-general and Lt-General M.L. Tuli, the master-general of ordnance, have less than a year to go in service and that they would hardly have time to become familiar with the new, vital jobs. Granting them the vice-chief's status is a symbolic sop, though it will add marginally to their salary and pension. Significantly, no similar gesture has been made to the other officers who have been similarly superseded, including Lt-General Surjit Singh Brar, at present chief of staff Eastern Command, Lt-General Niranjan Singh Cheema, chief of staff Northern Command and Lt-General K. Gowrishankar, GOC XI Corps at Jalandhar.

Sources in South Block point out that after the long delay the Government has finally decided to follow the same merit-cum-seniority principle as was decided for the bureaucracy when P.K. Kaul superseded 17 officers on his way to the cabinet secretary's post. And they are keeping their fingers crossed with the two more posts of army commanders—central and northern—falling vacant later this year. Besides the deputy chief's post remains to be filled up. Said a Defence Ministry officer: "If the new regime really wants to restore the dignity of vital institutions and the right kind of conventions, it should announce the name of the army chief-designate at least three months before the appointment so that he gets the chance of familiarising himself with the job and also of projecting his personality."

While such speculation continued, last fortnight the interest in defence circles was not entirely confined to the new appointments. There were also the whispers of the departure of two lieutenant-generals and a major-general facing enquiries. Significantly, this happened much before the new prime minister's clean-up operation. Major-General Satish Rai, who last held the post of the chief instructor at Defence services staff college left nearly six months back. Lt-General Matthew Thomas, GOC 10 Corps at Bhatinda, had put in his papers for premature retirement over six months ago and Lt-General Nirmal Puri, GOC 2 Corps at Ambala left in mid-November. Sources point out that none of them faced a major charge but sought retirement when confronted with evidence of relatively minor indiscretions.

But the belated and exaggerated exposure of the cases now caught the armymen with a bit of surprise, a state from which they had hardly got the time to recover in the appointments melee.

This is as pretty a picture as any we've ever made. This time, from 38,000 km up.

Through its crash R&D programme 'Operation Respond', HPF has indigenously developed special films and photographic papers for the Indian space research and aerial mapping efforts.

Whether it's a satellite hovering at 38,000 km over the equator or a high-flying aircraft mapping the topography below, HPF products help.

In recording the transmitted images perfectly at the monitoring ground stations.

Working closely with the Indian Space Research Organisation, HPF has indigenously developed a number of new highly sophisticated photo-sensitised products.

These include duplicating films, laser beam recording films, radiation monitoring films, aerographic films and shellburst linograph films. Development work on colour printing paper is under way.

These films and papers, with their high resolution and flawless reproduction abilities, involved the formulation of special emulsions and chemicals — developed entirely by the R&D wing at HPF.

Products that will take the country closer to total self-sufficiency in photo-sensitised materials.

From total dependency to near self-sufficiency

Film making is such a complex business that the bulk of the manufacturing process must be done in total darkness — in an atmosphere that is 100% dust-free.

No wonder, there are only six manufacturers in the world who make photo films from start to finish.

HPF is one of them.

A company that today works to 180% of its original rated capacity.

A company that has moved the country from total dependence on imports to being almost self reliant.

A company that is now a multi-product unit — manufacturing photographic, cinematographic, radiographic, lithographic and industrial radiographic film.

Film made with Indian knowhow, Indian materials and Indian expertise.

Film every Indian can be proud of.

COMPUTER INVASION

THE COMPUTER giants of the world seem to be making a beeline for India, attracted by the Government's open-door policy on electronics and the promise of further incentives in the near future. At least two US computer giants have decided to set up major software development centres in the country. Texas Instruments, for instance, is setting up a centre in Bangalore that will be linked by satellite to computer data banks in the US — permission for the satellite link-up being given by the Post & Telegraphs authorities after much badgering.

Hardware deals are also being clinched by various computer giants in the West. Hewlett Packard, for instance, is trying to set up a major manufacturing facility in India for mini-computers, and is talking to Indian companies like Wipro because of the Government's stipulation that 60 per cent of any venture's equity must be in Indian hands. Data General has already tied up with a local computer company, and DCM is also in the market for a computer manufacturing tie-up.

CHANGING CONCESSIONS

THE GOVERNMENT is planning to change the system of fiscal incentives for small-scale industrial units, perhaps in the coming Budget. At the moment, all small units are given excise concessions, which are fully withdrawn if they graduate to medium unit size. This, the Government has realised, acts as a deterrent to growth, while at the same time the exchequer gets little or no revenue from the burgeoning small-scale sector. As a corrective step, the proposal now is to introduce a graded system of fiscal incentives that will gradually reduce the concessions on offer as a unit grows in size. On the one hand, some of the larger small units will thus have to start paying more revenue, and on the other they can make the transition to medium unit size without taking a sledgehammer tax blow.

TECHNOLOGY TALK

THE TATAS have set their goals for the future, and aim to get into as many technology-intensive areas as possible. The fields identified so far are oil drilling (for which a joint venture is being set up with Forex Neptune), telecommunications (two joint ventures are proposed in Gujarat and Madhya Pradesh), super-computers (talks are on for a suitable collaboration), bio-technology (ways of increasing the yields of crops like tea) and perhaps cars. The grapevine reports that negotiations are under way with Honda.

POSITIVE PUBLICITY

THE NEW government seems to have changed its negative attitude to the advertising industry. In sharp contrast to the series of measures taken in the recent past in order to discourage expenditure on advertising (the 20 per cent tax disallowance being a case in point), the Government itself now intends making use of the services of the advertising industry. The railways, for instance, have invited some of the leading advertising agencies to suggest publicity campaigns. The agencies that have shown an interest include such giants as Hindustan Thompson and Ulka. Meanwhile, the Ministry of Women's and Social Welfare has contracted Interads to launch a series of advertising campaigns against social evils like drinking and dowry. Interads is launching a Rs 12.5 lakh campaign this year.

TAXING TACTICS

DEPRECIATION seems to provide the latest tax shelter for companies, judging by the widespread resort to a revaluing of corporate assets and the consequent sharp increase in provisions for depreciation. In 1983-84, for instance, according to the Reserve Bank, 500 large companies increased their depreciation provision by a hefty 36.3 per cent despite gross profits actually dropping by 0.4 per cent to Rs 2,097 crore. The capitalisation of interest was another widespread trend. Operating profits dropped by 14 per cent, post-tax profits by 20.5 per cent, and retained earnings by no less than 35.3 per cent.

Chart by B.K. SHARMA

BUSINESS BOOM

THE ARAB-owned Pakistani-managed Bank of Credit and Commerce International (BCCI) is a bank with a difference, both in its record of rapid growth and in the style of its operations. The bank, which opened a branch in Bombay two years ago, now plans to set up socially-oriented projects in rural areas, and then to turn them over to the Government. In the pipeline are a school, a dairy and other schemes spread over Maharashtra, Gujarat and Uttar Pradesh. In addition, the bank has a practice of giving to charity or good causes. This year's charity bill in the country is between Rs 1 crore and Rs 2 crore. But then the bank can afford that kind of giveaways. In its very first year of operation, BCCI's Nariman Point branch in Bombay collected deposits of Rs 58 crore. In comparison, the public sector Bank of India's Nariman Point branch has reached only Rs 55 crore after 12 years.

Aplab's Corporate Convictions 1

Outstanding achievement comes from seeking challenge.

Aplab entered the electronics field when it was an ideal sellers' market. No competition worth the name and generous Government incentives for the asking. In the near-monopoly situation, we could have made large profits. But we enforced a discipline on ourselves. To stand on our own legs and make only top quality products.

This served us well when we entered the West German and other European markets. Competing against high standards and advanced technology kept us perennially on our toes and raised our own standards.

In this constant striving to better our quality we achieved many 'firsts' and made signal contributions to the development of professional electronics.

Today we continue to hold our own in highly competitive markets making a name for ourselves and for the nation in the exciting international sphere of professional electronics.

BUDGET

The Balancing Act

FINANCE Minister Vishwanath Pratap Singh must be a worried man. As he pores over the figures of his coming budget—the first budget of the new administration and one that will set the pace for the Seventh Five-Year Plan—he must be juggling with the suggestions he has been swamped with, as all finance ministers are at this time of the year, wondering what to do with people who complain that they are being taxed almost out of existence while the other fellow is getting away scot-free. Businessmen have called for a tax on rich farmers, thereby allying themselves with academics who have been pressing for such a tax for years. Trade union leaders would like all wage-earners to be taken off the tax rack even though they often earn more than white-collar workers. Industrialists have also tried to make out a case for zero import duties on capital goods as well as basic raw materials, light duties on intermediates and a very high rate of duty on finished products. And then there are of course myriad suggestions for flushing out black money, from hanging black marketeers to demonetisation of high-value currency notes, though the biggest such note, the hundred-rupee one, is now worth no more than Rs 15 at 1960 prices.

At such times, it pays to stand conventional wisdom on its head. Is taxation the only way, or even the best way, of garnering resources? The finance minister was recently asked this question, and his reply is significant:

"Take resource raising as two things: first, resource raising in the sense of what goes into the Government kitty. The second is tapping savings for investments which may not necessarily be in the Government's purview but which certainly go to promote economic activity and thereby employment and the gross domestic product goes up. That is one way also of mobilising total resources of the country. When you are thinking of the country, it is not only the Government you are thinking of. It is the total economic activity in the country."

It is refreshing to find government spokesmen talking about 'total economic activity' and not just government revenues. This is a big change and hopefully it is reflected in the coming budget. Once the Government accepts the fact that it is not the sole repository of the nation's resources, it will have moved towards freeing the planning process from the constraints of centralisation.

Take the seventh plan which is now expected to be ready by June or July this year, though, going by press reports, it may not be markedly different from the earlier version. In that version, there was an uncovered deficit of Rs 39,000 crore, which was more than 20 per cent of the total outlay of Rs 180,000 crore. It has been said that the outlay will not be changed, no matter what happens. Will the deficit also remain unchanged at Rs 39,000 crore or will it be brought down to Rs 10,000 crore, the figure mentioned in one of the notes hurriedly circulated last year? This question is important, because most estimates of deficit finance have been exceeded in the past and there is no reason to believe that things will be different this time.

> **It is refreshing to find government spokesmen talking about 'total economic activity' and not just government revenues.**

In the 1980-85 plan, the deficit envisaged was Rs 5,000 crore. However, the actual figure is likely to be in excess of Rs 13,000 crore. If the seventh plan goes the way of the sixth, the deficit may turn out to be more than Rs 25,000 crore, or Rs 5,000 crore a year, for every year of the plan beginning with 1985-86. If, however, the finance minister takes the view that what matters is the total activity and not just government finances, he can stay his hand and go slow on the deficit business.

The income generated from agriculture, which is still our largest single sector, more than twice as large as industry, and in terms of savings perhaps equally as resourceful, is around Rs 60,000 crore a year. Even if a small portion of this is recycled for productive purposes, it should be possible to mobilise between Rs 4,000 crore and Rs 5,000 crore a year. Mobilisation does not mean taxing farmers but by providing them with incentives to invest in equity shares and debentures of companies, as also in government bonds and saving certificates. Our equity market is, however, centred almost entirely on cities. There are no sharebrokers in villages and no facilities for the purchase of such simple things as share transfer forms. Farmers consequently prefer to purchase gold rather than shares, which must be a big fillip to smuggling and waste their savings on lavish social ceremonies.

They can't really be blamed, for as soon as they buy a few shares, they find themselves trapped in the income tax net. As the system stands at present, the company paying the dividend deducts at source a tax at the flat rate of 22 per cent (if the dividend is less than Rs 1,000), and the recipient has to submit an income tax return either to get himself taxed at a lower rate applicable to him or claim a refund. For this, he has to undergo a cumbersome procedure to maintain account books, file income tax returns, engage income tax consultants and appear before income tax authorities. And all this for a few thousand rupees a year which he can make anyway by speculating on commodities, no questions asked, or by other means which contribute next to nothing to economic development.

It is not known how much the Government collects from taxes on dividends, but it cannot be a big amount. Actually, the dividends are taxed after taxing profits, which is a kind of double taxation and therefore unfair. The whole taxation business in this country is unfair, with a salaried man paying his taxes on the dot every month, while doctors and others who make ten times his kind of money get away with murder. The finance minister must do everything to scotch the belief that what goes into the government kitty is resources with a capital R, while money left with those who earn it with the sweat of their brow and who are as much concerned with economic development as the next man, is not. It could even be argued that those who earn money are best qualified to spend it and the Government's job is to help them spend it or invest it in the most fruitful manner. Unfortunately, the roles have been reversed and that is why we are in trouble.

SHAW WALLACE

The Acquisition Enigma

THE SECRECY shrouding the takeover of the Calcutta-based liquor giant was lifted last fortnight with the Dubai-based non-resident Indian M.R. Chabbria's announcement that he had bought the company's majority shareholding (about 38.7 per cent) from its Malaysian parent, Sime Darby Behard. What remained unexplained, however, was the initial secrecy surrounding the deal which is reported to have been effected sometime in December last year. Shaw Wallace bosses, after formally announcing last month that their majority shares had indeed changed hands, have lapsed into catatonic silence, leaving corporate watchers guessing as to who the new buyer could possibly be.

The company's tight-lipped bosses had been refusing to either confirm or deny press reports sugggesting that the south Indian liquor king, Vijay Mallya, and Chabbria had jointly purchased Shaw Wallace's foreign holdings. "We have no idea who has actually taken over the company since we have not been officially notified," company secretary Aloke De had been insisting. Chabbria however, made it quite clear that the Shaw Wallace management had all along known about him but had instead chosen to maintain an air of mystery over the takeover, perhaps to convince the Government that something underhand was afoot. On the other hand, why Chabbria had remained equally silent all this while is also not clear.

Shaw Wallace would have been a prize catch for Mallya not only because it is one of the largest liquor companies in the country but also for its excellent financial performance in recent years. At present, liquor constitutes just a fraction of the company's operations. Liquor, wines, and beer contributed 40 per cent to the total turnover of Rs 263.1 crore in 1983-84. Fertilisers and pesticides are fast becoming major money-earners for the company and contributed Rs 101.6 crore during the last financial year, not to speak of a thriving consumer products division.

The flurry of activity in the Shaw Wallace headquarters in Calcutta, the recent trips of top company officials, including Chairman S.P. Acharya, to Delhi and Madras, the sudden and secretive unofficial board meeting in New Delhi, did not, however, suggest any bewilderment on the part of the management. By last fortnight it was clear that the company's management, led by its chairman, were gearing up for a showdown. They knew who the new buyers were but were not admitting it as part of their strategy.

Acharya: personal stakes

Investigations revealed that the present management's battle against the acquisition move was not new. Sometime early last year, Acharya came to know that Vijay Mallya was angling for the company. Sime Darby did not appear to have divulged any details of their negotiations with any prospective buyer and did not even publicly announce their intentions of disposing of their holdings in their Indian subsidiary. Acharya, who has considerable personal stake in the company, did however assume everything was hunky-dory. Drastic changes obviously in the offing were to be resisted.

To maintain majority support among the company's shareholders, Acharya is reported to have enlisted the aid of, among others, a south Indian businessman, G. Venkateshwaran, and four of his investment companies—Aruna International, Sujata Producers, Sujata Estates and Sujata Films, all private limited companies. During September-November last year, Venkateshwaran lapped up approximately 2.7 per cent of the company's shares from the market, sending Shaw Wallace equity prices skyrocketing. However, the buying had been so reckless that recently the Income Tax Department cracked down and seized the transfer documents, putting the Shaw Wallace management in a bit of a spot.

Top Shaw Wallace managers have also floated a number of miniscule investment companies, with paid up capitals, in some cases as low as Rs 100, which were used for acquiring shares of different companies including those of Shaw Wallace. Investigations at the company law board revealed that companies like Dakhineswar Investments Pvt Ltd, and Paganas Investment Pvt Ltd owned by Shaw Wallace employees, despite having paid up capitals of only Rs 100 each

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have investments to the tune of Rs 50 lakh and more. Interestingly, another such company called Pakshiraj Investments has four directors, out of which three are senior Shaw Wallace managers: finance manager, marketing manager and financial controller. Moreover, Acharya personally holds at least 36,000 Shaw Wallace shares (0.6 per cent of the total equity) and has steadily been acquiring more shares.

These attempts to stave off a new buyer were nevertheless desperate since the financial institutions and banks with their 24.9 per cent stake were the key. Mallya presumed that the financial institutions would bend over backwards to suit him. And this happened to be a crucial mistake.

When Mallya bought the four UK-based Shell companies (J.C. Shaw and Company (22.2 per cent), Shaw Darby and Company (5.87 per cent), Shaw Scott and Company (6 per cent) and Thomas Rice Milling Company (5.7 per cent) from Sime Darby Malaysia, he did not bother to specify in the sales clause that the former would be responsible for the registration of Mallya's shares with Shaw Wallace. Neither did Mallya ensure Sime Darby's responsibility in putting through his nominees on the Shaw Wallace board. The moment the sale was concluded Sime Darby disclaimed all further responsibility.

The unexpected stumbling block to Mallya's plans proved to be the newly-elected Government, which declared it was serious about preventing concentration of economic power. Mallya already controls a commanding share of the Indian liquor market. Through his numerous companies, like the well-known United Breweries, Cavendis and Shaw Wallace in his hand Mallya would have an estimated 80 per cent of the Indian liquor industry under his control. The financial institutions decided they would not support the Mallya takeover.

While it is not entirely clear precisely what stage M.R. Chabbria was dragged into the deal by Mallya, what is obvious is that Chabbria, with his well-publicised international financial standing, could serve as a proxy. Mallya henceforth withdrew from the official picture, pushing Chabbria to the forefront. Chabbria came to Calcutta in the middle of February to try and persuade the Shaw Wallace chairman to relent. R.P. Goenka who was among the few people who met the Dubai-based tycoon in Calcutta told INDIA TODAY: "I asked Chabbria point blank whether he had taken over Shaw Wallace and he replied that he had not done so yet."

Acharya knew he had Mallya and Chabbria at a disadvantage, especially after last fortnight's unscheduled board meeting in New Delhi where the nominees of the financial institutions were present and assured their support. Acharya, who was due to retire in June this year was subsequently allowed a further extension of two years. Presently the management is quickly trying to plug all loopholes in their defence. Recently, several senior barristers of Calcutta High Court were also requested by the company to accept retainerships so that they would not take up briefs on someone else's behalf against them.

Apart from being prepared to take on Mallya and Chabbria in the Calcutta High Court, the Shaw Wallace management is also reported to have decided to seek governmental intervention as a last resort. The Companies Act allows the top executive of a company to complain to the Government if a change in ownership threatens to "affect prejudicially the affairs of the company". While it is unlikely that the Government will be able to dismiss Mallya and Chabbria as incompetent, it can always concur if Acharya argues that Mallya might hurt the company because it competes with his other liquor units.

Unfortunately, the top management's optimism was not shared by other employees including junior and middle-level executives. Unconfirmed rumours about the take-over and the new owner's intention of selling off most Shaw Wallace divisions cast a pall of gloom in its Calcutta headquarters. Even the normally vocal union members were strangely reticent. "We have only been told that Sime Darby has sold its four UK-based subsidiaries that held about 39 per cent of our shares. Not a word more," a middle-level manager confided.

The Shaw Wallace management was holding all the trumps till Chabbria's announcement. Hence their deliberate silence on the change of ownership. The impasse has been broken but the final denouement is yet to come.

BANKING

The Head Hunt

THE WORLD of bankers is a staid and proper world, where practices inspire confidence and change is wrought by evolution, not revolution. Right? Wrong! That is, if a series of changes ordered in the boardrooms of the nationalised banks is any indication. By its actions, the Government has at last indicated that it intends to act seriously to put right the rapidly deteriorating performance of the banking system (INDIA TODAY, December 15, 1983).

In an unprecedented move last fortnight, the Finance Ministry gave three chief executives marching orders before their time was up. S.V. Sonalkar, chairman and managing director of the Central Bank of India has been fired 20 months short of his three-year term. S.L. Baluja, chairman and managing director of the Punjab National Bank (PNB) was ordered out 16 months before his term expired and S.S. Master, executive director of the Bank of Baroda was sacked though he was to retire after 10 years.

The decision came after a thorough scrutiny of these banks' operations which showed up what Finance Ministry sources describe as "unsound decisions". Said Finance Minister V.P. Singh: "These changes are a part of the Government's efforts to tune the banking system in the country and put people with proven credibility and efficiency at the top level."

Singh had, in fact, first wielded his axe soon after he moved to the Finance Ministry two months ago. Among his early decisions was one ordering the removal from the boards of nationalised banks those directors whose term had expired. Directors were earlier usually allowed to continue in office till alternative appointments were made. Since selections were often delayed, many directors remained on the boards far beyond their usual three-year terms.

Not any longer, the new orders said, even if no new appointees were readily available. In one well publicised fell swoop, 92 bank directors were removed from 12 nationalised banks, and according to banking sources, the decision was swiftly implemented to frustrate possible manoeuvring by some incumbents to secure extensions.

But there has never before been anything like the dismissal of the three top executives carried out last fortnight. And while banking circles are buzzing with speculation about the reasons, it is clear that the three removed from their jobs are being taken to task for not acting with appropriate firmness and despatch when lapses and irregularities in their banks were brought to their notice by various agencies including the Reserve Bank of India. As a result of this dubious business, the PNB and Central banks lost some Rs 150 crore in business done abroad, according to a Central Bureau of Investigation (CBI) probe concluded last November.

PRAMOD PUSHKARNA

NAMAS BHOJANI

Bank executives Baluja (top) and Sonalkar: marching orders

Sonalkar is believed to have lost his job largely on account of his bank's involvement with the now bankrupt Britain-based Esal group of industries. The Central Bank is owed over Rs 45 crore by the Esal group which is owned by expatriate Indian businessman Rajinder Sethia. The Central Bank's London branch gave the group loans worth Rs 51.7 crore, over 60 per cent unsecured, in spite of adverse comments made by the bank's internal auditors and the RBI (INDIA TODAY, March 15, 1984).

The CBI later reported that the securities offered by the group were unsound and when Esal lost heavily in highly speculative business dealings with Nigeria, the Central Bank lost as well. Sonalkar, whose term was renewed for three years in December 1983 in the middle of this controversy, recently sought to convince Singh that the bank's money was fully secured and that it would recover its dues. But the Government was reportedly unconvinced, pointing out that additional loans had been given to Esal at a time when it was obviously sinking.

Baluja's bank not only advanced over Rs 100 crore to Esal in similar circumstances, it was responsible for channelling Rs 13 crore into India from Swraj Paul's Britain-based Caparo group. Paul's attempted buying of the shares of two Delhi-based companies, DCM and Escorts, has been highly controversial and there have been allegations that the rules were flouted.

In the Esal case, Baluja headed a rescue team made up of his bank, Sonalkar's and the Union Bank of India, and recommended a package deal worth Rs 30 crore to bale out the Sethias. The rescue shot down this attempt, and the battle was lost last month when a London court declared Esal insolvent and allowed a creditor bank to recover its dues. The judgment made no mention of the PNB and Central Bank dues, and with Esal in liquidation, the two banks stand to lose some 60 per cent of the advances they made. Esal is not the only black mark against Baluja: the Punjab National Bank, according to the latest estimates, may not be able to recover some Rs 300 crore given to the group in loans.

In comparison with these numbers, Master is being held morally responsible for a far smaller sum. According to a

PUBLIC SECTOR BANKS

Sorry State

IN THE last five years, the public sector banks have become the veritable pork-barrel of political patronage. Not only have the chief executives been chosen on political considerations, but an overwhelming majority of the 160 non-official directors of the 20 nationalised banks have been drawn from the ranks of the ruling party. Though the Banking Registration Act stipulates the appointment of the nominees of depositors, artisans, industry and farmers on the boards, these interests have all too often been represented by Congress(I) workers, pro-party journalists and industrialists, ministers' relatives, defeated Congress(I) MP's and MLA's (INDIA TODAY March 15, 1982).

The political appointees acquired greater political clout after 1982 when the Union Government decided to give liberal loans totalling over Rs 500 crore under Indira Gandhi's new 20-point programme. Even earlier, individual applications for loans worth over Rs 25 lakh were approved by the boards of banks and this enabled the non-official directors to build up considerable lobbies. Many a director's name was linked with controversial deals. In 1981, the Parliament was rocked by the then union finance minister R. Venkataraman's admission that his officials were looking into allegations that the directors of various banks were obliging each other with loans totalling over Rs 20 crore. The Reserve Bank too was flooded with complaints about directors misusing their positions to benefit firms run by their relatives. Last year, the RBI received a complaint about Andhra Bank whose Hyderabad branch had allegedly sanctioned loans worth Rs 3.92 crore to a construction company owned by relatives of K. Sambasiva Rao, a non-official director on the board of the bank. The loans were allegedly given on the inflated value of the assets pledged as securities to the bank.

Fraud is the other major malady that has afflicted the nationalised banks. Between May and June 1984, the Reserve Bank's special investigation cell launched inquiries into 12 major frauds and four serious complaints including those relating to the Punjab National Bank and Central Bank's operations in London. The cell found that various banks had been duped to the tune of over Rs 21 crore in the first nine months of 1983—by the bank's own employees including senior executives enjoying powerful patronage. The Parliament's Estimates Committee passed adverse remarks about the functioning of the Bank of India and the Syndicate Bank and called for a thorough probe into the alleged misuse of position by the then chairman of the Syndicate Bank.

The latest frauds to have come to light relate to the Indian Overseas Bank (IOB). The bank advanced loans of Rs 120 crore to companies in Indonesia, Singapore and Hong Kong owned by non-resident Indians. These have now become either bad debts or stagnant accounts. Interestingly, the advances were given despite adverse reports from financial experts on the feasibility of these industrial ventures. For example, in late 1980 when it was found that Texmaco Industries in Indonesia was not doing quite as well as expected, a management expert, Professor Paul Masspally of the Indian Institute of Management, Ahmedabad, was asked to look into the company's operations. Masspally and other experts reportedly found serious lapses and observed that Texmaco was siphoning off the bank's funds into other subsidiaries. Due to adverse economic conditions and unsoundness of the project, the bank could not recover over Rs 25 crore in time.

The bank also lost over Rs 5 crore in its dealings with certain non-banking financial institutions operating in the Gulf.

The bank's Hong Kong branch lost over Rs 2.5 crore in the purchase of an unstable currency. While the bank has long given up all hope of recovering any of its losses abroad, hardly any senior official has been hauled up. The story is none too different at the Punjab and Sind Bank (PSB) where officials indicted by the Reserve Bank for lapses in operations both overseas and in India have either been actually promoted or gone scot-free. According to the Reserve Bank sources, over Rs 50 crore of PSB are locked up in sticky accounts or bad debts given to either relatives of bank officials or politicians connected with the ruling party.

report, some of the Bank of Baroda's Calcutta branches have been cheated of Rs 6 crore by a private company conniving with certain officials in the branches. The modus operandi was simple: the private party opened 19 current accounts —all but one benami—in three branches and the officials went ahead and sanctioned credit limits, issued cheques and permitted overdrafts without the proper assessments, as the CBI put it, of "creditworthiness and ownership of assets, and market reputation".

If the Government intended to stir up the normally placid waters of the banking system, it certainly has succeeded. More such action may be forthcoming if the controlling agencies, such as the RBI and Finance Ministry step up their vigil, expedite investigations into bank frauds and recommend directors and chief executives with greater circumspection. Said Singh: "No government can allow the credibility of the banking system to suffer. Honest bankers will be encouraged, the corrupt and inefficient will have to go sooner or later."

The ministry's banking department is now preparing a new set of guidelines for the appointment of non-official directors to bank boards, and hopes that only pro-

fessionals or those genuinely representative of client interests, and not mere politicians, will find their way to them. The search is on for over 200 professionals, industrialists, artisans and agriculturists to fill the vacancies caused by the recent changes on the boards.

Not everyone has greeted the new broom with equal enthusiasm. There are some officials who don't believe that hiring and firing is the answer to better banking: it might just serve to inhibit decision-making which usually involves a certain amount of risk taking. Moreover, it doesn't tackle the strong nexus that exists between the nationalised banks and certain political interests which have contributed to the immense increase in the number of bank fraud cases. Of some 100 criminal cases registered by the CBI against public bank officials, only about five ended in convictions. A proposal was mooted recently to amend the banking service rules to hold chief executives personally responsible for bank frauds, but it has not found favour. Perhaps it would be an unfair measure, but unless frauds and ineptitude are immediately followed up by criminal or other proceedings, the latest clean-up drive may end up as nothing more than an exercise in futility.

—PRABHU CHAWLA

TOILET SOAPS

Frothing Over

RAINDROP, Ria, Oasis, Bubbles, Thrill, Wave, Piyu: this may sound like a list of soft drinks or dancers at a seedy nightclub, but it is not. It is a list of new brands of toilet soaps which have appeared on the shelves in the last few months. In 1984 nearly 20 new brands were launched and this year will see another dozen, which means that by the end of 1985 there will be over 50 brands hustling for attention. Says Shunu Sen, vice-chairman, marketing, Hindustan Lever, which commands an overwhelming two-thirds of the market: "I have lost track of the number of people in soaps."

Most of the rush is in the premium category of toilet soaps priced at Rs 3 and above which is about a fifth of the total market of Rs 300 crore and about 20,000 tonnes of soap annually. From 1981 to 1984, 28 new brands appeared in the shops in the premium segment as compared to 14 new entrants in the popular category. The most successful of the newcomers is undoubtedly the Ponds pair of Dreamflower and Cold Cream launched last year which has already grossed a market share of 5 per cent.

The Ponds success could be one of the reasons why Lever has revamped their star and market leader, the scene-stealing Liril with a brand new wrapper and a new perfume and is bringing out another luxury soap called Sunsilk. Of the others, Tomco's Raindrop, a July 1984 offering is holding its own with a market share of about 3 per cent and the trade's response to Lakme's new bath soap launched just over a month ago in the south is reported to be good.

Alas, for every success there are a dozen failures. Godrej's Nimin, a neem-based soap which was launched in April has sunk without trace. So has Ranbaxy's Naturelle Herbal and Swastik's Blush. In fact all the top five premium brands which hog 57 per cent of the market cake are stalwarts of long standing: Liril, Pears, Mysore Sandal, Cinthol and Shikakai. Quips B. Kumar, marketing controller, Swastik Household and Industrial Products: "The soap market is a slippery one and with so many people in the bathroom there are likely to be many casualties."

Newcomers have little choice but to try and make it in the premium segment because the popular segment is virtually impregnable. Hindustan Lever's Hama, Lux, Rexona and Lifebuoy have almost 80 per cent of this segment. Tomco is a distant second with Hamam, OK Bath and New Ria. Oswal Agro's Oasis and Kalpa have taken about 5 per cent of the market.

The other reason why the premium segment is seething with so much activity is that only limited quantities need to be produced and thus entrepreneurs can farm out actual production. For instance about two-thirds of Godrej's production is composed of guest brands like Dreamflower and Cold Cream, Nicholas Laboratories' Clear-tone and Johnson and Johnson's Baby Soap. In a madly competitive effort, manufactures are moving into specialised categories like baby soaps and clinical soaps: Wipro's Bubles, Swastik's Desire and Reckitt and Colman's Dettol. However these are yet to make their mark.

The next few months are going to see more activity on the soap scene. Oswal, flush with the reasonable success of their popular brands is moving into the big time with an offering hopefully titled 24 Carats. Ponds is trying to take on the Karnataka sandal monopoly with a sandal soap and Godrej is toying with a premium brand. It's the old familiar situation of hordes of cooks stirring the froth.

FOR THE MAN OF LETTERS.

The Personal Typewriter
Complete Portability-Independent Power Supply

Small and light enough to travel comfortably in a briefcase, Typestar 5 is ideal for creative people on the move. It's battery operated so you can use it anywhere. An AC Power Adaptor or rechargeable battery pack can be used.

Choice Of Typestyles With Multi-Language Capacity

The classic proportions of COURIER 10 or the sleek, contemporary look of CUBIC PS can be printed double width for headlines or emphasis. Conversion to French or Spanish is done with a simple touch.

On-Display Correction

In addition to Typestar 5 many automatic functions, you can make corrections in typing errors before they are printed. A 15 character display and one line memory make correction simple.

The Professional Touch

The whisper quiet, solid, Typestar 5 is ideal for any professional environment, and to suit your style even further, Typestar 5 will provide you with letter-quality printing.

Let's not call a spade a shovel.
Safari is not what dreams are made of.
It's the down to earth luggage for travel.

You have enough on your mind. The new project. Endless reports and formalities.
And the pressures of travelling at short notice. This is the high tension world of Safari.
Compose yourself. Details like clothes and personal effects are best left
to the luggage that sails through the hurly-burly of airports and hotel lobbies.
Safari. The no-nonsense luggage built to perform common chores uncommonly well.
It's tough and handsome. Comes in classy, subdued colours.
Agile in crowded corners on its recessed wheels.
Safari. It survives.

safari

The luggage that knows its business.

The tyres we race are the tyres you buy

It's true! The very same tyres that you use on city-roads, are repeatedly tested by MRF on race and rally tracks around the country.

There's a simple reason why. On a race-track a tyre is subjected to severe torture and strain. In just six hours on the track, a tyre goes through more than half its life. Something that would take more than a year on a city road.

Which means we get our test results that much faster. And you get an improved product that much quicker.

It's a testing technique developed by our collaborators B F Goodrich of the USA, people who build tyres for the NASA Space Shuttle Programme.

And since MRF tests city-tyres on the race-track, you can be sure that when we win, you too are winning. With tyres that are setting new standards for grip, handling, mileage, durability and sheer staying power.

At the end of the race, it's over to the MRF technicians... Testing for heat build-up in a tyre with an electronic pyrometer.

The race-track is our laboratory.

MRF TYRES

Tyres with Muscle

MRF Tyres are made in technical collaboration with B F Goodrich Company of U.S.A.

BSEC

The Reward Racket

WHEN the 10-year-old Bihar State Export Corporation (BSEC) decided to award all its 60-member staff, including Chairman and Managing Director R.R. Prasad, IAS, handsome bonuses a few months ago because the company had turned in a profit, the state's bureaucracy sat up startled at this unusual gesture of self-congratulation. Last month, in what Prasad described disgustedly as "government's unnecessary interference and one of the constraints in (BSEC's) functioning", the state Government ordered the employees to return their bonuses. To shed light on how it all might have occurred Senior Editor T.N. NINAN and Patna Correspondent FARZAND AHMED reconstruct an improbable conversation between a bureaucrat and BSEC manager.

Bihar Government Official: I called you today because I have heard about some funny decisions being taken in your company.

Manager of Bihar State Export Corporation (owned by the Bihar Government): What funny decisions?

Official: What is this I hear that your chairman-cum-managing director has gifted to himself Rs 10,000 as a good performance award?

Manager: If you will excuse me, that is the wrong way of putting it. The company did well last year, and therefore it was decided that all the 60 workers and managers should be given an ex gratia-cum-good performance award. The Chairman, Mr R.R. Prasad, got Rs 10,000, but everyone got the equivalent of three months' salary.

Official: What is this good performance you are talking about?

Manager: The company made a profit of Rs 3.25 lakh last year, on sales of Rs 6 crore.

Official: And how much have you given to yourselves as a good performance award?

Manager: It comes to a total of Rs 2.20 lakh.

Official: Do you mean that you have eaten up two-thirds of your company's profits? Don't you call that a pretty funny decision?

Manager: If I may say so, other companies owned by the Bihar Government do the same thing.

Official: Which?

Manager: The Bihar State Financial Corporation shows profits only on paper, and it gives good performance awards to its staff almost every year. And nobody has objected.

Official: I will look into that. But let me ask you about your own performance. The profit figure of Rs 3.25 lakh is before tax. After tax, it may be lower than Rs 2.20 lakh. In that case, the company staff will have eaten up the full year's profits. Second, your company's accounts have not been audited for the last four years. So your profits too may be only on paper, just like the Bihar State Financial Corporation's.

Manager: I think our company's performance is better. In fact, we have no debts of any kind, we have taken no loans from either the Government or our bank, and in fact we now have a Rs 1 crore bank balance. We are the only people who pay our suppliers promptly and in full. I think the performance awards were well earned.

Official: Don't divert the issue. Let us talk of hard finances. Your profits of Rs 3.5 lakh are on a share capital of Rs 72 lakh. That is a return of less than 5 per cent on the Government's investment, and is low by any commercial standard. Second, your profit of Rs 3.5 lakh is on a turnover of Rs 6 crore. So your profit margin is about half per cent of your sales. That is in fact dangerously low. So no good performance award was called for.

Manager: With all respect, our company has performed a very good role in developing the efforts of cottage and small-scale industries. We have helped create the carpet industry in Bihar, and we have found an export market for the traditional products of poor tribals. This is a very good record.

Official: Again you are diverting the issue from finance. Even by the normal yardstick, the bonus ceiling is 20 per cent of your pay, but you have given three months' pay, which is equal to 25 per cent of your annual pay. Second, the bonus ceiling is Rs 1,800. But your chairman has taken Rs 10,000. How can you do such a thing? You are treating the whole thing as "Sarkar ka paisa".

Manager: If you don't mind my saying so, it is Sarkar ka paisa.

Official: Then why are you taking the Government's money? Did you ask the Government's permission?

Manager: I don't know. The chairman may have taken permission.

Official: In any case, I don't think your performance is very good. In financial terms, it is barely passable. And even in terms of developing activity in the state, the garments that you export are not made in Bihar. You are exporting garments made in other states.

Manager: I think we have submitted a note on this to the Government. We have pointed out that most of the registered small-scale industries in Bihar exist only on paper, so it is difficult to procure items locally.

Official: I am also told that a lot of appointments are made on a caste basis.

Manager: Some disgruntled employees and politicians are spreading this false rumour. And in any case, this is not relevant to the issue. The company has been doing well and our profits have been going up. In fact, this year our profits are going to be Rs 12 lakh, almost four times last year's figure.

Official: Does that mean you will take four times the amount as good performance award? Will your chairman take Rs 40,000?

Manager: Well,..

Official: I am issuing a government order asking you and everyone in your company to give back the performance awards. That includes Rs 10,000 from your chairman. When performance awards are due, the Government will give them.

"I'm supposed to watch my cholesterol level—at 34 ?! Does this mean I have to change my whole lifestyle ?"

No, you don't. With Ranbaxy's Garlic Pearls.

Taken regularly, Ranbaxy's Garlic Pearls help to reduce your high cholesterol level. Because they contain pure garlic oil, extracted from the richest varieties of garlic. And garlic has been recognised by Ayurveda, and now by modern medical science, to have great curative properties.

However, garlic loses its beneficial properties in cooking. And raw garlic has to be chewed thoroughly for the oil to be absorbed by your system. Swallowing does not help. Moreover, you have to chew about 10 cloves of garlic daily to get the required amount of garlic oil. And that can be quite unpleasant. That's why you need Ranbaxy's Garlic Pearls—purest garlic oil without the smell.

Ranbaxy's Garlic Pearls also help in relieving gas and indigestion, easing joint pains, preventing coughs and colds from recurring.

Just two Ranbaxy's Garlic Pearls twice a day keep you in good health.

Wasp® has been fulfilling nature's promise of abundant water. With their hydraulic pumps.

The earth's natural water supply is inextricably linked to the vagaries of the rains.

But **extending** water supplies, where and when required, is where the art lies.

Wasp initially gained its superiority in manufacturing deepwell pumping systems. First Ejecto, and later, Submersible and Turbine pumps. With the internationally acclaimed Myers technology.

Persistent R & D efforts have resulted in a line of technically advanced Hydropneumatic Systems, Centrifugal, Centripetal, Self-priming, hand-operated and other pumps. To meet the water requirements of **every** customer.

Time and again, Wasp has been called by various industries to solve many industrial pumping problems on site. And increasingly complex applications made Wasp diversify into the manufacture of heavy industrial pumps.

Wasp high pressure simplex and triplex reciprocating pumps are precision-engineered for boiler feeding, industrial cleaning, hydraulic pressure testing or even simple car washing.

Chemical Process, Turbine-type, Rotary gear and Vane pumps are designed for handling acids, slurries, alkalies, volatile and viscous liquids.

Sewage and Non-clog pumps for handling solids and contaminated liquids.

Each pump is backed by an efficient countrywide network of branches and dealers, easy availability of spares and prompt after-sales service.

TOURISM

Welcome Advances

FOR AN activity which earns the country over Rs 1,100 crore annually in foreign exchange, tourism has surprisingly never featured in the honour roll of top revenue earning industries. It has not even been dignified with the description of "industry", an omission which has deprived tourism units of concessional finance and subsidies to which other recognised industries are entitled. All that looks like changing now.

For a start, the Planning Commission in its approach paper to the Seventh Five-Year Plan has clearly recommended that "tourism should be accorded the status of an industry", because "private sector investment will have to be encouraged in developing tourism, and public sector investment should be focused only on development of support infrastructure".

Step two in the rehabilitation of tourism is the assurance by the commission to increase the Department of Tourism's budget for 1985–86 from last year's Rs 6 crore to Rs 16 crore for the next financial year. This will enable the ministry to beef up its foreign publicity budget, which in effect was only Rs 75 lakh last year, and should now go up to Rs 2 crore.

The rest of the money is going into:

- setting up a Rs 1 crore Institute of Water Sports at Goa, Kovalam or Puri;
- provision of facilities for scuba diving in the Andaman Islands;
- providing water sports facilities at the lakes at Badkhal, Srinagar, Hyderabad, Bhopal and Jaipur;
- building budget accommodation at the wildlife sanctuaries at Simlipal (Orissa), Kanha and Bandhavgarh (Madhya Pradesh), Sasangir (Gujarat), Tadoba Park (Maharashtra) and Bandipur (Karnataka);
- provision of cheap accommodation at national heritage centres such as Kushinagar and Bodh Gaya;
- printing of high quality publicity literature for distribution abroad.

This vital infusion of sorely needed funds could not have come at a more opportune time. The industry is in a bad shape, struggling to overcome the fateful after-effects of 1984. "Tourism is in the doldrums unless something happens in a big way," says Ramesh Chandra, additional director-general of tourism. Tourist arrivals in the first half of 1984 had grown by 10.4 per cent over the corresponding period of the previous year, but a series of events starting with Operation Bluestar, which got India adverse publicity abroad, reversed this trend. Ramesh Chandra said Bluestar, followed by the dismissal of the governments in Kashmir and Andhra Pradesh, the blast at Madras airport, Mrs Gandhi's assassination and the subsequent killings, culminating in the Bhopal tragedy, must have convinced all intending visitors that India was an eminently avoidable destination. No part of the country had it so bad as Jammu & Kashmir, a state whose economy subsists on tourism. The Government had to intervene and disburse a Rs 200 monthly maintenance allowance to every houseboat owner in Srinagar, and order the Jammu & Kashmir Handicrafts Corporation to buy up handicrafts, carpets and shawls worth Rs 1.5 crore to Rs 2 crore which would otherwise have been purchased by tourists.

To add to the difficulties were the amended visa regulations imposed last year which, says a travel agent, "serve as a hindrance to tourists," adding: "The Home Ministry has only passed on the visa buck to the Ministry of External Affairs whose missions abroad are just not equipped to handle visa requests expeditiously." The Travel Agents Association of India plans to take up the matter with the prime minister. Since the prime minister is also minister of tourism, "this is the only ray of hope".

Hopes have also been raised by the recent appointment of a common secretary for tourism and civil aviation. The previous practice of having a full-fledged secretary heading each department had created coordination problems. On one occasion Air-India, which is a partner in the overseas tourism publicity programme, refused to carry the Department of Tourism's publicity brochures to its foreign offices. The bundles of brochures lay gathering dust in New Delhi while tourism offices abroad complained. Ultimately the then minister Khursheed Alam Khan had to step in and sort out the tiff between the two secretaries.

In keeping with the new guidelines, the Department of Tourism is taking a second look at the necessity of maintaining so many tourism offices abroad, especially the one-man offices in areas which have not generated enough traffic to India.

A similar cost consciousness appears to have infected the public sector India Tourism Development Corporation (ITDC). Managing Director Rajan Jetley says that the giant hotel chain no longer plans to build five-star hotel properties, a job that will in future be left to the private sector. ITDC will, apart from completing ongoing schemes and joint sector hotel projects, only loan consultancy and managerial expertise to builders. Two such agreements have already been signed, one in supervising the construction of a Rs 15-crore beach resort at Goa's Kanacona beach and the other to design and finally manage a 250-room five-star hotel at Hyderabad's Banjara Hills. Both hotels will be run as part of the ITDC's Ashok chain. Such deals apart, the chain plans to spend its resources in renovating and upgrading its other major properties in India, and build Yatri Niwas-type hotels at pilgrimage centres like Rishikesh, Hardwar, Ajmer, Shirdi and Dwarka.

But, as officials well know, none of this will revolutionise the industry, and Indian tourism will be no different until the setbacks of 1984 have sorted themselves out.

Do rising land prices make owning a house a distinct impossibility?

Read how Ansals Palam Vihar can make your dreams of a home come true.

For all those who take the liberty of dreaming of their own house, and then pinch themselves back to reality, here's some good news: you don't have to pinch yourself any more.

Your dream can become a reality.

About 7 kms from Palam Airport and 24 kms from Connaught Place, connected by a main road, are 500 acres of sprawling land. And this is where Palam Vihar is developing.

All plans for the colony have received Government approval and implementation is already underway. In a fast-paced, phased manner of development, Palam Vihar will, within the next two years, be transformed into a bustling locality of 50,000 residents — a completely self-sustained colony, with its own commercial centre, shopping complex, schools, hospitals, cinemas, clubs and parks.

Palam Vihar — a new way of life.

Aimed at improving the overall standard of life, Palam Vihar will offer exclusive features and facilities. Like a beautiful wood, 30 odd parks and various green belts, a special jogging track plus a number of tennis courts, swimming pools and playgrounds.

The layout of the colony itself is a heartening difference. All roads, lanes and by-lanes will run parallel and at right angles to each other — creating a perfect matrix for easy vehicle movement.

Vital services like post offices, police stations, bus stops, hospitals, medical stores and grocery shops have been placed at vantage points.

Behind Palam Vihar are Ansals.

The facilities will give the colony a new flavour of modern, twentieth century living. In the words of Mr Sushil Ansal, the Chairman and Managing Director of Ansal Properties & Industries (P) Ltd., "..(I)...am sure Palam Vihar will soon become one of the most prestigious colonies in and around Delhi..... it'll be difficult to believe that there was bare land here.."

Mr Ansal's confidence has something to it. ***Ansals have been in the construction business since 1940!*** And have been responsive to the country's growing commercial and housing needs. Ansals are acclaimed pioneers all over North India, with a number of distinguished buildings to their credit in Delhi itself — Vikas Minar, Nirman Bhawan, Surya Kiran, a part of Nehru Place and almost all the recent developments in Connaught Place. Ansals have also gone overseas, with giant projects in the Gulf.

But the end-benefit of Ansals experience is yours!

The instalment idea.

Ansals have developed comfortable pay-back schemes, distributed over one to three years. And you pay only as the development takes place! So you can be sure your investment is secure with Ansals.

But as you will see, this is not the only reason why Palam Vihar is such an attractive proposition.

Developed plots and ready-made houses.

In Palam Vihar there is virtually a plot for everyone — from sizes of 225.5 sqm to 836 sqm — and ready for possession! And for built-up houses there's an unbeatable variety in space and style — from single-unit houses to duplex' to palatial Continental and French Villas, with prices ranging from Rs.1,95,000 to Rs.8,75,000/-. And the best part is that you don't have to get into problems of construction and supervision. Ansals will do that for you. All you have to do is choose the house of your dreams!

But like everywhere else the saying is true for Palam Vihar too; ***the sooner the better!*** Because Palam Vihar is still reasonably inexpensive and with the fast-paced development taking place the prices may not remain the same for long. In fact, a few kms away from Palam Vihar land prices are already ten times higher.

So consider what you've got going for you at Palam Vihar. And now, reconsider what you always thought about rising land prices and owning a house.

You can contact, or write to Ansals at:

Ansal Properties & Industries (P) Ltd.,
115 Ansal Bhawan,
16, Kasturba Gandhi Marg,
New Delhi-110 001. Tel: 323755, 323001.

Please tick the box for detailed literature on the free-hold property of your choice.

IMC

Top Spin

DECORUM has always been the hallmark of the Indian Merchants Chamber (IMC), the 77-year-old institution headquartered in a lovely old building near Churchgate in Bombay. Last month, however, the calm of its stately velvet-draped boardroom was shattered by an ugly and increasingly strident controversy when industrialist Ashok Birla abruptly withdrew his nomination after being elected unopposed as IMC president. The immediate provocation was the fact that he was not allowed to choose his own vice-president and had to accept another.

Birla: sudden backout

Birla didn't put it quite that way, of course. He said that the democratic process in decision-making was not being followed and that the IMC should stop being "a closed club of a few senior members." The "few senior members" that Birla refers to are Pravinchandra Gandhi, former chairman of Dena Bank and IMC president in 1962, Himat J. Doshi of Amar Dye Chem Ltd and Pratapsinh Mathuradas of Wallace Flour Mills, and it is an open secret that the powerful coterie headed by Gandhi has been running chamber affairs for almost two decades now. Gandhi admits as much when he says that "in every institution there are people who take more interest in its working than others."

Birla should know this better than anyone else: with the blessings of the powers-that-be he was chosen vice-president last year—traditionally the vice-president automatically becomes president the following year—and has also been a member of the powerful managing committee for 17 years. In that context why he chose this year of all years to revolt is the crux of the current controversy.

The Birla backout coincided with the second most important event in IMC affairs: the elections to the 12-member managing committee. In an unprecedented happening a group of nine led by Shantilal K. Somaiya, another former president said to have Birla's tacit backing, contested the elections against the IMC's 12 and were soundly defeated. Comments paper magnate Rohit Patel who received the largest number of votes "tradition has triumphed".

The other camp grumbled about rigged elections in private but Somaiya issued a statesmanlike statement which said injuredly: "I am amazed and surprised at the tenor and poor taste and the quality of debate. There is only one issue of principle and that is how to make the chamber more democratic and participative in nature." Retorts current IMC President Pranlal Bhogilal: "The allegation that a few people are running chamber affairs is nonsense. The chamber has always been democratic in its functioning. I suspect that the present controversy has been provoked to try and destabilise the institution."

The "foreign hand" in this case is reported to be the Federation of Indian Chambers of Commerce and Industry (FICCI), which was said to have backed Somaiya in his so-called destabilisation attempt. Everybody involved in the current squabble loudly denies any such involvement but the rumours refuse to fade away. Matters were not helped by an article front-paged by a leading city daily which pointed to the issue of bogus membership which bedevils Indian industry's apex organisation. At a press conference held earlier by the rebellious nine they said, "It is entirely mischievous to suggest that a FICCI lobby is trying to swallow the IMC".

Of more immediate importance is the trade-industry split which characterised the managing committee election. Says Chandrakant Thakker, defeated candidate and boss of the powerful Federation of Associations of Maharashtra, the state's apex trade body: "In spite of the fact that 55 per cent of the chamber's 2,000-odd members are traders, we usually have only two or three people on the committee. This imbalance must be redressed."

Nearly a month after the controversy began, neither side appears to be in any mood for compromise. Technically speaking the IMC is without a president although it does have a vice-president. The procedure to elect a new president was restarted last week and a fascinated business community is waiting with bated breath for round two.

SWADESHI POLYTEX

Changed Fare

HE HAS every reason to walk tall. With three legal wins under his belt and the Government backing him to the hilt, Rajaram Jaipuria, the dimunitive chairman and managing director of Swadeshi Cotton Mills Company, is poised for a stunning victory over foster brother Sitaram Jaipuria, who heads Swadeshi Polytex Ltd. An end to the over nine-year brawl to control the Rs 65-crore turnover Swadeshi Polytex is in sight. A new board, which includes Rajaram, for the moment, sits in the company's board room and brother Sitaram has been stripped of all power—at least for the next two and a half months. Said a triumphant Rajaram before sailing into the first of two Swadeshi Polytex board meetings held last fortnight: "Lord Rama had a 14-year exile. My exile was for nine years."

That exile was enforced by the financial institutions which had backed Sitaram. Swadeshi Polytex was promoted by Swadeshi Cotton, and Rajaram now has 39 per cent of the staple fibre company's total equity of 39 lakh. Sitaram controls only about 9 per cent but was supported by the institutions with a crucial 16 per cent, and Mahendra Swarup, managing director of Paharpur Cooling Towers (P) Ltd and his friends who hold a 16 per cent block of shares. Last year the institutions switched support, only Swarup supporting Sitaram.

The dramatic turnabout in Rajaram's fortunes flows from a series of legal and government decisions. First, the Supreme Court shot down the claim of five small petitioners that 10 lakh Swadeshi Polytex shares owned by Swadeshi Cotton Mills carried no voting rights since the Government had taken over six Swadeshi Cotton mills in 1978. Last fortnight, the court upheld the Swadeshi management stand and an earlier Allahabad High Court verdict that only the mills, and not the company itself, had been taken over. That paves the way for Rajaram to fully flex his 39 per cent equity muscle.

Second, government officials stated in court some months ago that the Government would back the 51-year-old industrialist, and the financial institutions filed an affidavit that they had voted for him at the Swadeshi Polytex annual general meeting last year. The 16 per cent stake of the institutions together with his 39 per cent equity should pitchfork Rajaram into the saddle at Swadeshi Polytex and ease out Sitaram, the company's 59-year-old chairman and managing director, when the two brothers meet at the Swadeshi Polytex annual general meeting on May 15.

Third, the Supreme Court handed down an order last month after hearing lawyers for the institutions and Swadeshi Cotton on the one hand, and the existing Swadeshi Polytex management on the other.

Rajaram Jaipuria: dramatic change

The court said that the Swadeshi Polytex board would be recast to include four representatives of the institutions, and four each of the two camps. The two sides would each nominate one director as executive director to run the company. Any difference of opinion would be referred to the board. Sitaram would stay on as figurehead chairman and managing director till May 15, and preside over board meetings but would not have power to exercise a casting vote. The next annual general meeting would be held on May 15 "notwithstanding any order, direction or injunction of any other court in India".

The court went a step further and reserved the right to appoint the chairman of the May 15 meeting. At the last annual general meeting the scrutineers rejected the votes of the financial institutions. The institutions and Rajaram Jaipuria cried foul and went to court.

Expectedly, the Supreme Court's extraordinary compromise package satisfied no one fully. Nevertheless, a new 12-member board met on February 11 with Rajaram Jaipuria and Ashok Jaipuria, Sitaram's son, as executive directors. Two of the four Swadeshi Cotton nominees are Lohia Machines men (industrialist Sitaram Singhania, whose daughter is married to Rajaram Jaipuria's son, and Vinay Kumar Jain, the company's chief executive).

The big question that continues to dog Rajaram's ride to victory is the somersault of the institutions. A Swadeshi Cotton spokesman explains away the switch by pointing to Swadeshi Polytex's mounting tax dues (nearly Rs 6 crore, including interest, most of which is contested by the company) and to its "unprofessional management".

For all that, Rajaram Jaipuria is not taking institutional support for granted. To sew up public (and institutional) opinion, the Swadeshi Cotton camp is briefing press correspondents almost every day. The latest in a series of charges zeroes in on company profit: Swadeshi Polytex makes a profit of Rs. 4.5 crore, but profit should touch Rs 12 crore a year; staple fibre, the company's main product, is in shortage in the country and the staple fibre industry is protected from imports by high tariffs. Jain of Lohia says the company sells staple fibre at Rs 5 per kg, less than the market price.

Ashok Jaipuria disputes Jain's charges. The company sells its product for Rs 90, the same price charged by its competitors, the company's track record is excellent and the results speak for themselves. Adds Ashok: "Swadeshi Polyex has been a leader in the industry. It was the first to introduce the continuous process of polymerisation, the first to introduce polyester khadi. The credit for good management shouldn't go to an individual but an individual can ruin a company."

The company is rightly described as a goldmine and is making a foray into the lucrative ferrites field—buttressing the belief that Sitaram Jaipuria will not give up his company easily. In addition to his 9 per cent of Swadeshi Polytex's equity, small shareholders own about 18 per cent and may back him (the company has paid 15 to 20 per cent dividend in the last few years), as may Swarup. Swarup has lined up behind Sitaram Jaipuria in the past and may do so again.

The story may change course in the long run. The institutions which switched sides once could do so again or unload their shares if the price is right. Rajaram Jaipuria may have won this round, but the war to control Swadeshi Polytex may not quite end on May 15.

SIEMENS Digitized by Arya Samaj Foundation Chennai and eGangotri

Just how many hundreds of horses can you run in synchroneity?

Modern plants often use a number of motors — each perhaps developing over a hundred horsepower. The challenge is to synchronise these motors so that they are sensitive enough to respond to, let us say, the fragility of a single sheet of paper flowing between two independently motorised rolls.

Siemens' latest generation of Thyristor Controlled Drives offer just such highly precise control over industrial motors. Whether it be two or twenty interdependent motors, Siemens technology can interlink and interlock the entire system in absolute harmony.

Thyristor Controlled Drive being tested.

Siemens India employs over 7,000 people at 8 factories and 27 sales centres around the country. The Company's expert team of manufacturing, sales and service engineers are dedicated to the highest standards of quality assurance.

Siemens' Thyristor Controlled Drives are just one example of international technology being specifically tailored to meet the needs of Indian industry. Similar successes have been recorded in industrial electronics for control and automation, high-tension power technology and medical engineering.

WHILE INFLATION appears to have been contained for the moment with both wholesale and consumer prices stationary, credit expansion has led to sharp increases in money supply with possible long term effects on prices. Both the share and bullion markets have been bullish. Foreign exchange reserves are down sharply, and the trade gap has widened with imports exceeding exports by about 250 crore.

All data are seasonally adjusted. Current trends are computed on the basis of the last six months data to which a regression is fitted.

For the first time in many months, the wholesale price index dipped marginally by 0.1 per cent due to a fall in prices of food products.

Consumer prices were almost stationary last month, increasing only marginally by about 0.1 per cent, well below the long term trend.

Money supply surged ahead for the second successive fortnight up by 1.7 per cent due chiefly to credit expansion by commercial banks.

A sharp 1.4 per cent increase in bank credit to firms reversed the austerity indicated in the previous fortnight.

The trade gap widened to Rs 257 crore last month though the long term trend has remained approximately stable for several months.

In a disturbing development, foreign exchange reserves were down 5 per cent last month, sharply at variance with the long term trend.

The share market was bullish, jumping 2 per cent in response to the optimistic outlook in chemical fertilisers, transport equipment and paper.

The bullion market was up 1.7 per cent last fortnight following relatively stable conditions in the previous month.

WHOLESALE PRICES

THE MARKETS

Mixed Fortunes

WIN SOME, lose some. Operators on Dalal Street, as also elsewhere, were cautious throughout the fortnight but that did not prevent them from pushing up some shares and pulling down others, with the result that the market as a whole remained more or less in its listless state, with the index stuck in the same position. Some scrips were marked up and some others were marked down but neither the bulls nor the bears wished to make a fight of it.

However, some shares had everything going for them. Tata Engineering (TELCO) touched 500 on reports that the company was planning to take up the manufacture of passenger cars in collaboration with some foreign companies. Premier Automobiles moved up on bonus expectations. Century Spinning and Associated Cement have also recovered but with the budget less than a month away few marketmen are in a mood to take chances. The market has duly noted the prime minister's remarks about black money and taxation but it doesn't know which way to jump. Will the Government come down heavily on black money hoarders or will they be taken to the nearest tree and hanged, as Nehru used to threaten?

Chart by B.K SHARMA

Corporate news is mixed. Herdillia Chemicals has reported a 29 per cent rise in sales during the six months ended December 1984 and prospects for the other half of the year are said to be promising. Glaxo has commissioned its second basic drug plant in Gujarat. Synthetics and Chemicals, once a bright star in Dalal Street, has returned to dividend list. Fifty-six companies, a record, were granted permission to raise capital in January 1985, including Vulcan-Laval, Tata Fertiliser (Rs 20 crore), Bharat Gears and Ponds. Most new issues were oversubscribed.

Some doubts remain, however. If the market is so high now, what will it be like after the budget which is now expected around the middle of March? The finance minister has said nothing to his visitors who have been crowding his office for pre-budget discussions, but those who have broken bread with him say that the minister is worried about the resources position, what with a new big plan on the cards and all those high expectations which the prime minister has described as 'scary'. Add to this the casual remark of the new chief of the Planning Commission to the effect that deficit financing is not all that harmful, provided you go about it in a quiet way. During the current plan, deficit finance has exceeded the estimate by 50 per cent, and we all know what has happened to prices. We also know what has happened to share prices, for a little deficit goes a long way in pulling share prices with it, so what you lose on the swings you gain on the roundabouts. As we said, win some, lose some.

Vessels made out of Salem Stainless Steel are available at all leading vessel stores.

"It's always a good feeling when there's a marriage in the family.
This time, it's our third daughter's.
Being the last one, she's a bit of a pet at home.
Asking, and getting most of the time, what she wanted. Whether it's a pet dog, her own veena or dancing lessons.
Now that she's getting married, we've been shopping around a lot.
Silk sarees all the way from Kanchipuram. Diamond-studded ornaments from the best jewellers. A long list of household appliances and other things to set up a comfortable home.
Deciding on the right things for our daughter wasn't easy.
The only easy part was when we had to buy her vessels.
Vessels made out of Salem Stainless.
Vessels that don't pit, corrode or stain. Keep their shine even after years of daily use. And strong enough to last a lifetime.
After all, we want our daughter to have a lifetime gift. And in vessels, it's Salem Stainless.

STEEL AUTHORITY OF INDIA LIMITED

UDAYAM

A Remarkable Rise

FEW NEWSPAPERS have soared so high so quickly. Only month after it first rolled off the presses, Telugu daily *Udayam* (dawn) touched the remarkable circulation figure of 224,000 and was well entrenched in the number two spot among the dailies in Andhra Pradesh. Reacting to this runaway success, the 38-year-old publisher, Dasari Narayana Rao, the Telugu actor-director, ordered more printing machines and unable to meet the demand for another 50,000 copies from vendors, abandoned his ongoing sales promotion campaign.

"This is due to my popularity and is expected from the people," crowed the exultant Rao. His image certainly had a big part to play in *Udayam*'s success, but at least some of it must be attributed to its editor, A.B.K. Prasad, 49, who was in fact largely responsible for editorial innovations that some years ago made *Udayam*'s competitor *Eenadu* the largest-selling Telugu daily. Prasad introduced horizontal make-up of pages, sports photos on the front page and a racy style, which had catapulted *Eenadu* to a circulation of 3,35,000.

Udayam may not be marketed as aggressively as *Eenadu*, whose editor Ramoji Rao makes sure that his paper is distributed to the farthest corners of the state. But what *Udayam* loses in marketing is more than compensated for by its modern printing facilities. The paper has 16 phototsetting terminals with a script devised and programmed by P. Narasimham of the Hyderabad-based Computer Maintenance Corporation. The spacing gives the script a distinct look when printed and the paper's ability to introduce colour in some of the 10-page weekday editions and a four-page colour magazine section in the 16-page Sunday edition have added to its advantages. This visual appeal is backed by a wide variety and range of writing to interest the entire family that include serialised fiction, film news, comic strips and puzzles. Sports gets more than half a page, unusual in Telugu dailies. Analysis and critical comments on different issues carry pictures.

For its news coverage *Udayam* has a large editorial team: 49 reporters, including six roving correspondents for clusters of districts, 40 part-timers and 180 stringers (another 120 are being selected) all filing in through a teleprinter network linking all district headquarters in the state and Delhi with the publishing centres at Hyderabad and Vijayawada. However, says Telugu media watcher and author-journalist G. Krishna: "*Udayam* may inspire and be the hallmark of new Telugu journalism only if its writing quality and variety in coverage improves. Otherwise, the rise in circulation may be short-lived."

Prasad (top left), Rao and his daily (below): runaway success

Udayam's real test will come after the March assembly elections when much of the political excitement and campaigning is over. Narayana Rao, however, is not worried. He says confidently: "There must be a few gimmicks always to draw people's interest and some of it comes from my fans." His 850 film fan associations throughout the state bring him up to date with the views of film-goers. But he denies film fan support is one of his reasons for entering the publishing industry. The prolific film-maker with 83 films, including the national award-winning *Meghasandesham*, has had a chequered career. After passing out of school at Palacole, then a tiny village in the Godavari delta, he worked for a while as a typist in Hyderabad only to go back to his books and get a commerce degree before he joined Hindustan Aeronautics as an accounts assistant. But in 1968 he migrated to Madras and joined films as a scriptwriter and ultimately became an actor-director. Early in his film career Rao also ran a film-fortnightly *Cine Prapancham* for 18 months.

With an interest in both films and journalism, Rao has brought the two media together. He has lofty visions for his paper. Says he: "A newspaper is of great service as a link between people and the Government. You can educate people through newspapers but films need not necessarily educate. They may only entertain." The circulation charts had made Rao choose Tirupati as the location for the third edition to be launched before the year-end. The *Udayam* weekly is also to be launched by that time. Other journals being planned are *Sivaranjani*, a film weekly, and *Thatha Manavadu*, a children's monthly. Both are titles of his films. Rao says: "I want to break all records in circulation. I want to be more popular. Narayana Rao works hard for success."

However, he denies that all this is for an eventual entry into politics. "I have no plans at present," he says evasively. Discerning media watchers though point to the fact that his name as chairman appears in one corner and his picture as a film advertisement in the prime solus position at the other corner of the front page on most days in the week. This is not viewed as a sales gimmick for the film *Lanchavataram* (the avatar of corruption) to be released this month. And one interesting blurb has Narayana Rao saying, "Do you want to convert black money into white? Come I will tell you how."

Now, let our network take your product across the length and breadth of the country's richest agro land.

400 field sales staff, 740 deale distribution power

Punjab buys more agro products than any other state.

Which means that if you make agro and agro related products, this is the biggest market in the country for you.

It is also the richest. And the most profitable for you.

Take fertilisers for instance.

Punjab bought 13% of the country's total sale. Take tractors. The state bought 25% of all tractors sold in the country last year.

And if that's not enough, look at the per capita income. It is 75% higher than the national average. As much as Rs.3164 per year.

A rich market to develop. Punjab has had another record crop this year. So the rural areas are even more flush with funds than they were last year. Which means that Punjab will buy more. Lots more. More agro chemicals. More farm equipment. More agro related products. If you can reach the markets, you can get rich quick.

That's where we come in.

We can get your product to every market in the state. Every consumer. We have the network. We have the experience. We have the knowledge. Over 18 years of it. Gained through selling basic agricultural inputs to the Punjabi farmer. One of the smartest, most discerning agro product buyers in the land.

Is this the right time? Yes. Punjab has had its problems lately. Business slowed down for a while. But things are fast returning to normal. The markets are throbbing with activity. Just waiting to invest in new agro related products.

So now is the right time for you to push your product in Punjab.

We'll get your product to every corner of the state. From day one, our vast distribution network will rush your products into every of the state. From large towns like Ludhiana Amritsar to remote villages like Kothi and Mali.

From day to day we will monitor and distribution tightly through our 4 regional and 12 area offices. With constant feedback consumer reactions to your product and consumer needs too. So you can realign if you need to. Quickly and accurately. And plan on new products.

After 18 years we know our market inside out. 18 years of in-depth marketing given us a pretty clear idea of our consumer

Punjab Agro will distribute your product to the large

Or languish within narrow boundaries.

Own retail outlets will give you e can help but envy.

product. It has given our team of senior ing professionals specialised ability in keting. And a lot of respect for their se. They will help you plan successful ing programmes. They'll also use for you mation we have from a major market study. A sample of 3000 farmer ks in 6 representative districts in Punjab ing remote villages and cities. An extensive with an excellent accuracy factor.

Marketing options. Here are the optional ments you could make with us:

- Total marketing for Punjab: From product development to packaging to pricing to promotion and monitoring.
- Distribution: We will provide the distribution support to your existing, established brand. Which will give your product far greater depth of distribution.
- Segment distribution and market development: This arrangement with us allows you to develop a market in the remote areas of Punjab where you haven't been represented before. And which could be very lucrative for you.

How to start the ball rolling. Write to us right away. Tell us about your organisation and your products. And we'll get back to you with information. We'll arrange to meet you and talk over what we can do for you.

Our turnover has more than doubled over the past five years. Our turnover has grown from 32 crores to 82 crores in five years. That's over double.

We've grown with the people we work with as their marketing organisation in Punjab. People like HMT, International, SPIC, Shriram, IPL, Ra!!is and other major companies.

Here's to your success. So now it's up to you. If you're a smart businessman you'll get your managers to write to us right now. And take your first step towards major marketing successes. Or languish with the small share you already have.

Punjab Agro Industries Corporation

S C O 307-308, Sector 35-B, Chandigarh 160 036.

ities and even the smallest villages in Punjab. Fast.

BIHAR

False Arrests

THE DREADED midnight knock in Munger, a district town in Bihar, brings a chill that far exceeds the area's reputation for having everything about it outsized and outrageous—from gun-running to kidnapping and murder. One such knock on January 14 brought Dinesh Kushwaha, 21, face to face with a warrant from a Sasaram court for a rape he never committed. Five days later warrant-toting constables struck at nearby Itwa and arrested Ramchandar Mandal, 18, and Ramawtar Mandal, 20, on dacoity charges. A week later when Ramchandar returned home on a provisional bail, his mother Kalu Devi, 40, who could not bear the shock died of heart attack. Said Ramchandar: "How can I commit dacoity in Sasaram? When my neighbours went to Sasaram with a lawyer to get details of the case, they found that no case existed in any court."

Such arrests on the strength of 'mysterious warrants' would have gone unnoticed but for the efforts of a social worker of Sunderpur, Loknath Kushwaha, 33, who spent months to obtain a copy of one such warrant and went to the Superintendent of Police Rakesh Jaruhar last fortnight to complain that innocent people were being harassed and fleeced by an organised gang. Jaruhar however told INDIA TODAY: "We are yet to make a breakthrough in the case. It is so puzzling."

But the people who have suffered in the past few years have horrendous tales to relate. Said Nageshwar Singh, 45, an assistant superintendent of the electricity department, who faced warrants four times between January 1977 and March 1981: "I paid my way out of the first two confrontations with the warrants but the third one I pursued to the Gaya court which issued it. I found that no case existed against me and brought back a certified copy to tell the police that I was innocent. The fourth time when a warrant came from a Ranchi court, I knew it was bogus and threatened to expose the policemen who brought it. They took to their heels." Last April, however, Nageshwar found that some 'unknown persons' had lodged an FIR against him and a warrant of arrest had been issued. By the time he successfully challenged it, the police had raided his home and arrested his son Motikant, a student, as being wanted in a dacoity case.

Loknath, who estimates that scores of people have been arrested on the basis of 'fake warrants', fleeced and ruined, says in a majority of cases the victims are never produced in court and the deal is struck in a thana. "Since they are not given a copy of the warrants, they just pay the amount demanded to avoid arrest and social disgrace."

K.M. KISHAN

"How can I commit dacoity in Sasaram? When my neighbours went to Sasaram with a lawyer to get details of the case, they found that no case existed in any court."

RAMCHANDAR MANDAL

K.M. KISHAN

"I paid my way out of the first two confrontations with the warrants but the third one I pursued to the Gaya court...I found that no case existed against me."

NAGESHWAR SINGH

Bashis Lal, a leading lawyer of Munger town, feels that the racket is quite widespread because six victims whom he helped out were all facing 'fake' warrants. Other lawyers say that the modus operandi is quite above board. The gang picks a target and gathers details of any court case in the neighbouring districts, taking down the case numbers and sections under which any genuine accused is facing trial. Then a blank warrant of arrest or custody warrant is obtained, and filled up. All entries are genuine—only the name of accused is left blank. A court stamp is placed, the signature of the issuing magistrate is scribbled and the letter in a "On Govt. of India Service" envelope is posted to the superintendent of police's (SP's) office for execution. From the SP's office which does not have any machinery for verifying the authenticity of the warrant, the letter is forwarded to the police station concerned for execution. Since the court concerned never really issued the warrant, it does not pursue the matter but members of the gang who have interest in blackmailing people do so with vigour and vengeance.

The local police, on the other hand, is protected because it is supposed to be executing a court order which it has received through proper channels—so everything is legal. Admitted Jaruhar: "Some fake warrants might have passed through this office but how could one detect which one is genuine and which fake?" While the police find themselves helpless, the courts have apparently no reason to do so. Blank warrant forms are openly sold by stamp vendors. Suresh Tanti, an advocate, feels that the gang might include some lawyers and court clerks also.

The racket has assumed such proportions that a Munger lawyer, Bhajan Mani Chakraverty, recently received a warrant of arrest from a Dhanbad court on charges of 'rape'. A contestant in the assembly elections from Sultanpur has as many as four warrants pending against him. While the exact ramifications of the racket of fake warrants are yet to be fully understood, the number of people who have been dragged to the thana in the dead of the night and forced to fork out tidy sums continues to grow unchecked in the lawless jungle that is Bihar today.

Pipe-lines that are life-lines...

ARASU

Asbestos Cement Pressure Pipes

Strong & durable for cost-efficient water-management.

The ARASU range of products—from TANCEM—is gaining ever-wider appreciation for quality, strength and reliability

Take ARASU Asbestos Cement Pressure Pipes for instance:

Superb performance in water-supply, irrigation, drainage systems. Very sturdy, very robust, very durable. Economical—even in laying underground. Resistant to corrosion, combustion and vermin. Made under rigid quality control—to ISI standards. In standard length of 5m, dia range 80 to 600mm. And gaining greater ground all over the country.

Or take the other ARASU products:

Portland Cement and Asbestos Cement Sheets. For strength that really makes your structures strong and durable.

ARASU—for sheer strength & protection... overhead, underground or alongside!

ARMS FACTORIES

An Explosive Find

WHEN Bellary district officials raided the Dwaraka Arms Store, one of the top four private arms factories in the country, last October, they seized explosives of a different kind. In six brief-cases thrown carelessly around the store, they found copies of confidential documents of the Union Home Ministry, including blank letter-heads of the department. A week later, they trapped two people selling a Spanish gun that allegedly had been brought to Bellary by Golla Lakshman, the proprietor of the store, from Dhirendra Brahmachari's Shiva gun factory in Jammu which is already facing charges for peddling illegal arms. Apart from this, the officials found evidence to suspect that Dwaraka was manufacturing and selling arms illegally.

Ironically, when the case first broke, there was little public outcry and Lakshman even filed a defamation suit against Bellary's Deputy Commissioner, Sudhir Kumar, for making some of the facts of the raid public. It was only last month when the sensational spy scandal shook the country that investigators realised the true import of the documents they had seized. Lakshman seemed to have had access to all the key government papers relating to his factory—the home minister's notings in his file as well as a confidential letter written by the joint secretary, defence production, outlining the country's arms production capability.

Last fortnight, Sudhir Kumar filed a 57-page first information report that among other things charged Lakshman with violating the Official Secrets Act and of manufacturing and selling illegal arms. Both these are non-bailable offences, which, if upheld, could result in seven to 14 years' rigorous imprisonment for Lakshman. But before any arrests could be made, Lakshman and his two sons, Raghunath and Jagannath who are also accused, apparently went underground and a massive police manhunt has begun. However, officials in New Delhi arrested Y.P. Dangwal, who before his retirement as desk officer in the Union Home Ministry two years ago had allegedly passed on confidential information to Lakshman. Also arrested were R.N. Lakshman, a retired sub-inspector, his son Srinivasalu and Hardeep Singh, an employee of Dwaraka for trying to sell the illegal Spanish gun.

From all accounts, Lakshman seems to have been a resourceful person. Starting as a blacksmithy instructor in a government polytechnic college in Bellary with a salary of Rs 50 a month, Lakshman had by the end of last month, partnership interests in four gun factories in Bellary, an explosive manufacturing factory and an arms dealership. The police estimate his current assets between Rs. 10 crore and Rs 40 crore. He got into the arms business in the late '60s by converting old guns discarded by the police into usable ones. After he became a partner in Sujatha Arms Factory in neighbouring Guntakal which had a licence to convert 525 arms annually, Lakshman resigned from government service and took up the business seriously. By 1977 he established Dwarka Arms and merged it with Sujatha and obtained a licence to manufacture 700 breech and muzzle-loading guns a year. Soon he got licences to manufacture three lakh blank cartridges, 3.75 lakh live cartridges and one lakh lead shots.

Dangwal (spectacled) being arrested in Delhi and (left) G. Lakshman: key figures

His powers of persuasion seem to have been enormous. The Union Government as far back as 1958 had decided that manufacturing of arms should be a public sector activity and licences should not be issued to anyone in the private sector. But the 133 existing gun manufacturing factories were exempted from these provisions and have flourished. They now manufacture an estimated 60,000 guns every year. Lakshman was not only able to persuade the Government that conversion of arms was "tantamount" to manufacturing them and therefore had a licence issued to him for producing 700 guns in 1978, but in September last even got his capacity enhanced to 3,000. In this he is said to have received help from Dangwal who as desk officer put up his case favourably. But Lakshman's and Dangwal's only mistake was that they were too meticulous in their dealings and kept detailed accounts either in their diaries or in files. These have now become vital documents which among other things give out details of how Lakshman tried to persuade the Government to allow him to set up a pistol and revolver factory and how he was able to secure the confidential notings of the Union home minister and secretaries.

District officials suspect that Lakshman is deep in the illegal manufacture and sale of arms and ammunition. From the books of accounts they have examined, they find that, ironically, Lakshman was manufacturing items far short of the licensed capacity: 18,500 blank cartridges against three lakh licensed, roughly half of the 3.75 lakh live cartridges and only 15 per cent of the lead shots it is capable of manufacturing. With 13 lathes in the factory it has the capacity to manufacture 9,000 guns but till last year used to make only 700 guns. Says Sudhir Kumar: "The excess capacity can and must have been used to manufacture more guns and cartridges without anybody knowing anything about it."

But when Lakshman's factory was raided, officials found very little evidence to corroborate their suspicions. They could find only 74 empty brass cartridges that were illegal, 33 kg of smokeless gun powder although Lakshman should have had only five, a single-barrelled breech-loading five-chambered revolver and two rifle barrels that were illegal. As the investigations move further, on the Corps of Detectives rests the responsibility of finding out whether the charges against Lakshman are false or whether they have the firepower that the district officials suspect they do.

The best things in life are worth a little more

Japanese technology builds a lifetime's efficiency into the Allwyn refrigerators

Yes. The Allwyn does cost a little more. But what it offers you is a lot more. A lifetime's dependability. Because an Allwyn is engineered to last. To give you year after year of superb service and smooth efficiency. Allwyn has Japanese technology behind it. And Japanese technology puts Allwyn in a class by itself.

It gives you better cooling, better performance with never a rumble of trouble. Even at twice its price an Allwyn is a great investment.

Allwyn comes in a wide range... six models to choose from. 85, 165 and 300 litres in single door... 165, 300 and 380 litres in the double door models. There's sure to be one just right for your family!

Take a look at what Allwyn offers you...

Hitachi at the heart!

The Allwyn compressor is made under licence from Hitachi... made for negligible compressor failure and smooth, silent efficiency.

Who needs a voltage stabiliser?

Allwyn tackles voltage fluctuations from 150 to 260 volts... so you don't need a stabiliser!

Ice in a trice!

Its unique Roll Bond freezer makes ice quicker even while it preserves food for days.

Sayonara huge big electricity bills.

The Allwyn consumes 10% less electricity because of superior Japanese technology.

Defrosting never was so easy...

A self draining system for easy defrosting. High Impact Polystyrene/ABS linings for sleek roomy interiors.

Service before you can say Allwyn!

Allwyn comes with the biggest service network. You may never need it but help is available at the other end of the telephone.

The ready-to-take-on-the-world refrigerators.

Allwyn invests Rs. 8 crores in plant and equipment modernisation to constantly upgrade know how and update products for you.

IS : 1476

7 YEAR GUARANTEE

ALLWYN

2000 SL REFRIGERATORS

UNDER LICENCE FROM

HITACHI

A lot of people seem to think of Dodsal as just a pipeline construction company. In fact, a major part of Dodsal's activities involve plant construction. Dodsal takes on entire projects single handed: Civils. Mechanicals. Electricals. Instrumentation. Everything up to commissioning and start up. To date, over 75 projects worldwide. **Across South East Asia, Africa, India and the Middle East, this Indian company is sketching a new skyline for the earth.**

PETROCHEMICAL AND FERTILIZER COMPLEXES BY DODSAL

The IPCL petrochemical complex, India: One of India's largest complexes – built by Dodsal in a record time period of just 15 months. Mechanicals on three major plants. Structural steel work on two of the plants. And 11,000 MT of piping.

Fertilizer plants at Kalol, IFFCO, Bharuch and Hazira: Water, steam, naphtha and ammonia in-plant and yard piping. Fabrication of 11,000 MT of piping. As well as 48" underground piping for the off-site facilities.

DODSAL'S PLANT DIVISION: THE TRACK RECORD

In just 25 years, Dodsal has emerged as a major international force in plant construction.

Over 75 projects worldwide: Refineries. Industrial and steel plants. Oil and gas field facilities. Nuclear and thermal power stations. And desalination plants.

Every single project completed on or ahead of schedule.

Dodsal has a mobile task force of 500 engineers and 3,500 technicians. And equipment bases in Singapore, Baroda and Muscat.

HEAVY LIFTS

Dodsal is one of the few companies in India to specialise in heavy equipment lifts. Dodsal's crane (Manitowac 4600: Series 3 with Ringer Series 4) has a lifting capacity of 700 MT and a boom of 80 metres.

OTHER DIVISIONS:
Pipeline ■ Manufacturing ■ Transmission towers ■ Civil engineering ■ Operation and maintenance

Family Chronicle

THE NEHRUS AND THE GANDHIS
An Indian Dynasty
BY TARIQ ALI
Distributed by Rupa & Co
Pages: 302; Price: Rs 31.60

THE INDIAN National Congress was 40 years old when two Nehrus, Motilal and Jawaharlal, father and son, became its presidents, the son succeeding the father two years before Motilal died. Since then there has been no looking back for the Nehrus. This is, as the author says, a dynasty without precedent in the modern world. There have been other political families—Roosevelts and Kennedys in the United States, Churchills in Britain—but they are not in the same league as the Nehrus of Allahabad. Theirs has been an unbroken line of political succession, from great grandfather to great grandson, a series of successions fought and won, often with no holds barred, in the world's largest democracy.

How did it happen? Tariq Ali poses the question but does not explain. The book is a straightforward family chronicle beginning with the rise of Motilal Nehru on the wrong side of the tracks in Allahabad at the turn of the century and ending with the election of Rajiv Gandhi as prime minister. In between, the book traces, through the labyrinth of India's politics, the extraordinary lives of Jawaharlal and Indira, who laid the foundations for the family's political fortunes. In Ali's Nehru saga, there are walk-on parts for other characters but they do not interfere with the flow of the narrative. The author's spotlight is naturally on the two Nehrus, or rather one Nehru and one Gandhi, only one of whom he has met, but there are sympathetic sketches of the two Gandhis, Mohandas and Feroze. The book is a useful 'capsule' history of modern India, readable but not entirely reliable as history, though foreign readers might find it revealing.

There are certain uncanny parallels in the story of the dynasty. Both Jawaharlal and Indira were reluctant seekers after power, or, at any rate, that's the impression they gave. Gandhi made Nehru Congress president as he wanted to keep an eye on him and prevent him from going too much to the left. In the case of Indira, the party bosses, all of whom were Gandhians to the core, needed someone pliable, weak and susceptible to their control, a lump of clay, as Tariq says, they could mould and remould according to need. But the Nehrus were too smart for their keepers. As Congress president, Nehru declared that he was a socialist and a republican. There was consternation in the party and panic in London but Nehru did not give in. Thirty-seven years later, Mrs Gandhi on becoming prime minister did give in but only temporarily. Rajiv did not have to deal with bosses but he too was a reluctant entrant into the political arena and made it to the top within four years of his first political baptism.

In a perceptive introduction, Salman Rushdie has described the Nehru dynasty as part of a myth-making process which all countries go through, but that can only be a part of the explanation. The Nehrus are seen by most Indians as nationalists and modernisers, an unusual combination that gives them such a powerful hold on the minds of both conservatives and progressives, enabling them to create their own constituency, a Nehru constituency, across the country. Other parties, and other leaders, are nationalists or modernisers, but not both. Gandhi was a nationalist but he was anything but a moderniser so while other pre-Independence Congress leaders were classed as Gandhians, only Nehru remained a Nehru, a tree among the poppies. After Independence, the socialists, who alone could have laid claim to both, cut themselves adrift from the national mainstream and were lost for ever. The communists may have been modern in their outlook but their anti-national past betrayed them. The Jan Sanghis were and are strong nationalists, a little too strong perhaps for the modern times, but they are not perceived as modernisers, which puts them, so to speak, *hors de combat*. So the party follows wherever the Nehrus go, even when they do odd things like imposing an emergency or ordering troops into houses of prayer. But even the Nehrus have to abide by the rules, as Mrs Gandhi found to her great cost in 1977 when the people cast her out into the cold and she had to cool her heels for three years before she was allowed back in.

The Congress which the Nehrus have dominated for 50 years may have declined as a political party but it is still a powerful political force and is perceived by the bulk of Indians as a truly national organisation, perhaps the only one in the country. All countries need populist type leaders at the top when they are passing through a crisis and India's crisis is that it is still not quite a nation. When its nationhood is fully established, the Nehrus may find they are not as indispensable as they or their supporters might think.

The book was apparently rushed through the press and contains several errors. Mrs Gandhi became prime minister in 1966, not 1967, and she was killed in October, not November 1984. Rajiv was born in Bombay, not Allahabad and Namboodiripad became chief minister of Kerala in 1957, not 1950. Nehru won three consecutive general elections, not two, and Bal Gangadhar Tilak was born in 1856, not 1864. And surely in a family album of 28 pictures, there could be one, a tiny one, of Feroze Gandhi, who was after all one of the godfathers of the dynasty!

Ninetyfour years in a Week

The Week is two years old. But behind it is a ninetyfour-year-old name that has become an institution. Malayala Manorama : freedom fighter, patron of the arts, voice of social awareness.

With the second largest circulation in India. Among all English and language dailies.

What makes Malayala Manorama so special? The rich experience of having communicated with the most literate audience in India, for nearly a century. And the knowledge and authority that are self-evident in the acclaimed Malayala Manorama Year Book.

That's the inspired, distinctive background against which The Week stands. And that's why, in just two years, its circulation has crossed 1.5 lakhs : something of a record. Which isn't surprising. Because people now acknowledge The Week as an authentic spokesman. With first hand accounts of all the important events.

Take the storming of the Golden Temple : The Week had a man on the spot. Or Sunil Gavaskar's record making match : The Week interviewed his family — and published it before the match was over. In fact, The Week's correspondents are so hot on the heels of the latest news, that one found himself on board a hijacked plane!

Today, more and more people are discovering The Week. And putting their faith in it. Because they know that whatever happens, they're bound to read the best of it in the next Week!

Never a Week behind.

SARAT CHANDRA

Novel Popularity

THE BENGALI novelist Sarat Chandra Chattopadhyay, who died 47 years ago, is proving to be one of the biggest money-spinners in Indian book publishing history. Last fortnight, Calcutta's Ananda Publishers put into gear their plans for printing two lakh copies of the author's collected works —a plan that is going to cost the publishers at least Rs 40 lakh in royalty payments alone, making it the biggest single royalty deal in the country so far. The sales of Sarat Chandra's collected works, priced at Rs 100 per copy, are expected to gross a whopping Rs 2 crore. At any rate, says Badal Bose of of Ananda Publishers: "We are committed to pay the copyright holder Rs 40 lakh regardless of how many copies we actually print or sell."

The deal is obviously sound as the estimated demand for Sarat Chandra's works is enormous. A decade ago his collected works published by an association formed for his centenary celebrations, were bought up even before they were actually printed. For the first 50,000 copies, advance bookings were completed in about four months and by the time all the books were finally delivered by 1978 the centenary committee decided to print another 50,000 copies that also sold out.

"As a novelist Sarat Chandra is more popular than even Rabindranath Tagore, no matter what the intellectuals might feel," declares the best selling Bengali novelist Moni Shankar Mukherjee, who writes under the pseudonym "Shankar". Mukherjee's contention is, however, difficult to prove or disprove. Tagore's novels individually have sold a total of 11.2 lakh copies, according to records available with Visva-Bharati University, the sole publishers of the Nobel laureate's work. Two of the dozen novels written by Rabindranath, *Rajashree* and *Shesher Kabita* have sold over six lakh copies, while the rest have averaged about 50,000 copies each.

Unfortunately the two private publishers of Sarat Chandra's works, M.C. Sarkar and Sons and the Indian Associated Press Company, have not kept any comparable records. Supriya Sarkar of M.C. Sarkar and Sons, the company that held the exclusive copyright for Sarat Chandra's collected works before selling it to Ananda Publishers, claims that the 13 individual titles of the novelist's works being published by them currently sell about 35,000 copies a year. "The demand is growing considering that five years ago

Sarat Chandra (top) and Badal Bose: cashing in on the demand

only about 20,000 copies would sell every year," says Sarkar, maintaining that they have sold over a million copies of the author's novels during the last 50 years. Ananda Publishers are aiming to sell their edition of the collected works to the rural educated, avid readers of Sarat Chandra's novels, who have not always been able to afford his books. They are pricing their edition at Rs 100 as compared to Rs 450 charged by M.C. Sarkar and Sons, who have sold only about 50,000 copies of their edition.

The intentions of both the Ananda Publishers and Sarkar are to cash in on the Sarat Chandra boom before the copyright period expires in 1988, after which no publisher will have to pay royalty on his books. "Since we have already begun publishing Sarat Chandra's works we will be ahead of our competitors once the copyright expires," explains Badal Bose. Supriya Sarkar, has acquired the copyright for the collected works reportedly at a huge sum from Sarat Chandra's nephew's wife, Monica Chatterjee.

Publishers like N.D. Mehra of Rupa and Company are, however, somewhat sceptical about the sales target set by Ananda Publishers. "Except Shakespeare, I cannot recall another author's collected works selling more than a lakh copies in a single edition," says Mehra. But big retailers in Calcutta contend that Bengali novels and Hindi paperbacks are the biggest sellers in the country. Modern Bengali novels written by Satyajit Ray, Somoresh Basu and Shankar net several lakh rupees even though they are produced without exception in hard covers. Just how big the market is can be gauged by the fact that an omnibus of three of Shankar's novels sold a record 1.4 lakh copies. Most Bengali hardcover novels are priced upward of Rs 20 compared to less than Rs 10 for Hindi paperbacks.

"Sarat Chandra during his lifetime did not enjoy the kind of respect and popularity accorded to Rabindranath and Bankim Chandra Chattopadhyay," laments Mukherjee. Sarat Chandra's novels, with their stylistic simplicity and social plots were, and to a large extent are, still considered to be "devoid of literary content". Whatever popularity he did enjoy was "suspect both to the intellectual establishment as well as to himself," says Sarkar, whose father was the novelist's first publisher way back in 1913. Lacking institutional backing, Sarat Chandra's works after his death were brought out "by people who did not bother to ensure good printing and production", thus further dampening sales, argues Mukherjee.

Ironically when Sarat Chandra died in 1938, only about 25 people are said to have gone to his house to pay their last respects. But today thousands of his fans all over the state are queuing up to pay advance money for his collected works.

MENINGITIS

Battling the Breakout

EARLY one morning, last month, 11-year-old Rajan woke up with a headache. He complained of a feverish feeling but his mother, thinking he only wanted to skip school, handed him an aspirin and packed him off. Within a couple of hours Rajan was back, looking pale and weak. By late afternoon, he had become unconscious, his blood pressure dropped to a dangerously low level and on his leg he had begun to develop a dark pink rash—medically known as haemorrhagic spots. When his parents rushed him to hospital, a lumbar puncture revealed that the child was suffering from meningitis. For three days doctors struggled to bring him out of danger. Little Rajan did not die. But he could have.

In the last few months, meningitis—a disease passed around by the hardy neisseria meningitidis microbe—has quietly spread through the capital bringing into hospitals over 1,000 patients and claiming over 70 lives. The disease is not new but it has always been alarming since it takes as its victims usually young children up to the age of about five years with a peak attack rate in the six to 12 month age group. When Delhi's mini-epidemic began its toll, many parents stopped sending their children to school. "There is no question that there is an increase of five to seven times in the disease over previous years," said a practitioner. Worse, reports of meningitis breakouts from Calcutta, Chandigarh and Lucknow also began to trickle in.

However the worst, it seems, is over. Doctors everywhere are confident that the situation is completely under control. Said Dr R.N. Basu, director of the National Institute of Communicable Diseases (NICD): "We can't say how quickly the disease will die out, but there should be no more deaths." While the number of meningitis cases reported in February are almost twice those reported in January the number of deaths has significantly dropped by almost half.

That means, for a start, that people are more aware of what they should be doing. "The best way to reduce this epidemic," said Dr O.P. Ghai, head of the Paediatric Department at the All India Institute of Medical Sciences (AIIMS), "is by early diagnosis and prompt treatment." Which means once a child develops a severe headache or a sudden fever—the first symptoms of meningitis—parents should rush him to the doctor. At that time "every day counts" said an official of the Delhi Administration. Not all headaches indicate meningitis.

PRAMOD PUSHKARNA

A patient in hospital: fighting fear

But if it is meningitis, immediate treatment with antibiotics in most cases results in complete cure within a week or two. "There is no need to panic because not everyone is going to get it," said well-known paediatrician Dr S.C. Arya.

The disease is caused by a little microbe called neisseria meningitidis which has several strains. For years, the cocci may lie harmlessly in the nasal pharynx but once it gets into the bloodstream, it can localise itself around the brain and cause meningitis, that is inflammation of the coverings of the brain. Predominantly an urban phenomena, infections occur largely in closed communities. They are passed on from person to person by direct contact through infected droplets of respiratory tract secretions. Anyone can be a carrier of the microbe but may suffer from no symptoms of the disease himself. The early symptoms of meningococcal disease are fever, disorientation, nausea, headache, stiffness of the neck and a sudden rash. The cocci thrives mostly in cool, dry weather and is most active from the months of November to March.

Doctors are at a loss to explain the sudden onset of the meningitis epidemic this year. Of course natural phenomena rarely follows a prescribed pattern and medical men feel that this year the cycle has reached a peak. The epidemic has also, mysteriously enough, chosen a slightly unusual pattern: its victims are no longer coming from any specific, congested areas nor are their ages restricted to five years and under. NICD surveys show that at least 50 per cent patients are young adults over 14 years. NICD has worked out a strategy to counter the spread of the disease by:

- Careful surveillance, including compiling data on the disease, patients, localities affected;
- early diagnosis and treatment on suspicion;
- ensuring an adequate supply of drugs and continually testing the sensitivity of the organisms to the drugs.

It has also telexed all state health directorates—and is keeping medical associations posted with a regular bulletin. The Indian Academy of Paediatricians has on its part instituted a panel of experts to keep a close vigil. "Fortunately the microbe responds to most antibiotics," said Dr Ghai, "the best drug to use is penicillin by intra-muscular intra-venous injections, but not by mouth." He cautions against the use of Rifampicin for either treatment of patients or as a preventive measure for those in close contact. "It is useful for convalescent carriers only," he further warned.

Fortunately most patients become non-infective within two days of treatment and only three out of 1,000 people who come in contact with them are likely to contract the disease. Nevertheless doctors feel it is advisable for family members to receive chemoprophylaxis, a short-term treatment with drugs like sulfonamides. "There is no cause for alarm," said an official of the Directorate of Health Services in Delhi, "we can keep our fingers crossed that the epidemic dies down soon but people have to help us, people have to help themselves." In other words, awareness and prompt action are the best cure. There is no need for paranoid parents to barricade their children at home, nor, according to Dr Arya, "is there any need yet to vaccinate the populace at large". But human nature being what it is, panic often spreads faster than the disease.

CARDIAC SURGERY

Heartening Trend

PRESIDENT Giani Zail Singh made the trip. So did Sanjiva Reddy when he was president. Andhra Pradesh Chief Minister N.T.Rama Rao has been there as has film director Satyajit Ray and several hundred Indians a year.

The trip is, of course, by the ever increasing flow of cardiac patients who have visited the United States and other western destinations in search of cardiac surgery. Ironically, even as well-placed Indians have been making their pilgrimage to western hospitals, a reverse flow has begun of heart patients from the West Asian countries attracted to India by its rapid advances in sophisticated cardiac surgery.

This irony was noted at last month's international conference of cardiac surgeons in Bombay, organised to mark the silver jubilee of open-heart surgery in India. Cardiac surgery has moved ahead since K.N. Dastur performed the first open heart operation at the Nair Hospital in February 1961. Last year, some 8,000 heart operations were performed in about 40 Indian hospitals, including 800 coronary bypass procedures in which clogged arteries of the heart are bypassed using veins taken from the patient's leg or elsewhere. More important, the mortality rate in bypass operations in India is around 3 per cent as against 1.5 per cent in the US, the leading country in heart surgery. Since the first coronary bypass was performed in India by K.M. Cherian and T.J. Cherian at Madras' Southern Railway Hospital, no fewer than nine hospitals, four in Bombay, two in Madras and one each in Delhi, Chandigarh, Vellore and Trivandrum, now regularly undertake bypass procedures. And more specialised centres are in the process of being built.

Indeed, Harvard University's Dwight Harken, one of the delegates to the conference, who was among the pioneers of open-heart surgery in the 1940s, remarked that Indians spending vast sums on such surgery abroad would do better to have the operation done at home and donate the difference in cost to charity. Harken's reference was to the fact that while it costs up to Rs 5 lakh to have a coronary bypass performed in the US, a similar operation in India can cost Rs 25,000 to Rs 50,000 in a private hospital and only Rs 15,000 in a government facility.

Clearly, cardiac surgery is not cheap, and is well beyond the means of poor patients who are obliged to go to charity for the funds required. High cost is, in fact, one of the biggest factors inhibiting the expansion of heart surgery. The equipment needed to detect the location of a blockage in a coronary artery, the coronary anjor machine, costs about Rs 1 crore and is available in only about a dozen hospitals in the country. Monitors for blood pressure and heart performance cost Rs 5 lakh each, and a heart valve replacement comes for Rs 8,000. Disposable oxygenators cost Rs 3,000 each.

Some of the sophisticated equipment needed for cardiac surgery is simply not available. Indian surgeons, for the moment, have to do without high quality monitoring machines, respirators and well-equipped operating rooms.

A second inhibiting factor is the lack of experienced surgeons, doctors and assistants. Only about 12 of the country's 120-odd medical colleges offer specialisation in heart surgery. Nor do the available facilities give surgeons the sort of experience their American counterparts, for example, get.

In India, a few hospitals are responsible for most of the heart surgery performed. Of last year's 8,000 open-heart operations, which include such procedures as the replacement of valves and correcting physical defects, about 5,000 were performed in 13 centres and two Bombay hospitals alone accounted for 600 each.

Even so, the demand for coronary surgery far exceeds supply, and there are long queues to get into the operation theatre. In Bombay, patients have to wait for six months, but in other centres the wait may be even four years.

G.B. Parulkar, dean of Bombay's King Edward Memorial (KEM) Hospital says that "sheer necessity" dictates that facilities for heart surgery expand. Congenital heart disease occurs in two of every 1,000 births, and 10 lakh patients develop rheumatic heart diseases each year. These numbers dwarf the available facilities and it is estimated that last year's 8,000 open-heart operations were a mere 5 per cent of requirement.

Things are improving, but all too slowly. The Government proposed funding in the Seventh Five-Year Plan for six centres where coronary bypass operations will be performed after a study showed that a substantial saving in foreign exchange could be achieved with more facilities for this operation in India. Significantly, some 17 of the 40 coronary centres in India are run privately, and their number is likely to increase as large corporations, some working jointly with expatriate Indian doctors, venture into the medical field. But it promises to be a long haul, and the spread of cardiac surgery will hasten slowly

SANDEEP NAIK

King Momo: high spirits

PRAMOD PUSHKARNA

Mickey Mouse: no rat race

◆ "Let there be mirth", **King Momo** said, Bacchus, the god of wine, smiled from above, and true to carnival tradition, Goa prepared itself for three days of non-stop merrymaking. But the revellers of Panjim faced a highly indignant clergy this year. The church organ *Renewal* launched a tirade against the 'pagan' festival which it considers an affront to Christian values and morals and the vicar refused to allow the hedonist King Momo on to the holy church steps to announce his reign. But the immoral majority was just as determined to have its feni and drink it too. The carnival committee erected a rostrum a few feet from the church, organised a grand opening day parade and in general, insisted on its pound of flesh before the hard and fasting days of Lent.

◆ There's not a young girl in Bombay who wouldn't give her eye-teeth to be a famous model, but famous model **Shyamolie Verma** feels "modelling is literally just a means of livelihood". What's really after the 6-foot Lakme lady's heart is art. She paints and she's obviously good. Verma exhibited her own work—a series of tall, willowy nudes in various stages of sleep—last week in Bombay. Before nightfall, the very first day, 12 of the 19 sleeping beauties were sold out. With that kind of encouragement it just might mean that art's gain is going to be fashion's loss.

◆ The world's most famous mouse was in town last week. In a whirlwind 30-day, 30-country merry-go-round designed to infect the universe with Disneyland's 30th birthday festivities, **Mickey Mouse**—the world's most recognisable cartoon character—dropped into New Delhi. The mouse arrived on a jet plane, checked into a luxurious five-star hotel, rode an elephant and spread his message of goodwill. "Keep up a big smile," he said, "it makes your day." Even at the grand old age of 80, Mickey has lost none of his youthful sex appeal: there's not a grey hair on that happy head and that bewitching smile still has the power to send hundreds of six-year-olds swooning. As for the delighted photographers, there was no problem getting this VIP to say "cheese".

◆ "Every time we want a raise we have to go on strike," said an intern at the Lady Hardinge Medical College. This year too, students from several of the capital's medical institutions put down their stethoscopes, chucked away their thermometers and refused to heal the sick till their stipend was raised from a measly Rs 550 to a more respectable Rs 850 a month. But this year the agitating young doctors went a novel step further: they congregated at a construction site—and much to the amusement of the poor labourers—grabbed their shovels, picked up loads of bricks and decided it was time they called a spade a spade. "These labourers are better paid than we are," said one medical student exaggerating somewhat. Nevertheless the point was made, the stipend raised and within a few days, the medical structure was restored.

SIGN POSTS

Died: Ramu, the wolf boy, who was captured in Sultanpur district of Uttar Pradesh in 1976. Discovered in the company of wolves, Ramu had acquired many of their characteristics: he walked on all fours, his nails had grown into claws and he ate raw meat. Although he later found a human home in Prem Niwas, run by Mother Teresa's missionaries Ramu could not learn to speak. Last fortnight he developed cramps and did not respond to medical treatment.

UNEVEN GROWTH

"Buoyant Mood" (March 15) depicted the performance of the economy in the last six or seven years excellently. I agree that the economic state of the country is far better than it was before but we still have a long distance to cover in this direction. The achievements of the economy are yet to be extended to the poor and to the remote areas of the country. Virtually nothing has been done on the price front, and without controlling the prices it will be difficult for the ordinary man to get the benefits of progress.

Jabalpur NITESH KATHANE

■ The impressive performances of certain macro-economic variables should certainly put most of us into a buoyant mood. But the rather rosy picture of India's economic prospects that you go on to draw from these is scarcely warranted, at least until much more is known about the distributional impact of the new policies on various sectors.

You appear to set great store by the publicity of even higher growth rates offered by the recent moves towards liberalising the economy, and stress that this may result in "a more than proportionate increase in per capita incomes". This however is only cause for jubilation if there exists a direct connection between higher growth and lower poverty, or even between increases in per capita incomes and decreases in the poverty ratio. This link is yet to be demonstrated. Indeed Raj Krishna has recently argued that there is no significant relation between the latter two, and others have gone further to suggest that higher growth rates with an unchanged institutional structure may even worsen the plight of the poor.

The crucial question for the Indian economy, against which the much heralded "take-off" has to be assessed, is not whether sustained high growth rates are possible, but whether, as you yourself well analysed in a previous issue, such growth can make any lasting impact on the 'other half', sunk in the continuing mire of poverty and malnutrition. In the absence of such a wider perspective the buoyant bubble of confidence may risk being pricked rather soon.

Trivandrum GOPALAKRISHNA KUMAR

ACCOUNTABLE LAPSES

I have yet to see the old tradition of a minister resigning as a rule in practice because of a major catastrophe ("Defining Accountability", February 28). Two or three cases don't make a tradition. After the Chinese debacle who should have resigned? There is no morality left in public life, and those who enter it are not immoral but amoral. It is refreshing to know that a man at the top or near the top has resigned or is sacked now and then because he is accountable for a major catastrophe in his area of responsibility even though cynically such accountability is considered only instantaneous and academic and there is no permanent stigma.

Pune P.G. JOSHI

■ To sack a top civil servant for outside office activities of his assistant, over which the former has no control, is not only improper but unethical and may also be utterly demoralising for all the public servants. The tendency to find scapegoats cannot allow any system to function smoothly and efficiently. Political leaders should also show their regard for public accountability more by their deeds rather than words.

New Delhi P. GOPAL

LIMITED LIABILITY

Referring to the article "Damage Discount" (February 28) I disagree with your contention that the big question is whether Kinetic Engineering was involved in the fraud or whether it was the bank officials who were really the culprits. The big question really is what your article rightly points out in the last paragraph "if the basic trust which underlies these deals is broken, where do we go?" Based on the newspaper reports one comes to the conclusion that it is the bank officials who are actually involved and that they have tried to damage the name of the Firodias in an attempt to save their own skin. It is surprising that your correspondent thinks that Kinetic was involved in the fraud.

Chandigarh S.K.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

■ Banking is a business that is carried out on faith. The outsider has no way of knowing that the branch manager's signature is not valid if it is not countersigned by his superior or a certain branch is not authorised to transact certain business. Thus the general manager's excuse is invalid.

A lot of people in the banking circles have expressed shock and surprise at the statement. But if this contention is true then the Central Bank should hang a plaque at its entrances saying "our branch manager has very limited authority. His signature is not adequate for any transactions. Any business you transact with our branch is at your own risk."

Pune A.S. JOSHI

STAR TURN

Reading about "MGR : Return of the Hero" (February 28) one cannot help feeling that professional actors, joining hands with professional politicians who are themselves no mean actors, can only create a great tragic play. God save us from the shock!

Ahmedabad J.V.V. MURTHY

HOUSING PROBLEMS

Your special feature "Opposition Leaders: Life After Defeat" (February 28) made interesting reading. The Lok Sabha Housing Committee rightly asked the defeated MP's to vacate their houses and all of them should have complied with it as meanwhile law-making and now law-abiding citizens. Ram Jethmalani's reported remark "the heavens will not fall if the new MP is asked to wait for a few months. I waited for a year when I was defeated in '77", showed the inefficiency of the Janata government to enforce rules and regulations. He should also know that two wrongs do not make one right. If the law-makers themselves become law-breakers their image will suffer immensely in the eyes of the public.

Madras B.K. MALHOTRA

■ It makes amusing reading that many political stalwarts have to vacate their houses which they occupied as MP's. I'm glad that they will now come to the mainstream and know what the life of a common man could be.

Ahmedabad SOORYAKANT PARIKH

■ Your coverage on the opposition stalwarts' present problem to find themselves robbed of a roof from over their heads tells us how the Housing Committee without considering the fact that rents and property values in the capital have skyrocketed, gave them only a few weeks to vacate their houses in order to make room for new MP's. These leaders who were swept aside by the mighty Congress(I) wave in the recent Lok Sabha elections have not retired from politics. They need to stay in the capital so that they can be actively involved. The committee should provide them with temporary accommodation until they can find themselves an alternative.

Eluru, Andhra Pradesh C. SURYAM

ALL IN THE FAMILY

This is with reference to your article "Dirty Linen" (February 28). The sexual humiliation of the female students is deplorable. The criminal attitude of the principal is condemnable, instead of taking stern action against the defaulters he threatens the female students with dire consequences in case they raise their voice against the outrage on their modesty. The Stephanians called it their "family affair" instead of openly boycotting those who sullied the image of this prestigious institution.

Jaipur V. BALA KRISHNAN

■ Being an ex-Stephanian I read "Dirty Linen" before anything else and found that it gave a true picture of the minor incident at the college. It had been bloated out of proportion by the press. St Stephen's College has always roused envy and this time the adverse publicity was also given out of envy.

Ajmer HARKIRAT SINGH

■ Your report on St Stephen's was a well balanced one. It was heartening to read about the unity and loyalty shown by the students of the college and even the women students, who were the targets of this despicable affair, accepted it as a "domestic affair". What team spirit!

Calcutta SUSHOVAN BASU

BUREAUCRAT'S BUMBLE

Apropos of "Loan Mela" (February 28) I do not agree with Mr P.K. Kaul that he has done nothing wrong. Heaven help the nation if all bureaucrats start emulating his example.

Jabalpur R. SHEKHAR

NOT RELATED

In the cover story "Assembly Elections: An Unequal Battle" (February 28) it says "Gujarat: Tickets have been given to the wives of Jadeja, the health minister, Harihar Khamboljia, minister of state for finance, and Jaswant Chauhan, south Gujarat Congress leader, all of whom were denied tickets." This statement is totally baseless and untrue since Harshadba R. Jadeja is neither Manoharsinh Jadeja's spouse, family member nor relative.

Gandhinagar, Gujarat CHANDRASINHJI JHALA
personal secretary to the minister of health, civil supplies and sports

The error is regretted —*Editor*

STANDING BY STEREO

Your article "The Gold Rush" (February 28) was very biased. Appachen and I chose Stereovision over all other available 3-D systems to film *Kuttichathen (Chotta Chetan)*, now India's biggest box-office hit. Arrivision cannot in any way be considered the "new superstar". The first Arrivision film has been delayed, perhaps because the producer is reshooting scenes in an attempt to equal the astounding 3-D effects of our film.

Madras THOMAS EASAW
executive producer of Kuttichathen

ACCOUNTING FOR ACCOUNTS

This refers to your Trade Winds item "Adman Cometh" (January 31), concerning our agency. The accounts of Plantation Corporation, Oil Palm India Ltd. and Coconut Development Corporation were acquired by us when executives who were servicing them in other advertising agencies joined us and the clients wanted the same executives to service them. We are not handling any work of Kerala Agro Industries Corporation, and we handle only a very insignificant part of the advertising by the Milk Marketing Federation. In the case of the Kerala State Warehousing Corporation, we and Aries of Cochin do their work equally. Also, it is important to point out that we get more than half our billing from private clients—Rs 3.63 lakh as against Rs 2.58 lakh from government clients.

Cochin T. VINAY KUMAR
Manager Administration, Guide Advertising & Marketing Associates

Two spokesmen of rival advertising agencies and the managing director of a state government undertaking told our correspondent that they were pressurised to give some business to Guide Advertising, in which the daughter-in-law of the state agriculture minister is a partner. —*Editor*

STP LIMITED. That's the new name for Shalimar Tar Products (1935) Limited. Quite simply, because the company with an unmatched 50-year record in waterproofing and anti-corrosion protection has come to mean so much more than tar.

Today our leadership extends to bituminous protection systems as well and our expertise in handling civil construction projects is recognised throughout the country.

Our new name symbolises the spirit of the company that is constantly seeking innovative changes. In new product development, sophisticated protection systems, expert consultancy services and new business opportunities. Two major new diversification projects will soon take us into totally new and challenging fields.

So though we expect our record will get even longer, you'll still know us by the shortest name!

Tomorrow begins here

Computers from BPL. For better information processing.

They are being used increasingly, even for unconventional applications...

In the engineering entrance exams for instance. Where the computer evaluates answer papers, prints out results and maintains academic records.

Like the Computer, BPL's other Office Automation Products also go a long way in increasing efficiency and productivity: Small Business Systems, Word Processors, Automatic Plain Paper Copiers, Electronic Scanners and Private Automatic Exchanges.

There are other vital areas that BPL serves too. With Computers, Communications, Components, Instrumentation (Industrial, Medical & Measurement) and Consumer Electronics.

Behind this diverse product range is a vast corpus of knowledge that BPL has acquired over the last two decades. This knowledge has been integrated through technical tie-ups with international brand leaders like Texmate, USA; Sanyo, Japan and IMS, USA. And through an infrastructure that's unique only to BPL: Seven integrated factories, three R & D groups, in-house manufacture of critical components, a nationwide marketing network and an independent company exclusively employed for servicing. The result? Products that are better suited for local conditions. And user needs.

Yes. Satisfying user needs is, ultimately, the only objective BPL has.

BPL-INDIA

In pursuit of perfection

Messages in the Mandate

THERE are many ways of winning power in the states and the recent assembly elections have been a verdict on some of them no less than they have determined which party will rule which state. Politicians would do well to heed the message of the electorate.

The elections have at last shown quite conclusively that toppling popularly elected governments or tampering with them to win power is definitely out. Each of the three opposition governments that were thrown up in last fortnight's electoral battle were the object of concerted Congress(I) conspiracies that either got rid of the governments (in Sikkim and, temporarily, Andhra Pradesh) or put them under unacceptable pressure (in Karnataka). The humiliation of the Congress(I) in these states is entirely of its own making. Had the Centre last year permitted N.T.Rama Rao's Telugu Desam Government to lose steam on its own, and permitted the Central Bureau of Investigation to look into charges of alleged corruption against Nar Bahadur Bhandari, the story of the elections might well have been different.

The results have also shown that only parties that offer a realistic option or are led by men of charismatic appeal can hope to capture the popular imagination. The Congress(I) has swept the northern states because it is the only party which offers any credibility in these states, and enough of the electorate is unwilling to experiment with unstable opposition coalitions which are the only alternative. True, the Dalit Mazdoor Kisan Party has improved its position in Uttar Pradesh and the opposition parties—united for a change—made a big dent in Rajasthan, but this was due as much to the ruling party's own problems as the appeal of the opposition parties.

Finally, the elections strongly suggest that good performance is good politics. There is little doubt that the return to power of Ramakrishna Hegde's Janata Party with a vastly increased majority in Karnataka has to do with Hegde's performance as chief minister, a performance that Rajiv sought very unsuccessfully to belittle.

Hegde's success in overcoming Rajiv's challenge is doubly important. Not only does it show that good performance and a good image can carry the day, it also shows that the electorate is discriminating in its judgement. In both Karnataka and Andhra Pradesh, Rajiv's abrasive comments about the state governments were dismissed for the election rhetoric that they were, and the voter was obviously influenced by his own experience of the state administrations.

The message from the electorate is clear, that the fight for votes, the battle to form governments, must be played by the rules, that the competition for votes will have to be a competition of good deeds and policies, not the unrestrained exercise either of brute power or unconstitutional cunning. Amongst other things, this means a second look at the validity of the G.M. Shah Government in J & K, a government that was brought about by political manipulation and failed to carry conviction in last December's Lok Sabha election. It also means not discriminating against states that are ruled by opposition governments or denying them their dues in resources. And, such opposition regimes as there are need to remember that their continuation in office depends just as much on providing good government. A repeat of the administrative decay in Andhra Pradesh which characterised the drift of the previous Telugu Desam Government would be a sure invitation to disaster.

But, it needs to be emphasised, good government and good performance are not the same as wasteful populist measures. Midday meals and free saris, loan melas or concessions on reservations may work for a while, but they do so at very great cost. Governments that rely on buying the support of their electorate rather than winning it are merely being shortsighted: populist concessions tend to bankrupt governments and pampering certain sections of society at the cost of others tends to become self-defeating.

What is needed is something different. It is structural change that will speed up prosperity and there are no shortcuts to that. It is not the distribution of largesse but the creation of better administration, of justice for the public at the hands of bureaucrats, of more jobs and opportunities, better schools, more homes and law and order that win the loyalty of the average voter in the long run.

The election itself is a pointer to that, a signal that the electorate at large was aware that it needed to put brakes on the power that it handed the Congress(I) so liberally in the December election. A repeat of that in the assembly elections would have been an invitation to complacency if not at the very top then most certainly in the rank and file of the Congress(I). Each of the previous two Lok Sabha elections, in 1977 and 1980, was followed by a recession of the popular vote in the assembly polls that followed immediately afterwards. The same thing has happened this time round, only more so and enough to give the Congress(I) pause for thought. If the end result is to introduce caution in the governance of the states and an obligation to play by the rules, if the elections are followed by an awareness in all political parties not to take the voter for granted any more but obey his mandate for clean, effective politics, then it will have been a historic election.

We are in a constant, worldwide race against time...

...but we'd love to pause a while and tell you how Skypak could change your world!

Imagine you're sitting in your office. You have a document in front of you. And you want it delivered to some other part of the world.

Pick up your telephone and dial the local Skypak number.

The moment you hear a friendly "hello" a chain is set in motion. A race begins. A race against time. You have the entire worldwide family of TNT SKYPAK at your service instantly! With 200 offices around the globe and 19 of them in India. And the services of 26,000 people in 48 countries.

But that's statistics. All you're concerned with is your parcel, your destination and your deadline. Well, that's what we are concerned with as well.

Our reputation for speed and efficiency on every job is internationally trusted for 2 decades! And every time you have a package to send, we have that reputation to keep. With pleasure.

SKYPAK

A lot of people seem to think of Dodsal as just a pipeline construction company. In fact, a major part of Dodsal's activities involve plant construction. Dodsal takes on entire projects single handed: Civils. Mechanicals. Electricals. Instrumentation. Everything up to commissioning and start up. To date, over 75 projects worldwide. **Across South East Asia, Africa, India and the Middle East, this Indian company is sketching a new skyline for the earth.**

INDUSTRIAL AND STEEL PLANTS BY DODSAL

The 4,000,000 MT iron-ore pelletisation plant, Bahrain: Electricals. And instrumentation. 25,300 MT of mechanical equipment erection: tanks, bins, conveyors and refractory insulation. As well as fabrication and erection of tanks and bins.

Dodsal deployed over 650 men and 50 pieces of heavy construction equipment to meet the tight project schedule.

DODSAL'S PLANT DIVISION: THE TRACK RECORD

In just 25 years, Dodsal has emerged as a major international force in plant construction.

Over 75 projects worldwide: Refineries. Petrochemical and fertilizer complexes. Nuclear and thermal power stations. Oil and gas field facilities. And desalination plants.

Every single project completed on or ahead of schedule.

Dodsal has a mobile task force of 500 engineers and 3,500 technicians. And equipment bases in Singapore, Baroda and Muscat.

HEAVY LIFTS

Dodsal is one of the few companies in India to specialise in heavy equipment lifts. Dodsal's crane (Manitowac 4600: Series 3 with Ringer Series 4) has a lifting capacity of 700 MT and a boom of 80 metres.

OTHER DIVISIONS:

MILKY WAY

■ The milk of human kindness has been written about so often, starting with that lady in Scotland and her singular lack of any, that the expression has since been watered down considerably—and not just by the *doodhwala*. The unkindest cut of all now comes from Bhopal.

Last month a horde of *doodhwalas* from a government dairy outside town gathered three quintals of milk together in about a hundred cans and marched on the municipality. When they got there, they proceeded to splash the milk all around and on top of any municipal employee who happened to be passing by. The result of their single minded effort was that the municipality soon started to look like a land of milk and honey though the curses that emanated from its corridors were far from what could be called catholic.

However, it appeared that this somewhat unusual protest had in fact managed to put across its point. The milkmen were apparently peeved over the fact that the dairy was located miles outside town with few facilities by way of transport and other necessaries. It is to be hoped that after the drenching the authorities will now turn a somewhat kindlier eye to their problems.

STANDING CHARGES

■ The chair and the question of who sits on it rule Indian life. So it is not surprising that a tiny force one storm is brewing in Calcutta's Writers Building over chairs—about 130 of them to be precise.

The problem has to do with 130 employees who were recently promoted as upper division clerks on the basis of recommendations by the administrative reforms committee. But the committee had no idea that the furniture situation was so desperate: for the last few weeks now, the 'promotees' have been clocking in and signing the attendance register and then just hanging around because there are no chairs for them.

This has the various departmental heads in a tizzy. They fear that their

charges are enjoying all the benefits of higher pay for little or no work done and with a valid reason. The administration is reluctant to force the issue because anything that has to do with workers' obligations in a state as conscious of workers' rights as West Bengal is subject to much debate, and no one wants to hold the buck. So the 130 come, sign and go, their heads held high in pride.

BEERING THE BURDEN

■ Elections are a fun time for everybody concerned except for tipplers. The Government usually declares dry days and so it was a rich young man in Bombay found himself sans beer on a extremely hot, humid and thirsty afternoon listening to the waiter of a restaurant telling him apologetically that "*Saab, gormint ka order hai*". The waiter added helpfully

that only foreign passport holders could get drinks. The rich young man dashed off immediately and came back with another rich young man with a Nigerian passport. The grinning waiter promptly served them half a dozen bottles of beer. All around them were people with their tongues hanging out so the host graciously ordered beer for everybody present. As the evening wore on and night crept up the restaurant was one rowdy picnic with empty bottles stacked up on the tables.

When it came to the bill, though, the young man's magnanimity vanished. The perfect host who had been telling stories of how he always bought a round of drinks for everybody present in a pub in England now turned into the prudent businessman who asked the waiter to get separate bills. After all, it was no small beer.

FILMI FINALE

■ The West abounds with agony aunties who are ever ready to give copious advice in their regular columns in newspapers and suchlike. In India, where most press aunties are more interested in the best way to pluck an eyebrow, such consideration is sadly lacking. However, the films more than make up for this lacuna.

A Baroda couple had filed for divorce and the case was in court. The judge asked them to see a film together: *Pyar Jhukta Nahin*. The film is about a poverty-stricken photographer (Mithun Chakraborty) who marries a millionaire's daughter (Padmini Kolhapure). Mithun and Padmini's idyllic existence—when the Bombay film industry makes something idyllic it stays idyllic—is

shattered by Padmini's parents. Finally, everything works out well and the two walk away into the sunset.

Mysteriously, this love story had the couple sobbing in their seats. Afterwards, they went to the judge and told him that they saw his point of view and wanted the case withdrawn. He patted them on the head, and they walked away into the sunset.

"Ma, why does papa come home so late every night? Why does he beat you?"

It may be too late for his papa before he realises why!

An innocent child is bewildered at the action of his drunken father, as alcohol takes its toll of peace, prosperity and happiness of the family.

The signs are unmistakable :

* Quarrels that invariably end up in beatings.
* Less and less time for the family and children.
* Children start to feel neglected.
* Their actions, usually unsocial, are aimed at attracting attention.
* Lesser and lesser food for the family as alcohol demands more and more money.

Don't let this happen to you and your family.

All you need to give up alcohol is the intention....and a bit of will power.

It's liquor ...
or your family life.

GANAPATI EXPORTS

WE'RE RECOGNISED FOR OUR EXPERIENCE IN TRADE AROUND THE WORLD

Mr. O.P. Agarwal Managing Director Ganapati Exports Ltd. receives due recognition from the President of India Giani Zail Singh.

IN INDIA WE'RE RECOGNISED BY THE GOVERNMENT

The Government of India has given credit where it's due.

By recognising Ganapati Exports for its exports of 100% small-scale industry products.

For its 100% export efforts in the area of select products.

As a small-scale manufacturer export house that exports 100% of what it manufactures.

Ganapati Exports today holds the 100% export performance certificate issued by the Government.

From 1977, when Ganapati Exports was established, we have been taking a variety of Indian products to buyers around the world. We've been constantly exploring new markets and co-ordinating Indian exports.

Since our inception our export billing has increased nearly eighty-fold. Making us the largest and fastest growing export house of its kind in this country.

And the Government recognises us for it.

KARNATAKA

A Historic Comeback

RAMAKRISHNA Hegde was prepared for the worst as he and a handful of his ministers settled down around the oblong teakwood table in the sunny cabinet hall in Vidhana Soudha last week. Outside it was a breezy spring morning and Bangalore was living up to its name of the garden city of India with flowers in full bloom. It was the day the results of the assembly elections were to be announced and Hegde had deliberately called the Cabinet meeting so that if the Janata Party lost he could wind up office immediately and bid goodbye to his officers.

But an hour after the meeting had begun his private secretary handed him a white slip of paper that showed that after the second round of counting of votes was over, the Janata Party was leading in as many as 141 out of the 224 constituencies in the state. His cabinet ministers whooped with joy but Hegde was unruffled and even looked a trifle disappointed. As he said later: "Nobody is going to believe this but my immediate feeling was that I was going to be deprived of the short holiday that I had promised myself after the gruelling campaign."

As the results flowed in and a relaxed Hegde and his jubilant colleagues adjourned to the box-shaped chief minister's office called Krishna, which Gundu Rao had designed when he was in power, it became obvious that instead of Hegde it would be the Congress(I) partymen who would have to take a long holiday. By evening while Hegde watched the none too clear Doordarshan telecast of the election results, a picture of him taken 10 years ago flashed on the screen with the announcement that the Janata Party had won an absolute majority in Karnataka capturing 139 of the 224 seats. "I look like a Chambal dacoit in that picture," was all Hegde had to say.

If anyone saw Hegde in that role, it could only have been the Congress(I) which was robbed of victory by the chief minister and his Janata marauders. Nothing could stop the Hegde juggernaut. The dusty plains of north Karnataka which the Congress(I) had for long regarded as invincible yielded without a murmur. The rocky Kolar and Raichur could not withstand his onslaught and the Muslim districts of Bijapur and Bidar were captured. And as Hegde and his raiders marched down south, they overran the hilly Chickmagalur and Hassan districts. The palace city of Mysore was ransacked. The Janata fort in Bangalore remained undamaged except for two turrets. Only coastal south Kanara held Hegde at bay. Otherwise he was the undisputed king of Karnataka. The Congress(I), as former chief minister Gundu Rao put it, had been "thrown into the dustbin by the people of Karnataka."

For the battered national opposition parties, after their dismal defeat in the recent Lok Sabha elections, the Janata victory in Karnataka came like a breath of fresh air. The Rajiv tornado which had swept the country only two months ago had at last been contained to the north of the Vindhyas. It had showed signs of waning in Maharashtra where Sharad Pawar's Progressive Democratic Front had given the Congress(I) a run for its money initially before yielding. As expected Andhra Pradesh which had remained unaffected by the Rajiv wave earlier continued to repose its faith in N.T. Rama Rao. But the unexpected victory in Karnataka was a morale booster for the Opposition. In Bangalore as vast crowds gathered to cheer Hegde in Basavangudi a day after the election results, Janata Party leader Madhu Dandavate turned somewhat poetic and remarked, "In 1979, our garden was destroyed. But in 1985, in the hands of Ramakrishna Hegde our garden has bloomed again. Spring has come at last for the Opposition."

Democracy too seems to have got a new lease of life, with the electorate displaying a rare maturity. Only two mont[illegible] ago when they felt that the nation's un[illegible] was at stake they had voted solidly [illegible] Rajiv giving the Congress(I) 24 of the [illegible] Lok Sabha seats in the state. In an ana[illegible]tical editorial the *Deccan Herald*, [illegible] state's largest circulated English daily [illegible] commented: "The voters have demon[illegible]strated their ability to distinguish inte[illegible]gently between the issues in a Lok Sabha [illegible] election and assembly poll and have [illegible]reby displayed a high degree of polit[illegible] acumen." The people by and large [illegible] Hegde was good for Karnataka. Said [illegible]

aka. Said R

...ani, a college teacher: "Thank God our electorate is intelligent. We now have a chief minister that we are proud of."

Within two months Hegde had done the impossible. Only in December the chill weather turned bleaker for him when his party's strength was only 94 and could muster a slender majority of five with the help of the BJP and the two communist parties. When he called for fresh polls nobody, not even his own partymen, gave him an outside chance of winning. As R.G.R. Sindhia, a former minister who stood for the Parliamentary elections and was humiliatingly, put it: "We thought we wouldn't even be able to make it to the Opposition benches." Only Hegde had not given up hope. Said Hegde: "I knew that it was a colossal, almost impossible task. But I had some kind of feeling that the voting pattern would be different this time." Relying on what he called a gut-level feeling Hegde launched a virtual one-man crusade. He toured every constituency in his Jaya Vahini, a van similar to Rama Rao's Chaitanya Ratham, travelling more than 5,000 kilometres in a span of two supercharged weeks and addressed an average of 25 meetings everyday despite an ailing throat.

His efforts were not in vain for the party increased its strength from 94 to a whopping 139, but along with the six seats its allies, the two communist parties, had won it fell four short of the two-thirds majority in the Assembly. In the process it demolished the Congress(I) in the state whose tally dropped to 66 from 90. The BJP which had earlier failed to come to an electoral understanding with the Janata Party was virtually wiped out in the state retaining only two of the 18 seats they held previously. Said state BJP president B.B. Shivappa, who resigned after his party's disastrous showing, "Last time it was a Rajiv Gandhi wave. Now there is a Hegde wave. This is a vote for Hegde not for the Janata Party."

But Hegde did not rely solely on his 'gut-level' feelings to pull off this astonishing win. He secretly hired a private poll re-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

search group and asked them to conduct regular opinion polls to assist his campaign strategy. When the pollsters first reported to him before he set out on his election campaign in mid-February, the news they had was depressing. The Congress(I) was in a position to win 190 of the 224 seats and Hegde needed a huge 7.5 per cent swing in his favour if he had to make a comeback. Economist and one-time Janata Party poll strategist L.C. Jain, who assisted Hegde in his campaign, said: "It was a bone-chilling prospect." But Hegde himself was unfazed. He merely looked at the figure and said: "So this is the size of the challenge." The pollsters advised Hegde to carry out a subdued campaign that was designed to evoke the sympathy of the voters.

Hegde did just that and, quite unlike his Lok Sabha campaign, there was hardly any fire in his speeches. If anything, his meetings were designed to leave people with a warm afterglow—the kind they get from sitting around dying embers of coal. He never cajoled the people or carried out a vituperative attack against Rajiv Gandhi. On the other hand, he praised them for voting for a strong Centre. He made performance his sole campaign issue and cleverly convinced them that by resigning before his term was over he was a moral and sincere person who believed in value-based politics. He told the voters, everywhere he went, that they should vote for him only if they approved of his government. Said he: "My government did really nothing wrong in the past two years. So I was confident that my arguments were convincing." Initially, however, his approach did not appear to work and Hegde observed dispiritedly after the first leg of his campaign that the people "were cool and mysterious about their feelings".

Ironically, what gave Hegde the real boost was Rajiv's aggressive campaign in the state. Rajiv walked into Hegde's trap by challenging the claims of his performance. He derided Hegde's achievements and pointed out that the state had actually slipped down the development ladder under the Janata Government. In retrospect, Rajiv's biggest mistake was telling the people that if they wanted speedier progress, the same party should rule both at the Centre and the state. State intelligence reports revealed that in the process Rajiv had not only hurt the pride of the Kannadiga by telling him that the state was going downhill but put forward what seemed an unreasonable argument to them by asking for a same party rule. Hegde countered Rajiv's arguments

INTERVIEW

"I was prepared for the worst"

SUCCESS hardly seems to go to Ramakrishna Hegde's head. The bearded 59-year-old Karnataka chief minister was swept to power again by a wave akin to Rajiv Gandhi's in the Lok Sabha elections. But even in his moment of triumph Hegde remained as cool as ever. Just before he was formally elected leader of the Janata Party last week Hegde spoke for an hour to Correspondent RAJ CHENGAPPA *in Bangalore. And when he found that this time was insufficient he asked Chengappa to join him for a brisk morning walk to complete the interview. Excerpts:*

Q. *How does it feel to sweep back to power like this?*

A. Many people might think this funny but I am not elated. Just satisfied by the results. I have gone through vicissitudes in political life and am now used to taking things in the same spirit whether they are in my favour or not. For me power has never been an ego trip. I advised my party workers not to celebrate our victory until we had fulfilled our electoral promises. There is so much of poverty and unemployment that I cannot be at ease celebrating a small victory of ours when compared to Himalayan problems like these.

Q. *Did you expect to win and that too by such a big margin?*

A. A gut-level feeling made me confident that the people would not let me down. I was also prepared for the worst because I never take things for granted. Frankly, I expected to win only about 120 seats at the most.

Q. *While campaigning you remarked that the people's mood was mysterious. When did their attitude change?*

A. I think people were mysterious for two reasons. One was because initially the atmosphere had not warmed up. There was no election fever as yet. Secondly, people had heard me during the Lok Sabha elections and did not feel the need to express their feelings. That's what made them cool towards me.

Q. *This time your campaign was more systematic than the one for the Lok Sabha and you even carried out an opinion poll. Why?*

A. Because this poll was not just a battle, it was a war. It was not just a matter of my government winning the very future of my party depended the outcome of this election. With win here the Janata Party in particu and the Opposition in general have g shot in the arm.

Q. *What were the factors wh helped you win this election w such a large majority especially af the party's poor showing in the L Sabha elections?*

A. Rajiv Gandhi made my task eas by the kind of issues he put forth bef the electorate. Number one was that th same party should rule in the Centre a state for faster progress. Well, it did even take me a couple of minutes t demolish this because the glorio example of the past 15 years when th same party ruled both at the Centre an at the state was before the people. The knew what Gundu Rao and his dram troupe had done. The other wrong mov Rajiv made was that when I said th election was going to be a referendu for my performance in the past tw years, he thought the best way t counter it was to tell the people that m performance was zero. Well, he w caught because how can anybody b that statement in Karnataka. Take an single village here and you will find th in the past two years either a road ha been constructed or a high scho started or even a borewell sunk fo drinking water. What people had expe rienced was contrary to what Rajiv w saying. Once it was driven home in the minds that the prime minister was n speaking the truth, whatever I sa gained automatic credibility.

Q. *Didn't an undercurrent o sympathy which you exploited by go subdued campaign help you to w also?*

A. I don't think the sympathy factor was strong either for me or for Rajiv i this election. I didn't adopt a 'poor m approach because I knew that would b counter-productive. I didn't seek the pity in my speeches. If any sympa came it was because of my sincerity stuck to the same speech throughou not even changing a comma so much a that I was tired of it myself. I explained the people why I had to resign and a campaign was easy this time becau

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the only issue I put before the people was my performance. I spoke to the people in the simplest possible language and appealed to their hearts. They listened with rapt attention and every word went down. It was simple for me, very simple, to win their hearts.

Q. Don't you think that projecting you as the undisputed leader for your party helped?

A. I think that had a considerable influence too. Actually I have been studying the impact of a strong leader on the electorate with a certain degree of acuteness in the past seven years. Earlier, I never believed that symbolism plays such an important role in politics. When Nehru was there I thought it was just natural that people adored him. But he really symbolised the aspirations and dreams of independent India. If there was any room for suspicion Mrs Gandhi removed that as she systematically built up the personality cult. Hindus believe in symbolism and unlike in other faiths God has various forms, shapes and characteristics. But now thanks to Mrs Gandhi even in politics symbolism has come to stay. People now want a strong person who radiates confidence and charisma to lead them.

Q. You had once said that you too had become a symbol of the Janata Party in Karnataka. Isn't that dangerous because there is really no second line of leadership to take over from you?

A. I agree. Before my term is over, if it is possible, I would like somebody to take over from me so that in the next election that man has sufficient confidence and experience.

Q. Many political observers feel that you have the potential to be the next prime minister of the country?

A. I have no such illusions.

Q. You once remarked that all politicians should retire by the age of 65, will you?

A. Yes. There must be a time when we must say farewell. We must go when the going is good and before we become a strain on the people. A man has plenty of things to do apart from politics.

Q. How different will your second term be from your crisis-ridden first spell?

A. It is going to be a severe test of our ability to fulfil our promises. Otherwise people will say what is the point of giving us such a majority. There are no excuses. My second term will be qualitatively different. Administratively, I will not allow MLA's to bring pressure to transfer government officers as before. Similarly, with regard to corruption and efficiency we are going to be very very tough on government officials. We are going to speed up the investigation of corruption charges so that immediate action can be taken. The bureaucracy is against this government because they had their heyday during Gundu Rao's rule and there was hardly anybody to check them. Particularly the police who are not feeling constrained under my tenure. Otherwise earlier at the slightest excuse they opened fire.

Q. You have made the police trigger-happy again by your statement that violence will be met with bullets?

A. Hooliganism will not be tolerated. People have a fundamental right to agitate for their demands. But nobody has the fundamental right to damage public and private property or molest women. So far as violence is concerned, we are going to be very very tough.

Q. You have borrowed a leaf or two from MGR and NTR by announcing such populist measures as providing rice at Rs 2 a kg and finding jobs for at least one person in each family?

A. There is nothing wrong if I take something good from them and try and emulate that. It is a misnomer to call selling rice at Rs 2 a populist scheme. The state Government is not in a position to control prices because inflation is the result of the wrong policies of the Central Government. But if we want people to have two square meals a day, we must at least give them the main items at a subsidised rate. And providing jobs is essential. It is a pity we have not included the right to employment as a fundamental right. We cannot escape the responsibility of providing jobs to people. We owe at least this much to the younger generation who have stood by the party and have been loyal to us in these two years.

Q. Do you think the line adopted by Rajiv Gandhi in this election campaign that the same party must rule in the Centre and the state for faster progress would affect relations between him and you?

A. No, I don't think he will continue with this kind of attitude in his dealings. Maybe he wanted to impress the people during his campaign, but once elections are over all of us should become conscious of the fact that except in party matters, we should not be partisan. The ultimate objective is the same, as we are serving the same people. Rajiv Gandhi is the prime minister to serve the people of the country. I am chief minister to serve the people of my state. Where is the contradiction?

BHAWAN SINGH

Hegde: "This was not a battle but a war"

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

quietly and told the electorate of the work he had done in the past two years and contrasted it with the Congress(I) that had ruled uninterrupted for 14 years. Said Jain: "The more aggressive Rajiv got, the more reasonable Hegde became." A spot poll showed that as much as 68 per cent of the people interviewed did not believe what Rajiv was saying. With that the Congress(I)'s campaign went into a tail-spin while Hegde's moved ahead with much speed, his credibility soaring.

Boosting Hegde's campaign rocket was the leadership issue in the state. Long before the campaign was launched the Janata Party had decided to project Hegde as undisputed leader. In sharp contrast, the Congress(I) which has surfeit of what one partyman described as "accumulated leadership" decided not to project anyone from the state but instead relied on Rajiv's charisma to pull them through. This worked as a double-edged sword.

While Rajiv's charisma was not clicking as it did in the Lok Sabha election the uncertainty over leadership resulted in plenty of groupism within the party. The two main contestants were Veerappa Moily, leader of the Opposition, and K.H. Patil, state Congress(I) chief, and not only did they influence the selection of candidates by getting their own men tickets but even while campaigning were busy cutting into each other's supporters.

Hegde kept rubbing this point in wherever he went pointing out that Rajiv would not come back as chief minister but would appoint one of his nominees. The Janata Party released a catchy advertisement which said: "Karnataka must be governed from Karnataka. Not from Delhi." A leadership survey done by the party showed that 45 per cent of those interviewed believed Hegde was the best leader for the state but only 5 per cent had faith in Moily while Patil had a lower three per cent.

As the Congress(I)'s campaign faltered Hegde's gained momentum rapidly. Just four days before the election, another opinion poll was done and it showed that there had been a remarkable swing of 5 per cent in the Janata Party's favour within a week. Encouragingly 54 per cent of the men were for the Janata but still 60 per cent of the women believed in the Congress(I). Fortunately for Hegde, the poll showed that 30 per cent of them were still undecided and the party decided to go all out to woo them. Women party workers were pressed in service in all districts to explain to the women the schemes the Janata had launched for their benefit like pension for widows and grants of money for pregnant women. The reaction was electric. J.H. Patel, Janata Party secretary-general, said: "Women who never listened to us were now attending our meetings and listening with rapt attention."

But the Janata Party still needed a 2.5 per cent swing in the vote to win. To do it they needed the support of the weaker sections which never really had faith in the party. The Janata Party had not been able to shed its image of being controlled by the two dominant communities the Vokkaligas and the Lingayats and in fact had allocated more than 60 per cent of the seats being contested to these communities. While the move would have helped it retain its fund of support in these two communities it still needed votes from the backward classes, minorities and Scheduled Castes who form 60 per cent of the population in the state.

This was when the Janata announced its most ambitious populistic schemes: it promised that rice would be supplied at two rupees a kilo if it won and that for the weaker sections women would be given every year two sarees and a blouse worth Rs 20 while men would be given two pairs of dhotis and kurtas worth the same price. For the urban women it promised entrepreneurs loans without security and at subsidised interest rates. While the Congress(I) cried "foul" the move gave the Janata the much needed edge. On the last day of the campaign, Hegde, whose voice had turned hoarse from speaking, said excitedly: "The people have revealed their mood. There is a sea change in their attitude. It looks like there is a wave for us."

The Congress(I) never had a clue as to what was on. Just three days before voting day two of its key central observers stationed in Bangalore, Thangabalu and Amarjit Kaur, sent a confidential report to Rajiv that the Congress(I) would easily win 120 seats while in another 30 seats they had a 50-50 chance of winning. In fact the party workers were brimming with confidence and this had made them complacent. Although on the surface the Congress(I) election campaign was functioning like a well-oiled machine, behind the scenes several people were throwing spanners into the works. Gundu Rao who was ordered not to campaign was not quiet. The former chief minister still has powerful friends in the state and his supporters

An enthusiastic supporter gives vent to his feelings: popular mandate

refused to work for the party. In Hassan the Congress(I) paid the price of refusing the powerful Vokkaliga leader H.C. Srikantiah a ticket. The result: a total washout in the district which has eight seats.

In other constituencies the new faces that the Congress(I) had chosen were showing up their inexperience. Dissidence had broken out in the ranks and those who were denied tickets told their supporters to work against the party. The Congress(I) grassroots organisation was really, as one partyman put it "grass without roots." A red-eyed K.H. Patil, state Congress(I) chief, who resigned after the defeat, admitted: "While selecting candidates we did not properly guide our leader. The loss was not on account of Rajiv Gandhi but at our level."

A right regular slanging match has broken out between the various Congress(I) leaders in the state with each one blaming the other. Patil came under fire from all sections for his "uninspiring leadership". Irritated Youth Congress workers stormed the asbestos-roofed Congress office a day after the election howling for Patil's blood and the police had to be called to maintain order. Moily who was also blamed for the debacle tried to slip out by saying that in south Kanara, his home district, the Congress had done well. He felt that because they failed to project a state leader it hurt their chances. Bangarappa on the other hand reasoned that the selection of candidates had an effect. Said he: "We should have fielded good candidates. In many constituencies the voters had already rejected our candidates." Gundu Rao who openly claimed that he was "the happiest man" lashed out at Kerala Chief Minister K. Karunakaran who was in charge of the campaign in Karnataka. Said Rao in a typically brash outburst: "The whole debacle is because of Karunakaran and company who have destroyed the party here by their bad handling of the campaign."

Most of the leaders were content to accuse the Janata of using "money and liquor" to woo the voters but that sounded more like the pot calling the kettle black. Few were willing to search their conscience for answers. The Congress(I) seems to have lost on all counts. Of the 64 backward class candidates it had put up only 27 won dispelling the myth that this section was their real vote bank. Only 12 Scheduled Caste candidates of the 35 who stood, won. The major communities, the Lingayats and Vokkaligas, seemed to have preferred the Janata with only 21 Congress(I) candidates from this powerful lobby winning. Fortunately for the Congress(I) Moily, Patil and Bangarappa won, a fact even Hegde appreciated, as he put it: "Without them the assembly sessions would have been insipid."

The BJP, on the other hand, is hard put to explain its poor showing. Out of the 118 candidates which they put up, 90 of them lost their deposits. To add insult to their grievous injuries, the BJP leader in the former assembly, Dr V.S. Acharya, was soundly defeated from the Udipi constituency by the Congress(I) candidate Manorama Madhavraj. Only two of the 18 MLA's survived and ironically one of them is Vasanth Bangera who last year defected to the Congress(I) with the explanation that he was mesmerised by Bangarappa and then returned to the party under pressure. Shivappa, the state BJP president, feels the reason for their defeat was because the people were angry with them for not reaching an electoral understanding with the Janata Party. Said he: "People would just not believe our explanation that it was Hegde who refused to yield to our demands." To their mortification the BJP is now finding that their ranks are deserting to join not the Congress(I) but incredibly enough the Janata Party itself.

MUSHTAQ AHMED

Having won the elections convincingly Hegde is not likely to get carried away in the euphoria of his victory. He told party workers not to celebrate until the Government had been able to fulfil some of the election promises. He explains: "As soon as the results were announced I felt a creeping consciousness of the tremendous responsibility on me. The expectations of the people are so high that I do not want any section to be disappointed." This is easier said than done because he is saddled with a bureaucracy which is dead against him after he yielded to pressures from his MLA's to have them transferred at will in his first term. In his first two years he was accused of being influenced largely by the views of the Lingayats and the Vokkaligas. Decision-making was hampered too because of his very thin majority. In his crisis-ridden first term, more energy was devoted to keeping his MLA's happy than for solid work. Fortunately for the people, he has no "excuses", as he puts it, now and has to show some concrete results. Said Secretary-General Patel: "We must get cracking immediately and do a real good job, otherwise we would be in serious trouble."

And if Hegde's action last week is any indicator, he certainly means business. Delaying his decision to have a full-fledged Cabinet, he chose just two members, Abdul Nazir Sab, a Muslim, and B. Rachiah, a Scheduled Caste, thereby setting the tone of his administration which is likely to tilt decidedly towards the weaker sections. But first he is going to have to break the stranglehold of the powerful Lingayats and Vokkaligas who account for almost two-thirds of the party in the Assembly. However, Hegde asserts, "I will not yield to pressures from these groups so far as social justice is concerned. I will function free from inhibition and with sole intent of keeping our electoral promises." How far he will succeed though remains to be seen.

His second term is likely to be domi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nated by the implementation of such populist schemes as the selling of rice at Rs 2 a kg and finding a job for at last one person in each family. While the rice programme is going to cost the state exchequer Rs 50 crore, the details of the employment programme have yet to be worked out. Hedge is keen on pushing it through because unemployment in rural areas has reached alarming levels and there is a mass of frustrated and cynical youth which vents its anger openly if there is no succour in sight. His other major programme is to root out corruption, but this is likely to remain what it is: just a programme. Hedge is still rather vague about the major changes he wants to introduce and right now is more embroiled in choosing cabinet colleagues.

His major worry is finance. The state has already taken an overdraft of Rs 250 crore and the Central Government has not taken too kindly to it. Rajiv Gandhi made it a campaign issue and Hegde is rather upset with his stand. He was angry with the prime minister for telling the electorate about the development. Said he angrily: "The prime minister made it look like a sin to vote for another party. He virtually threatened the electorate about it. Rajiv Gandhi had made unity and integrity a campaign issue in the Lok Sabha elections but he is undermining the country's unity by dividing it into Congress(I) states and non-Congress(I) states."

Hegde is keen that a radical change be brought about in Centre-state relations but does not regard it as his immediate concern and prefers to wait till the Sarkaria Commission appointed by the Central Government gives its report. About whether he agrees with Rajiv's idea of development Hegde says: "He gives me the impression that he has good intentions. But so far he has been vague about them."

Hegde's other problem would be to develop a second line of leadership to take over from him. He is keen on pulling out of the state before his term ends so that his successor could have some experience before the assembly elections are held again. Hegde may then move on to the national stage and try to build up the national opposition into a viable alternative. But before that, he has to fulfil his promise to give Karnataka a "model government". And with the fortunes of the Opposition inextricably linked to his performance in the state, the inimitable chief minister has a testing time ahead of him. —RAJ CHENGAPPA

A. PRABHAKAR RAO

NTR at a victory rally: no surprise

ANDHRA PRADESH

The Third Coming

THE TELUGU Desam's victory in the elections to the 294-seat Andhra Pradesh Legislative Assembly came as no surprise. But even though the party got a resounding two-thirds majority, it did not fare as well as the party's charismatic leader N.T. Rama Rao had expected it to. The final tally of 202 seats was the same as in the January 1983 elections when four Rashtriya Sanjay Manch candidates also rode to victory on the Telugu Desam's bicycle symbol. The seemingly invincible number whittled down considerably in August last year to temporarily unseat the Rama Rao Ministry and ultimately force him to call for fresh elections. Though the gamble paid off, he had to settle for 18 less than the 220 seats he hoped he would win.

Rama Rao was sworn in as the chief minister at a large public ceremony on March 9 at 11.47 a.m—a time fixed by astrologers as most auspicious. But it was clear that amid the wild applause, cheering and firing of crackers as Rama Rao arrived in his Chaitanya Ratham and took the oath administered by the Governor Shankar Dayal Sharma, the uninhibited euphoria and excitement of 1983 was absent. The mood was a trifle more serious, for as Rama Rao told the large crowd sitting patiently in the scorching sun on the army parade ground: "The election was called to teach a lesson to the defectors. The Telugu Desam was formed not with the intention of capturing power but to promote moral and ethical conduct in political and public life. We have got the people's mandate once again to complete the unfinished tasks."

Beginning on this sombre note, Rama Rao introduced 12 new faces in his 24-member ministry sworn in collectively after him. Though all the ministers in the earlier cabinet were re-elected, nine of them, including Chegondi Venkata Rama Jogaiah, home minister, and Annabathuni Satyanarayana, civil supplies minister, were dropped. Rama Rao denied that they were dropped because of complaints against them, but it is widely believed that Jogaiah had been accused of interference with the police administration, ordering the transfers of police sub-inspectors. Satyanarayana had reportedly remarked a few days before polling that Muslims who did not vote for the party would be deported to Pakistan.

The new cabinet appears to have been shrewdly put together. K.E. Krishnamurthy, the backward caste leader from Kurnool district, has been allocated the important major and medium irrigation portfolio as a reward. A newcomer, Krishnamurthy joined the party just before the Lok Sabha elections and worked for the defeat of former Union minister K. Vijayabhaskara Reddy. Contesting from Dhone in Kurnool district,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

he defeated Reddy's brother to win the assembly seat. Similarly, G. Rajesham Goud, a 33-year-old lawyer, who defeated T. Jeevan Reddy —former chief minister N. Bhaskara Rao's partyman who then joined the Congress(I)—has been made a minister of state.

Keeping to his promise of completing unfinished tasks Rama Rao moved out of his Abids residence to a *kuteeram* (ashram) built on the banks of the Osmansagar lake nearly 30 km outside the city ostensibly to separate work completely from his personal life. He formally moved into the ashram, where he will be spending nights, after special pujas before the swearing-in ceremony. "I will be available in my official residence at Abids to meet people on weekdays and observe Sunday as a holiday for creative work," the chief minister said.

Undoubtedly the party's victory is largely due to the unfailing charisma of its leader. The drama surrounding the ouster last August, as well as the popular decisions like the abolition of the post of village officers has only increased its credibility. Other considerations of whether the candidate was a local or a non-local person were of little concern to the electorate. B. Sanjeeva Rao who won from the Gujwal reserved constituency in Medak resigned from the state-owned Andhra Pradesh Industrial Infrastructure Corporation to contest the elections. He belongs to Prakasam district in the Andhra region.

The Telugu Desam captured areas reckoned to be Congress(I) strongholds. In the 1983 elections 44 of the Congress-(I)'s 60 members were elected from the Telengana region which has a total of 106 seats in the Assembly. This time it won only 13 seats while the Telugu Desam which had won 38 in 1983 won 59. The party's allies—the BJP, Janata, CPI, CPI(M)—won 27 seats while the rest went to the Majlis-e-Ittehadul Muslimeen (3) and independents (2). One result was withheld and one countermanded. Similarly, the Telugu Desam did well in the north coastal districts of Srikakulam, Vizianagaram, Vishakhapatnam, East and West Godavari with several candidates winning by wide margins to get 67 of the 74 seats, two less than in 1983. However, in the south coastal districts of Krishna, Guntur, Prakasam and Nellore the party had a slight setback, winning only 39 of the 60 seats where it had won 50 in the last election. And in the Rayalaseema region, the Telugu Desam won 37 of the 53 seats, as against 40 the last time.

The popular assumption that the Telugu Desam is the party of the Kammas (the moneyed classes) is believed to be the reason for the polarisation of the non-Kamma votes in favour of the Congress(I). But in several constituencies this swing was neutralised by votes to the party's allies, particularly the Communist parties, which have a base among the farm workers. Consequently the strength of the Telugu Desam's allies has gone up in the new

RAGHU RAI

Bhaskara Rao: total rout

house—Janata Party from one to two, BJP three to eight, both CPI and CPI(M) five to eleven each. The adjustment of seats worked to the mutual advantage of the two sides. As a party activist said: "We gave the friendly parties a few seats in gratitude for their help and support when Bhaskara Rao betrayed us and democratic principles."

In the wake of the Rama Rao victory, Bhaskara Rao's Democratic Telugu Desam (DTD) party was totally routed in the elections. None of its 220 candidates have been elected and only Bhaskara Rao and another candidate T. Surendra Reddy managed to retrieve their deposit. As P. Upendra, Telugu Desam's general secretary, said: "Their contribution to Andhra politics is Rs 500 each to the state exchequer." The Majlis-e-Ittehadul Muslimeen, the DTD's election ally, retained only three of its five seats. It lost the fourth to the BJP and the result in the fifth has been withheld because of charges of rigging. The uncontrolled speculation on the outcome sparked off post-poll clashes which brought the death toll in the state to 21 since the start of the campaigning in mid-February.

The inability of the Congress(I) to shake off its past and present itself as a credible alternative has been the primary reason for its disastrous performance. The deliberate design by which a number of newcomers were fielded did not pay off. Analysing the reasons for its failure, K. Brahmananda Reddy, the state's election coordinating committee chairman, said: "The selection of candidates was not done carefully enough and we lost narrowly in several constituencies for want of luck. At the other end we were definitely wanting in resources which the Telugu Desam had in plenty in this election. NTR is only interested in results and not the means to achieve his objectives." At the same time he admitted that the chances for the Congress(I) to grow in the future in Andhra Pradesh lay in developing it from the grassroots. Observed K. Rosaiah, leader of the party in the legislative council, overseeing electioneering logistics in Hyderabad: "We have not been able to convincingly explain the weakness in the policies and programmes of the Telugu Desam."

Congress(I) activists in Andhra Pradesh knew they were not likely to form the Government, and only some of them were in a mood to actually put up a fight for the 75 assembly segments the party won in the Lok Sabha election. There have been no complaints of internal sabotage, but it is evident that the silence of former legislators who were refused tickets went to the party's disadvantage. Retaliating to Congress(I)'s charges about his government's non-performance, Rama Rao said: "The voters have shown for the third time in two years that the Telugu Desam is the people's party."

In his first speech after being sworn-in as chief minister, Rama Rao renewed his earlier plea for a review of Centre-state relations and pointed out that increased grants to states "is the only sure way to achieve the progress of the people all over the country". Predictably, he has not announced new welfare measures but has promised that the posts of village officers will be abolished and replaced with a new system of village assistants which will be legislated on in the first session of the new assembly. Together with such concerns, Rama Rao is also working on his plans to launch the Bharata Desam Party on his next birthday—May 28—at the annual Telugu Desam convention. He has not yet decided whether the Telugu Desam will be a part of it, but to keep his options open, has asked some constitutional and legal experts to work out a constitution and perhaps an ideology for the party. Whatever be the final decision, Andhra Pradesh under Rama Rao is going to remain in the news.

SIKKIM

Getting Back

WHAT N.T. Rama Rao is to Andhra Pradesh, Nar Bahadur Bhandari is to the miniscule eastern Himalayan state of Sikkim. Last fortnight, Bhandari once again proved his political omnipotence in the state by trouncing the Congress(I) and winning a record 30 out of a total of 32 seats in the latest assembly elections. In the last parliamentary election, Bhandari had stunned his political opponents by winning the sole Lok Sabha seat in the state and capturing over 73 per cent of the total votes polled.

The Congress(I)'s defeat in the assembly polls was all the more humiliating since stalwarts like Assam Chief Minister Hiteswar Saikia, Jagdish Tytler and a host of other party luminaries had thrown in their weight to ensure Bhandari's defeat. "The election results are a slap on the faces of all those who thought they could finish me politically," Bhandari said the day after being sworn in as chief minister.

Looking more tired than triumphant, Bhandari—who is back in the saddle nine months after he was dismissed from chief ministership by the Congress(I) high command—says: "I have once again proved that it is I who enjoy the faith of the Sikkimese people and not those who created dissidence against me to have me thrown out."

At no time had the Sikkimese leaders opposed to Bhandari been as united as they were during this assembly election. Determined to teach him a lesson, the Congress(I) had roped in leaders like R.C. Poudyal of the Congress(R), elevating him to the presidentship of the Sikkim Pradesh Congress(I) Committee.

"One of the principal reasons for the Congress(I)'s defeat was the inclusion of rabid communalists like Poudyal," says Chamla Tshering Bhutia, the new Sikkim Sangram Parishad (SSP) finance minister. Notorious as an unabashed champion of the majority Nepali community in the state, Poudyal had long alienated the Bhutia-Lepcha tribals by his persistent demands for a reduction in their representation in Sikkim politics.

Bhandari, on the other hand, does not appear to have had a communal image and his slogan "Sikkim for the Sikkimese" rallied both tribals and Nepalis against the influx of foreigners, mostly from Nepal. The fact that the majority of Nepalis speaking Sikkimese did not vote for Poudyal and his like shows their "concern for maintaining communal harmony and prosperity which would be destroyed in the event of an influx of foreigners," says Bhandari. Not surprisingly, the SSP not only won the Sangha seat where voters are purely Bhutia monks but also won all but one of the 13 seats reserved for the tribals.

Nar Bahadur Bhandari: dominant force

Bhandari does not consider his party's demand for a re-introduction of seat reservation for Nepali candidates to be communal. "This is a constitutional demand," says he, "all we are really demanding is the equal representation of tribals and Nepalis in the Assembly." Shortly after Sikkim's merger with India in 1975, the Centre had allotted 15 seats each to tribal and Nepali candidates, leaving a seat each for Scheduled Castes and monasteries. Morarji Desai had upset the applecart by suddenly withdrawing the reservation for Nepalis.

Just how much resentment this unilateral decision still generates can be judged by the fact that practically all political parties including the Congress (I) in this election had campaigned in favour of reservation. "My insistence on the seat reservation issue and the mammoth rally I had organised last April seems to be one of the reasons why the Congress(I) high command got angry with me," says Bhandari, who appears to have convinced Sikkim's electorate that he was dismissed for championing their cause too strongly with the Centre.

Firmly ensconced in the saddle, Bhandari is now making moves toward rejoining the ruling party, moves that are being met with no lukewarm response. Which leaves one little question still unanswered: what is going to happen to the Central Bureau of Investigation (CBI) case against him?

The CBI began its investigations against Bhandari in May 1984. Officials raided his house in Gangtok, scrutinised voluminous files at his office and came to the conclusion that there was an unexplained Rs 18 lakh that Bhandari is alleged to have acquired from 1979 to 1984. But before the agency got a final go-ahead for formal prosecution, Bhandari was elected to power again.

Strangely enough, no formal case was lodged in a court, only a preliminary enquiry was registered with the CBI. If it had been formally registered, the Government would have had to take a decision on withdrawing the case now. As it is, it is easy for the Government to merely consign the Bhandari files into the dust heap without any qualms. Besides, Bhandari now has the power to withdraw CBI investigations on his own. The bureau derives its powers to investigate a case from the Delhi Special Police Establishment Act. Section 6 of the Act allows a chief minister to sanction or withdraw a CBI investigation.

Either way Bhandari wins. If he rejoins the Congress(I), it is hardly likely that the ruling party is going to insist on charge-sheeting him. If he doesn't he still has the option of stopping CBI proceedings against him. Said a Home Ministry official: "It's a heads-I-win, tails-you-lose position for Bhandari."

What is perplexing is Bhandari's obvious desire to rejoin the Congress(I). "All what has happened in the past is a closed chapter," he declares, "now that Sikkimese people have elected me as their representative I do not see why I cannot return to the Congress (I)." But this is going to be a difficult job since the SSP has sworn not to rejoin the ruling party at the Centre unless the latter first conceded their three demands—seat reservation, inclusion of Nepali in the Eighth Schedule of the Constitution and the granting of citizenship to the stateless persons in Sikkim. "This time we will not succumb to mere promises," says Finance Minister Bhutia.

Even if the Congress(I) high command declines to take back Bhandari, SSP leaders like Bhutia and others are confident that the "Centre will not create trouble for Sikkim". The Centre, in Bhandari's words, "is always for the people and since I am their representative, the Centre will always be in my favour". Whether Bhandari is being too sanguine or not, only the Congress (I) high command knows.

HIMACHAL

Here's How to Plan a Perfect Trek ...

A) COME TO HIMACHAL

Himachal offers you an awesome array of choices, from the rolling valleys of Manali to the dizzy delights of Baralacha, from the peaks of Kinner Kailas to the chasms of Chamba. Each trek is different, each an experience. There are several trekking delights, one of which is sure to be to your trekking taste.

B) CHOOSE YOUR TREK

1) Raison to Chandrakhani (14 Days)
2) Manali to Keylong, via Chandratal (11 Days)
3) Manali to Padam, over Shingola (10 Days)
4) Manali to Zanskar, via Baralacha (9 Days)
5) Chamba to Udeypur (10 Days)
6) Banjar to Narkanda via Bashleo and Jalori (5 Days)

C) FACILITIES FOR YOU

Porters at base camps are easy to arrange, and if you are travelling light, you can even hire your equipment from our mountaineering institutes in Manali. Once on your way, the convenient locations of our Dak Bungalows and log huts are sure to delight you.

D) GEARING UP

Well prepared is half there. Some basics to keep in mind, and in your haversack, are, a sturdy tent, hiking boots, an insulated sleeping bag, and other essentials such as a small stove, matches and a first-aid kit.

Where clothing is concerned, everything should be warm and light-weight. A wind-cheater, and Jeans are basics. Carry tinned foods like condensed milk and chunk meats, some high energy food like raisins and chocolate bars, and you are all set.

CONGRESS(I)

Unexpected Setbacks

WHAT goes up must come down. True, but not in such a hurry. Last fortnight, while Prime Minister Rajiv Gandhi was holidaying in the woods of Kanha National Park after three barnstorming weeks of campaign for the assembly elections, the results that poured out showed sudden, and, in some areas, sharp chilling off of popular enthusiasm about his party. Only nine weeks after its trail-blazing success in the Lok Sabha polls, Rajiv's new-look Congress(I) was back again to its original dimension: strong in many areas, weak in some, dominant as a whole, but not quite the unrivalled darling of the popular heart. Assembly elections seldom faithfully echo the outcome of preceding parliamentary polls. But, coming so close on the heels of the December polls, the verdict of the 279 million voters (against 380 million in the Lok Sabha) in 11 states and the Union territory of Pondicherry was bad enough to kill the holiday spirit.

Srikant Verma, the All India Congress(I) Committee (AICC-I) general secretary, exuding his characteristic never-say-die spirit, reveried that "the people have once again reposed their confidence in the correct leadership of Rajiv Gandhi". But evidence, slowly trickling in from the 2,543 constituencies, did not point at wholesale reconfirmation of the thumbs up that the electorate had given only two months earlier to the Congress(I) under Rajiv. The party lost no new state and gained only Pondicherry, the sleepy former French colony with only 3.93 lakh voters. But the results indicated a sharp (26.79 per cent) drop in the party's number of seats from the number of assembly segments won by it in the December 1984 elections. With the single exception of Gujarat, its share of popular votes plummeted from the December level in all other states. In Gujarat it rose from 53.2 per cent to 55.54 per cent but in the crucial state of Uttar Pradesh, the decline was as marked as 10 per cent.

BHAWAN SINGH

Almost everywhere, there were unmistakable signs of the Congress(I) undergoing a personality change, with loyalites consequently being redefined.

The vast sprawl of India's Hindi-speaking heartland failed to bring any cheer for the Congress(I). In the four mainline states of Uttar Pradesh, Bihar, Madhya Pradesh and Rajasthan, the aggregate of the party's gains—816 excluding the 14 Bihar seats where results were pending—showed an overall slideback even from the Congress(I)'s strength of 864 in the dissolved assemblies of these states. At any rate, it was a far cry from the recent Lok Sabha poll tally in which the party led in an overwhelming 1,140 segments—recording a 25.9 per cent tumbledown.

Only tiny Himachal Pradesh redeemed the ruling party which was able to wipe out the Bharatiya Janata Party (BJP) to win 55 seats compared to 37 in the outgoing house. The other Himalayan state, Sikkim, saw a miserable rout for the Congress(I) which won a lone seat in a house of 30. And though Karnataka and Andhra Pradesh jointly proved to be the party's Waterloo, the defeat was rendered a shade more ignominious as the Congress(I) lost 33 more seats from its modest strength of 148 in the two outgoing assemblies. In Maharashtra, Congress(I) strength nosedived to 162 from 223 in the past assembly, and its popularity dipped to 43.76 per cent from 51.2 per cent two months ago.

1985 ASSEMBLY ELECTIONS

Even in its fortress state of Orissa, where the Congress(I) won an impressive 117 seats in a house of 147, its popularity as compared to December 1984 was on a downhill course: from 57 per cent to 51.01 per cent.

Not that Rajiv did not put his heart into the assembly campaign. To peddle his main theme—the Centre and states are like two hands, and two hands are required to do something—he stormed through 52,000 kilometres in cars, helicopters and a special Indian Air Force Boeing, addressing 235 public rallies in 20 days flat. Wherever he went, he sang the same tune: modernising factories and farms and giving the youth and women "a chance". He did not spare the Opposition and, true to what is now regarded as form, he would even turn non-issues into issues: such as the announcement in Himachal Pradesh, amid great relief, that the state would not be lumped together with Haryana and Punjab according to a plan unofficially floated by Haryana Chief Minister Bhajan Lal, his own partyman. "Who cared for the ghastly suggestion, and who cares for the denial now?" asked an irate Shanta Kumar, former chief minister and leader of the state BJP unit. But apparently, a lot of people did care.

The buntings, posters and festoons were surely on a lower key this time round. But the AICC(I) was taking out full-page ads in newspapers all the same to rub in the message: *Congress laao, pradesh badaao* (Bring in the Congress, improve the state). Nor was there any let-up in promises from Rajiv: a new education policy promised in Andhra Pradesh; a new industrial policy promised in Bombay; a new agricultural policy hinted at in Gujarat. And Rajiv provided a credible backdrop to these by dropping two out of every five sitting party MLA's and raising the share of women candidates from a measly 2.5 per cent in the June 1980 assembly elections to a respectable 8 per cent.

Yet the Congress(I)'s popularity suffered a setback nearly everywhere. Of the eight constituencies he visited in Orissa, the Congress(I) lost six. Its candidates were also defeated in nine of the 19 constituencies visited by him in Maharashtra. In what was clearly a slap in the face of the Congress(I), K.P. Tiwari, who had vacated the Allahabad parliamentary seat to make way for matinee idol Amitabh Bachchan and was rewarded with a ministerial berth, was defeated from the Karchhana assembly constituency in Allahabad.

BHAWAN SINGH

PRAMOD PUSHKARNA

BJP's Shekhawat (top) and PDF's Pawar: an improved image

Tiwari is a close friend of Vishwanath Pratap Singh, Union finance minister and Pradesh Congress(I) Committee (PCC-I) chief. In Maharashtra, the victory of A.R. Antulay, thorn in the flesh of Rajiv, by a huge margin of 33,000 also had its own message. And so had the victory of seven out of 22 'rebel' party candidates who fought on their own after having been denied party tickets.

The drop in the party's popularity was surely more pronounced than is generally expected between two rounds of polling. "There is an undeniable natural difference between Lok Sabha and assembly polls because issues are different. The two cannot be compared and there's no reason to believe that the pendulum is swinging backwards just because the Congress(I) has lost a few assembly segments that it won two months ago," said A.B.A. Ghani Khan Chowdhury, former railway minister shunted since January into the AICC(I) as one of its general secretaries. But the difference between apples and oranges, if comparable at all, was much less marked in the 1980 Lok Sabha and assembly polls.

In January 1980, the Congress(I) won 1,888 of the 2,543 assembly segments that went to the polls now. In June the same year, it bagged 1,513 of those seats, a drop of 19.86 per cent in terms of seats. However, the party slipped from 1,959 in the December 1984 polls to 1,438 in March 1985 (leaving aside the few seats for which results have not been announced). Even if the final tally touches the 1,450-mark, the party will still have to contend with a decline of 509, or 25.98 per cent. The figures of voting percentages, with the sole exception of Gujarat, also confirmed this trend. In the key state of Uttar Pradesh, for instance, the Congress(I) vote (as share of valid votes polled) actually rose between the Lok Sabha and assembly polls in 1980—from 35.9 per cent to 36.9 per cent. But in 1984-85, after recording a phenomenal leap to 52.59 per cent, it hurtled down to 42 per cent.

It was a shot in the arm for a battered, dispirited and humiliated opposition—pilloried even by its friends, and subjected to ridicule by the self-approving Congress(I). "*Do ya teen, bas* (Two or three will do)—two in the BJP and three in the DMKP," the prime minister said in one of the election rallies. But even though no opposition party could spread its appeal across the boundary of its limited sphere of influence, it recorded impressive gains from shrunken bases: in most instances, individual opposition parties even topped their 1980 assembly performances.

The DMKP, in its earlier incarnation as the Janata(S) in 1980, won 59 seats in the Uttar Pradesh assembly that year; it has won 85 now. The BJP's strength in Madhya Pradesh has declined only marginally from 60 in 1980 to 58, whereas it has risen slightly in the Rajasthan assembly from 32 to 38. In Maharashtra,

COMPARISON OF CONGRESS(I) LOK SABHA AND ASSEMBLY WINS

the Congress(S), which is the senior partner of the Sharad Pawar-led Progressive Democratic Front(PDF), improved its strength from 47 to 58. In Bihar too, where the Congress(I) has gained in numbers since June 1980, the DMKP, which is the dominant opposition party in the state, also rose in strength from 37 to 44. Except in Himachal Pradesh, where the principal opposition BJP crashed from 29 in the 1982 assembly polls to seven now, and Gujarat, where the Janata Party's strength dwindled from 22 to 14, the Opposition pulled itself up by the bootstraps from the pit to

NEW CMS

An Old Order

BINDESHWARI Dubey, Motilal Vora and Harideo Joshi, the three newly-elected Congress(I) chief ministers of Bihar, Madhya Pradesh and Rajasthan, had for so long been tipped as potential successors that few eyebrows were raised when they actually made it. But the people they replaced were really significant: Chandra Shekhar Singh, admittedly 'clean'; Arjun Singh, 'clean' and 'efficient'; and Hiralal Deopura, a bird of passage who had been to the Rajasthan chief minister's chair only to keep it warm for the interregnum between Shiv Charan Mathur and Joshi. As to why they were replaced could be only cryptically answered by Bansi Lal, railway minister and All India Congress(I) Committee (AICC-I) observer for Bihar, who said: "The legislators felt the necessity for a change."

It is uncertain if the legislators indeed felt so in all the states because in Madhya Pradesh, by a comic about-turn, the party MLA's chose their leaders twice in a span of 48 hours, opting for Singh first and then Vora. However, the choice of the three men is by and large being regarded in the Congress(I) circles as the return of the old order. Dubey is a close associate of Jagannath Mishra, the controversial former chief minister, the criminal case against whom was dropped at the request of the state. Joshi was the Emergency-time chief minister of Rajasthan. And Vora, formerly a stringer for a Hindi newspaper, won his spurs by attacking the Janata government during the 1977-79 period.

Dubey, 67, who is the first trade unionist to become the chief minister of a state that houses the nation's largest public sector investment, had for long formed an axis with Mishra and former minister L.P. Sahi. This axis lobbied hard for Singh's ouster, and Dubey's position as the Bihar Pradesh Congress (I) Committee (PCC-I) chief lent teeth to their effort. Working entirely to their plan, 30 Congress(I) MP's from Bihar petitioned Rajiv Gandhi last month for Singh's removal. When the results were announced, Dubey and Mishra, camping in Delhi, noted with pleasure that 124 of the new MLA's belonged to their lobby. While entering the meeting hall for the new legislators, a jubilant Mishra said: "I'll support any leader elected by the MLA's or selected by the high command." The die had by then been cast in favour of Dubey and against Singh, hated by him as an interloper.

Dubey

Vora

Joshi

The 64-year-old Joshi, however, was chosen as the party's trouble-shooter almost the moment its tally stopped at 113 in the 200-member assembly. Before that Mathur had resigned owning responsibility for the Deeg incident (see INDIA TODAY, March 15) in which Man Singh, the independent MLA, died in police firing. But Joshi edged past his rivals—Jagannath Pahadia and Deopura, entirely for his personal rapport with the MLA's and his long innings in the assembly. He is now the seniormost of the MLA's, going through the eighth successive term. Besides, Joshi has continuously been a member of the All India Congress Committee (AICC) and later the AICC(I) since 1949. He was a general secretary of the PCC between 1950 and 1959, and later the PCC president.

However, in what was really a surprising move, Joshi selected neither Pahadia, Mathur nor Deopura as a minister in his cabinet. Instead, he chose an initial team of five cabinet ministers and two ministers of state but kept 36 departments with himself. All the seven ministers sworn-in had been ministers at one time or the other; the controversial Narinder Singh Bhati was even elevated to cabinet rank.

Like Dubey in Bihar, Vora too was waiting in the wings after becoming the Madhya Pradesh PCC(I) chief last year. But he must have thanked his lucky stars for the break he got because until he boarded the flight to Delhi last fortnight after Arjun Singh had been chosen chief minister he did not know that he would benefit from a gilt-edged afterthought. A journalist turned politician, said Vora, "I thought I was being summoned to New Delhi for consultations in connection with the cabinet formation. But when I landed from the state aircraft I was told by Arjun Singhji about my selection as chief minister." Drafted into state politics by P.C. Sethi from his native Durg district in Chhattisgarh, Vora rose in the estimation of the former state satrap as an effective foil against V.C. Shukla, arch rival of Sethi and, later of Arjun Singh.

Shukla's hold over the Madhya Pradesh Congress(I) Legislature Party has since then been reduced to the minimum—caused, first, by the elimination of many of his loyal candidates, and later by the sketchy performance of the party in the Chhattisgarh region. But Vora now may have to contend with opposition from unexpected quarters, because about 200 of the 250 party MLA's are personally beholden to Arjun Singh. So far, Vora and Arjun Singh have got along well together. But, with Singh abruptly taken away from the vortex of politics in Madhya Pradesh to the Raj Bhavan in Chandigarh, dissidence may even strike in absentia.

NAMAS BHOJANI

Patil being sworn in by Governor Latif: political manoeuvre

which it had been relegated in December.

"The Lok Sabha elections were an aberration, a drunken folly, a bad dream caused by the pressure of a calamity, a chapter that had better be forgotten," said Atal Behari Vajpayee, BJP president, who bounced back from his sensational defeat in the December polls. Also tasting the heady wine of success in moderate doses after a long bad patch, was Charan Singh, the 83-year-old chief of the DMKP: "Not all is lost yet," was his terse comment as the party's tally-board in Uttar Pradesh touched 85.

However, the most important lesson that the opposition leaders had a chance to learn from the assembly polls was that their unity had still not outlived its importance. Its best demonstration ground was Rajasthan where the BJP, the DMKP and the Janata Party had put up united candidates, their combined tally going up to 75 from 45 in the dissolved assembly. "The people were convinced about the sincerity of our unity efforts," said Bhairon Singh Shekhawat, former chief minister and state BJP president.

As a matter of fact, the Opposition is clearly wiser after the event in Uttar Pradesh where the Congress(I) won over a dozen seats by a wafer-thin majority—less than 500. In 50 other constituencies, the Congress(I)'s margins of victory were well within 2,000. If the BJP and the DMKP had fought together, the Congress(I) would have lost 28 more seats. If the BJP, the DMKP and the Janata Party had joined hands, the Congress(I)'s loss would have mounted to around 50. And although the party would have still been hanging on to the ledge of power, it would have been a push-over case.

The Lok Sabha elections, if anything, were marked by a cheery rapport between Rajiv and the people in which a whopping 63.42 per cent, of the electorate turned out to cast their votes, ignoring the bite of winter. That effusiveness was lost in February and the turnout sank to less than 50 per cent thus raising valid doubts about what had really attracted the voters to the polling booths in December: the shock of Mrs Gandhi's death, or Rajiv's charisma. The excuses that were put up for low turnout—a cricket match in Bangalore, or the beginning of the dry season in Rajasthan—sounded frivolous. The difference, in 1980, between the Lok Sabha poll turnout and that for the assembly elections was 7.8 per cent, whereas the recent polls showed a difference of 16.74 per cent. This is a measure of apathy which simply cannot be explained away by the argument that national issues wield a stronger magnetic pull than state-level issues.

However, though Rajiv's campaign theme varied from state to state, its perceived message was common: he sought to rejuvenate the Congress(I) not by promises alone but by fielding a new crop of personnel and, specially, more women. Verma announced soon after the candidates' lists had been posted that 40 per cent of the sitting MLA's had been changed. In other words, two out of five previous MLA's were dropped, their places being taken up mainly by younger people, fresh graduates, amateur party supporters, Sewa Dal volunteers, and, occasionally, by children of older Congressmen. For instance, in Bihar, Nagendra Jha and former speaker Radhanandan Jha were dropped to make room for sons Madan Mohan and Harkhu respectively. While the promised one-fifth of nominations could not be given to women, the Congress (I) did feature 200 of them in its final list.

But the electorate did not welcome the new entrants with any new exuberance. In states like Maharashtra and Rajasthan, voters' response was mixed. In Rajasthan, 49 out of 85 sitting Congress(I) MLA's (57.64 per cent) were re-elected as against 64 out of 115 new faces (55.65 per cent). In Maharashtra too, their success rates were comparable in a 50-55 per cent range. However the voters showed little respect for the greenhorns in Madhya Pradesh, rejecting 40 of the 93 candidates who got their tickets by replacing sitting Congress(I) MLA's. But 120 of the 150 veterans were re-elected.

In Uttar Pradesh too, of the 171 party MLA's who were renominated as many as 113 were successful again. But the party had fielded 254 new candidates in the state, including 38 women, 50 nominees of front organisations, and little-known people netted in by the AICC(I)'s talent-scouting teams. Of these 254 candidates 154 won. But, out of 100 'absolute freshers' who replaced sitting party MLA's, only 30 reached the winning post. Admitted V.P. Singh: "It is true that the majority of those who have lost were newcomers. But we don't regret our decision to encourage young persons and the front organisation people. They should not feel that they're mere-errand boys."

It is only a matter for speculation whether Rajiv would have ordered sweeping changes of chief ministers had the assembly elections indicated a verdict closer to the Lok Sabha polls. With a performance slightly better than Rajiv's in the June 1980 assembly elections, the late Mrs Gandhi brought about drastic changes, experimenting with a Muslim chief minister in Maharashtra, appointing a Harijan chief minister in Rajasthan and upsetting the Brahmin-domination of north Indian politics by getting three Rajput chief ministers for Uttar Pradesh, Himachal Pradesh and Madhya Pradesh.

But Rajiv chose to tread cautiously. The bringing along of three new chief ministers (*see box*)—Bindeshwari Dubey installed in Bihar, Motilal Vora in Madhya Pradesh and Harideo Joshi in Rajasthan—seemed merely a tactical move rather than marking anything of strategic significance. Even the choice of Mammanapillai O.H.K. Farook as chief minister of Pondicherry could not have been one among many options: Farook had been chief minister twice before, once heading a DMK-CPI coalition and another time a Congress government.

On the other hand, Madhavsinh Solanki in Gujarat and J.B. Patnaik in

The most envied colour TV within a stone's throw!

Now who'd want to hurl a stone at such a beautiful TV! Mentally, though, many might.

Some of your neighbours for instance. Who may have seen your new ONIDA colour television set. And envied its classy, futuristic looks. And the most astounding true-to-life colour they've ever seen on a TV screen! And have been deeply regretting the fact that they're stuck with colour TVs that are obviously a generation behind!

You may of course argue, your neighbours are the nicest lot. Such violent emotions would never cloud their noble minds no matter how much they envy your ONIDA TV. Well... lucky you!

Orissa were retained for a second term —a practice that Mrs Gandhi never encouraged since she came to power in 1966. Both Solanki and Patnaik are 'loyalists' who cast their lot with Mrs Gandhi in the 1978 split; and, by another coincidence, the party has done well in both states. But they do not carry the clean, efficient image that is generally associated with Rajiv's men. Gujarat, under Solanki, was rocked by a series of communal riots whereas Patnaik's Orissa witnessed a proliferation of scandals in which the name of the chief minister was also occasionally dragged in. It is significant that Basant Kumar Biswal, Patnaik's right-hand man and the controversial former minister of state, was denied a party ticket and a number of names from Solanki's list of candidates were changed. Still they made it to the top once more.

The choice of Vasantdada Patil as chief minister of Maharashtra was also clearly actuated by political compulsions. Had Rajiv tried to impose someone from Delhi, Vasantdada could have walked out of the party taking with him a number of MLA's personally loyal to him. Some independents (or rebels) elected from the sugar cooperative region of western Maharashtra are also tacit supporters of the chief minister. Sharad Pawar says cryptically: "His selection is good for the Opposition but bad for the state."

The electorate this time round also injected a high degree of uncertainty in the Congress(I)'s region-wise distribution of influence. In some states, like Maharashtra, the party attained dizzy heights of popularity in the cities but crashed in the countryside. In states like Orissa, quite the reverse happened. But, almost everywhere, there were unmistakable signs of the Congress(I) undergoing a personality change, with loyalties consequently being redefined.

This was clearly visible in Madhya Pradesh where the Congress(I) lost many seats in its traditional strongholds of Chhattisgarh, Vindhya Bharat and Mahakoshal areas but made substantial inroads into Madhya Bharat, a BJP citadel, where the BJP's strength came down from 34 to 18. Maharashtra too provided an example of shifting loyalties when the Opposition wrested 21 of the 66 seats in the Vidarbha region: in 1980, the Congress(I) had lost only 10 seats in that area. However, the Congress(I) improved its strength in Ratnagiri and Rajapur despite these areas being old Janata and BJP strongholds.

S. PREMI

A forest of hands greets Tiwari: lessons to be learnt

In Uttar Pradesh, the Congress(I) received a drubbing in its bastion of eastern Uttar Pradesh where 10 Thakur-dominated districts returned Janata Party candidates in sizeable numbers. The Congress(I) lost four of the five seats it held in Ballia district, two of the three in Allahabad and three of the five in Barabanki. It is only in the hill areas of the state that the Opposition failed to ent the Congress(I) vote bank.

Sadly, local and caste issues were back. In Bihar, the Jharkhand Mukti Morcha bagged nine seats this time—two more than in 1980 when it had contested the polls as an ally of the Congress(I). There was no alliance now. Similarly, in Madhya Pradesh, the Congress(I) victory was largely due to the anti-reservation stir which, by a deft manipulation of the Congress(I) campaign, came to be seen as opposition-inspired. The party thus reaped huge dividends in the rural areas where all the backward castes and Harijans joined hands to ensure its victory. Similarly, Rajiv's public rejection of the three-state merger plan to settle the Punjab problem clinched the issue in favour of the Congress(I) in many constituencies of Himachal Pradesh—one of the three involved states.

In the absence of issues that cut across the country, the assembly polls were merely fought on the parties' balance of power which is weighted in northern and western India in favour of the Congress(I) and elsewhere against it. But the people chose to distinguish between individuals and ensured the victory of deserving candidates regardless of party affiliations. Thus, though having won power, the Congress(I) in Rajasthan will have to contend with a battery of seasoned opposition legislators in the assembly such as, Shekhawat (BJP), DMKP state chief Nathuram Mirdha, Sheopat Singh (CPI-M), and former minister Kedar Nath (Janata). In Maharashtra, the opposition benches will be occupied by Mrinal Gore (Janata), Vineeta Samant, wife of trade union leader Datta Samant, Ram Naik (BJP), and Datta Patil, leader of the Peasants' and Workers' Party (PWP). To crown it all, Pawar is resigning his Lok Sabha seat to retain membership of the assembly.

Politics has, therefore, returned close to the baseline from where the graph had suddenly begun shooting upwards since the assassination of Mrs Gandhi on October 31. Perhaps it has given Rajiv a better opportunity to judge the people he is supposed to lead, because the unqualified mandate that he received two months ago could easily result in complacency. The debacle in Karnataka and Andhra Pradesh will at least cure him and the party of the mistaken belief that the federal structure of the country can be fiddled with at will. For weeks after the new ministries get going, the Congress(I) will undoubtedly try to grapple with the messages of the assembly elections. At least some of the messages were visible even during campaigning when Rajiv drew crowds that were decidedly large but not bigger than in December. They cheered him alright, but occasionally dragged their feet. In Bhubaneswar, despite Rajiv pleading with the people to raise their hands in support of the Congress(I) candidate, only a few hands actually went up. The Congress(I) lost the seat badly to Biju Patnaik. For democracy, then, the striking gain of the 1985 assembly polls is that it is expected to make the Opposition a bit less overawed and the ruling party a trifle less smug and self-adulatory. —SUMIT MITRA with bureau reports

HARI OM GULATI

Longowal listening to the radio after his release: lost aura

PUNJAB

Breaking the Logjam

THE EVENTS unfolded in a great tumbling rush at the end of last fortnight and all of a sudden it began to look as if there was some hope of breaking the logjam in Punjab. The initiative which set the ball rolling was Home Minister Shankerrao Chavan's announcement at a hurriedly called press conference that eight Akali leaders, including the party President Sant Harchand Singh Longowal, were being released. Within 12 hours Longowal, rival faction chief Jagdev Singh Talwandi, SGPC Vice-president Atma Singh, former Union minister S.S. Barnala, former Punjab ministers Randhir Singh Cheema and Dalip Singh Pandhi, and Ujagar Singh Sekhwan and Baldev Singh Brar were freed from jails around the country.

The next day Chavan sprang another surprise: Madhya Pradesh Chief Minister Arjun Singh was being dispatched to Chandigarh as governor of Punjab, and the Cabinet sub–committee of which he was member would visit Punjab. Thirty-six hours after his release Longowal flew into Amritsar to a surprisingly cool, unenthusiastic welcome. Barely 200 Akalis were present to receive him at the airport and an equally small number followed him around the Golden Temple parikrama a little while later.It was obvious the Sant had lost some of his aura. People present in the parikrama when Longowal completed the circuit scornfully remarked: "What can he achieve now? He ran away when the Temple was attacked." This was only to be expected in an atmosphere in which many Sikhs still seem to revere Jarnail Singh Bhindranwale as a martyr, but it also highlighted the fact that Longowal and his Akali colleagues will find it difficult to rehabilitate themselves in the public esteem. Probably because of this, Longowal announced that he would start touring Punjab to meet those injured or uprooted by the November 1984 violence. Talwandi, on the other hand, issued a combative statement to the press, making it clear that the Anandpur Sahib resolution had to be the basis of any negotiations with the Centre.

This too was expected. The Home Ministry had been warned by the Punjab Government to expect some angry steam-letting by the leaders who have spent nine months in the cramped isolation of a jail cell, unsure of the mood of their followers and the people in their home state. However at night, stopping in Delhi en route to Amritsar, a tired but composed Longowal was more circumspect in his comments. He graciously accepted the greetings of all and sundry who called on him at the Punjabi Bagh mansion of his businessman friend Paramjit Singh Sarna. This, of course included a stream of correspondents, Indian and foreign. "I have been out of touch for nine months, and three thoughts are uppermost in my mind," said Longowal, "to resettle the women widowed in the November '84 violence, relocate those uprooted and get the army deserters and the innocent youth of Punjab released from jail.The sp-

ecial courts are a great *dhakka* (assault) on the *qaum*. They are meant for Sikhs but not spies who have been selling the country down the river for 25 years."

While Longowal was talking to newsmen, elsewhere in Delhi Home Minister Chavan was again in action, announcing the replacement of K.T. Satarawala by Arjun Singh. This came as a surprise to everyone at Chavan's press conference. The Madhya Pradesh chief minister has had little or no contact with Punjab to justify his posting to the Chandigarh Raj Bhawan. On the other hand he had led his party to a handsome win in the assembly elections and only the previous day been sworn-in as chief minister. In his second term he had literally become an "*ek din ka raja*" (king for a day), as a Congress functionary in Delhi put it. More important than the debate about whether this meant a promotion or come–uppance for Arjun Singh, was the question: what does it portend for Punjab? Singh will be Punjab's fifth governor since 1983 when Dr Chenna Reddy handed over to A.P. Sharma who handed over to B.D.Pande. Pande was removed just after Operation Bluestar and Satarawala moved in.

When Longowal heard about the appointment he too was mystified, but Arjun Singh himself accepted the change with equanimity. Relaxing in his suite at the Madhya Pradesh Bhavan in Delhi's Diplomatic Enclave after a late dinner, Singh was unruffled. He was "overwhelmed" by the trust reposed in him by the prime minister. Singh beamed, belying the impression of some that he had been banished from active politics. Of course governing Punjab while the state is under President's rule is going to be a more difficult task than managing Madhya Pradesh: "I am going there with an absolutely open mind. I have no preconceived notions and I expect the same from the other side," said Singh. While only he could know the reasons behind the move, an aide of the prime minister explained that the tough Singh, who is an experienced administrator, could be expected to tame Punjab's wayward bureaucracy. Under the easy-going Satarawala the state was being run single-handed by his senior adviser R.V. Subrahmaniam, a retired bureaucrat.

It was Subrahmaniam who made the only official level contact with Longowal at an Udaipur guest-house about a month before the release. Longowal, who lost 12 kg in detention, told INDIA TODAY that Subrahmaniam had obviously come to gauge his morale. "I told him Khalsa *hangam hai, mucchh noon halle vi vat denda hai*. (The Khalsa is steadfast, and still twirls his moustache with pride.) He asked me how the tension in Punjab could be eased, the situation normalised. I told him release the imprisoned youth and deserters who fled their posts under severe emotional stress, hold a judicial inquiry and punish those found guilty of killing Sikhs. I told him these are the new issues. The Government has spoiled the atmosphere anew."

Why had Longowal and his fellow Akalis been released? Chavan described it as a "concrete gesture. The Government has taken the first positive step and now the ball is the Akali court". Whether the Akalis bounce the ball back into the Government's court to start an exchange or hit it out of play remains to be seen. The chances appeared to favour a brief waiting period while the Akali leaders consult among themselves, with the ad hoc committee, the five Sikh head priests and village level workers to gauge the popular mood and the views of the party rank and file. Only then will they decide whether or not they should open negotiations with the Government.

"I am going there (to Punjab) with an absolutely open mind. I have no preconceived notions and I expect the same from the other side."

ARJUN SINGH
Punjab governor

The first occasion for direct contact between the Akalis and the Central Government could arise when the three-member Cabinet sub-committee on Punjab comprising Home Minister Chavan, Defence Minister Narasimha Rao and Education Minister K.C.Pant visits Punjab probably on weekends during the budget session of the Parliament.

But two questions that remained in the air as the released Akalis started congregating in Amritsar were: why had the Government chosen this time to release them, and why were SGPC chief G.S.Tohra and former chief minister Parkash Singh Badal, being kept back in jail? Official sources pointed out that the Home Ministry had received reports from the Punjab Government about the sullen mood in the countryside which keeps a dangerous anti-Centre resentment on the boil. In such a mood, moderate Akalis were proving unpopular. If evidence of this was needed, it was provided by the traditional Hola Mohalla congregation at Anandpur Sahib last fortnight. Akali leaders like Surjan Singh Thekedar were faced with angry Khalistan slogans from a section of the crowd. By releasing the moderate leaders the Government had decided to test the waters and also gauge how much of a following the Akali leaders still command after a nine-month absence from the scene.

Longowal however made it clear that the Government had no option but to release them, because it had no case to justify their prolonged detention. He was released the day before his appeal against the detention came up in the Supreme Court. Longowal said the Government had gone through his speeches for the past three years and could not come up with anything objectionable. He was also confident that Tohra and Badal would be released. "The cases against us are similar to the ones the British instituted against Congress leaders. Now they (Congressmen) are doing it to us," he said.

From the other side of the fence it looked like the Government was holding the Tohra and Badal cards in reserve to play at some later stage in the game. If things work out and some kind of dialogue does begin with the Akalis, then the Government could release the remaining two leaders as a further gesture of reconciliation. But by far the most crucial question is whether the released Akalis are going to be in any kind of position to orchestrate and sway public opinion in Punjab. The alternative scenario—that the mood of alienation and hostility in the countryside has deteriorated beyond the rescuing capacity of even the Akali leadership—is too grim to contemplate.

"TISCON has always given very consistent results in our labs. That's why we decided to use it for the world's longest river bridge."

—Mr A K Bhagat
Executive Engineer
Ganga Bridge Divn. III
Patna.

The 5.575 km long Mahatma Gandhi Setu, the main link between North and South Bihar, is the longest river bridge in the world. While constructing it, Mr Bhagat had to keep two important things in mind.

The Bridge had to cater to a discharge of 1,13,300 m^3/second with navigational facilities. It had to be designed for a 'Live Load' of class "70R" or two lanes of class "A" whichever gave the severest effect. As in the past, he found the desired structural support in Tiscon—the superior ribbed reinforcing bar from Tata Steel. Let us find out from him why he chose Tiscon.

"It's the rib pattern that makes all the difference."

"Actually, before deciding on a particular steel, we test it at our own laboratories. And Tiscon has always given us very consistent results. You see, it's the rib pattern that makes all the difference. It is designed to give superior grip.

"We saved about 40% on raw materials."

"But the main deciding factor has been Tiscon's strength. Because each bar has extremely high proof stress and ultimate tensile value, the total quantity of bars consumed is much less. We saved about 40% on raw materials. This isn't the first time I'm working with Tiscon. It has given me very positive results in the past.

"I would use it always, without any reservation."

Not only Mr Bhagat. Most top designers and architects in India are specifying Tiscon nowadays. The proof can be seen in almost every major project in the country. And all because of Tata Steel's obsession for quality. A quality that's become the by-word of the Indian industry today.

For more information write to any of our sales offices.

SPY SCANDAL

Sordid Saga

AS INDIA's latest spy scandal retreats slowly into the background there is, paradoxically, an increasingly clearer outline of the entire sordid saga. According to high-level sources in the investigating team, confessional statements by some of the accused have indicated the following:

- representatives of the Polish, East German and French embassies threatened to snap commercial links with Maneklal, the company that Coomar Narain worked for, unless he supplied them with restricted information;
- that the head of the company, Yogesh Maneklal, gave Coomar Narain the go-ahead to pass on the information if it meant commercial gain for the company;
- that the first contact was made with the French in 1979 through Colonel Alain Bolley's predecessor and subsequently the Polish and East German embassies got into the act;
- that all Narain received from the three embassies by way of payment was around Rs 1.5 lakh between 1979 and 1984.

Though five members of the network in custody have alleged that they were forced to make confessional statements, investigating officials are convinced that they now have an airtight case against almost all the nearly 20 people arrested for their part, however minor, in the espionage scandal. Much of their confidence is based on the clean breast that kingpin Coomar Narain himself has made regarding the ramifications and modus operandi he employed in obtaining the vast amount of classified information.

According to investigating sources, the saga started in 1979 when Coomar Narain, as the Delhi representative of Maneklal, had one of his meetings with the then French deputy military attache, M.Morvan.Morvan made it clear that if Narain's company wanted to do business in France there would be a quid pro quo, namely, information on industrial licences, foreign collaboration, foreign investment, defence projects and economic planning. Maneklal was informed and according to investigating officers, he okayed the agreement if it was in the interest of the company.

Narain was ideally placed to supply the information.He had the right contacts including K.C.Sharma, PA to the secretary, economic affairs, P. Sarathi, section officer in the Ministry of Defence Production, Amrik Lal, PA to the defence secretary and Palaniswami, PA to the joint secretary in the Ministry of Shipping.The information he obtained from these sources were passed on to Morvan throughout 1980 when Bolley arrived and took over as receiver. The sources were paid a standard fee of Rs 300 per document which included minutes of the Joint Intelligence Committee handed over by Amrik Lal.

In 1982, the net around Narain was tightened further.On a visit to the Polish embassy, the commercial attache used the same ploy that Morvan had employed.He threatened to terminate Maneklal's business dealings in Poland unless Narain came up with information on economic policies, foreign collaboration, Indo-Polish trade prospects and marine diesel engine collaboration with the Garden Reach Workshop in Calcutta.

PRAMOD PUSHKARNA

Narain: indicting accomplices

Pressurised for the sudden increase in the flow of information, Narain then cultivated J.C.Arora, PA to deputy secretary, Ministry of Defence Production and J.M.Tiwary, PA to the additional secretary in the Ministry of Finance. By this time, the East Germans, with whom Maneklal had considerable commercial dealings, also demanded their pound of flesh. The Germans asked specifically for information relating to the Ministry of Chemicals and Fertilisers.

According to information obtained by INDIA TODAY, the sources in the PA network were being paid from Maneklal's company funds while Narain himself was paid around Rs 500 per document from the three embassies apart from the commissions that Maneklal was getting for increased business dealings with the three countries.

Narain's two key sources, Gopalan and Kher, arrived on the scene much later and investigating authorities say that most of the information obtained in more recent months was through Gopalan, PA to the principal secretary of the prime minister. Investigations have established the fact that Kher, Gopalan's senior colleague, used to visit Narain's Hailey Road office frequently for drinks but there is some doubt as to whether he was involved in passing on information.Gopalan, however, was the key conduit for most of the sensitive documents obtained by Narain for his foreign masters and was paid, according to investigating sources, not so much in cash but in kind, namely whisky and women.

In that context, the question that arises is exactly how serious is the prosecution case against the 17 accused so far. An analysis of the documents seized from those arrested would suggest that it is not as serious as was earlier thought, with a majority of the information being on economic affairs.There are also routine reports on countries like Libya which go to the President before he embarks on a tour to that particular region as well as analysis of political developments in countries like Pakistan and China.There were also reports on the domestic itinerary of the President which would hardly be of interest to French or Polish intelligence.

However, since the accused were arrested under the all-embracing Official Secrets Act, even documents such as these spell trouble in the legal sense. As Section 5 of the Act says: "If any person having in possession or control any secret official code, password, sketch, plan, model, article, note, document or information which has been obtained in contravention of the Act... shall be guilty of offence under this section.

Legal experts are of the opinion that the confessional statements together with the 96 documents seized from Narain's office renders the prosecution case exceptionally strong.Narain himself is said to have indicted most of the 17 arrested in his statement including his employer, Yogesh Maneklal. But for the others much will also depend on the sensitive value of the documents seized from their respective residences. Investigating officials say that one or two of the PA's may get off with a lighter sentence but Coomar Narain and the other members of his ring appear to be heading for a long spell behind bars.

TAMIL NADU

In Limbo

AS THE weather warmed up in Tamil Nadu last fortnight, a sleepy midsummer listlessness seemed to have seeped into politics and administration. An always quick-witted and articulate DMK President M. Karunanidhi appeared to have gone into hibernation. The dormant Congress(I), which made a magnificent comeback in the Assembly elections after its total wipe-out from the state in 1967, did not even warm up to organise any meeting to thank the electorate. And film-hero Chief Minister M.G. Ramachandran, who had gloriously won no less than three last ditch battles with death, looked like he was losing grip over the state Government and the AIADMK. Said a political commentator in Madras: "Suddenly everything seems to have gone adrift, particularly in the AIADMK Government and party. Ministers and leaders of both the pro and anti-Jayalalitha factions have suddenly gone into a shell. Everyone has become silent overnight, but still one hears all kinds of rumour and gossip."

The composition of the initial 17-member cabinet that MGR announced betrayed clear evidence of a pro-Jayalalitha tilt (INDIA TODAY March 15). The dropping of Jayalalitha critics like former labour minister S. Raghavanandam and former food minister T. Veerasamy from the cabinet, the sudden sidelining of the earlier high-profile party leaders like finance minister V.R. Nedunchezhiyan and information minister R.M. Veerappan, and the satisfying tete-a-tete which Jayalalitha ultimately managed with the chief minister certainly seemed to indicate a mending of fences between the former matinee idol and his heroine.

And last fortnight came the crowning glory for the Rajya Sabha member and former propaganda secretary of the AIADMK. As the assembly election campaign moved into its last phase in Pondicherry, Andhra Pradesh and Karnataka, MGR issued a statement that Jayalalitha would campaign for the AIADMK and its electoral ally, the Congress(I), in both Pondicherry and Andhra Pradesh. He directed party workers to make all arrangements for the campaign and stressed specifically that no AIADMK partymen should criticise Jayalalitha. "I wish there would be continued peace and unity within the party," he said. That looked very much like a coup de grace for people like Veerapan and Agriculture Minister K. Kalimuthu and other Jayalalitha critics.

Jayalalitha: back in favour

However, when Jayalalitha hit the campaign trail, she arrived in Pondicherry only to find that the AIADMK workers had not been able to arrange even a single public meeting for her in any of the 30 assembly constituencies there. There were not even any posters and she was forced to address street-corner meetings from atop her van. She toured 11 constituencies and returned to Madras the same night. En route, her van was attacked and stoned and, subsequently, she was forced to call off her Andhra Pradesh trip. Said an AIADMK leader from the Veerappan camp: "The idea of Jayalalitha campaigning was not at all relished by our partymen in Pondicherry. That is why her van was stoned and she had to beat a hasty retreat to Madras. Even the few meetings that she addressed did not draw any crowds."

This was a sea change from days when top-ranking ministers and party functionaries would stand up to pay obeisance to Jayalalitha and no party leader could dare to sit beside her on the dais at any public meeting, of course, with deference to the unquestioned will of MGR. But here the party supremo's explicit orders were being openly flouted. The testimony of sources close to Jayalalitha only reinforces the point: "We don't know how this happened, but there were no proper arrangements made for Jayalalitha's campaign. That is why she wound up early and also called off the Andhra Pradesh tour."

Said Jayalalitha in a brief telephonic interview: "The public response to my campaign in Pondicherry was tremendous, in spite of the last minute invitation to me to go there. In every street and in every lane there were people waiting to see and hear me... that was why I was forced to address the crowds on every road and street that my convoy traversed. That my van was stoned because partymen resented my coming there is absolutely false. It was because of this sense of disappointment and frustration at not having been able to see me that the crowd at one point attacked the van."

In an attempt to nip in the bud any possible party revolt against the expulsion of former food minister S.D. Somasundaram from the party, MGR is taking no chances with the detractors. V.V. Swaminathan, party leader of the Veerappan camp, was made minister for handlooms and textiles. The former food minister T. Veerasamy, returned to the assembly from the Orthanad constituency in Thanjavur district, found himself elevated to the prized commercial taxes portfolio. The cabinet expansion saw another Jayalalitha opponent, getting in as minister, Anoor P.G. Jagadeesan of Chinglepet. The only supporter of Jayalalitha who got a berth in the cabinet this time was former assembly speaker K. Rajaram who got the prestigious industries portfolio. The Veerappan camp followers are critical of the inclusion of Rajaram in the cabinet, as also the retention of S. Ramachandran as electricity minister.

That the anti-Jayalalitha faction will not be trifled with and that MGR is only too aware of the fact is obvious. The Tamil Nadu chief minister had lost feeling in his right hand after the paralytic stroke he suffered. He has now mostly regained it. But whether he will also be able to regain his loosening hold on his party is still open to question.

SCL makes chips worth a few crore rupees. They are used in push button telephones, clocks, watches. Which are sold for as much as hundreds of crores. In between both is a saga of gainful employment, with all its benefits, for lakhs of Indians. Made possible by silicon, which is nothing but refined and processed sand.

In the past, progress has been technology-based, at the cost of people and employment. Or people-based, at the cost of technology and sophistication. With the LSI silicon chip, both become possible. Together.

SCL silicon chips will herald a new era of sophistication in diverse fields. LSI-based digital electronic telephone exchanges that will revolutionise the tele-communication industry in the country. Quartz watches and clocks, computers, calculators and a host of other microelectronic-based uses. Bringing down prices and power requirements, enhancing efficiency and increasing productivity.

On the other side of the prism, this process will mean employment. Massive employment. Because chips sold by SCL for a few crores rupees will make products worth hundreds of crores. Providing much-needed employment not to one or two, but lakhs of Indians. Bringing new hope and meaning to their lives.

This is the story of SCL. Not technology or employment. But technology and employment. Together.

BIHAR

Poll Toll

FAIR and free elections are an exercise central to a democratic system but in Bihar it has become a time where might prevails and even murder is committed to establish it. At the close of polling for the assembly elections last fortnight, 63 people including four candidates had been killed and over 200 wounded in the state, the highest ever number of casualties during any election exercise. A senior police officer admitted that every election in Bihar has been more violent than the previous one, but keeping in view the heavy security arrangements that were made no one expected this pitch of unrestrained violence.

Concerned by the large-scale violence which erupted during the Lok Sabha elections in December last year when 23 people were killed (INDIA TODAY, January 15), the Election Commission marked Bihar as the most sensitive state. All the 50,620 booths were either declared as "sensitive" or "extra-sensitive". R.P. Bhalla, the commission secretary, camped in Patna during the polling to attend to complaints and oversee the elections.

The Chief Secretary K.K. Srivastava said that 200 companies of paramilitary forces, including 96 companies of the CRPF and BSF, were called out to assist the one lakh state police and homeguard force to oversee the elections. Special squads were formed and the state split into five zones kept under the charge of senior officials. Each booth was guarded by a permanently stationed force. The Centre informed the state administration that in case of emergencies more paramilitary forces could be flown in. Srivastava announced that the forces had been ordered to shoot miscreants at sight. Also, collective fines would be imposed wherever violence erupted.

The chief secretary said on the eve of the elections that notices under Section 107 CrPC were issued against about 54,000 persons and another 3,665 bound down to maintain peace. Seventy-seven persons were wanted under the National Security Act, 390 under the Bihar Crime Control Act, and 2,719 rounded up. During the polling another 1,000 were detained by the police in the unprecedented drive to keep anti-social elements away from the polling booths.

Photographs by K.M. KISHAN

Funeral procession of Janeshwar Prasad Singh and police outside a polling booth: increased violence

But in a state which has professionalised booth-capturing and has mercenaries who hire out their services, none of these attempts to check violence worked. With the slaying of four candidates, a new chapter in its established history of violence and murder during elections was written. Bishnu Mahto, leader of the Indian People's Front (a Naxalite organisation) contesting from the Hatia constituency as an independent candidate was shot dead. His wife and family members alleged that Mahto was offered money by some Congress(I) leaders to withdraw his candidature before he was killed.

In Nalanda, the state's crime capital, another independent candidate Mahendra Prasad, who had no previous police record was gunned down in his house a day before the polling. In Masaurhi Congress(I) candidate Janeshwar Prasad Singh was shot dead in his election office. His supporters alleged that the DMKP were responsible for the murder.

Banwari Ram, an independent candidate constesting from the Bokaro constituency died in his sleep in allegedly mysterious circumstances.

Attempting to control the violence which had clearly got out of hand, the police fired in at least 25 places to restore order during polling. Illustrative of the chaos that prevailed, in some places the police began firing without any real provocation, gunning down innocent, uninvolved bystanders. As many as 12 persons died during the campaigning, 29 died on the first day of polling and another 22 were killed during the second day of polling. But officials claim that only 12 died on the first day of polling—one in accidental firing, five in mob violence and six in police firings—and nine on the second day—two in police firings and seven in group clashes.

Chief Minister Chandrashekhar Singh blamed the Opposition, especially the DMKP, for spreading terror and instigating the violence out of frustration. Singh was reacting to DMKP leader and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

former chief minister Karpoori Thakur's irresponsible open call to his supporters to collect arms, legal or illegal, to prevent booth-capturing by Congress(I) goondas to 'protect democracy' (INDIA TODAY, January 31, 1985). But DMKP leaders privately admitted that there were a few instances of booth-capturing and violence because they claimed the people were ready to "do or die" to protect their votes.

Central to the issue of violence was the conflict between the upper and backward castes. The upper caste has traditionally used force to put down the backward classes. As a result only 40 per cent of the voters turned out to exercise their franchise. "Casting our votes means risking our lives. Who knows when a bullet will fly taking away your life," said a voter in Vaishali.

Together with this was the emergence this time of widespread rigging by supposedly neutral polling officers. In the Kharagpur constituency in Munger district all the election officials at booth numbers 132, 133 and 134 were replaced and arrested for "collusive stamping" of ballot papers and putting them into the ballot boxes the night before polling. The administration, clearly pressurised by interested parties, later retraced its "official report" and said the district magistrate had communicated a wrong message. The presiding officer at a booth in Bakhtiyarpur constituency and another in Mahedpura were replaced and prosecuted on the same charge. Similarly, a number of polling personnel were detained in Madhubani and Muzaffarpur districts, and all the members of a polling party manning a booth in Benipatti constituency were detained.

Candidates were also detained by the police for carrying arms during polling. Ramashray Prasad, CPI MP and his son were arrested at a booth in Islampur constituency. In Nauthan CPI candidate Ramakant Dwivedi and his three supporters were arrested for possession of a rifle and bombs.

The proportions that violence and blood-letting have assumed in Bihar during elections is staggering. Attempting to provide a solution, a DMKP leader said: "Bihar should be isolated from the rest of the country during elections and only outside forces and officials should conduct it if rigging and violence are to be stopped completely." This is no real solution because many see the problem of violence as a Bihar way to stop elections wherever a candidate finds his position threatened. —FARZAND AHMED

Illegal mining in a Bihar coalfield and (inset) Budhdeo Singh: dubious dealings

BIHAR

Coal Scuttle

SCANDAL dogs the coal industry in Bihar with the regularity of a metronome. And the latest controversy to arise has only served to further taint the "clean" image of the Chandrashekhar Singh ministry. In tandem with outgoing Bihar Mines Minister Budhdeo Singh, who had been denied a ticket for the assembly elections, the chief minister ratified an arbitrarily selected list of "collaborators" for the state-owned Bihar Mines Development Corporation's (BMDC) joint coal-mining projects. So swiftly and secretly did the file move that even senior state Mines Department officials were caught unawares. "I heard about this only through newspaper reports," said one.

But the attempt to bulldoze the deal through has come up against some obstacles, not least of which is a memorandum sent to Prime Minister Rajiv Gandhi last fortnight by some leading citizens urging him to intervene and scuttle the deal and order an enquiry to ascertain under what circumstances the decision was taken. The memorandum pointed out that the persons selected as collaborators have cases against them ranging from coal pilferage to smuggling, illegal mining and evasion of taxes pending in various courts. The memorandum added that the norms laid down for collaboration had been "grossly violated" and that the recommendations of a high-level committee had been ignored.

However even more damning allegations came from some Congress(I) leaders, who privately called the whole affair a "farewell deal" in which much money changed hands. Industry sources said none of those selected as collaborators had proper mining leases or mine opening permission from the Government of India, and added that they had been running these coal mines illegally and been stopped several times by the authorities. Also, none of the five major criteria laid down by the high-level committee, including financial soundness and technical capability had been paid heed to. The Supreme Court has asked the BMDC to operate the mines in the joint sector in the first phase. These four included 81 coal-mines abandoned by Coal India Ltd after the first phase of mines nationalisation. These are spread over 3,000 acres in the districts of Giridih, Hazaribagh and Dhanbad.

Mines Minister Budhdeo Singh, however, refutes all charges of murky dealings, and says that everything was within the framework suggested by the high-level committee. When these mines are in operation they will fetch

the state exchequer an additional Rs 100 crore, he says. Also, the agreement provided that over and above the profit the BMDC would get Rs 15 per tonne of coal as royalty. A rigorous clause in the agreement was that in case of losses it would only be the private parties and not the BMDC which would suffer them. Besides, he said, the Supreme Court had recently allowed the BMDC to collaborate with private parties.

Defending his choice of collaborators and the exclusion of 91 other applicants, Singh said it was natural for those disgruntled elements who had been denied the offer to spread false rumours. They had no past experience and many of them were facing income-tax cases, he said, adding: "I have written to the Government that these elements were trying to demoralise the Government in order to gain these mines illegally."

But not all of the applicants were non-deserving or controversial. Sources said that one of the applicants was the Kundori Labour Cooperative Society operating in Hazaribagh and Giridih districts with the proper licences. In a petition to the director of mines the society pointed out that it was formed to help poor Harijans and tribals and contested the claims of the other applicants, saying none of them had worked in these mines in the past on scientific lines and many owed large sums to the Government. Its claims were ignored.

Following the Supreme Court order allowing the BMDC to operate the mines in question in collaboration with private parties, the Government formed the legislative committee to set the norms under which to select the collaborators and prepare viability reports for the four mines, Khas Jageshwar, Jageshwar, Pure Murlidih and Selected Pirpratand. The committee had suggested that the Government itself run these mines. But when the last Congress(I) Government returned to power the matter was shelved at the behest of party bigwigs.

An oversight on the part of the Central Government, whose ordinances in 1971 and 1973 taking over the management of the coal-mines in the country excluded mentioning these collieries as most of them were closed then, helped the old owners. They took advantage of the lacunae in the law and started mining them under an order from the Calcutta High Court but after a prolonged legal battle the Bihar Government won the case in the Supreme Court and closed the mines. This did not deter the operators. They mined the collieries clandestinely and employed the local poor. It resulted in both loss of revenue and loss of life.

Mrs Raminik Gupta, a trade union leader who had risked her life and fought against the illegal mining, succeeded in getting her demand for a committee of the legislative council formed to go into the matter six years ago. At that time at least 45 disputes were pending in the Calcutta High Court. The committee members told the Energy Ministry that though D-grade coal was found in abundance in the area Coal India Ltd had refused to take any responsibility. Late in 1981 the Bihar Government submitted a list of 81 names to the Central Coalfields Ltd, but it too had refused to come into the picture.

Following the controversy over the latest deal the BMDC reportedly held over the file and expressed doubts about whether the collaborations should be accepted. But considering the political clout of the minister and the mine operators it appears the BMDC will have little choice but to accept the proposal. The way the deal was struck on the eve of Singh's departure has raised many questions, and it appears that the old saying that any one who touches coal will have his hands blackened has in the case of the Bihar Government proved extremely apt. —FARZAND AHMED

KERALA

Liquor Bicker

THE CLOSURE of a nondescript shop tucked into a corner of a small fishing town in Kerala may not exactly be news, but the act has created enough waves to send liquor barons in the state reeling. Following five months of intensive picketing, members of the Kerala Prohibition Council (KPC) managed last fortnight to first, persuade the people of Mattancherry, Cochin, to boycott a privately-owned arrack shop, and second, to get the Government to order the shop to pull down its shutters. Considering the enormous political clout wielded by the liquor lobby in a state that has run wet for years, this is a positive gain for the KPC's leader M.P. Manmathan, 70, who was arrested four times and jailed twice in the course of his crusade. Said Manmathan: "Liquor shops have been mushrooming all over the state and today, drinking has become the biggest social evil in Kerala. Our fight is for total prohibition to eradicate this monster from our system."

Anti-liquor leader M.P. Manmathan being arrested during his fast

This new victory for the KPC and its supporters comes on the heels of others: at Kolencherry, near Cochin, volunteers forced the closure of an arrack shop after a month-long agitation in January; at Trichur, local residents physically prevented the state-owned Kerala Beverages Corporation from opening a liquor outlet in an orthodox brahmin area dotted with temples; at the annual Sarvodaya mela near Calicut, Sarvodaya workers walked out of a meeting addressed by Chief Minister K.Karunakaran, mouths gagged, and ears plugged, in protest against the Government's disregard for the Mattancherry agitation.

However, the KPC's booster dose came in the shape of poet and president of the state unit of the Peoples' Union for Civil Liberties (PUCL) Professor Kumara Pillai, who went on indefinite fast in front of the Mattancherry arrack shop calling for either a categorical statement from the Government that it rejected the setting down of prohibition as one of the directive principles of state policy in the Constitution, or a change in its prohibition policy. Karunakaran was sufficiently pressurised into holding talks with Manmathan and appointing a subcommittee comprising Excise Minister

Watch your conference take shape without putting it together

Do nothing.
And watch Air-India's Congresses & Conventions team organise just about everything. To put your conference together in the shape you'd like it to be.

Watch them bid for India as the conference venue. Promote your conference abroad. Liaise with delegates. Assist in preparing their kits. Arrange their hotel bookings. Transport them all the way to Delhi or any other city in India. On a wide range of low, low group and individual fares.

What's more, they'll even provide freighter services at special rates. In case you need to fly in special equipment for the conference.

Of course, their job is made easier by Air-India's worldwide network of 145 offices. And... by Delhi's super conference venues. Like the Talkatora Stadium or the Indoor Sports Complex. Ideal for large conventions ranging from 3000 to 25000. Or, the 9 new hotels in Delhi, most of which offer excellent conference facilities.

Or even the ultra-modern Shere-e-Kashmir Conference Centre at Srinagar. Which offers you a choice between two large and two small conference rooms as well as a 600 seat auditorium with simultaneous translation facilities in five languages and film projection facilities for both 16 mm and 35 mm. Plus four committee rooms, exclusive documentation and communication equipment, banquet space for 500 persons, an exhibition gallery and a press room. All attached to the superb 5-star Centaur Lake View Hotel right next to Dal Lake.

Naturally, with such services, it's no surprise that Air-India has been closely involved with the 12th International Leprosy Congress, the World Mining Congress, the 59th International Convention of World Association of Detectives Conference and many more.

Best of all, Air-India offers its conference planning services absolutely free! Now that you know, don't just rub your hands together in glee!

Widows of Vypeen liquor victims picket the arrack shop: new victory

N. Sreenivasan and two MLA's to look into the matter, apart from ordering the Mattancherry outlet closed.

While this set off ripples of some worry through the powerful liquor lobby, there did not seem to be any reason for panic yet, considering that the state's civil supplies corporation itself directs the sale of liquor. As K.S. Ramakrishnan, a major figure in the liquor business, and owner of the Mattancherry outlet, explained: "Manmathan and his volunteers can never stop liquor trade in the state because there are nearly two lakh people who make a living out of toddy-tapping. Above all, it is one of the biggest revenue-earners for the Government." Sreenivasan also admitted to INDIA TODAY that "there is no question of the Government introducing total prohibition in the state when finances are in shambles". With an earning of about Rs 110 crore in 1984-85, he pointed out that this akbari revenue (that earned from the sale of liquor) was the largest revenue-earner after sales tax. Echoing also the Vypeen Island liquor tragedy of 1983 when 70 people died and several were blinded after consuming illicitly-brewed liquor, he added that not only would thousands be rendered jobless, total prohibition would further encourage illicit distillation.

Manmathan and Pillai, however, are not in the mood for mollification. Said Pillai with fervour: "This is not just a puritanical fight against a few drunkards but a campaign to arouse the conscience of the people which would lead to the closure of all liquor shops in the state." To this, Manmathan added: "We believe that the liquor culture has eaten into the fabric of our society to such an extent that in the recent spy scandal, liquor was the main villain."

To the argument that it is impossible to implement total prohibition in this state, Manmathan merely points to its success story in Gujarat. As for the hazards of illicit brewing, he maintains that severe punishments are the only deterrents. As the anti-liquor agitation slowly gathers support from various quarters, including some politicians and intellectuals, Pillai has declared in no uncertain terms that if the Government fails to implement prohibition in the state, the KPC will step up its protests through "neo-Gandhi militancy". And, as things stand, it does seem as though the issue will assume Hamletian overtones in the corridors of political power —to drink or not to drink.

—SREEDHAR PILLAI

KERALA

Party Games

THE PERPETUALLY simmering cauldron of Kerala politics boiled over last fortnight as the budget session started. Amid speculation of the imminent fall of the Congress(I)-led coalition, Chief Minister Karunakaran found himself in the none too unfamiliar position between the devil and the deep sea. Last month his government lost all the three-by-elections to the state Assembly and, as if to cap the losses, came the discovery that the state's finances were in extremely bad shape. What followed was a slanging match between the Congress(I) and the state Finance Minister K.M. Mani's Kerala Congress. While the Congress(I) men held Mani responsible for the state's financial woes, the finance minister was making snide remarks of the Centre not giving Kerala its due.

As the flak flew, it was Mani who had the last laugh when the two feuding groups of the Kerala Congress—Mani and Joseph groups, both constituents of the ruling United Democratic Front (UDF)—formally came together to form a single Kerala Congress marking an end to six years of bickering. Though unity talks between the two factions had been going on for some months, it was the Congress(I) hostility towards regional parties that hastened the unity. In the new set-up, Revenue Minister P.J. Joseph would be chairman of the party while Mani would be leader of the party in the Assembly.

It was, however, the defection of the Democratic Janata Party (DJP) MLA P.C. Thomas that gave the Kerala Congress the final boost to become the second largest party in the coalition, after the Congress(I). Though Mani maintains that "the unity of Kerala Congress has given the party more depth and range and has also provided more strength to Chief Minister Karunakaran and the UDF," indications are that the growing strength of his party will not deter him from staking claim to the post of deputy chief minister, currently held by the Indian Union Muslim League (IUML) which has 14 to the Kerala Congress' 15 MLA's.

The leader of the three-member DJP and lone woman minister in the Karunakaran Government, M. Kamalam, has complained to the speaker over the defection—the first case of change of party by a legislator since the passing of the anti-defection bill. Thomas, however, claims that the new law requires a member to have a one-third following if he is to leave a party, which, since his party has only three members, he commands. In any case, he adds, "I joined the Kerala Congress a day before the new constitution amendment came into force."

Dark clouds always hover around whenever the Assembly meets, with one constituent of the ruling coalition or another serving an ultimatum to the chief minister. This time it was the National Democratic Party (NDP) whose three MLA's ganged up and demanded that its fourth member and Health Minister Ramachandran Nair should be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

dropped from the Cabinet. Karunakaran, with his wafer-thin majority, assured that Nair would be dropped. The problem, apparently, was that each year one of the members wants to become minister and it looks like all four MLA's would now get a chance to be minister for at least a year before their term ends.

Karunakaran had the additional headache to settle a dispute in the Congress(I) over the choice of a new speaker to replace Vakkom Purushothaman who has been elected to the Lok Sabha. In a calculated political move, Karunakaran made V.M. Sudheeran, an Antony man and one of his severest critics, the new speaker. Sudheeran, just before his election as speaker, told INDIA TODAY: "The speakership was thrust on me by the party and Antony is also very keen that I take it up for the smooth functioning of the present Government."

Sudheeran (right) being congratulated

It looks like the Karunakaran Government would be able to survive only as long as the chief minister wishes. But the cost of survival has been high so far and in the coming weeks a considerable amount of political horse-trading cannot be ruled out.

—SREEDHAR PILLAI

"There is no zero hour in the rules, so how does the question of scrapping it arise?"

HASHIM ABDUL HALIM,
speaker

"Parliament and assemblies allowed a zero hour where members could raise urgent issues."

ABDUS SATTAR,
opposition leader

WEST BENGAL

Zero Ban ?

WHAT'S in a zero? Plenty really, if it happens to be the democratic, free-for-all zero hour in the state Assembly. When the Congress(I) high command decided to return "decency and decorum" to parliamentary functioning, West Bengal's Marxist Speaker Hashim Abdul Halim decided that one way to bring the same to the state Assembly would be to banish the boisterous zero hour. As it happened, this minor but significant change that Halim announced in assembly procedures last fortnight was to the Congress (I) MLA's of the state, no less than a dangerous design to "muzzle protest against the ruling Left Front".

Bowing to his Congress(I) critics, Halim agreed to continue zero hour for a while but asserted, nonetheless, that no rules had actually been broken when he originally passed his order since the rules themselves make no mention of zero hour.

While there may be no mention of the zero hour in assembly rules Congress(I) leader of the Opposition Abdus Sattar pointed out: "By virtue of convention, Parliament and assemblies allowed a zero hour where members could raise whatever issues they considered urgent." The idea was to provide a psychological outlet for opposition members to vent any frustration they may have and to prevent them from resorting to any extra-parliamentary forms of protest.

According to Halim, however, this convention was being blatantly misused in the Assembly, resulting in chaos and indiscipline. "Since accusations made in the house cannot be challenged in a court of law," he explained, "there was nothing to protect a member from slanderous attacks that could tarnish his reputation."

"The opportunities for misuse are present not just in the zero hour," Sattar argued back. Most Congress (I) members are particularly incensed by the move because Halim did not consult them before making this decision. Said Gyan Singh Sohanpal of the Congress(I): "There was no discussion, nothing. The speaker took a unilateral decision."

Halim, however, continued to be adamant. According to him the "mention hour" gave an adequately ample opportunity to members to raise any legitimate issue or charge against the ruling benches. Said he: "The accused must be given a chance to prepare a defence against the charges to be raised against him and should not be surprised by a charge suddenly sprung against him as had become the prevailing practice in the zero hour."

That, in effect, would—according to Congress(I) Chief Whip Subrata Mukherjee—make it impossible to expose any malpractices of the Left Front. "In corruption cases it is often difficult to submit a paper to the speaker since it could mean betraying the source," he said. Moreover the formal process of raising corruption charges in the assembly would require the speaker's final consent. "Not only will spontaneous protest be totally suppressed but so will the role of the Opposition in the Assembly," he asserts glumly. If the noisy zero hour really goes, it's going to be dull days ahead in the West Bengal Assembly.

JAMMU & KASHMIR

Housing Heroin

ALL ACTIVITY on the placid waters of Srinagar's Dal Lake is not connected to tourism as the police were to learn last fortnight. It has, in fact become a key trading point for heroin. In a raid conducted by the special squad of the crime branch on the *Queen of Sheba*, a luxury houseboat moored on the banks of the lake near Srinagar, the police last week arrested Anwari Begum, husband Samad Guroo, owner of the houseboat Rasool Kotroo and three others while they were selling "brown sugar", a cruder form of heroin. All six are now being prosecuted for non-bailable offences under Section 48 of the Excise Act and under Section 8/14 of the Dangerous Drugs Act.

Anwari Begum

Samad Guroo

Rasool Kotroo

That the illegal trading was no small time racket became clear with the recovery, during the raid, of a large quantity of the drug, as also US, Thai, Indonesian and Nepalese currency valued at several lakh rupees from the possession of Anwari Begum. Her bank account also showed a recent deposit of Rs 82,000, allegedly the proceeds from recent sales. Some incriminatory documents pertaining to Anwari's correspondence with the underworld in Delhi and Bombay have prompted the Superintendent of Police (crime branch), Javid Mukhdoom, to rush to Delhi to haul in the others involved in the racket.

Masterminded by Anwari Begum, 45, who crossed into India from Abottabad in Pakistan in 1957, the trade flourished with help from Afghan smugglers who clandestinely transported the drug into Kashmir valley from across the Pakistan and Afghan border. Once across, "sugar" coated cigarettes laced with a quarter gram of the drug each, were sold for anything between Rs 30 to Rs 40 apiece. The local underground market alone is estimated to be fetching about Rs 1.50 lakh to Rs 2 lakh for every kilogramme of the drug, which has come to be increasingly in demand in the student and youth community.

In fact the growing use of the drug among youths in the region caused concern enough for the state Parliamentary Affairs Minister, G.M. Bhadarwahi, to confess in the Assembly, on February 28, that "heroin has been playing havoc with the health and morals of our young people, mostly in the age group of 15 to 25 years. Even young girls are said to have become addicts with disastrous consequences". Referring to the use of the drug, a Srinagar hotel-owner lamented: "My two young sons have become a real problem for me. One of them has to appear in the matriculation exams later this month but I've already struck off his name from the list of successful candidates." Said Omar Bashir, president of the Aquatic Tourists Traders' Association: "The foremost need should be to keep a strict vigil on the activities of the young boatmen who remain in direct and constant contact with the sellers and buyers of the drug."

While the Government may have initiated some action against the culprits, local newspapers have alleged political patronage to Anwari Begum. Indeed, a senior doctor in S.M.H.S. Hospital, Srinagar, observed that though the authorities had been informed of this menace seven months ago, "the Government agencies did not act as vigorously as they could have". There have also been allegations of police collusion with the racketeers and the *Srinagar Times*, in a report on February 26, charged that many police officers were shielding the criminals. Arrests, nonetheless, have been made. How the rest of the story unfolds and what clout, if any, Anwari Begum wields, now remain to be seen.

PAKISTAN

A Warning Shot

FOR A brief while last month there was the promise of a new, crisp Pakistani spring. In the garden city of Islamabad, the first shoots began to appear on the plentiful but still bare trees, bearing the promise of a fresh flush of green. For democracy-starved Pakistan, they were symbolic of another renewal, heralded by the promise of a national election taking the electorate a first, tentative step forward towards freeing itself from the much despised eight-year-old stranglehold of the military.

In the end, when it was all over, it seemed as if nothing had changed. True, Pakistan now had a new National Assembly due to meet on March 23, but what powers it would have remained to be seen. There were no political parties to jockey to form the Government—parties having been banned from taking part as such in the election—and there were few takers for President Zia-ul-Haq's assertion that the Assembly would be allowed to function freely as an advisory body. After all, Zia remained president unelected, and made sure that he continued to call the shots. By fortnight's end, he gave constitutional muscle to his authority to appoint governors, the military brass and the chief election commissioner, and call or dissolve the new Assembly entirely on his own. Without con-

Pakistani women waiting to cast their votes and (right) Zia at a polling booth: a loaded message

testing a thing, he won himself the right to rule for five years when his continuation in office would depend on re-election by an electoral college of senators and assemblymen over whose fortunes he would in the meantime be sole arbiter.

But no exercise of franchise, no matter how skilfully steered, can occur without some bumps and narrow misses. So it was with Pakistan's February election which saw the defeat of several central and provincial ministers. They included defence minister Ali Ahmed Talpur from Sind, widely regarded as a potential prime minister, information minister Raja Zafarul Haq, who was in the news for having greeted Sikh pilgrims to Nankana Sahib recently, and labour minister Ghulam Dastgir Khan.

It also saw the political eclipse of several of Zia's political friends and close associates, as well as the decimation of candidates from parties that supported him. The Jamaat-i-Islami, generally referred to as Zia's 'B team', backed more than 60 candidates; only 10 were successful. On the other hand, candidates who were associated with political parties but had been expelled for participating in an election boycotted by them did remarkably well. Almost all the 50-odd candidates associated with the late premier Z.A. Bhutto's Pakistan People's Party (PPP), which along with the 11-party Movement for the Restoration of Democracy (MRD) boycotted the election, were returned to the Assembly. So were strong independents such as retired Air Marshal Nur Khan.

Clearly, the electorate had fired a warning shot across Zia's bow. Summing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

up a widespread interpretation of the result, *The Statesman* editorialised: "In many respects, the arrangement resembles the early uneasy compromises between nascent parliamentarianism and absolute monarchy," adding that it would be surprising if the system wasn't soon overthrown.

If that were to happen, it would obliterate last month's tentative first step towards democracy. And, in spite of all its imperfections, as far as the voter was concerned Pakistan's elections were free and, within the constraints, fair. Not that an Indian voter would have recognised them as such. Political parties were debarred from participating, the more than 1,000 candidates contesting the 217 National Assembly seats on February 25 were vetted by deputy commissioners and superintendents of police, and given a stamp of official approval.

There were no widely attended public meetings, no loudspeakers shattering the sombre discipline of a military-controlled, allegedly Islamic society, no raucous processions or colourful buntings. None of them was permitted by the military administration which countenanced no more than a limited number of posters in crowded bazaars and personalised, house-to-house canvassing of votes.

Candidates weren't allowed to debate great issues of state, harangue the government for real or imaginary ills, or promise if elected to solve the problems of the people. They offered neither political options nor visionary manifestoes. Instead, they stood microphone-less at street corners, addressed knots of sceptical listeners and promised to improve civic facilities. As one wag asked: "How much heat can you generate by offering to clean drains."

In the background, Pakistan's massive military machinery continued to unleash its awesome powers on helpless members of the MRD, and anyone else advocating an election boycott. Thousands were arrested or restricted to their houses, districts or provinces, sometimes hauled out of bed in the middle of the night. But the election went on.

The first crucial measure of the election's success was turnout. It was impossible to verify whether it was 50 per cent plus as claimed by the Government. But everyone conceded it was several times greater than for General Zia's December 19 personal referendum. Then, over 60 per cent are said officially to have cast their vote, basically answering questions on the desirability of Islam, which Zia interpreted as an overwhelming vote to con-

ZIA-UL-HAQ

"I have no regrets"

PAKISTAN'S elections last month weren't the tumultuous, noisy colourful carnivals that Indian elections tend to be. Certainly they caused President Zia-ul-Haq, 60, little worry. A master at the art of public relations, Zia spent polling week carrying on business as usual. Dressed in a grey sherwani and white salwar, Zia met London-based television journalist of Independent Television's Eastern Eye service KARAN THAPAR *in the drawing room of the Army House at Rawalpindi for a half-hour chat. The walls were lined with over 60 pictures of Zia with several heads of state, and the President, newly returned to power, was as usual — relaxed, calm and very well briefed. Excerpts from the interview:*

On the elections:

All that I have done and am doing is to transfer power from a martial or military regime to a civilian democratically elected regime, of which I would have the honour of being, for the next five years *Inshallah*, a constitutional head.

On banning political parties:

One has to deal with one's own experience. Through martial laws, (there

Zia: reviving a process gradually

Digitized by Arya Samaj Foundation Chennai and eGangotri

has not been) much of a tradition in the form of political practices. So I had to give a start to a political process right from the beginning. I had two choices, either to revive the political parties in the next 10 years or to revive a process through which I could hand-create a civilian government in a lesser, shorter time. I have decided on the latter. Basically, there are two things. Firstly, my own personal view that in an Islamic system, political parties as they exist in Pakistan have no room. My second point was that I wanted to go straight to the people, and I did, and I succeeded.

On his constitutional powers:

In a sane, responsible government the head of state always acts on the advice of the prime minister. The powers are discretionary. Why must we think the prime minister and president are two forces? They are one nation, one party. Through the party system, they are one people trying to serve the people to the best of their spirit.

On dissolving the legislature:

The Parliament is generally dissolved on the recommendation of a prime minister, and a prime minister generally dissolves the Parliament if he wants to go for early elections. I see no reason to stand in their way. According to the constitution, the President has the power to dissolve the Parliament at his discretion and in case he feels that conditions (demand that it) must be left to the electorate, he can dissolve it.

On earlier election postponements:

First we wanted to hold elections after 90 days, and after 90 days my own friends and politicians forced us not to hold these elections. We tried again in 1979, and then we made up our minds to put the train back on the tracks, and that is how we started proceeding on a non-party system, trying to introduce an Islamic form of government.

On appointing a prime minister:

If you read the Constitution, you will see that the President is the constitutional head of the Government, and like all constitutions in democratic governments, everything is done in his name. When he appoints the prime minister, it does not mean that he takes it out of a hat; he appoints the prime minister who enjoys the confidence of the full house, (a person) who is humble, honest and dynamic and can take Pakistan forward.

On the arrested political leaders:

They should be released very soon, by April. Some are under detention (but) most only detained in their own houses.

On Benazir Bhutto:

This is her country, she is most welcome to come back of her own choice. We never detained her when she was here, unless she forced us to confine her to her own house. I see no reason why I should (arrest her if she returns). She is welcome to do what she likes, but... there are laws that have to be obeyed.

On Pakistan's alleged help to Sikh extremists:

All false, fabricated. There are 200,000 retired soldiers amongst the Sikh community. What is Pakistan waiting to teach them by opening camps in Pakistan? I have said on many occasions that Pakistan does not like anybody to interfere in its internal affairs. Similarly, it would be immoral on my part that I show sympathies to a segment of society in India which is up in arms at the Government today.

On US bases in Pakistan:

America has never indicated that they'll be interested in bases in Pakistan. They'd never be conceded. Why should Pakistan have bases for a country which requires them for something else? But don't forget Pakistan has friendly relations with the US and keeping (in mind our) non-aligned status (to which) we are new converts, we are very conscious of our position. If we feel that the US has certain requirements, not on bases, (and) Pakistan can help. I'll be too pleased to help them because it is an interdependent (relationship).

On Afghanistan:

I hope and pray that one day the Soviet troops will withdraw from Afghanistan and refugees will go home. We cannot find a solution militarily. It is through political means and by jingo I've done everything that is possible. And I wish I had a little bit of help from our neighbour, India, in this respect.

On the military:

I became a politician the day I took over the duties of running the country. Military men should not indulge in a profession which is not theirs, and therefore I feel that the military as a whole should keep aloof. But you cannot deny the armed forces of the country the two fundamental responsibilities that we have, guarding the building of Pakistan and the ideology of Pakistan.

On himself:

I have in 44 years of my army career learned one thing: Love your job and work hard. I have no regrets.

tinue as President for another five years!

Nevertheless, even official sources privately conceded that the claimed 60 per cent plus referendum turnout was false. Admitted one: "As a government servant I have to say it was 60 per cent. Personally I think it was more like 40 per cent. However, my mother in Sargodha says it was 15 per cent." In fact, on referendum day streets and polling booths were deserted, and no one conceded anything over a 20 per cent turnout. Even supporters and beneficiaries of the Zia regime like shopkeepers were disgusted by the referendum outcome, and for the first time turned against him.

But election day saw a fair amount of activity as large numbers of voters, especially women, went to cast their vote. Polling in certain areas of Lahore and Rawalpindi was light, but in Karachi, Peshawar and the interior of almost all the provinces it was indeed very respectable. As Mushahid Hussain, editor of Islamabad's English daily, *The Muslim*, tartly pointed out: "Political observers were quick to discern that the United States, our godfather, which had maintained an embarrassing silence on the referendum by not even sending a ritualistic message of congratulations to the President, was the first to welcome what on February 25 was a genuinely democratic exercise."

In retrospect, the turnout could hardly have been otherwise. Each of the 1,000-plus candidates conservatively spent between Pakistani Rs 5 lakh and Rs 50 lakh (Rs 4 lakh to 40 lakh) and brought out some votes on a purely personal basis. Then there were many powerful feudal lords and rich businessmen in the fray, all appealing to local caste, sect and *biradari* sentiments. One cynical Lahore journalist, trying to explain the presence of many beautiful, well-dressed women creating a veritable Meena Bazaar on election day, cattily observed: "They're doing this out of boredom. They have no other amusement in our society. It has become a social occasion."

But he was only partially right. Pakistani women are particularly infuriated about their aborted emancipation, thanks to the mullahs, Islamisation and the military regime. And they used the occasion to show it. Many others saw this as perhaps the proverbial light at the end of the tunnel.

Observed ex-Supreme Court Justice Fakhruddin Ebrahim, a bitter critic of the military regime: "When the elections came I was happy. I thought some political process will start. I also thought the MRD had made a mistake by not partici-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Outside a polling booth: good turnout

pating." And Maulana Kausar Niazi, a former Bhutto cabinet minister but no longer in the People's Party, explained: "People wanted to get rid of martial law. They were sure it would go at election end. As a result, there were many candidates, and voters were enthusiastic. They may have been non-party elections. But they were certainly political."

The trouble was, of course, what Hussain described as the 'rules of the game' which came in the shape of a bombshell on March 2 evening. Appearing on television in full dress military uniform, General Zia rambled on about the political history of Pakistan in an 83-minute address, and then announced what he claimed were some amendments to the 1973 Constitution. In fact, despite his protestations, he had unleashed a new constitution, which not only neutralised the election but was a thinly veiled attempt at maintaining his dictatorial stranglehold.

The 1973 constitution, duly ratified by a genuinely elected assembly, had maintained Parliament would be sovereign, the prime minister head of government and responsible to Parliament, and federating provinces largely autonomous. General Zia's amendments vested all power in the President, and both Parliament and the prime minister really amounted to nothing. The president would appoint the prime minister, who then had 60 days to muster a majority in the house. He could sack Parliament at will. The President would also appoint provincial governors who in turn would appoint chief ministers on his advice and even dissolve provincial assemblies if they though it was necessary. The President would also remain commander-in-chief of the defence forces, and make all major defence appointments including the service chiefs.

As a well-known commentator not wishing to the identified said: "In the last and previous constitutions, the President had to follow the advice of the prime minister. Here the President does not. It is totally unilateral. The prime minister is an appointee." Perhaps the prime minister's new role was best illustrated by Vai Ell's cartoon in Karachi's eveninger, *The Star*. He depicted the prime minister with a havildar's stripes, squatting on the ground outside the President's office door, smoking a hookah and sipping tea.

The 60 days given to the appointed prime minister to prove his majority seemed a particularly brazen method of mustering support for favoured candidates, since the possibility of buying or blackmailing parliamentarians seemed infinite. Since many successful candidates are feudal lords or businessmen, each involved in several murder, land or cheating cases, they could prove particularly pliable. And everyone spent over the permissible Rs 40,000 during the campaign, reportedly closely watched by the authorities. Prickly members could be slapped with election petitions, where conviction could mean five years' imprisonment.

The reaction to General Zia's constitutional sleight of hand was predictable. Mian Tufail Mohammad, president of the Jamaat-i-Islami, and hitherto a close Zia supporter, termed it a confiscation of the elected Assembly's rights. He said the amendments should have been presented

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to Parliament in the form of bills. His deputy, Professor Ghafoor Ahmed, was more forthright. "It is a misnomer to call these amendments," the courtly, soft-spoken vice-president fumed in an interview. "It is a new constitution imposed on the country by a martial law regime, which has no right to even amend the 1973 constitution, never mind make a new one." He was particularly annoyed that all powers—judicial, executive and legislative—had been concentrated in the hands of the President, without accountability to Parliament. The Constitution also puts him above the judiciary. "The new constitution of 1985 has virtually made Parliament a debating society," he said.

The crucial question is whether in fact General Zia-ul-Haq is at all authorised to amend the constitution. Even before the amendments came, former Supreme Court Justice Fakhruddin Ebrahim went on record saying he had no power to do so. "In fact, you cannot legitimately call this the 1973 constitution" says Ebrahim. "It has changed radically. I would call it the 1985 constitution given by one solitary individual. These amendments are not going to come up before the National Assembly for ratification. They are a fait accompli. Today this is the constitution of Pakistan, with the amendments."

But there are some who regard these constitutional amendments as an intermediate tactical position. Recently elected Air Marshal Nur Khan (Retd) was privately furious but said: "I regard the amendments as a negotiating position rather than final. It is for the Assembly to show unity and fight for its rights. The military cannot govern indefinitely. Martial law cannot remain much longer. The National Assembly will have to be entrusted with power."

Given all these complications, why did Zia agree to have elections at all when he seemed to be sitting pretty? Some Pakistani analysts believe the answer lies in US pressure. There was difficulty passing economic and military aid through the US Congress. The watershed was US Vice-President George Bush's visit some months ago, when both he and Pakistan

Passers-by at poll hoarding

Foreign Minister Sahibzada Yaqub Khan almost simultaneously announced resumption of the Pakistani democratic process. The Americans obviously carry extraordinary clout in Pakistan, and with the military regime in general. President Zia in particular is deeply be holden to them. Just after the election private receptions in honour of US Ambassador Dean Hinton were being held so he could to meet the newly elected parliamentarians, which tells its own story.

General Zia's immediate task now is to select a prime minister. There had been talk earlier of candidates from the minority provinces like Sindhi industrialist Ilahi Bux Soomro, especially following the large Sind turnout during the election. However, since the prime minister will only be 'consulted' should the contingency arise, rather than have his 'advice' acted upon, that is not in any case a major issue.

If there is any possible challenge, it is from Zia's own power base, the army, which he has headed for the last decade. His ability to relinquish that crucial post and also dismantle martial law depends on finding trustworthy people for key positions, who will not do what he did to prime minister Zulfikar Ali Bhutto. How much anyone can be trusted in that kind of environment is always moot. A key player is expected to be General Rahimuddin Khan, chairman of the Joint chiefs of staff and a close relation of former Indian President Zakir Hussain. With his daughter married to General Zia's son, he is said to be less of a threat than anyone else. Several provincial governors are slated to get the chop.

With General Zia leaving Army House, there are also bound to be many changes in the military, and many ambitions thwarted. The cumulative effect is difficult to foresee. The still undefined role of the crucial National Security Council (NSC) remains a big question mark. Zia has often reiterated his was not an attempt to transfer but share power. The NSC will reportedly be the military's ultimate weapon to safeguard its interests; indemnify itself against all past constitutional violations; and legitimise future extra-constitutional intervention.

Army interests could be threatened in several areas, for instance, by a foreign policy which reduces its pre-eminence in national affairs or threatens the enormous amount of military aid it receives from Pakistan's allies ; reductions in defence spending (which makes up 60 per cent of the budget) or neglect of the petty interests of the huge servicemen's lobby, like its demand for land in Sind.

But for the moment, it is Zia and the army that have the upper hand. Most of the political leadership is unfortunately locked up in jails across the country, though Zia says he will release them by April (*see interview*), but there seems to be little possibility of concerted political pressure building up inside Parliament or outside until the rules of the game are changed. That means lifting martial law and tolerating public debate and even dissent. If that happens, Pakistan will indeed move towards democracy. If it doesn't the February election will be an aborted political spring.

The coveted prize Sir Alfred Nobel instituted will honour five celebrities this year. The dynamic company he founded will also honour one.

DYTRON collaborates with DYNAMIT NOBEL AG of West Germany

DYTRON WILL MANUFACTURE

LAMINATES
- Glass Epoxy Copper Clad
- Paper Phenolic Copper Clad
- Paper Phenolic Unclad
- Phenolic Fabric
- Decorative

RESINS
- Melamine
- Phenolic
- Epoxy

Dytron (India) Limited is soon entering the capital market with a public issue of 22,75,000 Equity Shares of Rs.10 each for cash at par providing investors with an outstanding investment opportunity.

This issue is being made to raise a part of the finance for the Rs.14.85 crores project to manufacture Industrial and Decorative Laminates and Thermosetting Resins. Coming up with technical collaboration and financial participation from **DYNAMIT NOBEL AKTIENGESELLSCHAFT,** who are world leaders in chemicals and allied products, the project is now ready for trial runs.

A look at the highlights of the issue will convince you that here is an investment opportunity you were waiting for.

HIGHLIGHTS

- Technical collaboration with world renowned Dynamit Nobel of West Germany
- Equity participation by Dynamit Nobel
- Eastern India's first high technology industrial and decorative laminate plant
- Highly advanced product features and locational advantages ensure easy marketability of products
- Buy-back guarantee of 50% of the production of Paper Phenolic Copper Clad Laminates by foreign collaborator
- Glass Epoxy and cold punch grade of Paper Phenolic Copper Clad Laminates will be import substitute items
- No gestation, no waiting period – trial production from April 1985 and commercial production soon thereafter
- Distinguished personalities on the Board – professionally managed
- Tax concessions all the way – Wealth Tax, 80CC, 80L benefits for the investors, Backward area concessions and incentives from Central and State Governments for the Company
- Initial listing on Calcutta, Bombay and Delhi Stock Exchanges

As no two signatures can be the same, so pens to suit your style have to differ.

Now Luxor gives you a choice

Flowing Softouch

Slim Micro-tip **GRAPHIC**

We at Luxor, with over 25 years of involvement with pens, have realised certain basic facts about writing and pens. We have realised that everyone has his own style, everyone has his own writing. Some prefer soft rounded curves, some prefer the angular elegance, while some like it no nonsense, some prefer slim sophistication.

That is why Luxor has such a wide range of pens, covering every category of writing. And now you have yet two more Luxor specials. The Flowing Softouch pen. And the Slim Micro-tip Graphic. Both with that unmistakable Luxor flow and elegance. Each designed to suit different styles, personalities and writings. Available in Black, Blue, Red and Green.

So whatever your preference, there's always a Luxor.

PAKISTAN

Explosive Links

WASHINGTON's reaction to the most recent evidence of Pakistan's continuing global clandestine efforts to obtain essential components for making an atomic bomb is a frightening illustration of the Reagan Administration's pathetic inability to curb the nuclear ambitions of a renegade ally.

This volatile issue exploded into the American public consciousness last fortnight with the airing of an hour-long television documentary made by Pulitzer prize-winning investigative reporter Seymour Hersh in which he revealed that a 33-year-old Pakistani agent named Nazir Ahmed Vaid—posing as an innocent businessman—had illegally tried to smuggle 50 timing devices, that are used to trigger nuclear bombs, out of the USA at the behest of the Pakistani Government.

The devices, known as krytrons, resemble tiny, odd-shaped light bulbs and are manufactured only in America by a company named E.G. and G. They are considered to be such high-technology, sensitive items that their sales are restricted and licensed and their purchase by outsiders must be considered piecemeal by the state department. INDIA TODAY has learned that the total krytrons in commercial and other uses in the entire industrialised world number less than 100. Vaid's attempt to obtain 50 of them at one go raised a forest of red flags within E.G. and G. Vaid was placed under surveillance and nabbed by customs agents last June in a classical 'sting' operation when he tried to export the krytrons in a box deceptively labeled "bulbs and switches". He was tried, found guilty of export violations, given a mild sentence and deported to Pakistan.

These events have once again riveted world attention not only on how much time remains before Pakistan blasts its way into the nuclear club but also on whether the US has the will, determination or, even the ability, to carry out its professed public policy of preventing nuclear weapons proliferation.

Among the disturbing questions now being raised is whether the Reagan Administration bent over backwards in an attempt to avoid any overt embarassment to Pakistan which is the recipient of a $3.2 billion arms aid package from the US. Earlier news accounts of Vaid's arrest and subsequent trial had painted him as a misguided, and overzealous businessman. But according to the latest revelations, documents recovered from Vaid link him solidly and directly to the Pakistani Government.

What is even more startling is that these documents—exchanges of letters between Vaid and Pakistan's top atomic energy commission officials, S.A. Butt and Colonel Dar—regarding Vaid's surreptitious purchases here were seized by US government authorities on the day of his arrest. "Customs officials knew from day one of the arrest that Vaid was linked to the bomb through the documents," Hersh said. And this information was passed on to the state department and the justice department. Still, Vaid was prosecuted only as a negligent businessman rather than as a spy under the atomic energy act.

The prosecutor in the case admitted having seen the "smoking gun" documents but said that he did not recognise the significance of the Butt and Dar connection because he did not know who they were. Hersh identified Butt as the key Pakistani official who negotiated secret deals in Europe in the 1970's for procuring centrifuges and other materials for use in the production of enriched uranium in Pakistan.

Observers see an irritating *deja vu* in the reaction to the latest Pakistani nuclear caper from all sides. Pakistani officials immediately, and steadfastly denied that they had an interest in developing or exploding a bomb and reiterated their public position that their atomic plans were peaceful and research-oriented and that their businessmen were being maliciously smeared for internal political reasons. And they denied any connection with Vaid. Notwithstanding the existence of the seized documents, the state department and the White House simply repeated Pakistan's "assurances" that it is not developing a bomb. Vaid insisted that he did not know what krytrons really were and that he was simply fulfilling an order for research purposes for the University of Islamabad. And members of the US house and senate once again made noises about cutting off all arms aid to Pakistan. Powerful senators like former presidential candidates Alan Cranston and John Glenn have tried to cut off aid to Pakistan in the past over this issue but their efforts have been defeated by the onslaught of powerful lobbying from the White House.

The newest attempt in this direction is from Congressman Steve Solarz who has just introduced a bill stipulating that the US should cut off all arms aid to Pakistan if any of its agents are caught ever again trying to smuggle bomb components into Pakistan from anywhere in the world. Experts predict that this measure is doomed to failure because powerful right wing senators like Jesse Helms insist on widening the dragnet to include economic sanctions against all nations—including Israel—who are engaged in similar activity. Most members of Congress are loathe to equate Israel with Pakistan or to "punish" their staunchest Mid-East ally.

Also, the Reagan Administration is hesitant to take any precipitous action against Pakistan for fear that cutting off arms would make Zia a reluctant ally in sending arms to Afghan guerillas in the American-Soviet confrontation in Afghanistan.

But the US Government has been expressing deep anguish over Pakistan's nuclear adventurism in private. According to reliable sources at least a dozen top presidential assistants and emissaries have visited Pakistan over the last year to quietly arm-twist Zia and his government. The administration is convinced that Pakistan has the capability to produce several nuclear weapons. And intelligence agencies have confirmed that Pakistan was starting to produce plutonium as well as small amounts of enriched bomb-grade uranium. Sources said that the one of the specific purposes of presidential envoy Vernon Walter's recent visit to Islamabad was to tell Zia to "knock off" all production of fissionable materials.

Even though Zia and his government insist on telling visiting American VIP's that all Pakistan has "is a couple of sputtering centrifuges", they have reportedly agreed to halt production of enriched uranium and have not been operating their re-processing plant in recent months. Members of Congress have received this information in top level secret briefings from American intelligence sources.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

These secret briefings to Congress on Pakistan's nuclear weapons programme—based on an extensive and elaborate American intelligence operation directed at Pakistan's nuclear facilities where no international inspections are allowed—are in the nature of a White House compromise. Under current law US aid to Pakistan can be cut off only if Pakistan explodes a bomb. But last year the senate tried to pass a measure under which the US president, in writing, would assure the US Congress that Pakistan was not actively making a bomb, before further aid to Pakistan could be renewed. The measure was defeated at the behest of the White House. But under an alternative, unofficial arrangement, the Central Intelligence Agency (CIA) and related agencies regularly deliver classified information on Pakistan's nuclear designs to selected committees of Congress. Based on these briefings and notwithstanding Pakistan's recently-botched attempt at smuggling the krytrons, some members are convinced that Pakistan has for the time being halted production of fissionable materials.

There is likely to be another, powerful, outcry from US senators to halt all aid to Pakistan only if they learn through intelligence sources that Pakistan is again developing fissile materials. But one thing seems certain. The senate is likely to delay or even deny Pakistan the sale of new weapons it is seeking such as the sophisticated EC-2 Hawkeyes in relation against that country's clandestine operations in this country and Europe for obtaining parts for its off-again-on-again nuclear programme. And the White House is unlikely to fight too hard against such a ban.

Another view among administration circles is that Pakistan's real intentions may be one of politico-nuclear chesmanship to keep everybody guessing and at bay. These sources say that Pakistan, by design, deliberately and openly advertises its intentions of procuring parts for development of the bomb but stops short of actually exploding and designing one. The Vaid case they point out, was too obvious. He looked like a Pakistani, talked like a Pakistani and was in full Pakistani dress when he personally ordered the 50 krytrons. The game—if it is indeed one—signals to India that Pakistan has matched India's technological capabilities in this field and thereby deters India's from exploding another nuclear device that could 'justify' a similar explosion in Pakistan. It also feeds Pakistan's own nationalist pride and keeps domestic pressures on Zia in abeyance because he is not publicly perceived as kowtowing to American pressures on him not to build a bomb and while this posture keeps Americans nervous it also assures continuation of American aid to Pakistan because American policy-makers believe that their aid gives them the 'leverage' with which to arm-twist Pakistan out of building and exploding a nuclear weapon.

The issue exploded into American public consciousness when a television documentary revealed that a Pakistani agent had illegally tried to smuggle 50 timing devices, used to trigger nuclear bombs, out of the USA at the Pakistan Government's behest.

The Institute of Nuclear Science and Technology at Islamabad and (inset) Vaid

Whether the question of to-explode-or-not-to-explode may or may not be a brilliantly conceived game plan in which Zia is having the ultimate laugh, the existence of Pakistan's nuclear capability is a fact. Former Congressman Lester Wolfe, who headed a house foreign relations subcommittee said that as early as 1978 he "saw hard evidence of Pakistan's assembly lines for centrifuges. We knew at that time that Pakistan was getting nuclear material for large-scale production of the bomb. They had already spent $100 million in production".

Briefly, under the Carter administration, the US cut off all aid to Pakistan under the Symington amendment prohibiting assistance to any country engaged in developing a nuclear bomb. But despite Pakistan's refusal to sign the no-proliferation treaty or to submit facilities to international inspection, the Symington amendment was waived when the Soviets invaded Afghanistan and arms aid to Pakistan was resumed.

But throughout this period, as Senator Glenn remarked: "Pakistan has engaged in world-wide effort involving clandestine transfers of nuclear technology, equipment, and materials whose purpose is specifically geared to produce large quantities of weapons grade materials." Arrests similar to that of Vaid have been made in several countries during the past:

► In 1980, the Canadian police arrested two Pakistani agents trying to ship US-built inverters used in uranium enrichment;

► The following year Pakistani agents were able to persuade Turkish firms to divert American-built inverters from Europe to Pakistan;

► In 1983, Dr Abdul Qadir, head of Pakistan's nuclear programme, was convicted in Amsterdam in absentia for stealing blueprints of a Dutch uranium enrichment plant while working there as a consultant;

► During the same period Pakistani agents were arrested again in Canada and the US for attempting to smuggle materials such as zirocomium that is used in nuclear reactors;

► Last year the state department learned that Pakistan had a graphite purification plan as a source of plutoniun.

Critics of the US policy argue that the failure of the US to exercise the 'leverage' it claims to have with Pakistan will definitely lead to the production of a bomb. As one official put it: "The Pakistanis have nothing but contempt for us and they are using us." Paul Warnke, former US director of arms control recently stated: "There may be some benefits for close US relations with Pakistan. But is a nuclear-armed Pakistan a better ally? The Russians would see a nuclear Pakistan a better target for destabilisation. They would seek to destabilise Pakistan and turn it into a Soviet ally."

Several administration sources, however, believe that the only way to defuse Pakistan's nuclear intentions is to persuade India to take new bilateral initiatives toward Pakistan aimed, ultimately, at securing a no-bomb pact between the two countries. Such a no-nuclear detente between the two countries would be backed by guarantees from the United States, the Soviet Union and China.

SRI LANKAN REFUGEES

The Boat People

TAMIL leaders have been warning of "another Bangladesh" and by last fortnight with the influx of refugees from Sri Lanka into coastal Tamil Nadu crossing the 50,000 mark, their words carried a prophetic ring. Over 12,000 refugees have made the hazardous crossing since early February to a new and uncertain beginning having lost their livelihood and abandoned their homes in the face of the reign of unbridled terror unleashed by Sri Lankan security forces. In the process many families have been separated with no hope of being reunited in the near future. Though local authorities have managed to cope with their rehabilitation, their arrival poses other problems that will not be so easy to solve. INDIA TODAY's *Madras Correspondent* S.H. VENKATRAMANI *was on hand when the influx was at its peak. His report.*

HIS CLOSE cropped hair is white and his anxious face wrinkled with deep furrows. Thommai, 65 years old and a rugged fisherman who has learned over the years to cope with adversity, looks pale and lost as he squats on the ground with his wife Sesudiya, four sons and three daughters. He has reason to be distraught. One night last fortnight Thommai and his family slipped into a boat and left their home in Talaimannar town in Sri Lanka's north-western district of Mannar and made a perilous crossing to Rameswaram island, the nearest bit of Tamil Nadu's Ramanathapuram district from Sri Lanka. From there it was a short journey to the Mandapam repatriates' transit camp, 18 km inland where they are now installed.

Thommai is representative of the new wave of Sri Lankan Tamils who have been fleeing from their homes across the Palk Straits since last month, seeking security and safety in India from what they describe as terror unleashed by the Sri Lankan armed forces. As a result, Mandapam looks less a transit camp and more a refugee camp. Sesudiya, who speaks in a staccato voice and wears long ear-rings which have significantly distended her ear lobes, says that for the last six months, Talaimannar fishermen have scarcely been able to venture out to sea to fish "thanks to the day and night vigil on the sea by the Sri Lankan navy". In a contrasting, flat monotone, Thommai mumbles: "We don't have any other skills, we have been starving. Even starving is alright, but the Sinhalese army is always on the prowl and huge contingents keep descending on Tamil areas." The army suspects every Tamil, he adds, because every young Tamil is a potential extremist. "They loot our homes, rape our women and burn down our houses."

Mannar district has not been as hard pressed as areas further north where the Tamil population is much larger. Of Mannar district's one lakh people, some 30 per cent are Tamil-speaking Muslims, 60 per cent Tamil Christians and 10 per cent Sinhala. But Tamil militants who had earlier confined their operations to Jaffna in the north, had apparently started getting active around Mannar in January. Apart from stray incidents, a few soldiers and policemen were killed in

Refugees arriving in crowded boats at Rameswaram: tales of terror

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mannar in January. According to official Colombo sources, terrorists killed a Methodist minister of a local church and a couple of policemen travelling in a car and National Security Minister Lalith Athulathmudali lays the blame for the killing of 52 people in Mannar including Father Mary Bastian of the Mannar church squarely on the militants.

So severe were the military reprisals to these militant attacks that the Tamil residents of Mannar were left with very little choice but to flee the island to Tamil Nadu. But it was some time before they actually managed to get across to Ramanathapuram. Says Selvaratnam, a 38-year-old clerk working for the Talaimannar village council—a government job—who came over with his wife and four children and paid Rs 100 per person to make the crossing: "We are profoundly relieved to have been able to reach the safety of Tamil Nadu." Selvaratnam says that all four clerks with the council have fled because "it has become impossible for Tamils to live in Sri Lanka. You are not safe even inside your own house and any day Sinhalese soldiers may attack your home and burn it down, arrest your sons and torture them." He has no regrets at having exchanged his middle class existence in Talaimannar with the status of a penniless refugee in Mandapam.

Like thousands of others, Selvaratnam, Thommai and their families had obviously decided enough was enough. They piled their small but strong reinforced fibre fishing boats with a few essential belongings, and with 50 people packed into a boat which ought to take no more than 20, set out to sea. There was company because it is safer to travel in numbers, and although the crossing is a mere 21 km at its shortest, the boats charted a circuitous course to escape a confrontation with the Sri Lankan navy and air force which patrols the seas between India and Sri Lanka. As Mannar fisherman Thambipillai Fernando, 40, who escaped to Rameswaram with four children said: "We had to seek out the shallow waters and steer our boats through them because the Sri Lankan naval ships cannot come into these shallow waters."

The fear is, actually, a carry-over of their experience at home because the Sri Lankans make no real determined attempt to prevent the fishermen from leaving. The Sri Lankan navy and air force are on the prowl for what they believe are terrorists and supplies heading for Sri Lanka from India or escaping to India. Fishermen making the crossing are searched and often harassed, but seldom stopped. There have been a few instances of firing on boats from helicopters. Said Imlian, a 31-year-old turbaned fisherman who has shuttled between India and Sri Lanka ferrying refugees and who remains jovial in the face of hardship: "Only once was there firing in our direction from a helicopter so we sped back to Talaimannar and again set out at night. There was no further problem." Though there have been unconfirmed reports of vessels being sunk and bodies being recovered, there has been no serious attempt by the Sri Lankan navy to discourage or deter the Tamils from fleeing.

Understandably so. The Sri Lankan navy is hardly strong enough to effectively police the waters between the two countries, but more important, the Sri Lankan authorities are not exactly averse to the idea of Tamils leaving the island nation for India. Appapillai Amirthalingam, secretary-general of the Tamil United Liberation Front, provides the most radical view of the exodus. Talking to INDIA TODAY, Amirthalingam charged that the Sri Lankan Government "wants to convert Mannar district into a Sinhala-

An expectant mother being helped to shore: nightmare crossing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

majority area and that is why it is depopulating the district of Tamils".

Mannar district has a Tamil Christian population of 60,000 and about 10,000 Sinhalese. Amirthalingam argues that if 30,000 Sinhalese can be resettled it would even things out and provide a strong deterrent to the suspected traffic in arms and terrorists across the Palk Straits. This, the authorities believe, can ease the terrorist problem because although there are more than one million Tamils in Jaffna district further north, the distance from India is much greater—almost three times as much as from Mannar—and fishermen cannot make the trip as easily without being detected.

But Talaimannar is very different. A shopkeeper from Talaimannar who some day hopes to return and would not divulge his name, said that he and his family were the last to leave from his part of town. While they were waiting for some fishermen to take them across, they were accosted by some soldiers who asked them why they hadn't already left. "I explained to them I was waiting, for a boat to take us across," he said citing this as evidence of the army's eagerness to see the last of them. "But for the dividing sea between the two countries, Sri Lankan Tamils would have swarmed into Tamil Nadu just as refugees came into Bengal from Bangladesh in 1971," he added.

Two sisters cling to their remaining belongings: lost livelihood

Indeed, the official ferry service run by the Shipping Corporation of India, which ceased last winter because of the growing violence and insecurity in northern Sri Lanka, has been replaced by an unofficial "ferry service", run by fishermen who take people across for payment or against supplies of fuel or food. The latest wave started last month after the military crack-down, and the first boats hit Rameswaram in the pre-dawn hours of February 5, having been in the water a good nine hours. That day, five families of 21 people landed. The exodus peaked four days later on February 9 when, according to official figures, 363 people landed at different points on the Rameswaram-Dhanushkodi coast. Averaging around 300 to 400 a day last fortnight, the final tally had crossed more than 12,000 a month after the exodus started.

The refugees continue to pour in, and the Mandapam officials are anxious that at this rate it won't be long before half of Manner district's Christians flee to India. Their stories are distressingly similar, of army atrocities, fear for their lives, their livelihood gone. Fishermen who can't fish, shopkeepers who can't open and workers who can't work. Sivamali, 22-year-old fisherman from Talaimannar who arrived with a wife and child maintains an anxious vigil for his parents, brothers and sisters. "We couldn't fish, so it was hard to survive. And the army would shoot young men at random."

Fearing that the Sri Lankans would accuse them of operating an illegal ferry service the Indian authorities at first seized all incoming boats. This policy was quickly changed when the Sri Lankan Government began to allege that the Tamil Nadu Government was spiriting away Lankan Tamils. Now, on orders from on high, local officials look the other way when the boats commute between India and Sri Lanka ferrying refugees.

Indeed, the refugees couldn't hope for a friendlier welcome. Even as their boats touch the sands of Rameswaram, Indian fishermen, who have themselves been unable to go out and fish freely in the last six months for fear of reprisals from the Sri Lankan navy, help the refugees disembark and unload. Riding the few bullock-carts, the refugees are then taken to the 'Mohabeer dharamsala' in Rameswaram. At this veterinary dispensary converted into an entry point for refugees by

Refugee families at the Mohabeer camp: relief and rehabilitation

District Collector S. Gurumurthi, each refugee is made to fill out a disembarkation form—which gives some legal sanction to their presence—and innoculated with anti-cholera vaccine and tested for possible malaria. The refugees are then distributed between four different dharamsalas in Rameswaram and fed and housed for two or three days.

Their next halt is the Mandapam camp, which was the Sri Lanka authorities quarantine centre for Indian labour heading for Sri Lankan tea estates in the 19th and early 20th centuries, and which the Indian Government bought from Sri Lanka in 1966 for Rs 26 lakh to use as a transit camp for repatriates returning to India under the Srimavo-Shastri pact of 1964. At the camp, which now accommodates more than 700 families construction work is under way to increase capacity to 1,000 families, to be completed at a cost of Rs 15 lakh by the end of March.

Explains Gurumurthi: "At the Mandapam camp, we identify every refugee as a safeguard against an Assam type of problem later on." Each refugee is required to fill in a detailed identity card and photographs of family members are affixed to it as well. A refugees register is maintained. Once this process is over, each family is given some covered space—some 200 square feet for 12 to 15 people—and helped make a new home. Each family is given clothes, a set of aluminium utensils, blankets and mats. An average family, according to officials, costs about Rs 657 to maintain.

Beyond that, each family gets a cash allowance of Rs 110 to Rs 357 per month depending on its size, and the refugees are entitled to subsidised rice at 57 paise a kg and firewood at 80 paise a bundle of two kg which in the market would cost Rs 2. The state Government covers the firewood subsidy; the Centre pays for the rest. Gurumurthi estimates that the recurring cost of maintaining an average family is around Rs 1,100.

Mandapam is not the end of the trail for Sri Lankan refugees. In lots of 80 to 100 families, after an average stay of a week, they are scattered for settlement in all of Tamil Nadu's districts except Madras, Nilgris and Kanyakumari where repatriates have already thronged in large numbers. Not surprisingly, the refugees are elated. Says Alexander, a fisherman from Manner, "We are being looked after very well. We only look to the Indian Government to pressurise Sri Lanka to solve the Tamil problem speedily. Then we can go home again."

But this is not going to be quite so easy. For Ramanathapuram district has in the past been notorious for its caste and communal tension between the economically backward Hindus and Christians, Hindus and Muslims and between the Thevar and Harijan communities. Added to this Ramnathapuram is one of the most backward, impoverished and chronically drought-affected areas in a state where the monthly per capita income is as low as Rs 114. It is in these conditions that the Centre is maintaining thousands of refugees at a total of Rs 1,100 per family. Since the refugees unlike repatriates cannot be given jobs and absorbed into the national mainstream, they will have to depend on the Government's charity.

While the local populace has not expressed any resentment to the large influx of refugees, there is every possibility that problems are likely to arise. The predominantly Tamil Christian fishermen coming in from Sri Lanka will definitely upset the communal balance in the area which is not exactly going to go down very well with the Hindus. While everything is just hunky-dory at the moment with the general mood being one of overwhelming sympathy for the refugees, as more and more of them come pouring in, this could very easily cause the all too easily provoked passions of the volatile populace to erupt and add a new dimension to the already distressing problem.

INDO-FRENCH RELATIONS

Back on the Rails?

THE FORMAL announcement that Prime Minister Rajiv Gandhi will arrive in Paris on June 6 on a four-day official visit when he will also inaugurate the extensively designed L' Anné de L' Inde-1985 (India Year) has stilled weeks of speculation that surrounded the Parisian leg of his five-nation voyage. The agreement for the visit was effected some time ago when it was tentatively decided that Mrs Indira Gandhi and President Francois Mitterrand would jointly kick off the Festival of India (INDIA TODAY, April 15, 1983 and June 30, 1984). When French Prime Minister Laurent Fabius visited India to attend Mrs Gandhi's state funeral, he renewed the invitation to Rajiv Gandhi. Now the young prime minister and the French president will jointly inaugurate the nine-month extravaganza at the sprawling Trocadero Square against the backdrop of the Seine river and the Eiffel Tower amidst an Indian "*mela*", folkdancers, fireworks and live television coverage.

No doubt, it would be a stately occasion full of panache, dazzle and splendour. But the blithe, radiant elation and the clink of champagne toasts in ritzy 'salons' will hardly camouflage the stark fact that Indo-French ties—buoyant and upbeat just eight weeks ago—have retrogressed sharply and been devalued by the ruinous espionage affair. As the mass-selling newsweekly *L'Express* in a recent analysis entitled 'France-India: The Vanishing Dream' pointed out the "L'Anne de L'Inde-1985 in France has already got off to a rather bad start".

Despite the flawed political tenor between New Delhi and Paris, observers here are confident that the Indian prime minister's visit would be the perfect opportunity to put the derailed Indo-French ties back on the track. A part of the optimism appears to be generated from the fact that even Polish Premier General Jaruzelski—hardly an engaging figure in France where Western Europe's most potent Solidarity faction functions with forbidding efficiency—could pull off a "modestly successful visit in India" despite the fact that one of his diplomats was squarely implicated in the spy scandal. The argument goes considering Indo-French political and commercial ties have a broader base and scope, there is far too much at stake for the two countries to let matters go to seed. However, by the same token General Jaruzelski had promised to investigate if the diplomat at the Polish Trade Mission was involved in espionage and depending upon the outcome, "appropriate action" would be taken. During his press conference in New Delhi, to remove any doubts, the Polish premier had added that "anything that will harm India will harm Poland".

Extraordinary as it may seem, despite the damning indictment of Colonel Alain Bolley by Coomar Narain and his low-level bureaucratic buddies, French officials have maintained a dour and uncompromising silence. Taken under the wings of the Ministry of Defence, the French deputy military attache has been kept under tight wraps, even as criticism and questions have mounted: To what extent was Bolley culpable? Does he think he was framed? Did he work for the French external intelligence network—the Direction Generale de la Securite Exterieure (DGSE) or did he pass on information to CIA spooks? What do his superiors have to say about the incriminating evidence piled up against him? Is he being asked to explain his role or reprimanded? Have the so-called "consultations" as announced by the French Government ended and if it has, what is the outcome?

No clues are being offered—the Elysee spokesmen, the Ministry of External Relations, the Ministry of Defence or the sleuths of the DGSE are all maintaining a frosty silence over whether Colonel Bolley had indeed attempted to suborn Indian businessmen to obtain classified information. It is almost as if this deafening silence will obfuscate the affair and it will just go away in the course of time. This large dose of self-delusion apart, it is with difficulty that the French—especially those in the private sector with commercial interests in India—seem to reconcile to the fact that the country's trust and confidence had been shot to pieces by this scandalous affair. Little wonder then, disquieted by the official silence, the afternoon daily, *Le Monde* questioned in a front-page editorial the wisdom of such a "prudent attitude".

The baldest assertions which are made here are that it is difficult to target the grey areas between those considered "sensitive" by the host nation and run-of-the-mill jockeying for commercial and defence information. The other favourite theory that is bandied about is that the French have been "taken in" by their proverbial competitors—not just the Soviet Bloc but also by the British.

What is perhaps more illustrative and to be borne in mind is that the record of French weapons manufacturers abroad (most of the lions in the arms industry are now state-owned) is hardly pristine and is riddled with intrigue and dispensation of *pots-de-vins* (bribes). The problem became so corrosive that a previous gov-

By setting up a film coating plant all by itself, HPF moves the country closer to self-sufficiency in films.

The new film coating plant at HPF, designed and commissioned with indigenous talents and resources, has accelerated the coating speed several times over. Yet another instance of HPF's R & D capability.

Speeding towards self-sufficiency

The R & D projects at HPF are conceived and carried out with a single objective: to maximise indigenous input both in terms of technology and content.

A typical example is the new coating plant at HPF, commissioned recently to coat X-ray films with photosensitive chemicals.

This Rs 200 lakh plant, designed and commissioned entirely by HPF men, is capable of coating an additional 2 million square metres of X-ray films. The design, with built-in provisions for modifications, lends itself to the integrated production of roll films.

HPF, through its R & D efforts, has succeeded in developing a number of new products over the years: Bromoplast bromide paper, OPX-Super films for medical X-ray, photo typesetting papers and a host of films and papers for space and aerial photography.

Products that will take the country closer to total self-sufficiency in photosensitised materials.

From total dependency to near self-sufficiency

Film making is such a complex business that the bulk of manufacturing process must be done in total darkness — in an atmosphere that is 100% dust-free.

No wonder, there are only six manufacturers in the world who make photo films from start to finish.

HPF is one of them.

A company that today works to 180% of its original rated capacity.

A company that has moved the country from total dependence on imports to being almost self-reliant.

A company that is now a multi-product unit — manufacturing photographic, cinematographic, radiographic, lithographic and industrial radiographic film.

Film made with Indian knowhow, Indian materials and Indian expertise.

Film every Indian can be proud of.

ernment was forced to order a top-secret investigation of the state's role as a manufacturer and exporter of arms —the most celebrated being the Pierre Mayer Commission of 1976 ordered by President Giscard d 'Estaing which the French Ministry of Defence tried to quash. The stunning 135-page report came up with disturbing evidence that the French state was unwisely exposing itself by underwriting operations it should not be assuming responsibility for, and covering up transfers of money, that is bribes, that would be subject to severe criticism should they become public knowledge.

Besides the soft-pedalling on the Bolley affair, the only occasional statements attributed to him are those which have appeared in the press. One such statement attributed to the controversial Bolley quoted him as saying that he was "just an ordinary 'militaire' leading a boring life in India". Speculating about his future, one wag remarked that after his Indian escapade, Bolley could in all probability be "promoted".

The allusion is to the promotion of the French Ambassador to India, Serge Boidevaix, "recalled" by the Foreign Office back to the Quai d'Orsay. At a time when Indo-French relations took a steep nosedive, it must come as an exquisite surprise to the ambassador to be planted into the number 3 spot in the ministry—after the impressive new minister for external relations, Roland Dumas and the secretary-general Francis Gutman. Boidevaix who takes over from Jacques Martin as deputy secretary-general at the Ministry of External Relations a week before Rajiv Gandhi's arrival in Paris, has worked with such well-known French political luminaries as Michel Debre, Michel Jobert and Jacques Chirac and was formerly his country's ambassador to Poland in 1977. Against all accepted norms of diplomatic practice, his successor's name —Jean-Bernard Merimee—at the Delhi mission, has already been leaked.

At 50, Merimee, who like Boidevaix, is an "enarque" (products of the elite Ecole Nationale d'Administration), whose confirmation by New Delhi appears certain, could become one of the youngest French ambassadors to India. Merimee has worked as a first secretary in London during the late '70s, as chef de mission for cooperation in Abidjan, as chief of protocol and is currently the French ambassador in Australia. Even as the new French ambassador readies to shift from Canberra to New Delhi, the

Alain Bolley: a low profile

Indian ambassador, Narendra Singh, has returned to India having retired from the diplomatic service after a long and effective stint. Given the erosion in political relations, the presence of an experienced and senior ambassador for the Paris mission seems to be quite in order.

And it was just five months back that Rajiv Gandhi had abruptly cancelled his visit to Paris when he had travelled to Geneva to address the European Management Forum (EMF). His Paris itinerary had included a meeting with topflight French industrialists, an interview on France's channel-one television and a press conference. Apparently, he was scheduled to meet Minister for External Trade and Industry, Edith Cresson.

Will Indo-French ties quickly regain their zest and salubrity? Time-honoured diplomatic strategems are now in progress. A solicitous phone call from Laurent Fabius to the Indian prime minister. Francois Mitterrand despatching his brother, Jacques, former chairman of Aerospatiale, now heading Gifas, to New Delhi with a "special message". Studied speculation that before Rajiv Gandhi's June visit, Mitterrand or even Fabius might even stop by in Delhi as a gracious, fraternal gesture during one of their periodic trips abroad. A first indicator as to whether matters are back to normal will be the outcome of the massive 155-mm AUF-1 gun deal being evaluated by the Indian Army which the French were well-placed to clinch before the espionage scandal became public.

However, there is plenty more at stake. Beyond such imperishable media favourites as the Mirage-2000s and enriched uranium, aluminium plants and electronic switching gear, lie an extensive range of fields where there has been ongoing cooperation or areas coming under scrutiny. These encompass Airbuses and ATR-42s, Dauphin helicopters and Matra Missiles, hydel power projects and coal mines, oil exploration and railways, space research and atomic energy, data processing and main-frame computers. Two absorbing ideas concern the Indo-French Institute for Promotion of Advanced Research focussing on renewable sources of energy, informatics that includes fibre optics and computer application, biotechnology including genetic engineering and preservation of "patrimony". The second project hanging fire concerns a Viral Vaccine Institute in collaboration with the world-famous Institute Merieux.

Indo-French trade for instance stagnates at ludicrously low levels: the bleak figures speak for themselves —the volume of trade in recent years show the French share of India's total international trade at 2.27 per cent whilst India's share is 0.25 per cent. The French gripe about the ancient demons —strangulating red tape, language barrier. The Indians chafe at such tripwires as the use of the French language in all export documents. Last October, Harish Mahindra leading a high-powered delegation from the Indo-French Chamber of Commerce and Industry to Paris deprecated the sluggish trade and asked everyone from Prime Minister Laurent Fabius to the omnipotent bosses of the CNPF: "India's plans in the Seventh Five-Year Plan contemplate an investment of $ 320 billion. I ask what greater stimulus can be offered to French participation than these vast economic programmes supported by an enormous market which presently barely amounts to 100 million consumers of factory products out of a total population of nearly 730 million?"

A rapid mend between Paris and New Delhi will no doubt prove lucrative not only to France's eager arms peddlars, corporate executives and hungry investors but also to the beleaguered Elysee. Inveigled and short-changed by Colonel Gadaffy in Chad, thwarted by the impasse in New Caledonia, an additional foreign policy set-back especially in an area touted not so long ago as one of the "three pillars" of the socialists' Third World policy, could well nigh be unaffordable. Which is why it is being hoped that having swept the murky dealings of a maladroit Colonel Bolley under the carpet, the corruscating effulgence of an India Festival will revert Indo-French ties back to its former enchanted state.

Keltron delivers.

Technical expertise : Keltron is staffed at all levels with some of the most talented names in India's electronics industry. Backed by collaborations with world leaders. Keltron's automated capacitor plant at Cannanore, is India's largest... set up in technical collaboration with N.V. Sprague Electromag, Belgium.

An eight-city national network : Delhi Bombay, Madras, Bangalore, Hyderabad, Ahmedabad, Calcutta and Trivandrum.

Each centre has a manager and his crew, (qualified in electronic engineering) to look after your needs. Supported by a wide network of dealers across the country.

The Company that heralded the era of 'million tonne cement plants' in India, now introduces ....

Cement in Paper Bags

All over the world cement is being packed in paper bags. So, why should India be left behind?

Paper bags. One of the ideal modes of packing for cement. So that the cement does not absorb any moisture. And arrives at your site factory fresh.

Paper bags. No pilferage or tampering. No loss of cement due to handling and transport.

Yes. It's a part of our commitment. To give the consumers nothing less than an excellent cement - Properly packed in Paper Bags.

BANGLADESH

Predictable Patterns

WHEN Lt-General H.M. Ershad, president of Bangladesh and its chief martial law administrator (CMLA), withdrew the offer last fortnight to hold elections to the Parliament, there were not many who were surprised. The only subject for speculation was the general's next move. But Ershad's next manoeuvre, that of playing the tough guardian, turned out to be equally predictable: he had set the pattern himself in two similar situations since he overthrew an elected government to take over the controls three years ago.

Following the cancellation of the decision to hold the polls to the 300-seat *Jatiyo Sangshad* (parliament), which had been scheduled for April 6, the martial law administration hardened. The zonal and sub-zonal martial law authorities, temporarily ordered out by the CMLA as a "token of goodwill", were back with their summary powers. A ban was imposed on political activity, "both indoor and outdoor", thus forbidding even closed-door meetings of party committees. The country's six universities, long distrusted by the army as "hotbeds of indiscipline", were locked out indefinitely and students evicted from their hostels.

But the military's biggest onslaught was directed at the politicians, specially Sheikh Hasina Wajed, president of the Awami League and leader of the 15-party alliance, and Begum Khaleda Zia, chairman of the Bangladesh National Party (BNP) who leads the other alliance of seven parties. Both were placed under house arrest: Hasina, in her husband's house in Dhaka's affluent Banani area, and Khaleda in her residence inside the Dhaka cantonment. Over 50 politicians belonging to both the alliances were detained by the military and civilian police while over a hundred went into hiding.

Ershad himself went on the air on March 1, beginning his speech with a reverentially intoned *Bismillahir Rahmanir Rahim*, laying the responsibility for the cancellation of the polls entirely at the doors of politicians, and, at the end of his tortuous speech, divulged his new game-plan: to hold a referendum on March 21 which will decide if the nation supported his policies and programmes and wanted him to carry on as President till the elections, whenever he chooses to hold them now.

The March 21 "Yes-No" voting, even if allowed to be held in an atmosphere where anti-martial law sentiments are running high, is unlikely to yield any verdict other than 'yes' because of the country's questionable election procedures. But Ershad needs the prop, however rickety, of a direct mandate to push the parliamentary elections down the unwilling throats of most of the political parties. So far, both Hasina and Khaleda have spurned the offer to participate in the elections.

Ershad needs the prop, however rickety, of a direct mandate to push the parliamentary elections down the unwilling throats of most of the political parties.

Both Ershad and leaders of Jana Dal, the synthetic party sponsored by him, have criticised the two women for their "obstinacy". But their stand has been logical. The main plank of their appeal has been to label Ershad as an "usurper", and the martial law as "illegal". But the elections, if held under the suspended 1979 constitution, would still ensure Ershad's sway over the parliament and he may refuse to hand over power to the elected representatives.

Moreover, Ershad's motives were suspect. While he was professing neutrality, and had even removed Jana Dal members from his cabinet, he nevertheless began a barnstorming tour across the country. Convinced that the elections were a trap, Khaleda Zia told a rally last month: "We would not take part in the election under the illegal government of Ershad." A day before the new army crackdown, Hasina virtually derecognised the Ershad regime when she said: "This man (Ershad) has no right to legalise his illegal rule by holding a farcical election; if he wishes to expiate for his sins, the least he can do is to step down from office."

Hasina and Khaleda have obvious political differences. But both women have established substantial followings among students, lawyers, workers and women. In fact, Ershad got a handle to hold back the promised polls because doctors had been on strike, lawyers had stayed away from courts, women were overcoming religious inhibitions to demonstrate on Dhaka streets, and students became violent because a pro-Awami League student was shot dead in the university campus by student-supporters of Ershad.

Ershad hopes that the resentment against his virtually unilateral holding of, first the referendum, and then the parliamentary and presidential elections will not spark off an unmanageably large resistance. This is because of the dramatic upturn taken by the economy—once regarded as an "international basket case"—in recent years. The growth rate, after being stagnant around 3.5 per cent for three years, touched the 4.5 per cent mark in 1983-84 and, according to unofficial figures, has inched up to 5 per cent this year. Foreign aid still holds the key to Bangladesh's economy, but it is progressively coming down and, significantly, project aid has overtaken both food and commodity aid. But the most startling success of the Ershad regime has been in the power and gas sector where a whopping 21.4 per cent rise was recorded last year.

But economic growth has not always been a sure guarantee against oppressive regimes. Like the late Ziaur Rahman in the past, and President Zia-ul-Haq in Pakistan, Ershad is also anxious to don the civilian garb before it gets too hot. If he is successful in holding the March 21 referendum, it will mark his victory in the first major battle. But the outcome of the war will depend on the emotional hold the two bereaved women continue to enjoy over the people of Bangladesh.

Pipe-lines that are life-lines...

ARASU

Asbestos Cement Pressure Pipes

Strong & durable for cost-efficient water-management.

The ARASU range of products—from TANCEM—is gaining ever-wider appreciation for quality, strength and reliability

Take ARASU Asbestos Cement Pressure Pipes for instance:

Superb performance in water-supply, irrigation, drainage systems. Very sturdy, very robust, very durable. Economical—even in laying underground. Resistant to corrosion, combustion and vermin. Made under rigid quality control—to ISI standards. In standard length of 5m, dia range 80 to 600mm. And gaining greater ground all over the country.

Or take the other ARASU products:

Portland Cement and Asbestos Cement Sheets. For strength that really makes your structures strong and durable.

ARASU—for sheer strength & protection... overhead, underground or alongside!

STUDENTS AND FREEDOM MOVEMENT

NEW DELHI: The Chief Executive Councillor, Jag Parvesh Chandra has announced that Delhi Administration has instituted prizes worth Rs 4.50 lakhs for the best three manuscripts for a book on "History of the Freedom Movement" (1857 to 1947) for students of secondary and senior secondary schools. Details of the prizes are listed below:

1ST PRIZE-
Rs. 1,50,000 (One for English and one for Hindi)
2ND PRIZE-
Rs. 50,000 (One for English and one for Hindi)
3RD PRIZE-
Rs. 25,000 (One for English and one for Hindi)

The prizes have been declared State Awards by the Finance Ministry. As such they have assumed greater prestige besides rendering the award money exempt from income tax.

The basic purpose of writing such a book is to keep the younger generation of our people fully informed about the freedom movement. Accounts of the heroic role of freedom fighters in the various mass movements will instill a sense of love of country among the young citizens. This will promote secular outlook and strengthen national integration, which is the very condition of our national survival.

Manuscripts will be accepted either in English or Hindi and may contain about 40,000 words. Authors should send three copies of their manuscripts typed in double space under registered acknowledgement due cover by 31st December, 1985, to Secretary to the Chief Executive Councillor, Delhi Administration, Old Secretariat, Delhi-110054.

A panel of eminent writers and reputed historians will screen the manuscripts.

Delhi Administration will hold the copyright of the first-prize-winning manuscripts and the right to translate, print, publish and sell the book in any Indian language besides English and Hindi and incorporate such changes as it deems fit. The second and third prize winners and other authors may get their manuscripts printed by any private publisher.

For further clarifications please write to the Chief Executive Councillor, Delhi Administration, Old Secretariat, Delhi-110054.

SMUGGLING

Tightening the Net

WHEN the blue and white mechanised boat *Al Saras* anchored at Bedi Port in Gujarat last month, the local Customs authorities took hardly any notice since it was reported to have brought in a consignment of dates. But a red alert from the Bombay Customs quickly changed all that. Over a dozen Customs officials searched *Al Saras* and discovered hidden cavities in the rear portion and an 'L' shaped beam in the cargo hold containing 11,610 tolas of gold, watches worth over Rs 30 lakh and other contraband. The total haul was worth over Rs 3 crore, one of the biggest seizures in over a decade.

More excitement was in store a week later, this time in Bombay, when Customs divers went 35 feet down into muddy waters in the early morning hours (when the tide was receding). Forty-eight hours later, after roping in a dredger to help, the Customs men brought up two bags containing gold worth more than Rs 4 crore. The gold had been dumped into the sea earlier by the crew of a vessel that had sailed in from Dubai. The record haul included 12 gold bars of one kg each and 1,565 gold biscuits of 11.6 gm each, plus 1,000 Japanese wrist watches. Said P.K.Kapoor, collector of Customs (Preventive) in Bombay: "This is one of the biggest hauls in living memory. Our boys have done a wonderful job because not only did we get advance intelligence, we have also recovered the goods at great risk."

The jubilation should however be tempered by the sobering thought that such mammoth seizures indicate a renewed boom in gold smuggling. Gold has accounted for barely 10 per cent of total smuggling activity during the last decade, a business now estimated to be worth Rs 2,000 crore annually. But in the last two months, the share of gold in the smuggling business is estimated to have climbed quickly to 60 per cent. The simple fact is that gold smuggling has suddenly become far more lucrative.

Since 1980, the international price of gold has nosedived from over $ 800 per ounce to barely $ 300 now. At the informal rates of exchange prevailing in the Bombay *hawala* market, this works out to Rs 1,638 for 10 gm. Meanwhile, in the domestic market, the price of gold has increased in the last five months from around Rs 1,800 per 10 gm to over Rs 2,100. Almost overnight, therefore, the profit margins on bringing gold into the country have multiplied. Throughout 1983, the difference between the domestic and international gold prices was about Rs 160. This has now increased to more than Rs 400. More profits, more smuggling: that is the sobering truth behind the sudden spurt in large seizures.

The recent spurt in gold smuggling is primarily related to the widening gap between the supply and demand for gold. And coupled with a whopping profit due to the rise in domestic prices, gold smuggling has become a most lucrative business. According to the Bombay Bullion Association (BBA) over 10,000 licensed gold dealers and 2.50 lakh certified goldsmiths in the country handle over 100 tonnes of gold worth over Rs 2,000 crore annually. Only 50 per cent of this gold is procured through domestic sources by way of melting old gold ornaments for recycling into new ornaments. The Government-owned gold mines supply only 2.5 tonnes, that too for only industrial use. In the absence of any official supply, the gold industry

meets its demand through unauthorised channels to keep its business going.

Dubai has always been the main springboard for smuggling gold into India, and the figures of Dubai's gold imports buttress the conclusion that smuggling into India has witnessed a quantum jump. During 1983, Dubai officially imported 45,737 kg of gold. Last year, however, this rose to over one lakh kg. And intelligence estimates say that during the last two months alone over 18,000 kg of gold has reached Madras.

The trend in gold seizures is in line with this trend. Through all of 1983, the Customs seized no more than 230 kg of gold, valued at Rs 4.18 crore. In 1984, this more than doubled to 515 kg, valued at Rs 10.09 crore. But in February alone, the gold seizures were valued at a staggering Rs 11.56 crore.

This alarming trend has been accompanied by a complementary development that has serious implications in terms of rapid outgo of foreign exchange. For traditionally, gold smuggled into India has been paid for by the smuggling of silver out of the country. This has not been possible for more than a year because the international silver price has been depressed, making the smuggling out of silver unattractive. The Government estimates that silver smuggling became unattractive after September 1983. Thus, in the first nine months of 1983, silver seizures totalled a staggering 31,300 kg. This dropped sharply to no more than 853 kg during the last quarter of the year. And in all of 1984, no more than 697 kg of smuggled silver was seized.

But with gold smuggling growing rapidly, something had to replace silver as the mode of payment. And the substitute so far has been hard currency—US dollars—and the dreaded heroin, adding a dangerous edge to the business.

Last December and January, Finance Ministry officials were shaken by a sudden and almost unprecedented drop in the country's foreign exchange reserves. Reserve Bank figures show that the reserves dropped sharply by almost 10 per cent in just six weeks, from Rs 5,331 crore to Rs 4,830 crore, a drop for which there was no immediate explanation possible—other than the illegal use of dollars to pay for gold imports. Certainly, the unofficial dollar exchange rate on Bombay's *hawala* market reflected an increase in the demand for dollars.

Thus, the *hawala* rate for the US currency in September 1983 (when silver smuggling became unattractive) was higher than the official exchange rate by just 17.24 per cent. This rose quickly to 26.50 per cent by December 1983, and then climbed still further to 31.81 per cent last December and then a record 42 per cent in February. Between September 1983 and February 1985, the official rate for the dollar has increased by only Rs 2.61, but the *hawala* rate has jumped by Rs 5.60. Clearly, a lot of dollars are being sent out of the country as payment for the increased quantities of gold coming in.

The rapid growth of narcotics smuggling has been a parallel and equally worrying development. Since December 1984, the authorities have seized drugs worth Rs 5 crore from people who have strong links with smugglers based in both Dubai and Pakistan. On January 10, once again, BSF personnel seized 40 kg of light quality heroin worth Rs 2 crore from two people coming in from Pakistan.

Alarmed by these trends, the Government has now decided on firm action. Finance Minister V.P. Singh told a meeting of senior Customs officers last month that the campaign against smugglers must be stepped up. Said Singh: "I am on probation for six months in the Finance Ministry. My performance is under close scrutiny by the prime minister. If I lose my job after six months, I will not go alone, many others will also go with me."

That warning was well heeded. In the next six weeks, Customs officials recovered contraband worth Rs 21 crore, over a dozen international flights were subjected to 100 per cent Customs check and each vessel entering Indian ports was watched. Over 25 per cent of them were thoroughly searched. Said Manmohan Lal Wadhawan, director-general of revenue intelligence: "I am completely conscious of the fact that there has been a sharp increase in the smuggling activity, and the number of seizures indicates this. But we have geared ourselves to combat this evil."

Chart by B.K. SHARMA

The Government's anti-smuggling drive is now multi-pronged. During the last two months, the Finance Ministry arrested 48 people under the Conservation of Foreign Exchange and Prevention of Smuggling Act (COFEPOSA). Then, in a major announcement, the finance minister increased the rewards available to officials for seizing contraband. Against the earlier limit of Rs 2,500, which applied even if the seizure was over Rs 1 crore, the new list raises the reward limit from 10 per cent to 20 per cent without any monetary ceiling. Reacting to complaints that the rewards frequently do not reach the officers because of cumbersome procedures, V.P. Singh further ordered that half the reward money should be disbursed on the spot. Also, between 1 and 5 per cent of the value of the goods seized would be used to create an employees' welfare fund and another fund for augmenting the anti-smuggling infrastructure. Said Singh: "Why shouldn't the staff believe that their efforts and risks will not be ignored?"

In a third major step, the Government announced a new policy package aimed at making smuggling non-remunerative. Going along with the premise that smuggling would cease to flourish if it became financially unattractive, the Government reduced the duties on domestically manufactured watches. Further measures are on the anvil, including the liberal import of electronic goods, the import of gold through banking channels and the reduction of Customs duties on a variety of imported goods. Said a senior official in the Finance Ministry: "Smuggling is a form of economic warfare, and it has to be fought on that basis."

Meanwhile, Customs officials have taken note of changes in the pattern of smuggling: changes in the goods smuggled and changes in the kind of people involved in the business. One new trend is the involvement of a new category of people, urbane and educated men and women, some of them functioning as tour operators and clearing agents who have started using tourists as carriers. Wadhawan goes as far as to say: "Gone are the days when people with proven criminal records were the only people involved in smuggling. Hoteliers, industrialists and even philanthropists are now suspected of indulging in smuggling because of their extensive knowledge of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

international finance." Interestingly, even schoolchildren are being used for smuggling in electronic goods. A Delhi Customs official last year nabbed a woman who was using a group of schoolchildren for bringing in items like video cassette recorders, electronic watches and synthetic textiles from Thailand. The modus operandi in this and other cases is for air tickets and other arrangements to be made, and the carriers would be given 'gift packs' to be delivered to contacts in India. Customs officials say that there are no dossiers on the past activities of many

Bags of watches in *Al-Saras*' planks

UNDERWORLD TRADERS

The New Godfathers

IN THE world of smuggling the old order continually changeth, yielding place to new. Over the years, the nature of the contraband has diversified the people who carry them into the country, sneaking across a customs barrier through bribery or guile. The smugglers' dens, which admitted only the hardened criminals of a particular community from the back alleys of Bombay, are now wide open for urban people of large variety, many of them city-bred youngsters with an impeccable social background. The wares of their trade have also undergone a change: it is no longer the gold bars and ingots alone. The new commodities in the Rs 2,000-crore smuggling industry include a mind-blowing variety of quartz watches and calculators, snake skin, high-value textiles—not to speak of narcotics, heroin and cocaine.

The modes of transportation too have changed with the times. Arab dhows are now fitted with advanced radio equipment that crackle on hidden frequencies and enable the boat's occupants to dodge their pursuers. Commercial flights too have been opened up for big-time smuggling.

Assistant Editor PRABHU CHAWLA sifted through the dossiers of the 100-odd new 'godfathers' compiled by the intelligence agencies and put together this profile of some:

Taher Tayab Mohey Aldeen, alias Taher Tayab Sony: In July 1983, when Tayab, a resident of Bandra in Bombay, acquired a ship, MV Maguli, little did he know that the Directorate of Revenue Intelligence (DRI) had been closely watching his movements. The ship was intercepted on the high seas and 442 packages of watches, electronic goods and textiles, all contraband and valued at Rs 1.05 crore in India, were recovered. Tayab has since been detained under COFEPOSA (Conservation of Foreign Exchange and Prevention of Smuggling Act), though his brother, Taher, who lives in Dubai and allegedly helps Tayab, has so far escaped the long arm of law. The DRI claims to have ripped through the Tayab gang which is rudderless without the leader.

Rajan Bakshi: Bakshi is the prime example of the recent entry of the upper middle class into this lucrative trade. A graduate from Delhi's prestigious St Stephen's College, and an LL.B. from Delhi University, Bakshi according to the DRI, drifted into the colourful world of dope-runners after allegedly being involved in an espionage case. He is still being tried in the court of an additional sessions judge in Delhi on the charge of having passed on classified information to the US Central Intelligence Agency (CIA).

He was apprehended after DRI sleuths surprised him one night last November when they stormed into the room booked under his name at Hotel Searock in Bandra where a man and a woman, both allegedly appointed by Bakshi, were waiting with a cargo of nearly 6 kg of heroin to be carted off to Italy. The heroin, valued at nearly Rs 6 lakh in India, would have fetched Rs 1 crore in the international market. Bakshi was arrested on January 20.

K. Srinivasan, alias Chettiar, alias Venkatesh: Srinivasan, operating from his home town Madras, is the underworld king of an unusual item, snake skin. Customs officials at Madras airport last July detained an export consignment and discovered 30,925 pieces of snake skin valued at a little over Rs 6 lakh in India. Srinivasan was detained four months later, but the documents seized from his office indicated that several snake skins had already been despatched to Singapore and Europe. It also came to light that he had been operating from behind a facade of export firms in fictitious names. His detention under COFEPOSA has been confirmed by the Central Advisory Board.

Govind Kara Toranta, alias Govind T.T: Operating along the Saurashtra coast in Gujarat, Govind's prosperous career as a landing agent for importing wrist watches, fabrics and electronics items suffered a jolt in October '83 when three of his trucks, loaded with contraband valued at over Rs 27 lakh, were stopped and rummaged by the police. Customs men apprehended a second convoy, carrying contraband worth Rs 25 lakh, and then a third and a fourth, valued at Rs 18 lakh. Further investigations led to the information regarding Govind's fleet of boats that regularly ferried contraband between Gujarat and Bombay. Govind was ultimately detained in December '84.

Ravindra R. Vaghani, alias Bala Kala: A top-drawer smuggler with links in Hong Kong and Kathmandu, operates along the Indo-Nepal border. His alleged carriers were stopped at the Calcutta airport while going through the green channel after disembarking from a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of these people, so that they will not normally be suspected of involvement in smuggling. Revenue intelligence sleuths have also discovered that exporters have been under-invoicing their export consignments and receiving the balance in cash abroad. This money is then used to pay for goods smuggled into the country.

But in the final analysis, no drive against smuggling can succeed unless the Customs officials are supplied modern equipment and more men. The total budget of the Customs Department is Rs 50 crore, and the department spends only 50 paise to recover Rs 100 worth of revenue for the Government. Admitted a senior Customs official in Bombay: "We are no match for the well organised gangs of the underworld, who have a faster and more modern communications network."

During the last few years a large number of noted smugglers have also succeeded in exploiting technical flaws in their detention orders to get releases. Others have been let off with minor punishment. Last month Geeta Purushottam Dass was given only three month's imprisonment for allegedly bringing over 1,000 tolas of gold from Dubai. While the Customs Act provides a minimum of one year's imprisonment for smuggling in gold worth over Rs 1 lakh, the court took a liberal view on the plea that it was her first offence. In another court, yet another noted smuggler secured his release from COFEPOSA detention because nine others with similar names appeared in the court and the customs authorities could not prove that they had detained the actual smuggler.

The Government, however, is now alive to these and other problems. And the new drive for reducing the attractiveness of smuggling, the offer of higher rewards for officials and the promise of better equipment may well make a dent in the largest organised illegal business in the country.

—PRABHU CHAWLA

Bangkok flight in June '84. Their bags contained watches and watch parts valued at nearly Rs 6 lakh, which were finally linked to Vaghani. He had reportedly been trying to develop an alternative route to India for bringing the smuggled goods in direct from Hong Kong instead of through Nepal. Intelligence agencies say he is in Nepal, evading arrest.

Devi Vallabh Tandel, alias Devji Boss: Devji's specialities are silver and currency. Silver, which costs less in India, is for the outward traffic, while foreign currency is meant to be brought in. An operator along the Daman coast in Gujarat, Devji's line was to cart off the contraband in small powerful crafts to mother vessels lying in anchor on the high seas. In October '83, his vessel, *Hariprasad* MS-2932, was intercepted by the Muscat police who seized 203 bags of silver and currency notes from the boat. Devji was finally apprehended last November.

Kadar Ahmed Wagher

Mohey Aldeen

Mohammed Sumar Haji Kasam, alias Sumar Bottle: Sumar is a Pakistani national—who shuttled with his contraband along the golden triangle between Karachi, Kutch and Bombay. An operator who long survived off the grey area between smuggling and the world of intelligence agencies (Sumar allegedly used identity cards issued to him by unnamed intelligence agencies to give the slip to Indian customs), he was involved in a seizure of 16 kg of heroin (Indian price in 1983: Rs 13 lakh) in Kutch by the Border Security Force (BSF). His detentions in 1982 and '83 were revoked on court orders, finally he was detained in August last year. Suspected to be involved in the smuggling of fake Indian currency, Sumar's stocks-in-trade are gold, heroin, watches and textiles, and an occasional cargo of silver.

Nazir H. Dingmar: A resident of Nani in Daman, Dingmar is reputed to be one of the most daredevil landing agents in the Daman area. He and the customs authorities first crossed paths when a vessel, *Naranprasad*, was searched by Gujarat Customs off Mahuva and 139 packages containing contraband fabrics, electronic goods and wrist watches were seized from it. A sizeable portion of it reportedly belonged to Dingmar. He was later found to be involved in a case of seizure of 15 kg of silver at Surat. He was detained in July.

Jivan Dhanji Patel: A diamond dealer whose diamond cutting and polishing factory at his residence in Surat was raided by the customs people in July 1983, had four packets containing 4894.32 carats of rough (uncut) diamonds valued at over Rs 20 lakh seized. He allegedly smuggled them into India, to be polished and sold in the country's largest value-adding industries. Patel was booked in July last year.

Sayed Mohammed Arif Bawamiya, alias Arfat, alias Puja, alias Harshdev: Bawamiya, essentially an exchange racketeer, or a *hawala* operator, has so far managed to escape detention. His exchange company, Syed Exchange and Hawala, still flaunts its name-board at Deira market in Dubai, UAE. He first figured on the list of men wanted by the Customs in March 1983 when an outgoing passenger was stopped at Bombay Sahar Airport and Indian currency worth Rs 20 lakh, along with some UAE dirham, found in his possession. The Indian currency was ostensibly intended to be handed over to Bawamiya in Dubai. His other activities included smuggling of snake skins, jewellery, diamonds, precious stones and, of course, gold.

Kadar Ahmed Wagher, alias Ibrahmi, alias, Mohamed Akhtar Hussain: Kadar, who was apprehended in Ahmedabad and was found to be in possession of foreign gold biscuits valued at Rs 1.40 crore and an American made weapon, has been convicted to seven years imprisonment for having smuggled 1,67,000 tolas of gold valued at Rs 30.89 crore and illegally exporting 1,435 silver bars valued at Rs 12.61 crore during December '81 and April '82.

DURAMETALLIC (INDIA) LTD.

Dura Seals

Sealing every known fluid and sealing it successfully. From Durametallic (I) Ltd in collaboration with **Durametallic Corporation, USA,** internationally acknowledged experts in sealing systems.

BSGB SAFETY SYSTEMS (INDIA) LTD.

BSGB Rupture Disks

"Safety equipment of the last order" which surpass established international standards. From BSGB Safety Systems (I) Ltd in collaboration with **BSGB Safety Systems, USA,** the largest and oldest company in its field.

TUFLIN (INDIA) LTD.

Tuflin Plug Valves

The most effective Isolation Valves – the only ones of their kind in India. From Tuflin (I) Ltd in collaboration with **Xomox Corporation, USA,** leaders in valve technology, worldwide.

MOORCO (INDIA) LTD.

Smith Meters

A complete range of Flow Meters including Turbine Meters for accurate fluid volume measurement. From Moorco (I) Ltd in collaboration with the pioneers in flow measurement technology – **Smith Meters Inc.,** a subsidiary of **Moorco Inc., USA.**

MOORCO (INDIA) LTD.

Crosby Relief Valves

Safety Relief Valves — the most dependable equipment for added plant safety. From Moorco (I) Ltd in collaboration with the specialists for nuclear and process industries – **Crosby Valve and Gage Co.,** a subsidiary of **Moorco Inc., USA.**

A range of hi-tech engineering products that play a critical role in smooth, safe and uninterrupted plant functioning...

Proven products that were being imported until recently by Indian industries from the very same companies.

Identical technology, changed location

Result : the 'Made in India' advantages.

- No more import licence and foreign exchange problems.
- Prompt supply and service throughout the country.
- Specialised engineering capability for Indian needs.
- Assistance in selection, installation and commissioning.

So, for precision and reliability in fluid control and safety systems, come to :
147, Karapakkam Village,
Madras 600 096.

REMEDIAL RESTRICTIONS

AFTER the ruckus concerning the nationalised banks and their loans to the Sethia owned Esal Commodities in London, the Government is considering a number of measures to prevent a recurrence of banking scandals. Earlier, the banks had rushed abroad because of large and relatively easy profits on international operations, but the possibility of equally large losses has now got the Government thinking afresh on the subject. One particularly hardline option that has been mooted concerns a proposal to severely restrict the international operations of Indian banks since large losses on loans could threaten the very stability of the banks. However, this will be resorted to only as a last option. Government officials are also looking at ways of ensuring that Indian banks do not go after high-risk business provided by ethnic businessmen. They are looking at the possibility of strengthening the banks' capital base as one way of improving their ability to attract high-quality custom. Yet another remedy that the Reserve Bank is already looking at is the question of tightening supervision and controls so that managers of branches abroad do not take questionable decisions without keeping their head offices fully informed. Whether these will have the desired results remains to be seen, but the Government at the moment is determined on a clean-up operation.

TOP TUSSLES

THE TUSSLE for the succession in DCM continues, with two board meetings in the last month failing to determine the precise roles that will be played by Bansi Dhar, who has been designated senior managing director, and Vinay Bharat Ram, designated managing director. The immediate point at issue is whether Vinay Bharat Ram will report to Bansi Dhar or directly to the board. Yet another board meeting is due to be held but if a settlement again proves elusive, the two present managing directors, Bharat Ram and Charat Ram, will probably continue beyond the end of their present tenures, which expire this month.

DELAYING DECISIONS

THE MUCH-AWAITED decision regarding a change in the Government's financial year may not finally come through. Veteran administrator L.K. Jha had been asked to look into the pros and cons of a change, of the financial year beginning from April to October or November, because the post-monsoon period can give a better indication of crops, downstream industrial activity and tax revenues. But government departments tend to spend most of their annual allocations towards the end of the year, and if the fiscal year ends in October the year-end spending will be made difficult by the monsoons, which reduce the pace of economic activity. Jha is trying to work out solutions to this problem.

CORNERING CONTRACTS

SNAMPROGETTI, the Italian fertiliser giant, has tied up yet another major deal in India. It has signed up a Rs 150-crore turnkey contract with Indo-Gulf Fertiliser, which is to set up a fertiliser project at Jagdishpur in Uttar Pradesh. However, there is competition for Snamprogetti in relation to Zuari Agro-Chemicals' fertiliser project at Sawai Madhopur in Rajasthan. Snamprogetti had agreed to contribute a part of the equity capital for the project. But Toyo Engineering Corporation of Japan is now understood to have made a comparable offer to Zuari, which is considering the offers.

CATCHING UP

RELIANCE Textile Industries has climbed still higher in corporate rankings, and is now poised to overtake the long-standing corporate leaders—Tata Iron and Steel Company (TISCO) and Tata Engineering and Locomotive Company (TELCO)—on at least some counts. In 1983-84, according to *The Economic Times*, Reliance stood third (behind the two Tata giants) in terms of total capital employed, net sales and gross profits. Its gross profits, at Rs 61 crore, were only marginally lower than TELCO's Rs 62 crore and TISCO's Rs 64 crore. And its profit after tax is higher than both the corporate leaders' but second to the Associated Cement Companies, which earned Rs 39.36 crore against Reliance's Rs 39.14 crore.

Chart by B.K. SHARMA

DRUG DEBATE

THE ORGANISATION of Pharmaceutical Producers of India (OPPI) is making a determined pitch with the Government for a more liberal policy on pharmaceuticals production and pricing. OPPI mainly represents the foreign-managed drug companies, which would like the Government to avoid any discrimination between them and the wholly Indian-owned companies. The rival drug lobby, representing the wholly Indian-owned companies, has also become active. The Indian Drugs Manufacturers Association (IDMA) is arguing that it is harmful to treat foreign drug companies who have diluted their foreign shareholding to 40 per cent as Indian companies. This new round of lobbying means an end to the modicum of unanimity that had been reached between the different lobbies through the meetings of the development council for the industry. The effect will be a delay in framing a new drug policy.

Konark combines colour with good sense.

✻ How to choose and use a colour TV set.

Before making a down payment for an expensive colour TV, take a closer look at what you are paying for.

If your initial decision on the set you choose is erroneous, then there's no looking back. It could be a costly mistake. Konark TV shows you how to avoid it.

Every genuine colour TV must carry a stamp of quality conforming to DOE standards, guaranteeing safety and good performance.

Is the picture quality clear and crisp ? To check crispness, observe the letters displayed at the beginning or at the end of a programme. The letters should not be hazy.

Check if objects in the picture have natural hues and colours.

Make sure that the over scanning is within limits so that a part of the picture is not lost at the edges.

Most modern sets are designed to provide a full picture within a few seconds of switching on.

Turn on the sound and see if it is well-balanced.

Servicing, over a period of ten years may just cost you the price of the set itself. So, insist on a service contract and make sure that the manufacturer has a well-equipped service department with trained Engineers.

✻ Now that you know how to choose the right set, here's how you use it correctly.

1. It is advisable to prefer woodencabinets to plastic cabinets to avoid fire hazards.
2. Unplug the set when not in use for the same reason.
3. Don't put the set so close to a wall or furniture as to block ventilation.
4. Never expose the set to rain or moisture. If moisture does get into the set, ask for help to avoid fire.
5. Viewing distance should be a minimum of 8 to 10 times of the height of the screen.
6. An inferior Tuner or a defective Antenna or Cable can cause 'snow' on the screen. Ask your dealer to do the needful, if you observe this defect on your set.

A colour TV from the people who make good TVs.

Here's a final bit of good advice. Choose a Konark Colour TV from three models — Delux, Premier and Popular.

State-of-the-art technology with components from reputed Grundig of West Germany contribute to make some of the finest Konark Colour TVs in the market today.

Take one home today. Switch it on and you'll see for yourself how we combine colour with good sense.

Moderna

The international concept of sitting pretty. Just anywhere.

Elegance and functionality perfectly blended. That's Moderna.

Totally flexible. Eminently adaptable. Moderna Seating System is tailor-made to meet the needs of any seating situation. Indoors and outdoors.

Made from the wonder material, polypropylene, Moderna is lightweight. Portable. Tough. And it's ergonomically designed to provide maximum seating comfort for years and years. But that's not all. Moderna needs the minimum of looking after. No painting. No polishing. Just an occasional wash keeps it clean and bright.

Moderna. Offers you exciting ways to sit. In comfort and elegance. In a blaze of beautiful, non-fading colours.

Moderna. Naturally at home . . . in stadiums, auditoriums and theatres. In canteens, lounges, conference rooms and at poolsides. In a balcony or in a dining room.

Moderna. The functional seating system that offers you the best value for your money. Come, discover its many benefits.

INDUSTRIAL CONTROLS

The 'Liberty' Movement

THE LATEST vogue word is 'liberalisation'. Industrialists and businessmen are sold on it, and so are sharebrokers, which explains why the stock-market is edging upwards as budget day approaches instead of marking time as it usually does at this time of the year. The prime minister's quotable phrase: "We should do away with controls but not lose control of the economy" is on everyone's lips, though it is not quite clear how you can do away with controls and yet keep tabs on what is going on. Anyway, it is easy to say 'liberalise' but liberalise what? And where does it take us?

It should be admitted right away that controls did not materialise overnight nor did they creep on us by stealth. They are part and parcel of our model of growth or modernisation, if you wish to use another vogue word, and will not go away unless we do away with the model that we adopted three decades ago. The three constituents of this growth model are regulated economic development on the basis of certain national priorities; self-reliance; and direct participation of the state in all economic activity including industry. And all our current problems flow from this model.

Regulated development brought in its wake all kinds of controls but it also helped India become one of the leading industrial nations in the world. It made the country self-reliant, but only up to a point. We are self-reliant in almost everything except modern technology which we still have to borrow or buy from time to time. We had to pay a price for all this, however. The economy has got itself entangled in a vicious circle of low growth rates, low consumption and low employment and has to be helped out or 'liberated' from this messy tangle.

There are two ways of tackling this problem. You can go the whole hog and open up the economy to foreign competition and to modern sophisticated technologies. You can also do away with industrial licensing and MRTP and knock down the barriers that prevent the entry of newcomers into profitable industries. As regards the public sector, chunks of it can be 'privatised' as Margaret Thatcher is doing in Britain and controls on prices removed. The state can be barred from entering new areas of economic activity and its presence in old areas reduced substantially. The industrial sector can thus be entirely restructured and modernised so that it can face the challenges of the future.

But no one seems to have worked out the cost of this kind of restructuring in human and other terms. No matter how it is carried out, modernisation is ultimately related to productivity and technology, or rather higher productivity through technology, and the net result is almost always a slowdown if not a sharp reduction in employment generation in the short term. The closing down of old industries—and of companies engaged in such industries—will throw out labour in large volumes. It is true that new industries will open up new avenues for employment, but there is always a timelag in such things and secondly, the new opportunities will not be for the same type of labour. A loader in a textile mill or a tin can factory cannot be absorbed in a computer processing bureau as you don't need loaders there, not in such large numbers anyway. That is why despite the fact that there is something of a mini-boom in industry in and around Bombay, the millhands thrown out by the two-year-old textile strike are still jobless and cannot be absorbed anywhere at the old wages. You have this problem in every country going through the process of modernisation but other countries have ways of dealing with it. They have doles and other social benefits to take care of the shock. In India, we have nothing.

> **There is no need in the new set-up for a public sector and a private sector, for MRTP and FERA companies, for large houses and small.**

Actually, liberalisation should mean much more than just doing away with industrial licensing or import controls. We should take a fresh look at the entire industrial framework as it has developed over the years and replace it with a new one. There were certain social and political reasons why we went in for a powerful public sector, why controls were necessary and why a closed economy was considered essential for laying the foundations of industrial power without too much disturbance from the rest of the world. These reasons are not valid any more and we have to deal with an entirely new set of circumstances. There is no need in the new set-up for a public sector and a private sector, for MRTP and FERA companies, for large houses and small. The best course is to have three groups of industries, namely:

- Industries producing basic goods and services like steel, aluminium, cement, power, etc. These should be produced at the lowest possible cost using the best and the latest technology available. The criterion should be cost, not employment or anything else. This group of industries will maximise capital, a resource in short supply.
- Industries producing consumer goods like paper, TV sets, bicycles, etc. They should be geared to maximum output, and since they will be operating in an open market, they will have to produce quality goods for survival.
- The remaining industries, where the stress will be on employment. These are what are known as small-scale industries, but they need not be. They will differ from the second lot in the technology they use and it may be necessary to assist them with a proper package of fiscal and monetary incentives. This particular sector will be the only one to be regulated, but regulation will be fiscal and monetary, not physical.

There should be no bar on anyone entering any group, and no reservations of any kind, for ultimately it will be the market, not the babus sitting in Udyog Bhavan, who will decide whether a particular industry thrives or not. If Tatas can double the production capacity of their Jamshedpur steel plant from 2 million tonnes to 4 million tonnes, they can go ahead with it, and will not have to sit at the feet of steel ministers and secretaries for the dhobi mark. They will sell steel in competition with the Steel Authority of India (SAIL) and if SAIL cannot stand the pace, it will just go under and will not be bailed out by the taxpayer. This will be a real liberty movement with a capital 'L' and everything else will fall in line once the Government decides that it has the necessary political will to push it through. Does it?

FAST FOODS

Cashing in on the Boom

WHEN Ajay Singh Banga, an executive at a multinational company in Delhi, steps out of his office for a quick lunch, he often heads for one of the many quick service food outlets that have sprouted in the capital. Abha Dayal, a travel agency executive, also makes a bee-line for a fast food parlour. Explains Dayal: "Food is served quickly, an important consideration when lunch time is limited."

What unites the two executives with thousands of men and women across the country is a desire for clean food, served and eaten quickly—a phenomenon that is exciting big business like never before. Bent on seizing the main chance in a greenfield area, an impressive roster of firms is launching fast-service food outlets or expanding existing small networks in urban India. The list ranges from those new to the business such as Parle and the Senator Group of Makers Development Services, the construction people, and fledglings in the industry like McDowell & Co, Anil Nanda's An Enterprise and Wimpy Fast Foods, to fast-service food pioneer Nirula's.

All have metropolitan and national chains on their drawing-boards. By this month, Parle will have franchised 30 outlets under the Big Bite label to sell for Rs 4 and Rs 6 U-shaped "pitta" breads filled with chicken or vegetables. Soft drink tycoon Ramesh Chauhan says: "I'm shooting for 300 outlets in Bombay." He plans to franchise 12 more in nearby Pune by April or May. The Senator Group will spend between Rs 2 crore and Rs 3 crore on setting up five fast food parlours, three in Bombay and two in Delhi. Three of the five will be franchised out. Company officials are cagey about the menu but allow that Indian and western food priced at Rs 13 is on the agenda, though in separate outlets.

Those with a foothold in the industry are going national. Nanda runs nine outlets in the capital that sport the Hott-Potatos name. Nine more will open in April for Bangalore residents who will fork out Rs 5 to Rs 8 for hot potatoes with vegetable, meat and cheese stuffings, chow mein, hamburgers and pizzas. Other cities will sample Nanda's wares later.

Other companies also have ambitious plans. UK-based Avtar Singh Selhi's Wimpy Fast Foods will vend hamburgers for Rs 6 to Rs 22 at seven more Wimpy parlours in the capital, in addition to the one it already operates. Selhi has a target of 200 Wimpy outlets nation-wide, none of which will be franchised. Vijay Mallya's McDowell, which runs three Pizza King outlets in Delhi, will make a foray into Pune (one parlour) and Bombay (four) by May. McDowell is aiming at 10 new outlets by year-end and 100 nationwide in the long run. The company will also open in Delhi and Bombay four or five Pizza King Express outlets whose hallmark will be more rapid service than at the present pizza eating houses it runs. And industry pathbreaker Nirula's will "partially franchise" four more fast food houses in Delhi this year, before branching out to Bombay with two parlours.

So the fast food industry is plainly readying for take off. In fact the industry has been around for years. Nirula's opened a fast food outlet in 1972 when members of the family returning from abroad wanted to introduce it here since they saw a potential in it. Both Bombay and Delhi have had other outlets: Open House and

Rs 300 Rupees respectively. But the real fast food people are the traditional chatwallas and others. Organisation in this sense has come to the food business only now. But why now? The answer, from a chorus of voices, is that the time is ripe. A market research organisation executive points out that incomes are rising (nearly 31 per cent of urban India has incomes of over Rs 700). More women are working now, the pace of life has quickened and, as a corollary, more people are eating out in big cities. Finally, a mini westernised society is around the corner as a result of the new economic climate the Government is fostering.

For corporations, the sheer market size and profits are irresistible. A survey commissioned by Delhi's Wimpy showed a Rs 300-crore market waiting to be tapped, with a vacuum in between five-star hotels and roadside vendors. Not all accept such assessments of course. Argues Kisan Mehta, president of McDowell's foods and beverages division: "It is extremely difficult to pinpoint and quantify the market when you're working on a hunch that the time is right." But even those who question such figures are calculating that companies which get in on the ground floor will establish a lead time over competitors—and possibly sew up the entire market.

The money also is a lure if mass production techniques are married to the food business. Profit margins range from 12 to 25 per cent but, as Senator Group President Surendra Nath Gadhoke puts it, "The money lies in how quickly you can get people past the counter. The name of the game is volume." Not surprisingly, Senator has set itself a 3.5 minute per customer goal.

Market size and profits apart, fast food chains offer companies many promises. Multiproduct firms see advantages in putting their names up front on the street. A fast food chain hawks company names or brand names, not merely food, opening the door to selling other wares more easily. Making a big splash is also cheaper than venturing into an outlet or two: bulk buying for a number of food parlours cuts material costs sizeably, and overheads can be spread out more thinly.

Individual compulsions are propelling others into retailing foods. For Parle, the food business is a logical extension from soft drinks. About 12,000 outlets in Bombay sell the company's aerated drinks and small food counters can be tagged on to them with minimal bother. Anil Nanda confesses that he had always wanted to enter the food business, while Selhi cites as reasons for seeking a presence in India the privileges now on to tap non-resident Indians, the vacuum in the market here and the uncertain economic and political climate in the Middle East to which he used to export frozen foods.

And a move into fast foods need not be pricey for those looking to the low end of the market. Much of the equipment is available locally, sometimes for less than what a buyer would have to pay abroad, and investments in outlets are not chunky for downmarket firms that use limited space. Parle sunk Rs 40,000 in microwave ovens and decor in each of the first dozen Big Bites; future franchises may not be so lucky and may have to dip into their own pockets. Nanda started off with Rs 2 lakh of his personal funds (An Enterprise is not affiliated to Escorts or Goetze) and invested about Rs 30,000 in each Hott-Potatos outlet. The story is of course different for the industry's glamour boys, many of whom have sunk fat sums into prime locations. Industry men estimate that Wimpy invested Rs 40 lakh to Rs 50 lakh in its Connaught Place parlour in the capital.

The entry of so many into a fledgling industry is bound to have a number of singular consequences. First, it will give a push to a nascent ancillary foods industry. While some firms make their own

Aplab believes that top quality need not always cost the earth. Quality evolves from an effective utilisation of resources.

The first requisite is a committed leader whose creed places customers first, employees second and who looks upon profits as a corollary to imaginative hard work and collective excellence.

A true leader will identify promising human resources and draw to him people with potential leadership qualities. They will have the freedom to create a team of committed colleagues with the necessary competence and a basic technical background.

Every team leader will treat the individuals in his charge with respect, trust and consideration so that they reciprocate with a sense of dedication. Thus building up a fraternity of workers who wholeheartedly do their best for the company and the community.

Top quality is achieved by such a culture. Through contented employees, their dedicated service and a craftsman's pride in work.

Aplab • Bombay • Bangalore • Calcutta • New Delhi • Secunderabad

sauces, mustard and even jams, they draw the line at cheeses and spices. Nirula's has encouraged farms to grow spices and others to produce Mozarella cheese, as has McDowell. And the packaging industry will be helped along by the surging demand for wax sheets to wrap hamburgers in and cardboard boxes to carry them home (35 per cent of Wimpy burgers sold are carried out).

Secondly, some in the industry say that the publicity widens awareness of fast food products and hence the market. Claims Lalit Nirula, managing director of Nirula's, "An odd thing happened. When Pizza King advertised pizzas, our pizza sales went up." Certainly, new entrants to the business are faring well. Wimpy sales peaked at Rs 50,000 plus one day not long after it opened its doors. The parlour rakes in around Rs 6,000 every hour. But the spurt in sales could be due to initial consumer interest in trying out new eating places.

Thirdly, the emerging competition is forcing companies to protect their flanks by rethinking product strategies. Trends are not yet clear, but some firms that specialised in products may widen their menu ranges. Last fortnight, Hott-Potatos launched hamburgers and may soon include pizza slices in its menu. And industry men talk of McDowell setting up burger parlours, though McDowell's Mehta declines to comment on the subject. For upscale firms with pricey products in particular are worried that the market may not have enough "depth". A fast food company executive observes: "There is room for one or two chains selling a particular item, but not for five or six." Widening the product range may bring in more customers, but the competition on the horizon is leading even those with lengthy menus to move in other directions: Nirula's has plans to introduce a limited package of items tailored to the tastes of the community in which the outlet is sited.

Some of these moves could pose a dilemma to the industry. A wider product range makes it more difficult to enforce quality standards and standardise procedures, so important to a business that runs on mass production techniques. Referring to the industry in general, Lalit Nirula warns: "It's the toughest business going." He adds that fast food chains operate on the principle of quality, providing service, cleanliness and value for money.

The key to success in the industry lies in acquiring the right locations and in organisation, or what one industry executive calls "the systems approach". K.I.C. Food Product's American Pie in the capital is yet to take off almost three years after it opened because, as the company's joint Managing Director Sunil Lamba explains, flats surrounding the Asiad Village complex in which it is located are still not fully occupied. And the industry does offer complex logistics problems. Most chains have central food factories or kitchens to process enormous amounts of bread, meat, sauces and so on. (Nirula's uses up every month a breath-taking 15 tonnes of meat, 5 tonnes of cheese, 12 tonnes of cabbages, 10 tonnes of sugar, 15 tonnes of flour and 1.25 lakh eggs.) At its factory on the outskirts of Delhi, Nirula's bakes bread and portions meat to burger size after checking fat to meat ratio consistency and adding spices, chills the meat and sends them on to its outlets where the cooking is done. Wimpy freezes its meat and buns at its Okhla factory.

But conveyor belt systems are tailored to high volume business and the industry's Cassandras suspect that the volumes may not be large enough to sustain hordes of fast food chains. The industry plainly cannot compete with roadside vendors who sell food for Rs 2 to Rs 4. Thus the Senator Group is steering clear of south Indian food. Admits Edmund D'Souza, the firm's general manager for marketing, "We can't take on the Udipi restaurants." And because companies cannot handle the wayside competition they have taken the path of least resistance: westernised food. Deepankar Barat, marketing manager of Milkfood Ltd, which runs a fast food outlet in Amritsar, questions the trend. Says Barat: "Just because a certain concept is popular in a certain part of the world, why borrow both the concept and the cuisine?"

Meanwhile, industry outsiders point to the dangers inherent in eating "junk food". Warns C. Gopalan, president of the Nutritional Foundation of India and a former director-general of the Indian Council for Medical Research: "There is a nutritional danger if people stick to a limited number of foods, but the bigger danger is the temptation to recycle leftovers if sales slump on some days." That could happen at franchised outlets, but industry officials protest that outlets are fed daily in step with the previous day's sales. Any leftovers are destroyed, and audit teams swoop on franchised parlours to conduct surprise checks.

But a far bigger hazard to the industry itself is the possibility of overcrowding. Worried by the looming competition, industry men inevitably predict the shakeout that thins out the players in most fast growing fledgling industries. Still, that may be a long way off. So long as the cash registers ring up sales, companies will continue to enter the business. And Banga, Dayal and countless others like them will have a wider array of eating options at lunch time.

WHEN YOU BUY A COMPUTER YOU ALSO BUY A COMPANY.

A computer is a piece of capital equipment that is the single most important buying decision your organisation will make in terms of information storage, retrieval and processing.

Feature to feature, Uptron Computers are the best. This is the result of specific corporate strengths.

We have a reputation to protect. Concern for this reputation has enabled Uptron to grow from Rs. 60 lakhs to Rs. 60 crores in extremely competitive electronics markets. We have never "dabbled" in products. Neither do we have a "sell and run" attitude to our consumers.

Powerful financial resources make it possible for us to invest in the best human resources. And, to allocate more money to research and development which enhances product quality.

This is an ideal mix for a computer buyer. A Corporation with a strong techno-financial base and a mandate that makes commitment a pre-requisite.

India's most sophisticated computer buyers chose Uptron for these reasons.

● UPTRON HAS GROWN 100 TIMES IN 9 YEARS FROM Rs. 60 LAKHS TO Rs. 60 CRORES ● UPTRON ALWAYS PROVIDES STRONG SERVICE SUP

If you have decided on computerisation you will find it advantageous to get in touch with us.

HBJ PIPELINE

Building up Pressure

IT MAY wind up being the deal of the year. The run up to it has the excitement of a thriller. The big boys of the business have been snooping around, keeping tabs on government meetings (a public sector official gets a phone call at home at 9.00 p.m., barely two hours after an official meeting, asking him "not to take a rigid stand") and lobbying in the corridors of power for a piece of the hottest action in town.

The stakes are high—a Rs 1,100-crore pipeline contract, the largest now going in the world. That amount is not small beer for companies vying for business in a depressed global pipeline and construction market. The competition and price cutting have pared the original cost estimate of Rs 1,700 crore by Rs 600 crore—possibly the only silver lining to a sorry tale. The qualifications to bid for the job have been eased, companies that were knocked out have been brought back into the race, and a bitter debate rages over whether the work should be assigned "piecemeal" to different companies or to a single block of bidders, with the Government itself divided on the issue.

The race for the 1,730-km-long Hazira-Bijaypur-Jagdishpur (HBJ) pipeline contract is still wide open, but the crowd in the running has been essentially thinned to four. Leading the pack are India's Dodsal Pvt Ltd, Japan's Nippon Kokan (NKK), and a consortium of firms led by Japan's Toyo Engineering Company and France's Spie-Capag. But the dark horse coming up from behind is the state-owned multinational Snamprogetti SpA of Italy.

Snamprogetti has attracted much of the flak so far because its bid was handed in more than a month after the tender deadline passed by, and at least some officials in the Petroleum Ministry and the public sector companies concerned have preferred jettisoning the Italian firm's offer. Also, the company's bid is $50 million more expensive than the cheapest piecemeal offers, though the two offers are strictly not comparable (Snamprogetti has offered some additional services), and the Italian company is in any case willing to reduce its price-tag.

But there are also officials and ministers who prefer the Snamprogetti offer, partly because a turnkey contract makes sense when the Indian consultancy firm that will supervise the work has no previous experience with pipelines and may therefore not be able to do a proper monitoring job. Ottavio Quattrocchi, Snamprogetti's powerful, long-time representative in New Delhi, argues that the Gas Authority of India Ltd (GAIL), the public sector body set up last year to oversee the nation's gas resources, initially estimated the total pipeline cost at Rs 1,700 crore, whereas the figure should actually have been no more than Rs 1,100 crore. Says Quattrocchi: "This shows the lack of experience with pipelines."

When the contract was first mooted, a host of pipeline and construction industry stars lined up at the starting line. They included NKK, the Toyo-led combine, a consortium consisting of Canada's Nova and Alberta Corporation, Majestic Construction Ltd and India's Larsen & Toubro's (L&T) construction wing, Mexico's Condux, Singapore's Italmontagi, S. Korea's Halla Construction, India's Punj and Sons, Continental Construction and Dodsal, and the public sector Equipment and Projects India Ltd and Bridge and Roof. But many fell by the wayside because they were too expensive, failed to qualify technically, applied for very limited portions of the job or had not received official blessings for collaboration agreements in time.

The HBJ pipeline will snake across 15 rivers and four states and may eventually form the spine of a natural gas grid stretching to Orissa in the east and Andhra Pradesh in the south. The line will initially feed 18.2 million cubic metres of South Bassein natural gas every day to six fertiliser plants that are to sprout up along the route, besides two at Hazira on the coast of Gujarat. The country imports some Rs 1,400 crore worth of fertiliser annually and the gas will take it down the road to fertiliser self-sufficiency. Explains L.R. Talwar, managing director of Indo-Gulf Fertilisers & Chemicals Corporation, which is setting up a fertiliser plant at Jagdishpur in Uttar Pradesh: "The country's irrigation potential is going up and fertiliser consumption is on the rise. There may be problems in getting fertiliser from abroad, not enough naphtha is available to cater to the needs of the country, and gas as a feedstock requires fewer processing steps than naphtha."

The pipeline will also supply gas, much of which is now being flared, to two liquefied petroleum gas plants at Guna in Madhya Pradesh and Auriya in Uttar Pradesh. But the equally attractive promise it holds out is power. According to a GAIL official, the gas will run captive power generators at the fertiliser plants and the Karnal refinery, and drive three other 200 mw power plants in a region hungry for power. And the line will open out the economies of Madhya Padesh, Rajasthan and Uttar Pradesh to further industrialisation and create more jobs. Best of all, the Government could recover the investment in the pipeline in eight or 10 years. Says the New Delhi representative of a foreign pipeline laying firm, "The Government is looking at one hell of a gift horse."

But the immediate question is: when will it get going? The Government has deferred a decision on awarding the contract at least twice, overshot its January 1985 deadline for the work to begin and postponed the completion date by nine months to July 1989. Officials attribute the delay to Mrs Gandhi's assassination, a new government coming to power and

LIFE EXTENSION

HOW TO DECELERATE THE AGING PROCESS.

By Dr. Padam Singhvi
Leading Surgeon and Advisor,
Body & Beauty Care Magazine, Bombay

SURVIVAL OF THE FITTEST

"Medically speaking, no one dies of old age. The body will continue repairing and adjusting itself, unless and until there is some major failure or defect in one of its life-supporting mechanisms. And it is this major breakdown (a heart attack for example) that results in the cessation of life — what we call, death.

Today, life expectancy is on the increase. A normal healthy male can hope to live till he is 70. But surely, everyone wants to live longer. And that brings us to the subject of this article — how to reverse or slow down the biological clock. Let us first take a quick look at the aging process.

AT 30 PLUS:

Your system starts becoming inefficient by about 1% every year. Hearing and vision problems slowly appear. The skin becomes drier and the first wrinkles make their debut. Hair starts greying and teeth decaying.

AT 40 PLUS:

The body becomes less resistant to fight tumour cells. Bones become weaker. And you tend to sleep less.

AT 45 PLUS:

Digestion problems crop up. Arteries harden and you find it's harder to breathe. By the time you are 60, your body shrinks by an inch or so, and muscles lose their elasticity. Your eyesight diminishes and you find it takes longer to get ready for sex.

HOW FAST YOU AGE DEPENDS ON YOU

Although a lot depends on your genetic heritage, how fast you age is also determined by your lifestyle. Tapping the fountain of youth consists in keeping things from going wrong in the first place. Remember, fitness does not mean absence of illness.

THE GOLDEN RULES

Worrying about growing old will only make you age faster. Instead, do what Grandma told you a long time ago. Let me refresh your memory.

1 EXERCISE

It's never too late to start exercising. Experiments have proved, regular exercise helps improve blood circulation (a physically fit person has more chances of surviving a heart attack) helps you handle stress, keeps your weight under control and tones up your system. And reduces your chances of attracting diabetes, ulcers, heart disease and other ailments.

2 STOP SMOKING — RIGHT NOW!

If you are smoking as you read this, stub out your cigarette — filter or no filter. Give up this life-threatening habit and see the difference: In just twelve hours, carbon monoxide in your blood will rapidly decline. In a couple of weeks you'll breathe more freely. In a few years, the risk of cancer of the lung, larynx and oral cavity will decrease. Plus, you'll be less prone to premature heart disease. Result: longer life.

3 KEEP YOUR WEIGHT UNDER CONTROL

If you are more than 30% overweight, both your health and life are in danger. Ask any doctor or insurance agent and they will tell you, obese people live less longer. And are prime targets for diabetes and high blood pressure. Eat moderately but no crash diets. Reduce saturated fatty foods and increase vegetables, grains, fruits and cut down salted, cured, smoked and pickled foods. If you drink, exercise moderation. Because excessive alcohol (particularly combined with smoking) is associated with higher risks of lung and digestive tract cancer.

4 SLEEP WELL

The amount of sleep required, varies from person to person. But it's important that you feel refreshed and not sulky and restless when you wake up. Problem-sleepers should not pill-pop. Check with your doctor. Drink a glass of warm milk and let your mind relax. Sleeping at the same time every day helps.

5 LIVE ENERGETICALLY

In his book "Old Age" published in 1904, Elias Metchnikoff presents a cheerful picture of old people he had studied in Russia and France. According to his accounts, most of them remained active to the very end. So, live each day to the full, forget your past errors and future uncertainties.

6 KEEP YOURSELF WELL-GROOMED

Particularly, take care of your skin. As you grow older, the sweat and oil glands decrease their activity and the skin stretches. Avoid alcohol based astringents and toners.

7 MEDITATE EVERY DAY

Research in America has indicated a significant connection between younger biological age and the length of time meditation has been practised. Those who had been meditating longer than five years, appeared 12 years younger than their chronological age. When you meditate, your mind stops running, allowing the body's natural self-repair mechanisms to work by themselves. Because the stress and strain of everyday life hasten the aging process, meditation for at least one hour every day is a must.

8 THINK YOUNG

To quote Dr. Joseph Murphy, author of "The power of your subconscious mind" — "You grow old when you lose interest in life, when you cease to dream, to hunger after new truths, and to search for new worlds to conquer. When your mind is open to new ideas, new interests, you will remain young, regardless of the chronological age."

This message is brought to you by Vimal. People who bring you fabrics with built-in durability. In other words — long life. For this season, Vimal has put together a whole new range of Polyrich Suitings. Fabrics that bring you the best of both worlds in comfort and elegance.

THE NEW

Vijai SUPER mark II

Scooters India Limited

There's no 150 cc scooter to match it for ECONOMY POWER SAFETY.

FEATURES	Brand X	Brand Y	Vijai Super Mark-II
FUEL ECONOMY Kms/litres	40±6	40	56±6
POWER BHP	6.3	6.5	9.6
SAFETY Engine Mounting	Right hand side	Central	Centrally aligned

Its here. New Vijai Super Mark-II. The latest model from Scooters India Limited — successors to Innocenti of Italy. Pioneers in scooter manufacture. Vijai Super. The winner of Grand Prix in India and abroad.

Super Economy: 56±6 kms per litre

A new variable venturi carburettor, improved cylinder design, increased compression ratio and modified gear ratio impart optimum fuel economy. SAVING FUEL.

Super Power: 9.6 BHP

Goes from 0 to 60 kms in 12.75 seconds flat. Negotiates gradients with ease. And keeps ahead of others.

Super Safety

Centrally mounted engine, low centre of gravity and wider wheel base make it safer even at high speeds, on curves with load.

Super Durability

Modified material composition of cylinder, chrome plated piston rings and the use of solid lubricant enhance engine life. That is why it carries a warranty of 15 months or 10,000 kms (whichever is earlier) — the longest on any two wheeler.

It undergoes over 1,000 quality checks before it leaves the factory.

Vijai Super Mark-II. Distributed and serviced countrywide through 225 outlets.

Exported to many technologically advanced countries including Italy — its birth place.

THE NEW

Vijai SUPER mark II

The best deal on wheels

the elections. Finances for the project had to be sewn up, and the very scale of the project calls for measured decisions. These arguments certainly hold water, but behind-the-scenes manoeuvering and the debate over whether to go piecemeal or turnkey have also served to drag out the drama.

The pipeline has been dogged by controversy almost from the word go, from the companies eligible, to the bids, to the materials involved. After the Public Investment Board cleared it in February last year, the Oil and Natural Gas Commission (ONGC) invited contractors to bid for the job. The ONGC specified separate work schedules for three different sections of the main pipeline.

Three contracts are basically involved—for the pipes, fittings, and for laying and coating the pipeline. In addition, the public sector Bharat Heavy Electricals Ltd has been tipped for the job of installing four "compressor stations" to help the gas move through the pipeline, as well as a "cathodic protection" system to prevent the pipes from corroding.

Tenders for the contract to lay the pipeline were opened in July—and that's when the tale began to take its twists and turns. Bids were first scrutinised for eligibility. To qualify for the pipeline contract, companies had to have laid at least 1,000 km of pipeline over a seven-year period, with some of it being across rivers, GAIL and Engineers India Ltd (EIL), the public sector consultant to the project, picked four companies for their experience—Condux, NKK, Bridge and Roof, and the Majestic-L&T consortium. But the Petroleum Ministry asked GAIL and EIL to review the bids of 13 of the 16 companies that had put in tenders. (The ousted three—a Russian firm, Punj and Sons, and Continental Construction—were knocked out because they bid for small portions of the total work, which was found unacceptable.) This move specifically helped bring the Korean company, Halla Construction, back in the running after it had been rejected because it sought a longer completion time than the ONGC's 18 months. Following the review, GAIL and EIL went on to recommend Halla for the second section of the line from Bijaypur to Auriya, but it was dropped when its record did not stand up to scrutiny. Eventually, seven of the 13 qualified for the first (Hazira to Bijaypur) section, and Dodsal was recommended for the first half of it when prices were examined. The Toyo-Spie-Capag led consortium was recommended for the second half, NKK for the second (Bijaypur-Auriya) section and Dodsal for the remainder.

Differences of opinion also exist over the material to coat the pipeline. The US firm Raychem quoted almost 20 per cent less than competitors for its pipeline coating material Rayclad-HBJ (named after the HBJ pipeline). But in a memo dated July 30, 1984, H.A. Kruijtbosch and D. Koster of the Dutch firm Gascunie Engineering BV, EIL's back-up consultant, recommended a different coating.

Questions have also been raised about the Rs 300-crore contract to supply special steel pipes for the pipeline. Brazil's Petrobras quoted 30 per cent less than the rival Japanese consortium of Sumitomo, Nippon Steel, NKK, Cobe Steel Company and Japan Steel Works. But in the expectation that the Brazilians wouldn't be able to do the job, the Petroleum Ministry preferred the Japanese. A joint secretary in the ministry was sent to Brazil to inspect the Brazilian company's ability to deliver. He reported that while the firm might not be able to supply all the pipes on time, it would be able to supply most of them. But the ministry decided not to split the order, which would have been cheaper, and recommended the Japanese. That suggestion was shot down by the Finance Ministry.

Ottavio Quattrocchi, Snamprogetti's powerful representative in India, has argued for a turnkey contract, but this has led to a bitter dispute within the Government.

Another explanation for the Petroleum Ministry's tilt to the Japanese could be the project financing: he who pays the piper calls the tune. The World Bank has come up with a $ 150 million-offer, but last March the Government formally requested the Japanese Government for aid to cover the project's foreign exchange cost (now estimated at Rs 680 crore). In June, Japan agreed at the Aid India Club meeting to fork out 55 billion yen (Rs 245 crore) in soft Overseas Economic Cooperation Fund credit—but only for the Hazira-Bijaypur section of the pipeline. The loan has a proviso tagged on: it can be used only if orders are placed on Japanese companies or those from the less developed countries. Argues Atul Punj, president of Punj and Sons' construction division: "The agreement between the lines reads that Japanese companies must be favoured. The Japanese are viewing this as a test case for economic relations between India and Japan to be stepped up. It takes two hands to clap." That may be so, but Japanese pipe suppliers seem confident of bagging the contract for pipes. They have cut prices by only 2 per cent while rival suppliers have offered up to 25 per cent discounts.

The financing has had another fallout. It has led companies into marriages of convenience. Toyo's forte is not pipe laying (it is not a member of the International Pipeline Contractors' Association), but it is a Japanese company. So it has tied up with Spie-Capag of France, which has the knowhow. So also, Snamprogetti roped into its consortium C. Itoh, a Japanese trading company, and Japan Gasolene Company.

Underlying all this are two perceptions on awarding the contract that have been vying for supremacy—the piecemeal and turnkey approaches. Government officials and committees have so far favoured splitting the pipeline contract on the ground that this would be cheaper and that a turnkey deal would not help Indian engineers assimilate the technology to build future pipelines. Nor are they keen on the country placing all its eggs in one basket. But on the other hand, companies like Majestic and Snamprogetti have advanced the turnkey approach because, Quattrocchi argues, the quality of work will be better, there will be no cost overruns and, in the case of his consortium at least, the offer is flexible and negotiable.

Snamprogetti broached the turnkey idea to the Government in 1983 and the consortium made a formal $ 736-million bid for the contract in August 1984, one month after the other tender bids were opened, though before the prices quoted in the tenders were examined. Snamprogetti followed this up by slashing its price for the job by $100 million. As a sweetener, the Italian Government signed an agreement to provide

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

$160 million as aid for the project and verbally promised to raise the ante to $250 million or more if the turnkey approach was adopted. And to undercut the argument that the turnkey approach will leave no room for Indian companies to acquire knowhow, Snamprogetti has been talking to the Birla-owned Texmaco, Bridge and Roof, Triveni Engineering and Dodsal to provide an Indian presence in its consortium. Says Quattrocchi: "Dodsal must be included in our consortium. It has the maximum pipeline experience in India. And Engineers India can be fully associated with the project." The Snamprogetti offer cannot therefore be dismissed lightly, but it has divided opinion within the Government. So bitter has the dispute become that at a meeting of a panel of secretaries to examine the issue, a participant was sufficiently provoked to launch a public attack on Quattrocchi.

The winner in all this will be Dodsal, because it is guaranteed a major role as a sub-contractor. But Dodsal has fallen behind schedule on a feeder pipeline that it is building from Umrat to Hazira because a dredger sank in a tidal river, and therefore is under fire from the competition. And Majestic has pressed home the point to the Government that Dodsal's oil pipeline from Assam to Barauni started leaking just five years after it was laid. In contrast, Majestic's 25-year-old pipeline built for Oil India in Assam is in fine fettle. But Dodsal may also be behind schedule on the Umrat-Hazira line because the ONGC did not supply material in time, the oil pipeline to Barauni may have been poorly maintained, and the firm has a good track record in the Gulf countries. Says Indo-Gulf's Talwar: "Dodsal has an excellent international record."

Two factors emerge from this welter of blasts and counter blasts. One, the sniping may get worse. Two, a decision on awarding the contract cannot be postponed much longer. Most people in the construction business believe that although the delay in implementing the project has not significantly pushed up costs, this could change if the dollar continues to soar.

Piquantly, the situation may be compounded if the Government buys the turnkey line. Those who lose out could well demand a fresh round of tendering—which would open a Pandora's box of more delays and possibly higher project bills. But the Government may plump for one line or the other in the next few days—triggering off a new storm.

—PALAKUNNATHU G. MATHAI
with bureau reports

RAJENDRA SETHIA

The Loan Ranger

I KNOW that I am on the road to greatness. I may not get there for 15 years, and I may have to crawl on hands and knees through a long tunnel first. But I'll get through it," Rajendra Sethia had told a newspaper reporter last November from his hide-out in a rented Spanish villa.

Last fortnight, Sethia—the biggest bankrupt in British history—was no closer to the sought-after greatness. And even though he was not crawling on hands and knees, he could hardly have been very comfortable in a dingy office room of the Central Bureau of Investigation (CBI). Two days earlier, he had been lodged in an expensive suite in New Delhi's Maurya Sheraton hotel. And the story of Sethia's shift from the Spanish villa to a hotel suite to the CBI office is typical of the flamboyant bankrupt's daring style of operation.

Fleeing from criminal action on fraud charges a year ago, the 37-year-old India-born alumnus of the London School of Economics had left England for Spain, where typically he started business all over again even as court action began in England for liquidating his Esal Commodities group of companies. Sethia had in fact bragged that he was striking new deals in sugar, California peas and electronic components, and talked airily of repaying all his and Esal's debts, estimated at over Rs 350 crore.

Then, unannounced, Sethia showed up in Calcutta—an audacious move when three Indian public sector banks were trying to recover over Rs 250 crore from him. Sethia started trading in jute in Calcutta, and armed with a false passport managed to get an air ticket and a visa for the United States (where he continues to hold substantial assets). But in early March local newspaper reporters tracked him down, and Sethia disappeared yet again, only to surface in the Maurya Sheraton hotel in New Delhi's diplomatic enclave as R. Sethi.

The CBI, was now on his tail and quickly got the banks concerned to lodge a formal complaint—astonishingly, no such action had been taken till then. Sethia was finally nabbed in his hotel and produced in court. Said a confident CBI official: "With his arrest, the curtain is going to be lifted on one of the biggest bank frauds in the country."

Though the final trial will begin after CBI winds up its preliminary investigations, its advocates and Sethia were already locked in a verbal duel on the merits of the case. CBI counsel charged that Sethia had manipulated documents, acted in collusion with the employees of the concerned Indian banks, and under the garb of exporting consignments to non-existent African companies taken loans worth over Rs 150 crore from the Punjab National Bank (PNB) and over Rs 100 crore from the Central Bank of India and the Union Bank of India. CBI lawyers also contended that Sethia did not give proper securities for procuring these loans. In court, they argued that since Sethia did not possess enough assets of his own to repay his debts, he should be placed under police remand in order to help identify various Indian and foreign beneficiaries of his money.

Sethia argued his own defence as his advocate could not reach the court in time, and said in a low voice that "there was no illegal action on our part. Even now we are trying to repay the bank loans. In fact, I have come to India in pursuance of my efforts to collect funds from various sources for repayment to the banks." Sethia's lawyer claimed later that of the Rs 250 crore loans that were outstanding against Sethia's name, over Rs 60 crore had already been repaid. Sethia himself maintained that he had merely had a bad business season, and that he had paid off other debtors during the last few months. Specifically, he mentioned the securities that he had offered to the State Bank of India's branches in London and the United States. And he added that he would have cleared all his loans if the rescue package worked out by the consortium of Indian banks concerned had not collapsed because of opposition from London and Overseas Sugar Company (LOS), to whom Sethia owed Rs 20 crore.

In fact, the insolvency proceedings began against Sethia in London on the strength of an LOS petition. Said LOS's David Dean: "As long as there is any breath in my body, I shall follow Sethia. It is a very sad case." But in one of the endless twists and turns in a headline-hitting case, LOS itself faces liquidation proceedings that have been initiated by the Punjab National Bank.

In yet another sidelight to the main

Sethia (centre) being led to court: tough battles ahead in India and abroad

> "In fact, I have come to India in pursuance of my efforts to collect funds from various sources for repayment to the banks."
> RAJENDRA SETHIIA

show. Sethia's tea company Jokai India, whose assets he had apparently offered to Punjab National Bank as security, may now be up for sale, and a bid is reported to have been made by Tata Tea.

Meanwhile, Scotland Yard's fraud squad is chasing Sethia, and a Yard spokesman said: "Sethia has been arrested in India on our request." CBI sources said that they had received a request from London for Sethia's extradition to Britain in connection with the cases that had been filed against him there.

While declaring Sethia a "fugitive from justice", a London court has already appointed an official receiver for the liquidation of his companies so that his creditors can be repaid. The receivers as well as Sethia's creditors are saddled with the crucial question of getting hold of Sethia's properties in Britain and elsewhere. Said Gerhard Weiff, one of the group of accountants appointed to assist the official receiver: "The case is criminal in terms of a fraud. My major responsibility is to find out assets of Esal's companies to pay back his creditors. Liquidation will take years probably. Indian and Nigerian debts will take still more time."

But Indian authorities are in no mood to let their catch be shipped abroad. During his police remand, Sethia was subjected to some tough interrogation by over half a dozen sleuths drawn from the CBI's special cell. Their main objective was to extract information about Sethia's Indian accomplices. CBI officials were sure that Sethia could not have got his loans without the connivance of influential people in Indian banks and elsewhere. Last month, the Government had summarily dismissed the chairmen of both the Punjab National Bank and the Central Bank of India for their failure to take appropriate preventive action. And the Union Bank of India's Chairman J. Bhatnagar was spared the axe only because he assured the Finance Ministry that his loans could be recovered with the help of pledged securities. Moreover, he retired before the Finance Ministry could check this claim.

So far, none of the banks' other employees have been prosecuted. B.R.Patankar, who was the Central Bank's deputy general manager in London, has retired from the bank and joined Sethia and Amarjeet Singh of PNB and S.C.Tara of Union Bank have been recalled to India. The CBI has prepared a list of over a dozen officials of the three banks who it believes may have been involved in the sanctioning and release of loans on the basis of fake documents. But before the noose is tightened, the CBI interrogators want to collect enough information about their relationship with Sethia. Preliminary investigations have shown that these officials had enjoyed Sethia's hospitality on his specially fitted Boeing 707.

For all that, however, the prosecutors will have to cross many legal hurdles before they can expect a breakthrough or before the banks can hope to get back their money. The Government will also have to shake off Scotland Yard pressure for Sethia's immediate extradition to London. And the legal route for prosecuting Sethia for offences committed abroad will have to be carefully worked out. Sethia could be kept temporarily in India for possessing what is alleged to be a forged passport and unauthorised foreign exchange, but this can be of little help in properly bringing to book the biggest bankrupt of recent times.

And even at this late stage, the Indian banks have not filed any suits against Sethia in British courts, while the insolvency declared by a London court makes no provision for Indian debtors. Perhaps it is the banks that will have to crawl on hands and knees through an assortment of tunnels for 15 years before they get their money back. —PRABHU CHAWLA

DIAMONDS

Sparkling Success

QUESTION: Which industry's exports have multiplied 120 times in less than two decades?

Answer: Diamonds.

Which industry has the enviable distinction of producing goods worth Rs 34 on every rupee of capital investment? Diamonds.

Sparkling success is the story of the Indian diamond industry. A conversion enterprise par excellence, it imported almost all its raw material (Rs 900 crore worth of roughs in 1983-84) and exported Rs 1,190 crore of stones, earning almost Rs 300 crore in foreign exchange last year. With that kind of record, the sky should be the limit for Indian diamonds, but last fortnight the sparkle suddenly seemed to dim. Even as the country's first diamond exchange opened its doors, marking yet another step forward for the industry, raids on a diamond merchant provoked a shocked trade into an unprecedented and potentially crippling boycott of imported rough diamonds at a time when exports already showed clear signs of losing the tremendous momentum they have sustained over the past decade.

Last month, in an offshoot of the tax raids on builder firms throughout Bombay, taxmen raided a diamond merchant's office in south Bombay and seized a number of diamond packets belonging to the merchant and other exporters. The taxmen ignored explanations that at any given time any merchant is likely to have his as well as others' diamonds in stock on their way to and from the cutting and polishing centres.

In protest, diamond merchants refused the February 1985 'sight'—one of the 10 yearly import consignments of rough stones put together by the powerful Diamond Trading Company (DTC) of London—and threatened to boycott the next one in April as well. Shantilal Jhaveri, the combative president of the Diamond Exporters Association thundered: "Our protest is akin to Gandhiji's Bardoli satyagraha. The raids are just meant to harass us. The taxmen knew nothing about trade practices and we are paying for their ignorance."

The trade practice that Jhaveri refers to is the 'jhangar'—the identification slip which accompanies each packet of diamonds when it travels from one office to another. Within a fortnight, the seized packets were returned, but this did little to assuage hurt feelings, for the exporters had barely recovered from earlier raids in 1983 which resulted in Rs 1.41 crore worth of goods being seized. Those goods are still in the department's custody. Says Anoop Mehta of Mohanlal Raichand and Sons, which notched up Rs 18 crore in exports last year: "Fifty per cent of all roughs are imported on advance or imprest licences, so that we have to export the finished goods within six months. And if the tax people hold our diamonds for years then we lose a lot, especially the small firms which send their stuff to the larger offices to be shown to buyers."

One income tax officer explained privately that the jhangars were really not the bone of contention. The department was trying to penetrate the thicket of 'unseen' transactions in both rough and polished stones which take place any number of times between the time the rough arrives in the country and the time the finished product is shipped out. As a broker admits: "The diamonds that a company exports may not be cut from the same roughs it imported."

Still, there was some cheer for the diamantaires. After years of planning, and with a push last year from the then Union commerce minister V.P. Singh, India's first diamond exchange, the Bharat Diamond Bourse, finally opened its doors on one-and-a-half-floors of a building not very far from the complex of five buildings in south Bombay where the diamond traders are congregated. Essentially a meeting place for buyers and sellers, and a service centre for attendant headaches like customs clearance, the bourse, by the end of the first fortnight had notched up a daily turnover of Rs 6 crore.

While the merchants welcomed the establishment of the exchange, they were not too pleased about the involvement of

Chart by B.K. SHARMA

"The raids are just meant to harass us. The taxmen knew nothing about trade practices and we are paying for their ignorance."

SHANTILAL JHAVERI

Shining Trade

THE INDIAN diamond processing industry is a triumph of enterprise, the enterprise of a select community of Jains from Palanpur, a 1,200-year-old settlement 200 km north of Ahmedabad in Gujarat, which between them control an empire of 600-odd importing and exporting firms, over 30,000 cutting and polishing units which employ about 4 lakh people, and export Rs 1,200 crore on imports of Rs 900 crore. So close-knit is the community that attempts by the Birlas, Tatas and JK Singhania to set up their own diamond units have all ended in failure.

'Makeables' and 'cuttables'—rough diamonds which yield about 27 per cent of polished stone constitute 47 per cent of imports, with the rest composed of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Minerals and Metals Trading Corporation (MMTC), which has been entrusted with the task of organising the bourse and which has loaned Rs 1 crore on soft terms for the purpose. For a trade which is notoriously clannish and secretive, this is just another instance of the camel taking over the entire tent. Says an exporter: "They didn't give us the land we wanted for our bourse in another part of the city, and the Rs 3.5 lakh we deposited for that plot is still locked up."

The raids, the strike and the bourse have all arrived at a time when the indications are that diamond exports have peaked at the 1983-84 figure of Rs 1,189 crore. From 1983 to 1984, the value of exports in actual dollar terms declined from $ 1,108 million to $ 1,084 million, a drop of 2.1 per cent. The drop in net exports is more significant, by $55 million. And the fall in terms of caratage is from 56.5 lakh carats in 1983 to 52.5 lakh carats in 1984, which works out to 7.24 per cent. No wonder that the chairman of the Gem and Jewellery Export Promotion Council, Rasmikant Durlabhji, admitted last fortnight that the spectacular leaps in exports of the last few years were a thing of the past. In fact, India needs to export Rs 133 crore worth of diamonds in the last quarter of 1984-85 to bring this year's total level with last year's, which seems unlikely.

Ironically, India's own resounding success as the prime processing centre for small stones appears to have contributed to the current slump. Between 1972 and 1983, world sales of cut diamonds increased by 59 lakh carats to 84 lakh carats. In the same period, Indian exports went up by practically the same amount, by 51.5 lakh carats to 56.5 lakh carats. Thus nearly 90 per cent of the world boom was India's doing. And since India specialises almost exclusively in small and cheap diamonds, this was definitely a factor causing the depression in the large quality diamond market. De Beers, the monopoly company, declared 1984 a "quality" year and slashed the prices of quality roughs which were promptly grabbed by Israel and other centres. The finished products of others are attractively priced when compared to India's offerings.

"Our rules and our industry are geared to small stones. It's time for us to think of bigger things."

A.P. PALSHETKAR

Although the weight of a diamond has very little to do with its value, there is some criticism that India's diamond licensing system discourages work on large diamonds. Authorised imports of roughs range from 65 per cent to 87 per cent of value-added exports, and as the value added is labour, any company can maintain a self-sustaining cycle only if the labour content in the finished product is high. And it is obviously higher in the case of several small stones than a single big one. Says A.P. Palshetkar of Palshetkar and Co, a big import-export manufacturing combine: "Our rules and our industry are geared to small stones where we are the undisputed leaders. It's time for us to think of bigger things."

For the immediate present, however, the trade was steadily and vehemently lobbying in Delhi for more sympathetic treatment. Arguing that cracking down on the country's foremost export industry for the sake of a few crore rupees in tax would be tantamount to killing the goose for her golden eggs, Jhaveri says: "We don't say that we are all paragons of virtue. But most of us are honest entrepreneurs and we deliver the goods. That's more than you can say for several other industries." The million dollar question last fortnight was whether the powers that be would come around to this view.

—JAGANNATH DUBASHI

more expensive and more easily workable 'sawables' which yield nearly half their weight of stone. Forty per cent of the imports come directly from the DTC through the Indian 'sightholders' who are entitled to buy from DTC. This is a crucial privilege in a highly cartelised world in which about 35 per cent of all diamonds are of DTC origin. In fact, many Indian diamond companies have established a visible and growing presence in Antwerp, the world's diamond centre.

The roughs are parcelled out to cutting and polishing firms like Palshetkar and Co of Bombay and Ratnagiri, which employs 400 people in seven units. The salaries range from Rs 500 a month for the women who cleave the roughs to the Rs 5,000 a month (tax free, of course) made by the elite skilled workers who polish the stones. The skill of the Indian artisan is legendary. The roughs are handled best in Surat and Navsari, where the ghantis —the basic polishing wheels —are concentrated. The best part of the business is that it is not capital intensive: a ghanti costs about Rs 5,000.

JAGANNATH DUBASHI

Diamond polishing: fortune wheel

The polished diamonds are brought back to Bombay where they are offered to prospective buyers. The entire operation runs on trust. In the five buildings which are the heart of the trade, nondescript brokers run up and down stairs quietly offering sachets of stones. Nearly half of India's exports are to the United States, with Belgium in second place and Japan and Hong Kong tying for third. India's reputation as an exporter is justifiably high. The cottage industry has much to be proud about.

SHAW WALLACE

Share Desperation

MANOHAR Rajaram Chhabria is furious. Puffing away at an extra-long cigarette in a plush hotel suite in New Delhi, the 39-year-old Dubai-based businessman can barely restrain himself from rolling out the expletives. For after having coughed up more than $27 million for a 38.74 per cent stake in Shaw Wallace, he finds his voting power frozen by the Company Law Board, his intentions questioned, and his time taken up in a messy fight that he had never sought. "I have no time for a damaging situation," he says. But he is also not one to run away from a difficult situation, and Chhabria is now ready for battle to ensure that he gets control of the company he has paid for.

Chhabria's problem is that the Company Law Board has instituted an enquiry into the real ownership of the shares that he has bought, pending which his voting rights on the shares have been frozen. The shares themselves were bought indirectly, by buying up R.G. Shaw and Company, the overseas outfit that still owns the shares. So questions are also being asked as to whether Chhabria should have taken permission from the Reserve Bank for buying the holding company. Chhabria says he does not, since it was a completely offshore operation, but it is possible that permission is in fact required. This is because R.G.Shaw has no activity other than holding the Shaw Wallace shares. So, according to one interpretation of the law, the buying of R.G.Shaw's shares is tantamount to buying Shaw Wallace shares—an act which requires Reserve Bank's permission.

Such problems have arisen because Shaw Wallace's Indian management, in the person of Chairman S.P.Acharya, has strongly opposed Chhabria's entry into Shaw Wallace. Going well beyond the role of a professional manager employed by the shareholders, Acharya has lobbied with the Government, with the Malaysian company (Sime Darby) that sold the shares in the first place, and with the public sector financial institutions, which own 24.9 per cent of Shaw Wallace shares. He has held a succession of quick board meetings, proposed at one stage to increase the membership of the board (at which point Chhabria threatened to sue) and refused so far to speak to Chhabria. All this was probably because he believed that Chhabria was acting in collusion with Vijay Mallya, who operates as a rival to Shaw Wallace in the liquor business. But Chhabria stoutly insists that he is acting on his own, so Acharya might well have taken on a major fight without good reason. Acharya himself could not be reached for comment, and he has so far refused to speak to the press on the subject.

BHAWAN SINGH

"What have I done wrong? I have not ousted any promoter, I am not harming shareholders. The beauty of it is, I did not even want to change the Shaw Wallace management."

RAJARAM CHHABRIA

Last fortnight, Chhabria said he was prepared to face any enquiry by the Government. "I will give them documents even if they don't ask for them. What have I done wrong? I have not ousted any promoter, I am not causing any harm to minority shareholders. The beauty of it is, I did not even want to change the Shaw Wallace management. In fact, if Mr Acharya tells me tomorrow that he is resigning, I do not have anyone to replace him."

While Chhabria did the rounds in Delhi and Acharya planned the next step in a battle that has become the talking point in the corporate world, more fireworks seemed certain in the future.

The stage for the battle royal was set last October, when Chhabria got a call from the Grindlays Bank's corporate division, asking him whether he was interested in buying Shaw Wallace. "I thought the bank might be joking," Chhabria recalls, but he nevertheless consulted Vijay Mallya of United Breweries. "He knew the liquor business, and I was insisting he get involved, but he was not interested," says Chhabria, who also tried to strike a deal with his partner in the Dunlop India acquisition, R.P. Goenka. "Goenka is like a father to me, and he has adopted me as his son, but he said he did not want to be in the liquor business," says Chhabria, who finally decided to go it alone.

The bidding started soon afterwards, with a south Indian group providing the competition. Chhabria started at Rs 90 for each Rs 10 share, marginally higher than the going stock-market price, but this was steadily pushed up to Rs 124, at which level the competition dropped out ultimately.

On January 7, the Malaysian Central Bank gave its permission for the share sale, and Chhabria was called upon to pay up in seven days. On January 10, he flew to London armed with a banker's cheque for $23.4 million. The next day brought the first shock: Sime Darby said the deal was off and told Chhabria that they would invite fresh tender bids. Also, Shaw Wallace's Indian management would now be allowed to put in a bid through an overseas nominee. Recalls Chhabria: "Having flown to London at a few hours' notice, and since I had mentally set myself to acquire the company, this business of a tender was not acceptable." But his lawyers told him there was little he could do about it, so he finally decided to bid again.

This he did with native shrewdness. He offered Rs 2 per share more than the highest bidder, with a maximum price of Rs 145 per share, and payment in 24 hours. His rivals stopped at Rs 140, so he finally paid Rs 142. Interestingly enough, the rivals had included the Canadian Seagram whisky manufacturers (who have been trying to come into India for the last two years) and Nabisco Brand (which controls the Calcutta-based Britannia Industries).

Chhabria suspects that Nabisco may have been acting on behalf of the Indian

So we designed a spray phosphating unit that can facilitate a faster production rate, and a painting system for water-based paints at Modi Xerox

With the Modi Xerox surface coating project we have broken into the area of office equipment and proven the versatility of our expertise.

This pollution-free painting system designed as per European standards includes a conveyorised automatic spray phosphating unit which saves time, space and manual labour, thus raising the production rate to many times higher than conventional phosphating methods. This tunneled unit is fitted with a configuration of precisely positioned nozzles, which ensure complete phosphate coating of components and a special slot-seal to prevent the phosphating solution from soiling the overhead conveyor. An efficient sludge separator and a dry-off oven complete the pre-treatment plant that is easy to maintain.

The problem of spraying water-based paints electrostatically has been easily solved by the latest Ransburg REA III electrostatic gun.

However, these are not the only unique features of the project. The Thermopac, providing economical indirect heating; the pressurised paint shop having 6 pollution-free, side-draft paint booths, two of which are for handling plastic components; and an oven temperature range of 60°-180°C suited to handle both plastic components and water-based paints; all all add up to an international Xerox finish for the high technology Modi Xerox xerographic products.

If you have a surface coating problem, bring it to us. We have the solution.

We also have a collaboration with Ransburg, world leaders in electrostatic painting, and Advantair, UK, for systems designing. We have a total in-house fabrication facility.

We have two decades of expertise in indirect and direct heating. We have the technical competence. And we have the proof.

Enfield, Swaraj Vehicles, Bajaj Auto, Kinetic Engineering and almost every moped manufacturer in the country is on our client list. Added to it are Voltas and Modi Xerox, two important names in consumer durables and office equipment. We are now ready to take up fresh challenges. Let it be from you.

Nothing less than total involvement in surface coating

FOR THE MAN ON THE MOVE.

The Personal Typewriter

Complete Portability-Independent Power Supply

Small and light enough to travel comfortably in a briefcase, Typestar 5 is perfect for creative people on the move. It's battery operated so you can take it anywhere. An AC Power Adapter or rechargeable battery pack can also be used.

Choice Of Typestyles With Multi-Language Capacity

The classic proportions of COURIER 10 or the sleek, contemporary look of CUBIC PS can be printed double width for headlines or emphasis. Conversion to French or Spanish is done with a simple touch.

On-Display Correction

In addition to Typestar 5 many automatic functions, you can make corrections in typing errors before they are printed. A 15 character display and one line memory make correction simple.

The Professional Touch

The whisper quiet, solid, Typestar 5 is ideal for any professional environment, and to suit your style even further, Typestar 5 will provide you with letter-quality printing.

management, and he is forthright in his comments: "I have paid $4 million extra because the management of Shaw Wallace decided to put up a rival bid and made Sime Darby go back on its earlier commitment to me." The frustrated buyer adds that he has made several efforts to meet Acharya, "but he has not even spoken to me on the telephone".

Once Chhabria was stymied by the action of the Company Law Board, there were other equally interesting developments. On March 5, Chhabria got a telex message from a firm of merchant bankers in Singapore, offering him a way out. The bankers, acting on behalf of Nabisco Brands, suggested that certain parts of Shaw Wallace's business could be transferred to the Nabisco group, leaving the rest to Chhabria. The interesting part of the message was that Nabisco would also take the present management of Shaw Wallace with it. Chhabria suspects that the offer of a partial buy-out was made in the hope that he would have got tired of the stalemate on the subject, and believes that this points to a partnership between Acharya and Nabisco.

His reply to the merchant banking firm was in the negative, and Chhabria has also rejected an offer to sell out his holdings at a profit of some $8 million. Says Chhabria: "I do not buy companies to sell them. I am not a greenmailer." (Greenmailers are corporate raiders who buy substantial shareholdings in a company and then threaten to take control unless their holdings are bought out at a higher price.)

Talking of the Nabisco offer, Chhabria says: "This is like my ordering a cup of coffee for Rs 6. At that stage you put a fly in the coffee, then take out the fly and offer me Rs 60 if I drink the coffee. Will I drink the coffee?" Continuing further in this injured tone, he says: "I have been kicked around like a football from pole to pole, but I am not someone who can be threatened."

He says Shaw Wallace's attraction is its computer software business, which Chhabria thinks can be developed quickly. "I have Japanese friends who can help exploit Shaw Wallace's software business. At a meeting in Davos (Switzerland), I told the president of a giant Japanese company that if he gave us the hardware we could give him the software, and they were willing."

However, all such plans now have to be kept in abeyance till the Company Law Board completes its investigation, and until it becomes clear whether the Reserve Bank needs to clear his investment. The Dubai-based businessman could hardly have expected this cartload of trouble, given the smooth manner in which he has moved into three other Indian companies in the last six months: Dunlop India, Gordon Woodroffe and Bayer India. He has already taken over as chairman of Dunlop, is in the driver's seat at Gordon Woodroffe, and is being co-opted on to the board of Bayer India. Clearly, he had expected a similar sequence of events in the case of Shaw Wallace. And the management opposition must clearly have caught him completely by surprise.

He is now trying to regain the initiative, talking to journalists, to the Government and to anyone else who he thinks can be helpful, and he says: "I believe the new Government will give me justice." But at the moment, the great Shaw Wallace take-over remains stuck at a stalemate, with Acharya planning his next move and Chhabria fuming in frustration. —T.N.NINAN

WHILE prices continued to remain relatively stable, industrial production especially manufacturing output, as well as power generation, registered unhealthy declines last month. Money supply continued to expand though considerably more slowly than earlier. The mood in the share market was optimistic and gold recorded a sudden upsurge, the first in several weeks.

All data are seasonally adjusted. Current trends are computed on the basis of the last six months data to which a regression is fitted.

Wholesale prices were up marginally by 0.1 per cent last fortnight, above the long term trend but maintaining the stability of the previous month.

Industrial production dropped by 1.6 per cent last month owing to a fall in manufacturing output; increase in mining output failed to prop it up.

A steep decline in the output of machinery led to a disturbing 3.2 per cent drop in manufacturing output last month.

Money supply jumped 0.4 per cent last fortnight due chiefly to a sharp upsurge in commercial bank credit to the government.

In keeping with the long term trend which is decelerating, bank credit to firms was up about 0.6 per cent last fortnight.

Bullish tendencies in chemical fertilizers, tea plantation and electrical machinery securities caused a 1.8 per cent jump in the share market.

Power generation dropped 2 per cent last month chiefly due to a shortfall in non-thermal output.

Gold prices rocketed 4 per cent last fortnight notwithstanding a sharp dip in the middle, accelerating significantly over the previous fortnight.

ON THE ROAD WITH A VESPA XE RIDER

"It's got power and a sense of style. But what really turns me on is it's all round economy."

When my Dad gave it to me, he summed it up, "It's all yours son. The power, the safety, the style. But knowing what your allowance is, most important, the low maintenance and running costs."

Trust Dad to have phrased it right. You see I do a lot of travelling. College every day. Out of town on weekends. And my evenings are reasonably exciting. It's reassuring to know that I have a tough, reliable and economical scooter.

THE MARKETS

Holding Steady

LIKE the man who has eaten well but not too wisely, the stock-markets are busy digesting their recent gains. The markets have been remarkably steady with the index only a couple of points below the maximum reached since the start of the year. Most investors apparently take a fairly optimistic view of the forthcoming budget and the fact that the finance minister has not gone into hiding is taken as an indication that he will not spring an unpleasant surprise on the great day.

Operators are normally expected to be cautious on the eve of the budget but the bulls continue their tight grip on the market, encouraged perhaps by sustained buying by institutions. In any case, good scrips are in short supply while investible funds are apparently plentiful. Corporate reports are by and large upbeat. Wimco has fared well and stepped up its dividend from 18 to 20 per cent. Its gross profit has gone up by more than a third from Rs 9 crore to Rs 12.5 crore on a turnover of about Rs 105 crore. Vulcan-Laval, a Pune-based company, has done even better with sales up by 35 per cent and net profit by more than 50 per cent. Punjab Tractors, a joint sector company that made its fortune in tractors and is now diversifying into commercial vehicles, had a mixed year, with sales more than doubled but without much improvement in profits.

Those who think that share prices are unusually high and it is ridiculous to pay Rs 60 or Rs 70 for scrips that pay no more than 20 per cent may be in for a surprise. The shares are likely to go even higher and at least a dozen scrips should touch the magic figure of 100 in the next couple of years. The business community is backing the Government to the hilt and expects goodies in return. With a huge five-year plan to be fed with resources, tax reliefs may not be on the cards, but there may be other incentives. The general feeling is that industry is raring to go if only the Government will stop breathing down its neck. Unless the finance minister has been sending false signals, the share markets should have a record year ahead.

On a longer haul, companies involved in the power and oil industries deserve more than a passing look. The Government plans to spend more than Rs 40,000 crore on these two basic industries in the next five years or so, which must be a godsend to the manufacturers of switchgears, transformers, material handling plants, as also such special equipment as valves, rigs etc. Companies like Larsen & Toubro, Greaves Crompton, Kirloskar Electric, Siemens etc almost suggest themselves. Their shares are already pretty high—though Siemens is passing through a rough patch—but there is more in it than meets the eye. It is not for nothing that oil is called black gold.

TABLE TENNIS

An Attacking Champion

SIXTEEN years ago, a frail, bespectacled teenager made a quiet entry onto the table tennis scene in Calcutta. Connoisseurs, smitten by the reigning queen Rupa Mukherjee, failed to take notice—this was just another bubbly youngster who had looked good at school-level encounters but was as yet too aggressive, too rash, for top-drawer competition. Two years later, however these same connoisseurs in Calcutta sat up as Indu Puri swept aside Rupa to annexe the national title. That 1972 win signalled the beginning of a remarkable career that peaked last month with yet another national title, Indu Puri's eighth, and the sixth running. "Take it from me, she is a born champion. It is all there, in her strokes, approach to the game, and her tremendous strength of mind. When the other girls go out to play her, all they are looking forward to is a decent score," says G.Jagannath, former national champion himself and coach of the nine-member squad that left for Yugoslavia last fortnight for pre-world championship training.

Indu Puri's supremacy is all too obvious even now, at age 31. Last fortnight, the Union Bank officer from Delhi proved through many rounds of practice at the Nehru Stadium that the left-handed smash Indian spectators are so familiar with is still far too lethal for the younger girls in the team to tackle. "She is so attacking, and she takes so many points from that side-spin push of hers," acknowledges Vyoma Parekh who offered stubborn resistance to Puri at the last national finals. And the verve has not diminished. "I am an absolutely attacking player. I can't defend for nuts," she says, and adds, scotching rumours that she may call it a day this year, "Who does not like to win? I intend to continue for as long as I am good enough."

Given the poor standards of table tennis in the country, Puri never had the benefit of great coaching. "There haven't been any coaches. I learnt the game from my father, manager of a jute mill in Calcutta, who was a sports enthusiast and encouraged me to play. The rest was dedication and determination," she says and rues the fact that during the last 15 years not many youngsters have lived up to their initial promise. "To begin with," she says, "many of them look good. But later they fail to keep improving as they choose different priorities in life. Some get jobs and leave, and marriage, in Indian conditions, is a problem for a sportswoman." But the lack of both formal coaching and competition at home have not deterred Puri from making her mark on the international scene as well. She hit the high spot at the 1978 Asian Championship, defeating North Korea's Pak Yung Sun, the then world champion. "That," Puri recalls, is a moment I will cherish forever. It was much too big a victory for me." But that was also the period when the Indian women's table tennis team posted a few notables on the international scene. Puri was ranked second among the Commonwealth countries, won, with Nandini Kulkarni and Shailaja Salokhe the World Railways title in 1978 and put India in the first category of the Corbellion Cup, the world women's table tennis championship. She reminisces nostalgically, "Shaila was a worthy rival. Those were indeed great days." For many years, till Salokhe faded away, the two invariably fought it out for the national title. Says Puri: "Right from 1972 onwards I won every national that I was fit to play. The toughest challenge was always from Shaila."

Indu Puri in action at the last nationals: smash hit

And if fitness has been a perpetual bugbear her success speaks amply of her determination. She has lived with chronic asthma—she wheezes perceptibly even as she talks. A look at her glasses and any expert would dismiss her as a non-starter. But Puri does not even like to mention the fact that all through these 16 years she has looked down on her opponents through lenses of the strength of minus 10. "Please," she says, pleadingly, "I would be happy if you did not even mention that. I have never thought that my eyesight was a handicap of any kind."

But, if determination took care of the physical problems Puri inherited, her remarkable fitness now, at an age when most table tennis stars find themselves too slow for top-level competition, is due to the strenuous 45-minute workout she has every morning. "It's strenuous to train but when you are fit you realise what the others are missing. With exercise now my lungs have become so strong asthma does not even bother me," she says and regrets the fact that most of the young players today are not adequately fitness-conscious. Says she: "That is our problem at the international level where everyone is so fit. And the importance of fitness is never drilled into our youngsters."

That is one problem she now wants to apply herself to. She has her mind set on full-time coaching once she decides to leave medals and trophies to younger women. Yet she does not look at the future of table tennis in India with a great degree of optimism. Says she: "There is no incentive. Even the press bothers only about cricket. Think of Ami Ghia, seven times national badminton champion. Has she ever made it to the cover of a sports magazine? Ravi Shastri and Kapil Dev are always there." And that, indeed, is another left-handed clincher that will go unanswered like her famed side-spin push.

HALFWAY through the floodlit finale of the world championship of cricket at the Melbourne Cricket Ground (MCG) last fortnight, a pair of teenaged female Indian supporters hastily scribbled a message on a cloth banner and joyfully held it aloft. It read proudly: "Down Under, India is Thunder".

That one statement said it all. To the delighted disbelief of Indian sports fans, a totally transformed Indian cricket team powered its way to an authoritative victory in the seven-nation world championship of cricket tournament, steamrolling over the more fancied Australian, New Zealand and English teams before disdainfully brushing aside Pakistan in an emotion-charged final to win convincingly, for the second time in the span of 20 months, the title of World Champions of one-day cricket.

In June 1983, against all odds, India had humbled the all-conquering West

The victory lap in Shastri's new Audi: emotion-charged finale

Indies at Lords to win the Prudential World Cup, a victory largely diluted by the then-expressed view that it was a freak, flash-in-the-pan performance. But last fortnight's superlative display by Sunil Gavaskar's tightly-knit team was undoubtedly because they were without question quite simply the best team in the tournament.

Shrewdly shepherded by Gavaskar playing his last series as captain, the Indian eleven, unchanged throughout except for the final when opening bowler and till then leading wicket-taker in the tournament, Roger Binny, caught the flu, chalked up a 5-0 unbeaten record in such convincing fashion that at no stage in the tournament did they look capable of being beaten, even had they encountered the favourites, the West Indies.

It seemed incredible that barely two weeks before the tournament—held to celebrate the Australian state of Victoria's 150th birthday—Indian cricket had reached yet another nadir, having been roundly beaten 4-1 by a mediocre English eleven in the one-day internationals during the Test series at home. In Australia, fielding virtually the same 1983 World Cup combination, they started off as un-

overdoses with local bookies offering 20-1 odds against India, way behind the West Indies (1-3), Australia (5-1), England (8-1) and New Zealand (16-1).

In fact, so demoralised and divided had the Indian eleven looked against England that they were widely expected to move in to Pakistan in their opening match of the tourney, specially when their *bete noire*, the fiery Imran Khan, sent back three Indian batsmen with 27 runs on the giant Melbourne scoreboard. Then, in what was to become a regular feature of the Indian teams' performance, Mohammed Azharuddin, fresh from a record-breaking three consecutive centuries, and skipper Gavaskar put on a glorious 132-run partnership that allowed India to cruise past Pakistan's total of 183. Azhar, making his first appearance earned, rattled up an unbeaten 93 to wrest the man of the match title from bowler Binny (4 for 35 in 8.2 overs).

Overnight, the bookmaker's odds changed and India were now favoured at 3-1 to win the tournament. Australia's many cricketing scribes were also quick to comment on the new sense of purpose and self-confidence in the team, something that had been markedly absent just a fortnight earlier. "The boys tend to come closer together on tour," remarked Gavaskar after the match against Pakistan, raising visions of India repeating their stunning World Cup victory.

The truth of that statement was all too evident in the very next encounter against England in which India gained sweet revenge by grinding David Gower's men into the dust of the Sydney cricket ground, thrashing them by a convincing margin of 86 runs. Again, it was an inspiring team effort, opener Srikkanth laying the foundations with a typically swashbuckling 57 to earn the Indians their second $500 (Rs4,400) man of the match award, while the spinners, Ravi Shastri and the young and prodigiously talented Sivaramakrishnan, backed up by superb, razor-sharp fielding, eagerly gobbled up three wickets apiece.

But the toughest hurdle lay ahead, the decisive match against Australia, playing on home soil and heavily favoured to beat the West Indies in the finals. Skipper Gavaskar, however, had planned well and wisely. Realising that the key to eventual victory lay in fielding, he had arranged for the Indians to practice in secluded grounds far away from the prying eyes of the rival camps. There, under the watchful eye of tour manager and former Indian spin king Erapalli Prasanna, the team went through extremely strenuous workouts in the muggy Australian weather, fine-tuning their fielding and perfecting their strategy.

So unobtrusively and single-mindedly had they gone about their task that 23,000 Australians—the highest turnout for any of the matches to date—trooped into the MCG to savour what everybody thought would be a slaughter. It was, but not the way that had been expected. The Indian bowling line-up of Kapil Dev, Binny, Mohinder Amarnath, Madan Lal, Shastri and Sivaramakrishnan kept the Australians on a tight leash, giving nothing away while the fielders snapped up every chance that came their way. Australia were bundled out for 163 largely thanks to Kapil Dev (2 for 25), Binny (3 for 27), Amarnath (1 for 16), Siva (2 for 32) and Shastri (1 for 34). It was the third consecutive time that India had bundled out the opposition for a total below 200 and within the stipulated 50 overs.

An Indian victory would ensure that the team topped the group with maximum points from their matches, giving them a well-deserved berth in the semi-finals. They went about that task with consummate ease and confidence, opening pair Srikkanth (93 not out) and man of the match Ravi Shastri (51) hammering 124 runs to give India an 8-wicket victory in just 37 overs and also set up a semi-final clash against New Zealand. Australian captain Allan Border had no hesitation in giving the Indians credit for an outstanding performance. "They plain and simply were the better side by far," he admitted after the match, a statement that was gradually gaining wider currency as the days went by among the captains of the other six teams as well as the cricket-crazy Australian public.

The day before the all important semi-

Ravi Shastri in action: anchorman

final clash, New Zealand captain Geoffrey Howarth flatly stated: "We are very impressed with India and are not going to take them lightly. They seem to be back in the same kind of form that won them the World Cup two years ago. But I think we have their measure." Former Australian cricket captain Richie Benaud was not so sure. "India must go into this game strong favourites to win," he commented on Kerry Packer's Channel Nine, "they have the motivation to prove that their 1983 win was no fluke. I would put my shirt on the Indians."

So apparently, did the large number of bare-chested Sydney spectators, increasingly impressed by the thorough professionalism and dedication of the Indian eleven. New Zealand had no record to go by in the tournament having been given a tough fight by cricketing tyros Sri Lanka and losing a rain-affected 19-over match to the West Indies.But team manager Prasanna and captain Gavaskar were both cautious about the outcome, knowing that New Zealand are a tough side to beat in any one-day encounter.

In the end, it took just 51 electrifying minutes for the outcome to be settled.In the space of 74 balls, a belligerent Kapil Dev and an elegant Dilip Vengsarkar tore apart the New Zealand pace attack that had successfully tied up Srikkanth (9), Shastri (53) and Azharuddin (29) to send India storming into the finals of the world championship of cricket. But once again, it was team effort that really did the trick with the Indians really outstanding in the fielding department. New Zealand, in fact, were the first team to cross the 200 mark against India, managing to scrape together 206 in the face of exceptionally tight bowling, Shastri (3 for 31) being particularly dangerous. He picked up his second man of the match award in four matches but it was really Kapil Dev's explosive innings that turned the tide in India's favour. His electrifying 50 came off just 30 balls—17 in one over off feared paceman Richard Hadlee—and together with Vengsarkar (63 not out) posted India's third century partnership of the tournament.

Then it was back to Melbourne for the elated Indian team to await the outcome of the other semi-final battle between Pakistan and the West Indies, a match that saw the latter humbled in what was captain Clive 'Supercat' Lloyd's farewell appearance before his retirement from Test cricket. Nobody was more surprised than Gavaskar who had psyched up his teammates for a meeting with Clive Lloyd and his pace battery at the MCG on March

SUNIL GAVASKAR

"Everything went right"

"TERRIFIC" was Indian captain Sunil Gavaskar's laconic reply to the question of how he felt after shepherding India to a historic victory in the World Series of Cricket final in Australia last week. But even over a transcontinental telephone line, the normally unflappable Gavaskar's excitement was evident, and justifiably so.

A sizeable portion of the credit for India's dominant showing in the tourney belongs to Gavaskar for the outstanding captaincy and inspiration he displayed in what he insists is his last series as captain. Associate Editor DILIP BOBB *spoke to Gavaskar over the telephone an hour after India's triumph at the Melbourne Cricket Ground. Excerpts:*

Q. *How confident were you of winning the final considering you were playing Pakistan and not the West Indies?*

A. Pretty confident.We had beaten Pakistan quite convincingly in our first encounter in the tournament and we knew we could do it again.But I must confess I expected them to make a little more than the 176 they did specially with Roger Binny, our highest wicket-taker, not able to play.

Q. *This has been a low scoring series and considering the extra pressures of a final it could well have been a tough total to match?*

A. Well, we knew that anything less than four runs an over was well within our grasp and Shastri and Srikkanth gave us a dream opening stand.

Q. *Did you go into the tournament with a predetermined strategy or treat each match as an individual challenge?*

A. We took each match as it came depending on the opposition.The entire team had a serious discussion before every match where we analysed the strengths and weaknesses of the other side and decided on our own game plan. But in the end, everything just went so right for us that there really was no need. We merely played better than anybody else as a team.

Q. *The remarkable feature of the Indian team's performance was the total transformation they seemed to have undergone, the team spirit has never been more evident and every member gave of his best. What brou[illegible] this about?*

A. Somehow, there are various un[illegible]voidable pressures on the team when we are playing in India that take away from the overall performance. The players are not as confident and any mistake is magnified out of proportion. Outside the country, the whole atmosphere is different, there's less tension and friction and much more confidence and teamwork.

Q. *Talking of playing abroad, as the underdogs, did the lack of crowd support bother you at all?*

A. On the contrary, we were quite surprised at the level of support we got from the crowds.There were a large number of Indians settled in Australia who turned up to cheer for us and we even got a lot of support from the Australian spectators, mainly the youngsters.

Q. *Every single Australian commentator has been full of praise for your captaincy during the tournament and has also criticised your decision to step down as captain. Ian Chapell says you should continue as a kind of Clive Lloyd father figure. How serious are you about giving up the captaincy?*

A. Very serious. It's something I've given considerable thought to and my mind is made up.The boys have given me a wonderful gift for my farewell appearance as captain and I couldn't ask for a better way to end my captaincy. Now I just want to relax and enjoy whatever cricket I have left in me.

Q. *If you are absolutely convinced, you must have given some thought to your likely successor as well. Who is your nomination for the next captain of the Indian side?*

A. Well, I have absolutely no preferences at the moment. It is something for the Indian cricket board to decide and I really wouldn't like to comment.

Q. *From a captain's point of view, does the performance of players like Binny and Srikkanth mean that they will finally find a permanent place in the Indian Test team?*

A. It's obvious to anybody that they have done more than enough to justify their inclusion. I personally think they are an asset to any side.

GARRY SPARKE

Gavaskar on the victory stand: bowing out in style

Q. The present team seems to have got the right blend of youth and experience. Do you think they can continue to display the same world-beating form in subsequent series?

A. There is a tremendous depth of talent not just in this team but in Indian cricket in general. There are a lot of youngsters waiting in the wings who have an abundance of talent. Provided that talent can be backed up with the right temperament, Indian cricket has a bright future ahead. Take the present team, for example. One only had to see the enormous amount of effort everybody put in at practice to tone up our batting and physical fitness. We did it quietly and away from the glare of publicity so nobody was really aware of the effort being made. But we really worked hard for our victory. Even the reserves like Manoj Prabhakar, Ashok Malhotra and Chetan Sharma threw everything into the practice sessions. That is one reason why our fielding was much above the rest of the teams.

Q. How crucial were the spinners in your scheme of things?

A. Absolutely vital because it indeed two spells of 20 overs out of 10. Both Siva and Shastri contained the runs and picked up crucial wickets after Kapil and Binny had given us the vital breakthroughs.

Q. Manager Erapalli Prasanna seems to have done a good job. What was his contribution to the success?

A. He was very involved in every stage. He bowled to us at the nets and I was quite tempted to include him in the team except that his fielding was not up to the mark. But seriously, he was an invaluable asset.

Q. You have been quite consistently airing your theory of having neutral umpires for Test series. Has the current competition reaffirmed your belief?

A. Definitely. If a neutral umpire makes a wrong decision there are no hard feelings whereas with a non-neutral umpire, there is always a suspicion of bias. Umpires are an important factor in a Test match and if you have very good neutral umpires officiating it can eliminate a lot of the current controversies and bitterness that arise out of umpiring decisions. I think this competition has only proved my point.

Q. What about your cricketing future? Now that you have decided to step down as captain will you bat lower down in the order as you did here?

A. (Laughs) That all depends on whether I'm selected for the team at all.

10. "I was confident we would qualify for the finals," he said, "but to be facing Pakistan and not the West Indies has come as something of a surprise. Their morale must be sky-high after beating Clive Lloyd's men."

But so was the Indian team's. When they jogged out to field on the sun-drenched expanse of the MCG after Pakistan skipper Javed Miandad elected to bat, they exuded extraordinary confidence and a quiet capability.

Having beaten Pakistan once already in the tournament, India clearly had the edge but even so, the tension in the packed stands was almost physical. On paper, India and Pakistan had played 14 one-day internationals against each other with India having won seven and Pakistan six (one was abandoned). But Pakistan were obviously over-dependent on Imran and Mudassar Nazar while the Indians had a team in which every member had come good.

Kapil, recapturing the bowling form that catapulted him to original fame, grabbed three early wickets and the perfect yorker that shattered Qasim Omar's stumps was described by commentators as the best ball of the tournament. Both Miandad and Imran, who featured in a face-saving partnership, were lucky to get the benefit of the doubt from the umpires before little Siva, the darling of the Australian cricketing pundits, bowled one that turned prodigiously to beat Miandad's bat and the hyped-up Vishwanath behind the stumps had the bails off in a flash to claim his 12th victim in the tournament. Siva, brought in when 18 overs were left, wound up with three wickets in the match to take his tournament tally to 10, making him the highest wicket-taker in the series, an incredible feat for a spinner in a one-day tournament.

Once again, India had skittled out the opposition for less than 200, Pakistan finally inching up to 176 for 9, the only team to last out the full 50 overs against the Indians. But even that was not to be taken lightly considering that the entire tournament had been a low-scoring one. Gavaskar, however, had enough faith in his colleagues to know that anything less than four runs an over was attainable.

When the Indian innings opened, Imran was at his most hostile. But Shastri, showing a maturity far beyond his 22 years, stood like a rock and once again revealed his ability to shine under pressure. Playing his traditional sheet anchor role, Shastri blunted the pace attack to allow the exuberant Srikkanth at the other end to indulge in his pyrotechnics. Between

SYDNEY MORNING HERALD

Azharuddin: grit and determination

them, the two openers registered the fourth century stand for the Indians (the sixth in the entire tournament) and by the time Srikkanth was finally out for 67, the champagne corks had already started popping in the Indian dressing room.

It was, in many ways, reminiscent of the World Cup victory at Lords but with some major differences. Unlike the famous balcony scene at Lords, the elation in the Indian camp was more subdued. Even with four runs for victory and all the time and batting in the world, only Test newcomer Sadanand Vishwanath couldn't wait to uncork the champagne. Gavaskar, apart from the occasional smile and nod, looked as tense as if the innings had just started. Kapil, the next man in, paced up and down with the pads on, his irresistible urge to get at the bowling quite undiminished. Veteran Amarnath sat quietly in a corner autographing miniature cricket bats and did not even look up when Vengsarkar and Shastri took the winning run.

It was, more than anything else, a measure of the Indian team's new-found confidence in themselves and their ability and a reflection of their cricketing maturity. Once again, India were champions of one-day cricket and once again it was a spirit-lifting team effort that had triumphed. Srikkanth picked up his second man of the match award and Shastri picked up his third consecutive 50 in the tournament, a feat that, along with his bowling figures of 8 for 166 (he was the only bowler in the entire tournament to bowl his allotted 10 overs in every match) earned him the coveted title of Champion of Champions and a $40,000 bronze Audi 100 car, overshadowing contenders like Imran Khan, Allan Border, Vivian Richards, Richard Hadlee, Malcolm Marshall, Joel Garner and Alan Lamb.

In terms of sheer emotion, Melbourne clearly lorded it over Lords. The Indians, by their grit, team spirit, professionalism and obvious enjoyment of the game, had won the hearts of the Australian crowds and when Gavaskar lifted the $8,000 (Rs 72,400) gleaming gold goblet high in the air, the unrestrained ovation from the 35,000 spectators—the highest ever for a match not involving Australia—reflected precisely that. Then came the moment that will linger long in cricketing history: Shastri accepting the keys to his Audi and turning around to find an impish Gavaskar already in the front seat fiddling with the dashboard gadgets while the rest of the team piled into the back, on the roof and on the bonnet for a victory lap. "What a day it has been," said Shastri when he alighted from the car, "this beats hitting six sixes in one over".

The moment was highly symbolic. Nobody epitomised the professionalism more than Shastri. The tall talented all-rounder had set out to win the man of the series award well before the finals and had made no bones about it in an interview after the match against Australia, just as he had waxed confident about an Indian victory in the final. He had been instructed by Gavaskar to play an anchorman's role and keep one end up and he played that to perfection as his total tally of 182 runs testifies. Shastri also personified the new aggressive, killer instinct that has finally crept into Indian cricket. Said Dennis Lillee, one of the best fast bowlers the game has produced: "The Indians used to be almost apologetic earlier, almost idolising the opposition. It's good to see them getting more aggressive and confident."

But if Shastri symbolised the new awakening, he was not alone. There was Sadanand Vishwanath, the man with a pugnacious jaw and mercurial fingers, hyped up behind the stumps, shouting encouragement to the bowlers and castigating fielders for fumbles. Here was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

another Indian player with aggressive intent, giving nothing away. In the final match, when Imran Khan charged down the wicket to loft medium pacer Madan Lal over the midfield, Vishwanath immediately moved right up to the stumps. Imran never tried that shot again. India could not have found a more ideal replacement for the ageing Syed Kirmani.

Even young, reed-like leg spinner Sivaramakrishnan, 19, revealed himself to be as competitive as anybody else in the tournament, taunting the batsmen with his mystical variations of flight and turn and frustrating them with his agility and speed while fielding. In fact, so tight was the teamwork that it was virtually impossible to single out individual performances. Indian players topped both the bowling and batting averages with Srikkanth chalking up the highest run aggregate of 238 followed by Azharuddin (187) and Shastri (182) while Siva (10 wickets), Binny (9) and Kapil Dev (9) collected the highest number of wickets. Madan Lal performed his usual workhorse role, picking up seven wickets in a highly economical spell. Mohinder though hardly required to bat, bowled with his usual accuracy and intelligence, giving nothing away and garnered crucial wickets when they were needed the most, while Binny and Srikkanth showed by their all-round performance that their exclusion from the Test side was an insult to their talent.

The most heartening feature was the return to form of Kapil Dev and to some extent Dilip Vengsarkar. Kapil also recaptured the captaincy a day after the Melbourne victory for the four-nation $ 100,000 Rothmans tournament in Sharjah next fortnight. India won the Asia Cup at Sharjah last year and if they win the Rothmans it will be their fourth victory in one-day international tournaments in a row. Apart from the healthy additions to the team's individual bank balances. They picked up $ 51,500 (Rs 456,000) in total prize money at Melbourne besides the Rs 15,000 each player received from the Indian Cricket Board. Undoubtedly they will be showered with more financial blessings when they make their victorious return to India this week.

Sydney Morning Herald

A belligerent Vishwanath (above) and Srikkanth: competitive edge

But the Indian victory was worth much more than the purse. The world series of cricket marked, more than anything else, the revival of Indian cricket. Says Gavaskar: "Our efforts in this tournament will make a lot of people revalue our credentials. I believe that we have an excellent blend of experience and youth. Indian cricket is alive and well and this win in such a competition is a very special victory."

Nobody, least of all arch-rivals and finalists Pakistan, could have grudged Gavaskar and his men that palpable pride. "They fully deserved their victory," said Pakistan Captain Javed Miandad, "they were a better side." Ian Chapell made much the same point when he said that the Indians "showed no weaknesses at all. They were outstanding in bowling, batting and fielding. They have just the right blend of talent and in a year or two this could be the top cricket team in the world". Chapell's only criticism was regarding Gavaskar's decision to step down as captain. Chapell, one of the most successful captains Australia has had, strongly feels that Gavaskar should stay as skipper, bat lower down in the order and play the kind of father figure role that Clive Lloyd has played all these years for the West Indies. Gavaskar, however, seems quite determined to stick to his decision, made before the series got under way, but even he could not have conjured up a better way to bow out. "The boys could not have given me a better send-off as captain and for that I am proud and grateful," he says. But the ultimate comment on India's performance was reserved for Richie Benaud. "India's victory was more rewarding than in the financial sense," he said. "Gavaskar's team will remember the event with pleasure because it lifted them from the depths to which they had slipped just a few short weeks ago. It didn't just give them a purseful of dollars, it gave them pride, and that, whichever way you look at it, is a very valuable commodity in cricket."

"In commemoration

IOL : an innovator in industrial gases, cutting and welding, cryogenic technology and health care, strikes gold

24 January 1935 : Indian Oxygen and Acetylene Company Pvt. Ltd. was incorporated in Calcutta. Half a century later, IOL, as it is known now, looks back with a sense of achievement at the contribution it has made to the industrial development of the country. It is proud of the service it has been able to render not only to industry but also to defence, research and the medical profession.

Industrial gases : applications for progress

IOL pioneered the manufacture of industrial gases in India. Acting as an innovator and catalyst, IOL has, moreover, developed and introduced a large number of gases applications which have contributed significantly to the country's industrial modernisation and self-sufficiency. These applications range from oxygen in the fabrication of metals and argon for inert gas welding to nitrogen for chemical and pharmaceutical processes and the heat treatment of metals.

Special gases for sophisticated industries and research

A pioneering contribution of particular significance is the indigenous manufacture of special gases and gas mixtures by IOL. These are essential inputs for sophisticated industries such as electronics and telecommunications, advanced metallurgy and basic and applied research. These gases are prepared with the utmost precision to specified impurity levels.

A complete welding "package" for industry

Over the years IOL has pioneered in India the manufacture of various types of welding equipment and consumables, which serve every sector of industry. Many processes — from oxy-acetylene cutting and welding to fully automatic welding — have also been introduced, resulting in higher productivity and leading to modernisation of industry.

# of 50 golden years"

IOL provides not only the products, but also the process "know-how" and advisory service to the end user, large and small.

Cryogenic plants to strengthen industrial infrastructure

The Company pioneered the manufacture and supply of complete air separation plants in India. Today, IOL provides total engineering services, from concept to commissioning, for cryogenic and process plants. The Company's expertise is helping to strengthen the country's industrial infrastructure.

Health care products to alleviate suffering

IOL feels privileged to have pioneered in India the manufacture of medical gases, anaesthesia, analgesia and lung function equipment. The Company has played, and continues to play, a pivotal role by making life-saving gases and related equipment available throughout the country.

Involvement in national development

Ever responsive to the needs of the nation, whether in the field of industry or health care, IOL is continuously at work developing new products and processes and adapting new technologies appropriately.

On the occasion of its Golden Jubilee, IOL looks forward with renewed hope and dedication to serve the nation in the future as it has done in the past.

Technological courtesy, GCEL.

Those days of total reliance on imports have gone with the wind. Now you can actually get professional video wonders in India which are exported to other countries. With GCEL as their master minds.

Because GCEL, among other things, has provided the professional video community in India such electronic marvels as monitors, cameras and CCTV Systems for educational and professional applications—selected by the Indian Space Research Organisation and Doordarshan; video displays for Computer Systems peripherals; professional grade video tape recording—approved for Doordarshan. Indeed, India isn't merely switching in—it's 'switching'.

GCEL. At the helm of electronics.

GCEL has linked its destiny with India's future in electronics. In the short span since 1975, when it embarked on its mission as a public sector undertaking, GCEL has already achieved national stature.

It has come to stay as a reliable souce of highly sophisticated professional grade communication and electronic equipments. Utilised to advantage not only by Indian aviation authorities but also by the Posts and Telegraphs Railways, Doordarshan, Defence Services and the like.

And today, GCEL has taken electronics even beyond the realm of mere manufacture. To video editing studios and turnkey projects.

JUDICIARY

Leaving a Mark

P SUBRAMANIAM Poti has never lacked the courage of his convictions. Whether questioning central intervention in state affairs or speaking of the need for a uniform personal law, Poti has not hesitated to voice his opinions. As a result, he has been no stranger to controversy. When he was chief justice of Kerala, his home state, his relationship with Chief Minister Karunakaran and Home Minister Vayalar Ravi was far from harmonious, with some state Congress(I) men even calling him a CPI(I) stooge.

But last month, when he retired after a year's tenure at the helm of the Gujarat High Court, Poti had every reason to be proud of his record. In a series of judgements the bespectacled judge restored faith and hope in the judicial process and showed that the most effective law comes from the activist judge with a human concern. Leading lawyers and judges in the state could not help remarking that Poti had set a trend his predecessors could ill afford to ignore. And despite the fact that he could speak no Gujarati, Poti was a man on the move, travelling to every nook and corner of the state and pepping up the Lok Adalat system in remote areas by personally attending sessions.

But it was in public interest litigation that Poti's record was brightest. Gujarat has had a long tradition of socially committed judges, like P.N. Bhagwati and D.A. Desai but under Poti it received a new impetus. And a unique feature of his functioning was that quite a few of the cases he took an interest in were sparked off by media reports, many of them in INDIA TODAY. Only a few days after he took over, he freed 300 bonded labourers from the clutches of a labour contractor, and in his judgement lashed out at the contract labour system which exploited lakhs of workers in the state.

Other cases followed in quick succession. One involved hundreds of coal workers who were forced to live in subhuman conditions by a labour contractor under the very eye of their principal employer the Western Railways. Despite the battery of legal luminaries who fought the case for the contractor, within weeks Poti passed orders that saw to it that their condition underwent a sea change. Now 10 workers who work on loading coal on one wagon receive combined wages of Rs 130 a day, compared to Rs 80 previously. They now have identity cards and proper wage slips to prevent fraud, are entitled to free medical treatment and leave, provided with a canteen and a creche, and are given a Rs 150 bonus during Diwali.

RAMESH MENON

"In a growing democracy, the judiciary has a tremendous responsibility. Judges and lawyers have to rise to the situation to keep ensuring that people do not lose faith in the judiciary."

—P. SUBRAMANIAM POTI

As a consequence, the workers who lived in terror of the contractor's henchmen now believe that there are forces that will protect them. And their optimism is not just because of the court case. The momentum created by Poti's decisions has fired many young activists to regularly visit them and create an awareness among them of their rights. This case also forced the state labour commissioner to proceed against numerous other state corporations guilty of exploiting workers, especially after Poti lashed out against the working of the labour department.

For Poti himself, the pitiable condition of many in society has been an eye-opener. "It has been a great education for me. I was shocked to hear tribals in Dang ask me what the law was, whether there is actually a law. They did not know their rights and benefits and how they can live with dignity. There are so many areas like this which need attention," he says. And Poti's interim orders on a petition regarding the exploitation of tribals in Valia taluk in Broach district just before he retired was a land-mark. He directed the Government to ensure the tribals were paid the minimum wage and report to the court on how it enforced its decision, and ordered the police not to discriminate in dealings with the tribals.

"In a growing democracy," says Poti, "the judiciary has a tremendous responsibility. Judges and lawyers will have to rise to the situation to keep ensuring that people do not lose faith in the judiciary." In case after case, and the judge has not hesitated to reprimand whoever is responsible for any abuse of human rights. He has issued interim orders asking the Government to specially appoint factory inspectors to ensure that labour laws are enforced in the case of 18,000 textile workers in Surat and has asked the labour commissioner to report back to him.

Only last month, Poti minced no words when he and Justice I.C. Batt said the state of the Ahmedabad children's home made a mockery of the Children's Act. The home had become a den of illness and crime, and was run with no thought for the children. Poti and Bhatt passed an interim order that the state Government immediately organise health checkups of the inmates and that the juvenile courts take a more humane approach to their job, especially as many of the children had no business being there.

Addressing a packed gathering of lawyers and judges at a reception in his honour just before he retired, Poti spoke of one of his first cases as a young lawyer in Kerala when he had asked a villager to pay Rs 200 to fight his case. When he found out that the villager who lived by selling milk had to sell his cattle to get the money, says Poti, that was the turning point. Never again, he decided, would he tell a poor man to pay in order to get justice. The lawyers and judges listened to him in reverential silence. But whether they deem it necessary to learn from his experience remains to be seen.

What kindles the spark . . .

Digitized by Arya Samaj Foundation Chennai and eGangotri

. . . of hope in her eyes

There are millions like her all over the country. Young, eager and ready to work for a better future. But are there enough opportunities to fulfil their dreams? MICO thought about it.

It was clear that the only way to push the country on the path to progress was to develop the vast rural hinterland, where most of the population exists. Barely.

MICO located an impoverished village near Bangalore six years ago. The inhabitants had hardly enough to eat, nothing much to do and look forward to.

Not any more. Today, on what was dry land, lush crops are irrigated by canals and sprinklers, bringing life-giving water from borewells. Three crops grow in a year on fertilised fields. Thousands of newly planted trees enliven and protect the landscape. Neatly dressed children study assiduously.

Diseases, which used to take a heavy toll are being banished, thanks to the help given by MICO doctors. There are smiles and hope on healthy faces. Newly-built houses on elevated terrain overlook the miserable huts which will no more be seen. Most important, the villagers have learnt to look after themselves, needing less and less help from outside.

MICO created this model of self-reliance at the Kagglipura A. K. Colony near Bangalore in association with the Sadguru Sai Shankar Trust. A modest effort with immense potential to accelerate the country's progress.

After all, a bit of MICO is to be found everywhere—spark plugs for petrol engines and fuel injection equipment for diesel engines. Now a bit more. A commitment to the country's development in neglected areas, where the future begins.

AIRCRAFT PURCHASES

Delayed Flights

IS THERE a jinx attached to aircraft selection in India,or is it just the timidity of decision-shy bureaucrats which holds up re-equipment decisions for years? This question is being asked once again in aviation circles because the painfully slow selection process which produced a deep penetration strike aircraft for the Indian Air Force in the late 1970s and a feederliner for Vayudoot some years later, now looks like being repeated.The sufferers this time are Indian Airlines and Air-India.

The plane selection for Vayudoot by half a dozen committees, dragged on for ten long years till one front running aircraft became obsolete. The same danger now threatens the Boeing 757 selected for Indian Airlines (IA).The Government issued a letter of intent to the 757 manufacturers last summer,but the final decision to order the planes has now been held up because a new exercise has been ordered to evaluate *ab initio*, a completely new type of plane,the Airbus A 320, which will be available around 1988.

In Air-India's case a proposal to buy six Airbus A 310 aircraft has crossed the hurdle of the Public Investment Board(PIB) and now awaits Cabinet approval. Inexplicably, the file has been awaiting Cabinet approval for several months. Both cases are typical of the tortured process of decision-making in aircraft purchases. IA's proposal to buy twelve 757s was approved by the board of directors in June 1984 and it went through an informal scrutiny by the PIB in early December. The 206 seat 757s were due to start arriving in September this year—well in time to meet the heavy traffic rush IA faces in winter.

But the letter of intent remains just that,and Indian Airlines will have to find other ways of meeting the winter traffic rush. Meanwhile Airbus Industrie has told IA that the A 320 offers a substantial saving in operating costs over the 757. IA planners knew that the A 320 was in the works when they evaluated and selected the 757. But suddenly,in the last weeks of 1984 a new committee was set up headed by IA's Deputy Managing Director B.K. Bhasin to evaluate the A 320.That team has been at work for over two months and it is to be seen what its labours will produce.The earlier team which selected the 757 had looked for an aircraft midway in capacity between the 287 seater Airbus A 300 that it flies on the trunk routes and the 126 seat Boeing 737 used on the secondary routes.The 757 fitted the bill, particularly because of its ability to operate satisfactorily to all the airfields presently used by the 737.

The Boeing 757 (top) and A320: the technology trap

Airbus Industrie now argues that its A 320 can perform that very function much more efficiently.It offers just the right capacity increase over the 737, and since the 320 comes a couple of years after the 757 it has improved technology and better fuel economy.But the problem is that the A 320 is still very much a paper plane and will at best be delivered in 1988. What should IA do till then to meet traffic demands that are growing by 12 per cent a year. Airbus Industrie has suggested a way out: to lease some A 300 Airbuses and some 737s to tide over IA's problem till 1988. "Should IA keep waiting indefinitely for state of the art technology, or should it make up its mind and order some equipment to tide over the present crunch," an official asked.

Boeing is now trying to hit back and stall the A 320 bid.It has announced that it is designing a 150 seater for delivery in 1991 using the new General Electric unducted fan engine which promises a fuel efficiency of over 25 per cent over existing jet engines. This announcement by Boeing only underlines the argument that if IA waits for every advancement in technology then it will probably keep on waiting, and the development really worth waiting for would be the gearless G.E. engine with two counter–rotating propellors which would generate the same speed as jet engines.

But one factor which could work against the A 320 proposal is the Government's reluctance to give all its business to one manufacturer and one country.In case it decides that IA should wait till 1988 for the 320, then the Air-India proposal to buy A 310 aircraft may have to be altered in favour of the Boeing 767. If that happens it will confirm Air-India's hunch that its efforts to replace the old fuel guzzling 707s, are star crossed.In the early 1980s it had chosen the Lockheed Tristar only to be informed that its manufacture was being discontinued.Later it evaluated the A 310, the Boeing 767 and the three engined MD 100, and chose the MD 100, just before the McDonnell Douglas Corporation scrapped plans to produce the plane. The Tata Committee finally selected the Boeing 767 only to be told by the Government to take the A 310. Even that could be in danger now.

In any case Airbus probably realises that the IA business will in the long run be worth much more to it than Air-India's. In any case the Air-India order will only be for six planes whereas the IA order, if it comes through, will be worth fifteen A 320s in the first instance, with the likelihood of many more if it is to eventually replace the 737,the workhorse of the IA fleet. But whichever aircraft is eventually chosen,it will reflect poorly on the decision–making process.

WEST BENGAL

The Language Lament

THIRTY-EIGHT years after the demise of the British Raj, English retains a curious fascination for a majority of the middle class in West Bengal. The compulsory teaching of English has long been abolished in almost every state in the country, but nowhere has such a decision provoked as much controversy and opposition as it has here: a fact that the ruling Left Front is discovering to its great dismay.

Just how important the language still is in West Bengal was brought home rather dramatically recently when the second largest constituent of the Left Front, the Forward Bloc, publicly declared that the Front's educational reforms, particularly the decisions to scrap English and the system of examinations in the primary school stage, were among the foremost reasons for its poor showing in the Lok Sabha elections last December.

And it is not just the Forward Bloc that has gauged the pro-English trend of popular opinion. The Marxist opponent of the Left Front, the Socialist Units Centre of India (SUCI), has used the language issue to rally large sections of the urban and rural middle class against the Front ever since 1980 when the changes were first introduced. Of late, some Congress(I) leaders have also started voicing their opposition to the abolition of English.

The literate classes in the state, despite their almost jingoistic devotion to the cultural heritage of the Bengali language, fear that by abolishing English at the primary stages the Government is in effect ensuring a lifetime of mediocrity and restricted opportunities for their children. Most palpably worried are the urbanites for whom the institutes of technology, medicine and management outside the state are a paradise that can be reached only by treading the straight and narrow path of an education in English.

To the SUCI, however, the CPI(M)'s intentions are more diabolical. "Just like the British who did not want English to be taught to the broad masses since it would spread liberal ideas, the CPI(M) wants to keep the masses uneducated so that they can be manipulated and prevented from questioning the system," says SUCI women's leader Sumitra Mukherjee. But even the CPI(M) professes the importance of the language. Chief Minister Jyoti Basu declared at the 150th anniversary of St Xavier's Calcutta, his old school: "English is indispensable."

"The issue is not whether English should be taught or not," protests Primary Education Minister Mohammed Abdul Bari. He says the real question seems to be whether the absence of English teaching at the primary level will prevent a child from gaining proficiency in the language at a later stage.

PRABUDDHA BOSE

An English class: great demand

"The Left Front merely endorsed the view put forward by every central committee on education that only the mother tongue should be taught at the primary school stage," Bari adds.

But the result was the production of many graduates who were incapable of constructing even a single English sentence correctly. The malaise, CPI(M) leaders like Bhabesh Maitra argued, could only be cured if the traditional methods of teaching by rote and the monotony of the "C A T spells cat" system were replaced by the scientific method of teaching by association. But reorienting English teachers in all the 10,191 Madhyamik (class six to 10) schools has proved impossible even with the help of the All Bengal Teachers Association (ABTA). Beni Madhab Bhattacharjee, an English teacher in Calcutta's Ballygunje government high school feels that "the new method can help a student pick up the language fast but in the absence of supplementary reading and conversation practice and other forms of exposure to the language children fall back to learning mechanically."

Not surprisingly, the Marxist educationists who assumed that a child could gain sufficient proficiency in English within a span of just five years (between class six and 10) without having any previous encounter with the language have come in for considerable criticism. John Mason, principal of Calcutta's St. James' school, for one, is of the opinion that "four or even six years of learning English do not provide sufficient grounding for switching over from Bengali medium to English medium instruction at the college level".

And judging from the sharp decline in student admissions to government-run schools in urban areas in recent years, most middle class urbanites seem to share Mason's views. "Private primary schools where English is taught have proliferated in recent years in Calcutta," says Sukumar Chakraborty, secretary to the state committee of the Forward Bloc's Prathomik Shikshak Samiti. Chakraborty explains that in comparison to the increase in the number of primary schools from 40,941 to 51,800 in the last seven years, the number of high schools has only increased from 8,544 to 10,191, leading to a terrific competition for admission and increasing the premiums paid for admission to private schools.

The worst hit by the educational reforms, ironically, are the rural masses whom the changes are supposed to have benefitted. "Due to the absence of examinations or any other form of evaluation, there is no compulsion on the teacher to ensure that he does his job properly," says the Forward Bloc's Ashok Ghosh. In the villages of the interior, teachers at times do not bother to attend school for long stretches, or do not come in time, leave alone teaching by a method imperfectly understood by them. The Left Front might be doing the right thing in initiating a programme to bring about literacy to the greatest numbers but in the process it has lowered the level of the education system to that of the lowest common denominator. To the sizeable middle class in the state, the Left Front has only succeeded in creating a shortage of essential English education, just like other shortages of power, milk and civic amenities.

Never a dull Week

Through The Week, you can follow every move on the political chessboard. But that's not all. In the pages of The Week you'll meet every type of person.
From the most talked of world leader to your best loved comic characters.

Read about The Week correspondent's harrowing experience on board a hijacked Indian Airlines flight. Or a balanced, unbiased analysis of the LIC-Escorts story. Meet the amazing ninetythree-year-old Raghavendra Swamiji — doctor, wrestler and 'beggar'. Or enter the haunting, mellifluous world of Pankaj Udhas, renowned ghazal singer.

You'll find them all in The Week. People and events that make news. Brought to you with in-depth analyses. And always ahead of time. So it's hardly surprising that in just two years, The Week's circulation has crossed 1.5 lakhs: something of a record.

Today, more and more people are discovering The Week. And putting their faith in it. Because they know that whatever happens — to their favourite sportsman, to Asterix in Spain, or to Tintin in Tibet — they're bound to read the best of it in the next Week!

Never a Week behind.

India steps up thermal power generation capacity by 19,000 MW in two decades

Major thermal power projects at Koradi, Bhatinda, Korba, Gandhinagar, Ukai, Tuticorin, Vijayawada, Badarpur, Anpara, Kota and Trombay have all drawn on the integrated services of L&T's Construction Group. And so have atomic power projects in the country. ECC's specialised construction services were tapped by two of the four atomic power projects in India.

Current assignments include thermal power stations at Neyveli, Singrauli, Satpura, Raichur, Ropar, Parli...

ECC's capabilities cover :

- ☐ Construction of massive turbo generator foundations, pressure tunnels, outfall structures, precast, prestressed concrete construction...
- ☐ Fabrication and erection of steel structures, erection of boilers, turbo generators, piping...
- ☐ Building of switchyards, sub-stations...up to 220 kV, HT&LT cable installations, power supply, distribution and control systems, lighting...

An artist's impression of the court-martial scene

COURT-MARTIALS

Deserters in the Dock

THE WIRY, young soldier adjusts his peak-cap, gives an inexplicable last look at the gleaming bayonet on his self-loading rifle and barks a command. Tensely, he eyes the seven men march past him in single file, the first and the last carrying bayoneted rifles, and the rest, young Sikhs, looking just a wee bit bedraggled, in unkempt uniforms and ammunition boots. Some more loud commands, the armed soldiers salute, do a smart about-turn and retreat, leaving the five Sikhs in steel chairs, facing six middle level army officers, led by a brigadier in the middle. "Silence, GCM in progress", a signboard outside the Grinder Club at the Grenadier's Regimental Centre at Jabalpur solemnly announces. Inside the club hall, Brigadier Ved Prakash Airy, Maha Vir Chakra, calls the court to order and the sentries are back on duty again, ushering in Naik Kuldip Singh, the defence witness.

Thus, last fortnight, the court-martial of a large number of Sikh soldiers, accused of inciting mass desertions, violence and the murder of Brigadier S.C.Puri commandant of the Sikh Regimental Centre at Ramgarh in Bihar got into high gear at Jabalpur. At least six more general court-martials (GCM's) were in the process of being constituted and at least two more began to function close on the heels of conviction at the first GCM resulting in the conviction of Havildar Sadhu Singh and Naik Hari Singh on charges of inciting fellow soldiers and recruits into desertion, looting of armoury and violence.

The GCM's are being held at the numerous regimental centres spread around Jabalpur. On trial in this, the second round, are 10 more NCO's and jawans from Ramgarh—Naiks Baldev Singh, Harbhan Singh, Kulwant Singh, Lance-Naiks Pritam Singh, Bir Singh and Sepoys Surain Singh, Gurmeet Singh, Hakam Singh and Balraj. The GCM's, each one of which contains at least one Sikh officer, are being headed by officers of brigadier's rank. The third one to begin functioning last fortnight was headed by Brigadier R.S. Warriar, commandant of the Mahar Regimental Centre.

Besides judging the guilty, the officers at the trials are also trying to fill in the gaps in the sequence of events on June 10, last year, when the desertions began. Though the trials have been ordered on the basis of an inquiry report submitted by Major-General Inder Raj Kumar, general officer commanding of the Madhya Pradesh, Bihar and Orissa area, the officers are still looking for answers to certain questions. And interesting facts have surfaced during the trial. There is, for example, the revelation that while the desertions were triggered off by the vile rumours of oppression on the village-folk in Punjab in the wake of Operation Bluestar there were also deeper reasons behind it. It is obvious that the jawans and recruits were being indoctrinated for quite some time by certain men who were purveying Bhindranwale propaganda.

Lieutenant-Colonel K.K. Varma, commandant of the training battalion at Ramgarh told the GCM headed by Brigadier H.S. Lamba that he had foreseen trouble much earlier when a large number of recruits began to report for the routine physical training exercises, carrying kirpans. He questioned this and a Sikh soldier promptly produced a moth-eaten sheet of paper containing a rule made in the British times allowing Sikh soldiers the right to wear kirpans. Significantly, that is just the argument Bhindranwale was known to use frequently. Many of Bhindranwale's taped speeches mention this.

Again, the recruits and soldiers reacted with an obvious show of anger to the central authorities' reluctance to let the gurudwara prepare the *karha-prasad* in desi ghee. The defence counsel took umbrage at these statements and accused

What made UNIDO pay a tribute to our national drug industry?

The national drug industry comprises hundreds of well-managed large, medium and small scale units. They have contributed their talents, technology and resources to create, within a relatively short period, an outstanding record of performance in many directions of clear public benefit. But for these contributions, our national health goals, our drug production targets, our goal of reducing imports and increasing self-reliance, our object of free drug availability at reasonable prices and our aim to carry the name of India to other countries through exports would have remained an unfulfilled dream.

Today, the national drug industry, representing wholly-owned Indian units, is producing about 95% of the important bulk drugs considered as essential by the World Health Organisation and needed by our people. These important drugs include anti-T.B. products, antibiotics, vitamins, anti-diarrhoeal products, hormones, drugs for diabetes, hypertension, anaemias, cancer, asthma, skin diseases, leprosy, malaria, etc. About 80% of the country's total bulk drug production and 60% of formulations are made by the national sector using minimum import components and the country has now become almost self-sufficient in most essential drugs. It is no surprise, therefore, that UNIDO has credited India as a country with a well-developed drug industry.

Uninterrupted supplies of drugs are made available by the national drug industry at reasonable prices throughout the country with the help of an extensive distribution system which involves close co-operation between drug manufacturers, wholesalers and retailers. The national drug industry has always adopted a responsible attitude and co-operated fully in making essential drugs despite temporary losses resulting from certain Government procedures and policies.

Thanks to the positive changes made in the Indian Patents Act in 1970 the Indian scientists and chemical technologists have perfected commercial processes for many new drugs, which are being increasingly, more expeditiously and more economically made available to the Indian public by the national sector. This also saves our country considerable valuable foreign exchange, which would have been otherwise spent on imports and payments of royalties and dividends.

The national drug industry has now established technological capabilities which are not only proving extremely valuable for the country but also are enabling India to help several other developing nations in setting up viable pharmaceutical industries.

Another noteworthy achievement of the national drug industry is in the field of exports which are rising rapidly despite very keen competition from the gaint multinationals. Today, we are exporting our high quality drugs to USA, UK, W. Germany, USSR, Australia and several countries in Africa, the Middle East, the Far East and Latin America.

The national drug industry has performed creditably in line with the national objectives and priorities. It has the will and the capability to excel and do even better. It needs greater recognition and encouragement to fulfil the promise of tomorrow.

the officer of meddling in the religious affairs of the soldiers. Khanna argued that he was only mentioning some of the early symptoms of trouble and resentfully dismissed the charge of communal bias stating that he knew the Guru Granth Sahib by heart, much better than the Gita.

But such testimonies also underscore the point that the traumatic desertions from the Sikh units spread all over the country could have been anticipated and preventive measures taken. It was also reported in April last year that a large number of Sikh soldiers had met Bhindranwale in the Golden Temple and taken amrit (the holy nectar) from him. It is quite likely that these very men may have spread to the various units and possibly encouraged the desertions.

The second fact on which there seems very little doubt now is that Brigadier Puri's murder was not premeditated. Both from the inquiry report and the testimonies of jawans and officers at the centre—including those who got injured in the June 10 shootout—it is clear that Puri caught a bullet as a large mob of deserters suddenly fired in the direction of the car in which he was sitting next to the window. Two other officers next to him in the car were also injured.

THE INQUIRY has mentioned the names of three soldiers—Giani Gurnam Singh who died in the encounter with jawans of the fifth battalion of Jammu and Kashmir Rifles sent in to intercept the deserting troops, Sepoy Balwinder Singh, who is presently in custody and Sepoy Satnam Singh who died in the Command hospital at Lucknow in the army's captivity. The army authorities say he died of a kidney ailment while the defence lawyers make veiled suggestions of physical torture.

Incidentally, the zeal of the defence lawyers at the court-martials, where the defendants happen to be no more than poorly-paid jawans, incapable of hiring expensive lawyers, is a bit of a surprise. Initially, the army had provided the accused service officers as defence lawyers and also hired a local Jabalpur lawyer Jaya Singh Chauhan on a payment of Rs 250 a day. But as the trials progressed last fortnight Rajinder Singh Sodhi, a prominent Supreme Court advocate from Delhi appeared at Jabalpur and engaged some of the best known and most expensive lawyers in the city to defend the rest of the jawans. The defence lawyers' team is now headed by Satish Chandra Dutt, a well-known figure in the high court at Jabalpur. Officers say this helps the army as it goes a long way to building up the feeling of fair trial.

SHEKHAR GUPTA

The Grinder Club in Grenadier's Regimental Centre: crucial trials

Major-General Inder Raj Kumar said: "We want to maintain the sanctity of the court-martial which is the fairest trial. Can there be anything better than a trial by your own colleagues who have no interest in the issue?" In the same quest for credibility the army authorities have not kept the trials under wraps and readily granted a request by INDIA TODAY to witness the trial.

But the civilian lawyers defending the accused continue to nurse misgivings. "The system here is so outdated", said Dutt, adding, "all over the country now we have trial by a judge but in the army they continue to have the jury system. The defence has its say, but sometimes one feels that the jury's minds are already made up." Similarly civilian lawyers have doubts about the army's system of justice where an appeal to a civil court can only seek examination of the procedure followed during the trial and, if found wrong, can at best lead to a fresh trial, again by a court-martial. Says Dutt: "I don't see why we should persist with this system when even the British have changed?"

Besides, questioning the system there is a body of opinion, both inside and outside the army that are of the opinion that a lenient view should have been taken considering the fact that the desertions were no more than an emotional outburst. This was also conveyed by five retired Sikh generals, in a letter to the President which has been forwarded to the Defence Ministry. But the army says it has been reasonably lenient. Normally desertions, they say, should have attracted much more than 10 years' imprisonment. The GCM's are keeping in mind the mitigating circumstances.

Also, charges are being pressed against less than a hundred people out of the 1,128 who deserted from Ramgarh alone. Since 1,068 of the deserters were recruits, they have been treated separately. Nine hundred of them have already been tried summarily and given rigorous imprisonment for a mere 28 days. A decision on retaining them in the army is yet to be finalised. It is perhaps deliberate that the army has not yet scheduled the trial of the most prominent accused, Balwinder Singh, who is being blamed for the death of Puri. The trial will attract much wider attention and the authorities are taking no chances and are treading extremely warily.

Yet with a large number of the Sikh organisations, including the Shiromani Gurudwara Prabandhak Committee (SGPC) determined to defend the deserters to the last, the cases are unlikely to end at the GCM stage. Most will result in appeals and, possibly, also in a few landmark judgements on the system of jurisprudence in the army.

Digitized by Arya Samaj Foundation Chennai and eGangotri

Unless you constantly remind yourself that every year India can save Rs. 800 crores by utilising relatively simple conservation practices.

And that this will bring us closer to oil self sufficiency and save the country tremendous foreign exchange.

But where does this loss take place? PCRA has identified four primary areas.

The loss at home

Bad cooking habits, and inefficient burners and stoves result in losses of over 25% of all cooking gas or kerosene used.

The loss in agriculture

Pumpsets that are not designed or operated correctly, and carelessly used and maintained tractors result in losses of up to 25% of precious diesel.

It's remarkable, but with only a few minor changes 30 to 40% of diesel can be saved in pumpsets.

The loss on the road

Bad driving habits, inefficient engines and poor maintenance results in losses of over 10% of all fuel used in two wheelers and cars. In heavier transport vehicles the loss in diesel is far higher.

The loss in industry

Inefficient boilers and furnaces and the careless utilisation of them result in losses of 20 to 25% of valuable fuel oil.

Let's put a stop to this waste today

We are all probably responsible for wasting fuel in at least one or probably even three of these areas.

Remember, ultimately we have to bear the cost as citizen, user, consumer, manufacturer or shareholder.

So let's work to end this waste. In some areas you can begin today. In other areas you may need to get in touch with us. Do that. We'll work with you.

Success . . . a reason to go on

Over the last few years you have helped PCRA save Rs. 100 crores per annum by using petroleum with wisdom. This was achieved by following a few simple "tips" on how to save fuel in each area.

Meanwhile, on another front, PCRA has developed fuel efficient devices for you. The Nutan kerosene and gas stoves are famous examples.

But a lot more needs to be done.

Even while you read this advertisement precious fuel and time are running out.

Petroleum Conservation Research Association
306 Sethi Bhawan, 7 Rajendra Place,
New Delhi 110 008

PCRA is a Government sponsored organisation and a representative of India's petroleum companies in areas related to conservation.

PCRA's four major conservation targets are the Industrial, Agricultural, Domestic and Transport sectors.

PCRA's services are free. Savings achieved by PCRA through conservation exceed Rs. 100 crores per annum.

Oil isn't going to last much longer. Use it with wisdom.

◆ As a couple, they are tailor-made for each other: **Mukesh**, son of the Reliance Textiles wizard **Dhirubhai Ambani** and **Nita**, daughter of an executive in Birla's Century Rayon Mill. Last fortnight, the two decided to weave their lives together in what papa Dhirubhai insisted was a "simple and tasteful" wedding in Bombay. Mukesh, the 27-year-old heir to the loom, came not on one of the garishly dressed nags hired out by wedding caterers in Bombay, but simply in a buggy drawn by six stallions. The guests at the dandiya ras function were allowed to take their beautifully painted ras sticks home, and the wedding card—embellished with Mughal prints—was quite a collector's item. As for the wedding reception, designed as a beautiful rural fair, a mere 5,000 people turned up. Obviously when Dhirubhai hosts even a simple wedding ceremony—it's an affair to remember.

◆ It is **Upendra Nath Ashk's** most novel idea, but he's not going to put it in a

Ashk: counter-moves

book. The 74-year-old Hindi playwright, satirist, author—producer of a 100 novels—opened shop in his home town Allahabad recently. No, not a book shop but a grocery store—as his own unique way of saying that after years of putting his blood, sweat and *ashk* into literary work he is still unable to support his family and that it is warped government policies that are responsible for putting a creative spirit behind a humdrum ration counter. Ashk has in the past sold newspapers, handkerchieves and lemons. "I see no harm in it," he said, "I can sit on the road and sell things." If that manages to raise some literary hi-brows to action, very well. Otherwise, the store—if not the story—can go on.

The Ambanis: perfectly suited

◆ *A Passage to India* might very well work for **Victor Banerjee** as a passage from India—judging by the amount of kudos he's getting the world over. Last month, Banerjee was named Best Actor of 1984 at the D.W. Griffith awards ceremony in New York. "I was fortunate that David Lean went to India to search for an actor," he said modestly. Now that the world has discovered Banerjee, there's not a thing he can do wrong. He has been called the best thing about Satyajit Ray's *Ghare Baire* and *USA Today* wrote that "Banerjee's acting is something to remember at Oscar time." The 38-year-old star has certainly sailed a long way since he first played female parts in school productions.

◆ She's the loveable girl-next-door, everybody's two-

Chutki: testing time

pigtailed little sister. But even little ones fly the coop and **Loveleen Mishra**—Chutki to all—recently abandoned the homey security of *Hum Log* to become a Marxist-oriented young woman in Govind Nihalani's latest film *Aaghat*. That done, she's back where she belongs—in homes all over the country thrice a week continuing with the continuing domestic crises of *Hum Log*. She's not joining films yet, insists the first year history honours Lady Shri Ram student. In fact she plans to do nothing in the near future except study. "The film was very exciting," she chirps, "but now I have to pass my exams or my parents are going to say, sit at home."

Banerjee: going west

◆ A Tamilian woman living in South Africa comes to India in search of her roots but all she gets is cheated and humiliated by her countrymen. Depressing stuff, but the novel *Oru Kaveriyai Pola* has earned for its authoress Tripurasundari—better known as **Lakshmi**—the prestigious Sahitya Akademi Award for 1984. Like in all her works there is a bit of Lakshmi in this story too. She lived in South Africa till her husband died and returned to India only in 1977. She didn't like what she saw: "The progress in Tamil literature," she laments, "is only in obscenity and not in ideology." Her own writing

A Turning Point

The Punjab pendulum swung once again last week when the Centre conceded the demand for an independent inquiry into the riots after Mrs Gandhi's assassination. Other concessions announced made it clear that the ball was back in the Akali court.

COVER STORY 18

Clearing the Air

There has been a marked change in the once-charged atmosphere in the south Asian region. The change is the direct result of the hectic tour of neighbouring capitals by Foreign Secretary Romesh Bhandari at the initiative of Prime Minister Rajiv Gandhi.

NEIGHBOURS 70

The Poisonous Plants

The rapid industrialisation of Bombay city seems to have been at the expense of environmental safety standards. A report compiled recently has come out with some shocking facts about the lack of safety and pollution measures in the city's industrial units.

ENVIRONMENT 74

Out of Currency

The arrest last month of Mrugesh Jaikrishna, one of the country's top industrialists, under COFEPOSA, has led to the unearthing of details about his past political connections and the dubious manner in which he rose to industrial prominence.

INVESTIGATION 86

The Kidnap Trap

Bihar's west Champaran district has become unique for a lucrative kidnapping racket being run by a handful of gangs. Recently, the Bihar police launched Operation Black Panther, an all-out bid to smash the gangs and end their reign.

CRIME 122

Is Calcutta Dying?

Rajiv Gandhi's statement in Parliament that Calcutta was a "dying city" stirred up a hornet's nest. But there was enough truth in his statement. Calcutta has been going steadily downhill and its economic life is grinding to a halt.

We take as much pride in our 'firsts' in civil engineering and elsewhere as we do in our 'seconds'.

As well as our 'thirds' and 'fourths'.

There are, as you can imagine, quite a few 'firsts' we have notched up in our long career of sixty eventful years in civil engineering and other nation building activities. They say a lot for our expertise and experience in our chosen fields.

Pioneering:

To give a telling instance, in civil engineering, we were the first to introduce the technology of prestressed concrete bridge construction in the 50s and the 60s, both for Western and Central Railways as well as for the Government of Rajasthan.

Again & Again

The record of our 'seconds', 'thirds' and 'fourths' is equally fascinating. We have been blessed with clients of the first order, thanks largely to our obsession with quality. But what's also remarkable that quite a few of these clients repeat their orders

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Textiles • Reliance Textiles' Polyester Yarn plant–a repeat order that speaks for customer satisfaction.

Power Plants • Our countrywide involvement here is a testimony to our reputation with NTPC, most State Electricity Boards and others.

Cement Plants • Our bonafides are well established by the trust of the leaders in the cement industry (ACC, CCI and others).

ing it well:

is is not so surprising once you look at the way we rk. Taking pride in all we do, we make no promises on quality, rigidly adhere to delivery dules and follow the project planning and review niques to foresee and provide for contingencies ll in advance.

versified growth:

the last 8 years, our turnover has dramatically mped up by 330%, from Rs. 10.32 crores to Rs. 44.25 res in 1983-84. A major part of this growth has ne from our Civil Engineering Division. However, planned diversification in the fields of piling and ndation engineering, turnkey water treatment ants, material handling systems and machinery ction and piping have all contributed to our ntinuing progress.

CLEVER CAMOUFLAGE

The cover story "The Budget: A Bold New Approach" (April 15) made interesting reading. It has been a blessing in disguise for the elite section of the society who spend many a sleepless night pondering about how to evade taxes. However, the hike in prices of petroleum products coupled with the increase in rail freight and tickets has caused a lot of concern and worry to the common man. Naturally the prices of essential commodities will also subsequently rise. The finance minister's budget has punched the middle class below the belt.

Calcutta ARVINDER SINGH WALIA

■ The cartoons "pre-budget and post-budget" said it all and much better than any write-up on the subject could.

Calcutta SUBIR K. LAHIRI

■ The finance minister's new-look budget is not merely a balance sheet, an annual profit and loss account of the Government but it gives a clear perspective of the long-term fiscal policies of the Government. The budget is the major instrument through which the Government tries to direct the economic activity of the nation. The logical sequel to the many tax reliefs and liberal concessions to the industries should be a fillip to the country's economy which is now at take-off stage. But the Government can't be complacent or over-confident but should take all measures to keep a tight leash on prices. We can't and should'nt expect miracles to happen over night.

Bangalore PREMLATHA KRISHNAMOORTHY

■ Vishwanath Pratap Singh has conceived the so-called growth-oriented budget in such a way that it is neither open to criticism nor praise. It is a well-known fact that the budget is a camouflaged benediction to the industrialists and the likes who are well above the average middle class income level. On the other hand, is a definite burden on the middle class and the poor, who constitute a majority of the population, whose incomes are far below the tax limits.

Bangalore K. CHIDANAND KUMAR

RABBLE-ROUSING

Your Comment "Games Politicians Play" (April 15) was very apt. As soon as a communal riot starts in the country, a war of words between the politicians of the ruling party and the Opposition starts. It is these allegations and counter-allegations that make the situation worse. There is absolutely no need for the politicians of any party to visit the affected area, as his statement after the visit incites more trouble. All such statements should be made after the lapse of a certain period of time.

Lucknow DHIRESH BAHADUR

■ Our major problem is that the politicians practice the "divide and rule" policy creating hatred, bitterness, fear and distrust among the various religious groups thus inciting riots. Blaming the Opposition or appointing a judicial inquiry will not solve the problem in any way. Nor will a high-powered all party body or a national commission on "communal harmony" as suggested by the National Police Commission help. The immediate need is a change of heart on the part of our politicians.

Madras A. SESHA GIRI RAO

GRAVE RESERVATIONS

Your special report "Reservation Policy: The Caste Crunch" (April 15) explicitly reflects the flimsiness of the reservation policy followed by various state governments. The outright reservation of seats for a particular community is reason enough in itself for social discontentment that prevails, as it deprives more deserving candidates of their legitimate right on an undemocratic pretext. Such policies sound like absurd anachronisms in the 20th century. If the Government is so concerned about the welfare of particular sections of the downtrodden communities, then their economic uplift should be their primary aim.

Dehra Dun AJAY SINGH

■ The aim of the reservation policy should be to lessen the economic disparities existing in our society and not to foster ill will among various fragments of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the society, which is exactly what the present policy seems to be doing. Reservations should be made purely on the basis of economic backwardness and the caste factor should be abolished totally.

SOURABH MISHRA
Ranchi

■ It is shocking to read Jagjivan Ram's statement that he "does not want reservation because it is a means of economic upliftment but because it is an instrument of social change". I think that only abolishing reservation could bring about an upliftment of the Harijans. Because it would be only after this that nobody would be forward or backward.

KAMLESH K. SHRIVASTAVA
Bombay

■ The homely example of the Mandal Commission drives home the point that reservations have to be made at the initial stage of education—by having public schools and other similar institutions to reserve seats at lower levels for the "Lallus"—who should be given free education to nullify the "obvious... vast differences in social, cultural and environmental factors". Thereafter he/she should be on his/her own.

The policy, however, chooses to miss this aspect by a mile and picks up Lallu when he is almost an adult and thereafter pushes him upward where he is a total misfit causing not only heartburn in others but a loss to the nation through jobs not well done.

Bombay R.S. NIRBHAY

CALLOUS CRITICISM

In his letter Surendra Kanstiya (April 15) writes "Yesterday they (the cricketers) were flops, today they are a big hit and tomorrow they may go down... Rama Rao, Hegde and Bhandari's victory in the assembly elections is a more significant achievement." Doesn't he realise that politics is equally prone to ups and downs as is cricket. Politics may have its own historical facts but so has cricket.

Bhatinda DEEPINDER SINGH

■ Would Surendra Kanstiya have labelled Hegde and Rama Rao as flops had they lost the assembly elections? And does he label their victory as sheer luck as he does the cricketers in Melbourne?

Lucknow RAJESH MEHROTRA

TOTAL TRANSFORMATION

The cover story "World Champions Again" (March 31) was superb. Our cricketers have magnificently proved that they are undoubtedly the masters of the limited overs game, by winning in a line the Prudential Cup, the Asia Cup and the World Championships in Melbourne. India was treated as underdogs in this game but they have proved it otherwise much to the delight of the cricket fans in India and abroad. We now have the right blend of enthusiastic youngsters with a lot of potential and the more experienced and seasoned players. This has made a total transformation in the Indian team giving it a professional touch. Given the same degree of dedication, determination and self-confidence coupled with excellent team spirit we can hope that India will come back in full striking form in the five-day Tests too.

Faridabad GEETHA BALASUBRAMANIAM

■ India's recent victory was the result of astute leadership and commendable team spirit. This win has proved that India's Prudential Cup victory in 1983 was not a fluke.

Jorhat (Assam) RUPJYOTI BORTHAKUR

■ Your article on the recent success in Australia filled me with pride and joy. I had spent the last year in Australia where I had to fight tooth and nail every time an Aussie made a derisive comment about the state of Indian cricket. I would give anything to be there now.

Madras ANURADHA BALARAM

■ Simply taking some runs and wickets does not make a person worthy of a Champion of Champions title. While choosing the Champion of Champions more importance should be given to the player who is responsible for the turning point of the game through his individual performance at a critical juncture. It was Kapil who once again proved his mettle by taking 30 runs and three wickets which ultimately helped India win the match against Pakistan at Sharjah.

Palghat RAVI

■ Was very disappointed with the cover story. One expects you to do stories with themes which would induce one to think about the bleak condition of Indian sports. I think one of the most inappropriate and unnecessary little "colonial heredity" which the English people left for us, is cricket. This game which is being played by a handful of countries (mostly with a colonial past) and mostly by a section of a privileged group, is being given unwarranted attention. There are other people who share my view. To quote Indu Puri in the same issue "... Even the press bothers only about cricket." Think of Ami Ghia, seven times national badminton champion. Has she ever made it to the cover of a sports magazine? Ravi Shastri and Kapil Dev are always there.

West Berlin SABYASHACHI GUPTA

AN ACUTE AWARENESS

Referring to the Comment "Messages in the Mandate" (March 31) the Government of Prime Minister Rajiv Gandhi should understand the messages the voters conveyed in the recent assembly elections. The voters of Karnataka, for example, by overwhelmingly voting the Janata Party to power, as against the Congress(I) in the Lok Sabha elections, have warned the prime minister that they are not ready to be taken for a ride. Rajiv Gandhi's success will largely depend on how clearly he understands the message.

Kathmandu SANJAY UPADHYA

The triumph of Ramakrishna Hegde in the Karnataka assembly elections ("A Historic Comeback", March 31) has highlighted the political awareness of the electorate. They overwhelmingly supported the Congress(I) in the Lok Sabha elections giving it 24 of the 28 seats but in the assembly elections they not only favoured the Janata Party but also improved on its showing of 1982 when it formed a minority government with the support of the BJP.

Chandigarh ASHOK GROVER

■ Ramakrishna Hegde's historic comeback suggests that there is scope for value-based politics at least in Karnataka. The landslide victory of the Janata Party is in response to Hegde's integrity and sincerity. The entire credit should go to him.

S. Paravur, Kerala O.JAYAPRAKASH

JUSTICE FOR ALL

Your profile about P. Subramaniam Poti ("Leaving a Mark", March 31) was excellent. If ever a man is to be honoured for bringing justice to the common man, the choice can be none other than Poti. It will not be an exaggeration to say that Poti has laid the foundation for a more socially relevant judiciary. The mark left by him is indeed indelible.

Madurai S.PRAKASH

■ It is only because of judges like P. Subramaniam Poti that the image and dignity of our judiciary has gone up. All those concerned with the judicial adminstration should emulate his example.

Peace Offering

FOR THE first time in months and months of turmoil, bloodshed and acrimony, peace has a chance in Punjab. There will be some who will argue that the Government's initiatives of the last four weeks ought to have come earlier. Others will say that the Government is guilty of appeasement. And there will be some who will say the Government's announcements don't go far enough. Whatever the merit in all these arguments—and some can't be dismissed out of hand—they do not negate the basic fact that the steps taken one by one over the last fortnight—and other steps that must logically flow from these initiatives—should begin to restore a sense of confidence among the Sikhs at large, and create a climate for a long overdue reconciliation.

Nothing can, of course, be taken for granted. The wounds in Punjab and elsewhere run deep. There are terrorists who remain dedicated to stirring up trouble. The Sikh community lacks a credible and widely accepted leadership. The Akalis are fragmented and, after so many months in jail, are still searching for a constituency. And, of course, there are the Hindus who were the victims of the terrorist violence in Punjab prior to Operation Bluestar whose views and reactions are germane to any long-lasting peace.

It follows that peace in Punjab will depend on how each of these protagonists reacts in the coming weeks as events unfold. There are some obvious pitfalls to avoid. If the Akalis, who have hardened their stand in the last few weeks, fail to rise to the opportunity offered by the Government's concessions, they will merely show themselves to be political opportunists rather than what they claim to be: representatives of the interest of the Sikhs. Political differences are one matter; an agitation in support of demands that have been more or less agreed upon is unacceptable. Indeed, by vacillating for so many months before ordering an inquiry into the riots and yielding to the demand on the eve of a threatened agitation, the Government has given the Akalis a measure of credibility which they earlier lacked and which they can easily fritter away through ill-advised response.

The Akalis should realise that the actions of some of their leaders in lionising the alleged assassins of Mrs Gandhi cast doubt on their good sense. They may expediently win laurels from some sections of the Sikhs, but they do themselves considerable long-term harm and dilute their claim to be taken for serious politicians. Fortunately, there are still some Akali leaders untarred by this extremist brush, but those who mouth slogans of convenience can blame nobody if they come to be treated as crutches of convenience, and discarded when they are no longer relevant. Their only honourable course is to resume talks with the Government.

The Government, on its part, has matching responsibilities. It did the right thing in punishing army deserters and it was right to deal with them with a certain amount of understanding. Nor can it be faulted for respecting tradition and decorating those soldiers and officers who distinguished themselves in Operation Bluestar though it could have done so with a more propitious sense of timing. And it will be perfectly justified in continuing its crack-down on extremist violence wherever it occurs. But it must unhesitatingly follow up its announced initiatives such as releasing Akali leaders still in jail, speeding up the trial of extremists detained in Punjab and pushing the economic development of the state. And, while it must vigorously pursue negotiations with Akalis, it must be prepared to announce unilaterally, if need be, its decisions on such old, outstanding issues as the river waters dispute, the status of Chandigarh, the enclaves of Abohar and Fazilka and the Anandpur Sahib resolution of 1973.

But more than any of this, it is the handling of the inquiry into the riots in Delhi in early November that will be crucial to relations between Hindus and Sikhs. There is justification in the fear that old wounds will be reopened as evidence is presented in violence which resulted in the killing of some 2,000 people in the capital alone. There is reason to fear that those who perpetrated violence on such a large scale will not find it hard to fabricate evidence that saves their necks. It is not implausible that all this could drive Sikhs and Hindus further apart rather than heal the rift.

In this, the judge concerned and the Government have special responsibility to conduct the inquiry in such a way that perjurers are punished, that any heat and anger generated in the courtroom is contained within it, that even while justice is seen to be done, it doesn't generate new emotion outside the courtroom. In this, the Government should not hesitate to seek the cooperation of the media in reporting the inquiry with restraint, omitting to give wide currency to reports that might once again inflame passions. There is no reason why representative media bodies such as the Editors' Guild shouldn't take the initiative to set the guidelines.

The ultimate objective of all these moves is to restore a popular government to Punjab. But it would be self-defeating to rush into elections without first convincing the people of Punjab that the long process of ameliorating the anger and pain of the past has begun, that their interests do not lie with the hotheads, that the time has come to look to the future rather than the past. Last fortnight's initiatives are a sensible move in that direction.

At the top. Even after thirty years.

Thirty years ago, Indian Tube pioneered the manufacture of tubes in India.

Today, Indian Tube still leads the industry. Not only because it was one of the first on the scene, or because it is the largest manufacturer of tubes in the country.

Indian Tube is at the top because of the superior quality of its products and its ability to anticipate the needs of industry.

Isn't that what leadership is all about?

ood cooked in Cornola* and cooked in ordinary oil

What's the big difference ?

ood looks the same. That's where the similarity

ed in Cornola – the food retains its natural flavour. e other oils Cornola is absolutely odourless – the d tastes better, you feel lighter.

ever, the difference goes much deeper.

e primary factor contributing to heart attacks and rt disease is the excess in the body of a substance ed Cholesterol. The excess Cholesterol in the blood ns a layer of fat on the insides of the arteries which ntually leads to the blockage of the blood passages ch are vital for the healthy functioning of the body.

RNOLA – is a cooking medium that actually succeeds helping to reduce the level of Cholesterol in the blood acceptable levels. Cornola does this because it ntains an extremely high percentage of Polyunsatura- d Fatty Acids – which help reduce the level of lesterol in the blood.

- [illegible]
- [illegible]
  vitamin [illegible]
- technically [illegible]
  and purity
- economical – a little oil goes a long way.

This is why scientists and nutritionists the world over have succeeded in ensuring that Corn Oil is the most popular cooking oil in Europe and America today.

Buy a tin and feel the difference for yourself.

* 100% Pure Corn Oil – strongly recommended by the American Heart Association.

Cornola is good for your health

RUDE AWAKENING

■ The unfunny thing about thieves is that you never know where they'll strike next, as happened in north Bombay last fortnight. Assistant Commissioner of Police K.A. Karanje was asleep in his flat in an apartment house in Matunga inhabited mostly by police officers. Perhaps that lulled him and his family into a sense of security, but whatever it was, the sense of security they were lulled into was a false one, because even as they were dreaming about whatever families of police officers dream of when a hard day's work is over, light feet were tripping over the linoleum. This was not, as Karanje might imagine, little Baba wanting his midnightly snack of WHO condemned baby food, but a hardened burglar who had shinnied up to the first floor flat on quicksilver feet and was now making off with all the goodies he could find with even more quicksilver feet. And when Karanje rubbed the sleep from his eyes and reached for his service revolver, the robber was gone with clothes, shoes and cash totalling Rs 2,000. No one likes to be caught napping, and the cops least of all.

CRASH LANDING

■ Guilt is a terrible thing. For the sensitive person, living through its torment can be hell. Even for the not so sensitive person it is not an experience he would like to re-live. No one knows to which category Suleman, Ramesh and Jamuna of Delhi belong, but anybody who knows of their experience that terrible night will, like the walrus, deeply sympathise.

The guilt stemmed from G.B. Road, a thoroughfare in old Delhi which Victorian writers would have described as inhabited by ladies of ill repute. The three had just visited a few such ladies and were making their weary way home on a motorcycle when the police at a roadblock signalled them to a stop. They didn't of course, and whizzed out of sight. A flying squad in Connaught Place, failed to intercept

them but the motorcyclists unfortunately ran into a police van a few kilometres ahead. Shots fired from the van scared either Suleman, Ramesh or Jamuna—there's confusion over who was driving—and the bike ended up meeting a wall, upon which all three and the bike did a spectacular acrobatics act. Suleman and Jamuna were taken to hospital where they no doubt pondered the uses of a clean conscience.

STRIPPED WOLVES

■ In the days when man was not so clever, highway robbers operated in the time-honoured fashion of raising a pistol and saying the two words "..or else". These days they are more subtle.

Consider the Waiganga Hardoli Ghat Kamgar Cooperative Society Ltd. This impossingly-named organisation operates out of a hut on the

bank of the river in Maharashtra from which it draws its name and the hut is manned by about a dozen men whose job is simplicity itself. Whenever a vehicle draws up to the bridge, one of them backed by two or three others, moves up to the window, extends a grimy receipt book and says "pay". He doesn't even add "..or else" because the driver believes he is shelling out towards the cost of construction of a new bridge and as every Indian's instinct is to yap like a domestic dog when confronted with authority the Society Ltd had it fairly easy.

Until a group of journalists came calling and asked for their authorisation from the Government. This, of course, they could not produce and when reports last came in the Waiganga whatever was being wound up.

APPAREL FOOLS

■ "Miller's Apparels Pvt Ltd invite you to a grand exhibition of the latest fashion from Paris by the internationally known designer Christian Dior at 9.00 p.m. on Monday the 1st of April, 1985 at the NCPA (Tata Auditorium), Nariman Point. The top fashion models of Europe will be displaying a dazzling display of apparels for men and women. Cocktails will be served. Please bring this card for admission. Seating is limited. Maker Chamber VI, 15th Floor, Nariman Point, Bombay-400 021."

By all accounts this should have been the event of the season for Bombay. After all Dior of *Gay Paree* is not to be sniffed at even by tired old socialites with withered shoulders and 20-year-old brocades who have or pretend to have seen it all. So it was no wonder that most of

the 300-odd darlings of Bombay's *beau monde* who received the card called up at the NCPA to confirm their treat.

NCPA officials told each of the dozens of callers that there is no Maker Chamber VI and cocktails are *nevah* served in the Tata theatre. If that didn't convince them they were curtly told "April 1, sir (or madam)." And so ended one of the more tasteful April Fool jokes of recent years.

A large size project, set up at lower cost, with an ideal product mix—all for optimum returns.

SEWA PAPERS LIMITED

Bestriding Orissa's Jeypore Teshil is the Rs. 36 crore Sewa Papers project, promoted by a highly successful US based Indian entrepreneur—with the active participation of the Industrial Promotion and Investment Corporation of Orissa Limited (IPICOL), promoter of hundreds of successful projects including IPITATA.

A priority sector project, Sewa Papers was commissioned in a record time of 2 years. Production commenced in November 1984 and the plant has already achieved a capacity utilisation of 65% and sales of over Rs. 3 crores.

Large, Integrated Paper Mill

Sewa Papers is a large-scale, fully integrated paper mill, set up at a cost appreciably lower than that of any comparable large mill.

With an annual capacity of 25,000 tonnes, Sewa Papers is manufacturing a wide range of writing, printing, wrapping and packing papers—including superior grade cream wove, duplicating, coloured printing and maplitho varieties which yield optimum returns as they are not subject to restrictions or price control.

Assured, Growing Demand

The total installed annual capacity for paper and paper board is currently 21.82 lakh tonnes as against an estimated required capacity of 23.31 lakh tonnes. In view of the substantial short supply, necessitating continued imports, Sewa Papers will have an assured market.

Imported Machinery

The imported plant and machinery comprise paper machine of Voith Gmbh manufacture and others from Germany and Scandanavia. Other equipment has been supplied by reputed Indian companies like Larsen & Toubro, Hindustan Dorr Oliver, Kirloskar, Mather & Platt, Stewarts & Lloyds, Nelco, Best & Crompton and Philips.

Only Mill With Virgin Forest Reserves

Sewa Papers has the unique distinction of being supplied by virgin forest reserves. Under long-term arrangements with the Orissa Government, sufficient bamboo and hardwood will be available to the mill on a continuing and long term basis. The Company has also undertaken reforestation programmes.

Low-Cost Captive Power

A captive Stal-Laval Extraction Back-pressure Turbine, run entirely by steam generated in the manufacturing process, will meet over 60% of the total power requirement at no recurring cost. Continuous power supply for the balance 40% has been guaranteed by OSEB.

Subsidies and Concessions

Having started production before March 1985, Sewa Papers will enjoy a special 50% excise duty rebate for 5 years—besides its entitlement to sizeable Backward Area subsidies and concessions.

A Bright Future

Large size paper mills in India are performing extremely well. Sewa Papers, with lower project cost and an ideal combination of inputs, is certainly destined to make a mark in the Indian paper industry.

PUNJAB

A Turning Point

BAISAKHI, for Punjabis, heralds, the season of hope and change. But in Amritsar, the Sikh Vatican, it is also the time for people to count their beads. They remember only too well the Baisakhis that changed the course of history. In 1919, General Dyer's murderous troopers left Jallianwala Bagh littered with corpses on that day. In 1978, the fratricidal clash between the Nirankaris and Bhindranwale supporters set the stage for a bloodier agitation that still holds the state to ransom. And year after year, the Akali Dal has chosen Baisakhi as the ideal time to intensify their agitations.

Cassandras were out in force last fortnight in Amritsar as tension rose like mercury. With the Akalis set to resume their agitation from the Golden Temple and the Government firm on holding a national integration meeting in the adjoining Jallianwala Bagh as part of its "peace offensive" it was going to be another landmark Baisakhi.

A landmark it certainly was—but of a vastly different kind, not the cataclysm that was feared but a welcome turning point in the fortuitous Punjab saga. For once, Baisakhi was truly what it should be, the beginning of a new season of hope. Even as 50 companies of the Central Reserve Police Force (CRPF) and Border Security Force (BSF) fanned along the common approaches to the Golden Temple and Jallianwala Bagh and people waited tensely for the moment of reckoning, the news from Delhi came rattling over the teleprinters, drowning the din of contention with its forceful message. In a flash, the Centre announced it had ordered a probe by a sitting Supreme Court judge into the riots in Delhi following Mrs Gandhi's assassination, lifted the ban on the All India Sikh Students Federation (AISSF) which provided Bhindranwale many of his key stormtroopers and all his gun-fodder, and gave broad hints of release of more Akali and AISSF leaders. In one stroke the most relevant of demands of the Sikhs, had been conceded.

For the usually sombre-looking Union Home Minister S.B. Chavan, this was certainly the most important announcement of his political career. With Prime Minister Rajiv Gandhi in attendance, he rose laboriously from his seat in the Lok Sabha on April 11 and read out the text of a highly conciliatory statement which, besides specific concessions and a thinly veiled invitation to the Akalis for fresh talks, dropped hints that it would think again about the special courts set up to try suspected Punjab extremists which the Akalis resent so much.

And while there is widespread difference of opinion on the timing of the announcement—from those who argued it came too late to those who felt it was premature appeasement—no one could fault the way it was worded. For example, the most significant concession, and one that was least expected, that of lifting the AISSF ban, was shrewdly couched in words that at least sought to separate the quasi-religious organisation's rank and file from its militant leaders, now dead or in prisons. Said Chavan: "The AISSF was banned because some of its office-bearers had indulged in actions detrimental to the unity and integrity of India. We understand that a majority of the Sikh students represented by the Federation are eager to play their part in building a strong and united India."

For once, a decision on Punjab from a government that has for long been badgered for lack of ideas and political will on this crucial question evoked unanimous welcome throughout the country. Even opposition leaders like Atal Behari Vajpayee and the Janata Party's Madhu Dandavate, who have often accused the Government of pussyfooting on Punjab, welcomed the announcement. Similar nods came from elsewhere, from Farooq Abdullah to Ramakrishna Hegde.

Among Sikhs, there was at last a moment to shed the wearying suspicions of the past and welcome something positively. Said writer Khushwant Singh: "I am delighted at the announcement even though it is a delayed step. I hope the Akali leaders will now break the impasse and accept the hand of friendship that is extended to them." Condemning Harchand Singh Longowal's statements lauding Mrs Gandhi's alleged assassins, he said: "Longowal should keep a *maun vrat* (vow of silence) for a month!"

a non-partisan organisation of urban Sikhs, felt a word of regret about Operation Bluestar and the destruction of the Akal Takht would have helped. Arguing that the concessions did not go far enough, he still believed: "This will set the Akalis thinking, it should calm them down, have a soothing effect." But there were also doubts, particularly among the riot victims themselves. Said Sarjit Kaur, a Delhi riot widow: "I am not sure if any action will be taken. The Government has already released the attackers we had earlier identified."

IN THE Akali ranks there was a touch of glee. After all, by making the announcement on the eve of a threatened Akali agitation, the Government had lent the Akalis some credibility. Said party president and morcha dictator Longowal: "This is a good step and we welcome it. But it has come too late, after so much bitterness. Also, if the Government wants durable peace in Punjab it should accept our other demands including the Anandpur Sahib resolution and the abolition of special courts." Nevertheless, at their Amritsar strategy meet on April 12, they agreed to postpone a decision on their planned agitation to June. Ominously, they also called for the observation of "genocide week" to coincide with the anniversary of Operation Bluestar, but it was clear that the Government's initiatives had queered their pitch.

"Too little, too late," is often the instinctive reaction of an agitation leadership to any set of concessions made by the Government and thus political observers in Delhi were inclined to leave Longowal's conditional welcome at that. Said a senior Union Home Ministry officer: "Even we had not expected the Akalis to head straight for our arms the moment the announcement was made. They also have to play their own game and go through the necessary motions."

Apparently, this was also the presumption at a series of top-level meetings in Delhi last fortnight, in the course of which the Government shrugged off its lethargy after five months of vacillation. The Cabinet Committee for Political Affairs met at South Block on April 9 and took stock of the situation, assessing intelligence reports on the likelihood of trouble in Punjab in case the Akalis were allowed to go ahead with their agitational plans and the views of the three-member cabinet subcommittee which had visited various parts of Punjab on a fact-finding mission. Both sets of assessments decisively defeated the hardliners who wanted the agitation met and crushed with brute force. The subcommittee members were firm in their view, on the basis of their visits, that the Akalis could be counted on mustering enough support to create chaos and conditions rife for violence, and a renewed confrontation was the last thing the Government could afford.

The plea for defusing the tension came from both the ministers and officers leading the law and order machinery. It was followed by another informal session on April 10 attended by Punjab Governor Arjun Singh and his key aides who flew in by the state government aircraft. The discussions took off from where the previous ones had left off, and the opinion was crystallising that it would be futile to wait any longer. The prime minister met the Political Affairs Committee again on the following day. Singh was again summoned and the confabulations went on reportedly till 2.30 a.m. The committee met yet again on April 11, with Singh sitting in, before the decisions were finally taken. Of the seven issues considered for immediate announcement, four were held over. These were:

- a unilateral announcement giving Chandigarh to Punjab;
- setting up of a new tribunal to sort out territorial issues between Punjab and Haryana;
- appointment of a Supreme Court judge to adjudicate the river waters issue;
- immediate release of all young men jailed in Punjab on suspicion of extremist activity.

As a matter of fact, the lifting of the ban on the AISSF was not even on the first list of options. This was finally decided on the argument that one of the major problems in Punjab today was the anger of the youth and much of this could be neutralised by this one step. Summing up the new approach of the Government, Governor Arjun Singh told INDIA TODAY: "The Government has made it clear that it does not stand on prestige and is willing to consider any suggestion which helps in solving the outstanding problems. We should realise that any confrontationist approach is not only harmful to the country as a whole but also to this prosperous state of Punjab."

Government officials say further steps would depend on the response from the Akalis but, even among official circles in Delhi, there was a clear realisation that this was at best a starting point in a new quest for solution to the chronic problem.

There were words of caution from the Opposition as well. Veteran parliamentarian Madhu Dandavate reminded the Government that the main issue in Punjab, that of the Anandpur Sahib resolution and the old Akali demands, had not yet been touched. Atal Behari Vajpayee went a step further, echoing the feeling that the concessions were made under pressure. "Why announce these on the eve of the Akali agitation?" he asked, implying that this could give the extreme elements a feeling of victory. But the reply came the following day from Prime Minister Rajiv Gandhi himself who grimly stated at Calcutta: "We have not succumbed to any pressures. If necessary we will take harder measures to reduce tension and keep the nation together as there could be no compromise on the question of the country's unity and integrity." He reportedly told opposition leaders who met him after Chavan's announcement that the Government's cupboard was now bare of concessions, implying that beyond what had already been announced and long-agreed action on such outstanding issues as Chandigarh and the river waters dispute, further progress would depend on how the protagonists reacted to the Government's initiatives.

While there is enough uncertainty on just how they will, there is little doubt that with the Lok Sabha and assembly elections out of the way, the Gandhi Government was finally coming to grips with the problem that it had always held to be topmost on its list of priorities. It was catalysed by the emerging pressures in Punjab and plans announced by the Akalis to resume their agitation. On March 8, meeting at Anandpur Sahib, the historic gurudwara 83 km north-west of Chandigarh at a spot sanctified by Guru Gobind Singh, the Akalis issued an ultimatum to the Government to accept their demands by Baisakhi and set the ball rolling. Three days later the Government responded by releasing Longowal, Talwandi and seven other prominent leaders including former Union agriculture minister Surjit Singh Barnala. Further steps, all conciliatory, followed in quick succession and included:

► appointment of Arjun Singh as the new governor of Punjab;

► withdrawal of the Punjab Special Powers(Press) Act on March 14;

► Rajiv Gandhi's announcement of a package of economic concessions at Hussainiwala on March 23;

► prime minister's discussions with the national opposition leaders to evolve consensus on Punjab on March 29;

Cabinet subcommittee at Patiala meeting: mixed success

► announcement of a wheat bonus of Rs 5 per quintal to appease farmers on March 30;

► the tour of the cabinet subcommittee starting April 2, and;

► the mass contact programme of Congress(I) MP's and MLA's from April 5.

GOVERNMENT spokesmen deny the charge of making concessions under duress, arguing that the strategy was to make concessions slowly, without seeming to give in, but to do it all before the Baisakhi deadline. "There were many occasions," said a Home Ministry official, "when the temptation to retaliate was strong." Among the provocations were the renewed terrorist killings—BJP leader Krishan Lal Manchanda was shot dead by extremists the day after Rajiv's Hussainiwala visit and a police officer a week later—Buta Singh's excommunication and the Akalis' blatant, public glorification of Mrs Gandhi's assassins. But, said the official, "We were firm on ignoring it all for once in the hope that ultimately wise counsel would prevail."

In other words, this time, the approach was of political realism and not of knee-jerk confrontationism. This, indeed, has been a major departure from the past when Mrs Gandhi trusted none else but the coterie of bureaucrats around her to tackle such major political problems. Rajiv's decision to get moving on Punjab as soon as the assembly elections were out of the way, Arjun Singh's appointment and the formation of the cabinet subcommittee on Punjab had signalled a departure from this legacy.

But the subcommittee's initial forays were far from pathbreaking. Belying expectations that it would manage to reach out to various sections of society, the subcommittee followed the pedestrian approach of visiting major cities in the state —barring Amritsar, the most crucial of all—and issuing front-page advertisements to local dailies inviting everyone to come and see them. This had no impact and the district administrations, assigned the task of specifically inviting opinion leaders in their regions, miserably failed to do so. The ministers, thus, had to contend with an endless stream of delegations led by Congress(I) legislators saying the same thing over and over again. Remarked an elderly police constable standing guard at the Patiala Circuit House: "This is like the famous Punjabi saying, that when a blind man distributes sweets he keeps on giving them all to his own kinsmen."

In fact Chavan admitted this, arguing, "But we haven't forbidden anyone from coming." Asked if that did not rob the exercise of much of its purpose, he replied tentatively: "Well, there is some point there. But we will think about it later."

Yet even the feedback from their own partymen was good enough to convince the ministers of the futility of pursuing a line of confrontation. One after the other, party members pleaded for unilateral action that could render the Akalis irrelevant. The plea was almost invariably for a fresh round of elections which would give the state a popular government which might better tackle the problems.

Bir Devinder Singh, chief whip of the state Congress(I), told the subcommittee:

Longowal meeting a bereaved family: seeking support

"The problem requires a political solution. While a political governor is welcome, this alone will not do. We also need a political government that could look after Punjab's interests. Why should we always allow the Akalis to speak on behalf of the Sikhs?" Practically all Congress(I) leaders said that it was impossible for them to defend the Government's hesitation in ordering an inquiry into the Delhi riots and the unprecedented violence.

The theme was taken up by the few independent individuals who met the committee. By and large, they too supported the idea of unilateral, quick action without further dilly-dallying. At Patiala, Lieutenant-General Gurbachan Singh Bajwa, who retired as northern army commander five years ago, told the sub committee: "Gentlemen, after four years of troubles have you now come on a fact-finding mission or a decision-making one? Talking to the status quo people like us who live in cities and sleep on Dunlopillow mattresses is of no use now. The situation is grave and old political methods will not do. We need statesmanship." The Central ministers thus returned with the unanimous vote in favour of a unilateral announcement.

While the ministers scoured the state, supplementing the effort of the party legislators and 24 MP's participating in the Congress(I) mass contact programme, political activity was no less hectic on the other side of the fence. The Akalis too were sniffing round the countryside, feeling their constituents' pulse. Basically, there was a desperate bid to regain the credibility they lost partly during the Bhindranwale phase and partly because of the widespread belief among the Sikhs that they surrendered to the army inside the Golden Temple without a fight.

In fact, this quest lies at the core of Akali politics today and causes much of the inconvenient compulsions that Longowal and his supporters face, limiting their options. Also it explains many of their actions that, on surface, look so irrational, and provocative. Last fortnight, Longowal traversed the state, shuffling repeatedly in the cramped confines of the Premier Padmini loaned to him by a follower. But the perpetual furrows on his forehead were due to much more than travellers' fatigue. He was a worried man, one short on advisors and ideas and long on insecurities. At village after village Sikh youths barracked him, shouting pro-Bhindranwale slogans.

Initially he tried to deal with this by admonishing them, saying that they were only strengthening the hands of the Delhi durbar by making all that noise. But soon enough he began to acquiesce, joining them in slogan-shouting at Batala looking on when Satwant Singh's father was garlanded at Batala, and then felicitating Beant Singh's widow at Ropar. The very man who once made no secret of his contempt for Bhindranwale now referred to him with an overdose of honorifics such as "Sant Mahapurukh-(great soul) Sant Baba Jarnail Singh ji" and asked every audience how could there be a rift between him and Bhindranwale when their relationship was steeped in religious tradition.

At Zira, a teeming little town in Ferozepore district known for its large sugar

"This will set the Akalis thinking, it should calm them down, have a soothing effect. But a word of regret about Operation Bluestar would have helped."

HUKAMNAMA'

Plain Politics

RARELY, in Sikh history, has the clout of the *hukamnama*, a kind of ecclesiastical bull, been used as frequently as in the recent months. And rarely has one raised so much controversy as the one issued last fortnight, excommunicating Union Agriculture Minister Buta Singh from the *panth* for his alleged anti-Sikh activities.

The five high priests who signed the *hukamnama* jointly in Amritsar had probably underestimated the dust they would raise. While Buta Singh, a devout Sikh, insolently ignored the order, saying, "I don't care as long as I am allowed to read my Gurbani every morning," there was a flurry of protests from *mazhabi* (Scheduled Caste) Sikh organisations and even some priests. For the first time in recent years, doubts were publicly cast on the tenability of a *hukamnama*.

Leading the campaign was a man who is by no means an outsider to the issue. Bhai Man Singh is the jathedar of Takht Patna Sahib, one of the five preeminent seats of Sikh faith, who along with the jathedar of Takht Sri Huzur Sahib, Nanded, in Maharashtra, is often left out of the process of issuing *hukamnamas*. Said he: "This is a politically motivated step. How can they issue *hukamnamas* without asking us?" The high priests in Amritsar were immediately put on the defensive and claimed that they had been authorised by Man Singh in writing to act on his behalf. Brandishing Man Singh's letter, Kirpal Singh accused him of being a "prisoner of Buta Singh" and stated angrily, "in fact we should have declared him a *tankhaiya* when he attended Buta Singh's sacrilegious *Sarbat Khalsa*. But he said he was brought under duress. Now they are again using him."

But Patna was not the only direction from which the high priests faced attacks. The excommunication of Sant Narain Singh Kaleranwale, on the charge of associating with the Government's rebuilding of the Akal Takht, had also upset a number of sants running *deras* in the countryside and commanding substantial local following. Like Buta Singh, Kaleranwale too had ignored the *hukamnama* and went about preaching, visiting gurudwaras and criticising the high priests as "the chickens who surrendered the moment Bhindranwale showed up with his Sten guns and fled with their arms raised at the first glimpse of armymen." Says he: "I just do not understand this logic. They destroyed the Akal Takht and call themselves devout Sikhs. I helped build it and they call me a *tankhaiya* and yet they continue to live off the earnings of the same shrine." Buta Singh, on the other hand, was quieter, but showed his defiance by addressing gurudwara congregations outside Punjab where he drew large Sikh crowds.

But the Buta Singh counter-

Buta Singh and Kirpal Singh: class conflict

offensive had deeper, political implications. His excommunication was followed by widespread insinuations by his supporters that while President Zail Singh had been allowed to seek pardon from the high priests, Buta Singh had been made the sacrificial goat. The Anandpur Sahib head priest Harcharan Singh Mahalon's statement that Zail Singh should be punished now for presenting gallantry awards to soldiers involved in Operation Bluestar too was viewed in this light.

With controversy involving the Rashtrapati Bhawan now, Giani's aides were rushed to his defence. Rawail Singh, a former Akali minister who had acted as a mediator between Giani and the high priests, asserted that Zail Singh had neither submitted an apology nor any official documents. The high priests partly concurred. Kirpal Singh, displaying a bunch of photographs taken during Zail Singh's visit to the Golden Temple given to the priests by Rawail Singh, said: "He was not pardoned, he was acquitted. He submitted these official photographs to prove that he did not enter the temple wearing shoes and that he did commit sacrilege by walking under an umbrella. At the same time he convinced us that he did not sign the order deploying the army in Punjab." But, he quickly added: "At the same time he apologised for whatever had happened to the temple, no matter who was responsible for the destruction."

A *hukamnama* is normally not revoked and that leaves Buta Singh with the prospect of spending the rest of his life in excommunication. But he is in a defiant mood and is confronting the priests and the Akalis with some inconvenient questions. The Gurus had founded the *panth* as a classless society. But now, suddenly, it is seized by an unfamiliar class-struggle of sorts with many of the *mazhabis*, in a rebellious mood following the Sikh high priests' order excommunicating Buta Singh, himself a *mazhabi*. "This is an utterly destructive approach," lamented Longowal, adding, "anyone who talks in terms of caste among the Sikhs is not a true Sikh." In the same defensive vein, Kirpal Singh asked: "Haven't we been acting against Jat Sikhs like Talwandi, Sant Fateh Singh and others in the past? Why did no one protest then?"

But the fact remains that a large number of *mazhabis* have an inbuilt resentment against the more dominant Jat. They identify with Buta Singh's plight. And if the campaign to isolate them from the mainstream of Sikhism succeeds to any degree the high priests will have only themselves to blame.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

small, he continued the same effort to take over Bhindranwale's mantle by thundering along, saying, "For the Sikhs the choice now is between Takht(the throne) and takhta(the gallows). The Government wants us to talk to them and here we do not even want to listen till all our demands are conceded... even Gandhi had said that if the promises made to the Sikhs at the time of Independence are not kept they will be within their rights to reach for the scabbard." His routine fare included references to Sikh babies in Delhi "barbecued like chicken", people "torn apart by trucks pulling their limbs in different directions" and "our mothers and sisters subjected to gang-rapes". He didn't go so far as to call Beant Singh a martyr but seemed to justify the assassination as the expected outcome of the sacred resentment of one who saw the damage at the Golden Temple and "naturally" decided to take revenge.

What was even worse, however, was that he sat through the wild and inflammatory speeches of his followers and party workers as if endorsing them. At the Jra meeting, for example, Joginder Singh Jagi, an SGPC member screamed to the accompaniment of enthusiastic shouts of *sri akal* from the charged-up audience: "Watch out, Rajiv Gandhi You justified the Delhi killings saying that when a large tree falls there are bound to be tremors. Let me assure you, you have felled even bigger trees and will have to face the consequences."

In a swathe that cut across all parts of the state last fortnight, the Akalis were engaged in the same do-or-die bid; to win for themselves the mantle of Bhindranwale's Teutonic knights. If they lacked his followers' proselytising zeal they tried to make up for it by matching at least his compelling rhetoric.

The same Longowal who, cornered by the AISSF stormtroopers in the Golden Temple had counter-attacked with the setting up of the Akali Dal Youth Wing now went from village to village, consoling parents of AISSF members killed or captured by the security forces. At the village of Mahesari near Moga he paid such tributes to Amrik Singh and his supporters, speaking from a stage bedecked with the AISSF insignia and the portrait of a student killed in an encounter with the police. Reacting sharply to President Zail Singh's statement that people who killed Mrs Indira Gandhi could not be true Sikhs he shot fiercely back: "Let Zail Singh ask his own conscience. Can he call himself a true Sikh?"

But even in the web of this violent verbosity one significant factor stood out: the thrust of the Akali offensive was—and is—invariably directed at the Congress(I) and not the Hindus. Practically every speaker thanked the Hindus who helped Sikhs during the riots and was at pains to say that their fight was with the rulers in Delhi and not with the Hindus in general. "The Congress(I) is our biggest enemy," says Surjan Singh Thekedar who headed the Akali Dal in Longowal's absence, and adds, "even in the Congress(I) our main target should be those *sikkhads* (derogatory for Sikh), like Darbara and Randhawa, who betray the quam."

The approach makes the battle political and it enables Akali supporters to argue that their intentions are not as black as their innuendo. Explains Janata Party leader Inder Kumar Gujral, who was one of the four-member non-political team that met Longowal last week: "Don't take at face value whatever Longowal has been saying. After all, he also has his compulsions. He has to face the people and he can't help saying some of these things." The government's initiatives indicate that this assessment is also echoed in official thinking.

It stands to reason that the concessions should give the Akalis a sense of victory and thereby a short-cut to credibility which, in turn, should reduce their reliance on rhetoric. Said *Ajeet*, a relatively moderate Punjabi daily published from Jalandhar, in a front-page editorial: "This can be called a major victory for the Akalis. We appeal to the Akali Dal to reciprocate this gesture of goodwill by putting off the agitation. Now there is a great responsibility on the shoulders of Sant Longowal and he has to win back the trust of his comrades, workers and Punjabis." All over Punjab, the announcement was greeted by youngsters with jubilation and the Akalis had their best chance in a long time to reassert their stature as a responsible political party holding sway over the Sikh majority.

But if the Akalis had their political compulsions so, obviously, did the Congress(I). It is well known that their mass contact programme is a probing mission in preparation for the assembly poll which may be scheduled for June or September, depending on the way the situation develops in the state. And thus there has to be a limit to which the party leaders would want the Centre to let the Akalis regain hold over the rural Sikh masses. Said PPCC(I) General Secretary Vinod Sharma: "There is no denying that the Jat Sikh is not with us today. But he is also not with the Akalis. What we need is a strong

BHAWAN SINGH

campaign to win him over to our side." Other state Congress(I) leaders, though wary of speaking on record make no secret of their resentment against giving too many concessions to the Akalis which could be self-destructive in the election".

With elections widely accepted to be an inevitability the old, internecine rivalries which have much to answer for the present troubles in Punjab have also come to the fore. The appointment, last fortnight, of Santokh Singh Randhawa, a Darbara Singh camp follower as the new PPCC(I) chief, was thus seen in this light. Subsequently, Darbara Singh, guarded constantly by six carbine-carrying policemen, has been leading the mass contact programme, making statements that his own party leaders find hard to defend. At Jalandhar he blamed the Pakistani and American governments of having masterminded Mrs Gandhi's murder and at each meeting that he addresses he rejects the Anandpur Sahib resolution in its totality though Rajiv Gandhi himself stated recently that the Government had an open mind on discussing the resolution as long as it was within the constitutional framework.

While this pushed the Government to untenable positions, Darbara Singh's new high-profile role was causing more damage in another sense. The Akali campaigners identify him with fake encounters and, for some reason, most people believe this. Thus the threat of Darbara Singh's return as the next chief minister gives the Akalis a great rallying point. Besides, this has brought sharp counter-attacks from the strong pro-Zail Singh group which questions the wisdom in rehabilitating the same person who was sacked for incompetence while the state was being virtually run by the extremists. Time and again party leaders made the same point to the cabinet subcommittee. "I can't understand this. These are the very people who ignited the flames in the first place. Now how can you bring them back to extinguish the blaze?" asked Rajinder Kaur Bhattal a former dissident member of Darbara Singh's cabinet. Ultimately, it was at Amritsar that the rivalries showed up in the ugliest form as factions fought with each other, using firearms including a Sten-gun at the circuit house where party General Secretary Rajendra Kumari Bajpai was staying.

Factionalism apart, the prospect of elections is also bound to let loose other pressure. The Akalis, for example, are committed to opposing an election held without a settlement and this leaves the Centre in a Catch-22 situation. If it makes concessions and settles with the Akalis they will become a threat in the election. If it doesn't, the Akalis will try and prevent election, leading to an Assam-type nightmare. And yet the election cannot be put off for ever. In fact, the Akalis are already creating a psychosis that the Centre wants to do an Assam with their state. "Let them remember this is not Assam. People have already lost so much. If an election is forced on them they will pull out all stops and there will be bloodshed," warned Surjan Singh Thekedar.

Yet, last fortnight, indications were that the stage was being set for the poll. The Government was reported to have informally sounded the Election Commission and intelligence agencies were working overtime assessing the situation on the ground. According to highly placed sources the Government's main worry is violence and the fact that in the past, the Election Commission has made no exception to the rule that the army cannot be

H.S. MAHALON

"They were no Heroes"

AFTER 80 zig-zag kilometres through some of the most backward parts of Punjab, the road abruptly terminates in front of the majestic, white shrine, set atop a daunting hillock. Surrounding, wooded mountains give it the look of an impregnable fortress, which is what it was during the days of the tenth Sikh Guru, Guru Gobind Singh who gave birth to the concept of Khalsa *(the pure Sikh) here. Since then, Takht Sri Keshgarh Sahib, at Anandpur Sahib, is considered the second most important seat of Sikhism after the Akal Takht in Amritsar and its jathedar one of the five high priests who hold ultimate sway on the religious and temporal affairs of the Sikhs.*

The current jathedar of the Takht is Harcharan Singh Mahalon, an erudite scholar who has been preaching and baptising Sikhs since 1953. He has signed all the recent hukamnamas *issued by the Akal Takht including the one excommunicating Buta Singh.*

But he did cause a stir by asking why the jathedars of the two Sikh takhts outside Punjab, at Patna and Nanded, should not be made party to future hukamnamas. *At the same time, he sought discussion among high priests on possible action against President Zail Singh for presenting gallantry awards to soldiers involved in Operation Bluestar. "On* hukamnamas *issued so far," he says, "I have no difference with the Akal Takht or the other high priests." But he does have acute differences with the Akali leadership, particularly on the question of Mrs Gandhi's assassination which he called "cowardly" and "treacherous" in a wide-ranging interview with Principal Correspondent* SHEKHAR GUPTA. *Excerpts:*

Q. *There is a certain amount of controversy about your statement that jathedars from Patna and Nanded should be involved in the decision-making on* hukamnamas. *What exactly do you mean?*

A. There should be no controversy. I have only raised an academic point. I feel that a *hukamnama* signed by all the high priests will prove much more effective. At the same time there is no contesting the supremacy of the Akal Takht. It was set up by Guru Hargobind while the remaining four were set up by Guru Gobind Singh, his grandson.

Q. *And your suggestion that Zail Singh be declared* tankhaiya *for giving away the gallantry awards to soldiers involved in Operation Bluestar.*

A. I did not exactly make a suggestion. A lot of wise men and intellectuals who come to see me have been raising this point and I only conveyed it to the other Singh Sahibans.

Q. *How do you find the situation in Punjab today? Who is responsible for bringing things to this pass?*

A. The situation is not happy. A lot of youngsters are upset. Basically, the anger is on the total absence of any inquiry into the riots after Mrs Gandhi's assassination. If the culprits for the killings are punished, and victims given as much compensation as soldiers killed in Operation Bluestar, the situation will improve. As for the responsibility, I think it lies with both, the Government and the Akalis. The Akali leaders too do not speak with one voice and are often inconsistent.

Q. *Do you agree with the Akali reticence in condemning Mrs Gandhi's assassination and now hailing Beant Singh as a martyr?*

A. I just do not understand that. How could the assassination be an act of bravery. I am quite clear about this. She

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

deployed in a peacekeeping role during elections. It is unlikely that they will resident now, after staying firm in Assam in 1983 and in West Bengal during the Naxalite movement. A poll with the total absence of the army from the scene will prove to be a tricky affair unless a decisive majority of the rural population participates in it willingly.

The most politic approach to the problem would be a combination of political manoeuvre and economic sops, some of which were offered by the prime minister at Hussainiwala last fortnight. Now, his secretariat is studying an economic package for Punjab prepared by the Sikh Forum on Rajiv Gandhi's request. The proposals include:

► declaring the state as an industrially backward area;

► setting up at least two large industrial units in the state, each generating 25,000-30,000 jobs;

► clearance of the proposal for setting up a nuclear power plant in Punjab;

► subsidy on diesel generating sets and a moratorium on agricultural loans that remain unpaid due to disturbed conditions;

► provision of more agro-based industry and cotton spinning mills.

On another plane the Punjab Government has already set up a committee led by Financial Commissioner S.L. Kapur to travel round the country and persuade major industrialists to invest in the state where industry remains poorly developed. The Centre has also decided to exert pressure on big industrialists who have for years been sitting over licences to set up plants in Punjab. At the state level, the administration is likely to lift the freeze on ad hoc appointments which will at once clear the decks for filling up the nearly one lakh vacancies in government services.

But sops can never fill in for statesmanship and, ultimately, the fate of Punjab will depend on the extent to which both the Government and the Akalis are able to display that quality. Both have daunting compulsions, but also limited options and common reasons to hurry in the direction of conciliation. For example, if further delay in resuming a meaningful dialogue will lead to the resurgence of extremist power and embarrass the Government, it will also destroy the Akalis who, in any case, should be the best people to know how hard it is to counter the lure of an extremist movement among a directionless, frustrated population. The Bhindranwale phase and all that it stood for is much too recent to be forgotten and that is the challenge they will face if they fail to shrug off their political astigmatism.

On the other hand, the Centre and the Congress(I) will have to acknowledge that there is no wishing away the Akalis in Punjab. And because it is impossible to destroy them, the best course for the country would lie in living with them, as is the case with many other regional movements, such as the DMK in Tamil Nadu and Telugu Desam in Andhra Pradesh. The Akali inability to see themselves in a national or even a more complete Punjabi perspective and the Congress(I)'s paranoid distrust of regional forces are factors that make the Punjab problem so intractable. But after a three-year long impasse the Government's Baisakhi-eve initiative gives both sides an opportunity to disown this self-destructive legacy. It is an opportunity they cannot afford to lose.

—SHEKHAR GUPTA with bureau reports.

BHAWAN SINGH

"How could the assassination be an act of bravery? What is so heroic if my servant, whom I trust, kills me tomorrow?"

was killed by two persons who were employed to protect her, took their salaries from the Government, touched her feet every morning and called her, mother. How one day if they killed her what is so courageous about it. It was nothing short of "noon-harami" (betraying salt). What is so heroic about it if my servant, whom I trust, kills me tomorrow? I could understand the Akali attitude if they said they had sent the two to kill her. But they did it on their own.

Q. *But many people justify the murder drawing parallel with the beheading of debauch Massa Rangar outside the Golden Temple.*

A. I will tell you the history. Massa Rangar desecrated the Golden Temple by getting prostitutes to dance there. So the Nihangs in far-away Bikaner vowed to go and kill him. They galloped through the whole territory controlled by the Mughals, reached the temple, beheaded Massa Rangar, brought his head back to Bikaner, once again defying the Mughal forces, and fed it to dogs. Now that was courage. What happened in Delhi was entirely different.

Q. *President Zail Singh recently stated that people who killed Mrs Gandhi could not be real Sikhs. Do you agree?*

A. To my mind, anyone who commits treachery cannot in fact be called a true Sikh.

Q. *You signed the* hukamnama *declaring Buta Singh* tankhaiya. *What was his fault?*

A. He had let us all down. He met us on June 16 (1984), accepted our 14-point charter of demands and promised to come back with the prime minister's approval. But he turned up instead with Nihang Santa Singh to begin the *kar seva*. Similarly later he went back on promises made to Baba Kharak Singh in front of us all, the high priests and organised *Sarbat Khalsa*. But in spite of that when we gave him a lot of time to come and explain his conduct he stayed away, thereby committing contempt of court. Akal Takht is the highest religious court of the Sikhs.

Q. *What kind of support does the Khalistan demand have among the Sikhs? Is there a real threat of secessionism in Punjab?*

A. No one wants Khalistan, believe me. A very, very small number of people talk about it but they also do not mean it. This is their way of expressing frustration on the other issues where the Sikhs feel they are being wronged, for example the Delhi riots. Nevertheless if some corrective steps are taken even now to remove these grievances, the threat of secession will quickly disappear. I hope *waheguru* gives people wisdom and things get better.

BHOPAL TRAGEDY

Case Against Carbide

THE will-it-won't-it phase in the traumatic saga of the Bhopal gas tragedy finally came to an end last fortnight when the Government filed a case in a New York court seeking compensation from Union Carbide Corporation Ltd (UCCL) for the death of some 2,500 people last December. The case was unique in more senses than one. Apart from being potentially the biggest compensation claim in legal history and pertaining to the world's worst accident, it was the first time that a government was taking such a step against a multinational corporation. The outcome is certain to have significant long term repercussions on the relationship between multinationals and developing countries.

The case will make legal history—if it is heard to the end. The decision to lodge it came after negotiations between UCCL and the Indian Government broke down. The Government had originally planned to file the case on March 16 but decided to postpone it awaiting an offer of an out of court settlement from the American company. In the event, two American lawyers representing UCCL met Petroleum Secretary B.B. Singh on March 27 and made an offer. But, as Chemicals and Fertiliser Minister Veerendra Patil told Parliament last fortnight, it was "so ridiculously low that it wasn't worth considering". While officials declined to say how much was offered, INDIA TODAY has learned that UCCL volunteered to pay US $ 200 million (Rs 260 crore) over 35 years with an immediate first instalment of 40 per cent. The first payment was raised to 60 per cent when Indian officials demurred, but UCCL didn't raise the overall amount. UCCL also wanted an assurance that the Government would not file any suits against it as a part of the settlement.

The offer was rejected outright and within days a team of Indian officials headed by the Law Secretary B.S. Sekhon had left for the United States to initiate legal proceedings. In spite of this, however, the Indian side hasn't closed its mind on a possible out of court settlement—provided the amount offered is right. One reason, of course, is that a lawsuit could well take many years to yield any concrete benefit to the victims of the disaster. Law Minister Asoke Sen told INDIA TODAY: "We shall wait and see."

The decision to file the suit followed the visit to the US of Attorney-General K.Parasuram last January. Parasuram returned to advise the Government to take the legal battle—till then being waged by scores of American and Indian lawyers acting independently on behalf of several thousand victims and survivors—into its own hands. The first step was the promulgation on February 20 of the Bhopal Gas Leak Disaster (Procedure of Claims) Ordinance '85 which made it difficult for American lawyers to represent clients in India. Even though some American lawyers threatened to sue the Indian Government for promulgating the ordinance, officials say that the measure was in the best interest of the Bhopal victims. Patil told Parliament that its main objective was to ensure that the claims arising out of the gas disaster were dealt with "speedily, effectively, equitably and to the best advantage of the claimants".

In the meantime, the suit filed in the US accuses UCCL of "wanton disregard of the rights and safety of the citizens of countries where they do business". Represented by the firm Zelle, Larson and Kaplan of Minesotta, the Indian Government has argued that UCCL is "absolutely liable" for the disaster.

The suit filed in the US accuses Union Carbide of wanton disregard of the rights and safety of the citizens of countries where they do business.

The court's verdict will, naturally, depend on the case that the Indian side makes out. In the first weeks of the disaster, when America's so-called ambulance-chasers—lawyers who represent victims of accidents in which culpability can be established—descended on Bhopal, the prevalent view was that the mere fact that UCCL owned more than half the Indian subsidiary's equity would be sufficient to establish liability and responsibility for the accident and the deaths caused. But legal opinion is divided. "If it were as easy as all that, we would have sued them long ago," said one senior Law Ministry official.

The Government case must obviously be stronger and the American court will have to be convinced that Union Carbide was responsible for the design of the Bhopal plant, that it was aware of the shortcomings of the Bhopal plant, that it was party to the supervision of safety measures, and that it ignored tell-tale warnings. The Government is confident. Says Sen: "Our case is strong."

The confidence is based on several facts including a report by UCCL saying that in 1982 it had warned Union Carbide India Ltd (UCIL) about the laxity of safety measures in Bhopal. It was this report which enabled UCCL Chairman Warren Anderson last month to attempt to put the blame for the accident on the Indian subsidiary. That particular attempt carries little conviction in the light of another, more recent UCCL document examining the possibility of a runaway methyl isocyanate (MIC) reaction at its Institute, Virginia plant in the US. That report, dated mid-1984, just months before the Bhopal accident, listed as a major concern a "potential for runaway

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

The tank which contained the gas being filled for examination: awaiting a verdict

reaction in (MIC) unit storage tanks due to a combination of contamination possibilities and reduced surveillance during "shock reaction". The Indian subsidiary wasn't sent this report and it isn't clear whether this had to do with design differences between the two plants at Bhopal and Institute, or whether there were any design differences at all. Conflicting reports have been made with some spokesmen saying that the two plants are of different design and others the opposite.

Meanwhile, the investigating authorities in Bhopal—the Central Bureau of Investigation as well as scientists—are still unsure of how the runaway reaction occurred. Some light was shed last fortnight when tank number 610, which contained the lethal MIC, was finally opened up. The start to the inquiry was hardly auspicious: the tank with an estimated 12 tonnes of residue in it proved too much for the crane that was to lift it and for a while, instead of the tank being lifted by the crane, it was the crane which found itself tilted by the tank.

When it was finally opened, scientists found carbon deposits within the tank suggesting that it wasn't just MIC that escaped. One of the scientists at the site, C.S.P. Iyer said: "This is a research-oriented investigation which may take a very long time." The most favoured theory is, of course, that water found its way into the tank—a possible cause of the reaction which has been suggested both by Indian scientists like Dr. S. Vardarajan of the Council for Scientific and Industrial Research who headed the Indian scientists investigating the accident, and Carbide managers working on the basis of 'limited data'. Vardarajan and his team —which includes Iyer who is a senior scientist with the Bhabha Atomic Research Centre, Asad Ali Khan of the Regional Research Laboratory and N.R. Iyengar of the National Chemical Laboratory at Pune—have now taken 25 samples from tank 610 and will analyse the compounds in the residue to reconstruct the chemical reaction of December 2/3 night. The problem of course is that the victims and survivors have so far had little to do except wait. And the waiting will go on till the accident is analysed, the court case heard and a verdict reached—unless, the Indian Government and UCCL do manage to come to an out of court settlement.

ASSASSINATION

Slender Lead

FIVE months after it was set up, the Anand Ram Commission probing the assassination of Indira Gandhi is still unable to establish whether or not the conspiracy extended beyond the alleged assailants, Satwant and Beant Singh.So far, the commission has been painfully following up slender leads arising out of the evidence they have managed to collect. Their latest investigation involves a young 28-year-old former press superintendent of *Hitavad*, a prominent Bhopal newspaper, Attinderpal Singh. Singh is currently the focus of a massive manhunt launched in Madhya Pradesh, Punjab, Rajastan and Uttar Pradesh.

Singh went underground after Operation Bluestar and is now ranked in police files as one of the most wanted extremists at large. After the death of Bhai Amrik Singh, vice-president of the then outlawed All India Sikh Students Federation (AISSF) Attinderpal was elevated as his successor.He was reportedly the leader of the group of Sikh youths who hoisted the Khalistan flag on top of the Golden Temple on October 1 last year.

But the Anand Ram team believes that Attinderpal may have had knowledge about the conspiracy to assassinate Mrs Gandhi. Team sources say that a group of conspirators led by Attinderpal met at Nagpur on September 13 and discussed the matter at length. According to evidence collected by the commission, the idea was eventually abandoned but they believe Attinderpal may have been part of an aborted conspiracy to assassinate Mrs Gandhi on September 15 during her visit to Nagpur.

In Bhopal, however, the possibility of Attinderpal's involvement is scoffed at. He was employed at *Hitavad* for barely six months and his colleagues say that he was extremely vocal about the Punjab issue and had decidedly extremist views. But even so, he was hardly considered terrorist material. Even the Madhya Pradesh branch of the Intelligence Bureau did not have him on their known extremist files till the Special Branch of the state police detained him as a security risk when former Punjab chief minister Darbara Singh visited Bhopal on April 15,1984, before the assassination.

But after the Golden Temple action he went underground and surfaced in September in Calcutta. In an interview to a Calcutta daily, Attinderpal claimed res-

Digitized by Arya Samaj Foundation Chennai and eGangotri

ponsibility for masterminding the hijacking of an Indian Airlines aircraft to Pakistan. He also admitted that he never stayed in one place for more than a day and travelled under assumed names and various disguises.

Some of his statements to the paper:

On the killing of bus passengers in Punjab

"It is a reaction to years of subjugation. It was a means of letting the community know of our struggle. These acts will continue.

On the Sikh demand.

"Before Operation Bluestar all we wanted was implementation of the Anandpur Sahib resolution. Now we will settle for nothing less than independence."

On the 'struggle'

"It is not against the Hindu community but against the Hindu-minded government."

While in Calcutta, Attinderpal was known to have contacted the suspects arrested with Simranjit Singh Mann, the former police officer, on the Indo-Nepal border. Authorities believe that he may

Attinderpal Singh: massive manhunt

have fled to a neighbouring country but judging by their past record, that could merely mean that he has evaded the dragnet. He is known to be controlling certain Sikh extremist groups in Durg and Indore in Madhya Pradesh. In a bid to flush him out, the authorities are considering releasing his photograph publicly and asking for help in tracing his whereabouts. "He may not have been directly involved in the assassination but nevertheless he will be a crucial witness in the case," says an official.But to obtain his evidence, they first have to catch him.

GUJARAT

Escalation Threat

From all indications, the two-month-old anti-reservation stir in Gujarat could well escalate into a major caste war. With the more strident anti-reservationists enlarging the scope of the agitation to question reservations per se and the Harijans increasingly realising the need to protect their rights, the portents last fortnight were ominous. Should the stir intensify, the casualties of this round between the state's feuding social groups could dwarf those in an earlier round in 1981. Warned Surendra Rajput, Youth Congress(I) Leader and MLA, "Lower castes who did not till now know that they were entitled to concessions are now getting conscious because of the agitation. There is bound to be a backlash."

The biggest tragedy, of course, is that the agitation is totally pointless. This is not merely because Chief Minister Madhavsinh Solanki announced last month that the January 18 decision increasing reservations would not be implemented for a year and that the whole reservations policy would be reviewed.

More important is the fact that the quota of seats reserved for the Scheduled Castes and Scheduled Tribes and the socially and educationally backward castes (SEBC's) in the state's colleges is hardly ever filled up. The controversial January decision had increased the quota from 31 per cent to 49 per cent but in the state's medical and engineering colleges, which are the twin eyes of the storm, the actual utilisation of the quota has never exceeded 17.4 per cent and at times been as low as 11.6 per cent.

In the medical colleges barely a sixth of the quota was filled up in the last academic year. In the engineering colleges the situation was still worse, with only around 12 per cent of the reserved seats actually being taken by candidates from the deprived castes.

Explains Niranjan Singh, secretary of the Social Welfare Department, "Under utilisation of the reserved quota is mainly due to the inadequate facilities for teaching English, science and maths in the backward areas of the state. A good grasp of these subjects is necessary to get admission into technical institutions."

But logic and sane thinking had few takers in Gujarat even though there was a lull in the agitation after the communal riots in Ahmedabad last month in which 13 people lost their lives. The first signs of a looming confrontation war were visible on April 7 when pro-reservationists clashed with anti-reservationists in Ahmedabad at a meeting of the newly-formed Parents' Association. The meeting was convened to decide on how to intensify the agitation by emerging as a new pressure group aligned with the students.

The fall-out of the clash was predictable. Schools which were supposed to hold examinations hastily closed down as anti-reservationists went around threatening office-goers and indulging in brickbatting. As attitudes stiffened, sociology professor and convenor of the Parents' Association Shankerbhai Patel threatened: "There will be no examinations unless this issue is solved."

Though the Akhil Gujarat Navratna Samiti, a federation of students spearheading the agitation, still continued to maintain that it was only against the increase in reservations, the Samiti was discovering that not all agitators were prepared to be so reasonable. Though not grouped under any organisation, many agitators stepped up their demand to total abolition of reservations. The recurring manifestation of this feeling was the ubiquitous 'funeral procession' of reserved seats which came out in various parts of the state. At one such ceremony on April 2 at the affluent Satellite Road area in Ahmedabad a student dressed as a pujari performed the last 'rites' after the 'death' of the reservations system while a large number of women looked on approvingly.

There were similarly strident stirrings on the other side of the social spectrum. The Harijans have begun to realise that their rights are under attack. Meetings were held in various labour localities to spread consciousness on this issue. Their endeavours were buttressed by those of human rights organisations like the Lok Adhikar Sangh which also held a meeting to urge the oppressed castes to stand up for their rights.

Meanwhile, the agitation took another turn when examinations became the prestige issue. The tenth and twelfth standard board examinations, along with the college exams, were scheduled to commence last fortnight but

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Striking doctors burn termination notices: grave reservations

are been indefinitely postponed due to the disturbances. This has only aggravated matters as the schools have been caught in the crossfire between belligerent agitators and an unbending government. Even as most schools announced that there would be no examinations and vacations would start immediately, state Home Minister Amarsinh Chaudhari warned that he would stop grants to schools which did that. Asked a helpless school supervisor: "Will the Government guarantee the safety of every child if we decide to hold examination?"

The students are adamant that they will disrupt examinations if held now. Says Gaurang Shah, student leader, "The final showdown will start if the Government insists on holding examinations." Defending their belligerency, Shah adds: "We realise that the future of several lakh students is involved but even if they pass the exams what is their future with such a reservation system where no merit is ever recognised?"

To hold exams in such a potentially explosive situation will not be easy for the Government. As many as 4.8 lakh students of the tenth standard and the twelfth standard are scheduled to appear for the secondary school board exams at 4,95 centres in 1,300 buildings. There are almost half as many college students also waiting for exams.

The Government's ineptitude was not just confined to its inability to solve this dilemma. Almost everything it did boomeranged. It decided on a tough line by arresting the three leading student leaders, Vivek Patel, Kanu Patel and Amit Desai. While this suppressed the agitation briefly, as the other leaders went into hiding, it soon created a backlash in the shape of the Parents' Association which not only widened the support base of the agitation but also served to give it a greater credibility.

A similar fate attended the Government's attempt to discipline the students. When 1,500 junior doctors from government hospitals in Ahmedabad, Surat, Baroda and Jamnagar went on strike demanding the release of the student leaders, Chaudhari promptly issued termination notices to them. But the medicos treated the notice as a joke and made a bonfire of them in the civil hospital campus in Ahmedabad. Later, they got an order from the Gujarat High Court staying the termination notices.

Even its employees were turning belligerent. Some 600 government employees took out a huge procession in Gandhinagar, the state capital, demanding the abolition of reservation. The Government had them all arrested.

Increasingly being pushed into a corner, the Government could only repeat its conviction that 'vested interests' were behind the agitation. Asked Solanki: "When we have categorically stated that we are not going to implement the decision, why is the agitation continuing?" Chaudhari had an explanation for the seemingly baffling phenomenon. "Obviously some politicians who were defeated in the last elections are using this (agitation) to get back into public life."

Gujarat's Congress(I) leaders had obviously taken their cue from Prime Minister Rajiv Gandhi's statement that the Opposition was behind the communal riots last month. But local leaders have expressed reservations regarding this charge. Maulana Habiburrehman, general secretary of the Jamait-e-Islam-Hind, told a committee set up by the Lok Adhikar Sangh that the riots were the handiwork of Congress(I) elements trying to divert attention from the reservations issue.

The Government was similarly embarrassed when it decided to table the Rane Commission report, which was submitted in 1981 and which the Government accepted in a modified form in its infamous January 18 announcement. The tabling of the report only gave verbal ammunition to the anti-reservationists because the Rane Commission had categorically stated that family income and occupation, and not caste, should be the sole criteria for determining social and educational backwardness for reservations. Identification of backward classes in terms of caste would only perpetuate the evil of the caste system, the report had noted. But the Solanki Government, predictably enough, did the opposite of what the commission had recommended and plumped for the more politically advantageous retention of only the caste criterion. Now it is trying to order the genie back into the lamp but the genie has become a Frankenstein.

The Government is not the only one guilty of looking for short-term gains. Many so-called student leaders have jumped into the fray only because reservations was a readymade political issue which could give them instant prominence. Their political ambitions are the only motivating factors behind their participation in the stir. Similarly it must also be remembered that Shankerbhai Patel of the Parents' Association has long been an activist in the Gujarat Adhyapak Sangh, the association of university teachers.

The overall picture from Gujarat was of unremitting gloom. About the only glimmer of hope was provided by the residents of the riot-affected Dariapur area in Ahmedabad who met under one roof and chanted prayers from all religions and thanked army jawans for helping to restore normalcy. Good sense held sway in at least one corner of the scarred state.

WEST BENGAL

Unexpected Change

THE REHABILITATION of Pranab Mukherjee last fortnight was as surprising as it was inexplicable. In the three months that had elapsed since the No 2 in Mrs Gandhi's cabinet was dropped by Rajiv Gandhi, the former finance minister had largely stayed in the shadows. When two Congress(I) MP's hinted in Parliament on April 1 that Mukherjee had had some connections with the discredited Rajendra Sethia, it seemed that his detractors in the party would not even let him lick his wounds in peace. Yet, within 48 hours of this public mudslinging, Mukherjee was named as the new president of the Pradesh Congress(I) Committee, the most crucial office a Congressman can hold in an Opposition-ruled state.

Not suprisingly, the announcement was received with a mixture of shock and dismay in party circles. "It was like a bolt from the blue," said Gyan Singh Sohanpal, MLA. Somen Mitra, a known follower of Ghani Khan Chowdhury, Mukherjee's political opponent, asked pointedly, "Can a man who the Prime Minister says is too 'goody-goody' manage the party of a volatile state like Bengal?" Priya Ranjan Das Munshi, MP and known to be close to Union Law Minister Asoke Sen was all praise for the decision in public but in private reportedly said that Mukherjee's appointment would only accentuate the party's organisational weakness in the state. Even the party high command was somewhat equivocal about the merits of its candidate: as general secretary, Rajendra Kumari Bajpai, who handles West Bengal said, "Pranab's choice was the best—under the circumstances."

Admittedly, the high command was faced with a difficult decision: the range of candidates who could replace the ailing Ananda Gopal Mukherjee as the PCC(I) chief was limited while it was necessary to appoint an effective head to combat the Left Front politically with elections only two years away. The task is to win the elections, and only a dynamic PCC(I) president would be able to exploit the full potential of the growing support for the Congress(I), most dramatically brought out in the Lok Sabha elections where the party virtually matched the Left Front vote for vote. That this upsurge had come about inspite of a moribund Congress(I), riven with dissensions, has been due largely to the lacklustre performance of the Left Front in the eight years it has been in power. But the parliamentary results had shaken the Front and there have been clear signs that the CPI(M) has finally decided to shake off its complacency. Most important, the CPI(M) has Jyoti Basu, whose charisma and popularity is still unmatched in the state, as its mascot. The Congress(I) high command was enjoined, therefore, to find a leader who would not merely galvanise its workers but also be able to measure up to Basu's image in public. The choice was between Mukherjee, Chowdhury and Sen: Mukherjee won out because Chowdhury's image is too controversial while Sen, who re-entered politics only recently after a break of two decades, has been out of touch with things for too long.

Pranab Mukherjee: reinstated

BHAWAN SINGH

The task is to win the next elections and only a dynamic PCC(I) president would be able to exploit the full potential of the growing support for the Congress(I).

While that was the rationale, the actual method of selecting Mukherjee was instructive of how the party is run now. The exercise began by Rajiv asking Sen, Khan Chowdhury and Subrata Mukherjee to give their recommendations for the post in writing. Sen was asked to comment on Mukherjee and Khan Chowdhury, Khan Chowdhury on Sen, and Mukherjee and Subrata on all three. Next, Rajiv interviewed all three and asked them what their priorities would be if they were given the post. Mukherjee said his aim would be to extend the mass support of the party by highlighting the bad policies and management of the Left Government so as to win the next elections. Nobody else was as clear-headed or showed as much motivation as he did.

There was also the factor that in his dealings with the Left Government as Union finance minister, Mukherjee had been very much a hawk, refusing to do any favours even though it was his home state. This was in marked contrast to Khan Chowdhury who had gone out of his way to push projects in Bengal, which had earned him the grudging admiration of the Left Front.

Once the job was his, Rajiv held another meeting with Mukherjee at which the two discussed how best to go about the task of politically combating the CPI(M)-led Front which was in retreat but still had unassailable pockets in many rural areas. Of the 16 Lok Sabha seats that the Congress(I) won in the last poll, as many as 13 were in predominantly urban areas. Rajiv found that Mukherjee had equally clear views on how he would galvanise the party. Mukherjee thinks that district Congress committees have outlived their utility and should be replaced by sub-divisional committees as the fulcrum of the party's contact with the masses. That, he felt, was the best way to take the party to the villages, a game plan that Rajiv approved and that might go into operation

The world is going

Now Skybags brings the Soft Revolution to India. This exciting new range of nylon luggage from VIP is the ultimate in travelling style and comfort. Light-weight, really roomy, beautifully functional. And sensationally tough.

Fashioned from strong, tear resistant nylon, Skybags survive the torture of travel with remarkable ease. Only VIP's special care in manufacture and high quality standards could create such beauty with such toughness.

So before you pick your next destination, pick your Skybags from a dazzling selection of styles, colours and shapes. They're guaranteed to make you soft on them from the word Go!

SOFT. STRONG. STYLISH.

in the coming months.

But having named the 'general' the party again hesitated to give him his lieutenants. Conventionally, the PCC chief and his office-bearers have always been appointed together but even though Mukherjee's appointment was announced on April 3, the full list of the PCC(I) had not been announced till late last fortnight. It was learnt that the major hitch was over Das Munshi, who the high command reportedly wanted appointed as the general secretary. Mukherjee, it was learnt, was reluctant to accept him but wanted at least one more general secretary.

But on the face of it, Mukherjee was not letting all the doubts and uncertainties get to him last fortnight. "Factionalism will not pose any problems for me because this is a choice by the Congress(I) president," he told INDIA TODAY, clearly happy to be once again active in politics. He demonstrated his clout with the state Congressmen by persuading them to abandon the boycott of the Assembly, and even as the high command pondered over the PCC(I) list he gave them, flew off to north Bengal to campaign for the party in the three by-elections due on April 24.

Mukherjee can expect no quarter from the Left Front. The Front's members regard Mukherjee as part of the clique in Delhi which has denied the state its share from the Central kitty. Posters naming Mukherjee as a "conspirator" in this design came up on Writers' Buildings wall within days of his appointment. And Prasanta Sur, the CPI(M)'s urban affairs minister, indicated the bitterness with which his party regards Mukherjee when he said: "If the prime minister is advised on West Bengal affairs by men like Pranab Mukherjee then why Calcutta, the whole state of West Bengal will die."

Mukherjee's political mettle is currently undergoing what is perhaps its severest test. His handicaps are well known: having been away from Bengal for so long he does not have many grass roots contacts in the party; having spent most of his political life holding posts in various governments he is more a file pusher than a motivator of partymen; not having ever won an election he is now being entrusted with the electoral fortunes of an entire state. For starters, he must ensure that his party wins the by-election in Hassan, which falls in his home district of Birbhum. History can wait for the rest.

—SUMIT MITRA with INDRANIL BANERJIE

RAJASTHAN

Case Celebre

LAST fortnight saw the prelude to a trial, the kind which Rajasthan has never witnessed before. Kan Singh Bhati, deputy superintendent of police, who stands accused of killing independent legislator Man Singh of Deeg in Bharatpur district on February 21, was arrested on April 6—along with his driver Mahendra Singh and Deeg's station house officer Veerendra Singh. The arrests were made by the Central Bureau of Investigation (CBI) which is handling the case.

AMOLAK PATNI

Bhati: in the dock

On April 7, a day after his arrest, Bhati was remanded to police custody by Giriraj Prasad Sharma, special judicial magistrate for CBI cases, Jaipur, and his application for bail rejected. After spending four days in police custody, Bhati was then remanded to judicial custody for 14 days. The time, it was stated, was necessary for the further interrogation of Kan Singh Bhati.

This was challenged by Bhati's lawyer Dalip Singh, who took the case before Justice Vinod Shankar Dave of the Jaipur bench of the Rajasthan High Court. The CBI is represented in Dave's court by their standing counsel S.P. Tyagi. Although this was not the beginning of the main trial, the arguments augur much of what is to come in one of the most interesting cases of recent times.

The Deeg tragedy occurred when Man Singh—following alleged hooliganism by Congress(I) workers before the assembly elections—drove his heavy jeep, in a fit of rage, into a podium constructed by the ruling party. Still seething with anger, Man Singh drove down to an airstrip where a helicopter that had brought in the then chief minister Shiv Charan Mathur was parked, and rammed his jeep into the plane. Since a pilot was in the plane at that time, a case of attempt to murder was registered by the police.

According to Bhati, he was in the Deeg police station on February 21, when he got reports that Man Singh and his men—armed—were creating disorder. He immediately rushed to the spot along with a posse of policemen and tried to persuade Man Singh to surrender. Bhati says that the legislator did not respond and he and his men opened fire. In the return police fire, Man Singh and two of his men were shot dead.

The CBI came into the picture soon afterwards when Vijay Singh, Man Singh's son-in-law, lodged a complaint alleging that Bhati and his policemen came to the Deeg marketplace with the specific objective of murdering Man Singh. Vijay Singh also alleged that the murder was pre-planned by senior state government officials.

What is of interest is not the view of Vijay Singh alone: at this point, the CBI too seems to be following the same line. The CBI's application in Sharma's court for a police remand reveals its startling stand on the case. It reads: "He (Bhati) is the best person to reveal the complicity of other high officials of the Government of Rajasthan. For the purpose of fair and effective investigation, all the real culprits responsible for the commission of the crime directly or indirectly within the purview of investigation/law irrespective of their higher status, position in society and in administration are necessary to be brought to book."

Tyagi said as much in court when he referred to the helicopter smash-up and of chief minister Mathur's anger afterwards. He immediately drew a parallel to the celebrated case of dacoit Sunder during the Emergency, who was said to have been killed by the Delhi police because of the danger he supposedly posed to Sanjay Gandhi. At another point, Tyagi also said that the whole department had helped Bhati. Some of Tyagi's contentions in court:

- 67 neutral witnesses questioned by the CBI at Deeg said that the first shot had been fired by Bhati which hit Man Singh in the head. Police firing broke out only subsequently;
- the police version of the jeep's occupants being heavily armed was wrong;
- the bullet that killed Man Singh ent-

Outstanding achievement comes from seeking challenge.

Aplab entered the electronics field when it was an ideal sellers' market. No competition worth the name and generous Government incentives for the asking. In the near-monopoly situation, we could have made large profits. But we enforced a discipline on ourselves. To stand on our own legs and make only top quality products.

This served us well when we entered the West German and other European markets. Competing against high standards and advanced technology kept us perennially on our toes and raised our own standards.

In this constant striving to better our quality we achieved many 'firsts' and made signal contributions to the development of professional electronics.

Today we continue to hold our own in highly competitive markets making a name for ourselves and for the nation in the exciting international sphere of professional electronics.

ered behind his right ear;

▶ Bhati had been issued 12 bullets for his .38 calibre revolver. Only 11 were recovered from him.

Bhati's lawyers have several options open to them in pursuing his defence. If ballistic and forensic experts establish that the bullet that killed Man Singh did, in fact, come from his revolver, he could take the plea that his firing was in self-defence or that his action does not amount to murder.

Section 300 of the Indian Penal Code lays down some exceptions in which culpable homicide is not murder, one relating to a public servant causing death by exceeding the powers given to him under law. Bhati could seek refuge under this, but he will have to show that he believed his action "in good faith ... to be lawful and necessary for the due discharge of his duty" and that he bore no ill will toward the deceased.

Section 46 of the Criminal Procedure Code states that the police can use "all means necessary" to effect arrest but can cause death only if the accused is involved in a case which could bring him life imprisonment or the death sentence. Since Bhati contends that Man Singh resisted arrest—and was an accused for attempt to murder—a defence could be built up on that.

The CBI investigations are still to be completed. They have asked for, and got, judicial remand for Bhati. If the prosecution can establish that the daylight killing of Man Singh was preplanned, with Bhati the willing tool in the hands of police and political high-ups, it would not only decide the case, but also shake the entire police administration to its roots. Of course, the defence may just work, but till then the ghost of Man Singh continues to loom over the fortunes of deputy superintendent of police Kan Singh Bhati.

—SREEKANT KHANDEKAR

RAJASTHAN POLICE

Dubious Deed

NOTHING seems to be going right for the Rajasthan Police. The storm which broke over their involvement in the sensational killing in Deeg of the independent legislator Raja Man Singh has barely died down when they have been buffeted by another. Last fortnight, Bikaner's superintendent of police Rohitashwa Kumar was suspended and arrested for allegedly molesting the wife of his Additional Superintendent R.D Goyal. The unprecedented disciplinary action was taken only because the incident set off a furious debate in the state assembly and was reported diligently by the press.

The incident occurred in Bikaner on March 23 but was reported in the press only three days later. Though Kumar's and Goyal's versions are conflicting, it is certain that Kumar visited Goyal's house sometime after 9 p.m. In an interview to *Itwari Patrika*, a Jaipur-based weekly, Goyal said that Kumar had two drinks at his place. Goyal went out briefly to meet a complainant and returned to meet Kumar walking briskly out of the house. Rushing in he found his wife in tears and she told her husband that his boss had molested her. Goyal rushed to his superior's house in a fit of rage—stick in hand—but Kumar was not in. He immediately telephoned S.S. Pawar, the DIG of police who asked him to put down his complaint in writing. The complaint was then communicated to the Director General of Police, Raghunath Singh Kapoor.

Though the complaint was made, the police did not register a first information report (FIR) even as late as March 26. It was only after an uproar in the Assembly, when the Chief Minister Harideo Joshi said that he would not make a statement because the facts were being looked into, that he assured the agitated members that a case would be registered.

Kumar: an unsavoury past

Kumar, 38, in an interview to the same weekly denied the charge and said that the whole story had been fabricated. He claimed that the elaborate plan had been sprung because Goyal piqued by certain decisions made a few weeks earlier, which had reduced his power considerably, had decided to take revenge.

But Kumar doesn't seem to be a very popular officer: when the matter came up in the Assembly, there was a veritable tide of complaints about his past behaviour. Devi Singh Bhati, a Janata Party member, alleged that Kumar had also misbehaved with the wife of an official in Chittorgarh and a teacher in Bharatpur. Nathu Singh (BJP) said that Kumar had been notorious in Tonk and Jaisalmer as well.

Action against Kumar was taken only on April 1, more than a week after the incident, after a preliminary enquiry by DIG (CID) V.K. Kaul. A case was registered under Sections 354 and 451 of the Indian Penal Code—outraging a woman's modesty and house trespass to commit an offence punishable with imprisonment. Kaul ordered the arrest of Kumar but he was released on bail soon after.

Commenting on the pace of the action, a police official said: "A police officer's failure to immediately register an FIR is considered a serious offence for which several SHO's have been suspended in the part. But when one of our own is involved, we have taken a week to register the case." Had the press not reported the incident, had the assembly not been in session, it is doubtful if action would have been taken. The police brotherhood is strong and if Kumar had got off, he wouldn't have been the first: the standards applied to policemen and to the common public are rarely the same.

The event has had two spin-offs: one mildly amusing, the other more serious. Kumar, who is said to enjoy some political clout, has steadfastly maintained that after leaving Goyal's residence, he went to the residence of Kanta Kathuria, a Bikaner Congress(I) leader. Kathuria denied this—but only a week afterwards. The other feature is more unfortunate. So strong are caste rivalries in the state that some believe that Kumar is being victimised because he belongs to the Scheduled Caste section. A development that is certain to divert attention from the real issue at stake.

Technological courtesy, GCEL.

Those days of feeling totally helpless against weather vagaries have gone with the wind. Now you can actually forecast to what extent river levels will rise – and take preventive measures. With GCEL as sentinels.

Because GCEL, among other things, has given the country such electronic marvels as the Data Collection Storage and Transmission Sub Systems – to collect weather data in remote inaccessible areas and transmit them to central computer via INSAT; a sophisticated flood forecasting system – using unattended sensors hooked up to radio stations, microprocessors, and computer based control elements. Indeed, GCEL is weathering quite a storm.

GCEL. At the helm of electronics.

GCEL has linked its destiny with India's future in electronics. In the short span since 1975, when it embarked on its mission as a public sector undertaking, GCEL has already achieved national stature.

It has come to stay as a reliable source of highly sophisticated professional grade communication and electronic equipments. Utilised to advantage not only by Indian aviation authorities but also by the Posts and Telegraphs, Railways, Doordarshan, Defence Services and the like.

And today, GCEL has taken electronics even beyond the realm of mere manufacture. To turnkey projects.

GCEL

In step with the world.

How large companies keep their cool

Beat the heat! Just like so many have done. Airlines. Banks. Hotels. Hospitals. Homes. Multinationals. Private and Public Sector Companies all over India. The heat hasn't flustered them. Because they have all used SUN CONTROL — the U.V. stabilised polyester film from Garware — an effective and economic alternative to tinted glass. Available in different shades to choose from.

BIG BENEFITS of SUN CONTROL Garware Polyester Film:

- **Saves energy for air-conditioning by rejecting 70% of solar energy incidence**
- **Reduces ultra-violet radiation by about 95%**
- **Eliminates glare**
- **Saves on installation and maintenance costs**
- **Provides privacy**
- **Affords greater safety, being shatter-resistant**
- **Reduces fire risk**
- **Boosts aesthetics**
- **Is cheaper than conventional tinted glass**

SUN CONTROL
Garware Polyester Film

Keeps the heat out... lets the light in.

MAHARASHTRA

Municipal Manoeuvers

THE VENERABLE Bombay Municipal Corporation (BMC), at 108 years of age, is not just the second oldest civic body in the country; it is by far the richest. With a budget of over Rs 600 crore, it earns a bigger income than some states do. Considering the many tenders it handles, rags to riches stories abound among members of the civic body. The best known is that of a deputy sanitary inspector who went on to hold political office and then became a millionaire—all in the space of a mere 10 years. With civic elections slated for April 25, the importance of the BMC can be gauged from the fact that some Union ministers flew down to Bombay to put in a word for their favourites while others telephoned in. In fact, the Shiv Sena's only MLA Chhagan Bhujbal, has said that he prefers to opt out of state politics if he can manage a berth in the corporation.

A phenomenal 4,000 applicants crowded the Congress(I) offices in the hope of contesting the 170 seats in the BMC—paying Rs 10 each for the forms. Of these, 2,516 finally paid up the Rs 400 deposit and formally applied for the ruling party ticket. When the Bombay Regional Congress Commitee (BRCC) insisted that all aspiring candidates submit a voter's certificate along with their forms, there was bedlam and a 1000-strong mob attacked the BMC election office. As they broke furniture and toppled tables in a frenetic effort to break queues, a municipal official surveying the damage remarked: "God help the city if these are the people who are going to represent us."

When the Congress(I) list was announced, there was an even greater rumpus. Angry aspirants and their supporters smashed furniture and telephones at the BRCC office and shouted slogans against BRCC chief Murli Deora. Similar protests were registered at Chief Minister Vasantdada Patil's residence where party leaders were gheraoed.

To add to the party's embarrassment, Shrikant Shenoy, general secretary of the Youth Congress(I) press cell, charged that the Congress list had a number of "rising sons, wives and PA's of MLA's and ex-MLA's." Rajiv Bodhankar, son of MPCC(I) president N.M. Kamble, is one of them. There are five journalists also in the list.

Bombayites, however, are distressed by the charge that members of the underworld as well as slum lords and *matka* kings have got a fair representation in several party lists. While Haji Mastan's Dalit Muslim Suraksha Mahasangh seems to have folded up, a city paper reported warnings from the underworld to some candidates against entering certain areas. Shenoy even

Deora (top) and the BMC: high stakes

named some Congress(I) nominees who are alleged to be slum lords involved in illegal constructions and accused of robbery and assault. Particularly damaging for the Congress(I) is the inclusion of Dilip Hire who was convicted of the murder of a communist worker but later let off on appeal. Hire also has a case of assault on a policeman pending against him.

But Congress(I) general secretary in charge of the BRCC election wing C.D. Oomachen feels the party's detractors are being uncharitable. Pointing out that Hire was formerly with the Shiv Sena, he remarked: "Will you not allow one who has been a sinner to reform?" As for the scenes of unruliness he said that heightened emotions were common before elections and "then it is each man for himself and God for all."

Deora was less complacent about party indiscipline, and warned that rebel candidates would be expelled, insisting that after the withdrawal date very few genuine dissidents remained in the field. Shenoy, he pointed out, had no business using the letterhead of the press cell of the Youth Congress (I) since that body had been disbanded two years ago.

The scramble for tickets belies the fact that the party has not gained a majority in city politics for nearly two decades. An opposition alliance was in power when the BMC was superseded in March last year for no ostensible reason. But the Congress(I)'s showing in the assembly elections where it captured 27 out of 34 seats in Bombay, has raised hopes of a repeat performance in the civic polls. All the same, it needs to be remembered that the percentage of votes for the ruling party fell from 60 per cent in the Lok Sabha polls to 43 per cent in the assembly elections just two months later.

The opposition parties in the fray are, however, desperately divided. Only the Janata, Congress(S), and PWP remain in the whittled down Progressive Democratic Front (PDF). The BJP, Kamghar Aghadi, Shiv Sena and other groups are fighting independently. The chief minister, meanwhile, who had little say in city ticket distribution, expressed his ire by remarking coldly: "Let the BRCC manage its own affairs." He has enough on his plate with another confrontation with the party high command seemingly in the offing. He is probably the only Congress(I) chief minister who can afford to defy party leadership —considering the Congress (I)'s thin majority, his departure could spell the fall of the Congress (I).

When the high command ignored Vasantdada's recommendations for five metropolitan council seats and suggested four names inimical to him, including those of potential rivals Nasik rao Tirpude and Pratibha Patil, the chief minister publicly threw the list aside and announced he would not tolerate it. Charging that it would be backdoor entry for those denied assembly tickets, Vasantdada flew to Delhi last week to see the prime minister—but returned without a meeting. And the issue of the MLC's still hangs fire.

ORISSA

Lord of the Ring

THAT the fall of a politician can be just as dramatic as his rise is currently best illustrated by the case of Basanta Kumar Biswal, the controversial confidant of the Orissa Chief Minister J.B. Patnaik. Till barely over two months ago 50-year-old Biswal was lording it over the state as the so-called 'super chief minister' but today, when it seems increasingly clear that the Congress(I) high command is disinclined to give him an election ticket, the ex-minister is struggling to protect his fiefdom.

Biswal's decline began when he was among 45 party MLA's who were denied tickets for the Assembly elections last month. Biswal's followers had then pinned their hopes on their leader getting the party's nod for the Khurda seat which Patnaik had vacated after winning it. But even that hope was dashed last month when the party announced the candidature of Dr Baidyanath Mishra, an educationist, for the prestigious by-election. This fresh evidence of the high command's lack of enthusiasm came after both Biswal and Patnaik spent several days in Delhi lobbying for his rehabilitation.

Biswal himself was nonchalant about the reverses. "It hardly matters whether I am a minister or not," the contractor-turned-politician told INDIA TODAY, "I am still loved by the people, legislators and officials." He was also not prepared to commit himself on who he thinks is responsible for his fall from grace. Dismissing reports naming Patnaik as the moving force behind the latest setback, Biswal would only say, "I would not name anybody. But somebody conspired against me and wrongly briefed the high command. Everybody knows who the conspirators are."

Biswal's supporters, however, were prepared to be more categorical. They allege that Biswal's arch-rival, fellow minister Niranjan Patnaik, had teamed up with K.P. Singhdeo, the Union minister of state for personnel and administrative affairs, to plot their leader's downfall. They also think that Chief Minister Patnaik has been playing a dual role. Even while he and Biswal were lobbying in Delhi, hundreds of telegrams vilifying their leader were sent to the party headquarters. Biswal supporters believe that the two Patnaiks were behind the deluge of complaints. Biswal's men argue that Patnaik finally caved in to pressure from Niranjan. They point out that Niranjan's younger brother Samyo is married to Patnaik's daughter and that Samyo has constantly been taking swipes at Biswal in his Oriya daily, *Sambad*.

Patnaik and Biswal

"I am not a dissident. I am fully with Patnaik, my old friend. I have been telling the legislators and the people to fully cooperate with the Government."

—B.K. BISWAL

Biswal's eclipse has truly been unexpected. Seven years ago, his involvement with politics was confined to giving generous financial support to politicians. The Congress split in 1978 had shown him his true calling. "I still remember we had bought 32 air tickets to attend the AICC meeting called by Mrs Gandhi but only 28 people had turned up," Biswal recalled nostalgically. "We were with Mrs Gandhi when most people were afraid to support her," he pointed out.

Soon the large-hearted fund raiser became the treasurer of the PCC(I) and after his win in the 1980 elections was included in the Patnaik ministry as a minister of state. Before long he was functioning as a de facto chief minister: legislators, irrespective of their party affiliations, vied with each other in seeking his favour, bureaucrats feared his power and people queued up at his residence to seek redress. Biswal even attended cabinet meetings, which a minister of state is not normally supposed to do, and enjoyed instant access to the chief minister.

Though Biswal's political ambitions seem to have been temporarily thwarted, he was losing no time in flexing his muscle. His supporters claimed that the 40-odd legislators denied tickets and an equal number of MLA's have pledged their support to him. Threatened one loyalist, "He can topple the ministry any time."

But Biswal was at pains to reiterate his loyalty to the leadership. "I am not a dissident," he said, "I am fully with Patnaik, my old friend. I have been telling the legislators and the people to fully cooperate with the Government. Whatever decision the prime minister and the chief minister take, I will abide by."

Patnaik, for his part, has all along tried to appease Biswal his friend for more than three decades. When Biswal was denied an assembly ticket, Patnaik had persuaded the high command to appoint him head of the state campaign committee. Even now he has allowed Biswal to stay on in his official residence and retain his large ministerial staff. Patnaik told INDIA TODAY that Biswal did not get the Assembly ticket because the high command, appreciating his efficiency, wanted him to to work for the organisation. Admitting that Biswal's inclusion in his ministry would have greatly strengthened it, Patnaik hastened to add, however, that he had "full confidence" that Biswal would not encourage any dissidence. "I do not know of any conspiracy against him at the Centre," Patnaik also clarified.

"One reason why people conspired against me," declared Biswal, "was that I was a very effective minister. I had repeatedly asked the Government to order an inquiry into the charges of corruption against me. If I am found guilty, I will quit politics." It seemed last fortnight that the party high command was disinclined to leave the option to him. —FARZAND AHMED in Bhubaneswar

THE FASTEST 16-BIT COMPUTER HAS JUST ENTERED THE RACE.

The Uptron S-1650 has been designed to take throughput to dizzying levels.

For starters, there are separate processors for separate functions — seven to be precise. These perform I/O operations, transfer data to and from memory, between memory and peripheral devices and communicate with the user. Such a symmetrically optimised architecture naturally leaves the CPU free to do what it does best — number crunching. Additional support is provided to the CPU by a numeric co-processor that works with it in a unique dual-clock architecture.

In its full-blown configuration, the Uptron S-1650 is a 16 terminal system that supports twenty printers and a wide array of peripheral devices. It's one of the few systems that allows batch processing from any terminal, in a multi-user environment. It also permits foreground/background processing on a terminal.

Each set of eight terminals is handled by a 16-bit microprocessor. This ensures uniformly fast terminal response times, no matter what the number of terminals.

The memory also superbly serves a multi-user, time sharing environment. It is interleaved 1:8, dynamically partitioned and the block sizes are configurable.

So make no mistake about it. The Uptron S-1650 is the fastest 16-bit computer in a multi-user environment. The fastest.

To know more about it, write to Uptron. Fast.

UPTRON

Lufthansa daily to Frankfurt. Frankfurt daily to the world.

Every single day of the week a daily flight leaves India and flies non-stop to Frankfurt Airport. And Frankfurt, as the home of Lufthansa, offers convenient and frequent daily connections, minimum transit times and superb ground facilities. All guaranteed to take you smoothly and precisely onward to Europe and the world.

BIHAR

The Surprise Shift

EVEN Chandrashekhar Singh could not have expected his rehabilitation to come so soon, barely a month after he had been ignominiously removed from the chief ministership of Bihar. His tenure had been so lack-lustre that political oblivion loomed largest on the horizon.

Yet, last fortnight Singh was sworn in as Union minister of state for supply and textiles. An astonished Congress(I) leader from Bihar voiced the general feeling in the party when he said, "Something miraculous has happened. A person who was found unfit to run a state has found a berth in the Union ministry."

The surprise was only natural. The 18 months as Bihar's chief minister had done Singh little credit. When he had replaced Jagannath Mishra in September 1983 he had been welcomed as a clean and able administrator. But in March 1985 when Union Railway Minister Bansi Lal was drafted to assess Singh's popularity among the 240-odd members of the Congress(I)'s state legislature party, Lal found a mere 30 members backing Singh for the top post against over a hundred for Bindeshwari Dubey.

Singh's political eclipse began in mid-1984 when Rajiv Gandhi started visiting Bihar as the All India Congress(I) Committee general secretary. He was then given over a dozen memoranda by disgruntled party leaders about the growing corruption in government departments, encouragement given to Thakur officials, Singh's inability to take decisions on party matters and provide leadership to his ministerial colleagues. One memorandum lamented that a government file took an average of two weeks before it could get the chief minister's approval.

Initially, Rajiv dismissed the complaints as biased but his faith in Singh was somewhat shaken during the course of a visit to Bihar last October. At the end of a two-hour late night meeting between the two, when Rajiv asked Singh to recall the decisions taken in the course of the meeting Singh found he could not remember them.

Singh was similarly lackadaisical in managing the state's finances. According to Union Finance Ministry officials, in his ambition to minimise the overdrafts Singh even held back expenditure on development projects. At the end of December 1984 over 500 different projects in avenues ranging from irrigation to education had been awaiting the chief minister's approval for periods as long as four months and Bihar had a surplus of Rs 164 crore with the Reserve Bank.

What the future holds for Singh will depend on how he fares in his new assignment—challenges are not lacking.

But when the new Union Finance Minister Vishwanath Pratap Singh started pulling up states for not spending their plan allocations, Singh ordered a spending spree and Bihar was soon enough in the red. Singh's maverick approach to finances was perhaps best brought out in the 1985-86 budget he presented before the elections where he actually provided for a plan holiday.

Interestingly enough, a day before Singh was sworn in as a Union minister, the Bihar Government was pilloried in Parliament for encouraging unsafe private mining in the state. Union Minister for Steel, Coal and Mines Vasant Sathe was constrained to admit that the Centre had directed the state to prevent the working of abandoned mines by unscrupulous individuals. According to coal department sources, Singh and mines minister Budhdeo Singh had struck a deal with a few private firms to allow the mining of abandoned mines in clear violation of the Centre's directive. What is worse, the deal was struck barely three days before the Assembly elections.

The mining deal was not the only allegation against Singh. Some of the other charges framed by his own partymen were:

- encouraging casteism in the Bihar State Electricity Board by trying to foist his kinsman D.P. Singh as the chairman. D.P. Singh was given two extensions during which the board's functioning was paralysed;
- let a coterie led by his wife, Manorama Singh, MP, emerge as an extra constitutional centre of power. Evidence of the clout Mrs Singh came to command is the fact that the state publicity directorate would even circulate her tour programmes like it does for the chief minister;
- prevarication in dealing with two strikes called by government employees during his tenure. Even judges went on strike while he was in power, their first ever industrial action;
- sabotaging the election of some 30 party MLA's belonging to the Dubey faction.

Singh's popularity had dipped so low that last October even the usually pro-Congress(I) Patna Bar Council felt it necessary to censure him for his maladministration and casteism. Lamented a memorandum signed by over 50 advocates of the Patna High Court and addressed to the prime minister, "We are constrained to state that after few days of assuming office he started functioning in a most irrational and arbitrary fashion." Commented a venerable MP from Bihar, "He was sworn in as a clean chief minister but was ousted under a cloud."

Now that he has been inducted into the Union ministry his partymen are looking for a credible explanation for the rehabilitation. Though Singh himself was unavailable for comment, his supporters in the party were at pains to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

point out that he had been unfairly maligned by his detractors in the party led by former chief minister Jagannath Mishra. Singh's performance, they claim, was no worse than that of several other Congress(I) chief ministers retained after the assembly elections.

Congress(I) sources advance several credible reasons for Singh's rehabilitation. Most important, in a party not exactly flush with men of proven administrative experience, it would have been decidedly odd to have ignored one who had. Singh has not merely had administrative experience at the state level, he was the Union minister of state for power when he was drafted to Bihar.

Then, Singh is a Thakur and the powerful Thakur lobby in the ruling party needed to be assuaged after his ouster from Bihar and Arjun Singh's appointment as Punjab's governor. At one time during Mrs Gandhi's regime there were as many as four Thakur chief ministers; now there is only one: Virbhadra Singh in Himachal Pradesh.

It was also important, say Congress(I) sources, that Singh be removed from Bihar. True he had not been able to build much of a base among Bihar's Congressmen but his continued presence in Patna could only have made Dubey uneasy. Unable to be a state minister after having been the chief minister and unfit for an organisation post, he would only have been a misfit in Bihar.

What the future holds for Singh will depend on how he fares in his new assignment. Challenges are not lacking here: his textile portfolio would entail drawing up a comprehensive policy to rescue the ailing textile industry and to pull out the National Textile Corporation from the mess it has landed itself into.

The supply side of his portfolio is even more daunting. Corruption is rampant in the supply department which is responsible for purchases worth over Rs 4,000 crore for the Central and state governments. Vishwanath Pratap Singh, who used to look after this departmment earlier, had detected corruption of over Rs 100 crore in fixing contracts for iron pipes and related items.

Proceedings on this case have yet to begin. Singh has to carry the baton from his predecessor but his track record in politics does not promise either a clean or a memorable race.

—PRABHU CHAWLA and FARZAND AHMED

MEDIA

Prize Dispute

MANUSHI is a non-profit, feminist journal published from New Delhi with a committed following and circulation of about 12,000. *Eve's Weekly* is a popular, all-purpose women's magazine from Bombay with a circulation of over 41,000 and an interest in everything from cookery to consumer guidance. And the *Amrita Bazar Patrika* is a well-known Calcutta daily with a circulation of well over a lakh. These three utterly disparate organs of the Indian media are now locked in an unlikely legal battle with the charge of plagiarism at its heart.

Manushi recently filed a Rs 2 lakh civil suit in the Delhi High Court claiming that large chunks of an article by a 24-year-old freelance journalist in Calcutta, Saswati Ghosh, that first appeared in the pages of the *Patrika* and later in *Eve's Weekly* have, in fact, been directly lifted from earlier articles in *Manushi*. More serious than *Manushi's* infringement charge is the fact that Ghosh's crusading article on the working conditions and lack of legal land rights of tribal women in Bihar's Singbhum district won her the *Eve's Weekly's* Woman Journalist of the Year Award in 1984.

Ironically, it was neither the staff of *Manushi* nor the judges nor the editors of *Eve's Weekly* who spotted the uncanny similarities between the original *Manushi* articles on tribal women in Singbhum and Ghosh's award-winning entry but a discerning reader. On April 12 last year, Saroj Pal of Bombay who happens to be a regular reader of both magazines, pointed out identical passages in the articles in a letter sent to the two editors. These included verbatim repetitions from an interview with a tribal woman called Laro as well as a long paragraph of the narrative which appeared to have been copied word for word. Moreover, Pal pointed out that the entire analysis of the tribal women's lack of land rights in Ghosh's article seemed to be a summation of *Manushi* Editor Madhu Kishwar's petition filed in the Supreme Court in late 1982 which was widely reported in the press including INDIA TODAY (September 30, 1982).

(From left) Ewing, Kishwar and Ghosh: legal battle

When she received Pal's letter, Kishwar looked at the prize-winning article and alleges that she also found in it analysis and arguments she and her colleagues had developed in the course of several journeys to Singbhum to study, research and fight for the lack of land rights of tribal women.

Kishwar's repeated requests to *Eve's Weekly* have been to reproduce Pal's letter as explanation and apology. On July 31, 1984, she finally heard from *Eve's Weekly* Editor Gulshan Ewing saying that her magazine had made the award in good faith and that while it was not possible to publish Pal's letter in toto, it would publish "a brief note" from Kishwar recapitulating her objections. Kishwar refused. In subsequent correspondence, Ewing in fact said that Kishwar ought to have taken up the matter with the *Amrita Bazar Patrika*.

Kishwar and *Manushi*, as a result of the deadlock, have taken all three—*Eve's Weekly*, Saswati Ghosh and the *Amrita Bazar Patrika*—to court, claiming that the alleged plagiarism has damaged *Manushi's* credibility and standing as a non-profit publication. The petition, which may have far-reaching implications on infringements of the Copyright Act, will come up for hearing next month.

You can take chances with your luck. But if you want security of your luggage trust Safari.

Are they really worth it? Those anxious hours at airports or when you are away from your hotel room? When fear lurks in your mind that somebody has opened the bag and made off with the valuables inside.

The six-lever vault lock of Safari is specially designed for maximum security. As the key turns, a pilfer-proof slide engages into locking position to secure your bag. The locking slide is encased in a steel channel completely protected from tampering. Screwdrivers, knives or even more fearful implements in professional hands are known to have failed in opening the Safari lock.

Safari. It survives.

The tyres we race are the tyres you buy

It's true! The very same tyres that you use on city-roads, are repeatedly tested by MRF on race and rally tracks around the country.

There's a simple reason why. On a race-track a tyre is subjected to severe torture and strain. In just six hours on the track, a tyre goes through more than half its life. Something that would take more than a year on a city road.

Which means we get our test results that much faster. And you get an improved product that much quicker.

It's a testing technique developed by our collaborators B F Goodrich of the USA, people who build tyres for the NASA Space Shuttle Programme.

And since MRF tests city-tyres on the race-track, you can be sure that when we win, you too are winning. With tyres that are setting new standards for grip, handling, mileage, durability and sheer staying power.

At the end of the race, it's over to the MRF technicians... Testing for heat build-up in a tyre with an electronic pyrometer.

The race-track is our laboratory.

TAMIL NADU

The Shanmugam Gift

CONTROVERSY and Pachaiappan Udhandipalli Shanmugam, the 60-year-old newly-appointed local administration minister in Tamil Nadu, have long been acquaintances. The association was renewed with great fervour recently when his 27-year-old son, S. Selvam, and his wife landed at Madras airport on February 21, hardly aware of the embarrassment their sojourn in Singapore would cause to his father. On arrival Selvam declared that he had brought with him a professional Sony video camera set for his personal use. Customs officials levied a duty of Rs 73,400, which Selvam paid in cash on the spot and released the item.

Three weeks later Selvam and his father, who stay in the same house, found themselves the focus of a bizarre controversy. It all began with a visit to their house by two officials of the Enforcement Department, directorate of revenue intelligence wing of the Union Finance Ministry. The officials wanted to enquire about the source of foreign exchange for the purchases abroad. The news leaked out to the media with the DMK mouthpieces predictably splashing it. While the *Indian Express* reported that some incriminating documents had also been recovered from Shanmugam's house, DMK papers alleged that gold biscuits had been recovered from Selvam's baggage. This part was, however, later denied by the customs authorities.

The controversy even figured in the Assembly where Shanmugam felt it necessary to make a personal explanatory statement. Said Shanmugam: "There was no search of my house on March 11. An officer from the foreign exchange department had come and enquired about the video camera. He was shown the necessary papers and also told that it was a gift. The officer was satisfied and left."

Selvam tells a different tale. Admitting that the enforcement officials had interrogated him, he told INDIA TODAY: "The two officers were in my house for exactly 45 minutes. They wanted me to prove to them that the video camera was a gift. I had a declaration from my aunt to that effect. The officers sought legitimate clarifications. My father was also at home during the visit."

Enforcement officials concur: they do not describe their March 11 visit as a 'raid'. They say that the team had gone to make some enquiries and taken away some documents, including the purchase receipt Selvam had for the video camera. Their differences with Selvam relate to the nature of the gift he got from his aunt. Though Selvam now claims that his aunt had gifted the camera to him, in his first statement, according to the enforcement directorate, he had disclosed that he had bought the video equipment for Hong Kong $5,000 (Rs 8,125) which he received from his aunt, and the $1,000 (Rs 13,000) he and his wife had carried under the First Travel Scheme. Consequently, the enforcement authorities had asked Selvam to give details about his stay abroad and the approximate expenditure he had incurred. This was followed by the controversial 'visit', following which the Deputy Director (Enforcement) C.S. Ahmad Shah had summoned Selvam for clarifications on the gift.

BHAWAN SINGH

The case would not have attracted the attention it has but for Shanmugam's controversial track record.

The enforcement directorate is now preparing to file a case against Selvam for alleged violation of Section 8 of the Foreign Exchange Regulation Act. According to this provision no Indian can accept cash gifts of foreign exchange, and all such gifts must be remitted to the Reserve Bank of India (RBI) for conversion into Indian currency. RBI permission must also be taken to import professional equipment.

Even if this issue is resolved amicably, Selvam could find it more difficult to satisfy the income tax department about the cash payment of the customs duty. It is mandatory for customs authorities to inform the income tax officials about those who pay customs duty of Rs 25,000 and above. Selvam now claims that the duty paid was actually Rs 43,000 but even that figure does not let him off the hook. INDIA TODAY has learnt that the income tax authorities are also conducting a parallel investigation into Selvam's assets which they think are disproportionate to his income.

Selvam, who began his career as an advertising agent, has recently branched off into producing documentaries. According to income tax sources, his companies have not been doing so well as to justify the expenses of his foreign trips and the heavy customs duty he paid.

The case would not have attracted the attention it has but for Shanmugam's controversial track record. His earlier stint as a minister in M. Karunanidhi's DMK government was similarly marred by corruption allegations. The Justice Sarkaria Commission of Enquiry set up by the Centre in the 1970s to probe corruption charges against the Karunanidhi government, in which Shanmugam was food minister, had held that Shanmugam's guilt in the levy sugar case had been established "with a preponderance of probability". The commission had found that both Karunanidhi and Shanmugam had favoured private wholesale and retail dealers by appointing them distributors for levy sugar. Gratifications totalling Rs 13.21 lakh were allegedly involved in this deal.

Shanmugam hit the headlines again when he was named as one of the accused in what is known as 'the attempt to murder Mrs Gandhi case'. He, along with Karunanidhi, had staged a black-flag demonstration against Mrs Gandhi when she visited Tamil Nadu in 1979. The demonstration had turned violent and Mrs Gandhi had narrowly escaped

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

MASS/KURL-ON/85

Digitized by Arya Samaj Foundation Chennai and eGangotri

the 'murderous attack'. The M.G. Ramachandran Government had launched prosecution proceedings against Karunanidhi, Shanmugam and other DMK leaders in the case which is still pending in a Madras court. Shanmugam, who joined the AIADMK later and was made a minister only recently, maintains that he will quit politics if the charges against him are proved.

The Shanmugam family's latest brush with the authorities has only intensified the friction in the AIADMK. Believed to be a leading member of the anti-Jayalalitha group, Shanmugam may now find it difficult to sustain his tirade against her. In New Delhi, some AIADMK leaders were even actively pressurising the Finance Ministry to expedite the enquiry against Shanmugam. Even when Shanmugam was made a minister, MGR advised that by inducting an anti-Congress(I) minister he would be annoying the Centre. But the coterie comprising MGR's wife Janaki and Information Minister M. Veerappan prevailed over MGR and succeeded in having Shanmugam made a minister after a long break.

The Central agencies' resolve to prosecute the case suggests that the Union Government is not well disposed towards Shanmugam. If that indeed be so and if the Union authorities cannot be persuaded to turn off the heat, Shanmugam may find that his son's alleged indiscretions could prove fatal to his career.

—PRABHU CHAWLA with S.H. VENKATRAMANI in Madras

LAW

Curious Case

CHIEF Minister M.G.Ramachandran and his AIADMK Government are caught in a curious bind. As a criminal case against the DMK President M. Karunanidhi came up for hearing last fortnight and the judge ordered that he be arrested for consistently refusing to appear in court, the prosecuting MGR Government took the extraordinary decision to file a review petition in the high court challenging the order. As advocate Sriram Panchu remarked: "It is all very funny, to say the least."

Expressing much the same sentiments, Chief Metropolitan Magistrate R. Manickam told INDIA TODAY, "The court has issued the non-bailable arrest warrant to the deputy inspector general of police, (CID). It is now for the police to produce Karunanidhi in court. Personally I don't think it behoves a former chief minister to act like this. It is an unprecedented case."

The Government's dilemma is only the latest in this bizarre drama which grew out of the death, in suspicious circumstances, three-and-a-half years ago, of its officer C.Subramania Pillai in the famous Tiruchendur temple. When the Opposition and the media raised a shindig about the death, the MGR Government reluctantly appointed a commission of inquiry headed by retired judge, C.J.R. Paul. But once the report was submitted the Government refused to release it. It was then that Karunanidhi hit the headlines by making public the contents of the report which, predictably, had found definite evidence of murder.

The MGR Government reacted by filing a criminal case against Karunanidhi and three associates charging them with theft, receipt of stolen property and violation of the Official Secrets Act. Karunanidhi soon hit upon the ruse that has so cleverly upset MGR's designs—he simply decided to boycott court proceedings on the ground that the case had been foisted on him to seek political vengeance. Neither did he bother to hire a lawyer to represent him.

Endless adjournments resulted over a tedious period of time which finally exhausted Manickam's patience and Karunanidhi was ordered to be produced in court on June 7 last year. There was great drama that day and violence was in the air even though Manickam adopted a conciliatory stand by releasing the DMK leader after directing him to appear for every subsequent hearing.

The appeal, of course, went unheeded and the Government then initiated the appointment by the court of F.A. Jayaraman as *amicus curiae* (a lawyer who appears at government expense for an accused who does not have the means to defend himself), a patently absurd provision for a leader of the eminence of Karunanidhi. But last fortnight even Jayaraman decided to cry off his job, pointing out that "the personal presence of the accused is necessary for the *amicus curiae* to discuss the facts of the case". It was then that Manickam issued the non-bailable warrant of arrest.

The Government's dilemma is understandable. Karunanidhi's arrest could result in a touchy law and order situation but its failure to act on the order would suggest that it was lukewarm about pursuing a case it had initiated. Manickam, however, will brook no further delay. Not merely has he ordered Karunanidhi's arrest, he has also announced that the trial would be subsequently taken up continuously until it was finished. The Tamil Nadu Government has much to ponder over.

SIKKIM

The Merger Moves

A RESOUNDING victory over the Congress(I) in the recent assembly elections notwithstanding, the benefits of keeping on the good side of the Centre has evidently not been lost on Sikkim's Chief Minister Nar Bahadur Bhandari. From the day of his party the Sikkim Sangram Parishad's victory, he has been making unabashed overtures to the Congress(I) high command.

His efforts obviously didn't go to waste, because the Centre showed signs of thawing last fortnight when Bhandari's wife Dil Kumari Bhandari was elected unopposed to the Lok Sabha by virtue of the fact that the Congress(I) agreed not to field any candidates. And if that is not enough, there is a decided uncertainty about action on the CBI inquiry instituted by the Centre into charges of corruption against Bhandari.

By preventing any Congress(I) candidate from contesting the Lok Sabha by-election, the party's high command has, however, thrown its Sikkim branch in a state of disarray. Sikkim Congressmen were particularly unhappy at the way their high command handled the entire affair. "At 11 a.m. on April 1, the last date of filing nominations, we were instructed to put up three candidates," recalls the president of the Sikkim Pradesh Congress(I) Committee Ram Chandna Poudyal. Of the three candidates, two were to have withdrawn their candidature on the last date of withdrawal. This plan went awry when the high command issued a second directive just about two-and-a-half hours later, saying that no Congress members should file nominations.

In response to this not only did the three candidates who had already filed their nominations refuse to withdraw but another three Congres(I) members—Srimati Durga Lama, Dambar Bahadur Basant and Y. Bhandari—also jumped into the fray. The three candidates who had already filed nominations were R.B. Subhash, Madan Kumar Chetri and Mrs Manita Pradhan. "Our candidates withdrew only after I convinced them that the high command must have had good reasons for supporting Bhandari," says Poudyal. Local

Bhandari: uncertain future

Congressmen, however, confess that their party's decision actually allowed them to save face since they would have been routed by Bhandari's wife.

What has and continues to intrigue Sikkim politics is "what precisely transpired between Bhandari and the high command," wonders the outgoing Sikkim PCC(I) Vice-president C.D. Rai. The obvious inference that Bhandari must have struck some deal with the Centre is, however, dismissed by both the chief minister himself and by Congress(I) leaders. "Politics is not the only consideration of the high command which must also balance the demands of national integration and harmony," explains Rai. "Having got the mandate of the Sikkimes people, Bhandari went and surrendered to Rajiv who must have felt it unwise to open another front in the country," adds Poudyal.

Bhandari on his part explains: "The prime minister had told me when I met him after the elections that the important thing was to have a good Lok Sabha representative from Sikkim and I had told him of my wife's selection. Since I had assured my full cooperation to the Centre and had allayed concern about Sikkim's integration with the mainstream, he agreed to support my wife.

Poudyal: biding his time

But no matter how secure Bhandari might seem at the moment, local Congress leaders have not lost all hope of gaining power in the future. According to a senior police official, the CBI has recently submitted its report on the chief minister to the Union Law Ministry for vetting and once this is complete the next step would be to approach the Sikkim Governor Kona Prabhakar Rao for starting prosecution proceedings. Bhandari however airily dismisses all this with: "Let them do what they want but I will not ask for withdrawing the investigations." But obviously the Centre still holds the trump card.

Bhandari has also proposed that his party be merged into the Congress(I). The Congress(I) high command has yet to accept the proposal, mindful, no doubt of how the local unit would react to it. As it is, the Sikkim PCC(I) is deeply divided at the moment. As Bhutia Lepcha Congress leaders admit, the rift between leaders of their communities and the pro-Nepalese Poudyal had crippled their unit's organisation. So pronounced were the dissensions that the PCC(I) President Poudyal resigned on March 8 just after the assembly election results. Though his resignation has yet to be accepted, Congress(I) Bhutia leader Sonam Tshering says: "He was the factor for the Congress(I) debacle." Yet, last fortnight, all local Congress(I) leaders affirmed faith in Poudyal by passing a resolution urging the high command to allow him to continue as president and prepare a list of PCC(I) committee members.

"At the moment we are a disorganised party and need time to secure a firm foundation," says Tshering. And to achieve this Poudyal is ready to go along with whatever the high command thinks is politic even if it means cooperating with Bhandari. "But taking Bhandari into the party at the moment will be disastrous since he will not allow it to take root and break it whenever he wants to walk out," says Poudyal.

According to him the fact that 27,000 Sikkimese out of 1.5 lakh voters voted for the Congress(I) even though Bhandaris' victory in the Lok Sabha elections last year had presaged that his party would come back to power is taken as an index of the growing pro-Congress(I) nationalistic forces in the state. The CBI inquiry is not the only issue Bhandari should be worried about.

Technology is our strength, Performance our testimony. E.P.C. lays its cards on the table

- Original Equipment Manufacturers all over the country use E.P.C. Exhaust Fans for cooling highly sophisticated machines and instruments.
- E.P.C. Exhaust Fan has been given ISI certification marking for its full range which proves its superiority.
- DGS & D accepts products which only meet rigid specification.
- E.P.C. Exhaust Fans are available in widest range.

It is thus proved that E.P.C. products have come to stay by establishing their in-built superiority.

KERALA

Car Crazy

IT ISN'T enough to be a mere minister, at least not in Kerala where status symbols are worshipped with the same fervour as deities. Inspired by Chief Minister K. Karunakaran's example, his ministerial colleagues are tripping over each other in their latest game of one-upmanship. The prize—a metal three-pointed star that adorns the radiators of Mercedes Benz cars.

In a country where the prime minister uses a lowly Ambassador, the sudden proliferation of foreign cars in the driveways of ministerial bungalows in Kerala smacks of vulgar wastefulness, specially at a time when the state is supposedly strapped for finances. But if wishes are Mercedes—or Toyotas—then ministers will ride. At last count, no less than 13 of the state's 19 ministers were zipping around in Mercedes or Toyotas, most of which are being routed through the state tourism department.

That figure would have been more were it not for the fact that Karunakaran, not satisfied with a mere Mercedes, requisitioned an additional Toyota from the quota of cars imported for other ministers. Last year, the Karunakaran Ministry imported three Mercedes, four Toyotas and a Ford at a cost of Rs 30 lakh. The Toyotas were purchased from Japan by the Tourism Department, Government of India, and sold to the Kerala tourism department for Rs 2.5 lakh each while the Mercedes were bought by the Kerala tourism department from the State Trading Corporation at Rs 5 lakh each. Now, the tourism department has requested for a supplementary grant of Rs 55 lakh ostensibly to "promote tourism in the state", a request that opposition spokesmen charge is only a thinly-veiled camouflage to make the remaining Toyota-less ministers happy. Says a tourism official: "All these ministers demand foreign cars and some even want to use the luxury Buick and Chevrolet meant for the use of the President and visiting foreign dignitaries." The tourism department has little say in the matter. It receives instructions on allocation of vehicles from the department of general administration (political).

Tourism is not the only guise under which ministerial cars are being procured. Electricity Minister Balakrishna Pillai uses a Toyota belonging to the State Electricity Board while Congress (I) Irrigation Minister M.P. Gangadharan travels around in a Mercedes purchased by the aptly-named Kerala Water and Waste Water Authority of which he happens to be chairman. Says he by way of explanation: "As chairman, the board has insisted that I use the Mercedes because on long trips it is more comfortable than an Ambassador." The car was bought from a private owner in Bangalore for Rs 5 lakh but ran into a bus two months later. The repair bill was an estimated Rs 2 lakh.

Other ministers have demanded imported cars on the most ridiculous grounds. Industry Minister E. Ahamed requested for his on grounds of health while C.M.Sundaram, minister for Local Administration went one better—he threatened to go on a padayatra from the secretariat to his residence last November if he was not provided with a car. A brand-new Toyota arrived at his door within a week.

The flagrant extravagance has, however, given rise to other more dangerous evils. Recently, firebrand Marxist MLA M.V. Raghavan charged that the reckless speed with which the ministers were driving around on the state's narrow and congested roads was posing a major hazard. According to one estimate, ministerial cars and their escorts have been involved in a total of 40 accidents so far in which four people have been killed and another 70 injured. But statistics like those are of no concern to Kerala's car crazy ministers. After all, the record timing of two hours and 10 minutes between Cochin and Trivandrum—a normal car journey generally takes a minimum of four hours—was set last year by none other than Chief Minister K. Karunakaran himself.

"Wait a moment..."

"I'm positive. I'm almost sure. I think...maybe..."

The camera that works even when your memory fails!

To a lot of people, the most difficult part about photography is trying to remember not to forget!

If that's your problem, the Hot Shot 35 Auto is your camera.

And what a camera this is!

If you forget to remove the lens cap, the camera tells you so. (In fact, you just can't click if the lens is covered!)

If you're never sure whether you've loaded the film correctly, here's a load off your mind. An indicator tells you everything is fine.

If you can never remember to switch on the flash, a red light reminds you to.

If you keep forgetting to wind the camera after each frame, forget the problem. The camera does it — automatically.

If you never seem to be able to focus correctly, relax. The camera's got the exclusive Universal Focus System.

If you're never sure how to rewind the film, take it easy. Just press a button — the camera does it. Automatically.

If you've been wishing that there was a camera that could do almost everything for you, there's a name you'll never forget...

The Hot Shot 35 Auto.

Believe us, the pictures are unforgettable too!

The Hot Shot 35 Auto and the other cameras in the Hot Shot range are available with your nearest dealer.

HOT SHOT 35 AUTO

Just aim. And shoot!

Meet a vital member of the Peerless Team

The computer.

The wonder product of modern technology that analyses data, keeps records and statistics; speeds up correspondence and contacts; provides up-to-date information. An invaluable input in providing quicker and increasingly more efficient service to our certificate-holders.

Today, as part of our "better service" drive, Peerless has its own computer service in Calcutta, Bombay, Delhi, Madras, Varanasi and Bangalore, with forward plans to extend this facility to all Peerless offices in a phased manner.

Yet machines for all their efficiency can never replace men, nor work independent of them. The importance of the men and women who make up the matchless Peerless Team can never diminish. There can be no substitute for these dedicated people who are the friends and confidantes of millions of Peerless certificate-holders and visit them regularly as part of the famous Peerless "doorstep" service.

Peerless believes that this quality of door-to-door service coupled with computerisation have contributed greatly to the ever-increasing trust of the people in India's largest non-banking savings Company. Today, one out of every fifty Indians is a Peerless certificate-holder.

Total investment in Government custody—over Rs 500 crores

UAE

A Risky Enterprise

BUSINESS failures and recession are suddenly taking a toll of Indian bankers in the United Arab Emirates (UAE). In the latest crisis rocking the industry two senior bank executives, R. Narayanan and R. Seetharaman who had resigned from the Indian Overseas Bank six years ago to run Dubai's Emirates National Bank (ENB) were detained by the Government. In another instance P.C.D. Nambiar, vice-chairman of the Dubai Bank and a former chairman of the State Bank of India, was dropped from the board, controlled until this month by two Galadari brothers, Abdul Rahim and Abdul Latif.

ENB has been managed by Indian bankers since 1978-79 when its owner, Majid Al Ghurair, brought in two executives to run the fledgling institution. Its crisis began with the bankruptcy of Abdul Wahab Galadari in November 1983 (INDIA TODAY, January 15, 1984) and snowballed last year with the collapse of the Agra Group. Simultaneously, a string of bankruptcies, mostly of Indian merchants in Dubai, drained the liquidity base of the bank.

The two Indians, Chief General Manager R. Narayanan and General Manager R. Seetharaman, had steered ENB out of its troubled initial years and in the process involved the institution with what was then a thriving Indian and Iranian business community in Dubai. By 1982, ENB's capital had risen from its initial dirham 33.7 million in 1977 to dirham 132 million (Rs 12 crore to Rs 46 crore). But quarrels within the Ghurair family, relating particularly to the involvement of three Ghurair brothers with the Bank of Oman preventd ENB from becoming adequately liquid.

According to the UAE Minister of State for Finance and Industry, Ahmed Humaid Al Tayer, by the end of last year ENB's bad loans were as much as dirham 200 million. (Rs 70 crore). Bankers who have been dealing with ENB say there are bad loans of another dirham 200 million although these are provided for from reserves. In early 1985, ENB's assets and liabilities were taken over by Union Bank of the Middle East (UBME), 73 per cent of which is owned by the Dubai Government.

The Dubai Bank (above); Abdul Rahim and Abdul Latif Galadari

Al Tayer who heads UBME says the acquisition has been necessary because the Government "does not want to see any bank or business collapse here. So what they are doing is for the country's reputation and also to help the private sector."

Like most other UAE banks, ENB has been a victim of recent developments that have adversely affected Dubai's role as an entrepot—the Iran-Iraq war, a slump in oil prices, budgetary deficits in Gulf states and a consequent decision to cut down development schemes. By 1983, ENB's profits had come down by half and the bank could declare a dividend at the shareholders meeting last year. The collapse of Abdul Wahab Galadari's business empire wiped off at one stroke nearly dirham 88 million (Rs 30 crore) that ENB had given to the Iranian-born businessman. And when the Agra Group owned by the four Anand brothers from Punjab—who shifted their operations from Iran to Dubai after the revolution—was forced to close down, the bank lost another staggering dirham 83 million (Rs 28.7 crore). The Agra group had become a prominent Indian business house in Dubai with the take-over a few years ago of Intermagnetics Corporation of the US.

After ENB was taken over, the Government began a search for scapegoats and for weeks debated on the course of action. If precedents were to be the guide, ENB's owner Majid Al Ghurair should have been detained as was done in the case of Abdul Wahab Galadari. But because Majid is a *watni* (local) unlike Galadari, the Government could not even contemplate arresting him. Yet the Government could not ignore the ENB affair. Therefore, they finally decided to detain Narayanan and Seetharaman in addition to Venugopalan, who had a relatively minor role in the bank and was acting most of the time as secretary to Majid Al Ghurair. Though the three men have been in detention for a period of almost two months, until last fortnight, they had not been brought to trial on any specific charges.

Dubai Bank's problems, on the other hand, date back to early last year when it took over a dirham 400 million (Rs 140 crore) property development in Singapore belonging to Abdul Wahab Galadari. The decline in property values in Singapore and the Government's refusal to bale out the bank in this deal created difficulties for Dubai Bank. A major crisis was triggered off last month by the Dubai Government's decision to pull out hundreds of millions of dirhams deposited with the institution.

In the second half of February, the

Full Bodied Technical Service – Ever Active

Swadeshi Polytex is the only fibre producer who has eleven fully qualified textile technologists offering their technical service to customer mills on all 365 days of the year.

Another dimension to this technical service is the regular two monthly feature – Jailene Textracts – a newsletter which keeps the technicians in consumer mills informed on the super fast developments taking place worldwide, through abstracts of important articles on polyester blend processing from national and international journals on textile technology.

Taking a step further, Swadeshi Polytex organises Technological seminars from time to time. Swadeshi Polytex conducted Seminars on 'Spinning of Polyester Blends, jointly with the Textile Association (India) branches in Bangalore, Coimbatore, Madras and Solapur.

UAE Central Bank reassured panicky depositors that the bank was functioning normally and that the Government was supporting it. Since then Abdul Rahim Galadari has been replaced as chairman by Sultan Ali Al Oweis and his brother Abdul Latif lost vice-chairmanship of the institution. The changes were made in the absence of the two Galadari brothers and at the instance of the Government which nominated two of its men on the board.

In 1983, the two Galadari brothers who own majority shares in Dubai Bank had brought in Nambiar as vice-chairman in a bid to improve its working. It was thought that Nambiar's experience with the State Bank of India and his professionalism would help at a time when most UAE banks were facing problems. Since his retirement, Nambiar has been working from a European base as an investment advisor to the Galadaris.

A fall-out of the ENB-Dubai Bank episode is that foreigners no working with banks in the UAE are no longer prepared to take decisions even on routine matters. Indians are among the largest group of foreign bankers, many of whom left nationalised banks in the '70s in the wake of a Gulf banking explosion fuelled by the rise in oil prices. They are already disturbed by the virulence of the campaign accusing Indian bankers of having financed Indian businesses of doubtful viability and colluded with dishonest businessmen in obtaining funds from UAE banks. "Bad loans are inevitable in our business," said one leading Indian banker. "If we are not allowed to take a reasonable risk, we will not be able to do any business."

Al Tayer, on the other hand, tends to blame much of the problems of UAE's family-owned banks on their structure and style of functioning. "They are in the past. There are strong regulations now. In the past, bankers did not care, but (this) is a good lesson for them."

—A. ZARIN in Bahrain

UK

Piracy Plague

FILM producers, both Indian and western, are a worried lot. Despite carefully-timed releases and lavish publicity, returns from the box-office are fast declining. Thanks to increasing video piracy, people just don't want to go to the cinema anymore when they can just as well see films in the comfort of their drawing-room. Even a prestigious film like *Gandhi* was available on the video circuit weeks before it was released.

Video shop in London: new focus

In order to combat this menace, for the past six months the British Federation Against Copyright Theft (FACT), a non-profit private company formed in 1982, has been waging a relentless battle against video pirates, particularly Asian dealers. In 1983 as a result of pressure from the film and video industry, the Copyright Act became a law and those caught breaking it were liable for imprisonment or heavy fines. Since then a number of cases have been dealt with in the British courts. Last year the Indian Videogram Association (IVA), a group of eight Indian companies operating from London, joined FACT and instigated raids on Asian video shops.

FACT undertook raids on video dealers' premises in the Southall, Wembley and East End areas of London. In Southall where Asians comprise 40 per cent of the total population there are around 100 video shops selling and hiring video cassettes of over a thousand Bombay film titles. As a result of the raid two Asian video dealers were taken to court and punished with fines up to £3,000 (Rs 45,000). Said Peter Duffy, FACT director of investigations, "We raided 15 video shops and took away 15,000 illegal tapes. One place had 50 video recorders all linked up for copying."

Rajesh Mehra, chairman of the IVA, reckons that the average British turnover for Indian videos is between £8-10 million. The eight companies which make up IVA deal in 3 to 4 film titles per week. The master print is copied in Britain legally, the companies paying between Rs 75,000 and Rs 7.5 lakh per title copyright. The average selling price in Britain is £20 (Rs 300). Popular films like *Sohni Mahiwal*, *Qurbani* and *Shaan* sell between 300 and 3,000 copies. Says Mehra: "There are 1,500 video shops dealing in Bombay films in Britain. But our average sale per title is less than 500. The UK is a potential market for 10,000 sales per title."

According to Mehra illegal copying is done both by video shops and in private houses, Asian video dealers operate illegally not only in Britain but on the continent as well. IVA members are launching raids in Amsterdam, Rotterdam and The Hague this month.

Mehra blames the lax control exercised over the Santa Cruz Electronic Exports Processing Zone (SCEEPZ) in Bombay for the copyright infringement. In practice every film print exported from India should pass through the hands of the National Film Development Corporation of India. But original prints are often taken out overnight from cinemas by bribing hall attendants and are copied at the SCEEPZ laboratory, then exported to foreign countries.

The result of the illegal video trade in films has been the closure of around 180 cinemas in the UK specialising in Hindi films. "Where families used to spend £2 per head to go to the cinemas they can now see a film for £1 or even 50 pence, the price of one day's hire of a video cassette," says Mehra ruefully. The video business has also undercut Indian overseas distribution rights sales by 20 per cent.

The demand for video recorders is higher in Britain per capita than the US or Europe. And before the situation gets any worse, it is up to the film producers also to make an effort to curb this piracy which could well cripple both the British and Indian film industries. And this being British Film Year, it seems the appropriate time to start.

DIPLOMACY

Clearing the Air

INDIA has finally launched its much-debated offensive against its jittery neighbours. Not, of course, the type that was so vocally feared in close-by capitals. Instead of olive green, it is the olive branch that is spearheading the Indian invasion force under the command of its energetic, safari-suited general, Romesh Bhandari, India's new and upbeat foreign secretary.

Since his appointment barely two months ago, Bhandari has undertaken an 'if its Tuesday it must be Colombo'-type swing of India's neighbours in a high-profile bid to mend broken fences. Having bunny-hopped from Colombo to Kathmandu to Islamabad, Bhandari was off again last week to Kabul and Dacca to complete his South Asian itinerary. He had visited the Maldives for a South Asian Regional Cooperation (SARC) palaver immediately after taking over as foreign secretary and will set foot in Bhutan in May for the next high-level SARC session.

Bhandari's *tour de force* has been at the urging of his immediate boss, Prime Minister Rajiv Gandhi who also happens to hold the External Affairs portfolio. Rajiv had outlined his good-neighbour plan —the cornerstone of his initial foreign policy edifice—to the foreign secretary during the two-hour discussion they had en route to Moscow to attend president Chernenko's funeral and a receptive Bhandari lost no time in setting the machinery in motion, though not without some tricky diplomatic jugglery. His scheduled visit to hyper-sensitive Nepal had to be postponed twice, once for a frantic —and futile—dash to Baghdad to mediate in the Iran-Iraq conflict, and again to ensure a meeting with Jayewardene before the Sri Lankan president met with his Pakistani counterpart, General Zia, in Islamabad.

At first blush, the Indian initiative seems to have yielded significantly positive results. For the first time in years, the constant crackle of vocal gunfire across India's borders has been reduced to sporadic sniping, specially in Colombo and Islamabad—the two capitals that currently hold the key to the success or failure of the Bhandari *bhangra*.

That in itself is a minor miracle, however temporary its existence. In the neighbourhood, undoubtedly the most significant thaw in India's bilateral relations has been felt in Colombo in the immediate wake of Bhandari's visit. The confusion and consternation (*see box*) over the press release issued at the tail end of Bhandari's visit apart, the dramatic change in the Sri Lankan Government's stand on the vexatious Tamil issue can hardly be mere coincidence. Bhandari's presence, in itself, was a major incentive for the Sri Lankans. Colombo has made it clear that the Indian Government's mediator on the ethnic problem, G.Parthasarathi, chairman of the (foreign) Policy Planning Committee, was no longer acceptable to them on the grounds that being a Tamil, his bona fides were su-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

(From left) Jayewardene, Zia, Ershad and King Birendra: positive response

spect. "What we had to do was to convince them that the first step was for both sides to cool down and stop squabbling over minor issues like personalities. Only then could we tackle the real gut issues," says a foreign office source.

But even the Indian delegation was surprised at the almost immediate climb down by the Jayewardene Government on various vital issues. These were:

- the announcement by Jayewardene the moment his talks with Bhandari ended, of a general amnesty to the Tamil guerrillas if they laid down their weapons
- a revision of the controversial sixth amendment to the Constitution which disqualified members of the moderate Tamil United Liberation Front (TULF) from parliament
- release of detenus jailed under the Prevention of Terrorism Act
- confinement of the Sri Lankan army to their barracks in the Tamil-dominated areas in the north and the east combined with a relaxation of emergency regulations in those areas
- a rethink on the prickly settlement policy undertaken by the Government to resettle Sinhalese in Tamil areas
- resumption of the stalled negotiations for a final settlement of the ethnic problem
- relaxation of fishing restrictions that is causing acute hardship to Tamils in the 'prohibited zone' from Mannar on the western coast to Mullativu district on the eastern coast
- significant changes in the District Development Councils (DDC) Scheme and District Ministers with the possibility of setting up provincial councils

> **"At first blush, the Indian initiative seems to have yielded significantly positive results. For the first time in years, the constant crackle of vocal gunfire across India's borders has been reduced to sporadic sniping."**

All these are meant to be part of a package deal thrashed out in Colombo with a view to ending the ethnic strife and drawing the Tamils back into the mainstream of Sri Lankan life. The DDC's, for instance, now elected under the proportionate representation system, will be modified to include the individual popularity vote of candidates who will be considered elected even if their party gets a lower vote aggregate. The amendments also call for wider powers for the DDC's. Elected district ministers will enjoy a status equal to cabinet ministers. The new changes, according to reports in Colombo, will come in force during the fresh elections to the DDC's (This year's elections were postponed).

The package proposals, however, will depend on the response from Tamil circles regarding the willingness of the TULF to contest elections in Tamil areas; their agreement to restart negotiations and a ceasefire by Tamil militants. The Jayewardene Government has meanwhile dispatched at least three unofficial representatives to Madras in order to start a direct dialogue with Tamil militant leaders, including a former TULF MP and the editor of the influential Jaffna weekly, *Saturday Review*.

According to the *Saturday Review* report by its editor on his meeting with Jayewardene after Bhandari's visit, the Sri Lankan president stated that he was willing to meet Tamil militant leaders without any pre-conditions except that they agree to stop violence. Jayewardene, in a significant departure from his earlier stand, stated that he would not insist on their renouncing their demand for a separate state. The editor also quoted Tamil militants as saying: "Allow us to live in peace. We don't want power to suppress anyone".

According to External Affairs sources, the Bhandari mission returned convinced that there has been a marked change in the anti-Indian atmosphere in Colombo. "We had to convince them that what the Indian Government could do was limited to supplementing what the Sri Lankan Government did. We told them what we were doing on our part and that the rest was up to them".

Obviously, the recent events in Tamil Nadu—the eviction of Tamil militants from their bases along the Thanjavur coast and the capture of two separate arms consignments (*see box*)—has been seen in Colombo as a genuine attempt on the part of India to pave the way for an eventual settlement of the ethnic problem. Foreign office sources insist that the press note the militants are so upset about was release . ithout the consent of the Indian delegation and that they will be issuing a clarification soon. They also say that traditional India-baiters like Prime Minister Premadasa have mellowed their earlier stand considerably and opposition leaders like Mrs Bandaranaike have come forward to actively support

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

negotiations for a peaceful settlement of the problem and suspend inter-party strife till that happens. The sources stated: "Jayewardene seems prepared to go the whole hog if it means restoration of peace in the island".

Whatever results from the altered stand and the new moves towards reconciliation in Sri Lanka, the Indian foreign office still feels that the subsequent visit to Islamabad was far more important, and understandably so. "We made it clear from the start that it was pointless raking up no war pacts and friendship treaties. These issues can only be tackled if there is a lowering of tension and a change in the mutual atmosphere of mistrust and confrontation," says the source.

With that brief in mind, the Bhandari delegation's strategy was to make haste slowly by insisting on a step by step approach with a basic idea of increasing the frequency of exchanges in various fields between the two countries. On their part, according to members of the delegation, the Pakistan side seemed equally eager to improve relations with its larger neighbour. The Indian delegation was given every assurance that the trial of the Sikh hijackers would be speedily completed —they gave a deadline of three months for the final judgement—and that anti-Indian publicity in the Pakistani media would be curtailed.

Much of the change in attitudes seems to be the result of pressure brought to bear on General Zia by both the Americans and the Soviets. Soviet premier Mikhail Gorbachev and General Zia had a 55-minute meeting in Moscow during Chernenko's funeral during which the Afghanistan issue featured prominently. Gorbachev reportedly did some tough talking on Pakistan's support to the Afghan Mujahideen. In any event, the Pakistan Government is already having second thoughts about the presence of the 3,000-odd armed Afghan Mujahideen in the country, many of whom are deeply involved in the illegal drug trade. There have been reports of serious armed clashes between various Afghan groups in the Peshawar area and if things get worse, Pakistan could have a major pro-

TAMIL NADU

Taming the Tigers?

HAVE the tigers been tamed? In Tamil Nadu, the shock-waves emanating from Foreign Secretary Romesh Bhandari's visit to Sri Lanka have stunned Tamil liberation groups into temporary immobility and helplessness, signifying as it does in their eyes, a dramatic shift in the Indian stand on the Tamil issue which bodes ill for their continuing struggle for Eelam.

What provoked their disquiet was the press release issued in Colombo after Bhandari's visit which stated: "It was agreed that cessation of all acts of violence is necessary in order to create an atmosphere conducive to the resumption of a political dialogue." Translation: not only must the Sri Lankan army stop its armed campaign against Tamil militants but the Tamils have to end their battle against Sri Lankan security forces as well Says A.S.Balasingham, spokesman for the Liberation Tigers of Tamil Eelam (LTTE): "We are not happy with the wording of the statement which has confused between senseless army violence against innocent Tamil civilians and the resistance we are putting up against army violence. Some people perceive it as a shift in India's policy as regards Sri Lanka."

Most liberation groups and their sympathisers view the visit as a deliberate betrayal by the Indian Government considering the support they have been receiving from New Delhi so far. Charged the DMK's V.Gopalaswamy: "Mr Bhandari has sold out our interests." Added Janata Party Rajya Sabha member M.S. Gurupadaswamy: "The Indian Government seems to have accepted Sri Lanka's position that violence must cease before political negotiations can begin."

That was, unfortunately, not the only bad news in store for the liberation groups. The same night that Bhandari flew back from Colombo, an Indian coast guard vessel patrolling the Palk Strait intercepted a speedboat heading for Sri Lanka loaded with sub-machine-guns, 9 mm rifles and two bags full of grenades. The two-man crew, Sivanandan, 27, and Alfred, 24, who were dressed in battle fatigues, were arrested. INDIA TODAY has learnt that the two are members of the Eelam People's Revolutionary Liberation Front (EPRLF), one of the more active Tamil militant groups. Significantly, this was the first time that an Indian vessel had intercepted a Tamil gunboat.

Even more sensational was the seizure last fortnight of a container at Madras port by customs authorities stocked with 1,400 bolt-action rifles, 300 Sten guns, five Japanese wireless sets, an electronic radio with amplifier and three photocopying machines. The container manifest declared the contents as waste paper meant for a paper mill in Rajahmundry in Andhra Pradesh. Sympathisers of the Tamil cause were quick to put the blame on Andhra-based Naxalites and even Punjab terrorists but the cargo was precisely the kind of equipment that Tamil liberation groups are in desperate need of. That was not all. Reliable sources have confirmed that Tamil Nadu police have also arrested two members of the National Liberation Front of Tamil Eelam (NLFT) one of the smaller liberation groups, for illegal possession of arms.

Coincidentally or otherwise, the sudden succession of setbacks for the liberation groups has resulted in one advantageous fall-out. Last fortnight, four of the five major groups finally managed to come together under the banner of the Eelam National Liberation Front. The Front embraces the Eelam Peoples Revolutionary Liberation Front, the Liberation Tigers of Tamil Eelam headed by Pirabhakaran, the Tamil Eelam liberation Organisation (TELO) headed by Srisabaratnam and the Eelam Revolutionary Organisers (EROS) of Balakumar. The fifth major group, the Peoples Liberation Organisation of Tamil Eelam (PLOT) under the leadership of Uma Maheswaran has been left out of the Front. The abberation is curious since it

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

blem on its hands. There has also been increasing pressure being applied on General Zia by the American Government to improve relations with India.

According to the Indian foreign office, there is also a subterranean change in the atmosphere in Pakistan following the recent moves towards democratisation. "There are more people in influential positions now who are more favourably inclined towards normalisation of relations with India," says the source. Pakistan Foreign minister Yakub Khan agreed to a visit to New Delhi later this month to take the matter further and discuss the nuts and bolts of improving ties.

As far as the rest of the neighbourhood is concerned, there are no major problems that can prove intractable. In Nepal, the Bhandari bandwagon found them less touchy than before in spite of the visit having been postponed twice. King Birendra is still pushing for his Zone of Peace proposal and requires Indian support. As long as that is forthcoming, India and Nepal only have to sort out minor issues like the avoidance of double taxation to keep relations on an even keel. Similarly, Dhaka's protestations over the border fence and other related issues are more for internal consumption than external and the signals from General Ershad are that Bhandari will find a receptive audience awaiting him when he arrives there next week.

But even in the cloistered confines of the External Affairs Ministry, there is still an air of guarded optimism about what the future holds in store for the neighbourhood. Issues like Pakistan's nuclear programme, its acquisition of state-of-the-art weaponry and its alleged interference in India's internal affairs are major hurdles as is the external aid that Sri Lanka's security forces are receiving in their war against the Tamil militants. It would obviously be premature to conceive of a South Asia oozing overnight with neighbourly love and goodwill towards all men. It is, at best, a tentative beginning, an attempt to treat old wounds with a new ointment. But judging by the initial response of the patients, it is more likely to cure than to kill.

—DILIP BOBB

(From left) Srisabaratnam, Pirabhakaran and Padmanabhan: rumbling in the ranks

was with PLOT that the EPRLF, TELO and EROS were conducting unity talks and it appeared that LTTE was the odd man out. However, a EPRLF spokesman says that "our unity talks are continuing".

However, Front spokesman Balasingham says that the unity among the other four groups "will be both political and military. All four groups will be formulating our political approach and making political statements in future only after mutual discussions". On a military level, he says that "we are planning combined operations."

Clearly, the forging of unity among groups that have been at loggerheads with each other for years is the result of their suspicion of a change in the Indian Government's stand on Sri Lanka and the realisation that they will have to go it alone. Admits Balasingham: "Time is running out for us. We have to pool our resources and unless we change the balance of power in our favour, the Sri Lankan Government will not change its position."

The sudden panic in the ranks of the liberation groups could be a case of jumping the gun. While the groups and their sympathisers are convinced that the Indian Government has changed its stand on Sri Lanka, others view the latest events as merely a series of coincidences. The Foreign Ministry has assured members of Parliament that there has been no change in the Government's stand on the ethnic issue. Appapillai Amirthalingam, secretary-general of the moderate Tamil United Liberation Front (TULF), asserts:"I don't think that India has changed its policy on Sri Lanka."

Neutral observers say that the events are not being viewed in the proper perspective—as mere coincidence. Bhandari's visit, they say, was part of his routine round of neighbouring countries and he did not go there to specifically discuss the ethnic issue with President Jayewardene. Neither was Bhandari an accomplice to the wording of the press release issued by the Sri Lankans at the end of his visit; the EPRLF gun-runners were intercepted because the Indian Government wanted to ensure that there were no major attacks by Tamil guerrillas in Sri Lanka during or immediately after the visit (last year the EPRLF kidnapped an American couple during the visit of US Vice-president George Bush). The customs crackdown and the arrest of the NLFT militants was to put the brakes on the intermittent armed clashes between different Eelam groups in Tamil Nadu.

They also say that local pressure and sympathy for the Sri Lankan Tamils must necessarily be a consideration as far as the Indian Government is concerned. The Tamil Nadu chief minister convened an all-party meeting on the Sri Lankan issue where it was decided that a delegation would meet Rajiv Gandhi and present him with a memorandum. The opposition (DMK) leader Karunanidhi has been invited to be part of the delegation. The DMK had earlier announced its programme to picket Central Government offices and the Sri Lanka Deputy High Commission in Madras from April 29 if the Indian Government does not take any positive steps.

But a new twist to the Tamil issue has been given by the Sri Lankan Government itself. Having failed in its 18-month dialogue with the TULF, the Jayewardene Government is now trying to build bridges with the Tamil militants in Madras. The editor of the *Saturday Review* was in Madras recently for unofficial talks with leaders of the liberation groups and now a Quaker Peace and Service group is busy shuttling between Colombo and Madras on the same mission. Obviously, the situation has changed but precisely what will eventually emerge is still anybody's guess.

BOMBAY

The Poisonous Plants

FOR THE last century, the citizens of Bombay took the hundreds of factories, big and small, old and new, that dotted their bustling city very much for granted. Few cared about the smokestacks spewing gases into the air, or the streams of effluents allowed casually into the streams, or the masses of dangerous chemicals, tonnes of which were handled everyday on the shop-floor.

But Bhopal changed all that, perhaps forever. It didn't take much time for concerned citizens of Bombay to realise that if just one plant could take a city apart in that terrifying fashion, the factories of the country's financial capital could do much more, and much worse. From then on, every leak which might have gone unnoticed in the past received banner headline treatment, every industrial death was the target of close scrutiny. Both the Government and the public started taking a closer look at the cold figures like the spine-chilling one which puts the total amount of pollutant released into Bombay's already unhealthy atmosphere at 1,600 tonnes daily. In a telling comment on the state of the city's environment, a daily carried a grim April Fool headline, "Gas masks for Bombayites emergency ordinance to avert disaster".

The incident which really rubbed fears and consciences raw was the Rashtriya Chemicals and Fertilisers Ltd (RCF) episode when the residents of the suburb of Chembur, a heavily polluted area of Bombay—not for nothing is it called, "gas Chembur"—panicked after noticing a strong smell of ammonia in the air. For over a week RCF Chairman and Managing Director, Duleep Singh and Maharashtra Pollution Control Board Chairman, C.D. Oommachen, MLA, traded charges before the board ordered the company's ancient urea plant, one of whose vents is said to have given rise to the leak, closed for repairs. Says Oommachen, "We had to take action in the public interest. This sort of thing cannot be allowed to go on." Singh admits that there was an "ammonia escape" but asserts that it was due to the fact that two effluent streams which are supposed to converge and neutralise each other did not do so. Says he: "In any case, ammonia is not a fatal gas, unlike methyl isocyanate (MIC), which is odourless and deadly."

But no one was really convinced by that argument and there were fears that the RCF episode was just the tip of an iceberg. Now the worst fears are confirmed by the first report of the Environmental Safety Committee constituted by the Pollution Board. The 12-member committee, headed by R.K. Garg, director, Chemical Engineering Group, Bhabha Atomic Research Centre, Bombay, had sweeping terms of reference to identify hazardous highly toxic and corrosive chemicals: to check existing safety measures and the adequacy and efficiency of storage and handling facilities and to verify if the present safety and pollution control measures implemented by the company are adequate and to suggest improvement if they are not. Last month, the reports on the first 15 companies out of the projected 40 including

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

such giants as RCF and Hindustan Lever Ltd, piled up and the collective picture is frightening.

THERE is something wrong with every listed company. Hindustan Ciba Geigy Ltd, at its plant in Bhandup, handles nine hazardous chemicals from carbon disulphide to chloroform and although the general safety organisation of the factory is good, the company does not think it fit to monitor emissions into the atmosphere. Indian Explosives Ltd at Sewri handles 14 toxic chemicals but does not think it necessary to have a proper effluent treatment plant or to monitor emissions to ensure that none of the toxic chemicals escape into the atmosphere. As an investigating officer says bluntly, "There is a casual approach in safety measures while handling hazardous chemicals." Round the clock fire-fighting arrangements do not exist, despite the fact that four of the chemicals—ethylene oxide, aromax, methanol and butanol—are definitely fire hazards.

The same thread of casualness especially with regard to the outside world is a common factor in almost all the companies. Hindustan Lever Ltd working with about a dozen dangerous chemicals at its Sewri plant is yet to complete its new effluent treatment plant and particulate emissions from the detergent plant are not monitored. Sludge from the present effluent treatment plant are transported by road and monoethanol amine, a fire hazard, is stored in large drums far too close to the plant proper. It is a miracle that no major mishaps have occurred in the last three years.

By far the thickest file is devoted to RCF, which received particular attention. RCF is a huge and profitable government-owned fertiliser company whose sales turnover for 1983-84 was over Rs 400 crore, a whopping 53 per cent increase over that of 1982-83. It registered a net profit of Rs 50.06 crore which is more than double that of the previous year's figure, as the annual report proudly points out. It produced, last year, 4,32,000 tonnes of fertiliser—no wonder Duleep Singh is called the "fertiliser king".

Tata Electric Company,
Trombay

THE five units are situated "in a highly congested area". The units together generate 837.5 megawatts of power. The company is the only one in the report to get a 'satisfactory' remark: "The effluent standards are met as required. However, Bioassay Test should be done. Nearly 70 per cent of nitrogen oxide release in the Chembur area is due to Tata Electric Company. However, the concentration is very low," the committee points approvingly to the safety arrangements.

But here too, things are not quite what they should be and there are some rather hazardous drawbacks: The release of nitrogen oxides, sulphur dioxide and other suspended particulate matter is not monitored continuously; and neither is the temperature of the effluent at the discharge point. The committee recommends that there should be a definite time limit mentioned whenever a work permit is issued and repair and maintenance work is to be done. Also, "the fire drill should be done from time to time."

Bharat Petroleum Corporation Ltd, *Chembur.*

THE refinery covers 450 acres and processes 6 million tonnes of crude oil a year using 20 chemicals, from caustic soda to carbon tetrachloride, in the refining process. Apart from the silica alumina catalyst, all other chemicals are toxic. The biggest fire hazard is the 3.5 million tonnes crude oil stored in 15 special steel tanks. In the effluent, the Chemical Oxygen Demand (COD) level is 776 mg/litre while the standard is 250mg/litre. Both sulphur dioxide and carbon monoxide emission is high but will be reduced after implementation of various measures.

The safety organisation is well-oiled, with a three-tier safety committee overseeing everything. There have been no major mishaps in the last three years. However, there are faults: in case of power failure, switching from electricity to diesel driven generators is not automatic; tetraethyl lead vapours added to gasoline to reduce knocking are not monitored; neither are sulphur dioxide, hydrogen sulphide and carbon monoxide; and the tetraethyl lead absorption system does not take into account the release from the storage tank.

Despite the money it is raking in, the company's safety measures leave much to be desired as the committee's investigations make absolutely clear, an indication of how primitive safety measures in India are. Examples are:

- operators are not trained to cope with abnormal situations like a pressure rise in the system and are not trained in using safety devices like self-contained breathing apparatus;
- continuous monitoring for ammonia (in ammonia plants), carbon monoxide (in methanol plants), nitrogen oxides (in the old nitric acid plant) are not carried out;
- safety valves, level indicators and pressure indicators in the ammonia, methanol, methylamine and sulphuric acid tanks are either in a corroded condition or are not functioning properly;
- the venting system in the ammonia and nitric acid storage tanks release straight into the atmosphere;
- there are no stand-by storage tanks for methylamine;
- the control panel for the old nitric acid plant shows faulty alarms, and the feed flow rate is not indicated at all;
- the scrubbing system for nitrogen oxides is inadequate in case of heavy and sudden release;
- the ammonia storage tank is corroded and the gypsum from the phosphoric acid plant which contains phosphoric acid is dumped in the premises.

THE COMMITTEE has made a host of recommendations including a revamp of all safety and warning equipment and more fire-fighting equipment. It also suggested the setting up of a safety committee for each plant which would report to a safety committee for the whole complex. Finally, it asked that an "open house" be held from time to time with the community where emergency evacuation measures are discussed.

It will clearly be some time before all this gets under way. Meanwhile, the committee gave an account of its dealings with RCF which makes interesting reading. From this it is clear that the company had no contingency plan, the licences for the storage of hazardous chemicals had expired and that the company had not bothered to do anything about the dilapidated state of the safety systems until told to do so. For instance the nitric acid plant which was in an awful condition, with emission levels of nitrogen oxides several times the permissible levels, was overhauled only after the committee's visit. Despite this,

Burroughs Wellcome and Co (India) Ltd, *Mulund.*

THE chemical division produces hephenium and diethyl carbamazine citrate by using 10 hazardous chemicals, including phosgene and chlorosulphonic acid. The main pollutants are hydrogen chloride gas and sulphur dioxide and the emission of suspended solids, Biological Oxygen Demand (BOD) and COD. There is no effluent treatment plant and "it is recommended that effluent treatment plant be commissioned immediately".

The committee lists 12 "deficiencies" including: many chemicals and solvents are stored in the open with no adequate water spraying arrangement; phosgene cylinders are kept on the naked floor with inadequate ventilation of the storeroom; phosgene concentration is not being properly monitored in the working area; the pipe that connects the phosgene reactor to the scrubber is made of glass, "which is fragile and constitutes a potential hazard"; the cubicle where phosgene is charged houses the plant's main switch, and the canister gas masks are not checked regularly.

Some days are so hot, you can fry an egg on the pavement.

That's the kind of heat only Amtrex can handle.

Amtrex is specially designed to handle temperatures as high as 45°C. It cools effectively even in peak summer — when all other machines struggle to cope.

Most air conditioners work well when it isn't too hot – but they can't handle more than 40°C. When temperatures rise above 40°C, you need a machine with greater cooling capacity.

Extra cooling power

At very high temperatures, Amtrex keeps you really cool. In Delhi, for instance, Amtrex survives peak summer without the help of water. In cooler cities like Bombay, the extra capacity of Amtrex makes it the most effective even on the hottest day of the year, even in overcrowded rooms.

Bombay will never use the full cooling power of Amtrex.

This extra cooling power is generated by giant-size cooling coils, and an optimised air conditioning cycle that cools more air, faster.

Who's bought Amtrex?

Amtrex has already found its way into some of the best offices and homes in India. Gwalior Rayon Silk (Wvg.) Co. Ltd. Hoechst India Ltd. Diners Club India Pvt. Ltd. Bank of India, Ahmedabad. Orkay Polyester Ltd. Indian Merchants Chamber. Shri Dinesh Mills Ltd. Crown TV–Televisions and Components Pvt. Ltd. Alliance Francaise. Lohia Machines Ltd. Hinditron Computer Systems Pvt. Ltd. Saurashtra Paints Ltd.

Making Rasna is as easy as ABC. In fact, it's child's play!

Children love Rasna. And it's so easy to make, they can make it themselves.

Empty contents of Rasna pack into a vessel. Add sugar and water. Two bottles of syrup. Ready in minutes.

There's no wastage. Because you can store the syrup. For long. So you can have Rasna whenever you want. Instantly!

And Rasna is economical too! You get 32 glasses to a pack. At less than half the cost of any syrup/squash. Moreover, only Rasna offers you 9 lip-smacking flavours: **Orange, Pineapple, Lime, Masala Khatta (Grape), Mix Fruit, Rose, Khus, Masala Milk and Masala Soda (Jal Jeera).**

Ahmed Oil Mill, Two Tanks, *Bombay.*

THE plant is situated in the heart of Bombay city in a highly congested area and manufactures 100 tonnes of edible oil a day. It stores caustic soda lye, hydrogen, ammonia. There are quite a lot of things wrong—the BOD in the effluent is high, sulphur dioxide emission is above the 500 particles per million (PPM) limit. In fact, effluent and emission are not monitored. Hydrogen is stored in a partially open place; the electrical wiring and connections in the deodorising and bleaching section "are in a loose condition", and any ammonia leak could not be controlled. What is more, there is no separate fire-fighting group and no safety training for the workers.

The recommendations are sweeping: formations of a fire-fighting group; immediate replacement of all electrical connections and wires; checks of the thicknesses of caustic soda and hydrogen storage tanks, construction of an effluent treatment plant; the terrace slab to be structurally checked for its ability certificate to be obtained as required, and approval obtained for the storage of hydrogen in tanks.

it is incredible that even with such a black record in safety RCF can still blow its own trumpet. One of the publicity pamphlets it brings out is titled, "Is RCF fighting pollution? Let the facts speak for themselves." It says at one point, "Our efforts do not stop at providing the pollution control measures outlined earlier but go further to monitor round the clock, the emissions and discharges at source as well as the ambient air quality. This has been done to keep pollution control installations under continuous surveillance so as to ensure they give a correct and optimum performance at all times." This is corporate double speak: not a word about the corroded tanks, malfunctioning safety valves, or untrained operators.

The committee has made certain general recommendations besides the specific ones for each company:

- ► operators should be adequately trained to handle abnormal situations with regular refresher courses;
- ► toxic gases in the factory environment should be continuously monitored;
- ► safety devices and instruments should be frequently inspected, tested and a record kept;
- ► storage of hazardous intermediate products should be restricted to eight hours and before any plant shut-down all such products should be consumed;
- ► risk analysis should be carried out and measures for containing such a risk identified;
- ► all containers, plant equipment and pipelines should be made unserviceable when disposed of as scrap;
- ► the neighbouring population be educated on emergency measures;
- ► new buildings and hutments should not be allowed to come up near factories, and
- ► for transportation, a safety code should be evolved by the competent authority.

The committee report is scheduled to be placed in the Maharashtra Assembly sometime in June. The committee is moving with unusual speed because 25 other plants have also to be inspected. Oommachen says firmly: "Once the report is accepted by the House, we will see that its recommendations are implemented to the last word." Is that only one of the many promises made and forgotten or in the new pollution and safety conscious atmosphere, will the report be the first of many designed to set India's wayward industries on the safety track?

—JAGANNATH DUBASHI

Excel Industries Ltd, *Jogeshwari.*

THE factory is situated in the heart of one of Bombay's most congested areas—opposite a buffalo diary in fact. It manufactures oxalic acid, mercuric chloride and glyphosphate—all of which are highly toxic. There is no separate safety and fire officer although from time to time the company arranges refresher courses in fire-fighting, safety and first aid.

The amount of mercury in the effluent is slightly higher than the standard and this is only the beginning of a long list of deficiencies and recommendations. The levels of nitrogen oxides, mercury and phenol are not monitored, the flooring of the mercuric chloride plant is not proper, chlorine leaks from the absorption tower of the plant, the floor of the oxalic acid plant is wooden and benzene is not stored as stipulated in the licence. The committee suggests that mercury be monitored in workers' urine, the mercuric chloride plant have a "impervious, smooth, sloping flooring", to collect mercury spillage, and that the oxalic acid plant's wooden floor be replaced with acid-resistant flooring.

Solanki with Mrugesh: controversial friendship

MRUGESH JAIKRISHNA

Out of Currency

IT WAS once a rendezvous for the city's social and political elite. Today, with owner Mrugesh Jaikrishna arrested on charges of attempting to smuggle foreign currency out of the country through his employees, 'Gokul', his six-bedroom house in Ahmedabad, is now off-limits for visitors. Its most visible inhabitants are intelligence sleuths and the police. Ahmedabad's leading politicians, including the chief minister, bureaucrats and industrialists by the dozen who once made a bee-line for Gokul to enjoy Mrugesh's lavish hospitality, now patently refuse to talk about their visits and friendship with their generous hosts, Mrugesh and his wife Parul. Said a senior customs officer in Ahmedabad: "We were aware of his top connections, but when we began to interrogate people, no one owned up to knowing him, and they all denied having any links with him."

The sudden fall in Mrugesh's popularity ratings was perhaps understandable. Last month he was the first top industrialist in the country to be detained since the Emergency under the Conservation of Foreign Exchange and Prevention of Smuggling Act (COFEPOSA), a legislation which is normally used against smugglers. His detention followed the seizure of foreign currency worth Rs 46.63 lakh from two of his employees at Bombay's Sahar International airport (INDIA TODAY, April 15). If the case goes against him, Mrugesh is liable to pay a penalty of three times the amount seized which, in any case, will also be confiscated. In addition, he can be sentenced to a minimum of two years imprisonment.

Not only were there allegations that Solanki had shown Mrugesh undue favours in business and other interests, the couple were appointed to the boards of three prestigious state government undertakings.

But before his detention, Mrugesh was a name to reckon with in Gujarat. Not only was Chief Minister Madhavsinh Solanki a close personal friend, his visitor's book could have been filled with the names of the high and mighty, industrialists, politicians and bureaucrats. Among his visitors were former ministers as well as senior state and Central officials. Many of his visitors now claim that they called on him at home primarily in connection with their association with the public corporations and social and sports organisations with which Mrugesh was actively involved.

But the fact is that Mrugesh was first and foremost a fast rising industrialist. Besides being the managing director of Shri Ambica Mills, a Rs 40 crore turnover textile unit in Ahmedabad, Mrugesh was chairman of five other companies including Skyjet Aviation Pvt Ltd and H.K. (International) Co. Pvt Ltd, and director of 13 others. His other positions included vice presidencies of three sports bodies including the Board of Control for Cricket in India and the Gujarat Cricket Association—an impressive list indeed.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mrugesh shot into the public light—and no mean measure of notoriety—after the 1980 elections which returned Solanki's Congress(I) regime to power. Not only were there allegations that Solanki had shown Mrugesh undue favours in their business and other interests, the couple were appointed to the boards of three prestigious state government undertakings.

The first sign that Mrugesh was destined to be more equal than others was the construction of a stadium in Ahmedabad for the Gujarat Cricket Association in the face of opposition from within the state government. In fact, soon after the Solanki ministry came to power the then sports minister, Manoharsinh Jadeja had revived the long abandoned construction of the Sardar Patel Cricket Stadium which had lain incomplete for years for want of adequate funds. Jadeja, no friend of Solanki had sanctioned Rs 50 lakh towards its completion.

Since this stadium would be under the control of the municipal authorities and the association wanted its own, Mrugesh hatched a different project and was swiftly allotted 50 acres on the outskirts of the city at a throwaway price of Rs 8 per square metre. The Patel stadium remains incomplete—again for want of money—but Mrugesh's project went full speed ahead and was completed in a record time of one year in 1983. One obvious reason: it was named after the then prime minister Mrs Indira Gandhi.

What is more, it was built using bank loans, and state government undertakings, including the Slum Clearance Board, were asked to pay Rs 10,000 each to sign up as members of the stadium and the club attached to it. Money was raised through donations as well—and sure enough the stadium became a centre of controversy.

In mid-1982, four MP's, seven MLA's and ten district Congress(I) committee chiefs wrote a strongly worded letter to Mrs Gandhi alleging irregularities. They warned that if immediate action was not taken then the "Indira Gandhi stadium will prove another Antulay type Indira Gandhi Pratishthan." Mrs Gandhi subsequently obliged the association to drop her name from it.

The Solanki-Mrugesh connection was also responsible for growing dissidence in the party. When over a dozen Congressmen including former Union deputy finance minister Maganbhai Barot left the party, they cited Mrugesh's growing influence over Solanki as one of the factors for their action. Solanki's detractors maintain that Solanki would accept Mrugesh's advice even in political matters and ignore Congressmen. Said Barot: "In fact Gokul had become an extension of both, the chief minister's office and the PCC(I) where important decisions were taken." Added another Congressman: "The state Government twisted all the rules and regulations in order to favour one of its favourite industrialists whose track record itself was clearly controversial."

Parul: immense clout

Mrugesh's clout on state politics was noticed even during the recent Assembly elections. When scores of Congressmen descended at Gokul and openly sought the couple's support in getting Congress(I) tickets, according to a Congress(I) leader from Gujarat, over 20 of them actually did get tickets—ostensibly because their names were recommended either by Mrugesh or by Parul.

Later the same year, the state Government appointed Mrugesh director of the state-owned Gujarat Industrial Investment Corporation Ltd and Gujarat Tyres Ltd. His wife, Parul, was made director of the Gujarat State Tourism Development Corporation.

Mrugesh demonstrated his clout with the state Government when the textile industry was facing problems in 1984. While nearly two dozen mills downed shutters due to the recession, and some were prosecuted for having shut down without permission, the Government looked the other way in the case of Mrugesh's Sarangpur Mills. Then, the mill was allowed to reopen and was singled out as the only one declared a relief undertaking and thereby exempted from paying labour and other dues—in spite of reports by financial institutions and banks that it was not viable. A year later, this exemption was withdrawn when an advocate filed a writ petition in the high court challenging it as a special favour done to Mrugesh by Solanki.

The Government has had other dealings with the couple which has raised eyebrows. Parul's travel agency, Skyjet Aviation Ltd., which she owned together with A.C. Amin, one of those arrested in Bombay last month, was the only one in the state capital Gandhinagar. Skyjet has no office in Ahmedabad, where it would attract a larger volume of business; in Gandhinagar most of its business comes from the state government and its undertakings who patronise it.

On his part, Solanki stoutly denies having extended any favours or concession to Mrugesh and Parul and their interests. Says Solanki: "It is a vicious campaign to malign me personally." But he declines to comment on their appointment to the boards of state-owned companies. Congress(I) sources say that Solanki is keeping a low profile because he knows that the Congress(I) high command is looking into the alleged Solanki-Mrugesh connection.

Meanwhile, Mrugesh is not taking his detention lying down—far from it. Last fortnight, he hired a battery of senior advocates to defend his case and has since retracted his earlier confessional statement in which he admitted that it was indeed his money that was being smuggled out of India. Said Mrugesh: "I say that I did not have that much cash to procure foreign exchange. I had no means or capacity to own or possess Indian currency worth Rs 46 lakh."

This, in spite of the statement of the other two arrested. Prashant Naik, one of Mrugesh's employees, has told the police that it was Mrugesh who gave him money to buy the foreign exchange in the Bombay market.

Naik and Pankaj Shah, another alleged accomplice, stayed in the city's Ambassador Hotel under fictitious names and say they bought the exchange from three brokers. Naik, who was arrested on

One worldwide family is on its toes. So that you can sweep your worries off your desk!

That's overnight Skypak service for you!

What does it take to put up your feet and relax? Well, when you have a load on your chest it's not easy. That load could be a small parcel, or a document. Which has to physically reach a certain destination, across a distance, within a next-to-impossible time!

Then it takes TNT Skypak. The most reputed courier service in the world. With 200 offices around the globe. And the nearest one to you just a phone call away!

The moment you dial the local Skypak number and hear a friendly 'hello' a chain is set in motion. A chain that unites as many as 26,000 men and women in 48 countries! All of them on their toes!

So, by the time you replace your receiver you can put your feet up. Right on your table.

SKYPAK

when it's wanted yesterday!

April 1, confessed that he and Prashant Shah were summoned to Gokul on February 25. They were escorted to Parul's bedroom and were given two suitcases, one of which contained Rs 11 lakh and the other, Rs nine lakh. Shah alleged that Parul opened both the bags and showed them the money and then proceeded to reveal to them the combination numbers of the locks on the suitcases.

The same morning, they flew to Bombay where Rajani Patel of Skyjet's Bombay office took charge of the money. Naik also stated that he and Shah bought the foreign exchange at Rs 15.90 per dollar from three separate persons, Noor Mohammed, Mahesh Marmadi and Mulanbhai Shah. Prashant Shah claims that he returned from Bombay on the evening of February 26 and handed over the entire foreign exchange to Mrugesh in Parul's presence. Naik says he later made another trip to Bombay and bought additional foreign currency worth Rs five lakh from one of the three dealers. Enforcement Department sleuths have arrested two of them and expect that it will lead to the unearthing of one of the biggest foreign exchange rackets in the country.

CUSTOMS

Net Gains

SOMETIMES, honesty really is the best policy, or so V.N. Anantraman, 32, a junior customs official at Bombay's Sahar International Airport found out much to his surprise. Last fortnight, the bespectacled, bearded Anantraman was given a cash award of Rs one lakh by Bombay's Customs Collector (Preventive) P.K. Kapoor, for nabbing C.S. Amin and A.P. Nanawati for allegedly smuggling foreign currency worth over Rs 46 lakh out of the country, along with a noted Ahmedabad industrialist Mrugesh Jaikrishna.

Said a beaming Anantraman, "I always believed that sincerity, honesty and hardwork finally pay. We are now working without any fear and pressure. I am happy to learn that the finance minister has approved the award." There was also a significant message behind this reward to Anantraman: from now on officials sticking their necks out for booking even well-connected and politically influential people will not be penalised by transfers but encouraged.

This, incidentally, was not Anantraman's first catch. During his 10-year tenure in the customs he has detected over 50 major and minor cases of smuggling worth over Rs 10 crore. But success came his way only after he was transferred to the Customs Intelligence unit in 1982. During the last three years he has seized contraband goods worth over Rs 1.57 crore, but owing to bureaucratic hassles and the very small amounts involved in these operations, he was never rewarded.

However, this did not deter him in the least bit. Narrating his encounter with Mrugesh and others, he disclosed that he suspected that all was not quite well when he saw that Mrugesh was not accompanied by any influential government official. And when Anantraman saw Mrugesh checking in two suitcases and handing over the boarding passes to two other people, he promptly ordered the Air-India staff to withhold the luggage for an extensive and thorough search. His gamble paid off, when a briefcase crammed with foreign currency was recovered from the suitcases.

Anantraman (top) and Bains: honesty rewarded

But what Anantraman didn't reckon on at that time was that he would receive a share of the booty so soon. Finance Ministry officials for once did a quick follow-up on its earlier decision to give 20 per cent of the value of goods seized as reward to the customs employees. Pending the final settlement, the ministry directed the customs collectors to give an on-the-spot award up to Rs 1 lakh or 50 per cent of the total entitlement to the employees immediately. Said Solanki, collector customs, (Bombay airport), "The idea behind this encouragement is to make smuggling uneconomical. Now officers will take more risk in ending this menace."

This policy seems to have paid off elsewhere in the country too. On March 6 in New Delhi, Assistant Collector of Palam Airport, R.S. Bains displayed considerable resourcefulness in arresting a Swedish national, Robert Landy, who was breezing through the green channel. When junior officials could not find anything in Landy's briefcase, Bains himself searched Landy and found an unusually thick waist-belt in which was hidden over 10 kg of gold worth Rs 26 lakh, obviously meant for peddling on the Bombay bullion market. Bains received a cash award of Rs 40,000 within a week of this seizure.

These were, however, the immediate gains of the policy. The Finance Ministry is convinced that over 5,000 customs officials will now concentrate on preventive measures with added vim and vigour. Seizures have already crossed the Rs 40 crore mark in three months as against Rs 100 crore during the whole of 1984. Commented a senior business executive of New Delhi, "It is a wonderful economics. By paying one-fifth extra to its employees, the Government will still be left with 80 per cent additional income which it was losing in any case." And apart from, probably, the smugglers, no one's complaining.

BHADRACHALAM PAPERBOARDS LIMITED

An enterprise promoted by I.T.C. Limited

Organising People for Productivity

Speech of Shri S. Ghosh, Chairman, at the 9th Annual General Meeting held on 20.3.85.

Shri S.Ghosh

You would have observed that profits have staged a healthy recovery compared to 1982/83 and cash earnings have improved on account of market buoyancy and productiviy improvements. The inflationary impact has been the greatest in raw materials and energy rates, but has been contained through conversion efficiencies and conservation measures. I am happy to report that our sales in the first five months of the present year are 9% ahead of the comparable five month period of the year under review, and unforeseen circumstances apart, the expected surplus from the year's operations will well cover the small deficit now carried over.

I am pleased to report that your Company has once again won major awards for performance from two sources — the National Productivity Council award for Best Productivity and two awards from the Indian Paper Makers Association for the highest capacity utilisation and for energy conservation.

Three years ago, at the Annual General Meeting, following the official designation of that year as the Year of Productivity, I had expanded on the concept of Productivity in relation to your Company's efforts. Since that time, your Company has been twice conferred the National award for the best productivity performance in the paper industry. The latest award is significant in the sense that in addition to quantitative parameters, considerable weightage has been given to qualitative factors across a broad spectrum in the final evaluation.

PLANNING FOR PRODUCTIVITY

Today, I would like to share with you how **your Company set about developing an in-built drive towards productivity and the role that people and organisation have played in its attainment. This movement from its conviction that it is people, individually and collectively, who are the mainspring of productive performance** in any sphere of purposeful activity, and industry is no exception. The acid test of productivity is the quality, the values, the power of full production at the smallest unit of efforts, fueled by human energy but with maximum ingenuity. This yields a string of worthwhile results for legitimate and beneficial distribution to the widest body of associated publics.

Your Company believes that its pursuit of productivity must begin by looking within,and to coin a phrase, it must seek 'internal productivity:' an organisation must create and maintain conditions at all times which stimulate decision making and action taking: in order to be a vibrant organisation, it must have the highest respect for time, as time-efficiency is crucial to internal productivity. It is no secret that its productive impact is highest when strategic actions are correctly timed, the least time is expended to reach the best decisions, there is no delay in commencing approved actions and minimum time is spent in executing them.

Matching skills with technology

BPL's commitment to the creation of time-efficient and productivity-biased conditions started at the very early design stage of the mill, in terms of layout and location of facilities, energy systems, instrumentation and machine sophistication features. A great deal of attention has been paid and continues to be paid to match human potential with technological sophistication through training and supervision for a workforce predominantly from an agrarian background in a backward area. Due emphasis is placed on disciplined work practices, and achievable work standards for good housekeeping and industrial safety with infusion of skills, dexterity and attitudes to foster an efficient interactive relationship between man and machine. Technological updating, mechanisation, plant capability enhancement continue and side by side, re-training and reinforced supervision for higher proficiency will continue to remain an important constituent of BPL s drive for sustained productivity.

A large proportion of BPL employees at the mill come from neighbouring districts and from other States.The basic infrastructure in close proximity to the mill did not exist for them. Your Company has provided a housing colony in the nature of a mini-township complete with reasonable living amenities including proper facilities for schooling, recreation, medical assistance, transportation and security for them and their families. Your Company exhibits great care and concern to aspects of employee welfare and takes a genuine interest in promoting goodwill and a sense of well being. Your Company has thus been successful in creating an anxiety-free atmosphere at work encouraging much needed attention to work output and efficiency.

Shaping systems for decentralization

BPL's manpower complement of technically qualified persons and managers is lean, functioning within a structured, inter locking systems model for effective information based control and decision making. A great deal of information processing is done on computers, and more is proposed together with refinements in existing systems.

Your Company has taken steps to stimulate productivity through decentralised decision making and equipping people to make correct and timely decisions for initiation and follow up. Roles of individuals have been defined and clarified within areas of work so as to create a wide understanding of the value of each job, the potential scope of contribution each person can make and the other of influence he can exert through his actions. He is trained and encouraged to use processed data, seek knowledge from all sources, assisted in enlarging business skills and generally encouraged to equip himself better through self development for which opportunities are available. From time to time, individuals are entrusted with time bound projects with defined goals where facilities and administrative arrangements are provided. Limits of authority are prescribed as a means of exercising judgement between actions he may take independantly and those after consultation within a broad framework of corporate policy and specified guidelines. Through these measures and many others, your Company provides managers the opportunity to plan and perform with confidence and enthusiasm. However counter-checks and balancing systems have been concurrently devised so that initiative and enterprise flourish without dilution of effective control.

Widening horizons for enterprise

Quality orientation, concern for customers, and application of contemporary scientific methodology and technological knowledge are consciously demanded and form an integral part of the value systems of the organisation. Systems have developed and are used to gather knowledge and information from as many sources as possible. Arrangments exist for wide dissemination through group meetings, practices, experiments, projects etc.

To sum up, the leadership in BPL has fashioned its drive for productivity into a multi-faceted

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

...not only to measure output-input ratios ...but to embrace other dimensions of excel ...associated with quality outputs from each ...dual or group, adopting modern practices. ...Company recognises that it is not enough to ...potential retardants to productivity, but ...important to stimulate and foster condi ...which advance it through deliberate and ...impetus. **The ultimate objective is to ...ate in a wide cross-section of people ...the organisation, a sense of signi... ...ce and pride associated with achieve... ...affinity and trust, a sense of personal ...ment, and above all, a heightened ...of enterprise.** In such inculcation are the ...assured foundations for sustained productivity

...DUCTIVITY STIMULANTS ...M GOVERNMENT

...earlier occasion, I had mentioned that in ...ed economy system, the government exerts ...ful and pervasive influence on the fortunes ...corporate sector. This is particularly true of ...intensive core sector, where private ...is hesitant to venture in the absence of ...ial support from the government. Your ...pany's new mill at Bhadrachalam falls in this ...gory.

...ll stature of enduring productivity can ...be attained on a collaborative basis ...ween government and private industry, ...re the government creates the climate ...private industry creates the conditions ...which productivity may flourish.

...intensive new industry has certain very ...compulsions, which can be tackled only by ...government. To quote the relevant extract ...Report of the Indirect Taxation Enquiry ...ittee headed by Dr.L K Jha, "The question ...concessions to newly set up manufacturing ...either to sustain them during the initial period ...existence or to encourage investment in ...industries has to be viewed in its own ...ective.... The first question to consider would ...what kind of industries should be eligible for ...concession that might be proposed. We have ...that the problem relates to capital intensive ...ries and the question might well be asked ...in a country with scarcity of capital and such ...unemployment any fiscal incentives should ...given to capital intensive industries. The point ...is missed by those who argue on these lines ...that while there is every reason to discourage ...through fiscal devices and other means, the use of ...intensive technologies, the argument does ...have validity in respect of industries which, if ...are to be set up at all, have to be capital ...intensive." There are many other learned obser... ...in this Report which I cannot cite now for ...of time.

...tending with shortfalls

...when the decision to set up your new mill was ...made on a backward area, a package of fiscal ...ives and concessions was granted by the ...State Government and an assurance of relief ...from Central Government taxes was obtained for ...capital intensive unit of priority industry. ...monetary value of these concessions and ...was assessed by the financial institutions, ...at their insistence, the tenure of two items of ...concessions was extended, before they were ...based on project viability and agreed to extend. loan finance to the project.

You are aware that the power concession has been terminated after three of the five years and the royalty concession on fibrous materials after five of the ten years contracted. The sales tax loan by the State, due between 1980 and 1983 remains undisbursed. The State general sales tax relief scheme for industries located in a notified, scheduled area was suddenly amended to exclude us. The only silver lining in this depressing episode is the belated extension this year of excise concessions to two of your Company's major products by the Central Government.

If an assessment is made of the combined negation of profits during BPL's operating existence of five years on account of the above early terminations, non-fulfilments and delayed implementation of commitments, the quantam on a conservative calculation, would be no less than Rs. 10 crores. On the other hand, the value of productivity gains achieved so far have been substantial. An assessment of incremental profits arising out of sales in excess of industry norm-based estimates accepted for project appraisal is conservatively placed at over Rs. 11 crores. Consider who the beneficiaries of BPL's internal productivity have been — the State would have claimed its power revenues, sales tax and royalty dues, the Centre its customs and excise duties, the financial institutions and banks their interest charge and loan instalments, the employees their salaries and wages and all suppliers and creditors their dues and charges. The entire brunt of profits denied is being borne by the shareholder, who is forced to surrender legitimate dividend returns on his investment, merely because he comes at the end of the line.

I feel I owe an explanation to you for this development. Your Company's top management have left no stone unturned in representations, time and again before every concerned authority in the government. Facts, figures, historical information, future projections, income and cost profiles, documents, agreements, have all been submitted readily to substantiate your Company's case which have been examined threadbare departmentally, by special agencies like Government approved cost auditors and Bureau of Industrial Costs and Pnces, but to no satisfactory conclusion so far. Very regrettably, I am of the view that the Government machinery works too slowly to inspire confidence and the processes of decision making are avoidably dilatory. I am impelled to offer the view that there is deep rooted suspicion of industry submissions being exaggerated, and there is a propensity to be ultra-conservative, to decide on notions rather than fact and reason, to reject or at best, be overly tight-fisted. Your Company is determined to continue to fight for its legitimate rights on behalf of all its 5500 shareholders most of whom are ordinary individuals, and whose aspirations are being lost sight of in a totally unbefitting manner.

Steering for Success

We are aware that the present government is considering liberalisation of regulations and controls and streamlining procedures to spur the pace of industrialisation. At this point, I would venture to suggest that the burden of administering a plethora of laws, regulations and controls by the administrative machinery be lightened to enable greater attention to the health and problems of various industry sectors. Scrutiny needs to be extended from the macro level to the micro level. At any time in an industry, there will be healthy and weak sectors, well managed and poorly managed organisations for their own reasons. The administration must be encouraged to distinguish clearly, after detailed examinations where necessary, and urged to prescribe deserved remedies that attack the heart of the problem, even if these suffer the risk of being labelled discriminatory. Today, it would appear that the inefficient are receiving all the attention, and the efficient are forgotten and as in our case, being unfairly penalised. **Newer units where set up for accelerated dispersal of industry, will require special nurturing, to compensate for locational disadvantages. Unless promises and commitments are fulfilled and stability of basic policy maintained, there is no hope of a thriving industrial sector.**

BPL's spirit of enterprise has not been dampened by the unfortunate developments that have taken place. Notwithstanding these impediments, it has pursued the cause of productivity vigorously and been honoured with two national awards consecutively. The same spirit of enterprise gives it the courage and determination to forge ahead in an unyielding quest for self-reliance, excellence, and productivity.

This does not purport to be a report of the proceedings of the 9th Annual General Meeting.

SURPRISE PACKAGE

THE COMMITTEE on stock exchange reforms headed by former Unit Trust of India chairman G.S. Patel may spring a surprise or two in its report, the second part of which deals with steps to reduce the cost of public share issues by companies. While it may suggest the scrapping of tax deductions for advertisements in the media to promote share issues, the report may also recommend that banks get tough in accepting share application forms in different names to increase share allotment prospects—it costs companies Rs 3 to Rs 4 to process and reject each application. To cut procedural hassles the committee is also expected to recommend that firms enlist on one stock exchange instead of on all exchanges as they now have to do.

Only the first part of the report has been handed in to the Government so far. The second is expected to be submitted by the end of April and the other seven or eight parts by the end of May. The committee's brief also includes spelling out a code of conduct for stock exchange members and measures to tap the money in semi-urban areas.

STALLED PROJECT

WHILE the first 115 megawatt unit of the National Hydroelectric Power Corporation's Salal power project in Jammu is likely to be commissioned next year, over a decade after the project was taken up, its hydel project at Koel Karo in Bihar has run into squally weather. Work on the seven-year project to set up five units with a total capacity of 714 mw was supposed to begin last year. But problems in acquiring land for the project have cropped up with local residents, most of them Adivasis, refusing to move out. This has delayed the Rs 400-crore project—pushing up costs by an estimated Rs 20 crore a year.

UNDER ONE ROOF

WITH competition hotting up in the hotel industry, the India Tourism Development Corporation (ITDC) is seeking to drum up more business abroad by tying up with foreign hotel chains. Room occupancy rates at ITDC hotels in the capital are high, but its hotels in other cities are not so well off and hotels in small cities are in the pipeline. So it is readying to tie up with Trust House Forte. Under the terms of the deal which is now awaiting government approval, the hotel chain will market ITDC hotel rooms in the West for a commission of 10 to 20 per cent, and train ITDC staff in the UK. In January ITDC arrived at a three-year agreement with Odner Hotel Representative (OHR) Ltd, part of the Pacific Leisure group of companies. This Hong Kong-based firm will market ITDC hotel rooms in the Far East in exchange for quarterly fee and a commission on business that materialises.

PURCHASING POWER

THE FARIDABAD Industries Association effort to promote a Rs 50 crore company to set up a 100 megawatt power plant for distribution to shareholders has had a mixed reception. Under the scheme, a company that wants 1,000 units a day will have to buy 1,000 shares of Rs 60 each. But the power will be more expensive than Haryana State Electricity Board (HSEB) power (Rs 1.04 to 1.20 per unit compared with Rs 0.95) though cheaper than obtained from generators (Rs 3). The scheme promises uninterrupted power but some companies have reservations about the plan to distribute it through the HSEB.

POOR SHOW

PRIVATE sector companies fared poorly in 1983-84 compared with the year before. While the total capital employed, net worth and net sales of 207 giant and mini giant firms studied by *The Economic Times* did grow in 1983-84,

Chart by B.K. SHARMA

growth was less than during the year before. Gross profits dipped (they had risen the year before), while profits before tax and after tax fell even more sharply than in 1982-83. The overall performance was affected to some extent by the steeper fall in the growth rates and profitability ratios of mini giant firms, but the study fails to explain why such firms fared badly.

HIGHWAY LOANS

THE WORLD Bank is being approached for soft loans to build the nation's first expressways in Gujarat and West Bengal. Meant to encourage high speed motoring, the expressways will have fewer entry points and crossings than the national highways have. Plans for the 93-km-long Ahmedabad-Baroda expressway are at an advanced stage. The Gujarat Government will build the four-lane expressway at a total cost of Rs 130 crore. Tolls are expected to net the Centre a 10 to 15 per cent annual return on outlay. The Calcutta-Palsit project is still in its initial stages and no decision has been taken on whether it will be a two or four-lane expressway.

The two expressways are part of a package of eight projects. The other projects involve widening portions of the national highways in six states. The total bill for the eight projects will be Rs 560 crore, and the World Bank may fund almost half this amount.

GROWTH RATE

India 2000 AD

ONLY one member of Parliament described Vishwanath Pratap Singh's maiden budget as one that would take us into the 21st century. Singh himself and his colleagues have their feet planted firmly in the 20th century and are apparently far more worried about what's going to happen in 1985 than 15 long years from now.

What will India be like in the year of the Lord 2000? No definitive studies are available, and they would not be much good even if they were, as such studies invariably tend to be off the beam, but some figures crop up now and then. They tend to be figures about output, so much more of steel and so many million tonnes more of crude oil, as if the only difference between today's India and the India of 2000 will be in the volume of goods and services it is expected to produce. About changes in the quality of life there is next to nothing.

According to Dr S. Varadarajan of the Council of Scientific and Industrial Research (CSIR), the country will produce about one-and-a-half times the food we produce today without any significant increase in the area under cultivation. The consumption of oil and gas will rise to about 138 million tonnes (from the current level of around 50) and annual coal consumption to 400 million tonnes. The technology for the use of renewable energy sources (like forests) would still not become commercially viable in another 15 years though it might be so by 2015.

Professor M.G.K. Menon has tried to fill in the gaps but the overall scenario is still rather vague. A point he has made is that "if we do not take correct decisions about robotics and automation, the country would be in serious economic trouble in 2000. Primary industries must go in for automation to remain competitive in the world market, while employment would be the responsibility of secondary and service sectors."

For a country that is supposed to be trying to catch up with the West, the figures our officialdom is aiming at are anything but encouraging. A rise of 50 per cent in foodgrain production, that is, from the current level of 150 million tonnes to around 225 million tonnes, amounts to no more than a rate of growth of 3 per cent per year, more or less on par with what we have done in the last 10 years or so. Other estimates are also on par with this minuscule rate of growth. At this rate, we shall not only *not* catch up with the West but fail to catch up even with our next door neighbour, China.

According to reliable estimates, China achieved a record harvest of 400 million tonnes of grain in 1984, an improvement of 13 million tonnes on the previous year. Indications are that the target of 425 million tonnes set for 1990 will be over-reached earlier than expected. In industry, the reforms in economic structure and access to modern technologies have led to impressive results. Oil output was 115 million tonne last year, an increase of 15 million tonnes over 1983. Steel production has shot up by nearly 10 million tonnes in six years. Coal output was 770 million tonnes last year, a rise of 135 million tonnes since 1979, and electricity generation touched 375 billion kwh in 1984, an impressive increase of nearly 100 billion kwh since 1979.

> **The question is not whether we shall ever catch up with China or America or Japan, but whether we shall catch up with ourselves, and our potential for growth and greatness.**

These figures are between two and five times our figures for the corresponding products and there is no way we can match them in the near future. The surprising part is that all this has been achieved at the cost of a very small trade deficit (about Rs 1,200 crore) last year. China is going in for joint ventures with foreign firms in a big way. There are at present 75 wholly-owned foreign-owned enterprises in the country, of which more than a third were established in 1984. Experts say that this is only a beginning and industrial growth rate should stabilise around 10 per cent a year by 1990.

The trouble is, India may have missed the bus, or, what is probably worse, is on the wrong track. There is absolutely no reason why India should not aim at a harvest of 400 million tonnes of foodgrains by 2000—which would still be less than what China is producing now for a population that is only a third as much again as ours—and steel output nearer 100 million tonnes. This is actually what had been planned for when the first steel plants went up 25 years ago but somewhere along the road we seem to have faltered and given up the ghost. Since then, it has been essentially a case of decimal points, with grown men squabbling over percentage points as if their lives depended on it.

Consider a recent example. All that Singh has done is to cut down personal and corporate income tax by 5 to 10 per cent and abolished a couple of duties. We are so grateful for such small mercies that no one has questioned why he has not slashed them by 25 per cent and done away with scores of other imposts. The poor man has been snowed under brickbats and flowers, roughly in the same proportion, and the whole spectacle has so scared him that he had to get up in Parliament to assure everyone that his budget did not signify any change from the past budgets, and the Government's economic philosophy, whatever it is, had not changed a bit. Not a single member of Parliament asked him why it had not changed, why a policy that has stopped this country in its tracks for 15 long years has remained unchanged even after the massive mandate the Government has received. What was the recent mandate for if it was not a mandate for change? And why is the Planning Commission still engaged in its futile exercise of dotting the i's and crossing the t's of old plans and presenting them in a new format with a few minor alterations?

The question is not whether we shall ever catch up with China or America or Japan, but whether we shall catch up with ourselves, and our potential for growth and greatness. We know we have it in us, if only we thought big and gave up thinking in terms of what Churchill called those damn dots. But all we hear us in this year of the Lord 1985 is whether the percentage of the people below the poverty line is 44.5 or 44.4 per cent. Those who think poor, die poor.

or a bank that takes service seriously.

The choice is entirely yours.

You can continue to put up with the rudeness and the insolence every time you visit your bank.

Or you can find a bank that treats you the way a bank should.
With a little courtesy.
A little attention.
And a little enthusiasm.

At HongkongBank you will find all three in plenty. What you won't find is the aloofness that some people seem to read into an international name.

Walk into our nearest branch. Look around and see the difference for yourself.

And make your choice.

We were warned that several species of wildlife would soon become extinct. But civilization did not listen. We were warned about deforestation but we still cut trees. We were warned of the dangers of air and water pollution. But civilization didn't listen.

The Panda and a drop of oil

The illustration in this advertisement presents a Giant Panda cupping a drop of oil. An animal almost extinct, saved because mankind came to its senses almost too late, reminding us about something else that is on its way to extinction.

Legislation was the only way mankind could safeguard wildlife and prevent deforestation and pollution.

Is the same necessary for petroleum? Is it too early? Or is it already too late?

A champion for conservation

You're probably wondering who made the statement in inverted commas, on the left. It was made by our late Prime Minister, Indira Gandhi on October 11th, 1980 when she handed over India's first two indigenous offshore oil platforms. She was a great believer in conservation and she never lost a moment to remind us that it is a cornerstone in any energy programme.

What is "Energy Audit"

Energy Audit is sane and necessary. It is not a step back but a logical step forward. What it implies is that we should use fuel efficiently. And to make sure we do this we have to inform our consumer, our country and the world how much energy was used to make something or to carry out a process.

In Japan, for instance, Energy Audit has been in practise for years. You can turn over a cup and saucer in Japan and find out how many units of energy were used to produce them.

Time is running out for petroleum

Every year Rs. 800 crores are lost because of carelessness or "taken-for-granted" wastage in the use of petroleum ... petrol, diesel, kerosene, cooking gas and fuel oils.

Is it time to legislate against this wastage? Or should we wait? Just like we waited with the Giant Panda or our lush green forests. Give it a thought.

Let's give our scientists a fighting chance

All over the world work is on to find new sources of energy and to make renewable sources of energy viable on a mass scale. This kind of effort, however, takes time. If we work at conservation and allow petroleum to last 30 years longer the transition to a new source could be smooth. If we don't we may not have an energy source in between.

"Thank You"

PCRA wants to thank you for the efforts you have made to help petroleum last longer. Today we are proud of the fact that together we are saving Rs. 100 crores per annum for India by following a few simple "tips" and guidelines for the efficient utilisation of petroleum. It was only possible through team work.

If you are not part of the team get in touch with us today.

Petroleum Conservation Research Association

306, Sethi Bhawan, 7 Rajendra Place,
New Delhi-110 008.

PCRA is a Government sponsored organisation and a representative of India's petroleum companies in areas related to conservation.

PCRA's four major conservation targets are the Industrial, Agricultural, Domestic and Transport sectors.

PCRA's services are free. Savings achieved by PCRA through conservation exceed Rs. 100 crores per annum.

Oil isn't going to last much longer. Use it with wisdom.

POWER SUPPLY

The Generation Gap

FOR THOSE living in Maharashtra, Gujarat, Kerala, Andhra Pradesh and Punjab, the summer may not prove so sticky—electricity should be available almost at the flick of a switch through most of every day. But for those in Orissa, West Bengal, Uttar Pradesh, Haryana, Karnataka or Tamil Nadu, the coming days may not be half as pleasant.

Indeed, most of the country will be faced with crippling power shortages this summer as well. Although more power is being generated now than ever before, it continues to be a scarce item because demand far outpaces supply. Power plants are working on a rising efficiency curve—but coal stocks at some thermal stations situated far away from mines are dangerously low. And water levels in at least two important reservoirs are lower than they were last year, a sure indication that power generation at hydel plants will be affected. Minister of State for Power Arun Nehru said optimistically: "You are always going to be a little short in summer, there's no doubt about that. But the position will be better than last year." *(see interview)*

Nehru's optimism springs from a number of factors. For one, thermal plants are crossing generation targets set for them by the Government. On April 4, they produced 25 million units (kilowatts an hour) more than the official target of 292 million units. Hydel plants too have so far exceeded their power targets. As M.K. Sambamoorthy, acting chairman, Central Electricity Authority, points out: "Even nuclear plants are doing very well. The first unit of the Rajasthan Atomic Power Plant (RAPP) has been put back into operation. That is a technical feat." Also, around the end of March, the plant load factor (PLF: the rate of efficiency at which a power plants function) rose to over 55 per cent, up by over 7 per cent from the figure a year ago.

Behind the upbeat statistics lies a tale. Nearly 6 per cent of the nation's total installed power capacity of around 43,000 mw was added on last year, and a hefty chunk of it was thermal capacity. If thermal power plants are performing better, it is because the teething troubles of the 35-odd 200 mw units commissioned in the country till now have been overcome. These represent nearly 41 per cent of thermal capacity. As one power company executive puts it: "We have debugged the most major of the problems and the learning process is over ." A major snafu—hydrogen leakage from 200 mw generators—has largely been crossed. Grid capacity has improved, current fluctuations can therefore be absorbed more easily, and control systems are now automated so that power "trippings" can be minimised. Finally, there is a greater all-round consciousness of the need to improve the quality of coal.

But there are dark clouds looming on the power horizon. Water levels at Punjab's Bhakra complex (installed generating capacity: 2,687 mw) are three metres lower than last year. At the Sharavathi in Karnataka, a state which depends almost entirely on hydel power, the water level is four metres lower than last year. The position at other reservoirs in the country is comfortable, but if the snows upstream of Bhakra do not melt in time, parts of the north could be in trouble.

Breakdowns at plants are more frequent in summer with cables getting damaged owing to the heat, and supervision is often lax. Finally, the coal stocks at six or seven important power complexes, mainly in the north, had, on April 4, fallen to less than a fortnight's supply, the minimum level that is regarded as safe for plants sited far from coal mines. This could be due to the more rapid use of coal that results from higher thermal generation, and government officials last fortnight were quick to point out that the coal position is being monitored. But others complain of oversized coal being delivered, notably at the Badarpur plant in the capital region, and of railway wagons being diverted for other purposes.

Sambamoorthy scoffs at all the dark projections. The Bhakra reservoir, he says, will start filling up in another month or so, more water will start flowing into Dehar (which is upstream from Bhakra).

thermal stations in the north such as the one at Ropar and Bhatinda in Punjab are going great guns and the additional power that thermal stations generate will largely offset any lower generation by hydel plants. He adds: "Power shortages may exist in the north, but there is no cause for alarm."

That may be true, but last May, as many as six states and a Union territory reeled under power cuts of 50 per cent and above. With more power being produced now the position may be that much better this time round. But no one in the Government or outside is predicting power cut-free days for the next few months.

—PALAKUNNATHU G. MATHAI

ARUN NEHRU

"Power will get priority"

A PORTLY figure who looms over his desk in Shram Shakti Bhawan, Arun Nehru, 40, reflects an easy familiarity with a topic he has handled just three months. Cautious in his replies—he thinks it would be wrong to comment on matters which have yet to be okayed by the Planning Commission—he nevertheless exudes a quiet confidence about the one topic to which everyone turns in the summer months: power shortages. Last fortnight he spoke to Assistant Editor AJAY KUMAR *and Principal Correspondent* PALAKUNNATHU G. MATHAI. *Excerpts from the interview:*

"The objective is to increase power generation. We will examine every possible way of doing that, the job has to be done and I have no doubt we will do it."

Q. *The winter rains have been poor. How bad will the power position in summer be?*

A. We are always going to be a little short in the summer, there is no doubt about that but the position will be better than last year. The plant load factor (PLF: utilisation of capacity) this year has gone up by 5 per cent, which is a very large chunk. And I think we can improve it further. True, hydro levels are not all that satisfactory, but there has been a big improvement in thermal generation.

Q. *To what do you attribute this improvement?*

A. Many factors. A lot of pressure is being put on the state electricity boards (SEB's). We find that by constant prodding, by giving them new ideas, by taking fresh ideas from them we are making some headway. We've a lot of talent in the states, the question is of allowing that talent to operate. Then there has been a big improvement in the quality of coal we have been getting.

Q. *The Centre's power companies have been doing very well while the SEB's have been floundering. Would you advocate a greater role for the Centre in the power sector?*

A. No. The way you look at it is to see what is wrong with the existing set up. First of all, the existing capacities have to be utilised to the best of our ability. You just can't say that the coal supply is bad or BHEL *ne ye kar diya or wo kar diya* (BHEL has done this or that). Our intentions are very clear: we are not going to waste money. Money meant for projects will be made available but if a state is not going to fulfil its commitments, there is nothing we can do about it. The states need pulling up.

Q. *The SEB's face a lot of political pressure. Is this a major problem?*

A. It shouldn't be a major problem. We have told all the chief ministers that unless the SEB's rationalise their method of working and produce a profit all their projects are going to be delayed and we are not going to bale out any of them.

Q. *What about the proposal to set up gas-based power plants?*

A. We are going in for three gas-based plants with a total capacity of 1,500 mw on the Hazira -Bijaipur -Jagdishpur pipeline route. We have enormous gas reserves and the gestation period of a gas-based plant is only three-and-a-half years as against six to seven years for a thermal plant and even more for a hydel plant. Overall, our demand for power is something like 470 million units a day. We generate about 440 million units. Assuming a 20 per cent loss in transmission, we are short of about 70 million units—about 7,000 mw.

Q. *Will the gas-based plants solve this?*

A. They are not a total solution but a partial one.

Q. *Do you see an end to the power shortages?*

A. That will take a little time. If we can double the capacity in the next 10 years we will be all right.

Q. *Isn't finance a problem?*

A. We will have to find ways of getting it. Power will get priority.

Q. *Is the private sector to be given a bigger role?*

A. No, there is no shift in policy. What is wrong with the public sector?

Q. *What do you think of the Faridabad Industries Association's plan to set up a power plant?*

A. We will communicate our views when they come to us. If their plan falls into the captive plants category, there is no problem; if not, there is.

Q. *Did you have any preconceived notions when you took this job?*

A. No, I came with an open mind. Basically, the objective is to increase power generation. We will examine every possible way of doing that. We may not be conventional all the time. The point is, the job has to be done and I have no doubt we will do it.

TELECOMMUNICATIONS

Positive Signals

IF THE Government's latest decisions are to be taken seriously then the nation's obsolete telecommunications network is in for a revolutionary change. In a major policy announcement last fortnight Union Minister of State for Communications, Ram Niwas Mirdha, disclosed the Central Government decisions to permit foreign collaboration with the private sector for manufacturing indigenously telecommunications equipment, bifurcation of the Communications Department—one for telecommunications and the postal services, and the other for the creation of autonomous corporations for Delhi and Bombay telephones. Said, Mirdha: "We are going to adopt a new, bold and forward-looking approach for the development of telecommunications in the country."

The Centre's new telecommunications policy—which came in a record time of barely three months after Rajiv's Government took over—aims at overhauling this vital sector by introducing an element of competition in an area so far reserved exclusively for the public sector, giving in more financial support and administrative autonomy. Asserts Mirdha: "A dependable, efficient and modern communications system has become absolutely essential for economic growth. We must catch up with the rest of the world in this field."

It was because of the top priority accorded to the Communications Ministry that the Central Government raised its seventh plan allocation to Rs 13,000 crore from Rs 2,300 crore during the sixth plan—a whopping increase of over 300 per cent. Earlier the Central Government amended its policy of not allowing foreign equity participation and collaboration for manufacturing telecommunications equipment in India. Early last month the Department of Electronics retracted its earlier opinion and cleared the desks for foreign collaboration in this field too. Mirdha disclosed that new private units have already signed collaboration agreements with FACE of Italy for the production of telephone instruments in India.

FACE was not the only one to offer their services. Over a dozen leading industrial groups including Birlas, Tatas and Modis have signed collaboration agreements with various multinational corporations for manufacturing telecommunications equipment in India. The Industry Ministry is now flooded with over 50 more applications for licensing. Said a Communications Ministry official: "If all the proposals come through, we will be able to give a perfect and faultless telephone across the table within the next five years. But the Government must give lot more freedom to the department."

BHAWAN SINGH

"We are going to adopt a forward-looking approach for the development of telecommunications."

—RAM NIWAS MIRDHA
Union minister of state for communications

The Central Government did not confine itself to giving a financial boost to the ailing department. In order to make it accountable and autonomous, the Cabinet approved the creation of an additional board in the ministry. Earlier a five-member Posts and Telegraphs Board headed by a secretary used to look after both the telecommunications and the postal services. Now there will be a separate five-member board each for postal and telecommunications services. And for the first time there will be a separate member to look after technology in the Telecommunications Board. The idea behind the bifurcation is to provide promotional avenues to the Indian Telecommunication Services personnel who were stranded at the joint secretary level earlier.

In addition, the board will be entrusted with the exclusive task of formulation of the policies and their time-bound implementation. Admitted a senior official: "Earlier one could lay blame for inefficiency on the confusion here in the board, but now no one will be able to pass on the buck." The Telecommunications Department will now get its revenue surplus of over Rs 400 crore directly and postal losses will not be reflected in their annual balance sheets.

But the bifurcation of the department fell short of the general expectation that the new Government would announce the creation of a Telecommunications Commission on the pattern of commissions on space and electronics. In fact, soon after taking over Rajiv and his aides summoned files from the Space and Electronics Commission to study their structure. A note was sent to the Communications Ministry to study the possibility and recommend suitable measures to be taken by the Cabinet. But for over two months the top-notches of the ministry slept over it till a stiff reminder came from the Cabinet Secretariat.

Instead of pushing the idea of a corporation for the whole country the mandarins at Sanchar Bhawan pressed for the creation of a separate board and reluctantly processed the possibility of corporations in Delhi and Bombay. Surprisingly the opposition to the corporations came from within the Communications Ministry because it would lead to recruitment of the chairman from outside the department's own employees and make them more duty-bound than earlier. Said a senior official of Bombay Telephones: "In a corporation, officials can't exist as train passengers who can board it and leave it without any responsibility. We will have to show results otherwise all of us will be thrown out."

By launching new corporations, the Government intends to remove bureaucratic control over this sector. Once the corporations begin to work, they are likely to work purely on a commercial basis. Since the communication network has become one of the essential inputs in business activity, it is not available on demand at present. However, industry, trade and commerce suffer heavy losses due to the inefficient telecommunications system. Numerous new ventures could not take off due to the non-availability of a trusted communication facility and the red tapism involved in giving new connections. Recently a non-resident Indian had to approach the prime minister for getting a hot-line connection between his factory

11. Bullock Cart
12. Pump Set
13. Pedal Cycle
14. Horse
15. Engineering Insurance
16. Professional Indemnity
17. Workmen's Compensation
18. Multi Perils
19. Fidelity Guarantee
20. Plate Glass
21. Business Interruption
22. Cash in Transit
23. Marine

and many more.

Whether it's a 2 crore computer or 20,000 chickens

New India offers you all the assurance you need against anticipated loss of profits.

You'd be surprised at the range of covers New India has to offer.

Whether it's for a multi-crore, fourth generation computer malfunctioning when your company can least afford it. Or an epidemic striking all your young chickens with devastating effect.

Our Loss of Profits policy can secure you against crippling financial loss while you put your business house in order again.

You name it. . . we'll insure it

We have the widest range of assurance covers . . . more than 74 different schemes . . . ranging from covers against petty theft, forgery, arson, riots and strikes to professional indemnity, marine, accidents, illness to baggage, travel assurance, machinery breakdowns, T.V. sets, cycles and even rabbits.

And the premiums are a mere pittance when you consider the total value you are insured for.

We have a work-force of 14,000 people to service your needs from a network of 493 branches, 149 divisional offices, 11 regional offices in India and 29 offices around the world.

Call or write to your nearest New India office. We'll be glad to give you complete details.

NEW INDIA ASSURANCE
A subsidiary of the General Insurance Corpn. of India.

So much security. For so little.

in the south and New York because the ministry officials were unable to take a quick decision. By giving autonomy, the Government expects the corporations to take these decisions at their level purely on commercial and professional considerations.

The decision to float corporations—to begin with in Delhi and Bombay—followed the realisation that over 25 per cent of the phones are working in the metros and they yielded over 40 per cent of the telephone revenue. Since the demand in the cities is growing faster than the rest of country, the Government can't find sufficient funds to create facilities in other areas. Once the corporations are created and are allowed to raise their own resources, the Government will have surplus funds for investing in rural areas and spend it on research facilities. These corporations will not only have financial and administrative autonomy but will be given specific time-bound expansion programmes.

But the nagging question still persists as to whether they will be free from political and government control. If these also go the way of the other 200-odd public sector companies, then the dream of providing an efficient telecommunications service will collapse even before the idea fructifies.

—PRABHU CHAWLA

KERALA PORTS

Stormy Seas

ANY PORT in a storm is a phrase that can quite literally be applied to the current controversy brewing in Kerala over the future of its existing minor ports. The state's 580-km coastline boasts a total of 14 minor ports but that figure is misleading since most of them are inoperative. But only in the physical sense. In the political sense, however, they are hyper-active, specially Alleppey, 60 km from Cochin.

Originally the main port for the erstwhile state of Travancore, Alleppey is now a relic; the last sailing vessels to visit the port did so in 1978-79. Under pressure from local politicians, however, the state Government has been keeping Alleppey afloat at considerable expense with zero returns and at the cost of more viable ports like Beypore near Calicut and Neendakara near Quilon.

At Beypore, an agitation spearheaded by local CPI(M) MLA K. Moosankutty has been set in motion against the state Government's neglect of the port and the stepmotherly treatment given to Alleppey. Beypore exports timber (which has now been banned) and tiles and offers safe anchorage since it is a riverine port. But neglect over the years has led to accumulation of sandbanks at the mouth of the river, making it unsafe for navigation. The neglect has led to 600 port workers being laid off and an equal number losing their jobs in the state-owned Steel Industrial Limited, Kerala (SILK), which had a ship-breaking yard in the port. With no ships able to navigate the shallow approach, SILK has no ships left to break.

The agitation took a rather dramatic turn when Moosankutty and his supporters "captured" *Meena*, the sole dredger in the state, and insisted it remain at Beypore to dredge the river since it was pointless sending it to ports with no traffic. Meanwhile, local MLA's of other ports have demanded its "release". Minister of Ports N. Sreenivasan says the Central Government is not interested in maintaining minor ports as it does not have the money to maintain them. "All the MLA's and ministers want *Meena* to dredge their ports," he complains, "but we cannot afford to buy another dredger."

Despite the heated battle, the future of minor ports in Kerala is obviously bleak. The development of Cochin port and the completion of the broad gauge railway line between Cochin and Trivandrum sounded the death-knell and the failure of the traditional coir industry to offer sufficient tonnage for shipping lines and the start of containerised shipping were the final nail. Says P.K. Ramachandran Nair, director of ports: "The easy availability of fast dispatching systems such as goods trains and lorry transportation has contributed to the decline of coastal shipping through minor ports."

Obviously, the politicians do not agree. In Alleppey, the powerful Congress(I) MP Vakkom Purushothaman is making every effort to revive the port but his reasons are vague. Says he: "Alleppey port cannot be neglected because it has a historical background and at one time the entire foodgrains of the state came through this port." He wants Alleppey to be developed into a satellite port for Cochin with an internal depot.

SREEDHAR PILLAI

SREEDHAR PILLAI

Alleppey port (above) and Beypore harbour: political gamesmanship

The state Government, however, has continued to prop up Alleppey by maintaining a skeleton staff at the port and carrying out periodic inspections of the pier and the electric cranes which have not been in use for the last six years. Declares P. Viswalekshmi, veteran head of the Allepey Port Trade Union: "There is no point in opening the port because it would require crores and today most of the workers are dead. The state should therefore declare the port as antique."

There is little likelihood of that happening. Admits Ramachandran Nair: "I am personally of the opinion that Beypore and Neendakara should be given priority over other dead ports but the closure of other minor ports which are a drain on the state finances is a sensitive issue for local politicians." Operable or not, as long as there are politicians around, it looks like the more privileged of Kerala's minor ports will continue to cater to non-existent customers.

HOTELS

The Five Star Flap

CROWDED Bombay has no dearth of land scandals. From claustrophobic Colaba to aggravating Andheri, somebody is always either fiddling the floor space ratio or passing off residential land as industrial land or simply using muscle to build on areas originally designated green. Last fortnight, a particularly spectacular scandal sent delighted shivers through a city perpetually looking for excitement. Noted environmentalist Dr Rashmi Mayur of the Urban Development Institute accused the promoters of Hotel Leela Penta, an eight-floor 282-room five-star hotel coming up half-a-kilometre from the international airport at Sahar, of manipulating officials to get their baby off the ground.

Hotel Leela Venture Ltd, the company which is building the hotel at a cost of Rs 22.2 crore, was accused of using influence to rush plans and approvals past a number of procedural and legal hurdles with the help of people placed in powerful positions. Among other things the hotel is alleged to have violated the height restriction law in force around airports, is said to have somehow managed the lease of a large chunk of land from the International Airport Authority of India (IAAI) in an irregular fashion, is reported to have been helped by a Central minister and some bureaucrats to get the lucrative collaboration with Penta Hotels Ltd of UK—owned by the Lufthansa, Swissair and British Airways and to cap it all is charged with fiddling project reports so as to build on licensed government land whereas the old project report provided for a building on private land.

This is an unpretty kettle of charges and C.P. Krishnan Nair, chairman, and his son Vivek Nair, managing director, Hotel Leela Venture Ltd, admit to being considerably shaken especially after the Bombay Municipal Corporation (BMC) came down with a stay order on construction. Krishnan Nair, an affable former army captain who took to the handloom industry and made a considerable success of it—"Bleeding Madras and I are synonymous"—says that shock turned to anger when he realised the damage it might do to the project. "We have not flouted any law let alone the 20 mentioned in the newspaper report. Each and every procedure has been gone through. Nothing is irregular," expostulated Nair, brandishing a host of no-objection certificates (NOC's) approvals and lease and licence agreements to prove his point.

JAGANNATH DUBASHI

Nair in front of his hotel: grounded

The affair is an intricate maze of leases and licences, with a few NOC's thrown in here and there to make things difficult for any judge in case either Nair or Mayur decides to sue, one to defend a tarnished reputation and the other "in the public interest". The amount of land itself is disputed. Newspaper reports said that the hotel had taken over 50,000 sq m of area. Nair says that they are using only 29,000 sq m—18,000 sq m of lease and 11,000 on licence from the IAAI.

However, it is possible that both figures are off the mark, because the project report prepared by the State Bank of India (SBI) before Hotel Leela Venture Ltd went to the financial institutions for loans which were granted mentions a total of 36,000 sq m—9,000 sq m leased from IAAI, 20,000 sq m licenced from the same authority and 7,500 sq m either "acquired" or leased from Leela Scottish Lace Pvt Ltd, the promoter company. Nair says that in the end they decided not to use the last chunk of land, but the confusion over how much was actually leased and how much licensed from the IAAI still exists.

Another interesting piece of information can be got from a comparison of the SBI evaluation study and the Hotel Leela Venture Ltd prospectus issued when Rs 19 lakh worth of shares were offered to the public earlier this year. The first study mentions the name of Salman Khurshid, advocate, Supreme Court, as one of the directors. Khurshid's father is none other than Khurshid Alam Khan, former minister of state for tourism and civil aviation. The prospectus on the other hand does not have Khurshid's name and Nair explains, "He did not want to be on our board because of the problems it would create for his father."

Mayur brushes aside the certificates and everything else that Nair flourishes. He says that Nair is telling "lies all the way" and points to the letter Hotel Leela Venture Ltd wrote to the newspaper signed by Commercial Director R.S. Nair, which mentions the BMC stay order and adds, "the company has received commencement certificate for construction of the hotel up to the third floor and plans are approved up to the fourth floor. Our application for approval of building plans up to the eighth floor was submitted on December 22, 1984". Mayur says angrily: "Their way of working is to first build and then get it approved."

Nair doesn't pull any punches either. He wonders why nobody is raising a stink about the sulphuric acid manufacturing concern Star Chemicals Pvt Ltd adjacent to his hotel. Why false allegations are being made about construction on land meant for environmental development when he is doing precisely that by landscaping wide swathes of land into tastefully cultured gardens. "Mayur should actually be on my side," Nair complains.

It will be sometime before the tangle is sorted out. Hotel Leela Venture Ltd is busy clearing papers with the BMC and Nair thinks that work should start again this fortnight. Much is at stake, for with the backing of Penta Hotels, Hotel Leela Penta can be assured that at least 200 of its 282 rooms will be full on any given day because of the needs of the flight crews and the transit passengers. So Krishnan Nair, handloom doyen and hotelier, has a good thing going if he can soothe the ruffled passions of the city.

When the voltage rises most bulbs drop – dead

Elektron bulbs, on the other hand take voltage fluctuations in their stride. That's because of our specially designed filament. So you can be assured of 1000 light hours and more!

We make every single, tiny component ourselves — with the finest raw material. Infinite care is taken in mounting the delicate tungsten filament on to lead-in wires.

Elektron bulbs, in addition to the perfect filament construction, are filled with a high purity gas mixture — which makes them superior. Bulbs which withstand extreme voltage fluctuations and last longer.

Ask for Elektron by name; Elektron bulbs — with a longer lease of life.

at home amidst the wilds of Assam, covering the risks in oil drilling.

The virgin forests of Assam are pretty bleak as a place of work. Here, men brave torrential rains and inclement weather to hammer in miles and miles of precious steel into the bowels of the earth—in search of oil. Now, a tiny mistake at any stage of the operation—and you've lost millions of rupees in equipment and oil.

When the risks are staked so high you need to have total insurance coverage. The kind of coverage one has come to expect from National Insurance. While National is, essentially, an insurance company, it has field personnel who know the problems related to oil exploration like the back of their own hands.

This makes a world of difference when you're looking for insurance that gives comprehensive cover in high-investment, high-risk projects. National does it to your satisfaction.

National Insurance. Well connected with India's core industries. Not just oil and refineries, but iron ores, steel, tea, jute, shipping, chemicals—the lot.

National Insurance Company Limited
(A Subsidiary of General Insurance Corporation of India)

DCM

A Troubled Transition

LESS than a year after it began, the tussle for succession at DCM is finally over. The second generation of the Shriram family has made way for the third, and a new duo is in command at the Rs 550-crore turnover company. But the issue of who is actually number one, which prolonged the battle over at least three formal board meetings and many informal discussions, seems still to be unresolved. Not that the protagonists admit it. As far as they are concerned, it has been resolved and the board will work in absolute harmony, and perhaps a corporate giant which has slumbered all these years will once again get moving.

Last fortnight, Bansi Dhar, 55, nephew of former managing directors Bharat Ram and Charat Ram and till recently joint managing director, took over as chairman and senior managing director of DCM. Bharat Ram's eldest son Vinay Bharat Ram, 49, who was deputy managing director, is now managing director and continues as vice-chairman of DCM Toyota. Bharat Ram, 70, who was also chairman of the company and his brother Charat Ram, 67, stay on the board as non-executive directors. The new deputy managing director could be Siddharth Shriram, Charat Ram's second son, who heads Shriram Refrigeration Industries. Siddharth had not yet been formally approached for the job in the first half of last fortnight as he was in China with a delegation.

The transition of power at DCM, proposed by Bharat Ram last July, is the result of decisions arrived at on March 28 in New Delhi's Taj Mahal Hotel. Conflicting accounts of what went on at the board meeting are advanced, but two of those who attended it agree that it was if anything stormy. The meeting was deadlocked for almost three hours after it began at 2 p.m., principally on Vinay Bharat Ram's designation. Charat Ram reiterated his demand that Bansi Dhar should be made the sole managing director. The two sides stuck to their positions, the financial institutions with their 42 per cent stake in the company remaining neutral throughout. Finally, a non-institutional director intervened and an arrangement was worked out, but Charat Ram shot in a note dissenting with the board's decisions.

HARI OM GULATI

Bansi Dhar

PRAMOD PUSHKARNA

Vinay Bharat Ram

The board resolution is certainly silent on who will have the final say in the company... That could prove a contentious matter, but right now conciliation is the order of the day.

The resolution finally adopted at the meeting backs the position the board adopted when it met twice last October. In effect, it passes on Bharat Ram's mantle to his son, Vinay, and Charat Ram's to his nephew. Vinay Bharat Ram has been assigned five textile Mills (Delhi Cloth Mills, Hissar Textile Mills, DCM Silk Mills, Swatantra Bharat Mills and Hindon River Mills), DCM Engineering Products (an automotive foundry located at Ropar in Punjab), and DCM Data Products. He is also responsible for the working of Shriram Fibres and DCM Toyota, run by his brothers Arun and Vivek, respectively. Bansi Dhar will look after the head office, Shriram Rayons, and Shriram Fertilisers and Chemicals at Kota in Rajasthan, Shriram Foods and Fertiliser in the capital, the two sugar factories at Daurala and Mawana in Meerut, and will sit on the boards of DCM Toyota and Shriram Fibres.

That might look as if Bansi Dhar has got the better deal. (The company's fertiliser, chemical and sugar divisions earn profits that tot up to Rs 15 crore or more a year. The textile division on the other hand has been Rs 7 crore to Rs 10 crore in the red annually, though DCM Data Products is "on the upswing" and DCM Engineering was in the black last year.) But the present arrangement largely continues the past division of responsibilities, and family members are not claiming a victory for either side, arguing that the board has taken both viewpoints into account before arriving at any decisions.

The board resolution is certainly silent on who will have the final say in the company—leaving the question open to different interpretations. As Vinay Bharat Ram sees it, nowhere does the latest resolution state that the senior managing director will have the last word except in his areas of responsibility. But from Bansi Dhar's vantage point, the board has reaffirmed the decisions it took at its October meetings— and the October board resolution states that if there is a difference of opinion between the senior managing director and the managing director, the former would have the final word. That could prove a contentious matter, but right now conciliation is the order of the day. Says Vinay Bharat Ram: "Bansi Dhar is a very competent manager, a man of excellent human qualities. We have no background of personal differences and should make a good team." The compliment is reciprocated by Bansi Dhar.

The March 28 board resolution also says that the senior managing director's decisions on items to be sent to the board will be final, though he has to send on any major business policy decisions on his cousin's areas of responsibility if Vinay Bharat Ram so desires. Bansi Dhar points out that he cannot and will not

Digitized by Arya Samaj Foundation Chennai and eGangotri

block such issues going to the board.

The bonhomie apart, what is worrisome is the company's immediate outlook. DCM has fared poorly this year. According to a note submitted to the board, in the eight months ending in February the company made far less profits than it made in the same period the year before. (Profits last year finally touched Rs 15 crore or so on a turnover of Rs 502 crore.) Many of the problems are due to textiles which Vinay says, cropped up because operations were decentralised and the five mills competed with one another as separate profit centres.

However, big plans are afoot elsewhere. On the drawing-boards are a 25 per cent expansion of a fertiliser plant at Kota at an outlay of over Rs 40 crore, expansion of the sugar factory (Rs 10 crore), a biotechnology process product for which the company is talking to a Japanese firm and a foray into bulk drugs with the possibility of collaborating with Japanese or French firms. A modern new textile mill may also be launched at a cost of up to Rs. 50 crore. The bill for these and for a Rs 20-crore cement plant at Kota and other smaller projects, adds up to over Rs 125 crore.

The big question is: where will this money come from? DCM is strapped for cash, its board adopted a Rs 29-crore deficit budget last year, and servicing the Rs 30 crore in debentures it has raised will slice Rs 5 crore off annual profits. A company spokesman says that funds will be generated internally. The company can also go to the institutions for funds and the proviso that a firm has to sink in 20 per cent of project costs to be eligible for institutional finance may be waived. The management had also hoped that its rights to promote or set up a building on the valuable Delhi Cloth Mills land would net it fat sums. But that plan has fallen through, and while the closure of some textile mills may "scotch the losses permanently", the next two or three years may be rough going for DCM. —PALAKUNNATHU G. MATHAI

DCM

Labour Pains

THE VERDICT was clearly a blow for the company: DCM would not be allowed to close its 96-year-old textile mill in the heart of the capital's old city. But it has thrown up a host of associated issues, and may obliquely reflect on the Delhi Development Authority (DDA) which had cleared DCM's proposal to pull down the mill's tacky buildings, shift eleswhere, and put up "flatted" factories and houses on the 63-acre site.

The Delhi Administration's decision, announced a fortnight after the company had put in a formal application to shut down the mill which had a turnover of Rs 36.44 crore in 1984 on July 1. The decision supports the stand taken by Nita Bali, the administration's labour commissioner. After holding hearings on DCM's application, Bali strongly urged Delhi's Lt-Governor M.M.K. Wali to turn it down. She did not buy the company's argument that the mill was not viable, the buildings were old and unsafe and running the mill at its present site posed a danger to the health of the locality. She said that safety measures could be updated, closing the mill was not in the public interest since workers would lose jobs, and permitting the company to put the premises to commercial use would create a precedent for others. But in a statement released before the decision was announced, DCM Managing Director Vinay Bharat Ram argued that to bring the mill in line with international standards would call for an investment of almost Rs 60 crore —something impossible since the mill was in an area that does not conform to the capital's 1966 master plan and since the mill would have to shift eventually.

The two positions apart, what is evident is that the administration has thrown a lifeline to the mill's 6,109 employees who faced the axe, and defused an agitation by the mill's seven unions. The disparate unions had forged a common front and taken to the streets to protest the decision to down shutters. But for the moment, the unions are awaiting further developments. Says Brinda Karat, secretary of the Centre of Indian Trade Union affiliated Kapda Mazdoor Laljanda Union: "The administration has taken a tough stand and we welcome it. But when different government departments speak in two voices, one approving of the mill's closure and shift and the other not, will the matter end here?"

DCM's textile mill in Delhi and (inset) Bali: conflicting views

The point about the Government having been divided is echoed by a DCM spokesman. He says: "The initiative to shift the mill was taken by the administration."

Though the company may not get the 200 acres it had sought and may be given an alternate site in the long run, the decision raises more immediate questions. What options are now available to DCM? It could request the administration to review the decision, arguing that its own agencies had in the first place asked it to shift. It could also go to court. The company has contended that Section 25 (O) of the Industrial Disputes Act—the clause permits the Government to reject "in the public interest" a company's application to close shop—is unconstitutional.

The decision has other ramifications too. A senior administration bureaucrat questions the DDA's having backed the company's plan to develop a commercial complex on the premises: "The DDA has not allowed private companies to develop land in Delhi. Why did it back DCM's proposal?"

The question for the moment may be academic. What is of concern for DCM is that it is stuck with a business that loses Rs 2 crore a year—unless the textile policy now on the anvil catapults it into the pink again.

Prices were up only marginally last fortnight; industry and power generation, however, continue to languish and there is cause for concern. While commercial bank credit increased sharply, money supply as a whole has decelerated. Both the share and bullion markets are distinctly buoyant.

All data are seasonally adjusted. Current trends are computed on the basis of the last six months' data to which a regression is fitted.

Price increases in food products and manufactured products led to a 0.3 per cent increase in wholesale prices last fortnight.

Production was up by 0.3 per cent last month reinforcing a disappointing long term trend: mining and quarrying was the chief contributor.

Manufacturing output crawled up a meagre 0.1 per cent last month indicating no recovery after a sharp decline in the previous month.

Money supply was up 0.6 per cent last fortnight but showed signs of slowing down—bank credit expansion contributed chiefly to the growth.

Bank credit to firms accelerated to register a 1.1 per cent increase last fortnight at over twice the trend rate of growth.

The share market soared a further 4.8 per cent due to bullish conditions in tea plantations and transport equipment securities.

Power generation recorded an ominous drop of 0.3 per cent last month, the first time in five months, due to a drop in nuclear generation.

Gold prices were up by 1.8 per cent last fortnight showing a sharp increase in the course of one month.

THE MARKETS

Heady Heights

BOOM is a favourite four-letter word in the stock-market and the marketmen cannot apparently have enough of it. For two weeks running since the budget—and another two weeks before it—the market has been on what the junkies call a 'trip', scaling a new high every day. It has gained more than 10 per cent since the beginning of March and almost 25 per cent since the Rajiv Government was sworn in.

Cheerful corporate reports have helped fuel the boom. Reliance Textiles stepped up the dividend from 30 to 40 per cent after a year of record achievements, both in terms of turnover and profits. The company is planning to spend over Rs 650 crore in the next few years and is expected to displace Tata Steel from its No. 1 spot in the corporate stakes. Roplas (India) has stepped up the dividend from 15 to 18 per cent and so has Anil Starch. Doom Dooma has announced a bonus of 1 for 1 and hiked dividend from 30 to 35 per cent. Baroda

Rayon, Hindustan Ciba-Geigy and Guest Keen Williams have fared better than last year.

Delhi scrips have been rather slow in catching up with noisy goings-on elsewhere but they too have joined the mad race. DCM, which had been hovering around 50 for months, has shot up to 60 on rumours that the company was jettisoning its old textile mills in Delhi and selling the land for housing. Escorts too has lurched forward and is likely to touch 70 before the month is out. In Calcutta, tea shares were in the limelight because of high auction prices as well as concessions announced in the budget. And in Bombay, Gwalior Rayon has perked up on reports that its cement plant had swung into production.

Most scrips are so high-priced one is scared to touch them. But some shares, particularly in Calcutta, continue to be in the dumps. Guest Keen Williams is still quoted below 25 and so is Indian Cable. They are far too closely associated with the public sector to take advantage of the budget.

How long will the boom last? It is anybody's guess but the picture might turn radically if the power situation, already rather serious, gets out of control. A number of states including Karnataka, Haryana, Uttar Pradesh, and, to a certain extent, Tamil Nadu and Rajasthan, are passing through something of a crisis. Then there is inflation, or the fear of inflation, whatever government spokesmen might say. Prices of most consumer items have shot up 15 to 20 per cent since the budget and further price hikes are on the cards. The only thing that will sustain the market at its current high level is higher production and, of course, higher profits. Companies like Reliance Textiles which are modernising and expanding like mad are a good bet, but what about the rest? *That* is the question.

RAJIV GANDHI

Image Building

WHAT kind of a man is Rajiv Gandhi? The question gnaws at the cerebral nerves of politicians, diplomats, analysts and commentators as the 40-year-old prime minister of India moves confidently towards the 175th day of his rule, and gives the impression that he may well occupy the cockpit of power for 5,000 days. Little is publicly known about his childhood, of how he grew up in a split family, of his formative years in school and as a trainee pilot. Equally little is known of his early youth. Not until Rajiv Gandhi "reluctantly" came into politics after the death of his brother, Sanjay, did he draw the limelight of public attention. In April 1981, *a Statesman* columnist, Sunanda Datta-Ray, asked the budding politician to come out of his mother's skirts. "Will the real Rajiv Gandhi please stand up and declare himself?" asked Datta-Ray. Rajiv responded promptly, resigned his pilot's job, contested and won the Amethi seat for the Lok Sabha, made himself visible to the people.

Now, four years later, has the "real" Rajiv Gandhi fully "declared himself"? In the half-a-dozen interviews he has given to Indian and foreign reporters, he has sketched out his personality, his mind and his character. In the first flush of a national euphoria, he has been enjoying the indulgence of the political and intellectual elite that his mother did not when she was chosen prime minister in January 1966. Social scientist V.A. Pai Panandikar has identified the social base of Rajiv's politics: "a coalition with the 200 million-strong Indian middle class", most of them young, possibly below 40. Editor Girilal Jain has frankly confessed to a "generation gap between the new ruler and commentators like me". Rajiv's friend and aide Arun Singh helped identify the gap: "We were of the Beatles generation", he told a reporter. What does that mean in terms of political thinking and political values? How does "Beatleism" relate to the form and content of Indian politics, India's political culture?

Students of political affairs now look for the minds of political actors, their personality and their style. Psychological study of political leaders is an infant sub-discipline. In Rajiv's case, it is a difficult task because his mother's private life was very private. A few interesting glimpses are, however, available. In the anecdotes Mrs Gandhi narrated for record of the childhood of her two sons, Rajiv was seldom mentioned; it was almost always Sanjay. Sanjay was the mother's pet; perhaps also the grandfather's. Was Rajiv, then, his father's son?

So little is known of the relationship the two sons had with their father that it is impossible to get reliable clues to the influence Feroze Gandhi might have had on the formative years of Rajiv's life. If, as Girilal Jain has suggested, Rajiv is giving the impression that he wants to distance himself from Mrs Gandhi's style of politics—the young prime minister has on more than one occasion roundly deplored the accumulated silt of the last 20 years in the Indian political process—did he entertain a grievance against his mother for being deprived of his father in the boyhood years of his life? It is known, on the evidence of published stories of their childhood and youth, that there wasn't much love lost between the two brothers. One of the reasons why the close cronies of Sanjay and his wife so strongly resisted the move in 1980-81 to induct Rajiv into politics is that they knew that, given the authority, Rajiv would undo almost everything Sanjay had done in the bizarre years of the Emergency and thereafter. He has himself partly confirmed this in his interview with M.J. Akbar of *Sunday*.

The image of the man whose pilotship of India is seen with so much affection and hope by most of his countrymen is being projected with considerable skill and care on the canvas of the Indian mind. He is unflappable. He can take a 20-hour working day lightly in his daily stride. He is unworrisome. Asked whether he was bothered about threats to his life, he said: "That sort of thing doesn't bother me." He is strong; he did not cry when he heard the news of his mother's assassination. He is unloaded with a sense of destiny: "You know I didn't particularly want this chair. And I don't care if I lose it."

> **Rajiv seems to suffer from three major weaknesses. He has been reckless in the use of political invectives. He has been somewhat too generous with promises. Above all, he has not found a new language of politics.**

He is a doer, has given "an activist lead." He is not a pusher, although he realises the impact of "doing things with a bang". He doesn't wish to push people and institutions too much, Rajiv has said, "you don't want to cross the rails the other way and go to the other side." He has spoken about the importance of "principle and ideology" in politics, without explaining what his ideology is. One student of the Gandhi family says Rajiv has been from his youth a believer in "social democracy". His father was once friendly with the communists, but later broke with them completely. His image builders project him as a modernizer, a pilot who wants to land India safely and surely on the 21st century. He is not religious. He believes in "morality, rights and wrongs"—a statement that has been confirmed by Arun Singh.

The image may or may not be the real man whom time will reveal in increasing clarity. For the present, he seems to suffer from three major weaknesses. He has been reckless in the use of political invectives, making charges against the Opposition he cannot substantiate and which undermine his image as a conciliator. He has been somewhat too generous with promises; though he has done quite a bit to clean up the top levels of the raj, and to correct its enormous sloppiness, his deliveries have inevitably fallen short of his promises. Above all, he has not found a new language of politics. His orations, mercifully short, reflect his mother's political mind rather than his own political and administrative actions. Rajiv Gandhi does not seem to have a conceptual mind; so far he has given no evidence of visualising a new architecture of Indian politics. His mind is rather problem-solving—an airline pilot's mind rather than the mind of the pilot of the world's largest democracy. That's why he has been short on ideology and quite long on pragmatism. However, the man's political mind is still in the making. It will continue to compel close and careful watching in India and abroad.

Uptron equipment
part of a

Uptron commissioned a somewhat similar system for Air India in 1980.

So when Indian Airlines decided to computerise their reservation system, they too opted for Uptron's data communication equipment. And for sound reasons.

The right mix of hardware and software for instance. A proven track-record. Highly qualified professionals. The capability to install and maintain such a complex network. And, a corporate excellence that few can match.

Today, hundreds of Uptron terminals, cluster controllers, nodal processors, statistical and time division multiplexers and modems

UPTRON

are networked across India's East and West regions to give instant on-the-spot reservation on any flight.

Best wishes to Indian Airlines on this venture of national importance.

UPTRON

Cost effective computers, process control systems, communication systems, TVs and components.

BIHAR

The Kidnap Trap

IN THE thick jungles and hillocks of west Champaran, the north-west district of Bihar nestling in the shadows of the Himalayas, a new and very lucrative industry has been developing since 1981: kidnapping for ransom. Since then, according to local estimates, over 600 people have been kidnapped and ransom amounting to a mind-boggling Rs 6 crore has changed hands. From inside the lush terrain, criss-crossed by rivers, the six gangs of kidnappers wield enormous power, levying taxes on poor farmers, lifting grain, cattle and tractors as they please and issuing notices in the name of "Bihar sarkar".

But it was only last month, when Prime Minister Rajiv Gandhi, horrified at the escalating crime graph, asked Chief Minister Bindeshwari Dubey to clean up the mess, that the real Bihar sarkar swung into action. Immediately the anti-kidnapper drive became priority No. 1 and the state administration launched its biggest-ever hunt impressively titled Operation Black Panther. But like all projects conceived in a hurry, the operation is pock-marked with problems and its chances of success, dubious. INDIA TODAY*'s Patna Correspondent* FARZAND AHMED, *along with freelance photographer K.M. Kishan spent a couple of days and nights inside the jungles with the Bihar Military Police* (BMP) *to assess the project. His report:*

Map by B K SHARMA

THERE is defeat and demoralisation on the faces of the police officials who have been combing the deep, labyrinthine forests of west Champaran since the lofty Operation Black Panther was launched sometime ago. The 90-km range on the Indo-Nepal border is dotted with newly dug trenches and some of the BMP's finest marksmen have been waiting there, round the clock, their fingers positioned on the triggers of their semi-automatics. "It is the biggest ever operation in Bihar," said Inspector General of Police (Crime Branch) S.N. Roy. Added Arun Narain Singh, DIG (Anti-dacoity): "It is the final assault on the gangs and everybody in the police department has a stake in its success."

Everything about the operation, however, seems to be spelling failure, not

BMP jawans waiting in trenches: elusive quarry

Digitized by Arya Samaj Foundation Chennai and eGangotri

success. The police department itself started off on the wrong note. Instead of careful planning and team coordination, the project began with ego war in the police headquarters. When Rajiv Gandhi expressed his concern about the kidnappings, DGP Jagat Anand immediately prepared a blueprint to tackle the problem. Before he could announce his intentions, however, Chief Minister Dubey moved in and suggested the name of Ram Chandra Khan, DIG, Bihar Military Police to lead the operation.

Khan is a known strategist who has in the past broken 30 gangs including the dreaded gang of Kamdeo Singh, disarmed militant tribals in Bokaro and tamed the naxalites in rural Patna. Impeccable credentials, but sources revealed that Khan never could get along with Jagat Anand and when his name was suggested by the chief minister, tension was anticipated. It came. Khan was made leader but all plans and details were kept secret from him. He was not allowed to see any files at any stage but was asked to go ahead with the operation, and quickly. On March 22, when he took over charge, Khan found that even the manpower assigned to him had not arrived. Moreover, much to his dismay, the date of the operation had been openly announced. Said he: "There must be top secrecy. An operation like this must have an element of surprise but all these things were non-existent in the whole planning." Three days later, before he could formulate any strategies of his own, Khan was suddenly replaced by DIG Jyoti Kumar Sinha. The first phase of Operation Black Panther was over and nothing had been accomplished.

Sinha was swamped with many of the same problems. The manpower assigned to him was inadequate and in some cases, shabbily trained. When he wanted jeeps for a surprise attack, he was told that all the jeeps had been sent for repair. He later found out that they were all in good working condition. Then, the local administration created so many little problems in the beginning, that, as a senior officer in Patna confessed, "all the criminals got time to withdraw into their hideouts or cross over into Nepal". On April 3, Sinha, while conducting raids in some remote area, caught a message on his wireless set, that a raiding party in Dhahana village had been attacked by some criminals. He immediately radioed his base in Bettiah for reinforcements. The reinforcements took eight hours to take off and by then it was too late.

One reason for his strategies failing one after another, Sinha feels, is that the kidnappers have nurtured well-paid moles in the administration. "We are concentrating on the gangs, a list has been prepared by the CID team operating in the area, we are likely to strike soon," said Sinha, "but some of the lower level personnel in the administration are suspected to have links with the kidnappers and unless we get cooperation from the local people, we will be nowhere."

Worse, some former police officials themselves seem to be guiding the kidnappers. Ram Dheni, once a subedar in the BMP, later suspended on a murder charge, is now reported to be master-

Jhha Mishra, mukhiya: living in fear

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

minding several of the kidnappers' operations. Said Sinha: "Our whole strategy may be exposed due to his presence among the criminals." Ramjatan Nonia, also now leading one of the kidnapping gangs, was once in home-guards himself and enjoys all the advantages of knowing the police working from the inside.

MOREOVER the densely forested 90-km long terrain is an unknown, unexplored world for the police force. Since the operation was flagged off in such a hurry, none of the police officers could familiarise themselves with the topography nor could any map be prepared. No reconnaissance was done and no air or ground survey carried out. The only map they had was an outdated one prepared in 1919 and since then no one had studied the interiors of the jungles. Said I. Lakra, who commands the Gobardhana Forest Zone: "The entire force is directionless, as the survey map of the forest department is leading them nowhere."

While the police grapples in the dark, the mysterious, winding jungles are working to the tremendous advantage of the kidnappers. "The hillocks act as observation posts," said J.K. Sinha, DIG, "even from a close range, the gang members can observe the activities of the police force without being seen." Still the police must do what it can. It has divided the entire area into two zones headed by commandants and each zone has been split into sectors. Thirty "posts" have been created in the trenches, fully equipped with sophisticated arms and wireless systems. In all, 11 companies of paramilitary forces have been deployed to finish only six gangs. Officers patrol the area day in and day out but the quarry has till now not showed up.

Obviously, then, the kidnappers are alive and well and probably having a good laugh as well. They enjoy full protection from some of the landlords, some of whom have even employed relations of the gang leaders as a favour to them. The local politicians are also quite unwilling to speak up against them since they bank on these criminals for their political survival during elections. Arjun Vikram Shah of the Congress(I) in Ramanagar constituency earned the

DIG Sinha: no cooperation

wrath of these gangs when he once tried to initiate action against them. During elections, gang leaders openly worked against him threatening people with death if they voted for him. Shah is now a minister of state but refuses to speak against them.

There are few willing to help the police because there are few who believe in the integrity of the police. Bacha Mishra, mukhiya of Jogappati who has employed his own armed guards said: "The gang leaders, even if arrested, would be released soon and after that they would take revenge. Once the police withdraw, there will be hell let loose by the gangs who enjoy the support of local landlords, politicians and the police." Said sarpanch Jangbahadur Mahto cynically, "It is the police in fact which is spying for the criminals. How can this operation be successful?"

The situation is certainly grave and growing more serious every year. The kidnapping business began in early 1981 on a small scale. By last year it had turned into a flourishing industry. Official statistics reveal that in 1981, the police registered only five cases of kidnapping for ransom, in 1982 it registered 16, in 1983—48, in 1984—22, and by March 16,1985 it had already recorded 22 kidnapping cases. And those are official statistics alone. Ransoms have been ranging from Rs 25,000 to Rs 4 lakh. The six kidnapper gangs—headed by Nema Ahir, Dhurup Yadav, Dhurup Mallah, Ramjatan Nonia, Satyanarain Yadav and Surajpati Yadav—have established a parallel administration that does anything it pleases. Now that the kidnappers have become rich men, they have also started acquiring property and investing money in business through benami deals. "Once we finish the operation we can probe how much benami land has been transacted or business established," said Sinha. But first, he is determined to get his kidnappers.

Just how successful he'll be in that is debatable. Last year, a special drive to arrest 204 criminals ended with the capture of only 54. Some of the dreaded gang leaders have indeed been killed in the past—but not by the police. They have died either in gang warfare or in encounters with villagers. So far no firearms have been seized, no major encounters taken place and only six innocent persons arrested for interrogation. Any new strategies that are suggested are reportedly vetoed by conventional senior police officials. According to reliable sources, Sinha had suggested rounding up the criminals during election time as many gang leaders emerge from hiding at that time to help their favoured candidates. Sinha suggested that plain clothesmen circulate amongst the canvassers to capture, or at least spy on the criminals. His idea was turned down and the police department still does not have a full description of the gang leaders.

Sinha is now a man in a hurry. He has to round up the kidnappers before the rains set in and completely cut off the forests. "I am getting good response and hope something will be done in the next two months," he said. But everything seems to be working against him and publicity, too, has done the project as much harm as anything else. Unless a miracle helps him, Operation Black Panther may end up as an expensive picnic with the kidnappers having the last laugh from their hideouts in the jungles.

Innocent villagers under arrest

Not all refrigerators are made like this

Japanese technology puts Allwyn in a class by itself

The Allwyn 2000 SL is in a class by itself. Unbeatable in performance. Unmatched in years of trouble free service. It's the only Indian refrigerator with the smooth silent efficiency and confident guarantee of Japanese technology behind it.

Allwyn comes in a wide range... six models to choose from. 85, 165 and 300 litres in single door... 165, 300 and 380 litres in the double door models. There's sure to be one just right for your family!

Take a look at what Allwyn offers you...

Hitachi at the heart!

The Allwyn compressor is made under licence from Hitachi... made for negligible compressor failure and smooth, silent efficiency.

Who needs a voltage stabiliser?

Allwyn tackles voltage fluctuations from 150 to 260 volts... so you don't need a stabiliser!

Ice in a trice!

Its unique Roll Bond freezer makes ice quicker even while it preserves food for days.

Sayonara huge big electricity bills.

The Allwyn consumes 10% less electricity because of superior Japanese technology.

Defrosting never was so easy...

A self draining system for easy defrosting. High Impact Polystyrene/ ABS linings for sleek roomy interiors.

Service before you can say Allwyn!

Allywn comes with the biggest service network. You may never need it but help is available at the other end of the telephone.

The ready-to-take-on-the-world refrigerators.

Allwyn invests Rs. 8 crores in plant and equipment modernisation to constantly upgrade know how and update products for you.

Is Calcutta DYING?

ROBERT Clive, the great empire builder, called it "the most wicked place in the universe" and poet Rudyard Kipling named it the "city of dreadful night". But it was author Geoffrey Moorhouse, who perhaps came closest to the truth. "Very few people have said anything nice about Calcutta," he wrote, "unless they were Bengali." Rajiv Gandhi isn't and his ill-advised remark in Parliament last month in which he called Calcutta a "dying city" triggered off a predictable storm of protest. The issue dominated the West Bengal Assembly for days with Left Front members led by Chief Minister Jyoti Basu demanding a retraction. An opinion poll carried out by *The Telegraph* during the peak of the controversy revealed that 60 per cent of those interviewed felt that Rajiv Gandhi had hurt their feelings and 66 per cent said that the city was definitely not dying.

The reaction was typical. Calcutta, has always attracted extreme opinions. But despite the obvious signs of decay, its inhabitants continue to display a fierce if not irrational, loyalty and pride in the city, specially the Bengalis. Last fortnight, as the sultry claws of summer clutched at the city, Rajiv's words sounded like an epitaph. The frequency of routine power cuts spurted, another half a dozen jute mills downed their shutters, the state Government ran out of money and new appointments were banned; taxis and minibuses went off the roads in protest against the petrol price hike, the municipal corporation declared it did not have enough money to maintain its new civic assets; the telephone authorities announced a whopping 55,000 lines lying 'dead' and said there was no hope of putting the tangle right before two years; and economists spoke of a steady demand recession in Calcutta which made most economic activities unproductive.

A modern-day visitor, if he comes by air, will motor down an expressway that cuts through the erstwhile eastern swamp which Job Charnock some 300 years ago found so impregnable against enemy forays that he located the city near it. The swamps have disappeared alright, giving way to the planned township of Salt Lake, often hailed as the "new Calcutta". Still the expressway leads straight into the jaws of a nightmare that is Calcutta. Across a modern flyover on the defensive canal system that the British had built in the 18th century, the roads are often no wider than by just two traffic lanes, lined with rows upon rows of crumbling stucco houses so weak that a cyclone can raze some of them to the ground. Not a monsoon passes without some of them actually going down.

Chittaranjan Avenue, the main north-central artery built during the '40s (a new road in Calcutta is such a rarity that many citizens still call it the 'new road'), has a bombed-out look reminiscent of the London blitz. It is battered and bruised by a subway system only a quarter of which has been completed in 13 years. The traffic is a maddening medley of trucks, cars, oxcarts, handcarts and 20,000 hand-pulled rickshaws, most of which are unlicensed. The traffic snarl-ups are often two kilometres long and take a whole evening to straighten out. The air has a sinister smell reeking of effluent gases pouring down on the city by convection current. And then the power supply breaks down, plunging large stretches of roads into total darkness and confusion, interrupting students' classwork, factory production even work at doctors' clinics.

Physical impressions confirm the aggregate statistics of squalor, some of which are as follows:

► about two-thirds of the people (population: 10.2 million in greater Calcutta) live in make shift, non-permanent (mud or thatched-roof) buildings;

▶ a third of the 3.3 million people living in the core area of the city rough it out in slums with less than 30 sq ft per dweller;

▶ the per capita open space (such as parks) in Calcutta is 21 sq ft against 250 sq ft in London: in more congested localities of the city the area is not even two square feet.

▶ only 6 per cent of Calcutta's area is under roads as against Bombay's 12 per cent and Delhi's 20 per cent;

▶ traffic crawls at an average 8 km per hour, half as fast as in Bombay which has more than thrice Calcutta's 1.9 lakh registered vehicles;

▶ three lakh Calcuttans live, procreate and die on the pavements: some of these pavement dwellers came in as early as the 1914-18 World War but could not make it to a house ever since;

▶ over 7,000 people die in Calcutta every year because of dysentry, diarrhoea, tuberculosis, and respiratory infections—just four broad categories of quality-of-life related diseases; and, worst of all,

▶ the average Calcuttan is getting poorer compared to his counterparts in Bombay and Delhi: with a per capita income of Rs 1,133 (at 1970-71 prices) in greater Calcutta, the average Calcuttan is worse off than a Bombayite by 26 per cent and than a Delhiwalla by 33 per cent.

The undeniable fact, obscured by hyperbole and emotion, is that Calcutta is not just managing to survive at its acknowledged low level of existence: on the contrary, as late British journalist James Cameron had said, "the filth is getting filthier, the squalor more squalid." In the five years beginning from 1983-84, the CMDA will be spending Rs 330 crore—or Rs 60 per resident of greater Calcutta per annum—not to speak of central investment on the metro rail (subway) project and the Rs 140-crore second Hooghly Bridge scheme.

The epitomes of Calcutta's dwindling work ethos are of course the government offices in the city, particularly the Gothic-style Writers' Building with statuary on its top. The Marxist-controlled Employees' Coordination Committee carried on a hectic campaign last year to inculcate a "new work culture" into its followers, urging them —through multi-coloured posters—to leave no work pending, to attend office punctually, and to avoid "idle gossip" during working hours. Result: when the Marxists really began insisting on punctual attendance a large chunk of the employees left them to join the Congress(I)-controlled Employees' Federation. The overriding first impression of the Writers' Building is of ill-lit corridors and grimy cubicles, of vacant chairs because the babus had gone away to attend union meetings, of the smell of egg being fried at over 20 unauthorised canteens one of which is right behind the chief minister's chamber.

Equally dismal are the affairs of the Calcutta Municipal Corporation, the venerable civic body established in 1726. The cor-

poration's 38,000 employees are organised into a record 120 trade unions and are so legalistic that they cannot be made to do anything beyond the definition of their jobs. So the driver of conservancy trucks would not condescend to check if the tyre pressure is alright; the staff whose job is to collect garbage from the vats would stay idle if the vats had been removed from their places, which is a normal occurrence anyway; the staff at the corporation-controlled crematoria would quietly leave a half-burnt body inside the chamber if load-shedding hours overlap with shift changes, and bereaved family members must wait for men on the next shift to slowly arrive.

Behind Calcutta's urban decay, there is often an overdose of politics and a pathological emphasis on legalism rather than achieving result. The Marxists are not alone to be blamed, for this is a trait that cuts across party lines. The Calcuttan is generally a great scuttler, and more often than not he scuttles his own interest. Thus, the 3,000 illegal cattle-sheds in the city, accounting for a large share of the 2,000 tonnes of daily garbage accretion, cannot be removed (there are 750 court injunctions now) even though the CMDA has spent Rs 10 crore to build alternative sheds. The metro rail project was delayed by over a year because of legal resistance offered by the affected people. The Eastern Bypass cannot be extended to thickly built-up south Calcutta because a dozen villagers whose houses fall along the way have refused handsome compensation offered by the state and the Congress(I) supports them to the hilt.

But the installation of the Left Front Government in 1977, and the two earlier United Front regimes between 1967 and 1970, clearly gave an official seal on over-righteousness and inactivity. "The work-force in Calcutta is not just militant," says Shyamal Mitra, owner of Nalanda Press which is locked up now, "but also unwilling to work: in my line, for a rupee spent on labour in Calcutta, you get an output which is at least 30 per cent less than in Delhi." Hundreds of small entrepreneurs like Mitra are bitter. But the big-time industrialists are simply withdrawing their investments and future plans from Calcutta without getting drawn into an overt confrontation with the state Government. And many of them privately allege that it is the lackadaisical labour, and the "institutional encouragement" provided to such indolence, that shaped their decisions.

The Birlas, for instance, have not set up any project in or around Calcutta since the Hindustan Motors went into production in 1953. Nor have the Goenkas of the Duncan group made any worthwhile investment in greater Calcutta in the past three decades. The children of the top industrial families of the city are gradually shifting to greener pastures in Bombay. Ashok and Aditya, two of the later generation Birlas, have made Bombay their home base. R.P. Goenka, the wealthiest member of the Duncan family, formally shifted his residence to Bombay last year. The palatial homes of the Calcutta businessmen, occupying huge tracts of land in some of the city's prime areas, are now a grim reminder of Calcutta's past glory as the nation's foremost financial centre.

With investors leaving, jobs have to follow suit. In the

decade between 1961 and 1971, only two lakh new jobs were created in greater Calcutta even though population grew by 24 per cent to seven million. In the next 10 years, two-and-a-half lakh new jobs came up when population rose by another two million. Says Soumitra Chowdhury, a commerce graduate who has got his name registered with the employment exchange in Calcutta but has not found a job after a full year's wait: "The only job that I was offered in the past six months was that of a postal peon. My father was a lawyer. I don't want to be a peon. I must be at least a clerk. No matter what the salary is. At least a clerk." So, there is an element of self-esteem also that stands in the way of the impoverished Bengali Calcuttan taking up any job. In 1981, only 8.62 per cent of the clerical posts in Calcutta were held by non-Bengalis whereas their share of menial jobs was as high as 63.5 per cent.

In fact, the 'true blue' Calcutta Bengalis, who constitute nearly three-fourths of the population of greater Calcutta (two-thirds of the population of the core city), are caught in a cleft stick: the labour market is dominated by the upcountry labourers whereas the money market is controlled by non-Bengali traders, mainly the Marwaris. And all communities have given back to the city much less than what they have taken away.

If Bombay is a city built on the munificence of its Parsi community, Calcutta is singularly unlucky in being deprived of the generosity of its settlers. The 82 bathing steps on the river bank, the first palaces, the first parks, the early roads—they were all built by Bengali businessmen and landlords whose affluence waned with the loss of East Bengal, the main source of their earnings. As the non-Bengali traders took over the city's and the state's, economic levers, their citadel Burrabazar, turned into one of the world's most congested 'business ghetto', with five lakh people stuffed into a bare 3.5 square kilometre area. Burrabazar pays 60 per cent of the city's sales tax revenue, but it is also the biggest drag on the city's civic resources. Says Rajesh Khaitan, MLA from Burrabazar: "The only remedy left is for the state Government to close down Burrabazar and provide alternative site to the traders."

But Calcutta is also used, and abused, by the migratory and settled labour force, and by the estimated one million commuters who descend on the city every morning to work—in buses and trains that run jam-packed. There are also the thousands who flock into Calcutta lured by the city lights. Says Dipak Rudra, the scholarly secretary in the transport department: "What has really happened is that the city has passed into the grip of users, people who extract a lot from Calcutta but do not give back anything." The user's mentality spreads to every class of Calcuttan, including those who reside in the city.

Instead of ensuring a better management for Calcutta proper, the ruling Left Front is merely diluting the much-needed funds for the city's development by annexing into the area of Calcutta's urban agglomeration, called Calcutta Metropolitan District (CMD), more and more semi-urban municipal towns. The present CMD now includes 34 municipalities, three corporations, two notified areas and 182 *anchals*: some of them are 45 km away from the city proper. Funds for Calcutta's deve-

development are being systematically drained away to these small towns. The per capita planned outlay for Calcutta, which was Rs 61.54 in 1976-77, dropped to Rs 59.53 in 1980-81, but the figure for the CMDA local bodies other than Calcutta and Howrah was raised from Rs 19.88 to Rs 30.40 during the same period.

The Marxists also do not want to remove the slums, either by force or by allowing the market forces to have a free play. "It is inhuman to remove the slum dwellers by force," says Ashim Dasgupta, member of the state planning board and a Marxist economist who wields considerable influence in the Government. Only a half of the slums, where one-third Calcuttans live, have been 'improved' so far with community toilets, metal roads, electric lights and better roofing. But the improvement work mostly is a waste and the slums regain their original griminess in one or two years because the CMDA spends a meagre 5 per cent of its budget on the maintenance of assets created by it. Nor has the state Government any worthwhile scheme to resettle the slum-dwellers in cheap houses: the state housing board makes, and sells, flats worth Rs 3 lakh each but earmarks only 0.7 per cent of its funds for houses in the lowest category of income.

The CMDA's efforts have merely patched some of the gaping wounds in the city's civic fabric by adding new water treatment plant, roads, bridges, sewer and water supply system. But Lina Chakravarty, chief executive of the CMDA, admits: "We have checked further deterioration of the city to some extent but in essence most of our work has been a holding operation." The CMDA received capital assistance worth Rs 120 crore from World Bank till 1983-84, but is now receiving around Rs 160 crore from the bank for projects that will continue for another five years. A bulk of the funds is spent on capital cost, and maintenance is neglected because the municipal bodies, as well as Calcutta Corporation, cannot generate enough revenue for development.

The Left Front is also quite unable to take hard decisions and make the city's users pay enough to keep the civic bodies out of the red. In Bombay, for instance, building owners pay at rates ranging from 66 per cent to 82 per cent of the rateable (or assessed) value of their houses every year as property taxes. But in Calcutta the property taxes are only 40 per cent in the highest slab—unlike in Bombay, where all buildings are taxed, small dwellings are entirely exempt from property taxes. Sur says even his attempt to instal water metres at homes were thwarted by angry rate payers "who demand everything free". Says Dhruba Narayan Bannerjee, special secretary in the Urban Affairs Department: "Unbalanced city growth is continuing because old building bye-laws continue to be the basis for giving sanctions to building plans."

Jogendra Chowdhury, a Calcutta gynaecologist who had made common cause with a group of citizens and tried last year to stall the construction of an unauthorised building, gave vent to his bitter realisation. Said Chowdhury: "I am alarmed by the kind of city my children and grandchildren are going to inherit. In Calcutta the state has no authority, and the city's entire skyline is illegal—a graphic testament to the helplessness of

the state." The corporation has only 20 staff to check against unauthorised construction, and the standard practice of the city's buccaneering builders is to build regardless, then to secure stay order against demolition, and finally to settle for a compensation. "A sense of cynicism has set in among the people of Calcutta," says Rusi Modi, chairman of the Tata Iron and Steel Company (TISCO), "and most people have lost the sense of consideration for the society."

The apathy of the Calcuttan to his lot is phenomenal; the level of his tolerance is mind-boggling. Says a Bengali television-manufacturer: "I have made repeated efforts to get industrialists in my area to pool funds and set up a captive power plant because the state sector will never be able to meet the demand. But my neighbours would rather suffer in silence than get together and do something." The couldn't-care-less syndrome percolates down to the lowest level. At the Dhakuria lakes overlooking the expensive high-rise buildings of Southern Avenue, pavement dwellers defecate on the open street. The ghastly sight in the morning is tolerated by citizens without even a mild frown. Nobody bats an eyelid when heavy-duty trucks enter prohibited roads upon paying a small bribe to the smiling policeman.

The inveterate Calcuttan says he is still happy, a fact borne out by *The Telegraph*'s opinion poll. For old-timers, Calcutta still evokes the memory of the pre-Partition days when the city was graceful, there was a grandeur in the tree-lined quiet European quarters of the city and the emerald green of the maidans, and the riverbank—still uncluttered by the cars of the *nouveau riche*—invested with a sense of mystery. Recalls industrialist Basant Kumar Birla: "Calcutta was not just neat and clean when I was young, it was actually beautiful. During December people from all over the country would converge here for polo tournaments, the races, the tennis matches and social events. Calcutta was right on top."

To others, Calcutta seems preferable for the intimate social ties that bind its citizens together; these ties do not exist in any other Indian metropolis. Says Manjira Bhattacharjee, a young housewife who is studying dentistry and wants to set up practice at her home in Calcutta: "I won't leave Calcutta even if someone offers me a big bungalow in Delhi or Bombay and two big cars. I know everyone in my neighbourhood and everyone knows me. We stand by each other when need arises. Tell me in which city people of a neighbourhood live like one family?" The Calcuttan grumbles, but does not think of leaving his city. And the attachment can be hardly necrophilic.

The Calcuttan makes up for his materialist lethargy with a degree of cerebration that one seldom comes across at any other Indian metropolis. Earlier this year, Calcutta hosted a festival of poetry which was attended by over one lakh people. The Calcutta Book Fair is the largest book fair in India. Relying on meagre resources, often saved from tiffin allowances, the city's unflappable literary enthusiasts brought out 732 literary magazines last year with their pages devoted neither to advertisements nor to detective stories and soft porn but pure literature, though of varying quality. In the past 30 years, the President's

Gold Medal has been bagged by 15 Bengali films made in Calcutta. It is a city whose legends are not building speculators or industrialists but men like Rabindranath Tagore, stage actor Utpal Dutt, painter Abaninanath or film maker Satyajit Ray. Says Ain Rashid Khan, police officer and maker of a well-acclaimed documentary film: "It speaks volumes for the city

that a film like Ray's *Ghare-Baire*...as complex and as devoid of cheap popular frills...can run in many theatres of Calcutta straight into what looks like a sure jubilee."

Many of the city's countless anonymous poets and unsung stage actors are holders of small jobs in obscure offices who sweat it out in public vehicles through choked streets to attend the literary *addas* (an untranslatable Bengali word, half way between a gossip circle and a discourse) or the evening theatre rehearsals. The fabled Uttam Kumar, Bengal's last matinee idol, was one such 'amateur actor' who acted after work as clerk at the Port Commissioners.

The intense cultural life of the city, the shared respect for lasting values in life and the arts, and a sense of togetherness —these are the underlying reasons that induce the Calcuttan to tolerate the squalor of Calcutta. "We grumble, we don't explode," says biochemist Indu Bhushan Chatterjee who would turn down offers of jobs abroad to stay back in the city and teach at the politics-ridden Calcutta University.

But hard physical and economic realities have begun to militate against the Calcuttan's acknowledged complacence about his city. Its cultural richness has been a product of its early economic growth, of European influences cross-fertilising local culture along the route of trade, commerce and conquest. But now the Bengali mind, though still productive, is tending to contract inwards into a provincial cocoon. The most visible manifestation of this regression is a failure to adopt new technology, to ingest new ideas and to rekindle the traditional Bengali spirit—that of rebellion. The Naxalite violence of 1970-71, in which over 1,000 people were slain on Calcutta streets purely because they chose to defend their ideas, are a matter of the past now. The quality of the city's politics has become staid, mediocre and marked by self-interest rather than passion.

And the city's economic importance is constantly ebbing away. Partition robbed it of a vast hinterland of 50 million in East Bengal. The percentage share of cargo handled at Calcutta port over the entire nation's was 43.29 per cent in 1947: it plummeted to a measly 10.9 per cent in 1981. A favourite among foreigners visiting India till the '50s, Calcutta is today avoided by the international tour groups as wormwood. In 1983, Delhi received 3.11 lakh foreign tourists, Bombay was visited by 3.35 lakh, even Madras by 78,000—but Calcutta was the destination of just 33,827 foreign visitors, mostly Bangladeshis. Says Nitish Sengupta, director-general of tourism in the Union Gov-

ernment who is himself a Calcuttan: "It has become impossible to sell Calcutta as a destination to foreigners. They are simply not interested."

The Left Front charges that it is in fact the Congress that is solely responsible for Calcutta's, and West Bengal's, suffering. Even Birla feels the same way. Says he:

"The Government of India's attitude to West Bengal has never been friendly." The Marxists harp on two facts: the freight equalisation policy of the Centre by which raw materials produced in Bengal and the eastern region are sold in the farthest corner of the country at the same price but the produces of other regions, such as cotton yarn, became dearer in the east; and industrial policy of the Centre which disfavoured core sector investment in West Bengal after the '50s. Nirmal Bose, the state industry minister, points out the fact that Dankuni Coal Gas complex, the first major Central industrial investment in the city's environs in recent times, was gifted by the Janata government. Added to that was the problem of refugees who had not been settled even 38 years after the Partition. Prasanta Sur, who came to political limelight organising East Bengal refugees, says: "The 4.75 million refugees from West Pakistan could be settled by the Congress Government by 1955-56; but the 4.9 million refugees from East Pakistan—whose unofficial number may be seven million—are not yet settled. The Congress is biased against Bengalis."

There may be an overdose of ire in Sur's remarks, but Calcutta still carries five lakh refugees who lead a sub human existence in suburban slums. Their progeny have mingled with the ranks of the urban poor and the impoverished middle class to provide an underpinning of violence and lawlessness to life in the city. Like ants from under the woodwork, they often come out in the open. And then occur the mindless murders, the stabbings for petty gains, the sudden orgies of violence. It is the pent up fury of the underdogs that sporadically cast on the city the shadow of an urban apocalypse.

It is this 'other Calcutta' that lives in the decaying houses of the old city and the suburbs, or in the slums that pervade 97 of the core area's 100 wards. They comprise a brotherhood of the poorest classes and the rooted middle class which is getting increasingly debased, de-cultured and despondent as opportunities shrink, jobs become scarce and life gets harder. On the other side of the fence lie the Edwardian mansions of Alipore, the expensive flats, the Honda generators that beat the load-shedding, the sweet security of the beautiful country club at Tollygunje, the pony races and the card games and the Christmas parties by the Hooghly. Like what the most determined detractor of Calcutta, Kipling, had prophesied, in a different context though, the twain shall not meet.

FOOTBALL

Off Side

IT WAS billed as the start of a sports exchange programme between India and Britain but instead turned out to be an embarrassing fiasco. Last fortnight, the team of young footballers from a community relations club in Newcastle-upon-Tyne returned home without setting foot on the playing field. Rather, they were lobbed from one place to another, shadowed by Intelligence Bureau (IB) sleuths and ensnarled in messy bureaucratic red tape.

As usual, there are conflicting versions of what exactly happened and why. The team members say they arrived in New Delhi but there was nobody to receive them. They made their own way to the Jawaharlal Nehru Stadium where they were housed for two days before being evicted and informed that the tour was off. With no matches to play and nowhere to go, the footballers arrived at the British High Commission where they were put up before finally winging their weary way homewards, fuming at the shabby treatment meted out to them.

The Sports Ministry, on the other hand, claims that the team was informed that the tour had been called off. But the real cause of the fiasco was obviously the security aspect arising out of the team's composition—six of the players were Sikhs of Indian origin while five were Pakistani. "We were not given an official reason but we assume that being Sikhs and Muslims we were considered a security risk," says Birender Brar, 24, the captain of the team. Major General Narinder Singh, director-general of Sports Authority of India (SAI), told the team that it would be impossible to guarantee their safety and if anything happened it could create an "international incident".

That there was a security angle to the messy affair was indicated by the presence of IB sleuths shadowing the team during their stay in Delhi. But instead of quietly deporting them, the Home Ministry allowed the team to stay on as tourists and even travel around the country. Some visited Punjab while others went to Jaipur and Agra.

Meanwhile, the various ministries involved played their own game of buck passing. When the British deputy high commissioner approached the Ministry of External Affairs he was politely told that there was an "internal problem". Earlier, when SAI contacted the Ministry of External Affairs, they were told that having arrived, the team should be allowed to play football. A joint secretary wrote to SAI that it would be "inelegant" to bundle the players back to Britain as it could result in "avoidable adverse publicity", advice that apparently went unheeded. The Home Ministry, on the other hand, also informed SAI that it had no objection to the tour if the Sports Ministry made an official request. The fact that the Sports Ministry never did make the request would indicate that there were differences in the ministry regarding the tour.

Minister of State for Sports, R.K. Jaichandra Singh, insisted the team had been informed that their tour had been called off. "I don't know why they had to come in spite of the fact that they were told not to come." He said the tour "would not have served much of a purpose on the football front as these persons were mainly of Asian stock. Asians are not very good in football". Singh said he would have been interested in a professional team, even a 4th division team in the British League. He claimed not to know anything about the security aspect.

Officials in the FAI say there was a security angle which concerned not the Sikhs on the team but the five players of Pakistani origin. They claimed that after clearing the tour on paper Foreign Ministry officials had unofficially advised the SAI to postpone the matches because the Pakistanis could be in danger in view of the recent communal riots in Hyderabad and Ahmedabad.

Whatever the reason, the players returned home thinking their colour and nationality had made them unwelcome. "The ironic thing is that they knew we were a multi-racial team but here (in India) they expected a wholly British team. Colonel A.B. Masih, deputy military advisor of the Indian High Commission in London came up to Newcastle to find out about us. He knew most of us were Indians. If we were Khalistanis why were visas given to us?" asked Kamaljit Singh Kundi, 24, a team member. "We have no political affiliation at all. All we wanted to do was to come and play football in India to show how multi-cultural people get on in England." But here they found themselves caught in a multi-ministry tangle. Soured by this experience at least some of the Indian passport holders planned to change their passports into British, said Brar and Kundi. One person who will definitely hear from the team is Colonel Masih. "When we get back we are going to send him a bill for the money we spent on his hotel and food bills when he visited Newcastle," snorted an angry Kundi.

BIHAR UNIVERSITY

Lessons of the Past

POLITICIANS in Bihar have long been notorious for meddling with higher education.Rules have been changed and appointments made under their pressure—all under the ruse of "creating a better academic climate". So it was that a major decision taken last month by the new Chief Minister Bindeshwari Dubey was warmly welcomed by the state's academic community.

Dubey told vice-chancellors and officials of the Education Department that even though there was an ordinance permitting vice-chancellors to appoint teachers on an ad hoc basis, no such appointments would be allowed by the new state Government which would set up a university service commission before the next academic session began in July. "This government," echoed Education Minister Uma Pandey, "will not tolerate any sort of ad hocism."

The chief minister's announcement has, in one stroke, nullified February's controversial ordinance initiated by the then education minister Nagendra Jha. Jha had described the move as a "boon" for those who had been kept waiting for appointments and promotions.

Dubey's pronouncement has been welcomed by the state's two major associations of university teachers, the Federation of University Teachers' Association of Bihar (FUTAB) and the Federation of University (Service) Teachers' Association of Bihar. FUTAB Joint Secretary Ekram Shabnam explained that following the February 5 ordinance ad hoc appointments were made indiscriminately, without any consideration for merit.

Shabnam revealed that at least two vice-chancellors had told him that the number of recommendations from political higher-ups exceeded the vacancies. Most vice-chancellors, said Shabnam, were only too willing to please their political masters with at least one vice-chancellor—of Magadh University in Bodh Gaya—showing such unseemly hurry to exercise his powers that the university had advertised vacancies on January 29, even before the ordinance had been promulgated!

This short period has not been the only time that university bosses have tried to convert the appointment of lecturers into a profitable "business". Till 1981 vice-chancellors were empowered to make ad hoc appointments for six months during which they were to be ratified by the Bihar Public Service Commission (BPSC). This continued virtually till March 1983, proved to be a bonanza for wheeler-dealers in education.

A. PRABHAKAR RAO

Dubey announced that though there was an ordinance permitting VC's to appoint teachers on an ad hoc basis, no such appointments would now be allowed.

A 1983 report by a university inquiry committee headed by Dr V.S. Jha, former director at the Commonwealth Education Liaison Unit (London) had cited several cases. The vice-chancellor of Bihar University, a close associate of the then chief minister Jagannath Mishra, had shown unseemly haste in promoting as many as 967 lecturers to readers in a period of theee months. "Surely it was not for nothing that the vice-chancellor went out of his way to grant favours," the report had commented.

In another case, the Jha report pointed out, a vice-chancellor who was a reader previously and who had been elevated on caste considerations had unabashedly appointed himself and his friends as professors.

Jha's report, had examined in detail what he called an "ingenious move to inject into university service, through the backdoor, lecturers whose professional competence has never been tested nor is likely to be tested". These appointments, mostly made by friends and relations, were in "hastily created" colleges set up by politicians whom Jha had described as "entrepreneurs". Nearly 7,000 such appointments were made, leading Jha to conclude: "Starting a college is a gainful business, provided you are a political boss or public nuisance."

Amid mounting public criticism the then Mishra government took the discretionary power away from the vice-chancellors and issued an ordinance providing for written tests for appointment of lecturers by the BPSC with effect from March 1983. However, before the BPSC, which is notorious for "selling" posts, could work out the details, the Mishra government went out of power.

In the intervening 20 months another problem has been created for the Dubey government to deal with: due to a liberal policy on promotions as many as 3,000 posts have fallen vacant in Bihar's universities.

Can the Government meet the three-month deadline? Uma Pandey is certain it can but the others are not so optimistic. Leading educationist, Dr Ramjee Prasad Singh, head of the Education Department of Patna University, points out that all governments had made similar commitments to carry out a thorough overhaul but all that resulted was chaos and confusion.

Patna today is a witness to the sagacity of Dr Singh's observation. The Jha commission had also pointed out that political bosses used to apply pressure to get "substandard" private colleges converted into constituent ones. Their success then still spawns hopes. Teachers, students and non-teaching staff of affiliated colleges are on a relay hunger strike near the Bihar secretariat since February 16 to demand conversion of their colleges into constituent units.

The Bihar State Affiliated Colleges Action Committee Convener Basudeo Prasad maintains that Prime Minister Rajiv Gandhi had met them and directed the then chief minister to look into their demands. He points out that no affiliated college has been converted into a constituent one after 1980 even though the Government has an annual budgetary provision of Rs 35 lakh for the purpose. Clearly, Dubey's ministry has its work cut out in attempting an overhaul of Bihar's universities. —FARZAND AHMED

An Oliva Ridely scoops up sand (left) before nesting on Ekakula beach

TURTLES

A Reptilian Refuge

THE EKAKULA beach on the Orissa coast stretches for 15 km and sits at one end of the picturesque Gahirmatha sanctuary. On most occasions, it is a desolate place where the wind whistles eerily through the casuarina trees and the water resembles tinted glass. For the first three months of the year, however, Ekakula enjoys the unique distinction of being the world's largest nesting site of the Oliva Ridely turtle. In that sense, Ekakula also symbolises the concerted battle being fought by conservationists to try and strike the ungainly, flippered reptiles off the Red List of endangered species

Each night during the nesting period, groups of men armed with rifles and torches patrol the beach to protect the reptiles from poachers and also to record all arrivals and departures. For the second successive year, the number of turtle arrivals has crossed the 300,000 mark and conservation officials in Orissa are elated that their efforts to save the reptile from extinction —a three-year concerted campaign against poaching—are finally beginning to pay rich dividends.

Paradoxically, Orissa itself has no market for turtle poachers. But turtle meat and soup is in great demand in West Bengal where sales had reached alarming proportions in recent years with Digha beach in the state's Midnapore district having become one of the major centres for the illegal turtle trade (INDIA TODAY, March 31, 1982).

Fishermen from Digha have been hired by illegal traders to trap turtles off the Ekakula beach and even steal their eggs, greatly valued as an aphrodisiac in West Bengal. Poaching is encouraged by the fact that the turtles are easy to catch either in nets or while mating in the sea off the coast, a process which can last up to 52 hours. Even more are caught when the females leave the water at night to come ashore for nesting.

Subsequently, more females fall prey to the poachers than the males, who never leave the sea, leading to a crucial imbalance in the sex ratio. This is further compounded by the rich harvest of eggs reaped by poachers. The females lay their eggs in shallow pits scooped out of the sand—each turtle lays an average of 100 ping-pong ball-sized eggs—and cover them with sand before returning to the sea. The poachers are easily able to identify the pits and dig out the eggs.

But things literally turned turtle in 1982 when the then prime minister Indira Gandhi orchestrated an all-out effort to protect the Oliva Ridely turtle after her office was flooded with angry letters from conservationists alarmed at the rampant poaching. The programme involved the Orissa forest department, the Indian navy, the coast guard and the state fisheries department. Oil India and Indian Metals and Ferro-Alloys Ltd loaned the project helicopters for reconnaissance flights during the nesting season. The results were dramatic. Over 70 poachers were caught and fishing boats impounded while turtle arrivals at Ekakula rose from 170,000 in 1982 to over 300,000 at present

But conservationists agree that there are still gaps in the defence. Says S.K. Mishra, head of the Gahirmatha sanctuary: "If the poachers get organised, we will need seaworthy speedboats to counter them as coast guard vessels cannot come in close to the shore or into the estuaries." Another problem is the steady erosion of the beach which could all but disappear in time to come. But for the moment, Project Ekakula is nothing less than a resounding success that has transformed a stretch of deserted and poacher-infested beach into a vital reptilian refuge.

Deccan Chronicle
Hyderabad's most powerful advertising medium introduces its Vizag edition.

Today, media planners and advertising professionals rely on fine tuning their media selection to maximise reach and minimise wastage. Besides quantitative analysis such as reach, OTS and cost efficiency several professionals are seriously considering the qualitative impact of a medium.

Deccan Chronicle has for over 4 decades been Hyderabad and Secunderabad's foremost newspaper, as synonymous with the twin cities as the Charminar itself.

★ With a total of 3,45,000 readers in twin cities, Deccan Chronicle occupies the top position with Hindu at 1,69,000 and Indian Express 1,13,000 readers.

Now DC, will bring to you the same essential ingredients of success with its Vizag edition. With an initial print order of 35,000 copies, DC will be the only English Newspaper from Vizag. We will also be launching Andhra Bhoomi simultaneously.

So when you take the formidable combination of DC & Andhra Bhoomi you will be reaching a part of Andhra Pradesh that matters.

A Man and the Myth

MOUNTBATTEN—THE OFFICIAL BIOGRAPHY
BY PHILIP ZIEGLER
Published by William Collins, London, 1985
Price: £15 (Rs 229.50); Pages: 781

MUCH has been written of Mountbatten in India and a lot more said. He was himself an indefatigable and adept self publicist—but he rather overdid it and as a result wantonly lost ground in public esteem. Particularly towards the end of his life, it had tended to become obsessive and at times unbridled in fantasy and waywardness.

This fat book, so well-written, replete with charm, vitality and vivid illustrations both in words and photographs of a career of astonishing range and achievement, however, sets the record straight.

What is most fascinating is the way it unfolds; how from being just "an ordinary little boy", Mountbatten developed his potentialities, and deployed them step by bounding step with such spectacular success in so many different fields. The Indian episode concerns us most; but it occupies only one part of the book. There are four others; and they are hardly less remarkable or absorbing. His father, an outstanding naval officer inspired him in his naval career; but his mother, Queen Victoria's grand daughter, named after her, was the real architect in instilling in his character, the values of grit, and indomitable self-confidence that brought him to the top time and again.

Philip Ziegler is justifiably dubbed in the blurb as being: "kindly, understanding, admiring yet undeceived", by Mountbatten's almost compulsive incense burning at his own shrine. All credit to him; and to Mountbatten's innate nature and qualities that in this winnowing process Mountbatten emerges as a much more attractive character, and more significant historical figure than he, and some of his recent publicists, had succeeded in projecting him.

Much again has been made of Mountbatten's royal connections—not least by himself—and of his addiction to genealogy (not dissimilar to that of astrology that besots some of our politicians); and of Lady Mountbatten's great wealth, and in her youth her stellar role in Britain's fastest, and most self-indulgent social set. It thus comes as a surprise (and explains a great deal of how and why they fitted in so well later in the Indian scene, then at the peak of our national gestation) to read:

"Politics meant little to him except as a means to some particular end. Edwina was predisposed to admire all things of the Left. It is fascinating being here again...she wrote from Moscow (in 1929) at the height of the Stalinist purges... I gather shorter hours, higher wages and lower prices (not only from what Intourist tell me!!) and the people on the whole are contented, and the young ones happy and enthusiastic." Mountbatten was more pragmatic and less gullible. He too inclined to favour the Left, but from a generous if vague conviction that the poor and deprived ought to be given a better chance, rather than commitment to any ideology. His dislike of fascism was an over-riding factor: whoever opposed it was his friend. When Robert Bruce Lockhart...in October 1936...talked to him of Spain he reported: "He is very frightened of a Fascist triangle and thinks it will be very bad for us. He would prefer a left-wing victory in Spain—even communist."

The Mountbattens' marriage—a real love affair—metamorphosed itself after many a storm, into an enduring partnership in public service, of companionship, deep affection and esteem of which their time together in India was perhaps the zenith, crowned as it was by the inclusion by mutual consent and approval of Jawaharlal Nehru within its ambit. This was a striking example of civilised behaviour, tolerance and generosity in trying circumstances that would have broken lesser mortals. It is a sad proof of the incapacity of Indian authors, social scientists, and historians to break the stranglehold that the dead hand of Victorian Anglo-Indian social hypocrisy still exercises on their psyche, unmanning them from writing about such relationships, and evaluating their effect on their subject's public life, that one has to be enlightened about one, concerning even the career of Jawaharlal Nehru by a foreigner.

Undoubtedly, the sincere, spontaneous relationship that developed between Edwina Mountbatten and Jawaharlal Nehru in the autumn of their lives, contributed towards encouraging the latter to seek a new form of relationship with Britain. The once most passionate and influential advocate for a complete break from the British connection, as enunciated in his January 26, 1929 Lahore Congress Presidential address, accepted, after prolonged negotiations, membership along with Britain in a refurbished Commonwealth. Many factors— political, economic and strategic —influenced these two opposed stands at two critical junctures of Indian history. But the psychological factors should not be overlooked. As much as the former stance was a reaction to the Jalianwala Bagh massacre; the harsh and ugly visage that Britain then presented, symbolised by the racially hate-filled personality of General Dyer and his like; the latter, was a response to the civilised, humane, internationalism of the Mountbattens.

Getting together.
To bridge the generator gap!

When two well-known names come together, it's always big news.
When the names are Birla and Yamaha and the products are generator sets, the news is nothing short of electrifying.
Birla and Yamaha. Both giants in their own right.
Birla. A pioneer and a leader in so many different fields.
And Yamaha. A name that's synonymous with technical excellence the world over.
Excellence in products ranging from motor bikes to generator sets.

Birla-Yamaha will make light of power problems everywhere

Take power shortage areas.
Even when there's darkness all around, there can be light in your house with Birla-Yamaha.
If you're in a power-sufficient area, you can now have power you can take along with you, wherever you will. In a mobile van, for instance.
Of course, where no power is available at all, out in the wilds where no electric pole has ever been sighted, Birla-Yamaha will bring light.
At last!

This is the end of the Dark Ages

Every time power fails, you are made dramatically aware of the significance of something you've taken for granted all your life.
You face the hottest Indian summer in 20 years without even a fan to come to your aid...
Or you're a shop owner who has come face to face with the unpleasant fact that no power can mean no business, at peak festival time...
It's a lot worse in an operating theatre where the cost of power failure is as dear as life itself.
Well, now things are going to be different.
Thanks to Birla-Yamaha.

Enter the Little Genie

Birla-Yamaha generators will certainly help bring some of the magic back to life.
Appropriately, we've called our generator the Little Genie. At the turn of a switch it puts power at your command. When you want it... where you want it.

These generator sets with outputs ranging from 0.5 to 4 KVA are ideal for homes, clinics, shops, petrol pumps, banks, offices, video parlours, outdoor film/video shooting units, defence camps, mobile vans... almost anywhere.

Putting quality and service together

With the Little Genie, compact, fuel-efficient generators will be available for the first time in India.
Little Genie generator sets will be made to the same standards that have set Yamaha generators apart on the international scene.
Now you can get Yamaha quality right here at home. Actually, you get a lot more than international quality. You get the confidence of spares being available at any time.
You get the advantage of efficient service that's always on hand when you need it.

Leave it to Birla-Yamaha

Yes, Birla-Yamaha is here to tackle one of the larger problems that you are faced with today.
Because while electricity is one of the biggest boons of modern life, it has also spoilt us a little. We find it difficult to live without it.
Even for a few hours.
Well, now there is a standby. From the manufacturers who stand by their product...
Birla-Yamaha.
It's going to be a bright future ahead for all of us.

BIRLA-YAMAHA LIMITED
1st Floor, Dalamal House, Nariman Point, Bombay 400 021.

Bringing the Little Genie into your life.

AFTER-CARE HOME

Den of Darkness

THE INTENTION is lofty—to protect and gradually reform women ostracised from society and denied participation in the act of daily life and living. The reality, however, is starkly different. The State After-Care Home (SACH) in Patna, the only one of its kind in Bihar, is a den of darkness in which women, ostensibly rescued from misery, only sink deeper into the morass. Said one inmate, brokenly, "This is worse than a jail. We are brought here for protection, but once we are in, we are thrown to the mercy of hunger, disease and dirt."

Set up in 1958 as a wing of the state's Welfare Department in the crowded Pathar-ki-Masjid Mohalla in east Patna, the haveli-like home nestles depressingly behind a board that proclaims 'Protected Area'. But the home continues to offer little protection to the 100-odd women sheltered behind the huge wooden gate. Crowded into two dingy rooms and a verandah are a pathetic herd of humanity, a cross-section of the mentally deranged, the physically handicapped, the diseased, all equally pitiable. Worse, they live in constant fear of the roof crumbling upon them, so old and so shaky is the structure. Not surprisingly, the sorry state of the building symbolises the life within. And even as superintendent Vidya Sinha insists that "this is a reform and rehabilitation centre, not a jail", her words cannot drown those of a fellow worker who confesses: "We are getting no cooperation from any side—society or the Government."

"The Government is aware of the grave situation and something will be done," claims Sinha. But how aware the Government is, is questionable. As one member of the staff remarked: "The institution, like its inmates, is a discard. This speaks volumes about the Government's concern for welfare."

SACH is badly in need of a radical round of revamping, covering the entire gamut from money allocation to security to medical facilities to basic amenities. All this, in the face of misplaced claims by a Welfare Department official that "since this institution is very important from the social point of view, the Government provides the inmates with free food, clothing, medical care, training, and education so that they are made good citizens and earn their own livelihood independently when they are released."

The State After-Care Home in Patna is a den of darkness in which women, ostensibly rescued from misery, only sink deeper into the morass.

Medicare, food, clothing—these are provided cheap, but in doses so skimpy they hardly cover the human beings they claim to preserve and protect. Medical care, for instance, is kept to an improbably low level on an annual fund allocation of Rs 1,500 and is left in the trust of an old doctor who has been visiting the home since 1958 on an astonishingly low honorarium of Rs 50. He is so old now, he has to be brought to the home every week by his son, and has to treat a variety of cases lumped together in common quarters—seven cases of mental illness, six of speech impairment, half-a-dozen of tuberculosis, and, until two months ago, two cases of leprosy—many of whom he is in dubious position to examine, let alone treat. SACH staff also point out the high incidence of sexually transmitted diseases among the women.

As for food and hygiene, the Govern-

Inmates crowded into a verandah

ent apparently believes in the theory t one must merely eat to stay alive. In a of generosity last August, the Bihar vernment raised the daily food allot- nt from Rs 3 to Rs 5—a whole two ges jump! It also allows Rs 150 per d annually for clothing and Rs 5 per d a month for toilet articles. The Gov- ment has not lagged behind in the ter of education either—it has posted ee teachers at SACH to school the men up to standard seven level, but unfortunately overlooked the ques- n of teaching aids. SACH has neither ebooks nor notebooks.

In an ironic statement on the situa- n, SACH is flanked on one side by the eguards training centre which, for women, is more a security hazard n a protective force. It is not unusual find illiterate trainees joining rec- ised rowdy elements in jumping the h wall and frightening the women, metimes forcibly taking them away. local police chip in with their own d of injustice by refusing to register plaints of trespassing or even kid- ping on the specious logic that the in- ates are, in any case, what they term d characters'. Once guarded by four

"The Government is aware of the grave situation and something will be done."

VIDYA SINHA
superintendent

securitymen, not one now remains, leaving the institution's inmates exposed to exploitation by miscreants and criminals. Last year, for instance, when 16-year-old Sabrunissa was kidnapped from the home by some persons, the local police refused point-blank to intervene in the matter. In another instance, when police brought young Mala Sinha to the home, freshly rescued from the clutches of flesh traders, a whole crop of individuals turned up in the superintendent's office, claiming to be her legal guardian. When Vidya Sinha tried to rebuff their claims, she was threatened with dire consequences.

Tales of exploitation of innocent young women and moleslation are legion. Maina Devi, a Nepali hailing from a respectable family, was one such girl who fell prey to a Bihari's lascivious intentions. Robbed of all her money and jewellery, and pregnant, she gave herself up to the mercy of the police who produced her before the chief judicial magistrate who, in turn, sent her to the home. It is now four years since she first came, but the SACH's repeated requests to the court and to the Government to arrange for her return to Nepal have fallen on deaf ears. Said Maina: "I have nowhere to go and nobody is listening to me." And if nothing is done, the trauma of the shocking events in her life may eventually kill her.

Death is not new for the women. Last year alone, four women died due to the after-effects of extreme shock or disease, and at least six more are counting their days. Consequently, the Bihar State After-Care Home has started to resemble a crumbling graveyard for victims of the Government's callous indifference.

ANTARCTICA EXPEDITION

Call of the Cold

Expedition members at Dakshin Gangotri ice station: experiencing the long night

THE CALL of the cold continent is getting increasingly more powerful as far as India is concerned. Last month, a 12-man Antarctica team sailed into Goa's Mormugao harbour to an emotional home-coming after the most arduous test of them all—the six-month long sunless Antarctic winter. The team, which spent 14 months on the frozen wastes of Antarctica, is the fourth expedition launched by India since the tricolour was unfurled to mark the success of 'Operation Gangotri' in January 1982.

That same year, a second expedition landed at eastern Antarctica in the area christened Dakshin Gangotri to select a suitable site for an all-year station. The third expedition reached there in December 1983 to construct the all-weather ice station and 12 members of that expedition stayed back to form the 'doughty dozen' who would be the first to actually live through the forbidding 'Long Night', the half-yearly period between April and September when the sun never shows.

Naturally, the basic requirement was physical and psychological fitness which is why all but two of the members were from the army or the navy including the expedition leader, Lt-Colonel S.S. Sharma of the Defence Research and Development Organisation. Essentially, their task was to establish whether the double-storey ice station could weather the winter with temperatures of minus 50 degrees Celsius and blinding snowstorms where wind speeds reached 300 kmph.

Construction work on an airstrip

Their brief was to find out whether the structure required strengthening, the various psychological hazards involved and pin-point the signals for abrupt changes in temperature.

"The most striking thing was the silence which is initially surprising considering that wind speeds are normally so high. But even wind can whistle only if it has something to rush through or swirl around," says S.G. Prabhu Matondkar, a microbiologist with the National Institute of Oceanography in Goa and the only man who has been on all four of the Indian expeditions. Matondkar, in fact, wanted to stay on in Antarctica for the next winter expedition but was ordered back by Dr S.Z. Qasim, secretary, Department of Ocean Development (DOD). Says Qasim: "Antarctica is so strongly enticing that I have yet to meet a scientist who is

CC-0. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

willing to go there again." As a micro-biologist, however, Matondkar's enthusiasm is understandable. "The place is an area of discovery. We have brought back data we will be analysing for years," he enthused.

But the expedition was also a major stepping-stone for an even more ambitious project—an expedition to the South Pole at the end of the year. In that context, the fourth expedition did some vital preliminary work which included:

- the setting up of three huts about 75 km south of Dakshin Gangotri;
- the construction of a 60 m x 10 m garage for snowmobiles;
- a 5 kw high frequency radio link between Dakshin Gangotri and India;
- an airstrip on which transport aircraft can possibly land by the end of 1985.

A five-man team led by Lt-Colonel J.K. Qasim, an experienced mountaineer and a gliding expert, after detailed reconnaissance surveys, worked out alternate routes and fuel dump locations for the 6,000 km trip across Antarctica to the South Pole. The eventual trip will be longer and more dangerous than those undertaken by other countries since the approach will be from the north over hills, ice and plateaus. This is unavoidable because the first Indian Antarctica expedition landed on the north-eastern side which was closest to India. "At that time we didn't thought of the South Pole," Qasim says, "but our task is clear. We have to reach the South Pole from Dakshin Gangotri. It will be tougher and more difficult than a Himalayan climb and the weather could change as we go along but we will surely find our way there."

The data brought back by the fourth expedition will also prove invaluable. Every member was assigned specific tasks in addition to normal everyday chores. Though they had all been trained in emergency procedures, the tension in end-March when the 'Long Night' began was palpable. Says Matondkar: "If one appreciates the place and the panorama of blue and white there is really no problem. Otherwise, it would be difficult to get along with the person you share a cabin with." The toughest part was adjusting to sleep in the sunless conditions and the morale of the team dropped to its lowest in May when the Antarctic winter was at its peak and the swirling snow cut visibility to a few inches.

UNDER instructions, the team mainly restricted itself to the 2,300 sq metre ice station and its vicinity. To ease the strain, the ice station was well-stocked with video films while table tennis and carrom helped relieve the boredom. The temperature inside the station was a comfortable 10 degrees Celsius and liquor was available for those who wanted. A telephone and video link with the DOD headquarters in Delhi allowed members to send greetings and receive news of their families and one member, Dr S.R. Rizvi, even went on a fast during Ramzan using Greenwich Mean Time as markers.

The team did not miss their normal diet since there were plenty of concentrates of Kashmiri and Mughlai food and dry mixes for making sambar and mulligatawny. The biggest problem was the isolation and boredom. Says Rizvi: "We had all the creature comforts but the lack of privacy means that the smallest irritation can ruin relationships."

But the basic objective of the expeditions and India's permanent presence in Antarctica—exploration and possible exploitation of mineral wealth under the ice—still remains a distant dream. As Qasim admits: "The exploration of oil and minerals in Antarctica calls for 21st century technology," another way of saying that machinery to extract minerals in those conditions is yet to be designed.

Meanwhile, the only exploitation is in a renewable resource—krill, the shrimp-like crustacean which is a rich source of protein for human and animal requirements. Eleven countries are currently annually netting 400,000 of the estimated 150 million tonnes of krill and India is readying to join the club. *Sagar Sampada*, a ship bought by the DOD, will hopefully start fishing in Antarctican waters by the end of the year and bring back an estimated 100 tonnes from each voyage.

The growing geo-political and economic interest in Antarctica is attracting more countries with China, Peru, Italy, Uruguay and Sweden all preparing to join the exclusive club of 12 countries that have established bases there and are members of the Antarctica Treaty.

India, as one of the 12, is making a heavy investment in Antarctica. The DOD has spent Rs 14 crore on the four expeditions and will spend another Rs 9 crore to try and get the first Indian to the South Pole in the next expedition. It also plans to invest another Rs 40 crore on an ice-breaker-cum-ocean research vessel to be delivered by 1990. The DOD will to step up its scientific programme through the proposed Antarctica study centre to be set up in Goa and is preparing a ten-year profile on the short-term and long-term gains from Antarctica exploration. But for the moment, the DOD is eagerly awaiting the green signal for Operation South Pole.

NAMAS BHOJANI

Naidu: a pretty picture

◆ In 1971, when **Leela Naidu** quit films, one day before her marriage to poet Dom Moraes, everyone thought—that for better or for verse—she'd never come back. Now, a decade-and-a-half later, Dom-struck Leela has returned, and as she says "it's a breeze". She will play the central character, in Shyam Benegal's latest film being shot on Goan sands. "I have matured a lot as an actress," said Leela, once considered among the five most beautiful women in the world, "and it's so much more fun than before." Seems like lovely Leela is going to continue sitting pretty for a long time now.

◆ Imagine **M.F. Husain**, a cowboy hat on that hoary head, astride a bucking bronco and zipping away into the sunset? At least, that's how one young schoolboy visualised the venerable artist. Last month, when *Mashoor Mahal* threw out an open challenge to send in a sketch of Husain for a small cash prize, they little anticipated the response they got. Within a few days, over 7,000 entries came pouring in. There was Husain—bashful, kindly, frivolous, jazzy and one imaginative artist even put his face on a horse's body. When Husain saw these strokes of genius, he almost had an 'art attack'. "I feel I'm in a hall of mirrors," he said at a display of the paintings in New Delhi last week, "the faces I have never seen in myself, I saw here."

Husain: face to face

◆ "You've come a long way, baby!" At least **Simi Garewal** thinks so and on her TV show 'It's a Woman's World'—Sunday, prime time—she wants to make certain that her sex get a fair deal. The programme, which was inaugurated last fortnight, features some of the nation's best-known women on fashion, beauty, health and other such issues, the idea generally being to advise women on the shape of the future and on how to make up for lost time. "It's for the woman who is progressive, ambitious and very, very feminine," said Simi. A real heart to heart show—or should that be chic to chic.

Simi: future woman

PRAMOD PUSHKARNA

◆ "It all depends on the impulse. Neither the audience nor we know what's going to happen at the end of the show," said **Sheela Raj**, a contemporary dancer who lives in France and who performed in her country for the first time last week. Well, neither was the beginning nor the middle of the show quite what the conventional capital was prepared for either. Raj and her two male partners coordinated the most modern of dance movements to the most traditional of Indian ragas. And at the surprise end, the gifted young choreographer simply jumped off stage, pirouetted amongst the audience, threw flowers around and even placed herself on the laps of a few amused viewers. "For me my life is like a yatra," said Raj nostalgically, "from east to west to east."

SANJIV DAYAL

Sheela Raj: one step ahead

◆ When **Volker Fink** a German diplomat, moved to New Delhi some time ago, he decided that his experien of India wouldn't be quite om-plete without an all-Indian pet. So the Fink family went right ahead and got the pet after their heart—a seven-and-a-half foot, heavyweight, real, live female python. **Mohini**, as the beloved serpent is called, is scaling new heights in reptilian luxury. She sits blithely in a corner of the garden, bathes in a private pool, takes an evening slither, feeds on the choicest rats and leads the kind of life that would make any less privileged animal turn green with envy. Initially, though, the family had problems finding rodents. But word got around "and then," said Fink, "the letters offering mice kept pouring in." Trust a snake to always charm the people.

IN FOCUS THIS FORTNIGHT

State of Seige

The violence in Gujarat took an ominous turn with the police going on a rampage and the public retaliating by lynching a policeman. The Centre turned down demands for Solanki's dismissal even as the situation refused to come under control.

COVER STORY 58

Ten Years Later

The opponents of Sikkim's merger are today's leaders and few give thought to the controversial event 10 years ago. The signs of development are plentiful, but tensions between the indigenous Bhutiya-Lepcha and migrant Nepali communities remain.

SPECIAL FEATURE 84

Crackdown in Bombay

Bombay's ubiquitous underworld was back in focus last fortnight following the surfacing of two cassette tapes showing the police in embarrassing light. It was obviously a ploy to counter the current crackdown on the Bombay mafia that threatens their rule.

SPECIAL REPORT 72

The Last Encore

Nothing in Kishore Kumar's life has ever been predictable, least of all his farewell to the film industry just when he is poised at the peak of his career. But the man with the golden voice insists that it is time to return to his roots.

PROFILE 116

Crippling Scourge

Water in the desert belt of Rajasthan has been giving not life but sickness—in the form of fluorosis, a crippling disease that spares no one. And with no help coming from the Government, many young children seem destined to a maimed future.

HEALTH 140

Breaking the Bonds

Chandralekha walked out on Bharatanatyam 14 years ago believing it had reached a dead end. Today she is back with *Angika*, a brilliant and innovative new dance work that represents a radical departure from traditional dance forms.

Gone are the days when we were known to the world by our civil engineering excellence alone. We are making our mark in more fields than one (piling and foundation engineering, water treatment plants, material handling systems, mechanical erection and piping).

We have been dominating civil engineering in India for six decades as of now. It is only natural that our name has been closely linked to this most visible activity.

However, our claim to fame is much more broad based than most people realise.

Blue-chip clients:

A quick run through the partial list of our civil engineering clients is sufficient to give you an idea of the width and depth of our involvement in nation building. In power generation, we have worked for most State Electricity Boards in the country, apart from the NTPC. In cement, for ACC and CCI among others. In textiles, Reliance, Mafatlal and Chemicals & Fibres (ICI). In engineering, Mahindra and Mahindra, Associated Bearing (SKF) and GKW. In aluminium, Bharat Aluminium and National Aluminium. In pharmaceuticals and chemicals, Glaxo, Searle and Ranbaxy.

Quality, first and foremost:

Best of all, quite a few of our clients keep coming back to us with repeat orders. The secret of this happy state of affairs is not difficult to discover. We make quality the keynote of all we do, stick to strict delivery schedules and follow the project planning and review techniques to foresee and provide for contingencies well in advance.

Diversified growth:

In the last 8 years, our turnover has dramatically climbed up by 330%, from Rs. 10.32 crores to Rs. 44.2[illegible] crores in 1983-84. A major part of this growth has undoubtedly come from our Civil Engineering Division. But the rest has been contributed by our planned diversification initiated in the early 60s as

PEACE PATH

Apropos of the cover story on Punjab "A Turning Point" (April 30) it is commendable that the Centre has announced a package of concessions for the Sikhs without negotiations. It will assuage their hurt feelings and soften the Akali Dal's hostility towards the Government. But the acceptance of a few demands contained in the ultimatum served on the Government by the Akali Dal confirms that the former is not willing to show all its cards and expects the latter to reciprocate.

Merely postponing the "action programme" is not enough. The Akalis should realise that they are being clubbed together with the extremists in a large part of the country. Therefore they must denounce terrorism and restore to the majority their lost sense of well-being and safety by organising communal harmony meetings.

Chandigarh ASHOK GROVER

■ The recent initiatives of the Government are certainly a step forward in the path towards solving the tragic situation in Punjab. But at the same time there have also been events which in no way would contribute to the restoration of peace in the state. The Government's ill-timed decoration of soldiers involved in the Operation Bluestar and the Akalis' glorification of the assassins of Mrs Gandhi may prove detrimental to an early settlement. The Akalis should shed their intransigence and reciprocate the Government's overtures by joining it in the search for peace.

Kathmandu SANJAY UPADHYA

■ The present state of affairs in Punjab is of its own creation. The Sikh leaders should come out and fight for the nation's welfare and not just their own. This alone can restore their lost credibility.

Madras R. RETNASWAMY

GETTING THE PICTURE

Raghu Rai's stunning photo feature "Is Calcutta Dying" (April 30) is like the city's past itself: long, fascinating, intricate, yet powerfully poignant.

Madras SOSA MAMMEN

GROWTH POTENTIAL

In the Economy "Growth Rate: India 2000 AD (April 30) Dr Dubashi says "The question is not whether we shall ever catch up with China or America or Japan, but whether we shall catch up with ourselves and our potential for growth and greatness." Obviously our state governments do not believe that we have the potential, at least as far as the construction industry is concerned. For any reasonably-sized project, they do not even look at an Indian tender unless there is a foreign collaborator. The foreigners are taking advantage of this and, once in, they will be extremely difficult to dislodge. It is high time we slowed down our "industrialisation express" just enough to allow the natives to scramble on to the bandwagon unaided.

New Delhi RAJESHWARI SINGH

BUDGET BLUES

Your cover story "A Bold New Approach" (April 15) highlighted only the plus points of the budget rather than looking at it critically. True, it has given prime importance to the private sector which was in the need of a boost but agriculture, the bread-winner for almost 70 per cent of India's population, has been totally neglected and you as well have conveniently ignored it. The rise in prices of the basic household items has also missed mention.

Mysore B.S. ARUN

■ The change in direction of the Union budget has been rightly termed as a bold new step. By giving such a budget, the finance minister has done his part and it is now up to the industrialists to make full use of it.

Nagercoil V.N. [illegible]

■ While the so-called wealthy class (who) elated over the budget proposals and praised it as the boldest and best ever budget, the vast majority of the ordinary Indians have been badly let down by the new Government. All the incentives were aimed at the elite whereas there was nothing in the budget for consolation of the hard-pressed poor people, who are the ones responsible for the massive mandate

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Government received in the December elections.

In short the carrots will be cornered by the elite comprising less than 2 per cent of the total population, whereas the sticks are reserved for the remaining 98 per cent of the less fortunate Indians.

JACOB OLLUKKARAN
Bombay

■ The opposition parties as usual have criticised the budget, the economists have praised it and there are opposite or favourable views by the industrialists and agriculturalists. But nobody is bothered about the reaction of the poverty-stricken population (a sizeable portion by any standards) who are hit the hardest. The prices of all the goods have increased whether additional taxes were levied on them or not. One feature of our annual budget has been the price increase after every budget. The lop-sidedness and the pro-richness of the budget can be judged from the fact that whereas the lower income tax limit has been increased by a mere Rs 3,000, the highest slab has been increased by 16 per cent from 66 per cent to 50 per cent. Only the next year's budget will tell us how wrong this budget was.

Rampur
KULDIP SINGH

COMMUNITY FEELINGS

"You are right in suggesting the formation of a high-powered all-party body on communal harmony ("Games Politicians Play", April 15). The national commission suggested by the National Police Commission, is also a good idea. But communal feelings are so deep-rooted in the Indian mind that in spite of efforts to eliminate them, they are increasing. Mahatma Gandhi and other leaders left no stone unturned to secure Hindu-Muslim unity, but the result was growing tensions which finally resulted in the Partition. I feel that no number of inquiries or commissions will be able to solve this problem. All those leaders who preach communal harmony themselves indulge in communal discrimination. Who does not favour his own community? Candidates for elections are always selected from amongst dominating castes of the region both by the Government and the Opposition. The only persons willing to bring about communal peace are the few resourceless and ineffective social workers and philanthropists.

S.C. MATHUR

RESERVATION RUMPUS

Your article on the reservation policy—"The Caste Crunch" (April 15) is thought-provoking. The anti-social elements are taking undue advantage of the situation. As far as the policy of reservation is concerned, a sea change should take place. Even according to the author of the reservation policy, Dr Ambedkar, it was never meant to be extended over a long period. The policy extended to 35 years has not brought economic equality and has in turn contributed to the low standard in the administration. The criteria of merit, talent and skill are being ignored totally.

Bijapur
K. SURYANARAYANA RAO

■ I would like to remove the prevailing illusion which holds the upper middle class as well-to-do people and that it is only the reserved category that is poor and requires support and privileges from the Government. In the days of unemployment the situation is further complicated by the reservations in jobs for the different backward class categories. Being an "upper caste" commerce graduate with 58 per cent marks I am compelled to drive an autorickshaw while the reserved category candidates get jobs in the government sector with ease and with as low as 44 per cent marks.

I am not against policies aimed for the uplift of the under privileged class of society. But what sort of social uplift does the Government want to bring by favouring someone at the cost of a more deserving candidate who is also in need but cannot get help because of the so-called "upper class" tag.

Baroda
DEVESH D. DESAI

■ The classification of more and more castes as backward has started giving negative results. The solution does not lie in increasing the already high percentage of reservations. It would be worthwhile if the efforts of the Government were geared towards the uplift of the economically backward sections of the society, irrespective of their castes.

Kandagaon, Bastar Dist.
B.V. RANGADHAM

■ I fully support the anti-reservation stir. It is absolutely ridiculous that in Madhya Pradesh 78 per cent of the seats are "reserved". Jagjivan Ram says that he is in favour of the continuation of the reservation policy in the form it is being implemented currently because it is an instrument of social change. I think he is absolutely wrong. If he had said that reservation is a means of economic uplift, one could agree with him. In fact the reservation policy has become the root cause for inducing the caste distinction in the minds of the younger generation—the future of the country—resulting in bleak prospects.

Nagpur
ABHIJIT DAM

■ It is leaders like Jagjivan Ram who exploit the sensitive issues by making ridiculous statements like "will a Brahmin call me to his house for a meal", to gain their ulterior motives. A common man does not talk of castes and races, but the reservation policy will compel him to think in those terms.

Calcutta
RAJNISH BALI

■ The report "Caste Crunch" aptly illustrates the way in which purely social issues are politicised, paving way for communal disturbances, loss of life and property as also creating an atmosphere of tension in the society. After having seen the way political parties and politicians have striven to maintain vote banks on the basis of caste, creed and communities, there is no doubt that the present state of affairs is solely the creation of our political parties.

Vasco da Gama
ANNIE FRANCIS

NO CHILD'S PLAY

I was really shocked to read the article "Exploiting Innocence" (April 15). It is high time the authorities concerned took some stern steps to stop these evils still prevalent in our society. Mere laws on paper will do nothing. Only serious action against those involved in such exploitation can open the eyes of others.

Manavalakurichy, Tamil Nadu
T.K. HARI HARA IYER

■ Our prime minister wants to take the country to the 21st century, but will he be successful in his endeavour with such age-old traditions as child marriage still ruling our society? In reality child marriages amount to plain and simple exploitation. Law-making alone would not be sufficient to break this tradition. Drastic social efforts have to be made.

Joara, Madhya Pradesh
SARBJIT SINGH BAINS

WRONG COMPANY

This refers to your report "HBJ Pipeline: Building Up Pressure" (March 31) in which you state that the Assam-Barauni pipeline built by Dodsal started leaking five years after it was laid. I would like to state that the Assam-Barauni pipeline was not built by Dodsal.

The heart has started beating again

Cardiac Equipment from BPL. For diagnosis, monitoring and resuscitation.

When a dysfunction in the heart occurs, the Defibrillator is used, as a last resort, to discharge a measured amount of electrical energy into the patient's heart to restore its natural rhythm. The monitor displays the ECG continuously and the recorder makes a copy of the wave forms.

The Defibrillator, now a byword in the medical profession, is just one example where BPL has used electronics for life saving applications. Electro-cardiographs and Patient Monitoring Systems complete the range.

There are other vital areas that BPL serves too. With Computers, Communications, Components, Instrumentation (Industrial & Measurement), Office Automation and Consumer Electronics.

Behind this diverse product range is a vast corpus of knowledge that BPL has acquired over the last two decades. This knowledge has been integrated through technical tie-ups with international brand leaders like Fukuda, Japan; Siemens, West Germany and Nihon Kohden, Japan. And through an infrastructure that's unique only to BPL: Seven integrated factories, three R & D groups, in-house manufacture of critical components, a nationwide marketing network and an independent company exclusively employed for servicing. The result? Products that are better suited for local conditions. And user needs.

Yes. Satisfying user needs is, ultimately, the only objective BPL has.

BPL-INDIA

In pursuit of perfection

Misusing the Army

THE PATTERN is now all too familiar. A breakdown in law and order, a failure of the administration to contain it, an escalation of violence beyond the ability of the police to cope—and the inevitable call to the army to come to the aid of what is euphemistically called civilian authority. In theory, of course, there is nothing wrong with this drill. The practice is that the civilian authority seems to break down at the first hint of trouble and instead of a measure of the last resort, the army is being called out more and more as a first impulse. It was used 82 times in 1982-83, 96 the next year and as many as 175 times in 1984-85, mostly for maintenance of law and order.

It doesn't take a Nagaland or a Mizoram or even a Punjab to tell us how dangerous this trend is. The Bhiwandis and Ahmedabads of this country are frequent enough to keep the army on the front pages of the newspapers, in full public glare, rather than in their barracks or trenches, in complete anonymity, which is where they belong. It is as well that anxious voices are now being raised in Parliament and elsewhere, asking the Government to take cognisance of this misuse of the army, and there is reason to believe that the Government is beginning to take notice. Certainly, even casual conversation with serving generals indicates that the army itself is acutely aware of the problem and most reluctant to become embroiled in controversial action.

It is not hard to see why. First, the army is being asked to do a job for which it is not trained. It took several years before the army was able to learn how to cope with insurgency in the North-east. In the process, it earned itself an unwarrantedly bad name. Similarly problems have arisen more recently in Punjab where the army was expected to keep the peace after Operation Bluestar last June. The basic fact is that the army is trained to deal with the nation's enemies, not its own citizenry; with opposing soldiers in uniform, not civilians. Out of its milieu, it runs the risk of discrediting itself. Military men have proud traditions, and any slur or any compulsion to undertake unsavoury tasks tends to have an immediate impact on morale and discipline.

Second, the more the army comes into law and order operations, the closer it comes to the political process. All too often, riots and the breakdown of law and order are political events, contrived at by interested parties. It is no secret that spontaneous public outbursts are often seized upon for political gain and trouble often allowed or even encouraged to escalate in an effort to garner dubious advantage. The police knows this and is frequently aware of the processes at work and the people responsible, but often cannot or will not act on its knowledge. So far the army has managed to remain untouched by these distortions, but will it continue to if it becomes routine for it to handle problems that the local administration and the police ought to?

Third, this is a country with democratic traditions, a nation which prides itself on civilian government and with justification distances itself from military dictatorships and those nations whose civilian governments are in fact propped up by military clout. The use of the army hurts this image and, more important, the reality. Just as the use of force has never been able to solve social problems, democracy has never been served by the use of the army in keeping law and order.

Finally, the solution runs the risk of becoming the problem. The more frequently that administrations lean on the army to solve their problems, the less inclined and ultimately the less capable will they be of doing the job themselves. An easy way out is to pass the buck, and buck passing has assumed scandalous dimensions in the handling of riots and violence, whether it is sectarian or spontaneous. Last week's shocking episode concerning the Ahmedabad police is not the first time such a thing has happened. If administrations and governments continue to evade their responsibility or heap law and order problems on the shoulders of the army, it certainly won't be the last time either.

This is the crux of the problem. Time and again, whether it was in Delhi last November or in Punjab through the months of rising terrorism or Gujarat last week, not to mention other notorious incidents as in Bombay and Uttar Pradesh, it is the police which provides the weakest link. If the problem has to be tackled, it can only be done by a thorough overhaul of the country's police forces, their morale, leadership, working conditions, their value systems.

There's no dearth of ideas. The Police Commission's reports, which bring together the collective wisdom of top police officers and administrators, lie gathering dust in the Home Ministry. There have been recommendations time and again each time there has been a breakdown of police discipline, but they have been dealt with half-heartedly or not at all. The answer does not lie in creating new organs—there are enough, as it is, between the armed and unarmed police and the reserve forces—but in getting what already exist to simply do the job.

This is only in part the responsibility of the police brass. Politicians, who have over the years debased the police forces and converted them into VIP protection squads must take the first step, a hands-off decision which will keep them out of police affairs and allow the forces to professionalise themselves. Unless this is done, and done very soon, more police forces will go the way of the Ahmedabad police, and administrations will call in the army. And who can say they weren't warned if some hothead in uniform decides that he can do a better job of running the show than a bunch of bumbling civilians.

THE BFW 'SPECIALS'-4

Duplex Continuous Milling Machines

BFW in technical collaboration with Fritz Werner of West Germany, take pride in rigorous quality control systems. No wonder BFW Special Purpose Machines are the choice of leading engineering companies like Ashok Leyland, Bajaj Tempo, Bajaj Auto, MICO, TVS Group, Enfield, Kirloskar Cummins, Kinetic Engineering and various defence establishments in the country.

Machine Specifications:

Milling Units:	
Capacity	: 3 HP with Belt Drive.
Quantity	: 2 Nos. adjustable for different width of jobs.
Milling Feed	: By continuously rotating drum supported on trunnions.
Work Piece Material	: Gear Pump Body
Operation	: Extruded/Cast Aluminium Alloy
	: Milling 2 parallel faces ensuring good surface finish without cutter relief.
Cycle Time	: 0.75 minutes/piece

BFW has a range of Special Purpose Machines for your requirements offering the following features:

- Hardened and ground guideways for the slides, with imported good quality wipers and telescopic guards.
- Imported, super-precision bearings for main spindles.
- Hardened and ground gears for spindle drive wherever the drive is through gears.
- Centralised automatic lubrication systems for driving elements and slides.
- Standardised Hydraulic and Electrical Control Units.
- Well-ribbed base and structure with suitable slopes for proper swarf and coolant disposal.
- Water cooled heat exchanger for Hydraulic Powerpack.
- Option for Programmable Logic Controls

Cut costs
Produce faster
Eliminate rejection

REBEL RIVALRY

■ The Congress(I) is beginning to look a little like the United States of America, circa 1860 A.D: the loyalist Union on one side and the rebel Confederacy on the other. In the elections to the Bombay Municipal Corporation (BMC), there sometimes seems to be one rebel for every loyalist and their face-off is nothing short of a civil war. Take the case of R. Ranganath and Herbert Beretto.

Ranganath is playing rebel to Beretto's loyalist in Ward 43. Last month, Ranganath filed an application for two pandals in the ward and was allowed to set them up: one near the Maheshwari Udyan and the other near the Matunga Kabutarkhana. No sooner had the labourers hammered in the last peg than Beretto claimed that he had applied for the same spots and as he was the official party candidate the spots belonged to him.

Perhaps fearing the direct action that the party is famous for, Ranganath hastened to the civil court for a stay order. Tragically, court orders are flimsy things compared to the heat of political passions and when Ranganath returned he discovered that the pandals had been completely destroyed. By all indications, this is not going to be a very civic poll.

FILMING FIASCO

■ Films are the breath of life in India and, especially in the south, any householder's idea of bliss is to lend his house for a day's shooting and stand in a corner watching muscled beauties and beasts wrestling on his carpet. However, the floor show is not everybody's idea of pure bliss, as is indicated in a recent incident in Madras.

A gentleman in the affluent locality of Annanagar had combined business with pleasure in renting his house out to film units. The neighbours did not like it and protested to the police about noise pollution and air pollution caused by the generator. The householder got away with a fine of Rs 50.

Then the neighbours got good and mad and filed a public interest suit, complaining

that the shooting was not just a nuisance but also a hazard, because of the crowds it attracted. Despite the defendant's pleas that his was a commercial activity on the lines of bank branches, which are permitted in residential areas, the court granted an interim injunction, restraining him from using the house as a ready-made set. Jayalalitha and Kamalahasan are not as popular as they think.

PAINFUL POINT

■ On April 7, all of Patna seemed to be talking about mosquitoes. It talks about mosquitoes a lot of the time, because the mosquito presence in the state capital is, like Dolly Parton, overpowering, but April 7 was something special.

To begin at the beginning, a large procession of hard-bitten demonstrators wandered through the city led by

two men with a banner saying: "Machchar Bhagao, Jaan Bachao," which translates as: "Make the mosquitoes run for their life, or run for your own." Unfortunately, this had no effect on the health authorities. This as it turned out, was their undoing.

Before they knew what was happening, a thousand mosquitoes descended on them, biting, poking, pricking, very, very painfully. The scene at the Sultangunj Health Office was akin to an anthill with a careless boot inside. The reason was simple: the demonstrators, to put a fine point on their demands, had unsheathed pins and needles and were sinking them into every government servant they could see. The idea, as one protester said between one thrust and the next, was to "make them conscious of the pain from a mosquito bite". His victims couldn't but get the point.

CANINE CAPER

■ A stray dog fears nothing so much as the large pair of pincers held by corporation dog-catchers. So it was that when a posse of pincer-packing people assaulted a locality in Calcutta, the dogs ran helter-skelter. Even so, a few were caught.

But if a dog is man's best friend, then man sometimes reciprocates the gesture. All the street urchins in the area congregated on the spot and started arguing for the release of their four-legged fellows. The babus were just about to give them up when a well-fed pot-bellied gentleman erupted onto the scene, scolding the boys for siding with the "public nuisances". The boys retorted that the dogs were the best warning against thieves. However, they were on a losing wicket

until someone noticed that among the captured dogs was a nursing mother.

His remark put an end to the proceedings. "They are catching suckling mothers. Didn't you suckle your baby?" Then, as pot-belly turned purple, "Didn't your wife, I mean?" he asked. It took just a jiffy to open the door of the van and let the prisoners run away to freedom.

Top quality emerges from a culture of care.

Aplab believes that top quality need not always cost the earth. Quality evolves from an effective utilisation of resources.

The first requisite is a committed leader whose creed places customers first, employees second and who looks upon profits as a corollary to imaginative hard work and collective excellence.

A true leader will identify promising human resources and draw to him people with potential leadership qualities. They will have the freedom to create a team of committed colleagues with the necessary competence and a basic technical background.

Every team leader will treat the individuals in his charge with respect, trust and consideration so that they reciprocate with a sense of dedication. Thus building up a fraternity of workers who wholeheartedly do their best for the company and the community.

Top quality is achieved by such a culture. Through contented employees, their dedicated service and a craftsman's pride in work.

HIJACKERS' TRIAL

Stalling Tactics

FOR a country known more for a somewhat dubious brand of jurisprudence, the special court at Lahore's bustling Davis Road has a surprisingly grandiose look. Passers-by stare, intrigued at the large congregation of armed policemen standing around the building of the agriculture department adjoining the headquarter of the sub-martial law authority in Lahore. Most miss the small signboard that reads, cryptically, "Special Court".

Inside the compound, the protection would do justice to a military court. Police commandos displaying automatics in open holsters and plain clothed intelligence-men mill around, forming a daunting array. There isn't one policeman carrying a lathi, which is understandable because the crowds are not likely to be a problem here. The entry to the high-ceilinged, centrally air-conditioned chamber, which used to be the agriculture department's convention hall, is strictly regulated through passes issued by the registrar of the court. Only officials, selected newsmen and lawyers are entitled to one.

Last fortnight, this motley bunch sat quietly through the initial but vital stages of what may, in terms of its bearing on India-Pakistan relations, become the most important legal case in the subcontinent's history. The Government of India has been indicating that its attitude towards Pakistan in times to come would be decided by the manner in which Pakistan treats the two sets of Indian Airlines aircraft hijackers, who landed at Lahore in September 1981 and August 1984, respectively. And the Pakistani officials say they want to make it an example of "goodwill" and their claim of a hands-off policy on the Sikh crisis in India. But, the case had its element of surprise.

For the Indians, it came in the form of two traditionally dressed Sikh women, Kulwant Kaur Khalsa and Gurcharan Kaur Khalsa, who turned up to witness the proceedings with Sham Singh, a rabid Pakistani Sikh based in Thatta, near Karachi. He has often been seen provoking and indoctrinating the Indian Sikh pilgrims visiting the shrines of Panja Sahib and Nankana Sahib.

Morning after morning, as the five accused walked in, shouting slogans for Khalistan and Bhindranwale and condemning the Indian Government, Amnesty International, the UN and Human Rights Commission, the women welcomed them with folded hands and the traditional Sikh salutation: *Sat Siri Akal*. Their usual restraint gave way when, on a request from Gajinder Singh, supposedly, the leader of the hijackers, Sessions Judge Fazal Karim permitted the women to meet the accused immediately before the rising of the court. Amidst impassioned embraces and tears, the hijackers shouted without inhibition, "Don't worry about us, sisters, we will finish the job we have to do. We will liberate India."

But much more than the show of emotions, what upset the Indian officials was the fact that after each day's hearing, the two women and Sham Singh would sit together with the Pakistani intelligence officials for a round of debriefing and then give angry interviews to some Urdu papers. Adding to Indian discomfiture was the fact that Kulwant Kaur is believed to be the wife of Talwinder Singh Parmar, a Canadian citizen, leader of the Babbar Khalsa Dal and wanted in connection with the Lala Jagat Narain murder case. The Canadian Government has turned down India's repeated requests for his extradition. "This really is like adding insult to injury," remarked an Indian official, mentioning that the same women were carrying a portrait of an armed Talwinder and quoting scriptures to justify violence.

> **The defence lawyers had clearly revealed a strategy combining political rhetoric to prolong the proceedings and legalese to secure adjournments.**

Even on the legal plane too, there was cause for worry for the Indian side. Even as the committal proceedings were completed last fortnight the defence lawyers had clearly revealed a strategy combining political rhetoric to prolong the proceedings and legalese to secure adjournments. For a whole week, as the five-member crew of the hijacked Indian Airlines aircraft sat closeted in the Lahore Intercontinental, defence lawyers S.M. Zafar and Dr Abdul Basit Khan filibustered on a series of applications, all in the quest of securing an adjournment.

Zafar, a former federal law minister and one of the most prominent—and expensive—lawyers in Pakistan, challenged the very basis of the case, questioning the Pakistani court's jurisdiction in trying a crime which was "committed in the Indian skies, over Moga, which is a hundred miles from Lahore". Basit, on the other hand, followed a different approach, seeking an assurance that, in spite of the absence of provisions in Pakistani law to serve summons on witnesses in India, the defence would be given "Aladin's *charagh* (lamp), which the prosecution used" to bring along the Indian Airlines crew.

While the judge set aside Zafar's objections and put off Basit's, saying, "we will decide when the time comes to examine defence witnesses", he did concede his request for lifting of restriction on the coverage of the trial by the Pakistani press. The restraints were imposed on Indian request.

For the defence lawyers, this was no small victory and it suited their strategy. Already, Basit has given ample indication that his approach is going to be to embarrass the Indian Government as much as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

SHEKHAR GUPTA

Special Court building in Lahore

possible in the court-room, perhaps to the point where the cost of persisting with the trial becomes unacceptable in terms of adverse publicity. Pleading for the lifting of the press ban, Basit argued: "The Government of India, wants to kill two birds with one stone. It wants to tell the Sikhs that it has control over Pakistan and thus they can expect no sanctuaries there. On the other hand, if this case ends in acquittal, it will become a big *casus belli* against Pakistan as the Indians will tell the world, here is the country that harbours our criminals. Thus the world must know from the press that it is a fair trial."

More significant, he sought to explain the act of hijacking in terms of the "oppression of the Sikhs" and wanted to call witnesses from "India, Canada, UK and all over the world" to explain to the court how the "Sikhs were betrayed during 1947", how "Sikh nationalism is being suppressed by the creation of Nirankaris by the Government" and how the "Indian army destroyed and desecrated their *kaaba*."

THE MESSAGE was clear. As the trial progresses, the defence will call in as witnesses key Khalistan activists, many of whom may be in prison on various charges. What, as an official argued, could the Indian Government do if the defence sought the presence of someone like Harminder Singh Sandhu, the general secretary of AISSF? There is no way the Government would allow that and the defence would immediately question the fairness of the trial.

SHEKHAR GUPTA

Zafar: buying time

Indian officials also concede that adverse pubilicity and stalling tactics are inevitabilities they can do very little about. They cannot even press the Pakistan Government to do something about it as the matter is in a civil court. Said an Indian official: "The problem is this is becoming a political campaign. This will never be like an ordinary criminal trial."

At least on that point even the defence lawyers planding for the hijackers seem to be in agreement. Said Zafar, who recently won fame as the successful attorney for Abdul Qadir Khan, the Pakistani nuclear scientist, in his appeal against an earlier verdict handing out a four-year sentence in absentia for nuclear espionage: "This is by no means an ordinary case. This case can not be devoid of its legal nuances."

With the case going along these lines now, Pakistani officials are using the opportunity to tell their Indian counterparts how sensible it would have been not to have sought the trial in the first place. Indian officials counter this by saying that they had wanted the hijackers to be tried the same way the Pakistani Governmment deals with its own hijackers —one of them, Nasir Baluch, has been hanged even on charge of complicity in the 1982 PIA plane hijacking. But, asserts additional secretary in the foreign office at Islamabad and former Pakistani ambassador in India, Abdus Sattar: "We do not apply martial law regulations to foreigners, so they have to be tried in a civil court where lawyers are obviously likely to make full use of the legal tricks available to them."

In fact, Sattar now justifies the initial Pakistani reluctance to put the hijackers on trial saying, "we had told the Indian Government the worst that can happen to the hijackers is a prison sentence because, in the course of the hijacking, no one was physically harmed. That purpose is being served as the men are in prison, anyway. But now the trial has begun and Indian Government is very happy. So we are told." Sattar says the Pakistan Government now faces a difficult dilemma. The defence lawyers would like to "parade witnesses" from all over the world. "If we grant them visas, there will be a lot of adverse publicity and if we don't, the fairness of the trial will be questioned."

Chances are, the visas will be granted, for the men campaigning for the hijackers' defence are also a determined and resourceful lot. The defence lawyers are not mere *amicus curiae*, they have been hired by the International Committee of Sikhs' Defence run by Ganga Singh Dhillon who visited Pakistan frequently in connection with the trial. Zafar admits being in frequent telex contact with Pritam Singh, Queen's Counsel in London and is upset that the Pakistani immigration authorities sent him back from Karachi airport last fortnight. "How can you stop him, the only Asian Queen's Counsel? I am taking it up with the Government," he says. The same argument will be advanced in case of many others and, in case the Government accepts it in principle the case which India wants to use as a message to the militants, will become a godsend publicity coup for their non-resident champions.

RAMINDAR SINGH

Tohra at the Golden Temple: from hope to dismay

PUNJAB

Mounting Alienation

IN AN uncanny replay of past events the pendulum in Punjab swung once again from hope to dismay. The hope that had been generated by the Government's announcement of an enquiry into the November 1984 violence against Sikhs in Delhi, and the subsequent release of some Akali leaders, was tainted by the blood of the AICC(I) General secretary Raghunandan Lal Bhatia which flowed on Amritsar's Mall Road as suspected terrorists struck again last fortnight. Luckily Bhatia survived despite three bullets in his jaw, neck and back, but a political worker who had come to see him was not so lucky. Two young terrorists had mingled with an early morning crowd of deputationists outside Bhatia's house, and started firing on him as he ran indoors. None of the 60-odd persons tried to stop the assailants who grabbed the scooter of a passerby and fled. As the prime minister's Parliamentary Secretary Arun Singh and state Governor Arjun Singh rushed to Bhatia's side, it became clear that the shooting was aimed at scuttling any chances of a rapprochement between the Akalis and the Government. And it served notice that the state still teeters dangerously on a razor's edge with many elements ever ready to push it over.

There were some new complications too. The Bhatia shooting was followed by a raid by the security forces on the sarais adjoining the Golden Temple. While this scored the point that there can be no refuge beyond the reach of the law, it yielded no culprits. Instead, it predictably incensed the Akalis and staff of the Shiromani Gurudwara Parbandhak Committee (SGPC). Two days later the SGPC President Gurcharan Singh Tohra injected a new element into the uncertain scenario when, on reaching Amritsar after release from detention, he announced that the Akal Takht may have to be rebuilt.

The Government named Supreme Court judge Ranganath Mishra to enquire into the November 1984 riots in Delhi, and the Akali Dal president Harchand Singh Longowal spent three days in the capital trying to convince students and intellectuals that Akalis stood for the country's unity and integrity, and touring the violence affected areas. But it was difficult to say whether listening to the experiences of the surviors would harden his stance. On past occasions like this the Akali leaders have tended to shoot from the hip without thinking out the long-term effect of their statements.

This was proved once again by the increased stridency which crept into Tohra's statements the moment he reached Amritsar and saw some of the ruins left behind by Operation Bluestar, particularly the smoke blackened shell of the building which once housed his office. On the plane from Delhi, Tohra appeared subdued and somewhat helpless. "How can we control the Punjab youth when we have nothing to offer them," he told INDIA TODAY. "The Government can strengthen our hands by conceding the Anandpur Sahib resolution, abolishing the special courts and withdrawing the Disturbed Areas Act before any talks."

He said the basic question was how to remove the dissatisfaction and insecurity of the Sikhs who needed to feel that their culture and religion were protected. He ventured: "Some special protection can be given in the Constitution. Let the Government think sincerely about it."

But after a walk around the parikrama of the Golden Temple and a visit to the rebuilt Akal Takht, the beetle-browed Tohra chose to address his followers in the charred, first floor hall of the SGPC building. Here he was all fire and brimstone saying that the Government had unleashed violence worse than the Mughals to "teach our *qaum* (community) a lesson." Tohra felt any enquiry into the Delhi riots would be meaningless unless the Akalis were consulted about the terms of reference, and it was made clear from the beginning that the guilty would be punished. The Tarkunde and Sikri enquiry committees had pointed an accusing finger at persons who were now ministers and MP's. "How will they allow a fair enquiry?" he asked.

At a press conference two hours later, Tohra dropped the bombshell

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

about the possibility of rebuilding the Akal Takht. But he was careful enough to leave himself an option: this, he said, was only his personal view and any such step could only be taken after taking the Khalsa Panth into confidence. "For the time being we may not be able to do it as we are engaged in another struggle," he said. Asked why he wanted to demolish the Akal Takht, he replied: "Because the Government has built it; the people won't accept places of worship built by the Government; only the followers of the faith should do this." And, he said, if the Government wanted peace, "let Rajiv Gandhi come here and apologise, and give a guarantee that the police will never enter the temple again." Hadn't the the Sikhs readily forgiven the then Punjab chief minister Bhimsen Sachar when he apologised after the police entered the temple in 1955, he asked, and hadn't Arjun Singh as Madhya Pradesh chief minister gone to an Indore gurudwara and apologised for the entry of the police into it?

Like all Akalis, Tohra too proclaimed himself in favour of a settlement —but, on his terms. But he did concede: "We have suffered, the Hindus have suffered and above all Punjab has suffered. Those whose houses are on fire do not want the flames to continue raging."

Of all the things Tohra said on his first day in Amritsar, it was his proposal to demolish and rebuild the Akal Takht that seemed to catch on. Whether or not he said it as yet another negotiating point to be raised by the Akalis, it certainly took everyone by surprise. Veteran CPI leader Satya Paul Dang said it would divide the Sikhs. And so it did. Dilbir Singh, 54, outspoken Amritsar industrialist and general secretary of the Chief Khalsa Diwan, the main educational body of the Sikhs, said: "Tohra is welcome to further beautify and extend the Akal Takht but demolishing a gurudwara already built cannot be approved." He wondered why the Akal Takht, which has not been an issue so far, was being turned into one. "We should reduce the number of issues, not increase them," he said.

But the proposal was enthusiastically endorsed by Amrinder Singh, convenor of the Sikh Forum, only to be refuted the next day by co-convenor Lt-General Jagjit Singh Aurora who clarified that this could only be Amrinder Singh's personal view. Aurora said that the Forum Council would meet to take a view on the Takht proposal and meanwhile he would take Tohra's remarks with a pinch of salt. It was probably another case of adopting a hard line to gain credibilty, Aurora said.

But whatever people like Dilbir Singh and Aurora might say, the Tohra announcement seemed to be immensely popular with Sikh commoners and shopkeepers around the Golden Temple. Sitting at a book shop in Bazaar Mai Sewan, Dr Darshan Singh, a renowned agricultural scientist and retired head of the Agronomy Department at the Punjab Agricultural University, came out wholeheartedly in support of it.

People like Dang, however, advised that the Government should persevere in not getting provoked by such statements and come forth with more initiatives. Dang also felt that the Congress(I) could contribute by instructing its units in Punjab, Haryana and Chandigarh to "keep their mouths shut about the future of Chandigarh" and mobilise public opinion for the acceptance of any award the Centre may give in the national interest.

But while there is still no sign of further initiatives—barring the release of former Akali chief minister Prakash Singh Badal—the tension in the state is palpable. Police checking up on civilians often evokes hostile reactions, particularly when the police is aggressive in its searches. Last fortnight, the alleged manhandling of a bus driver by a CRP patrol led to a strike by roadways staff and suspension of all bus services. It was only when the Deputy Commissioner, Ramesh Inder Singh, ordered a magisterial enquiry into the incident that the roadways staff returned to duty.

Police action is more vigorous after the sort of murderous violence that was dealt against Bhatia, and both the violence and the follow up tend to cloud the atmosphere more. If the Sikhs resent the police for its ham-handedness, the Hindus protest its ineffectiveness. Both communities ask why the police and security forces have failed to apprehend terrorists after daring attacks such as the one on Bhatia. "Previously it used to be alleged that terrorists came from the Golden Temple and returned to it after killing people. Now that they have no such refuge why are the culprits not being caught?" asks Dilbir Singh. The president of the Punjab Bharatiya Janata Party, Dr Baldev Prakash, counters that the police is either afraid or sympathetic, and is still "groping in the dark" for Bhatia's attackers.

Ramesh Inder Singh, however, asserts that arrests have been made in 90 per cent of the cases of terrorism. Of the three persons arrested after the raid on sarais adjoining the temple, one was a listed bad character and another an SGPC sewadar who was carrying a licensed weapon but without endorsement on the licence.

However unsuccessful they may be in catching terrorists, the authorities show a paranoid concern for security. Taking a flight from Amritsar airport means running a security gauntlet which involves having one's baggage sniffed by an Alsation dog once in the security lounge and once again at the foot of the aircraft stairs, multiple friskings and body checks with hand held metal detectors, apart from the customary X-ray scan of baggage and walking through a doorframe metal detector. After checking in at the airline counter, the passenger proceeds to a police counter to be accosted by three policemen who take down the passenger's name, father's name, address, ticket number, and details of the number of recent trips to Amritsar. All of this points to the growing gulf between Punjab and the rest of the country. That was how the north-east once felt. Now that same sense of alienation is creeping up on Punjab.

Presenting a copier that improves on the original

The new Canon NP-271 is designed to produce the perfect copy every time. The secret is its built-in Automatic Exposure System.

Original too dark?
The NP-271 automatically lightens the image to produce perfectly clear copies.

Original too light?
The NP-271 automatically darkens the image for a cleaner copy.

Original just right?
The NP-271 maintains the correct exposure automatically.

There are many other features that take the Canon NP-271 beyond the standard in plain paper copiers . . .

High Speed: Turns out 27 copies per minute.

Colour-coding: A choice of three colours — brown, blue or black — helps you classify your papers more easily.

Mono-component toner: Ensures excellent and uniform copy quality at all times.

CdS drum: Scratch resistant and highly sensitive to all colours including blue.

Touch-sensitive controls: Microcomputer sophistication assures simple one-touch operation.

After Sales Service: Backed by an efficient All India Service Network.

BY-ELECTIONS

Changing Fortunes

A NOR'WESTER does not spell the monsoon. Nor does a bad patch in by-elections signify an all-round decline in popularity. Yet the seizure that gripped the Congress(I) at the by-elections to three Lok Sabha and 26 assembly seats, concluded last fortnight, gives a measure of the quicksand on which its popularity rests. In the assembly polls, spread evenly among states ruled by the Congress(I) as well as the Opposition, its tallyboard remained stuck at a shockingly low seven. And its victory in one of the three Lok Sabha constituencies could hardly be considered a compensation for the humiliation suffered by it at the hands of the much-abused Shiv Sena in the elections to the Bombay Municipal Corporation (*see box*).

The verdict of five million voters, spread over 10 states, was admittedly harsher than the one given in the March assembly when polls the Congress(I) had bagged 60 per cent of the total seats. It won a little over a fourth this time round. In Orissa, Bihar and West Bengal, where the party came out with flying colours in the Lok Sabha elections, it managed to win just two of the 10 seats contested. Altogether it wrested only three seats from the Opposition, but lost out on seven.

The party merely shrugged off its reverses. All India Congress(I) Committee (AICC-I) General Secretary Srikant Verma, the party's man for all seasons, said: "By-elections are like a mere sentence in a book. A sentence may be badly phrased here and there, but that does not take away from the merit of the book." But Verma is a poet, and many thought the metaphor was rather clumsy. Said Atal Behari Vajpayee, president of the BJP: "I also agree that too much meaning should not be read into by-elections. But it was a warning to the ruling party, and people are generally not warned so soon after taking charge."

It was truly a stern warning served to the Congress(I) in Uttar Pradesh, home state of Prime Minister Rajiv Gandhi. The party lost two of the three seats in the state. Ram Singh Khanna, Uttar Pradesh minister till March and veteran Congressman, was badly mauled in his traditional constituency of Bareilly city by a BJP candidate, Dinesh Jauhari, who won by a margin of 14,885 votes. Even the Congress(J)—certainly no favourite of the bookies—scored a victory over the Congress(I) at Phulpur constituency in Azamgarh district. It was only Harishankar Tiwari, sitting MLA from Bilgram constituency in Hardoi district, who registered a face-saving victory for the party by defeating his nearest Lok Dal candidate. Said Union Finance Minister Vishwanath Pratap Singh, who is also the president of the state unit of the party: "We expected much better results."

Expectations were equally belied in Orissa, the state where the Congress(I) had had made a clean sweep of the Lok Sabha polls, winning 20 of the 21 seats. This time, however, it came a cropper, losing all the three assembly constituencies. The hardest blow came at Khurda, the constituency vacated by chief minister Janaki Ballav Patnaik who had contested from two seats in the March assembly elections. Patnaik had won the seat by a whopping 25,000 votes: but this time round the tables were turned on the Congress(I) which lost the seat by a over 2,500 votes to a Congress(I) rebel, Parasanna Patsani, a known supporter of Basanta Kumar Biswal, Patnaik's former friend who was upstaged by the high command on the eve of the assembly polls. Patsani resigned from the party last month as his claim to the Khurda seat was not entertained by the party. Subsequently, Patnaik sacked him from chairmanship of the Orissa State Cooperative Land Development Board and slapped corruption charges on him.

The Janata Party in Orissa, led by the fiery Biju Patnaik, wrested the reserved tribal seat of Keonjhar from the Congress(I), as well as the Kakatpur seat. There was a renewed bout of optimism in the Janata camp, sulking for months after its defeat in the Lok Sabha and the assembly elections. Said Biju Patnaik: "The results have proved the present Government's sharp decline in popularity. The earlier victories were a mere fluke, caused by sudden and unnatural events. Now the real issues are back on the scene, and the Congress(I) is fast losing ground."

The verdict in neighbouring West Bengal was particularly galling to the Congress(I) which had of late been in a state of euphoria over its recent successes in the Left Front-ruled state: the Congress(I) had quadrupled its tally (from four to 16) at the last Lok Sabha elections. However, the Marxist-led Left Front struck back defeating Congress(I) candidates in all the three constituencies where by-elections were held. Umakanta Roy, candidate of the Revolutionary Communist Party of India (RCPI), a Front partner, defeated the Congress(I)'s Asit Mal by 3,478 votes at the Hasan reserved seat in Birbhum district. And this was clearly a slap in the face for Pranab Muk-

BOMBAY MUNICIPAL CORPORATION

The Aye of the Tiger

THE DRAWING-ROOM, stuffed with gods and tigers, was crammed to capacity and more. The thin man in spotless white stood quietly in a corner, smoking his trademark pipe as, one by one, a string of people touched his feet. Bal Thackeray was a happy man. "Today we have proved that Bombay belongs to the Maharashtrians," he said with that famous clipped smile and muttering: "Jai Maharashtra". He said a moment later over the head of one of the newly-elected corporators: "Now they will have to listen to us."

It was Thackeray and his Shiv Sena's finest hour. Against all odds and predictions, in the teeth of the supposed "Rajiv wave", brushing aside the cobwebs of past defeats, the fanatically parochial party has run away with the country's richest and most powerful corporation. It won 74 of the 140 seats it contested, leaving it 12 short of a majority in the 170-member corporation. The Congress(I) resembled nothing so much as a pricked balloon, winning only 37 seats, the Congress(S) and the Janata Party together took 19, and the BJP, as usual going it alone, finished with 13. The CPI ended with one and independents and others—including nine rebel Congressmen—accounted for a crucial 26. In its sweep, the Sena humbled many stalwarts like former mayor B.K. Boman Behram, contesting as an independent, and Bombay Regional Congress Committee (I) Vice-President Tabjibhai Solanki. Only a third of the Congress(I) sitting corporators given a ticket got through.

The Shiv Sena's performance was astounding. Even at the previous height of its popularity, in 1968, it had got only 42 seats and in the outgoing corporation it had held only half that. To explain the feat of more than trebling the earlier tally is something which even the cocky Thackeray—he understandably looked a little dazed by the sweep—is hard put to perform. Sudhir Joshi, ex-mayor, comments: "Our councillors were the only ones who worked in their wards and that is why they voted for us. Rajiv Gandhi does not count in a local election."

The reasons why for the first time a single opposition party came only a dozen short of a majority in the BMC are varied. The vote, for one, was poor, estimated at only 40 per cent. For another it was heavily split, not just among parties but among the candidates of each party. The Congress(I)'s 170 candidates were reportedly being opposed by at least 300 rebels and in some wards were facing three or four rebels each.

JAGANNATH DUBASHI

Shiv Sena's Bal Thackeray back with a bang

It was Vasantdada Patil who set the ball rolling with what is said by Bombay Congressmen to have been a calculatedly inflammatory remark about a move to bring Bombay under Central rule, and that the need of the hour was to oppose it even at the cost of one's life. Thackeray's campaigners immediately made much of this in their meetings. Then the chief minister, whose dislike of the city politicians is well-known, came out with another statement to a local paper about the many Congress(I) candidates said to be of dubious antecedents: "Don't vote for them. Defeat them." What was worse, he did not retract the statements. Says city Congress(I) leader Murli Deora, who resigned as soon as the trend became clear: "We have not lost because of our candidates. The rumour was spread that Bombay was being taken away from Maharashtra and this was enough to inflame passions."

The chief minister is quickly being painted as the villain of the piece of the Congress(I). He reportedly refused to campaign for the party and even refused to release the manifesto. Complaints to him about partymen actively working against party interests fell on deaf ears. Says D. Patil, MLA from Bhandup where the Congress(I) lost all six wards for the first time in many years: "In our area an MLA known to be close to the chief minister was moving around with rebel candidates." Charges Gurudas Kamat, MP from Bombay: "The police was inactive. Countless instances of bogus polling were ignored."

Even as the Congress leaders got set for a right royal squabble, the Shiv Sainiks are getting ready for power after a long dry season. There is no doubt that the victory has come as a much-needed shot in the arm—despite Thackeray's assertion that "it did not come as oxygen for us." And last fortnight Thackeray was getting ready to dole out the spoils, explaining that he did not believe in intra-party democracy. He appealed to the people of other states to "respect the language and culture of Bombay and to live harmoniously. They must share not only our joys but also our sorrows." First, of course, he has to find the dozen or so people for a majority and was unusually accommodating. "We are not going to see party labels on the floor of the house. We will go by the proposal."

Among the winners from other political parties were Ramdas Nayak of the BJP. Says Arun Mehta, general secretary of the state Congress(S): "The vote was heavily split. A quick calculation shows that in many cases the national opposition parties polled the highest, but the Sena's win is a creditable one." And what does Shiv Sena rule mean for Bombay? Thackeray plans to begin the reign by renaming Bombay Mumbai. Then he plans to control the influx of people into Mumbai by denying licences and permits to people from other states coming there on business. No doubt the former cartoonist will think of other treats as time goes on. Which should make for exciting times.

herjee, the newly-appointed West Bengal Pradesh Congress(I) Committee president, who is a son of Birbhum. This was regardless of the fact that Union Law Minister Asoke Sen and weighty state leader Subrata Mukherjee had campaigned at Hasan. Front candidates also breezily went past the winning post at Garbeta in the coastal district of Midnapore, and Kranti in the northern district of Jalpaiguri.

It was equally tough going for the Congress(I) in the two southern states of Karnataka and Andhra Pradesh, lost to it anyway. Out of the five seats in Andhra Pradesh, the party won one while its ally, the Majlis-e-Ittehadul Muslimeen (MIM), won another. N.T. Rama Rao, the chief minister, had earlier contested three seats and, characteristically, won all. The two seats vacated by him subsequently—Gudiwada and Nalagonda—have gone back to the ruling Telugu Desam, not to speak of the Makthal seat which was wrested by the Janata Party, an ally of the Telugu Desam, from the Congress(I). Ravi Sohanadari, the campaign manager of Rama Rao, won the Gudiwada seat by a margin of 21,643 votes. Says P. Upendra, general secretary of the Telugu Desam: "The people have reposed their faith once again in the leadership of Chief Minister N.T. Rama Rao."

It was also a question of faith in the state of Karnataka next door where candidates belonging to Chief Minister Ramakrishna Hegde's Janata Party clinched both the seats where by-elections were held. Their margins of victory were resounding by any standard: K.L. Shivalinge Gowda trounced Marilingaiah of the Congress(I) by over 18,000 votes at Sathanur while Umesh Katti beat Congressman S.S. Mahajan Shetty by a margin of more than 22,000. Earlier H.D. Deve Gowda, a minister in the Hegde Cabinet, had won the Sathanur seat by a margin of 12,800 votes but vacated it in favour of Holenarsipur. Said M. Chandrashekhar, recently elected president of the state Janata Party: "We have done it again and again, proving that the people are happy with our government."

The Congress(I) performed better in Rajasthan and Madhya Pradesh. And despite the violence in Bihar—where four people were killed on polling day—the party conducted itself not entirely without credit, winning two of the five seats. In Madhya Pradesh, Ajay Singh, son of the former chief minister and Punjab Governor Arjun Singh, won the Churhat seat vacated by his illustrious father. This was the only seat where a by-poll was due. In Rajasthan, however, the Congress(I) won two of the three seats that it contested; it won the prize seat of Amber, captured earlier by influential BJP leader Bhairon Singh Shekhawat, former chief minister. However, the BJP also retrieved from the Congress(I) the Kishengarh seat: the defeated Congress(I) candidate is no less than Kastur Chand Chowdhary, son of the Rajasthan PCC(I) general secretary, Kesari Chand Chowdhary.

In Bihar, the BJP won the industrial constituency of Bokaro. The Latehar seat, first stated to have been won by the BJP, was later unofficially declared won by the Congress(I).

It was only in Tamil Nadu, under the benign eye of friendly Chief Minister M.G. Ramachandran, that the Congress(I) scored a decisive victory over its Janata Party rival in the Lok Sabha constituency of Tiruchendur. The margin of its victory, however, was reduced from 2.23 lakh last December—following which the winning candidate died—to 76,000 now. But the Janata Party avenged its defeat at Baramati in Maharashtra, trouncing the Congress(I) candidate by a margin of 35,000 votes in the by-election necessitated by Sharad Pawar vacating the seat.

It was anything but half-heartedness that caused the sketchy performance of the Congress(I). Even though Rajiv did not move out this time, seven state cabinet ministers assisted Tiwari in the campaign in Uttar Pradesh. It was even ensured that there was no tripping in power supply to the relevant constituencies for a few weeks before the polls. In Rajasthan, a number of hand-pumps were hurriedly installed in the constituencies that were going to the polls. To cap it all, the Congress(I), in all its campaign rallies, harped on the promise of a better future—more jobs, more technological advancement, better education.

But electoral allurements in India are effective only when they are accompanied by strong emotional motivations—such as during the aftermath of the assassination of Mrs Gandhi last year. When the emotional batteries are drained, as they are now, Rajiv and his Congress(I) have to face the electorate on the strength of achievements.

—PRABHU CHAWLA with bureau reports.

At Keltron Controls too, we never rest on our laurels.

Today, Keltron presents a total integrated control capability comprising fourth generation digital distributed control systems, state-of-the-art process computers and a range of application software, process models and optimization packages.

Within just five years of inception, Keltron controls have revolutionized process control technology in the country. Bringing the expertise of an international stalwart in the field.

The entire corporate effort at Keltron Controls has been to achieve self reliance in technology, production and R&D.

Leaders
India's first successfully commissioned totally automatic control system at the Tuticorin Thermal Power Plant was installed by Keltron Controls.

R&D
Keltron stakes nearly 6% of the total turn-over in R&D. This impressive investment has a record to match. Keltron Controls have made significant advances on the Controle Bailey design. Our list of developments include Surveillance Monitors, Alarm Annunciation Systems, Microprocessor based Temperature Scanners, Sequence of Events Recorders and Programmable Logic Controllers.

Infrastructure
At Keltron Controls, we have systematically built up a complete infrastructure of our own manufacturing bases. From minor components to major equipment such as pressure transmitters, pneumatic operators, converters, monitors. We also have the backing Keltron's Cybernetics Division for microprocessor based systems, engineering work stations, colour graphics, networking and software.

9020 System
The present 9020 system of Controle Bailey endorses a sophisticated third generation design. Its most notable features are split architecture to facilitate more efficient control panel layout, the personalization facility and surveillance monitors that simplify maintenance and reduce downtime.

This system, effectively indigenised and upgraded by our R&D has proved to be an unprecedented success wherever it has been set up.

The system also offers the full range of completing items: Deltapi transmitters (Kent Teighi), water and gas quality analysers (BBK), Turbodem Logic Controllers (CGEE ALSTHOM), Capacomp indicators (Cammille Baeur), PWM based UPS (BBS).

Projects
Today, our orders strength exceeds Rs. 108 crores and includes the country's major corporations such as BHEL, IOC, HPCL, Malabar Cements, Bhilai and Vishak Steel Plants, Kribhco Fertilizers, power plants for the states of Gujarat, Tamil Nadu, Andhra Pradesh, Uttar Pradesh, Madhya Pradesh, Karnataka, Haryana, Maharashtra.

Our large fleet of top-flight engineers can immediately get cracking on your projects. Lead time for execution can be as low as six months.

Future
A quest for ever more refined systems has our engineers engrossed in wider explorations. To develop advanced programmable controllers, Microprocessor based Voice Annunciation Systems and Data Loggers.

Now our sights are set on more ambitious fourth generation digital distributed control systems: Hitachi's HIACS 3000 & BBK's P4000.

No matter how good the present, we are always working for a better future at Keltron.

THE PRESIDENT

Extreme Charges

IT ISN'T often that polemical broadsides are aimed at the august person of the President of India, a national symbol who is supposed to be above controversy. So more than a few eyebrows went up last fortnight when a Congress(I) MP, K.K. Tiwari, alleged in the Lok Sabha that two Sikhs supposed to be connected with extremists overseas had been President Zail Singh's guests at Rashtrapati Bhawan in 1983.

Tiwari's remarks came close on the heels of stories in sections of the media alleging that the President had links with extremists. Admittedly, the stories were sensational and polemical in content and style, and they looked suspiciously like a campaign. Consequently, they raised a controversy which generated more heat than light.

The most blatant accusation came from Tiwari. Speaking in a debate last fortnight on a public hearing on the so-called "human rights" issue in Punjab in Washington, Tiwari said that Deedar Singh Bains and Bhajan Singh Jogi, two men who he said were associated with such extremist leaders as Jagjit Singh Chauhan and Ganga Singh Dhillon, had stayed at Rashtrapati Bhawan in 1983. Presuming on the basis of this that there was some link thus established between Rashtrapati Bhawan and these protagonists of Khalistan, Tiwari thundered: "I would like to ask the (home) minister how their stay was possible."

Home Minister S.B. Chavan seemed less than enthusiastic in his reply. Taking two days to make a riposte, all he did was to read out the official denial issued by Rashtrapati Bhawan saying that Bains and Jogi had not stayed there.

Perhaps, but what makes Tiwari's allegation interesting is not just that it was made but that he doesn't seem to have been taken to task for speaking out of turn. What is more, a feeling has got around—not least because Chavan's defence was so half-hearted—among opposition leaders that the feelings he expressed were actually inspired by guidance from higher-up. But Tiwari firmly denies that he was acting on orders. Said he: "I have been in Parliament for six years and I have been known to speak my mind. This was an issue I felt strongly about."

Contacted by INDIA TODAY, an official of Rashtrapati Bhawan declined to get involved in a discussion on the subject and stuck to the letter of the official denial. "The office of the President cannot be dragged into this," he said. While that may be a valid argument, inquiries by INDIA TODAY reveal that both Bains and Jogi visited India several times and Jogi at least had been in Rashtrapati Bhawan as a visitor if not overnight guest. Jogi had also met the late prime minister Mrs Gandhi and Rajiv Gandhi before he became prime minister.

So was it a storm in a teacup? In one sense it certainly was. Jogi, a former customs inspector in Delhi, left India in the '60s to settle in the United States. He is credited with having converted a number of white Americans to Sikhism and has become a wealthy man owning property including ashrams in several parts of the US.

But he is no stranger to India. According to the official records, he was in India on December 9, 1982, and stayed with his disciples in a five-star hotel in the capital. He was back in India in 1984 and sat in the VIP enclosure at the Republic Day parade. Three months later, when President Zail Singh visited Mexico, he dropped in on Jogi's Los Angeles ashram. Said a presidential aide: "There was no secrecy. Even (Minister of State for Steel) Natwar Singh, who was then foreign secretary, was with him." The itinerary, he added significantly, was approved by the Government.

Bhajan Singh Jogi: suspect visitor

Deedar Singh Bains is now one of the wealthiest of Sikhs in the US to which he migrated shortly after Independence in 1947. He owns some 10,000 acres of orchards and agricultural lands in California and has been an acquaintance of —Zail Singh's for some time. But Operation Bluestar changed his view on his country of origin completely. Shortly after the crack-down on extremists in the Golden Temple last June, he told INDIA TODAY (July 15, 1984) in the US: "My only solution now is Khalistan. Before the raid I was not too much for it."

Bains too is reported to have visited India often though not since the army crack-down. More important, he was once considered for an honour by Mrs Gandhi's government.

According to information from intelligence sources, Jogi and Bains are in different ways committed to the extremist cause. But while Jogi is known more for his flamboyance, Bains may actually be more active in the separatist movement. But the way things are, it would do nobody any good, certainly not the President, to publicly own up to a friendship with the two.

Unfortunately, it doesn't seem likely that such controversies will die out. They're too much a part of the mishandling of Punjab, the long story of lost opportunities and Congress(I) factionalism which helped bring the state to its present mess.

Before he became President, Zail Singh was embroiled in an unseemly battle for influence within the Congress(I) in Punjab, battling his chief rival in the party, Darbara Singh, in a manner which gave all the advantage to the extremist leader Jarnail Singh Bhindranwale. Incidents in which the rivalry between these two Congress(I) leaders allowed Bhindranwale to evade arrest and Zail Singh's presence at a religious ceremony together with Bhindranwale are now an indelible part of the Punjab story. And it seems likely that until the Punjab mess is cleared up, these ghosts of the past cannot be wished away.

An Artist's Impression

ANDHRA PRADESH

Survivor's Story

ENCOUNTERS sometimes backfire on their perpetrators—the police. Civil rights groups in Andhra Pradesh are demanding a reopening of the whole question of police repression after a patrol gunned down five unarmed naxalites. A sixth member of the group, Ramiah, feigned death and lived to tell the tale revealing, in the process, that the divisions among naxalite factions can even lead them to turn informers against each other.

As Ramiah tells it, the tragic incident took place at night on April 11 on the outskirts of Venkatraopet village in Karimnagar district where the six activists of the Chandra Pulla Reddy group had stopped to spend the night. Worn out, they neglected to post a guard, and rued the mistake when they were woken up by a police patrol and forced to squat in a line with their hands tied behind their backs. Seconds later, the police opened fire with Sten-guns and revolvers at the barked commands of two sub-inspectors. Ramiah, who was shot in the legs, stuck out his tongue in a gross parody of death when the cops shone torches on the faces of the naxalites to make sure they had done a complete job. He made good his escape once their backs were turned and contacted the Andhra Pradesh Civil Liberties Committee (APCLC).

The police were not slow in coming out with their own version of the incident, complete with alleged seizures of firearms and country bombs from Venkatraopet. However, they refused permission for an APCLC fact-finding team to visit the spot and carry out investigations on the grounds that the area was "tense". Deputy Superintendent of Police Buchi Reddy, Sircilla, even claimed that over 50 activists had surrendered in the wake of the incident and agreed never to associate with naxalite groups.

Map by B K SHARMA

However, APCLC Secretary K. Balagopal, challenged the police version, pointing out that their refusal to let the team visit the spot and talk to the villagers "only deepens our suspicions". His information also led him to bluntly state that the "tense" situation the police cited as reason for keeping the village out-of-bounds to outsiders was their own creation. Dozens of activists and sympathisers of the Pulla Reddy faction had been beaten up in police stations and intimidated into silence.

K. Rajanna, state committee secretary of the Chandra Pulla Reddy group, said the latest killing was the first since the days of the Emergency when activists of his faction were prominent targets for the police. "My analysis leads me to believe that the police strategy is to eliminate key activists of one group and then pass on to the next. They began with groups lacking a mass base and then move on to groups with considerable popular backing—ours."

Politically, the Chandra Pulla Reddy faction has always had a large measure of support from educated youth and farm workers, thereby causing concern to the police. But this question of mass backing has drawn fire from other groups which claim that after Pulla Reddy's death in November last, a sizeable number broke away under Paila Vasudeva Rao. The split generated its own bitter divisions that took a peculiar turn—one faction informing on another faction to the police.

This was confirmed by a junior police officer who refused to be identified. He said that the tip-off about the Venkatraopet group came from the rival People's War Group led by Kondapalli Seetharamiah. Similarly, the arrest of four naxalites of the People's War Group near Rampachodavaram in East Godavari district shortly after the Venkatraopet incident was a result of information supplied by the Paila Vasudeva Rao group. Not surprisingly, the police have been quick in exploiting these internecine rivalries with deadly results.

Coming in the wake of the denial of permission to Professor Manoranjan Mohanty of Delhi University to speak at Indervalli on April 20 to mark the fourth anniversary of the massacre of Gond tribals in 1981, Balagopal believes there is a renewed campaign against civil rights groups under way. "Continued atrocities on unarmed villagers and impediments put in the way of our functioning point to the fact that the state Government is behind this. Petitions to the Lok Ayukt by the APCLC for indicting police officers have evoked little response."

The affair took on a comic opera get-up when Chief Minister N.T. Rama Rao called the naxalites "true nationalists". In a manner reminiscent of one of his block-busters, he went on to declaim: "We cannot direct the police to shoot naxalites. We can only appeal to them to shed the path of violence and wait for a mental transformation."

But if the growing police "encounters" are any indication, Balagopal and his like-minded activists have ample reason to feel that it is the state police who are in urgent need of a "mental transformation".

THE ULTIMATE WORLD CLASS REFRIGERATOR

Polyurethane Foam (PUF)—the world's latest advance in insulation technology now comes to India. This outstanding technological innovation has been incorporated in our Kelvinator refrigerators. Bringing them at par with the best available in the industrially advanced nations. The Polyurethane Foam gives the refrigerator perfect insulation. Improves cabinet temperature and reduces electricity consumption. Cooling is much faster and ice-formation much quicker.

Being highly rigid and strong, Polyurethane Foam makes the refrigerator infinitely sturdier. Making it virtually immune to damages and dents.

The rigid foam also makes it impossible for cockroaches and other insects to breed within the insulation.

No moisture can collect within the insulation and so the refrigerator does not sweat in humid conditions.

We are proud to offer to you the ultimate in refrigerator technology.

Sold & serviced by :
Expo Machinery Limited
Pragati Tower, 26, Rajindra Place,
New Delhi-110 008.

MANAGERIAL EXCELLENCE

HOW TO DO IT — THE PI WAY.

By Dr. Pradip N. Khandwalla, Professor IIMA, and author of "Fourth Eye: Excellence through Creativity."

"ORGANIZATION VS. PI MAN

Ever met the Organization Man? This creature not only works for the organization, but also belongs to it. The man of persuasion techniques, group work, committees, and conference tables. Gets along well. Has no disturbingly exceptional traits. The "well-rounded" mediocrity. William H. Whyte first identified the species in the mid-fifties. More recently Zaleznik and Kets de Vries described a mutant: the man of procedures, precedents, and rules, the steady climber; the inhabiter of ruts; the Minimum Man. Most managers, by the time they are forty, closely resemble the Organization Man. And the Minimum Man. They exist. Merely.

Then there is another man. Not much better off than the Organization Man. Not at least earnings and perks and position-wise. Sometimes reviled. Dismissed at times as an impractical visionary or a crank. Even considered a troublemaker. The man who likes to challenge the God given order. Toys with fresh ideas. Takes risks. Stands up for what he thinks is right. Endlessly asks questions. Seeks out people with bright ideas. Wants to leave a mark on the world. Likes to be a pioneer. And an innovator. Let us call him the PI Man (P for pioneer and I for innovator).

INTERNATIONAL FILM STAR: KABIR BEDI

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection.

Digitized by Arya Samaj Foundation Chennai and eGangotri

WHERE ARE THE PI MEN THESE DAYS?

Surprisingly, everywhere: In industrial beehives around towns. Gutsy little entrepreneurs. More than half-a-million strong. Greater in number than the army of corporate managers. In greenfield sites, working fifteen hours a day to turn a blueprint of lines and strange notations into a temple of steel and concrete. Poring over government incentive schemes for new ventures. Jetting in the developed countries in search of new technologies and foreign collaborators. In labs, burning the midnight oil for working on bizarre ideas. In offices after six, conjuring diversification or doubling of capacity. If you want to find one, go wherever a new edifice is rising. Be it of cement and steel, or of ideas. You will be sure to find a PI fellow orchestrating the effort.

WHY BE A PI MAN?

Because life is short. Because to be human is to live fully. And create. And reach for excellence. And inhale the breath of the age of Aquarius. The age of inventions, ventures, peaceful revolutions. The age of tall human achievements. The age of renaissance. The age of national rebirth.

The PI, too, is human. He uses contacts. Employs techniques. Works with others. Thinks, when he chances to remember, of his creature comforts. Even saves. But he is charged. Charged with a sense of mission. Taking challenges. Moving mountainous traditions. Growing in a dozen directions.

Probing. Pushing. Dismantling. Developing. Recreating. Enlarging. Breaking new paths. Blazing. Living every, every minute. Shaping the organization to his vision. Carving out pieces of space. Overtaking time.

WHERE CAN YOU PI?

But you will say, "How can one PI in this country of lilliputians and bureaucracy?". One can. Go where the action is hot. Even if the pay and the perks are not too hot. Into organizations that are growing and diversifying. Where the management has a gleam in the eye but its managerial resources are thin. Go where research and development is a way of life. Into organizations shaking in gales of competition. Into organizations that work for some basic values. Into organizations that throw you to the wolves. And don't just look at corporations. There are cooperatives. Voluntary organizations serving the Bottom Man. Institutions. Many dynamic and undermanned. There are enterprises to start. Industries to found. Markets to conquer. And there are sick units to turn around. Thousands of them. Languishing for want of good management. Excellence knows no organizational boundaries.

HOW CAN YOU PI?

If you have decided to PI in an organization, perhaps you may try these steps:

1. First, work hard at getting accepted in the organization. Don't brag. Don't over-promise. Be serviceable.
2. Identify the power structure of your organization. Find out the persons who call the shots and what they want. Cultivate a powerful sponsor for your innovative ideas.
3. Initially, at least, go for modest innovations. Later, you can try more radical innovations.
4. Try and build a broader support base for the innovative idea. Identify those who stand to gain by it. Identify those who stand to lose by the idea. Often, simple modifications may take care of most of their objections.
5. Plan the execution of the innovation very carefully. Success with your first efforts will go a long way in establishing your credibility. It will come in handy for bigger, more daring efforts later.
6. Use and promote the technique of brainstorming. Build on the ideas of others rather than wasting time demolishing them. Wisdom is cumulative. So is human creativity. Persistence in using these principles on oneself and on others should yield high dividends.

What says you? Will you PI or minimy? The choice is yours. Is there a choice, really? ❞

KERALA

Shaking the Coalition

KERALA's politics takes peculiar twists and turns. Chief Minister K. Karunakaran's balancing act in keeping together his fractious partners in the United Democratic Front seemed to hang in the balance when his own Youth Congress(I) President and MLA, G. Karthikeyan, called upon his party to jettison its coalition partners and singly manage the reins of government to ensure a corruption-free administration.

Speaking during the budget session of the Assembly, Karthikeyan charged that the Congress(I) was being "bullied by communal parties whose mismanagement of sensitive portfolios had cast a shadow on the image of the Congress(I) in Kerala". Calling the coalition the "most corrupt government in the history of the state", he asserted that constant pandering to sectarian sentiment had made a complete hash of administrative programmes and policies. Adding fuel to the fire was the Youth Congress(I) General Secretary, C. Philip, who dubbed the Kerala Congress as having a "district outlook" and the Indian Union Muslim League (IUML) with being extremely communal.

Things began to happen when the Kerala Congress questioned the propriety and motives of Karthikeyan and Philip. Dejos Kappan and George Sebastian, both general secretaries, pointed out that the Youth Congress(I), being a part of the Congress(I) and dominant partner in the coalition, had no "moral" right to criticise its partners. Implicit in this mild statement was the threat that the Congress (I) with just 34 seats in the 140-member house was in no position to point the finger at its partners whose support it needed to stay on in power.

They turned the heat on Chief Minister Karunakaran claiming that the corruption allegations levelled against them were a smokescreen intended to cover up the charges of improper conduct directed time and again against the chief minister. Matters reached a critical stage when the KPCC(I) President, C.V. Padmarajan, came out in support of his youthful proteges, leading Karthikeyan to believe that he had Karunakaran's blessing if not open support.

This persuaded Karthikeyan that he was on the right track. Ambitiously, he went on to outline a plan that would enable the Congress(I) to take over the reins of government based on motivating grassroots workers to intensify their efforts at building up the party's base. But Karthikeyan was guilty of overestimating his reach. In the elections to the student unions of three state universities, the Youth Congress was humbled by the student wings of the Kerala Congress, IUML and CPI(M), prompting Congress(S) MLA A.C. Shanmughadas to challenge them to win a single seat south or north of Guruvayoor without support from either the Kerala Congress or the IUML.

Silence from Karunakaran led influential Kerala Congress leader K.C. Joseph to indulge in some loud thinking. "It is the Kerala Congress with its roots deep in the countryside that could best handle Kerala's interests and not the Congress(I)", he said. He was at pains to point out that in spite of having a Congress(I) Government at the Centre, Kerala could not secure the required Rs 3,360-odd crore that it had asked for as budgetary appropriations for the seventh plan. "All we got was a paltry Rs 1,600 crore. The Kerala Congress would be able to secure a better financial deal from the Centre," he claimed.

Perceiving that matters had gone too far and the safety of the coalition was at stake, Karunakaran moved into action. A meeting with his partners in the UDF brought out a ringing declaration that the coalition would stand firm —disbanding it would be suicidal to the future of Kerala. At the same time he quietly impressed upon his Youth Congress firebrands that the time for public criticism was not quite appropriate and that they should wait for better times.

But the polemics had served one purpose—they had ignited a public debate in politics-conscious Kerala about the virtues or otherwise of one-party rule. And what forms this consciousness will take only time can tell.

Beethoven would have loved it

HALDA HONEE DU

The Typewriter with the lightest piano touch keys

The light, light Halda HONEE DU. Fit, perhaps, even for a symphony by legendary German composer, Beethoven.

It's that famous Swedish touch — the unique 49 ball-bearing configuration that takes all the strain out of typing. Designed classically simple. So it's easy to handle.

And extremely economical to maintain. Backed by the country's widest after-sales service network. At your service.

Choose. From a wide range of neat type-faces and four carriage widths. And watch them handle the heaviest paper-work. Ever so lightly.

TAMIL NADU

Idol Furore

EVEN the most studious candidate for the civil services would not be expected to know where Paruthiyur is on the map of India. But last fortnight the spotlight was on this small village in Thanjavur district of Tamil Nadu when K.P. Unnikrishnan of the Congress(S) and S. Jaipal Reddi of the Janata Party raised a storm in the Lok Sabha by alleging that the Indian Government had sought to ship priceless idols from a Paruthiyur temple to the United States for exhibition in the Festival of India there. "This was done," said Unnikrishnan, "despite protests by local Hindus and there is public resentment in Tamil Nadu over the removal of idols under worship."

The Paruthiyur idols and Sastrigal (left): resented export

Nearly 365 idols, icons, images, and art treasures from all over the country were picked by the Government of India for exhibition in the festival. These included a number of precious *panchaloha* (a five-metal alloy) idols from different Thanjavur temples: the Kalyanavaradarajaperumal temple in Paruthiyur, the Sikkal village temple and the Chidambareeswarar temple of Vadakulathur. Then there were priceless bronze images from the Thanjavur Art Gallery which were also taken out, not to speak of the small wood carvings and limestone sculptures from the Government museum in Madras city. It all added up to 10 priceless large pieces, besides many smaller ones.

No eyebrows would have been raised had all this not been done under a cloak of official silence. When Union Minister of State for Culture K.P. Singh Deo replied to the charges in the Lok Sabha 70 idols had already been shipped to the US and, said Deo, the rest were on their way. Journalists had to seek out the Tamil Nadu Hindu Religious and Charitable Endowments Minister R.M. Veerappan for details on when and how the idols were sent to Delhi.

And then some more uncomfortable facts emerged. It now transpired that the state Government had initially refused the Centre's request for the idols in deference to local sentiment. It had even ordered that replicas be made immediately of all the idols that the Central Government sought so that duplicates, instead of the priceless originals, could be sent for the Festival of India. The replicas were even readied in record time. But then the state Government suddenly sent the originals to Delhi.

Explained Veerappan: "The Central Government got in touch with Chief Minister M.G. Ramachandran a second time and pressed again for the original Paruthiyur idols and impressed on MGR that the art exhibits from Tamil Nadu had greatly appealed to the foreign participants at the 1983 Non-Aligned Meet (NAM) in New Delhi. This time the US Government had assured full protection for the exhibits. Prime Minister Rajiv Gandhi was going to personally participate in the festival, and the art treasures would be sent and brought back very safely, insured for very large sums."

But Veerappan caused a few flutters when he tried to argue that the most important reason why the original temple idols were sent was because they were not being worshipped. Said he: "These Paruthiyur temple idols have not been under worship for the last five years or more, and certainly not when we sent them to Delhi. In fact 63 temple icons not under worship had been sent from Tamil Nadu for NAM. At that time no objection had been raised. The icons and idols which have been sent now had all been sent for NAM." The minister gave a categorical assurance that "we will never allow removal from temples of idols which are worshipped as deities".

But 64-year-old P.K. Ramanatha Sastrigal, a Brahmin who was a teacher of Sanskrit in the Paruthiyur Kalyanavaradarajaperumal temple for several decades, has openly challenged Veerappan's contention. Sastrigal told INDIA TODAY that "the four idols of Rama, Lakshmana, Sita, and Anjaneya were very much under regular worship in the temple till 1979 when they were stolen."

An obvious question that arises is why the idols, if they were under regular worship till they were stolen, were not restored to the temple after they were recovered in 1983. Says Sastrigal: "The Government did not return the idols to the temple. Neither were the Brahmins of Paruthiyur conscious enough to ask for the idols back. There are only about eight Brahmin families in the village, and nobody was really interested in 1983 to know what was happening to their recovered idols."

But if the Brahmins of Paruthiyur were sleeping in 1983, they had certainly woken up in 1985. They asked the Hindu Religious and Charitable Endowments Department for the idols to celebrate the Sri Rama Navami festival which fell in end-March. Sorry, said the officials, the work of reconstruction and renovation of the temple was not yet over, and it would be against prescribed religious codes to bring idols into an unfinished temple. What the officials did not say, but Veerappan did, was that the idols had been sent to Delhi.

Even Swami Jayendra Saraswati, the Sankaracharya of the Kanchi Kamakoti Mutt, went on record to say "it is not right to remove idols under worship from temples". The Sankaracharya particularly cautioned against sending our priceless icons abroad, because of the excellent counterfeiting techniques avail-

WHEN YOU BUY A COMPUTER YOU ALSO BUY A COMPANY.

A computer is a piece of capital equipment that is the single most important buying decision your organisation will make in terms of information storage, retrieval and processing.

Feature to feature, Uptron Computers are the best. This is the result of specific corporate strengths.

We have a reputation to protect. Concern for this reputation has enabled Uptron to grow from Rs.60 lakhs to Rs.60 crores in extremely competitive electronics markets. We have never "dabbled" in products. Neither do we have a "sell and run" attitude to our consumers.

Powerful financial resources make it possible for us to invest in the best human resources. And, to allocate more money to research and development which enhances product quality.

This is an ideal mix for a computer buyer. A Corporation with a strong techno-financial base and a mandate that makes commitment a pre-requisite.

India's most sophisticated computer buyers chose Uptron for these reasons.

● UPTRON HAS GROWN 100 TIMES IN 9 YEARS FROM Rs. 60 LAKHS TO Rs. 60 CRORES ● UPTRON ALWAYS PROVIDES STRONG SERVICE SUPP

TO ALL ITS PROD

If you have decided on computerisation you will find it advantageous to get in touch with us.

able in foreign countries. The President of the Hindu Mission in Madras, N.V. Swami, even took the issue to the Madras High Court in a writ petition seeking to forbid the authorities from taking the idols either to America or to any other country. The petition pointed out that "idols of worship could not be made articles of exhibition" and that "no other person of any other religious faith would allow similar things to happen". The court ordered issue of notice to both the Central and state governments. So as the battle raged over a fait accompli, it was evident that the Central and state governments offended religious sentiments while appearing to cater to cultural sensibilities.

PRABHAKAR

BIHAR

Homing In

SUCCESSIVE Bihar chief ministers have played their own version of musical chairs with their official residences. With few exceptions, they have changed their hearth, necessitating massive and costly renovations every time. Last fortnight the state's newly-elected Chief Minister Bindeshwari Dubey decided to uphold this tradition when he decided to convert the state guest-house into his official residence while the 'official' residence, the bungalow at 4, King George Road, lacks an occupant.

Knowledgeable circles in Patna believe that astrological advice was behind the change in Dubey's earlier decision to move to King George Road. Some even say that Dubey changed his mind when he was told that the earlier occupant, previous chief minister Chandrashekhar Singh, had organised some kind of a puja at King George Road which would have augured ill for his successor. Discounting all this, a Dubey aide said the simple reason was that the residence was considered too big for Dubey's family. It was difficult, however, to find many takers for this explanation.

Opposition leaders were, predictably, incensed at this waste of "public funds". They estimate that something like Rs 5 crore has been spent on renovations alone of various chief ministers' residences in the last 10 years. Fumed Lok Dal General Secretary Prabhat Kumar Sinha: "These chief ministers show utter disregard for public money and spend it on decorating their houses as if they are not people's representatives but old time nawabs."

PRABHAKAR

The King George bungalow (top) and the guest house: allegations of waste

The charge was not far off the mark. The King George bungalow, across the Raj Bhavan, has just housed three chief ministers—S.K. Sinha, Mahamaya Prasad Sinha and C.S. Singh— even though after recent innovations which cost Rs 15 lakh it would do any leader proud. Improvements in the electrical wiring and fixtures alone cost Rs 4 lakh. Singh had even got a huge "Durbar Hall" constructed to hold his "Janata Durbar" but went out of office before it could be used.

The first to spurn the King George Road bungalow was Binodanand Jha, who succeeded S.K. Sinha. K.B. Sahay, who followed, preferred to stay in his Chajjubagh residence after, of course, the usual renovations. As Kedar Pandey and Abdul Ghafoor also preferred to stay in their private residences, the King George house was converted, partly, into a guest-house.

With Dr Jagannath Mishra in 1975 came the turn of the astrologers. Guided by the stars, his ministerial bungalow at 12, Bailey Road was given a face-lift worthy of a chief minister. When those stars dimmed two years later, successors Karpoori Thakur and Ram Sunder Das shone in glory from Bailey Road. Mishra stormed back in 1980 but continued to stay at 2, Circular Road while the Bailey Road residence was converted into a Janata Durbar, again after generous allotments from the exchequer.

When C.S. Singh finally decided to restore the King George bungalow to its rightful status, he found it wasn't that simple. L.P. Sahi, a powerful dissident in the Mishra days, was the new occupant there and he was clearly not inclined to shift to Mishra's Bailey Road residence as Singh wanted him to. It was around that time that some 'human skeletons' were found in the Bailey Road residence and displayed by Sahi's men as evidence of tantric rites by the previous occupant. The 'skeletons' proved to be a hoax and Sahi was persuaded to move after Rs 6 lakh was spent on renovating the house.

What erosion the Dubey decision will cause to the public exchequer is as yet unknown. Officials of the buildings construction departments who, for no fault of theirs keep getting into the limelight, were tightlipped on the figure.

Department Commissioner D.P. Maheswari would merely say, "We, the officials, will do whatever the Government decides."

One decision the Government shows no inclination of taking pertains to Thakur's proposal to put an end to this game. As chief minister, Thakur had proposed that the Raj Bhavan be made into the headquarters of the police department, the King George bungalow be made the Raj Bhavan and the Bailey Road house into the chief minister's official residence. The then governor Jagannath Kaushal had also agreed to the proposal but before it could be implemented. Thakur lost his job. Dubey's star-gazer will no doubt brief him on how to manage a longer lease on the job than any of his predecessors but does even he know when the music of the masons will stop at the chief minister's 'official' residence?

—FARZAND AHMED

PROPERTY

House Grouse

HAVING promised to fight for the property rights of hutment dwellers in Jamshedpur if elected to the state assembly, Dramesh Nariman the local Congress(I) MLA seemingly decided last month to begin this crusade by staking a claim to a bungalow he coveted for himself in one of the poshest localities in the city. According to an official working with the Tata Engineering and Locomotive Company Ltd (TELCO), Nariman had tried to pressurise the management to allot bungalow number D-18 on Dalma Road in Nildih, a senior TELCO officers' colony, to him. Failing in his attempts to get the house, Nariman allegedly hired the services of some of the city's known toughs who forcibly entered and occupied the bungalow on the night of April 11. The management immediately protested and last fortnight Nariman was named the second accused and charged with criminal trespass and illegal occupation.

Until the March assembly elections Nariman was a political non-entity in a lucrative Delhi-based leather garment export business. He was unexpectedly given the Congress(I) ticket to the Jamshedpur (East) seat, which he won.

According to the FIR lodged by R.B. Jha, TELCO's town control security in-charge, the bungalow which had been temporarily turned into a store, was allegedly broken into by 15 men armed with guns and other lethal weapons, and led by Paras Singh who was working in connivance with Nariman. The two security guards keeping a watch on the bungalow were "manhandled" and restrained from putting up any resistance. "I too was rebuked and threatened with dire consequences by Paras Singh and his henchmen. They also told me that they had occupied the quarters under instructions from Nariman MLA," Jha who had rushed to the scene stated in his FIR. The FIR also alleges that Paras Singh and his associates removed articles worth Rs 59,000 from the bungalow including 30 fans, 10 geysers and other costly electrical fittings.

The Dalma Road residence and (inset) Nariman: in and out

The TELCO police station at first refused to entertain the FIR and accepted it only when the management complained to higher officials. Officials of the company recalled that the police, despite written complaints remained immobilised and Jha, three days later was forced to file a criminal case against Paras Singh, Nariman and others in the court of additional chief judicial magistrate at Jamshedpur. As Jha stated in his complaint: "The matter was immediately reported to the local police but as Nariman (accused no 2) is an influential personality, no tangible action has been taken by the police. The superintendent of police, Jamshedpur, was also informed but up till now no action has been taken."

However, Amar Pratap Singh, the superintendent of police said that the administration had informed Chief Minister Bindeshwari Dubey and assembly Speaker Shiv Chandra Jha about Nariman's activities. He also asserted that the local police was waiting for Nariman to return to the city to interrogate him.

The attitude of the police prompted the additional chief judicial magistrate to order last week that the police get the house vacated and help the TELCO authorities in occupying it. The court also asked the police to continue its efforts to prevent any further breach of peace.

Nariman returned to Jamshedpur on the day this order was passed and announced that he was no longer interested in staying in the bungalow. He also claimed that the house had been allotted to him but showed no papers to substantiate this. Charging that some TELCO officials were out to "malign" him, he also alleged that some local Congress(I) trade union leaders were a party to the campaign against him. For the time being tranquility seems to have returned to the steel town.

HIMACHAL PRADESH

Clean Sweep

IT WAS time for spring-cleaning in the hilly state of Himachal Pradesh—and last fortnight, Chief Minister Virbhadra Singh was wielding the broom like never before. In a dramatic move that startled the little state, Singh ordered the filing of over a dozen criminal cases against former state ministers and senior government officials allegedly involved in corruption cases. Singh's action came after six months of preliminary enquiries indicted these people guilty of either abetting corruption directly or for being involved in allegedly illegal business dealings. The big names included: former ministers Shiv Kumar and Hans Raj Akhrot, former Pradesh Congress Committee general secretary Vidyadhar, and leading timber tycoon Kewal Ram Chauhan. Said Singh: "My party is committed to give a clean administration and we will not spare anyone who is found guilty, irrespective of his party affiliations."

Singh swung into action soon after his party's massive victory in the March assembly elections in which the Congress(I) won 55 of the 65 seats polled. With the triumph came fresh confidence and once safe in his saddle, Singh directed his enforcement authorities to reopen all corruption cases against politicians and, where necessary, to go ahead and launch criminal proceedings.

Soon, state officials began closing in on rebel Congressmen, especially those who had contested against official candidates and lost. Last month, Vimla Mahajan, widow of former minister Desraj Mahajan, was charged under the Prevention of Hoarding and Profiteering Act. Mahajan, who runs a cooking gas agency in Shimla, was charged with selling cooking gas refills in the black market.

Then came the turn of former industry minister Shiv Kumar who was also denied a Congress(I) ticket. The case against Shiv Kumar relates to the illegal sale of coal outside the state. Official sources reveal that the coal quota of the state was first allowed to lapse by the Industry Department—in which Shiv Kumar's brother was a senior official—and later sold to some Delhi-based private traders without the prior approval of the Cabinet. As a result, the state suffered a coal shortage and private dealers in Delhi made a whopping profit of over Rs 20 lakh. Last month, the Himachal Government arrested two Delhi traders and proceeded with the enquiry against Shiv Kumar. Said a senior state Home Ministry official: "This particular case is just a tip of the iceberg. We are looking into the entire purchases worth over Rs 20 crore made by the state Government between 1980-84."

PRAMOD PUSHKARNA

If he can resist pressure, it'll be a spring-clean that should keep Singh's administration sparkling.

Shiv Kumar

Next, the Government zeroed in on the illegal smuggling and sale of timber in the state—and the man against whom over a dozen complaints have been filed: timber tycoon and former Congress(I) MLA Kewal Ram Chauhan. A report submitted by the state's Enforcement Department last month clearly established that a few important Congress(I) MLA's were running benami timber-selling agencies through which timber was being smuggled out of the state. Chauhan was denied a ticket because of the complaints against him. He later contested as an independent and lost his deposit.

Another criminal case has been launched against Vidyadhar for allegedly selling timber allotted to him for hotel construction in the market. Reportedly, Vidyadhar and his sons had also cut trees on the hotel site without permission of the Government, a fact that was brought to Singh's notice three months ago. But before the state Government could register the case this month, Vidyadhar sought anticipatory bail.

Since the Himachal Government has chosen to start its criminal proceedings with Congress(I) rebels, its Operation Clean-up is being labelled as political vendetta. Said Vidyadhar: "These cases are meant only to silence and harass those who fought against official candidates." Former Congressmen argue that the operation is hardly fair since Singh's government is very reluctant to charge its own sitting MLA's and ministers who may also have been involved in corruption cases.

Singh, however, denies the charge. He insists that his government has decided to launch criminal cases against officials involved in the famous pipe scandal where the public works and health engineering department bought pipes worth over Rs 10 crore in excess of the requirements. The pipes, bought between 1980-82, are still lying unused. Last year, Singh ordered a probe in this deal in which the name of the husband of a sitting Rajya Sabha member, Usha Malhotra, figured prominently.

The enforcement and vigilance departments have prepared a list of over 100 officials involved in corruption. According to a secret report, a large number of government officials—including secretary-level officials—influenced their political bosses and junior staff to allot residential and industrial space to their relatives. In over a dozen cases at least, plots were allotted in the names of wives, sons and other relatives without following the proper procedure. Then in January this year, Singh began scrutinising the returns filed by the bureaucrats. He discovered that most were not declaring their assets completely. He transferred 20 officials from sensitive departments and asked his enforcement and vigilance departments to initiate disciplinary proceedings against them.

The wholesale launching of criminal cases against high profile officials has created an unprecedented scare in the state. Those with connections have started using them. Last fortnight, over 20 MLA's and senior officials camped in New Delhi to get Congress(I) leaders to intervene on their behalf. Slowly and surely the pressure is being put on Virbhadra Singh. If he can resist, it'll be a spring-clean that should keep his administration sparkling all year round.

THE NEW

Vijai SUPER mark II

Scooters India Limited

There's no 150 cc scooter to match it for ECONOMY POWER SAFETY.

FEATURES	Brand X	Brand Y	Vijai Super Mark-II
FUEL ECONOMY Kms/litres	40±6	40	56±6
POWER BHP	6.3	6.5	9.6
SAFETY Engine Mounting	Right hand side	Central	Centrally aligned

Its here. New Vijai Super Mark-II. The latest model from Scooters India Limited — successors to Innocenti of Italy. Pioneers in scooter manufacture. Vijai Super. The winner of Grand Prix in India and abroad.

Super Economy: 56±6 kms per litre

A new variable venturi carburettor, improved cylinder design, increased compression ratio and modified gear ratio impart optimum fuel economy. SAVING FUEL.

Super Power: 9.6 BHP

Goes from 0 to 60 kms in 12.75 seconds flat. Negotiates gradients with ease. And keeps ahead of others.

Super Safety

Centrally mounted engine, low centre of gravity and wider wheel base make it safer even at high speeds, on curves with load.

Super Durability

Modified material composition of cylinder, chrome plated piston rings and the use of solid lubricant enhance engine life. That is why it carries a warranty of 15 months or 10,000 kms (whichever is earlier) — the longest on any two wheeler.

It undergoes over 1,000 quality checks before it leaves the factory.

Vijai Super Mark-II. Distributed and serviced countrywide through 225 outlets.

Exported to many technologically advanced countries including Italy — its birth place.

ORISSA

The Students' Stir

IT WAS unlike any student demonstration that Bhubaneswar had witnessed before: a sudden and violent outpouring of rage. When the smoke finally cleared the press of a local newspaper was in ashes, the credibility of Bhubaneswar's journalists was being questioned and the once-proud reputation of Utkal University had been seriously tarnished. Worse yet was the surfacing of an unhealthy tendency among academics, the police and even the general public to condone the students' taking of the law into their own hands.

The student ire was first provoked on April 3 by *Sambad*, an Oriya morninger, which carried a front page survey of the drug culture it alleged was sweeping the Utkal campus. The report said 44 per cent of the students were taking drugs—and 27 per cent of them were addicts. Then *Tuesday*, a weekly tabloid, published a report on April 9 implicating women students of the university hostel in a call-girl racket.

The *Tuesday* report was the proverbial straw that broke the student body's back. Enraged by what they called the "irresponsible and scurrilous" reports, over 300 students—most of them women—collected on April 11 to demonstrate in the streets. Even Vice-Chancellor M.N. Das was provoked enough to say to the students before they marched out of the campus: "You (the women students) are like my daughters. I will protect your honour as I am not at the mercy of any politician."

The implications of the vice-chancellor's statement were clear. Soumya Ranjan Patnaik, managing director of Eastern Media Limited which publishes *Sambad* is the son-in-law of Orissa Chief Minister J.B. Patnaik. As the students wound their way through the streets they shouted slogans against the chief minister and demanded a public apology from Soumya Ranjan. Vice-Chancellor Das meanwhile led a delegation of three women students to the chief minister to lodge a complaint against the newspaper reports.

Before he could return, however, the students had already raided the offices of the Khabar-Kagaj group, publishers of *Tuesday* and caused widespread damage. By now there was no stopping the student tide which swept into the industrial area of the town and burnt the Trimurti Press which publishes *Tuesday*. "The tragedy," lamented Dhiren Patnaik, editor of *Tuesday*, "was that the police and the magistracy took sadistic pleasure in the violence. Instead of trying to prevent the damage an official told me to go and face the students." *Sambad* and Soumya Ranjan were more fortunate. By the time the students reached the Sambad complex and tried to storm it police and civil officials had reached there and were joined by the vice-chancellor. Soumya Ranjan, who was constrained to come out of his office, refused to apologise but did promise to verify the story on drug addiction.

But Soumya Ranjan feels there is more to the scenario than meets the eye. "Everybody tends to condemn me and my paper because I happen to be the son-in-law of the chief minister," he says. Rabindranath Bahera, assistant general secretary of the university students union refutes that charge and says *Sambad* ignored the rejoinder sent by the hostel superintendent and the secretary of the hostel's union. Nonetheless three days after the demonstration *Sambad* in an editorial regretted that the students had "misunderstood" the report and tendered an apology.

The role of the police has also left many dissatisfied. Allegations that they allowed the students a free hand were indirectly confirmed by SP Kulamani Deo, who said: "Students have taken a vow to destroy the newspapers which publish dirty stories. We are not going to protect any journalist if he writes such things. All these stories in *Sambad* and *Tuesday* are lies."

Vandalised news office: danger signs

Few deny that the students, especially the women, had cause to resent the articles. "But the way the students have expressed their anger has set a new precedent," warned an editorial in the newspaper *Pratigivadi*. "Any organised group will now be encouraged to terrorise and pressurise a newspaper under cover of protesting against irresponsible reporting." Both students and the press will be the losers if that warning is not heeded.

The Original

In 1962, Rado introduced the world's first scratchproof watch – the Rado DiaStar – a milestone in the development of modern watchmaking. Providing a watch with «eternal youth and beauty» required a total commitment and prodigious engineering efforts on the part of Rado. Today, Rado has an unparalleled fund of know-how in manufacturing and servicing scratchproof watches. That's why Rado is known as «the inventor of the scratchproof watch». And that's why the name Rado is synonymous with leadership in watchmaking technology. For each and every Rado DiaStar is a distinctive example of unmatched quality and styling – for manufacturer and owner alike. Would you want to settle for less?

GUJARAT STATE

EVERYBODY, it seemed, was fighting everybody in Gujarat last fortnight. The upper castes were fighting the lower castes, the working class had turned against the middle class, Hindus were fighting with Muslims, the police were battling both the people and the press and the Government was fighting the Opposition. What had started off 11 weeks ago as a students' agitation against the state Government's reservation policy had metamorphosed into a bloody cauldron in which the catalytic conflict between the upper caste anti-reservationists and a government bent on pushing through with the concessions granted to the majority lower castes was subsumed by other collective angers that exploded simultaneously across the state and shattered even the basic social contract that exists between the police and the citizenry. Gujarat has lived through many bloody episodes: the 1969 communal carnage, for one, and the 1981 anti-reservation riots, for another. But Jehangir Cama, hotelier and auto garage owner, was right when he said: "I have lived all my life here but I have never seen or felt the kind of terror I see all around."

Just when it was thought that there could not possibly be any recrudescence of the communal clashes which left several dead in the walled city last month, there was a fresh outbreak of communal clashes both within the pressure-cooker atmosphere of the walled city and in the outlying areas where the fabric of communal amity had not been ruptured till then. Just when it was thought that the police would not repeat the strong-arm tactics that they displayed in the Asarwa locality in Ahmedabad in the first week of April, the 9,000-strong police force showed the city's three million residents that Asarwa was not even a faithful trailer. They repeated their Asarwa excesses in the Khadia and Gomtipur areas on April 17 and 18 and then went on to write one of the most shameful chapters in the history of India's police forces by going on a seven-hour rampage on April 22 after one of their own was hacked to death by a mob.

When they finished, the offices and press of Gujarat's largest-selling newspaper, *Gujarat Samachar* (circulation: 300,000) had been gutted and the city's streets were littered with burnt scooters and autorickshaws. The state Government later claimed that after their "emotional outburst" the police were persuaded to report back for duty but the Muslim residents of Bapunagar, a labour colony, are convinced that many policemen led gangs of "Hindu goondas" in night-long attacks on them which left over 55 dead. Resident J.J.Sheikh, an employee of the telephone department and a social worker, claimed that the rioters came in eight to 10 trucks led by an assistant superintendent of police, an inspector and two sub-inspectors whom he could identify even easily though they were not in uniform.

The fear of rampaging mobs even gripped the affluent areas of the city,

Army pickets in Ahmedabad: fear and frustration

E OF SIEGE

whose traditional distrust of the have-nots was now supplemented by a new fear: attack by ununiformed policemen. As Sandra Long, a resident of Ruby Park in the well-to-do Vadaj locality, said: "People were awake all night fearing that policemen would come and attack us." In other similarly upper middle and middle class areas like Satellite Road, Ambawadi, Paldi, Sarkhej and Navrangpura, it became standard practice to leave lights on all night as groups of vigilantes lounged around outside the gates of co-operative societies, armed with lathis, iron rods and knives.

Asked Dr Gourang Shah, spokesman of the students' Navrachna Samiti: "The state Government says we lost control of the agitation but is the Government in control of its forces?" The question was valid as the trouble spread to Baroda, Surat and elsewhere, and the Madhavsinh Solanki Government felt compelled to call the army in for the second time in five weeks to impose a curfew that its forces had failed to enforce. But the army, unlike the police, cannot be omnipresent and killings continued through the week, taking the toll to around 100—more than double the count in the 100-day anti-reservation agitation of 1981. Solanki had managed to ride that tiger and dismount but there were two essential differences: he had not then become the focal point of the anger of so many castes and classes and neither had his handling of the situation been widely perceived as being inept.

Solanki's reaction, as that of the Union Government and the Congress(I) high command, was a predictable mixture of belligerence and stonewalling tactics. Taking the cue from Prime Minister Rajiv Gandhi's blaming the Opposition for the communal riots in March, Solanki alleged that only the Opposition was behind the continued non-withdrawal of the agitation even after he had conceded the concessions they had sought from his government. As for the police's misdeeds, the chief minister admitted in a confidential three-page note on the Gujarat happenings to Rajiv Gandhi that it was a revolt. But in public he would decline comment on the plea that the matter was sub judice.

THE UNION Government's stand was even odder. Home Minister S.B. Chavan gave graphic details to Parliament of the havoc wrought by the police in Ahmedabad but concluded by almost condoning their action. He blamed the high court for allegedly preventing the police from entering the trouble-spots (only five controversial officers have in fact been debarred), and then took the press to task for inflaming passions. Reacting also to persistent demands from opposition benches for Solanki's removal, Chavan said there was no question of this since it was a "duly elected" government. The refrain was repeated by Rajiv Gandhi at a meeting with opposition leaders but it was left to AICC(I) General Secretary Rajendra Kumari Bajpai to give the party reasoning more clearly when she countered the question with one of her own: should every Congress(I) chief minister be asked to resign every time opposition parties launched an agitation?

Solanki himself sounded confident of riding this tiger as well (*see interview*). In his note to the prime minister, scheduled to be sent late last week, he held out the assurance that the situation would become normal in a week, and pointed out that after the seven-hour police revolt everyone "including the Patels and Hindu businessmen" had realised that police protection was necessary. Accusing the opposition parties of resorting to "street politics" as a way of getting their own back after the mauling they received at the polls, he also accused the press of building up the Opposition. Finally, he drew the prime minister's attention to the report of the Editors' Guild indicting the *Gujarat Samachar* for its role in the 1981 agitation. Elsewhere he is reported to

MADHAVSINH SOLANKI

"I'm confident I'll stay on"

FATE has been playing strange tricks with Madhavsinh Solanki, the 58-year-old chief minister of Gujarat. Barely two months ago his political fortunes were at a unique high: he had become the first Gujarat chief minister to complete a full term and then be elected for a second term; he had led the Congress(I) to a resounding victory in the Assembly poll. His word had carried unhindered sway in the allotment of tickets and all his detractors in the party had been denied them. There was a small cloud on the horizon in the shape of an anti-reservation movement which had been going on for three weeks, but it was expected that a man of his political and administrative acumen would prove more than equal to the task.

But last fortnight it seemed as if his carefully nurtured world had come crashing around him. Gujarat was in turmoil as the anti-reservation agitation had unexpected spin-offs into violence that cut across caste, class and community, the army was out on the streets of Ahmedabad, the police and the people had lost faith in each other and his government had not been able to curb the violence let alone end it.

Worse still for Solanki, there was a mounting campaign for his removal and both Prime Minister Rajiv Gandhi and party general secretary, Rajendra Kumari Bajpai had been called upon to state categorically that Solanki would not be removed. He sounded confident that he would ride this crisis when he met Assistant Editor AJAY KUMAR *and Correspondent* RAMESH MENON *for an interview. Excerpts:*

Q. *Wasn't your January decision increasing reservations for the backward castes a pre-poll gift?*

A. Not at all. There was hardly any delay between the submission of the Rane Commission report, its evaluation, acceptance by an empowered committee and the Cabinet's decision on it.

Q. *But wasn't the committee's report submitted in October 1983 while your decision came 15 months later?*

A. The report was indeed submitted in October 1983. It was then translated and printed, which was finished by mid-1984. Then it was reviewed by the departments of general affairs, medical services and social welfare. Then it went to the empowered committee of secretaries which had a note for the cabinet ready by December but we couldn't take a decision because of the Election Commission's stipulation that policy matters cannot be decided once the elections are announced. Our decision came almost immediately after the Lok Sabha elections finished.

Q. *Wasn't your decision to ignore the commission's recommendation that caste should not be the sole criterion for reservations based on political considerations only?*

Solanki: under attack

A. We decided to accept only those recommendations of the Rane Commission which were within its frame of reference. Whether economic backwardness should also be the criterion was beyond its purview. In fact, economic backwardness cannot be the sole criterion considering that utilisation of the quota has not been good enough. Reservations by themselves are not enough. We will have to create better facilities so they can take full advantage of the reservations. Here also we accepted the recommendations of the Rane Commission which went into the issue of how to help the backward classes identified by the 1978 Baxi Commission whose utilisation was a poor 5.6 per cent out of their 10 per cent quota.

The Rane Commission suggested that instead of giving only a small handicap of 5 per cent grace marks to the Baxi Panch classes, as is the present system, we should consider them for admission if they get 55 per cent marks as is presently done for the Scheduled Castes and Tribes. We accepted this.

Q. *Why then did you back out and postpone the increased reservation by a year?*

A. Several reasons. We felt that the backward classes should not be in any hurry because even now their full quota is not being utilised. We could also see that if we did not compromise slightly, five lakh children would lose a year because their exams would not be held. We met the representatives of the students and parents heading the anti-reservation agitation and they assured us that they would call off the agitation if we postponed the implementation. We decided to have faith in them.

Q. *The anti-reservationists say that while their agitation is non-political and want only that merit should count, the pro-reservationists are really not concerned and whatever counter agitation they have started has been at the instigation of the ruling party.*

A. Is it possible for the Government to instigate the Harijans at a time like this? And do you think it is possible that they should not be upset about losing something they have? I also do not understand why the *savarnas* (high caste) keep saying that merit and efficiency are impaired by the reservations. What about the 'non-reserved' students who go off to Karnataka and get admissions in private colleges by paying huge capitation fees and then come back as doctors with very low marks? Is their merit ever doubted?

Q. *Today the violence has escalated to engulf all castes and classes. How do you account for the several turns that the violence has taken?*

A. Basically this agitation is a politically inspired attempt to discredit the Government which has only been given the cover of being anti-reservations. It is these political forces which are not allowing the anti-reservationists to call off the agitation.

Q. *Why did you condone the police indiscipline and violence in Ahmedabad?*

A. I do not want to say anything on this as the matter is subjudice. I did not condone their behaviour but only said that the police were under a lot of pressure because of the media reports on them. I can only say that the matter will be thoroughly examined.

Q. *Do you feel shaky about continuing in office?*

A. Not at all. I am absolutely confident that I will stay on.

Shantibhai Shah inside gutted office of his *Gujarat Samachar*: singled out

have said: "Since our government is not corrupt, the Opposition has to find some way to discredit us. Their strategy is to create a law and order situation and then say that the Government has failed."

Such charges and counter charges by the Opposition were to come well after the sequence of events that culminated in the police revolt of April 22 and its tragic aftermath. A little before 6 a.m. on April 17, two groups of policemen under the overall charge of Deputy Commissioner of Police J. Mohapatra were asked to bring peace to the walled city areas of Gomtipur and Astodia, where the police had been subjected to severe stoning for more than a week. Helpless in the narrow *poles* (lanes) of these tinder-box areas (*see box*) the police were unable to deal with the barrage of stones and broken tiles that invariably blocked their path. The odd police party that did make some headway would be stopped by a phalanx of women and children, behind whom the men would hide. Rarely, if ever, had these impregnable fortresses, where the BJP holds undisputed sway, been penetrated.

Over the next 40 hours they were assaulted as never before. According to the residents, the police were absolutely ruthless in their attack; beating up women, abusing and, allegedly even molesting them. Sobbed Manguben Thakore, a resident of Gomtipur: "Policemen had taken off their trousers and were calling out to women to take off their clothes and come into the streets." Wailed an old woman: "We do not even want to talk of what happened." Asked Maniben Modi of Ambaji *Mata Ki Pole* in Gomtipur: "The police tore off blouses of self-respecting girls. How can we tolerate this?"

WOMEN, of course, were not the only targets. At Patwa Sheri in Gomtipur the telephone lines were allegedly cut by the police. Kanubhai Patel and his family watched in utter helplessness as their rickshaw was sat upon a pile of handcarts and set ablaze by the police. In Pakhalia Pole in Raipur, tell-tale signs of police perversity remained even several days later. The police had broken off the water pipes to most houses and municipality workers had had to plug the pipes to stem the street flooding. Ashwin Balkrishna Bhatt, a salesman, had a few bones broken after policemen assaulted him with iron pipes. In Raipur, the house of Yashwant Jagirdar, a poor clerk, had been broken into by the police and his TV set smashed. Told that the police was saying that many people had broken their own possessions, Jagirdar retorted: "Will I destroy something I have sweated to buy?"

The police deny the allegations of atrocities even though they admit that they did indeed scale the houses. But one of the officers involved claimed that the steps taken were "precise, no more than the situation demanded and all within the law". Irate policemen had also smashed a "martyrs" memorial erected in Astodia in memory of those who died in the Navnirman agitation of 1974. The operation there was led by R.K. Vasisht, a controversial but tough commandant of the State Reserve Police, whose lack of tact has proved costly to his career. He justified the police action at the memorial by asking: "Has any memorial ever been erected in the memory of policemen who died in trying to establish peace?" Vasisht's notoriety was brought out by slogans which appeared on the Gandhi Road leading to Khadia, demanding his "capture", "dead or alive", and promising a "reward" of Rs 60,000.

It was at this point that the judiciary stepped in, an intervention that Chavan decried in his Lok Sabha statement. Police officers claim that this thoroughly demoralised the rank and file. Following a petition by MLA Ashok Bhatt of the BJP, the Gujarat High Court directed that Vasisht and another officer be debarred from entering the Astodia police station area. A senior police officer described the serving of the order as the "turning point". The court order emboldened the militant residents of Khadia while policemen, instead

KHADIA

Tinder Box

THERE is never a dull moment in Khadia. And that is more true than ever today, when tension stalks this Ahmedabad locality in the wake of the anti-reservation stir. The worst communal clashes and the worst police versus anti-reservationist battles took place here. Khadia has invariably been at the centre of any popular movement or controversy, and a well-known saying is that agitations and issues are born here. Long before the freedom struggle it was famed for those who questioned the existing state of affairs. Even in the 18th century it was the cultural capital of Ahmedabad, and in ensuing years did much to influence the city through men like educationist Dewan Ballubhai, the intellectual Uma Shankar Joshi and the poet Sunderam.

Khadia came to the forefront to lead and inspire with the advent of the freedom struggle. Though Ahmedabad was a conservative city where women usually lived in seclusion, Khadia blazed a new trail when its women began stepping out after sunrise to sing patriotic songs and bhajans. Even today the women of Khadia remain different, taking the lead in grappling with the police and not hesitating to pelt them with a barrage of stones.

The locality was in the vanguard of the freedom struggle in Gujarat in another way too. The only underground paper in Gujarat exhorting the people to fight for freedom at any cost came out from here. This was the *Gujarat Satyagraha Patrika*—merely a sheet of cyclostyled paper but packing a powerful message. *Gujarat Samachar* which was recently reduced to ashes during the police revolt was also greatly influenced by the people of Khadia as Thakorelal Thakore, the editor of *Prajabandhu* which later became the *Gujarat Samachar*, was a resident. *Sandesh*, another major Gujarati daily, also began its early rumblings in Khadia.

With the passage of time and the erosion of the joint family system, there was a change in the culture of the area. People moved out to the new areas of the city and typical city flats. This was certainly a change from the lanes of their old home, which were extremely difficult for an outsider to navigate as they all look the same. The narrow lanes are hugged on all sides by tall three-storeyed buildings, some of which still have old haveli doors and intricately carved pillars. But though many Khadia residents have shifted to new areas, they have taken along their tendency to oppose the Government.

The latest communal violence did not come as a surprise to many either. Khadia has always reacted strongly during communal riots, beginning with a major one in 1926. In fact the area has the dubious distinction of being the battlefield where the soda water bottle first became a dangerous weapon. Politically it is the strongest BJP bastion in the state and only opposition leaders have flourished here. Much of the prominence that Khadia gets today is because of BJP leader Ashok Bhatt, who has never hesitated to embarrass the Government on the floor of the house with his disclosures. Last fortnight Bhatt was underground, fearing he would be arrested in connection with the riots.

The basic political stance of Khadia is anti-establishment, and it has never elected a Congress candidate either to the Lok Sabha or to the Assembly. The present secretary of the Janata Party, Brahmkumar Bhatt, was once idolised in Khadia and returned twice to the Assembly as a Praja Socialist Party candidate. But in 1967 he joined the Congress of Mrs Gandhi. Khadia could not forgive him. While campaigning for the assembly elections he had to be guarded. Predictably, he lost.

The narrow lanes and bylanes are a rioters' dream. The police cannot enter the area in a vehicle, they have to come in on foot, at which time a rain of stones descends on them. The terraces are so built that a troublemaker can hop from one house to another for a good distance and end up far from Khadia. And to escape the police all they need to do is enter any house where they are immediately given shelter.

The residents of Khadia are proud of their notoriety. Says Narhari Logowala, a businessman: "It is said that cats are afraid of Khadia rats. The water we drink here is different and so we stand out." But the controversial SRP Commandant R.K. Vasisht, who has come under fire for the way he dealt with the residents of Ahmedabad, said: "If Khadia is razed to the ground, there will be no agitations in the state for another decade." Perhaps, but though Khadia may be razed to the ground, the spirit of the people cannot be broken.

—RAMESH MENON

Army patrol in Khadia lanes: storm centre

of enforcing the curfew, sat sulking at street corners.

The fall-out of that was to come some days later even as tensions were building up on other fronts. On most days the front page of the *Gujarat Samachar* was full of graphic accounts, based on interviews, of police atrocities. Liberally illustrated with photographs showing women displaying wound marks, the reports caught the imagination of the people and public participation in protest meetings registered an all-time high. The anti-reservation agitation was now a people's movement against the police. Opposition leaders lost little time in lashing out against the Government. Lamented former chief minister Babubhai Patel: "It is shocking how a democratic government can go to such an extent to cause physical and mental agony to the people."

Pushed into a corner, the Government appointed a two-member commission to inquire into the alleged atrocities. Matters were now approaching a flashpoint, which was reached on April 22 noon when head constable Laxman Desai, accompanying the commission members to Astodia, was stabbed to death even as they watched in shocked horror. The police dam burst and catastrophic events followed in quick succession.

The police wanted to attack the residents of Astodia but the army prevented them. Immediately police wirelesses switched from transmitting instructions to telling policemen to leave their stations and rush to Astodia for a showdown. As policemen rushed in, the troops of the Bihar Regiment drew a white mark across the road to indicate the point beyond which they would shoot any policeman. Frustrated, the policemen trooped off to the V.S. Hospital where Desai's body lay.

It was then that the rampage started. The impunity of the policemen was astounding: they lined up on both sides of the road in front of the commissioner's office and stoned all vehicles including an ambulance driven by a lady. Pedestrians ran for cover as truckloads of policemen went around shouting *"Jho humse takkayega, mitti mein mil jayega"* (Those who clash with us will be reduced to dust). They even gheraoed all major fire stations and prevented the fire brigade from answering 90 per cent of the calls for help.

The most shocking incident was the burning down of *Gujarat Samachar*: every article of any value in the 4,000 sq m complex was in flames in an operation that lasted a bare 15 minutes. The fire was still raging in the basement two days later as property worth Rs 7 crore was gutted. Said a broken Bahubali Shah, the editor: "For the moment, we are finished as a paper. This only goes to show what a vindictive government can do to silence those who are exposing them." Reporters and photographers were singled out by the police and beaten up. The other major city papers closed shutters and the next day five dailies failed to appear. Journalists at Patrakar Colony stayed awake through the night keeping vigil.

OFFICIALLY, the state Government and the police top brass would not admit that the police had revolted, but unofficially police officers lost no opportunity to say how they prevented a worse holocaust. Police Commissioner B.K. Jha, who has yet to distinguish himself, reportedly threatened that he would resign if the policemen did not rejoin duty. Another senior officer went around the police stations applying the balm. Insisting on anonymity, he told INDIA TODAY that when he had gone to Navrangpura he saw armed policemen in mufti all ready to go in two trucks and burn the Patrakar Colony. He succeeded in persuading them to attend Desai's funeral instead.

Policemen started filtering back on duty in the evening but anti-social elements, along with the more militant section of the police, went on a rampage in several areas. Bapunagar was the worst affected. Here, the killings turned communal. Syed Naunihal, Ahmedabad Jamaat Islami chief and a resident, said slogans were raised asking Muslims to get out of the country. The fury spilled over to the next day, at the end of which 25 people were dead—the bloodiest count since the reservations agitation began.

The embers were still burning at week's-end and panic still ruled: the relief camp at Bapunagar had only 6,000 people till last Thursday but in two days the numbers had swelled to 8,000 as people realised that the camp was the safest haven. It did not help restore public confidence that senior officials continued to bury their heads in the sand. "The law and order situation never broke down," claimed Jha. Home Minister Amarsinh Chaudhary, when asked if he was contemplating action against the erring policemen, said: "They did not err."

Such comments are typical of the manner in which the state Government has handled the entire issue, from its first containable stage to the subsequent escalation that led to the repeated flashpoints. Solanki himself provided the spark for the students' agitation by announcing an increase in the reservations for the backward castes when there was no groundswell of demand for it. The existing 10 per cent quota for the socially and educationally backward castes (SEBC's) was rarely more than a third filled. Neither was Solanki facing any political challenge that had to be defused by handing out sops. The Opposition was on the mat after its decimation in the Lok Sabha poll and even his own party detractors were on the defensive. True, Zinabhai Darji, acclaimed to be a leader of the tribals in south Gujarat, was ranged against Solanki, but few in the state would have considered a near trebling of the reserved quota for the SEBC's as necessary to punc-

KALPESH DUDHIA

Congress(I) leader Mankad beaten up by anti-reservationists: continuing violence

Digitized by Arya Samaj Foundation Chennai and eGangotri

ture Darji's balloon. Besides, the 1981 anti-reservation stir provided ample warning of the dangers involved in arousing caste passions.

Having ignored all this and lit the spark, Solanki then ignored the first flames of the spreading fire and made no attempt to talk to the students before support for them snowballed. Instead, he made aggressive statements on the need for increased reservations and openly chided the agitation leaders, saying they had no credibility.

His capitulation soon after the assembly elections, when he announced that the increase in reserved quotas would be postponed by a year while the whole issue would be reviewed, made matters worse. Not merely did this show him as weak, it also lent credence to the charge that the move had in the first place been aimed at winning the assembly elections.

Once violence erupted in mid-March, his administrative handling of the situation was sloppy. The army was not called out in time, even when it was clear that the situation could not be controlled by the police, and many lives were lost. Even when the police revolted last fortnight, Solanki did not ask the army to take charge though Ahmedabad suffered a power vacuum for several hours and the police took their time in rejoining duty.

He also failed to direct the police to set up a steady communication channel with the media, and the Government's version of the happenings at Asarwa came more than a fortnight after the incident. Compounding his blunders, Solanki then made holding of the examinations a test case of the Government's prerogative to decide on such matters of public concern, and stated that they would be held at any cost. But he had to eat his words soon enough: more than a month after the examinations were supposed to be held the Government had to concede defeat and allow the schools to declare vacations.

IN THE midst of this crisis, Solanki is a lonely man. He has either discarded the more competent among his aides (like Sanat Mehta and Manoharsinh Jadeja) or has had them taken away from him (like ex-home minister Prabodhbhai Raval, an experienced if controversial hand). The result is he has few men around him who are both trustworthy and competent. The feeling is widespread that this has impaired his efficiency. Parthiv Adhyaru, a leader of the Parents' Association that is ranged alongside the student agitators, voiced this when he said: "In the five years that he has been in power, this is the first time that Solanki has lost his ability to keep everything in balance. That is why we feel that he is being wrongly advised." Without saying it in so many words, Adhyaru was pointing the finger at the controversial role supposed to have been played by Raval.

Parlour talk across Ahmedabad, whether in affluent sections like Adhyaru's or that of V.P. Vora, an employee of the SLM Maneklal group and a resident of the famous Khadia locality (*see box*), maintains that Raval not only continues to call the shots in the Home Ministry but also that the communal twist to the conflict and the inter-class conflict that has also erupted are both the brainchildren of Raval. Said Vora: "The police atrocities in Khadia have been part of a political retaliation by Congress(I) elements denied tickets, led by Raval and two others. Once Khadia elected Ashok Bhatt of the BJP it was decided that these people should be taught a lesson."

Raval hotly denies the charge. Arguing that he would be foolish to sully his image when he has been promised that he will be called to Delhi, he maintains that he is currently only a "senior Congress worker" and that all the canards being spread about him arise from the Opposition's fear of him.

The Congress(I)'s counter allegations about the role played by the oppo-

For hours they had waited behind the pillar.

Which of them would get the best shot of the day?

She entered. Every inch the superstar. The cameras went up. The flashes went off.

The poses were perfect. She had all her best camera angles all beautifully worked out.

Would she now grant them an interview? A smile said everything. And revealed nothing. Except a playful dimple to the camera.

The questions were shot at her from all sides.

"Who's the leading man in your life?" asked one.

"I'm interviewing several candidates for the role" she quipped.

"Tell us about the diamond on your finger" implored another.

"I'd rather talk about the camera in your hand" she countered. "What's your camera? And yours? And yours?"

"Hot Shot" they said, in unison.

"Now, now" she said, observing how different the cameras looked "which of you isn't telling the truth."

"The camera never lies" they answered, holding up the evidence.

"Quite a range" she marvelled "and I'm told they're quite the rage too!"

"So are you" said one of them to her, with smooth flattery. "In fact put the two of you together — and it's dynamite."

"Some like it hot" she joked.

"All like it Hot Shot" was another quick retort, "whether they want a 110 or a 35 mm camera. With a flash or without it. With a normal lens or a telephoto lens. With automatic features. Or..."

"Each camera is very different" she observed.

"Sure" the talkative one said, "and they're all the same. No hassles about focussing. No worrying about exposures..."

"That's what the director insists in all my films!" said she.

"Everything's so simple about the camera..."

"Then I've got to have Hot Shot" she said. "I'm just a simple country girl at heart."

Three Hot Shot cameras were offered to her instantly. With one small condition.

The photographer went with each!

HOT SHOT 35&110

Just aim. And shoot!

sition parties, specifically the BJP, were meanwhile being aired privately. Solanki alleged to a journalist that the state unit of the BJP had called a meeting of its top leaders on April 7 where it was decided that the party would openly support the agitation. But BJP MP Jaswant Singh countered: "The allegation is baseless and criminally motivated. It is meant to transfer the responsibility of misgovernance on the Opposition." Solanki also alleged that three former chief ministers, Chimanbhai Patel, Babubhai Patel and Ghanshyam Oza, were active in the agitation behind the scenes and that at least four members of the Navrachna Samiti belonged to the ABVP and one to the Yuva Janata.

Dr Gouranga Shah, spokesman of the Samiti, is genuinely concerned that their movement should not fall into the hands of politicians, reserving his ire, however, for Shankerbhai Patel, the president of the Vali Mahamandal (Parents' Association) who he says functions at the behest of Chimanbhai Patel. While Shankerbhai flatly denies that he has any political affiliations, Shah's statement is nonetheless revealing in its admission of fissures between the Samiti and the Mahamandal. The statement is also ironic because, as Adhyaru said, Shankerbhai was the best man to be the president of the Parents' Association as he was not known to have political affiliations.

Whatever the allegations and counter-allegations, there is little doubt that the communal twist to the conflagration was not spontaneous. A visit to the troublespots by the Institute of Islamic Studies, Bombay, showed no prior build-up of communal tension. Instead, on the night following the Ahmedabad bandh of March 18, two shops each belonging to Muslims and Hindus were set on fire in the Fernandes Bridge area. There was a similar secular quality to the shops burnt that night in Manik Chowk, Gandhi Road and other areas. If the communalism had been genuine, the first acts of arson would have been against either only Hindu or only Muslim shops, not both.

So was the communal twist deliberately planned? If so, by whom? Ahmedabad was not short of theories last fortnight on the identity of the culprits, but nothing can be said with any certainty. The truth may never be known, as Solanki has refused to order a judicial inquiry.

THAT wasn't the only conundrum needing an answer. The bigger question that had to be addressed was: why did such an emotional explosion occur among a people noted for their gentleness and astute business sense? The question has been worrying saner elements in Gujarat's increasingly fractured society. Pravin Sheth, head of the department of political science at the Gujarat University feels that caste-based violence can be explained as a fusion of two contradictory social trends. The Patels, Gujarat's once overridingly powerful landed communities, have been losing their traditional hold on the affairs of the Gujarati society. Running up against this has been the fast rising sense of political and social awareness of their rights among all the other castes.

The Patels have many reasons to be dissatisfied with their present lot. A landed class, they first lost their financial clout when land reforms and ceilings cut into their property. The creation of panchayats then chipped away at their political power but they at least held the reins at the state level. But by the mid-1970s even their political influence had been considerably whittled by the rising Kshatriyas, mostly small farmers and strictly second on the social scale. The Patels were then delivered the coup de grace in 1980 when the Congress(I) romped home on support drawn from the Kshatriyas, Harijans, Adivasis and Muslims.

The changed equation between the Patels and the Kshatriyas was reflected in the composition of the Assembly. In 1976 one out of four MLA's was a Patel; four years later only 18 per cent of the MLA's were Patels. In 1976, one out of six MLA's was a Kshatriya; four years later their representation had gone up to one out of five. Most important, the Chief Minister, Madhavsinh Solanki, is a Kshatriya. In Solanki's first ministry there wasn't a single Patel in the Cabinet. The ministry had just two Patels, both of whom are lightweights in the community. It is the same now. Yet they comprise around 22 per cent of the population. The Kshatriyas, who are an amorphous caste comprising various sub-groups, are 40 per cent of the population. The fact that these castes, making up almost two-thirds of the population, are ranged against each other is a source of perpetual social tension.

To this incendiary situation has been added the latest decision to increase the reservations for the backward castes which, says Sheth, has made Gujarat the first state which has run the full circle in social mobilisation. In layman's terms that means all castes and communities have become conscious of their rights by being coopted into the power structure. Sheth explains his hypothesis in the following terms: till 1965 power was shared by the PAKSH castes (Patels and Kshatriyas); a decade later the Patels were on the way out while the Harijans, Adivasis and Muslims had joined the Kshatriyas on the power wagon. The January decision gave the marginal backward castes, hitherto left out, a

RESERVATION

Loaded Views

PARTHIV Adhyaru is a 43-year-old Ph.D. in electronics who hadn't given serious thought to the inequities of the reservations system till Solanki's increase for the backward castes last January. "It occurred to me then that this was a political stunt," said the bespectacled and fresh-faced entrepreneur as he explained how he got involved with the anti-reservation movement. A reasonable man (he didn't protest when the Government nationalised his father's hosiery mill even though it wasn't sick), he became a convinced anti-reservationist after hearing an activist's views at the Sharda Mandir School, where his eldest daughter, Parthivi, studies in class VIII.

Today, Adhyaru is one of the brains behind the Parents' Association. He explains: "Reservations for the Scheduled Castes and Tribes is all right but ultimately the Government saw reservations as creating a vote bank and went on expanding it." The January increase quite clearly came as the last straw and, he says: "I decided that somebody should raise his voice."

Adhyaru's deeply-felt indignation is shared by Dr Gouranga Shah, 26, spokesman of the students' Navrachna Samiti. Adhyaru and Shah share several characteristics. Both have no personal axe to grind: the eldest of Adhyaru's four children is only 13 and Shah is doing his M.D. in radiology so cannot now be denied the chance of becoming a doctor by somebody from the reserved quota. They represent the voice of reason in a movement which has its share of hawks and political stooges. Says Shah: "We are even prepared to call off the agitation if the Government gives us a time-bound assurance that the additional reservations will be phased out."

Shankerbhai Ishwarbhai Patel, 48-year-old professor of sociology at the L.D.Arts College and president of Gujarat Vali Mahamandal (Parents' Association), holds much stronger views. Patel, who believes that reservations should be abolished in toto, says: "Reservations violate the constitutional guarantee of equality to all citizens. They have not helped the lower classes who continue to live in poverty with all their bad habits. We should create better educational facilities for them and teach them good habits, not just give them seats and promotions out of pity. How can we have a strong nation if we do not let merit prevail?"

Patel's views are probably more representative of most anti-reservationists. But it doesn't still explain why these middle class parents have taken to the streets even though many of them do not have anything at stake personally. Pravin Sheth, 52-year-old head of the department of political science at Gujarat University, feels: "Even though they do not have any real deprivation it is their imagined deprivation which explains why they feel an injustice is being done to them." Sheth also believes that the reaction against the January announcement was so decisive because the enhanced reservations gave the backward castes an opportunity they weren't equipped to take. He points out that if they cannot fully utilise the 10 per cent quota, they are unlikely to use up the enhanced 28 per cent. The resentment is heightened by the knowledge that the Rane Commission had clearly said that caste should not be made the criterion.

Gouranga Shah: indignant

"Gujaratis think the Government should also run like a business. Appointments and promotions cannot be a matter of charity."

SHANKERBHAI PATEL
president, Gujarat Vali Mahamandal

Interestingly, Harijans disagree just as strongly with the Rane Commission's views. At a meeting organised by a Sarvodaya organisation, Lok Samiti, to discuss the issue of reservations, several speakers spoke with feeling about the need to base reservations on economic basis. But a Harijan bank officer got up and asked: "I earn over Rs 3,000 but will any high caste Hindu here allow me to marry his daughter?" Nobody spoke for quite a while. Explains Sheth: "Harijans feel the need for reservations. In the 1981 agitation the Harijan backlash against a similar movement was strongest in Ahmedabad and the districts of Kheda and Mehsana where the majority of the educated Harijans live."

Sheth and Patel share the assessment that the backward castes identified by the Baxi Commission, who currently enjoy 10 per cent reservation and were granted 18 per cent more, do not feel as intensely about reservations as the Harijans. Patel thinks this is because they do not need them; Sheth thinks it is because there is no "felt need" among them. But Sheth adds, in the manner of a careful academic, that his conclusions are tentative and based only on the absence of strong reactions from the backward castes in media reports and 'letters to the editor'.

But why is it that the Gujaratis, are more sensitive on the reservations issue? If the amount of reservations were to decide the scale of opposition to it, the upper caste Tamilians should be most upset because Tamil Nadu has 68 per cent reservations. Again the articulate Shankerbhai Patel had the most definitive word: "The Gujaratis know the value of efficiency. They know how to do business and they always mean business. And they think the Government should also run like a business where merit is appreciated. Appointments and promotions cannot be a matter of charity." Perhaps he is right about the Gujaratis but clearly then it doesn't reflect a charitable disposition towards the backward castes. It's hardly surprising that the reservations issue refuses to die down.

Curfew violaters: incendiary situation

stake in the power structure by extending reservations to them. The stage was thus set for the wide-ranging conflict.

THE IGNITING of these underlying social tensions would have precipitated enough major conflicts for any society; Gujarat had the misfortune of getting concurrently embroiled in communal clashes, a class conflict and a people vs the police war. As *The Times of India* noted: "Seldom before have so many kinds of antagonisms exploded at one time in one place... similarly, while we have not been unfamiliar either with police revolts or with police excesses, the two have seldom gone together. In Ahmedabad they have." Add to that a government which was seen variously as barbaric, weak-kneed or just plain ineptand it was easy to understand the mistrust and panic that prevailed in Gujarat.

Examples of distrust and unnatural fears abounded. Responsible people spoke of "hit lists" being prepared. There was such a sudden spurt in the demand for illegal arms that the police started a drive to seize all private arms. They were only being pragmatic: they knew the weapons were being stockpiled for a showdown with them. Hundreds of caste Hindus living around Harijan localities migrated to other areas fearing a backlash.

The sheer financial loss was staggering. Industry was strapped for funds as banks stopped clearing cheques. Inventories piled up as truck-owners refused to take risks. The secretary of the Gujarat Chamber of Commerce and Industry, I.N. Kania, said the state had already suffered a loss of Rs 200 crore. The state Government and municipal corporations are estimated to have lost half as much in unpaid sales tax and octroi duty. A desperate Chamber took the unprecedented step of requesting that the Government hand over Ahmedabad to the army.

The social cost of the caste war was not so easily counted, partly because it was still too early to say where it would end. Even as organisations of Dalits and Muslims got together to work out a combined strategy against attacks by caste Hindus, some Dalits were seriously thinking of converting to Islam. One such was Neerav Patel, a Dalit poet, who spoke bitterly about how he changed his surname to escape humiliation but was still treated like a Harijan. Dalit bodies came out with pamphlets detailing the backward castes eligible for reservations under the aborted proposal. Said Kanti Rathod of the Bank Employees' Association: "There is no way out. We have to fight for our rights."

In spite of this mass of apprehensions, there was still considerable interest in the fate of one individual: Chief Minister Madhavsinh Solanki. Journalists who milled around Ahmedabad's circuit house annexe, where Solanki was spending virtually all his waking hours, were quick in answering what the people were asking: Is Solanki's time up? The consensus was that it indeed was, but he was not going to be asked to go just now. That would seem too much like capitulating under pressure from the Opposition.

Similarly uncertain but considerably more sorrowful was the fate of many who had lost their near ones. Huddled in one corner of the steadily expanding relief camp at Bapunagar was a gaggle of six children who had lost their parents in the holocaust of the night of April 22. Lonely and tragic, they were too numb to express any anger. But others were not so mute. When Solanki went to meet the refugees three days after their world had come crashing around them, he was soundly booed and hooted. Elsewhere, he was shouted at by textile workers. On at least one occasion, Solanki was forced to beat a hasty retreat. It was an experience that was bound to haunt him for a long time. But Gujarat's own tragedy is infinitely greater.

CRIME

Crackdown in Bombay

AMONG the dense thicket of billboards sprouting along Bombay's bustling Marine Drive is the inevitable offering from the Amul butter people. With their usual flair for tailoring catchy copywriting to issues of topical interest, the blurb reads: "What do cops and criminals have in common?" Shorn of its commercial message, the inference was explicit. Once again, though in a decidely more dramatic fashion, the long-suspected nexus between the city's ubiquitous underworld and the sentinels of law and order was, quite literally, exposed for public viewing.

The exposure came in the form of two cassette tapes—one audio and the other visual—leaked recently, and deliberately, to the more dubious elements in the Bombay media. The objective was obvious:to undermine the city's disunited police force and, more precisely, its nonsense police commissioner, Julio Ribeiro. The audio cassette contained a recorded conversation between two senior inspectors of the Bombay police and the reigning king of the city's underworld, Varadharajan Mudaliar, better known as Vardha in police circles and Vardhabhai to those who pay him timely tribute (*see box*).

The cassette, laced with expletives and suggestive sniggers, was targetted at DCP Y.C. Pawar, the one man apart from Ribeiro who has single-handedly challenged Vardha's all-pervasive writ. The recording portrays the two policemen as emissaries of Pawar, come to plead on his behalf for the withdrawal of three cases filed against him by some of Vardha's henchmen.

Hardly had the resultant hullabaloo abated when a second cassette surfaced. The video cassette, also deliberately fed to the press, was taken at a party held in Bombay's Palm Grove Hotel last December. The guests included many senior police officers, some of whom are known to be close to Ribeiro, and serving and retired members of the judiciary. Also present were a number of known criminals including the host, Alok Kriplani Khira alias Baboo.

The party was evidently of bacchanalian proportions. Later, the police officers claimed that they had no idea of the guest list and thought their host was a doctor. However, the fact that

Ribeiro: leaving a vacuum

VARADHARAJAN

Don's Domain

RAMA Shetty, the villainous mafia don in Gobind Nihalani's film *Ardh Satya*, was a compelling celluloid character. A lungi-clad and deeply religious Tamilian, Shetty's rule over a slum empire in which every vice racket from extortion to prostitution thrived unchecked was unquestioned. Half the local police force, senior police officials and politicians paid him obeisance.

To residents of Bombay's south Indian dominated localities of Sion, Koliwada and Wadala, Shetty bore an uncanny resemblance to Varadharajan Mudaliar popularly known as "Vardhabhai", the uncrowned overlord of the area. In essence, however, Vardha's rags-to-riches rise did resemble a film script. The son of a railway fitter in Kalyan, Vardha came to Bombay in 1949 to live with an aunt after he was orphaned when he was nine. He quit attending the local Tamil school when he was in the seventh standard and started work as a motor mechanic earning Rs 1.25 a day.

Police records are unclear about Vardha's entry into the underworld but

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Varadharajan: pious posturing

his rise through the ranks was unusually rapid and unobtrusive. He worked as a railway porter and then graduated to small-time traffic in illicit hooch, hitching his wagon to Chellamuthu, one of the two big-time bootleggers in the Sion Koliwada area. Vardha's rise as a bootlegger coincided with the imposition of prohibition in the state by the then chief minister Morarji Desai as well as the semi-retirement of Muthu. Vardha took over Muthu's operations and then ousted his main rival in the area by wooing away Thomas Kurien who became his right-hand man.

By the '70s, Vardha's name figured prominently in the police files as an up-and-coming boss of the underworld with extensive interests in illicit distillation, prostitution, gambling, *tod pani* (settlement of disputes for a fee), dock thefts and smuggling. He was jailed between 1974 and 1977 under the Defence of India Rules (DIR) but since then the police have been unable to pin him down to any concrete criminal case largely through the clout he wields in political circles and the fear he instills in any prospective witnesses or informers.

Though officially Vardha's monthly income is declared as an unimpressive Rs 5,000 from four garages and some rentals, his clout is enormous. The state chief minister's wife inaugurated one of the many temples he has erected on public land at Sion Koliwada. When Vardha's daughter got married in Madras in May 1983, MGR and his wife were among the prominent guests. Vardha even had the photograph of MGR with the bridal couple published in the *Indian Express* as a paid advertisement. Shortly after, when he led a march to the state Assembly in Bombay to protest against Sri Lankan atrocities against Tamils, a special train was requisitioned to transport the protestors from Dadar to VT. Several Tamil Nadu MP's had flown down for the event.

Like his fellow-dons, Vardha has plunged headlong into social and religious activity to acquire a veneer of respectability. He holds the biggest and flashiest Ganapati procession in Bombay every year, complete with brass bands, revolving idols and strobe lights. Shopkeepers and businessmen in his "territory" contribute liberally to his charitable activities and leading film personalities gladly offer their services for the musical evenings he arranges.

His social welfare organisations include the Tamil Peravai, which he founded. The organisation owns six ambulances and arranges blood donation camps and claims to provide free food for the needy. Vardha also recommends jobs for the unemployed to the General Seamans Crew Union and is chairman of the Jai Bhavani Mitra Mandal, a social body for Punjabis in the Sion area, run by one of his close lieutenants.

In one interview, Vardha claimed that "I get nearly Rs 18,000 per month as rent and that is enough for my expenses. The money I save from this amount I give away to needy people. I am a social worker. The slum dwellers adore me and as a mark of respect they have named their colony Varadarajannagar." Says Ahilya Rangnekar, former CPI(M) MP and Vardha's neighbour in Matunga: "He is the most powerful man in this area and it is amazing the number of people who jump to do his bidding."

MGR at Vardha's daughter's wedding

Vardha indignantly refutes allegations of his criminal connections as being "all nonsense. People write things about me to sell more copies." But the police files tell quite a different story. Last year, the COFEPOSA board recommended his detention for his involvement in a smuggling case in which Rs 47.66 lakh worth of contraband was seized in Dhamankol in Ratnagiri district.

Two of his known lieutenants, Thomas Kurien alias Khajabhai and Mohinder Singh Vig alias Soma were caught in the net as was Dilawarkhan Asadulakhan, a driver of the association's ambulance. In all 136 packages of contraband, mainly textiles and electronic items, were seized. Investigations established that the two lieutenants had made six lightning calls to Vardha's residence from the Vihar Deluxe hotel at Dhamankol during the three days before the landing of the contraband.

However, the state Home Ministry vetoed the COFEPOSA board's recommendations for Vardha's detention on the grounds that there was insufficient evidence. Similarly, in 1983, Vardha was again let off, this time with a fine of Rs 10 lakh, for his involvement in another contraband case in which the coast guard caught a Polish ship, *Portoroz*, unloading contraband into two fishing boats. Again, customs and revenue intelligence investigators were convinced that the boats had been hired by Vardha but were unable to detain him.

In August this year, Vardha was once more brought in for questioning in the *Maguli* smuggling case but emerged unscathed. Though intelligence reports suggested that Vardha was the "landing agent" for contraband contained in *Maguli*, once again there was lack of concrete evidence. Vardha, in fact, produced witnesses who swore he was being treated for diabetes in Madras at the time.

The controversial tape-recording of his alleged conversation with two police officers has obviously established his connections with the police but Vardha denies all knowledge, claiming that the tape is doctored and a professional mimic used to imitate his pronounced Tamil accent. However, Ribeiro, says: "I have no doubt that the tape is authentic, I can recognise the voices of Vardha and the police officials." But Vardha is too slippery a customer to be caught so easily. Underground after the recent crack-down, police believe that he has gone into hiding in Tamil Nadu. Says a senior revenue intelligence official: "I will bet a year's salary that he is ensconced in some posh clinic in Madras, laughing his head off."

—COOMI KAPOOR

Digitized by Arya Samaj Foundation Chennai and eGangotri

such a large number of policemen were present would indicate that they were being set up for a scam with the sole purpose of embarrassing Ribeiro and his trusted aides.

The provocation for the sudden appearance of the cassettes was undoubtedly serious enough. On March 11, the state's new Chief Secretary B.G. Deshmukh convened a meeting with all police officers above the rank of deputy commissioners of police (DCP's). Deshmukh made it clear that there was going to be a major crack-down on crime which would concentrate on the so-called Dons of Bombay's many-tentacled mafia. "He made it clear that he wanted the big guys," recalls Ribeiro. The message that went home was that he would back Ribeiro to the proverbial hilt in the latter's crusade to curb the growing influence and activities of the underworld in the city.

The tapes were obviously timed to checkmate the proposed crack-down but it also succeeded in revealing the kind of external forces that have a role in the sordid drama. The video cassette was handed over to a free-lance Marathi journalist who has underworld access. He in turn passed on the tape to Home Secretary B.K. Chowgule who gave it to a cub reporter with the United News of India (UNI). UNI put out a modified version of the tape and the storm broke. Ribeiro was rightly upset that Chowgule had seen fit to release the cassette without showing it to him since it was his officers that were involved. The home secretary, however, issued a statement denying that he had received the tape or passed it on to anybody.

Curiously, the Chief Minister, Vasantdada Patil, who is close to Chowgule—both come from Sangli—came out in support of Chowgule and stated that the tape was actually with him. The chief minister claimed that the tape had been given to him three days earlier by a "private person". He added that he had not seen the tape since it was badly cut and needed splicing.

Karim Lala: back behind bars

Meanwhile, Chief Secretary Deshmukh reiterated that the crack-down on the underworld would proceed as planned and no political pressure or interference would be tolerated. To show that the Government meant business, a hit list of 48 people was drawn up for detention under the National Security Act (NSA). The list was imposing enough, being a veritable Who's Who of the city's overlords of crime. Topping the list was Varadharajan who had gone underground with the first sniff of trouble. Three of his trusted lieutenants, Khaja, Soma and Tillu also figured on the list as did Dawood Ibrahim and Abdul Kunju who have been on the run ever since their involvement in the internecine gang war that suddenly erupted in 1983. Also included were Arvind and Mahesh Dholakia, former foreign exchange racketeers and owners of Caesar's Palace hotel in Khar.

Haji Mastan (left) and Yusuf Patel: riding high

Till last week, only 12 of the 48 had been arrested, including Karim Lala who was already in judicial custody for a separate offence. The others have gone underground and the kingpin, Vardha, is rumoured to be hiding out somewhere in Madras where he has powerful political connections.

Political connections are, of course, the name of the game. "It's a three-legged stool," says Ribeiro resignedly, referring to the long-standing link between the city's underworld, sections of the police force and politicians which is fairly common cocktail gossip in the city's concentric social circles. Ribeiro should know. His crusade against crime has time and again come up against a blank wall erected by political elements or the bureaucracy. The most glaring example was the release last year of 18 known smugglers and employees of the All India People's Secretariat (AIPS) founded by Haji Mastan.

Yusuf Patel is a director of AIPS and Karim Lala provided a major portion of the finance. Together, the three comprise the troika that ruled the city's underworld for decades before going into semi-retirement. The AIPS was accused of involvement in the May riots in Bombay last year. Police files record that crates of Molotov cocktails were stored at the AIPS offices. Dr Ibrahim Merchant, secretary of

MOHUDDIN TAYAB SONI

Low Profile

THE SMUGGLERS' Hall of Fame contains such illustrious names as Haji Mastan, Yusuf Patel, Manu Narang and Sukur Narain Bakhia. But there is—or was till last fortnight—one glaring omission—Mohuddin Tayab Soni. Soni was released by the Bombay High Court on a technicality after spending seven months in detention under COFEPOSA. The court ruled that the procedure followed in his detention was faulty even if the grounds on which he had been detained were adequate.

Though he has escaped the attention of the media so far, Soni along with his Dubai-based brother Taher, has not had the same success with Indian authorities. Judging by the scope and magnitude of their operations as described in his COFEPOSA orders, the Soni brothers rank in a league by themselves. Mohuddin was detained last September on the charge that he along with Taher owned the *Maguli*, a ship engaged in smuggling which was deliberately sunk by its crew off the Bombay coast when challenged by the coast guard. On paper, the *Maguli* is owned by the Zeta Shipping Company and is registered in Malta. The Zeta Company is owned by H.R. Shah who happens to be a low-level employee of Taher. The COFEPOSA order states that Shah is merely a "benami owner", the real owner being Mohuddin who made several trips to Greece to inspect and purchase the ship in July, 1983. His passport was renewed by the Indian consulate in Athens during that period.

Revenue intelligence officials believe that the ship made three trips to India carrying contraband and on the third occasion mounted an elaborate operation to track it down. A naval helicopter took pictures of the ship and radioed its position and direction to revenue intelligence officials lying in wait. When surrounded by coast guard vessels, the crew jumped overboard after setting fire to the ship. The *Maguli* was carrying 442 packets of contraband that customs officers value at around Rs 3 crore.

Mohuddin was arrested and taken to Arthur Road jail and then to Nasik.

Soni and the *Maguli*: eluding trouble

But he proved a difficult man to keep in custody. He hired the best lawyers available: a writ was filed in the Delhi High Court where his legal advisor was Asoke Sen, now law minister. In the Bombay High Court, his senior counsel was Ram Jethmalani who had the detention order squashed on technical grounds. Under COFEPOSA rules a fresh order cannot be made out for the same offence which leaves Mohuddin free to resume his interrupted business career which is an eye-opener.

The Soni brothers (legally it is in the name of Taher) own the firm G & M International in Dubai which has a monthly turnover of 20 million Dirhams (Rs 7 crore). They also own Gaylan Contracting and Trading Company which is involved in construction projects among other things. The former firm has 100 employees and is the sole agent in the UAE for almost all the major watch manufacturers as well as leading electronic companies. The list includes Hitachi, Maxell, Aiwa, Girard, Masushista, Kenwood, Seiko, Rolex, Fuji and Citizen.

Frederic Robello, the firm's Hong Kong purchase executive, in his statement to revenue intelligence, estimated that every month the firm sold 3,000 watches through outlets in the UAE and another 6,000 to 7,000 through "other outlets". Revenue intelligence sleuths are convinced that the "other outlets" referred to means India.

The suave 40-year-old Mohuddin belongs to an Indian Muslim family which originally hails from Saurashtra. He owns a house in the congested commercial area of Agripada and has also acquired a bungalow in Bandra. He is a partner in Milan cinema and Astana hotel while his wife is part owner of Kismet cinema. During a recent raid, a search of his house unearthed 64 watches. The authorities suspect that the watches were meant as samples for prospective bulk customers but Mohuddin coolly informed them that he was an avid collector of watches and liked giving watches to people as presents. Meanwhile, after his release, it is the police who are now keeping a close watch on him.

the secretariat and six other AIPS employees were arrested. The police commissioner had announced during the arrests that "we have clear evidence to link the arrested men with some of the disturbances in central Bombay during the riots." Amazingly, 24 days after their detention under NSA, they were released at the intervention of Chowgule, a decision that surprised even the then chief secretary R.D. Pradhan. Equally intrigueing was the fact that none of the 18 smugglers had formally challenged the detention order.

Similar extraneous pressure was used in the famous floor space index (FSI) scandal.The officials responsible for filing the case, Arun Bhatia, collector of Bombay and D.M. Sukthankar, were summarily transferred. Three of the cases involved Yusuf Patel. In fact, in one of his interviews, Haji Mastan virtually admitted the existence of political patronage when he stated:·"Politicians who criticise me by day come to me at night with a begging bowl."

In a more recent case, the state Home Ministry overruled the police which had recommended against granting the renewal of licences to restaurants which flouted municipal and safety rules or were owned by people with known gangster links. The ministry also overturned the refusal by the police to grant a bar licence to Khaja,Varadarajan's right-hand man, in the Sion-Koliwada area.

But the most revealing incidents in the recent past involve the tortuous efforts by DCP Pawar and a municipal ward officer, G.K. Khairnar, to tackle the underworld dons on their own terms. Both men, in their own way, went gunning for Vardha, often at great personal risk and with no support from their colleagues.Within a month of his arrival in Bombay, Pawar made his intentions clear by arresting Khaja for illicit liquor operations and assault. To add insult to injury, Pawar paraded Khaja in handcuffs through Khaja creek, the area which he held undisputed sway over and is in fact named after him.

In the crack-down, Pawar ordered the destruction of over 200 illegal stills in the area that had earlier operated with impunity. Pawar next went after the other rackets thriving in the area including brothels, blue movie parlours and unlicensed hotels, all operating under the patronage of Vardha. The sudden decline in Vardha's influence—his famous open air courts where he was judge, jury and executioner came to an abrupt end—meant a serious loss of face for him.

Immediately, pressure was brought to bear on the state Government to transfer Pawar and Ribeiro. A group of Tamil Nadu MP's led by Congress (I) General Secretary G.K. Moopanar petitioned the chief minister for their transfer. The state Home Ministry even circulated Pawar's bio data recommending that both he and Ribeiro would be more effective in Delhi or Punjab.

Meanwhile, Vardha adopted the tactic employed by most underworld dons against overenthusiastic policemen. He had four of his lieutenants file cases of assault against Pawar, cases that have dragged on in the lower courts for almost three years without any charges being framed. Pawar is forced to attend court almost every week where he is greeted by toughs who pass derisive or threatening comments. "Its pure psychological torture and a lesser man would give up rather than fight," says Ribeiro.One indication of the pressure is the fact that the controversial cassette indicates that Pawar is willing to arrive at a compromise to get the cases dropped by Vardha but all the same he has not let up on his crack-down.

Pawar and Khairnar: dogged crusade

Another man in the same boat as Pawar is Khairnar. Last February, Khairnar demolished three temples, one masjid and a church in the Shivaji Park area which were on municipal land even though he had been warned that they were erected by Vardha. Prior to the demolition, Vardha had met Khairnar and urged him not to go ahead with his plans.He also told him that he would be visiting the chief minister.

The next day, Khairnar learnt that the chief minister had ordered his transfer. The transfer, however, was stalled because his superiors dared not move him in the wake of the enormous public support Khairnar received for his dogged crusade which he continued (his next move was to pull down another temple in Mahim which is patronised by Manohar Phalke, brother-in-law of the chief minister).In recent days, Khairnar has been stoned by gangs of hawkers and once had to fire his pistol in the air after police took their time in coming to his rescue. "Life has become very difficult," he says in what is an obvious understatement.

Tragically, Pawar and Khairnar are in a minute minority. Ribeiro jokes that if he wants to send a message to the underworld, all he has to do is call a meeting of his senior officers and within five minutes of the meeting breaking up the underworld will know every word that was uttered. But it is in reality no laughing matter. The tapes have proved just how incestuous is the relationship between the police and the city's crime lords. In that context, the current crack-down is really a make or break effort. "They have felt this kind of squeeze," says Ribeiro. But there lies the rub. Last fortnight, it was announced that Ribeiro is being transfered as Delhi's police commissioner and whether the momentum gained by the crack-down will continue is now debatable.

More crucial is the fact that there is a simultaneous effort on to clean up the city's discredited police force. A list of 15 police officials suspected of having links with the underworld, including an assistant commissioner, has been prepared and the number is likely to increase. The two officers on the Vardarajan tape, Inspectors Samson and Deshmukh, who were suspended after the story broke, also figure on the list. But obviously what is also required is the political will and backing, a factor that has so far frustrated all attempts to break the mafia. Patil has been making appropriate noises about the state government's backing for the current crack-down. But if the past is any indication, it is more than likely that the dons will be back, perhaps more powerful than ever before. —DILIP BOBB with COOMI KAPOOR

The Vedas enshrine quality of life

Sama Veda

In this Veda of 'melodies', the synthesis of national integration with its distinctive individuality, personality and peculiarities has been well blended as the hallmark of culture and civilization in India. It is a living expression of reality and emotional outpouring of spiritual consciousness.

The Sama Veda has an irresistible appeal for all its simplicity, mystical grandeur and melody. It is looked upon as the best form of devotion, meditation, worship and service to the great celestial connoisseurs.

INDO-US RELATIONS

Distorted Images

THE INDIAN press and members of Parliament have reacted with typical alacrity to a scarcely-noted non-event in Washington on April 11. This was a discussion on human rights in India that included, among other topics, the plight of the Sikh community. The debate that raged in Parliament on the issue would have led an observer to conclude that the Government and Congress had engaged in extreme interference in the internal politics of India and had given Sikh extremists an official platform from which to sound the clarion call of treasonous secession.

But the event was nothing of the kind. Not a single member of Congress attended the small meeting—it was neither an official nor semi-official gathering—and except for a Voice of America radio correspondent who attended the conference and filed a brief report, no other member of the press was present. And the story that made headlines in India on the basis of a (UNI) report did not appear in any section of the US press.

There was precious little the Indian mission in Washington could have done to influence or prevent the gathering. In a society like America which seems to suffer from a terminal case of public candor, open and robust debate occurs in innumerable forums on every conceivable subject on earth, be it embarrassing to America itself or to a foreign government or institution.

Even if a formal committee of Congress decides to hold a sensitive hearing affecting another country the Administration—the executive branch—is powerless to stop it because in the US where government is based on a separation of powers the legislative body is not answerable to the executive.

The meeting was primarily organised by Human Rights Internet (HRI), a private body whose executive director Laurie Wiseberg says she chose Capitol Hill after a member of the Congressional Human Rights Caucus (CHRC) agreed to loan them a spare room in an office building of the House of Representatives. While members of the CHRC, a non-government body of 160 members were told of it, obtaining an empty room for a meeting in a House office building does not imply congressional sanction or endorsement of the event.

The domestic hullabaloo in India seems to focus on the fact the meeting was organised under the aegis of the CHRC, that it was held on Capitol Hill, and that prominent in the audience were Sikh activists Ganga Singh Dhillon and recent expatriate Maj-Gen J.S. Bhullar, and that there were overtones of political interference in India's affairs. No more than 40 people, mostly Sikhs, attended the meeting, and the perception of what occurred there is far more ominous than the reality. Added Wiseberg: "We decided to have a meeting on the Sikh situation because we felt someone should draw attention to a problem that has not been previously aired. There was never any discussion of separatism during the meeting. It focused largely on the Delhi riots that followed the assassination of Mrs Gandhi."

> **"The domestic hullabaloo in India seems to focus on the fact that the meeting was held on Capitol Hill and that there were overtones of political interference in India's affairs. The perception of what occurred there is far more ominous than the reality."**

She also said that she had invited a representative from the Indian Embassy and had listed the embassy's participation on a notice announcing the briefing. But political counsellor Vijay Kumar declined the invitation in a two-page letter one day before the meeting. "Perhaps I was wrong in listing their participation," Wiseberg said, "before I got final word from them. I had assumed they'd send somebody."

The original idea for the conference came from Ralph Singh, a white American Sikh who is an insurance executive in Syracuse, New York. Singh spent six years in Punjab during the 1970s and was converted to Sikhism in India. Contrary to rumours he is not a member of the World Sikh Organisation, does not believe in Yogi Bhajan, and is not affiliated with any organisation supported by Ganga Singh Dhillon and Bhullar. Singh said that he was surprised to see Dhillon and Bhullar at the human rights meeting. "They were not invited", he said, "but they showed up, much to my chagrin. I didn't even want to prepare a press release on the meeting because I was not trying to launch a media campaign and I didn't want any sloganeering."

The meeting was attended by Leo Rose of the University of Berkley, one of the foremost American experts on India and South Asia, who is serving temporarily as a consultant in the State Department's office of policy and planning. Rose said he attended the briefing in a personal capacity. "It's the kind of meeting I normally would not have attended but I was informed that the Indian Embassy would have a representative there to confront a group of Sikh activists. As a scholar I thought it would be an interesting session. I was amazed when I got there. There were no journalists present and the first thing I heard was a letter from the embassy that was read out saying that no embassy representative would attend." Rose said he spoke at the meeting because he thought it needed "balance". He made the point, he said, that Sikhs here must resist making extremist statements and not do anything to complicate the settlement process now under way in India. "I also made the point that the Sikh situation in India was not a communal issue, not a Hindu versus Sikh issue. Nor was it a political issue in terms of the Congress(I) against the Akali Dal." He added: "It is very easy for the Sikh community in the United States, Britain and Canada to go around shouting about this. They don't have to live in India. They don't have to try and adjust to what is a huge majority population. But there are 15 million Sikhs in India that do, and their future is going to be based on their ability to come to terms with the rest of the Indian society that protects their rights, that gives them their legitimate rights, but still enables them to live peacefully with their neighbours."

A staff assistant for CHRC told INDIA TODAY that in view of the severe reaction in India, members of the caucus have reinvited Ambassador Bajpai to speak to them in a closed session. There will be no other participants. At press time it was not known whether Bajpai would accept the invitation.

Our fans have always had a premium on quality

Soon, investors will say the same about our shares as well.

POLAR is a premium brand name that has emerged in the last decade in the Electric Fan industry as a strong contender for leadership in East, South & North India and is all set for a challenging growth in West India. With one of the widest range of products in the industry, Polar enjoys very good market demand. The recently introduced 24 Carats Ceiling Fan in the premium segment has taken off exceptionally well and has in fact set a new trend in the fan industry.

The Company, incorporated on 19th June, 1982, started manufacturing activities in December, 1982 and turned out good working results from the very first year of operation. While sales turnover increased from Rs. 104 lakhs in 1982-83 to Rs.210 lakhs in 1983-84, profit before tax also doubled over the same period and the Company declared a maiden dividend of 12% for the year ended 30th September, 1984 — the first full year of operation for the Company. The Board of Directors is confident of maintaining the dividend at the same rate in the current year as well.

To meet the ever growing demand of its products, the Company is setting up expansion projects to increase its installed capacity from the existing level of 1,50,000 fans per annum to 3,60,000 fans per annum.

To fund a part of the project cost and to augment its long term resources for working capital requirement, the Company is making a Public Issue of 8,10,000 Equity Shares of Rs. 10/- each for cash at par.

HIGHLIGHTS

- **Existing, dividend paying Company.**
- **Well-established product brand name in the market.**
- **Profitable record of operations from the first year of production.**
- **Promoters with 20 years experience in the fan industry.**
- **12% dividend assured to the new Shareholders for the year ending 30th September, 1985.**
- **Listing of shares on Calcutta, Delhi and Bombay Stock Exchanges.**

ISSUE OPENS ON 7TH MAY, 1985

It's a 24 Carat issue from Polar

SIKKIM

Ten Years After

TWENTY years ago on a bright April Sunday in Sikkim's capital, Gangtok, trumpets blew away evil spirits, cymbals clanged and prayer wheels turned, while lamas consecrated Palden Thondup Namgyal as the twelfth chogyal or monarch of the mountain kingdom. Almost exactly 10 years later the chogyal was deposed and the Indian tricolour replaced the once proudly fluttering royal standard. Today, the events of April 1975—the hurried referendum, announced and completed within 72 hours—and the subsequent 36th constitutional amendment bill ratified by the Parliament bringing Sikkim into the Indian fold have passed into memory. Calcutta Correspondent INDRANIL BANERJIE *last fortnight toured the tiny state (population: 330,000) to see what changes the last 10 years had brought about and assess the mood of the people. His report:*

THE PEOPLE look the same, the streets haven't changed much, old timers say, except that they're so much more crowded. Ill-designed buildings crawl up the thinly forested hillside in the manner of all newly-expanded hill stations, and there is a recognisable bustle which has replaced the sleepy, hamlet-like existence of the past. Gangtok, the capital of Sikkim from where once the chogyal ruled his diminutive kingdom, is now unmistakably the seat of power of a bureaucracy of babus, a popularly elected government and a state of the Indian Union.

There are other changes, more full of meaning, that have cut through the isolation of the Sikkim of old. Yesterday's opponents of the merger are today's leaders. Chief Minister Nar Bahadur Bhandari, who today considers the merger to be a fait accompli, entered politics more than 10 years ago to rally the Sikkimese against Indian attempts to swallow their kingdom. On the other hand, Kazi Lendhup Dorji, who became Sikkim's first chief minister in 1974 and oversaw the merger, has retired to the relative anonymity of his Kalimpong home after being defeated twice in elections.

Other strident protagonists of the merger, like Bhim Bahadur Gurung, who took Bhandari's place for a mere 13 days after the latter's unceremonious dismissal from chief ministership last year, and B. Khaitiawara, the *enfant terrible* of the Nepal community so prominent during the pre-merger disturbances, have also been consigned to the electoral rubbish heap. Laments Sikkim PCC(I) chief Ram Chandra Pondyal: "Of the 32 MLA's who brought about the merger I am the only one left in politics." The wheel has indeed come full circle: the twelfth chogyal's heir, Prince Jigme Wangchuck, is sequestered in ironic splendour in his lonely palace, officially relegated to being a mere Mr Namgyal. The once elegantly busy royal secretariat, overlooking the new state government secretariat bustling with jeeps and people, lies deserted.

But the sense of a separate Sikkimese identity lingers, as was amply proved by Bhandari's stunning return to power in the March assembly elections when his party, the Sikkim Sangram Parishad (SSP) won 30 of the state's seats. At work were his election slogan: "Sikkim for the Sikkimese" which touched the latent sentiments against outsiders referred to here as "dhotiwalas", and the popular memory of his blatantly undemocratic ouster last May by former governor Homi J. Talyarkhan. "Bhandari's pro-Sikkimese campaign smashed us," admitted Bhutiya Congress(I) leader Sonam Tshering "but I don't blame the people for being pro-Sikkim."

If this was an assertion of identity, it's clear that it didn't hark back to an era that is long gone. Only the Kazis, hereditary nobles, insist that "history cannot be erased in a decade", but even they recognise that their prince can never return as king. Sikkim's original inhabitants, the Lepchas and Bhutiyas, continue to revere their royalty but few people now shed tears over its deposition. Small wonder. Ten years of education and growing employment opportunities have given commoners like N.D. Chaingapa, West District deputy collector, a chance to be on par with the former Kazis. Son of a small cardamom planter, Chaingapa says: "There are hundreds of young people with a peasant background who are gradually migrating to the towns in search of white-collar jobs." Another commoner, Karma Topden, formerly head of the chogyal's secret service, is today a trusted secretary of Chief Minister Bhandari.

But the bold assertion of Sikkim's identity hides more than it reveals. The Bhutiyas' and Lepchas' real fear is of the ever-rising tide of Nepalis from across the border who now form the majority community in the state and have relegated the original inhabitants to a mere one quarter of the population. By curious twist of fate, the champion of the Nepalis is a man who declares: "If by being for the majority I am called communal, I don't mind being communal." Ram Chandra Poudyal is currently PCC(I) chief of the monolithic nationalist party, the Con-

The slopes of Gangtok: growing forests of buildings

Bhandari: triumphant return

PALJOR TASHI

Digitized by Arya Samaj Foundation Chennai and eGangotri

ress(I). Equally strange is the fact that is man, who should have had the unstinting support of his community, should have led his party to a humiliating defeat in the last assembly elections.

The answer possibly lies in Bhandari's non-communal image which obviously appeals to all sections of the population. His secular image has been eroded somewhat because he demands constitutional recognition of the Nepali language and wants the Nepalis and Bhutiya-Lepchas to have 15 seats each reserved for them

Kazi Dorji: slide into anonymity

PRAMOD PUSHKARNA

(compared with 13 only for the latter at present) but he manages to correct the balance by declaring that the state Government would eject all "foreigners" who entered that state after 1970.

But stemming the Nepali tide is practically impossible, since Sikkim has traditionally employed cheap Nepali labour to build roads, in construction and for harvesting work. This practice continues and has increased with the spurt in development activity since the merger. Most Nepali settlers are pathetically poor. Pleads Sunmaya Gurung: "We have nowhere else to go." Sunmaya's son-in-law migrated to Sikkim 12 years ago and settled down on a small patch of land he cleared in the mountainside near Pemayangtse in western Sikkim. Her daughter and son-in-law work as casual labour and are also engaged in looking after the adjoining cardamom plantation of a Bhutiya farmer.

Sadly, the influx is proving disastrous for the state's precarious Himalayan ecology. The once thick forests preserving the geologically young and hence unstable mountains have been dangerously thinned. Yet, as Chaingapa maintains, there have been no reports or complaints about encroachment of land by outsiders. This is chiefly because the state still has ample marginal land to be settled on. According to the 1981 census, only 4,887 of the total of 1.47 lakh workers in Sikkim were landless agricultural labour.

Some Bhutiya-Lepchas in the bureaucracy now fear the time is coming when they will be politically and economically obliterated by the Nepali deluge. The state's population has been growing at an unnatural rate in recent years, doubling from 1.62 lakh in 1971 to 3.16 lakh in 1981. Suresh Parmar, editor of a local daily who has conducted a detailed study on the voters list, estimates there has been a 46 per cent increase in the number of Nepali voters between 1979 and 1984, compared to a 22.6 per cent rise in the Bhutiya-Lepcha voters.

Sikkim's social fabric is further warped by the resentment locals have against plainsmen, chiefly the Marwaris who dominate trade and commerce through their extensive marketing network developed both within and outside the state over several decades. Being a tightly-knit community, the Marwaris can successfully dictate prices to local farmers and, at another level, outsmart local businessmen who have few contacts in the principal markets of Calcutta, Lucknow and Kanpur. The result, laments the chief minister, is that unfortunately for them "the people cannot enjoy the fruits of their labour".

But Balchand Sarda, Gangtok's independent MLA and the first plainsman to win an election in the state, vehemently denies that traders are exploiting local agriculture. A scion of Marwaris who first settled here 70 years ago, he argues: "Why can't the Government through its cooperatives build up a monopoly?" In fact the state Government has been trying since 1982 to strengthen the cooperative marketing network and establish rural banks for providing short-term credit. "But it's proving difficult to break the decades-long traditional links between illiterate farmers and the Marwaris," says West District Collector T.N.Barphungha.

IN A MANNER so similar to the practice in other parts of India, farmers find banks and cooperatives alien concepts and prefer direct dealing with the traders. But interest rates are usurious and the gullible farmers almost invariably end up pledging their crops to them. "Farmers in the state would have even lost their land due to indebtedness had it not been for the official ban on outsiders buying land," says Barphungha.

The Marwaris have been quick to cash in on the post-merger boom. In Gangtok, where plainsmen are allowed to own property, they have fuelled a building boom that is paying rich dividends now that both the state and the Central governments are opening new offices every year and an entire generation of young Sikkimese is flocking to the state capital. Gangtok's population has nearly trebled from 13,000 in 1971 to an estimated 40,000 at present. Meanwhile, the former Gangtok of neat little cottages with flower patches has been transformed into a congested collection of multi-storied buildings crammed into every conceivable spot on the mountainside.

"It's easy money, man" says 24-year-old Ugen Tashi, one of the many hundred young Sikkimese who have left their village homes to flock to Gangtok for contracts and white-collar jobs. But for young Tashi the experience has also been sobering. There is money all right, but living costs are high and competing with established contractors difficult. Hope is the eternal motivating factor. Even a local football coach, M. Manglam, who came to Gangtok nine years ago, saved Rs 25,000 by giving extra coaching lessons and doing a bit of trading on the side. Today, thanks to state government-backed bank finance, he is waiting to receive a Premier Padmini taxi.

Over 100 mills use Jailene.
For all seasons and every occasion, newer, wider, better, suiting and shirting ranges - all with Jailene.

Of course, it begins with Jailene, SPL's amazingly versatile polyester fibre. The widest denier range, with the required staple lengths. The whitest colour. The best dyeability. And, the maximum blend possibilities. SPL's regular Technical publications give valuable information to the mills.

Which other polyester fibre manufacturer would tell its customers "24 different ways to make a safari suiting", "two fold vs. three fold yarn suiting" or "coarse yarn suiting"?

That is why, both Swadeshi Polytex and Jailene remain far ahead of competitors. As do the customer mills.

But the strongest push to the local economy has come from Delhi. "The Centre has pumped in so much money that some people here have become millionaires overnight," says Sarda. Plan assistance to Sikkim has sky-rocketed since the merger from about Rs 6 crore annually to Rs 44 crore in the current financial year. During the sixth plan, per capita central assistance to Sikkim amounted to Rs 1,209, which is not just the highest for any state but several times the national average of Rs 80. "Sikkim's own revenue is just about Rs 11 crore annually, whereas this year we have projected a total expenditure of Rs 97 crore," says R. Narayanan, who has been the state's development commissioner since 1976.

Get-rich-quick stories are legion. Some of the profits were made during the brief period when permits were liberally doled out and certain industries in the state were exempted from excise duty. The ultimate in apocryphal stories concerns the businessman who loaned money to the Government to pay salaries. But the pipeline of funds has also had a visible impact on the state's development, as borne out by indicators:

- Ten years ago there were 264 educational institutions in the state; today there are 761. One result: the number of persons employed in agriculture declined;
- power generation has risen more than five times to a capacity of 17 mw compared to 2.5 mw at the time of the merger. Result: Sikkim sells surplus power to neighbouring West Bengal and from a handful, no fewer than 181 villages of a total of 405 have electricity;
- in the sixth plan period, 350 kms of new roads were hewn out of the mountains;
- Irrigated area has doubted to 8,000 hectares;
- Sikkim's gross domestic product, the value of total production in the state, has risen about 50 per cent in five years to Rs 37.4 crore in 1983-84.

Not surprisingly, save for settlements of migrant Nepali labour, Sikkim shows few signs of the crushing poverty that scar so many other parts of India. Says DIG of Police Tashi Namgyal: "Today when I go to the districts I can see the change. The tribals have corrugated sheet roofs, their crops and life in general is better." The remote north district's headquarters are at Nangan. This inconspicuous settlement boasts two video parlours and bars serving Indian beer and Sikkimese liquor.

Nepali workers in Gangtok: disquieting influx

Some Sikkimese are, however, beginning to realise that their honeymoon with New Delhi is not going to last forever. "At the moment we don't have to pay any central income-tax and there are enough contracts, jobs and loans to keep us going," explains M. Sharma, the state's enterprising industries director, but he counterposes this with the grim reminder provided by the short-lived consumer products industry boom between 1981 and the end of 1983 that died the moment the Centre included Sikkim within the purview of the Central Excise Duty Act.

"Our only long term hope is industries and the Centre must help us in concrete terms," says Sharma, pointing out that not a single Central government undertaking has been set up in the state so far. The Sikkim Government made an arrangement with HMT and with its own money set up an ancillary unit for assembling mechanical watches. "We need more units like the watch factory to develop skills and provide a base for diversification," says he, proudly outlining the factory's move into the manufacture of watch crowns and electronic clocks.

Jigme Wangchuck: isolated

With billowing expectations and conflicting sectarian aspirations, the Sikkimese polity today is an unstable raft on which few politicians can balance successfully. Last year, Prince Jigme Wangchuck firmly refused when asked by a group of Bhutiya-Lepcha bureaucrats and politicians to return to public life by contesting the parliamentary elections. Speaking for the reclusive prince, a Kazi bureaucrat explains: "Perhaps the way democracy came to Sikkim was unfortunate but it had to come. Today, our community has no leader so our chogyal must come forward. But our chogyal feels the merger was not constitutional and by contesting he will be accepting the annexation. Also perhaps he is not sure where he will stand as an equal among his former subjects."

But no leader, not even Bhandari, seems to be sure where he stands today. At one end is the rising clamour of the majority Nepalis who feel they are still being suppressed, still being denied opportunities commensurate with their efforts and numbers. On the other are the insecure Bhutiya and Lepcha tribals craving for a leader to protect their interests. And on top is the omnipotent Centre demanding obeisance to national integration and unity. Freed of the monarchical straightjacket but pinned by this trinity, Sikkim 10 years after its merger with India is prospering but still far from being the "happy house" its name implies.

BREACH OF FORM

MOST businessmen with corporate take-over programmes seem to be paying little attention to the revised guidelines on the subject pushed through by the Government last year. The guidelines, modelled on the London City Code and included as a new clause in the listing agreements between companies and stock exchanges, stipulate that anyone buying 25 per cent of a company's shares should offer the same price to other shareholders, plus disclose their sources of funds and identities. By and large, however, these guidelines have been observed in the breach. The exceptions include M.G. Mittal and Company of Bombay, which has taken over Trade Wings from Nandalal Kilachand Investment, Dodsal and the United Commercial Bank. Another instance when small shareholders were offered a sale option was in the case of the Indian Vegetable Products. Some Calcutta-based concerns have also followed the new guidelines. But stock exchange sources say that in most cases the guidelines are evaded with apparent ease by the deploying of front companies, each of which then buys less than 25 per cent of the equity.

DESI-DARSHAN

TWO MORE television whodunits, *Target* and *Shoestring*, are scheduled to go on the waves in the next few weeks. The launching date has not been decided, but if it does, one of the serials may be run on Friday night. Otherwise, Doordarshan plans to telecast them on Saturday or Sunday. The current crop of foreign programmes is slated to go off the screens by September/October, and Doordarshan will soon be looking seriously for replacements. One virtual certainty is *Star Trek* (13 episodes) or a similar science fiction serial. Six more episodes of the BBC serial *Sorry* will be screened on the second channel. The double meanings were considered unsuitable for the first channel.

POWER TO STEEL

STEEL re-rolling mills and induction furnaces in the states surrounding Delhi have been flocking to the capital in recent months, attracted by the relatively attractive power position in Delhi. Some 150 of these units have already submitted applications to the Delhi Administration, which however has reacted in alarm since these units will mean an additional power demand of 300 mw: 50 per cent of the capital's current electricity requirements. The administration is therefore moving on a proposal to ban the establishment of new steel re-rolling mills and induction furnaces in the capital. However, about 30 of these units have already been provisionally registered with the municipal corporation for power connections. But despite this, a ban order will render this a still born industrial boom.

ANOTHER BITE

THE WORLD of fast food parlours is rapidly becoming crowded: yet another parlour has opened in New Delhi, in collaboration with the Canadian firm Mohawk International. Launched by local entrepreneurs Jagdish Sood and son Ajay (prominent in the cinema theatre and construction business), the new parlour Americano offers the conventional burgers, pizzas plus Indian food. Six more Americano outlets are planned if business picks up, while the Sood combine is also negotiating with the US hotel chain, Ramada Inn, for setting up a hotel in Delhi.

CAPITAL HEIGHTS

PRIVATE equity issues may be doing extraordinarily well on the stock market, but the total paid-up capital of all the 93,294 private sector companies in the country stands at no more than Rs 5,514 crore, according to the *Economic Times*. In comparison, 970 government-owned companies have a paid-up capital of Rs 16,415 crore, providing good evidence of the commanding heights to which the public sector has climbed. This situation is a complete reversal of the situation 30 years ago, when the private sector companies had a paid-up capital (Rs 1,005 crore) that was far more than in the case of the public sector (Rs 73 crore). But the private sector is looking up in one respect: in the early 1960s equity issues floated on the market evoked a response from the public of no more than 60 per cent. In 1983-84, this improved to 98.1 per cent.

Chart by B.K. SHARMA

SMALL SUCCESS

PRIME Minister Rajiv Gandhi laid out the Government's priorities quite clearly when he told foreign business leaders brought to Delhi by the EMF Foundation that what the country required was foreign investment in core sectors like power. But few of the assembled businessmen qualified on this count: the majority of those present were from companies like Pepsi Cola, the Hinduja Group, Ramada Inn, General Foods and a variety of bankers. There were also representatives present from companies like Alcan, Westinghouse, Rockwell, CGEE Alsthom, Pechiney, Voest Alpine and CIT Alcatel. But most of these are already familiar with India, its economic policies and the Government's priorities. So whether the round-table meet will mark any sort of breakthrough remains to be seen.

at home in tea plantations, covering the risks from bush to cup.

Anything that affects the well-being of a Rs. 500 crore foreign exchange earner affects the well-being of the Nation. Excessive rains. Hailstorms. Herd of wild elephants. Pests and insects. Wild bush fire. Anything going wrong during processing. The uncertainties of tea production are simply too many to be left to chance.

That's why people who know, put their trust in National Insurance. While National is, essentially, an insurance company, it has field personnel who know the hazards of producing tea, inside out.

Now, this makes a world of difference when you're looking for insurance that provides comprehensive cover in high-investment, high-risk projects. National does it to your satisfaction.

National Insurance. Well connected with India's core industries. Not just tea and jute, but iron ores, steel, oil, shipping, chemicals—the lot.

THE BUDGET

A Balancing Act

FINANCE Minister Vishwanath Pratap Singh's budget is being praised for the wrong reasons. A national budget is very much like a household budget —you earn so much, spend so much, and at the end of the year, put away so much in the kitty for a rainy day.

It is a pity that discussion on the budget has centered on income tax cuts and other concessions given to companies but has almost totally ignored the overall financial picture in relation to the national economy. The point is not whether the Government is taking too much out of the economy—which obviously it is—not even whether it makes good use of what it takes away—about which there can be more than one opinion but one would not care much for the other one—but whether it manages to live within its means. The answer to the last question is no, and it is indeed a pity that in the euphoria over tax cuts and other 'liberating' measures, this aspect has been lost sight of.

Charan Singh's disastrous budget of 1979-80 was probably the first budget in which the Centre's revenue disbursements exceeded its revenue receipts. The margin was small, only about 6 per cent, but the signs were ominous. That year, the receipts were Rs 11,000 crore and disbursements slightly over Rs 12,000 crore, leaving a balance of about Rs 1,000 crore to be made up by cooking the books. In the following year, the gap doubled to nearly Rs 2,000 crore, but came down in the year after that.

Since then, the gap has been widening, both in absolute and relative terms, and it now stands at 22 per cent. Singh's budget shows revenue receipts of Rs 26,722 crore and disbursements of Rs 32,717 crore which leaves a gap of Rs 6,000 crore. This will be met partly through borrowings and partly through deficit financing but the fact remains that the Government is not able to do its housekeeping, which is what a revenue budget is, without getting into debt or without cooking its books, which is essentially what deficit financing is.

When you borrow, you have to pay at least a nominal interest, rate, as the Government does. The Government has first charge on the resources of banks and has its hands more or less permanently into their pockets. The banks are consequently forced to charge a much higher rate of interest to make up for the low rate they charge the Government.

We have therefore more or less the same situation as in the United States where the large budget deficits have led to high interest rates. Fortunately for them, high rates of interest attract dollars from Europe and elsewhere, and makes the dollar a strong currency, so strong that the Americans pop over to Paris and London to do their shopping. While the US is cleaning up the world with its strong dollar, the position in India is entirely different. High interest rates lead to high costs, and high costs to high prices. The budget is inflationary on two counts: high deficit coupled with massive borrowings.

The finance minister has received kudos for cutting down personal and company income tax rates. He would have done better if he had wielded his hatchet on government expenditure.

That is not all. The burden of interest on accumulated debt is growing yearly and a stage has reached where the Government has to borrow just to pay off old debts. Total net borrowing this year (1985-86) is estimated at Rs 7,244 crore. As against this, total interest payments during the year are placed around Rs 7,075 crore, which means that the entire borrowings will be used up to pay the interest on accumulated debt. At this rate, time is not very far when the Government will be forced to print currency notes, not to balance its books which it does now in any case, but to pay off its pressing creditors.

The only way to put an end to this state of affairs is to cut down government expenditure ruthlessly, and blue-pencil every other request, particularly from state governments, for funds. The states may be making much of their lack of autonomy but one wonders whether they are as scrupulous as they should be with the cash they receive from the Centre. The telephone bills of some state chief ministers run into lakhs of rupees. Bhajan Lal's telephone bill for calls between April 1, 1984, and February 28, 1985, came to Rs 2,94,831.30 which works out to Rs 36 per hour—hour, not day. A Maharashtra minister took a helicopter from Bombay to visit friends in the interior and ran up a huge bill on government account. Multiply such items a thousand or a million times, and you get a very good idea of the kind of waste that has become almost a routine affair in the name of development. The finance minister has received kudos for cutting down personal and company income tax rates. He would have done better if he had wielded his hatchet, for nothing less than a hatchet would do, on government expenditure and hacked it down by at least Rs 2,000 crore

Rajiv Gandhi has said that his government is going to have a good look at the present activities of the public sector and rationalise them. He has said that he does not want government undertakings to make tomato sauce. Actually, the Government has no business making anything if it cannot make it without making a profit. For the losses come out of the general kitty and are reflected in the budget. If the Centre shuts down state units that have outlived their usefulness it will not have to dip into taxpayers' pockets to balance its books. Ultimately, it is the taxpayer who pays for its rulers' extracurricular activities.

There is no reason why we have to be taxed so heavily to pay Bhajan Lal's telephone bills. And there must be millions of taxpayers—and everyone in India is a taxpayer since even salt is now taxed —wondering why they should not fiddle their accounts if the Government cannot balance its books without fiddling its accounts. If the finance minister does not tighten his belt, the planners will do it for him, for they will have to decide very soon what do with a plan that is so short of resources that its size may have to be cut down by 10 per cent, if not more. After all, there is only so much in the kitty, and if a big slice is eaten up just to keep talkative ministers happy, then something must give. And that something will be the plan which, when everything is said and done, does decide whether we grow or stay put.

COMPUTERS

Big is Beautiful

THE WORLD of bits and bytes is being buffeted by the first winds of upheaval—and predictably so. Costs are dropping, firms are turning out more computers and sales are picking up. And the market may be growing, though the jury is still out on that. Companies scrambling to protect market shares have gone on a price cutting spree, computer prices have in some cases tumbled to half the levels prevailing a few months ago, and the price wars will get bloodier in the months ahead.

The wars will exact their toll of course: almost everyone connected with computers agrees that some of the smaller firms will be wiped out or will be forced to switch from manufacturing to representing the big boys as agents. And what will inevitably hone the competition is the horde of foreign firms that is poised to enter the Indian market in association with local firms—a far cry from the closed market of yesteryear when International Business Machines (IBM) was forced out of the country.

Readying to enter the country are Apple Computers Ltd, Hewlett Packard, Commodore and Sinclair. Apple is looking for a partner, though it has a local distributor in Raba Contel and could tie up with it, Hewlett Packard is scouting the market, and Sinclair and Macmillan India have joined hands to make some 80,000 home computers a year, half of which may be exported. Commodore will be coming in with a non-resident Indian, the French company Bull Sem is talking to the public sector Instrumentation Ltd, Kota, the Dutch firm Nixdorff has tied up with the Kotharis, Philips of Holland will launch computers with its local counterpart Peico, and other US, Japanese and Dutch companies have gone into a huddle with the Mafatlals, Raunaq Enterprises and the Modis. A sign of the coming production explosion in computers is that, at the low end of the market alone, the Government has issued letters of intent to firms to launch annually four lakh personal computers. All these may not come off the assembly lines, but even if one-hundredth of this number does, that would be more than all the computers turned out in the country last year.

"The industry is crying wolf. The Government had to break the vicious cycle of high prices and low volumes."

N. SESHAGIRI
additional secretary, Department of Electronics

Even firms that are now in are examining new ways of doing things or venturing into associated fields. Texas Instruments, the US firm, proposes to establish an earth station in India and transmit software data through a satellite. Local firms like Usha Microprocess Controls are branching into peripherals manufacture.

If the computer industry is set to take off, much of the impulses at work stem from a series of key customs duty announcements in the budget and the export-import policy. These have rounded off the new policy that was unveiled last November. The November package lifted restraints on output and opened the doors to foreign computer firms—all with the goal of infusing competition into the industry, lowering computer prices to international levels and stepping up annual production from the laughable figure of 3,500 or so last year to a lakh in five years time. Now the 15 per cent excise levied on every computer sold has been scrapped and the customs duty on four electronic components has been lowered to 25 per cent from 75 per cent. (Logically, that should contribute to lower computer prices, but some industry executives argue that the high dollar has offset the concession.) Most important, computers that cost less than Rs 10 lakh can be imported under an open general licence by the end-users (who cannot re-sell downstream) by shelling out 200 per cent duty (60 per cent if import applications are

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

vetted by the Department of Electronics).

The package is broadly welcomed. Elico Computers Managing Director Balbir Singh Bajaj says: "Right now while the international market talks in terms of 50,000s we talk in terms of hundreds. The new policy will produce these kinds of numbers in five years." But the provision for freer imports has ruffled feathers in the industry. Many raise the spectre of local firms going down like ninepins if the market is flooded with imported computers. Says Dilip J. Shah, director, International Data Management (IDM), the firm put together by former IBM employees: "The import policy is disastrous for the industry. It may be almost cheaper to shop for computers abroad since local costs are twice or thrice cost levels in foreign countries." He argues that if the advantage of brand names that foreign computers have, is added to this, and domestic firms will be swamped. Shah's views are echoed by Ashok Soota, president of Wipro Information Technology. He fears that unscrupulous manufacturers won't play by the rules. Says he: "The measures the Government has taken so far will ensure that the computer market will grow by 50 per cent and more. But it must safeguard against growth occurring only in imports".

SHAH and Soota's fears may be valid but up to a point. The price-tag for importing a small business computer could range between $ 5,000 and $ 8,000 (about Rs 65,000 and Rs 1.04 lakh), including the 200 per cent duty. Some industry analysts hold that when finally assessed by customs, the bill could cross Rs 1 lakh or more—and buyers may plump for the home-made variety which is half as expensive. While small computer buyers are sensitive to price, the argument goes, those who buy mini computers are far less so. Where foreign products could edge out local ones is in mini computers priced at Rs 2 lakh to Rs 10 lakh. Industry watcher Sunil Agarwal, who edits *Dataquest*, the computer magazine, believes that over a dozen local mini computer manufacturers could be squeezed by imports because buyers may opt for foreign products even if they have to pay more for them.

Not everyone buys this argument. Malin Kohli, chairman of the Delhi chapter of the Computer Society of India, points out that buyers have gone through a learning curve and are aware that local companies alone can provide the maintenance support necessary. And N. Seshagiri, additional secretary in the Department of Electronics and the architect of the computer policy, brushes off the industry's fears: "The industry is crying wolf. The Government had to break the vicious cycle of high prices and low volumes."

"The measures the Government has taken so far will ensure that the computer market will grow. But it must safeguard against growth occurring only in imports."

ASHOK SOOTA
president, Wipro Information Technology

"The import policy is disastrous for the industry. It may be almost cheaper to shop for computers abroad since local costs are twice as much."

DILIP J. SHAH
director, International Data Management

Nevertheless, the Government's latest round of policy liberalisations has left many grey areas. Last fortnight, computer executives were throwing up a number of questions. How will an actual user be defined? Can a corporate heavyweight import 200 personal computers? Vinay Bharat Ram, managing director of DCM, argues that customs officials don't have computer price catalogues and under-invoicing can therefore become rampant. Others suggest that buyers can import two systems that cost less than Rs 10 lakh each and hook them up and that the Department of Electronics does not have a system to monitor what is available in the country, the yardstick by which imports will be allowed.

But Seshagiri says that anyone who wants to will be allowed to import any number of computers. Though the landed cost will act as a deterrent, customs officials have computer price catalogues and imports of personal computer networks will not be permitted. In a major clarification, he adds that imports of computers that cost less than Rs 1 lakh will be banned. Last fortnight, guidelines were being issued to customs officials to this effect.

That should certainly gladden computer manufacturers, most of whom cater to the low end of the market (by the end of last year 4,630 micro computers had been installed in the country). It could also result in firms switching to low market lines in the coming months though many deny that they intend doing so. What is evident is that a restructuring of the industry is in the offing.

First, companies will resort to what one executive calls "smart selling" or repackaging the same products in different ways. The executive confesses that his firm is doing precisely that. Second, only big companies with financial staying power will survive. In computers, as in other areas of electronics, big is beautiful. As a government official puts it: "The name of the game is numbers." Third, the emerging competition will force companies to cut costs—and the only area where the axe can be wielded is product maintenance and user staff training. Unlike firms abroad, Indian computer companies generally provide systems software and training free to customers. (Many in the industry therefore argue that Indian computer prices are not strictly comparable with prices

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

abroad.) Says an analyst: "Firms will have to price each and every support service. All the goodies will cost extra." Thus another satellite industry to provide services could grow. Fourth, import duties are scheduled to be phased out over the next three years to cut prices even further. Manufacturers with high overheads who have ties with foreign firms may close down production lines and switch to representing their foreign partners as agents if they cannot face the competition. The alternative is for them to become original equipment makers who sell to systems engineering units which in turn will retail computers. Finally, software exports, now in the region of Rs 20 crore or less, may get a push.

Underpinning the argument that a computer revolution is in the offing is a basic premise—that a huge market exists out there waiting to be tapped. But even the cheapest computer today is too expensive for the lay public to take home and computers come low down on the totem pole, after TV's and VCR's. Where then will the demand come from? Manufacturers are only too aware of the problem. Some like Vinay Rai, president of the Computers, Peripherals and Process Manufacturers' Association, had proposed that a cess be levied on the industry to promote the use of computers. Shah of IDM suggests the industry set up advanced centres in conjunction with government agencies to demonstrate the advantages of using computers, and that the Government permit tax write-offs to computer buyers up to a certain amount. And Eiko is wooing schools and conducting courses for students. It plans on holding a camp in June to train teachers to use computers.

In the short run, however, companies are looking to the Government to provide the big push. The Rangarajan Committee on computerisation in banks has recommended that Rs 300 crore be spent on buying computers, and the Government has already cleared Rs 130 crore of this. But the big spending may not begin quickly enough, leading one industry observer to comment: "Computer manufacture for the next one year will be a bum's game." The era of super profits and of companies taking the consumer for a ride is over, and prices will fall even further, a leaner industry will emerge with half a dozen giants dominating the market, and the inefficient and small will fall by the wayside. The beneficiary can only be the consumer.

—PALAKUNNATHU G. MATHAI with bureau reports

McDOWELL

Taxing Times

KERALA's fractious politics has taken a rum turn. Liquor giant McDowell and three public sector firms are the centre of a heated dispute over sales tax assessment with the finance minister drawing flak from his industry minister and a Marxist leader for imperilling the industrial future of the state.

The storm broke when the revenue divisional officer in Alleppey attached all movable properties of Mcdowell's Shertally division, which manufactures the hot-selling McDowell's Premium and Diplomat-brand whiskies, for failing to pay taxes amounting to Rs 9.75 crore in 1975-76 and 1979-80. McDowell promptly declared a lock-out putting 600-odd employees out of work. Three public sector undertakings coming under the Industry Ministry also came under pressure to pay back tax arrears.

These were the Civil Supplies Corporation (CSC) which is being asked to pay up Rs 22 crore, the Small Industries Development and Employment Corporation (SIDECO) which had its properties attached for running up Rs 3 crore in arrears and the Cashew Development Corporation (CDC) which had its bank accounts frozen because of its inability to pay Rs 60 lakh in taxes. McDowell and the three companies are convinced that the assessments are "cooked up" since it was made ex parte and they even claim to have paid excess taxes. McDowell has filed a suit in a lower court charging the assistant commissioner, sales tax, with making an ex parte assessment and not giving them enough time for a personal hearing.

Industry Minister E.A. Ahmad came out strongly against the tax department's action and lobbied Chief Minister Karunakaran to get the revenue recovery proceedings stayed. He pointed out that ex parte assessments of this nature "will sound the death-knell of the industries in the state".

His unlikely ally in the affair was a Communist Party of India (Marxist) MLA K.R. Gouri, who was instrumental in bringing the McDowell unit to her constituency. Gouri, who enjoys the support of the largest union in the factory, made it clear where her loyalties lay. "There are 600 workers now on the streets due to the finance minister's action," she said and charged Mani with "gunning for McDowell since he was prejudiced against the liquor firm".

SHERTALLAI VENU

Distillery workers: locked out

Mani refused to call off his tax officers. "Ironically, the very people who are taking pot-shots at me for failing to collect taxes properly are now calling for stay orders on the recovery proceedings I have launched," he said.

But things went against Mani. Chief Minister Karunakaran, bowing to pressure from his partymen, stayed revenue recovery proceedings against the companies involved, but with certain conditions attached. Till the settlement of the case, McDowell agreed to pay one-third of the total arrears for lifting the lock-out. But N.J. Menon, director (technical), made it clear that there was no question of paying a sales tax without proper assessment and that "we may be forced to close down our operations in Kerala till the issue is settled without discrimination."

The reprieve is also applicable to the three public sector companies but the question was just how long. The uneasy stalemate, unless broken soon, may serve as a brake to further industrial investment in Kerala which has practically no industries to boast of.

THE GULF

Construction Crunch

THE PARTY is over. Ever since oil prices leapt over the moon in the early '70s, the Middle East was the boom arena for Indian construction companies who bagged contract after contract for everything from housing to bridges. But the times have a-changed: a lethal combination of the Gulf war and sagging oil prices have put a damper on things. Until mid-1981 Indian construction companies secured overseas projects worth Rs 5,000 crore: from then on, till 1984, the flow diminished to a trickle of Rs 1,500 crore and 1985 is not going to be any improvement over the preceding years. Says Harshavadan Shah, chairman, Overseas Construction Council of India (OCCI): "It is a dwindling market. The Iran-Iraq war has completely upset the applecart."

The decline has mainly hit construction projects: sparing the turnkey contracts which have been coming to India at a regular rate of Rs 100 crore a year. Says Kalyan Banerji, chairman, Export-Import Bank of India, the channelising agency for any project of over Rs 5 crore: "The Arab countries have turned net borrowers in the international monetary system, which means that the competition is much more acute than it was." The strike rate for bids secured as against bids made is about one in twelve now: last year Indian companies bid for projects worth Rs 3,200 crore, but expect to get only about Rs 300 crore worth.

To add to their woes, the contractors are not getting their money. The major Indian presence was and is in Iraq—and Iraq, saddled with a costly war of its own making, is not paying up to the tune of Rs 2,000 crore although a deferred payment agreement has been hammered out at the Government level. In addition, there is Rs 200 crore worth of equipment lying in the Middle East which contractors are reluctant to re-import into India because of the customs duty charged.

All in all, it is the gloomiest of scenarios, as a recent document prepared by the OCCI makes clear. And what it also says is that the real crunch is yet to come. "When we've finished our current commitments and find that there is very little else we can build, that is when the shoe will bite," says Ajit Gulabchand, managing director, Hindustan Construction Company Ltd (HCCL), a division of the Walchand group. He says that HCCL was doing work worth Rs 30 crore only two years ago, but this had dropped to Rs 5 crore now. "We are a little desperate," Gulabchand admitted.

Similar stories are to be heard in almost every office. K.G. Shenoy, president, corporate development division, Makers Development Services Pvt Ltd, says: "As the slump has hit the foreigners also, the competition is crippling." An indication of the decline comes from the executive of a large company who says that the number of workers they employed has dropped to a fifth of the number three years ago.

Besides the obvious factors of the war and OPEC's problems, there are other not so obvious reasons for the obvious Indian downslide:

- the Gulf countries and Arab governments are looking for project financing and Indian companies can't offer financing, though for exceptionally viable projects the Government may permit them to do so;
- customers are reluctant to award jobs to Indian companies because a few of the public sector ones didn't finish work in Kuwait and Iraq. Most Gulf countries, therefore, now prefer European and US companies whose operations are also far more mechanised and hence faster;
- a number of local contractors in the Gulf have developed reasonable expertise in simpler construction jobs such as housing and roads.

Indian contractors are plagued by their lack of modernisation as well. An official of the National Projects Constructions Corporation (NPCC) says: "Our project management techniques are obsolete—no computerisation, for instance—and we face manpower problems, like having to build more houses for labour, bigger kitchens and so on, simply because we are labour-intensive." The cost advantages that Indians enjoyed because of cheap labour have also suddenly vanished. C.L. Verma, managing director, Continental Construction Ltd, says: "Our labour is more costly and troublesome. There have been a number of strikes by Indian labour in Iraq. Chinese and Filipino labour is far cheaper than Indian labour."

Payments are a problem and not just the 'deferred' ones, which incidentally, apply only to previous projects and not new contracts. Iraq, for instance, had offered Continental Construction a highway project but the Indian Government

Chart by B.K SHARMA

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

turned it down because of the deferred payment problem. Countries like Libya want to pay in oil but when sold at the OPEC price, the oil brings in $30 a barrel while the spot price on which the Indian firm can re-sell the oil is only $27. The oil can't be brought home either because India does not have the refining capacity.

While the going was good, the Indians didn't look elsewhere. Now, at long last, they are looking for greener pastures. One of them is, of course, India. Shah points out that in the Sixth Five Year Plan 42 per cent of the total outlay was for construction. The increased outlay in its successor should be a welcome boon to Indian companies. They are also looking hungrily at the many institution-funded projects coming up all over the world and the OCCI document wistfully lists $ 3 billion worth of World Bank and Asian Development Bank-funded waterworks, bridges and dams.

HOWEVER the slice of action that the Indian companies will get is likely to be quite thin and could, in most cases, be limited to subcontracts. The competition is getting fiercer by the day. For example, one Indian construction company had tendered $160 million for a bridge in Malaysia. A Korean company bid a rock-bottom $54 million and took the contract. Another Indian consortium bid $160 million for the Marsyangdi hydel project in Nepal. A Japanese firm took it away for $63 million. "With such cut-throat survival tactics," says Gulabchand, "Indians will be left out in the cold." And what is worse, the foreigners are said to be sniffing around hopefully in India, offering the same cut-throat prices.

The OCCI is planning to send a delegation abroad to explore new areas. Paradoxically, the area of hope is still in the Middle East and Africa—after the war. The Arab construction market is, at $100 billion, estimated to be the third largest after the US and Japan, and a number of countries in the region can be tapped. Iraq has budgeted $ 84 billion over the next five years, Algeria about $10 billion, Egypt about $ 30 billion, Saudi Arabia—the richest projects market—$65 billion. Others, like North Yemen and South Yemen, Bahrain, Oman, Syria and Qatar will chip in with substantial investment. India will get only the crumbs—its current share, anyway, is infinitesimal—but it would be "better than nothing," as Shah says.

JAGANNATH DUBASHI

"It is a dwindling market. The Iran-Iraq war has completely upset the applecart."

HARSHAVADAN SHAH
chairman, Overseas Construction Council of India

Breakthroughs elsewhere will not be easy. According to J.P. Srivastava, group general manager, Indian Railway Construction Corporation (IRCON), one of the few companies which is keeping its head up in the present slump, the other possible areas are already the fields of others. South-East Asia, for example, is dominated by the Japanese and their specifications for material and equipment are totally different from Indian or western—he cites the example of railway lines. "So it is difficult to make a mark in this region even as subcontractors to the Japanese," he says, except in Vietnam and Thailand, which, in any case, want aid-linked projects that India can ill-afford.

NAMAS BHOJANI

"The Arab countries have turned net borrowers, which means that the competition is much more acute than it was."

KALYAN BANERJI
chairman, Export-Import Bank of India

Elsewhere, the picture is not all rosy. Central African countries have no funds to speak of although India has set up sugar and cycle factories there and IRCON has done signalling work in Nigeria. Latin America is out because of the US stranglehold—it gives aid directly—the language and the lack of communicaton.

An NPCC official argues that since the market for conventional construction has shrunk India should venture into areas of sophisticated technology—small chemical and industrial plants, turnkey farming jobs—and that Indian companies can quote lower than western ones because production costs are lower in India. He further says that a market exists in maintaining complex equipment, air-conditioning plants, diesel generating plants, inventory and spare parts management, and maintaining hospitals and airports. Other countries have moved into these areas and Indian companies will have to tie up with foreign ones.

Srivastava of IRCON feels that India should also begin exporting raw materials, if necessary with government subsidy because the expense can be recovered in profits. "At present we care tuppence for raw material quality at home since we operate in a suppliers market," he comments, but adds that it is not the case abroad. IRCON has just built a $350 million high-speed railway line in Iraq and about 10,000 tonnes of steel were used. "Can't even 5 per cent of this have been Indian?" asks Srivastava. "It may be uneconomical to produce only 10,000 tonnes of high quality steel but we have to make a start somewhere. When I tell people abroad that we produce about six million tonnes of steel they don't believe me."

All that is, however, in the future. For the moment, Indian contractors are concentrating on keeping the flag flying in the Middle East, even as they try desperately to make headway elsewhere.

HBJ CONTRACT

Flip Flop

CONTROVERSIAL decisions on major contracts are not a new phenomenon in this country. But the Government brought little credit to itself last fortnight when it did an about turn on what is probably the largest contract on offer in the country today: the Rs 1,700 crore 1,730 km Hazira-Bijaypur-Jagdishpur (HBJ) gas pipeline. Reversing an earlier decision to parcel the contract out piecemeal, and cancelling a tender that was floated last year, the Government announced that a fresh tender would be floated and the contract given to one party on a turnkey basis.

That had virtually everyone crying foul. Almost every word written on the subject in the newspapers was condemnatory, and Minister of State for Petroleum Nawal Kishore Sharma was grilled for two hours in Parliament by irate opposition leaders. Much of the heat was generated by the suspicion, aired both in Parliament and outside, that the move was designed to help a company that had not even responded to the initial tender.

Speaking to INDIA TODAY, Sharma dismissed the criticism as "motivated" and said: "If Snamprogetti was not involved no one would have paid any notice." That may or may not be true, but the Government's change of mind came in the wake of months of intense lobbying by Snamprogetti's Delhi representative, Ottavio Quattrocchi, who himself has stated repeatedly that a turnkey approach was in India's best interest.

Nevertheless, the decision will probably delay the construction of the pipeline, with possible downstream delays in the commissioning of fertiliser plants, and perhaps will entail a rise in the cost as well. The new decision also means a reduction in the role of the prime Indian consultant Engineers India, as Sharma himself admits, and possible loss of orders for Bharat Heavy Electricals Ltd (BHEL), which had been told that it would get the order for compressors and cathodic protection systems that are a part of the contract.

Sharma explained that the decision was taken because the Indian companies involved did not have the requisite experience in laying gas pipelines, BHEL did not make the kind of compressors required and because the delays would not cause downstream problems.

But these arguments do not hold much water. For one thing, while BHEL does not make the compressors it already has a collaboration agreement with the Italian firm Nuovo Pingnone. And BHEL has been talking to Bechtel Corporation of the US on the engineering for compressor stations. As for the cathodic protection system, BHEL signed an agreement a few months ago to acquire the technology from Harko of the US. The only valid criticism against BHEL came from an official spokesman, who said that BHEL had quoted Rs 75 crore for the cathodic protection system whereas the original cost estimate was Rs 25 crore.

HARI OM GULATI

"If Snamprogetti was not involved no one would have paid any notice."

NAWAL KISHORE SHARMA
minister of state for petroleum

Sharma may also have been incorrect when he said that the downstream fertiliser plants would not be delayed by the new decision. He said that the National Fertilisers Ltd's (NFL) boiler at Guna would not be ready before March 1987. But NFL's Managing Director B.S. Kakkar said that the boiler would be ready by December 1986, by which time the pipeline will not be ready. Sharma also said that the revised construction schedule would start ticking from December this year, whereas the kick-off date may in reality be March 1986. With a projected lead time of 15 months, the pipeline will not reach NFL's plant till June 1987: a delay of six months that can mean a production loss estimated at around Rs 63 crore.

Official spokesmen put forward some other arguments in defence of the turn-about. For one, it was said, Engineers India and the Gas Authority of India Ltd (which will own the pipeline) will now have to deal with only one prime contractor, so that the responsibility for delays and cost overrun can be fixed. And Sharma made the point that none of the oil pipelines built so far in India had been finished on time and within the original cost limits. "We want to change this and make sure this is not repeated," he said.

While there is some validity to this argument, the fact also remains that numerous turnkey contracts too have not been completed within the stipulated cost and time limits. And the Oil and Natural Gas Commission (ONGC) developed the Bombay High offshore oilfield in record time without going in for a turnkey approach, and despite having no prior experience in offshore work. Finally, transfer of technology and the learning process are both retarded with the adoption of a turnkey approach.

What wasn't clear about the whole episode was who exactly had taken the decision to switch approaches. In the run-up to the decision, a furious row had raged last year between the then petroleum secretary A.S. Gill (who favoured the old piecemeal approach) and the then petroleum minister P. Shiv Shankar. Also, a committee of secretaries had considered the turnkey approach and rejected it on the grounds of the delays involved in a fresh tendering process. But Sharma argued last fortnight that the committee of secretaries was not authorised to take any such decision. Asked who exactly had decided in favour of the turnkey approach, Sharma denied the prime minister had anything to do with it, and claimed: "The decision was taken by my ministry."

The final verdict on the wisdom of the Government's decision will, of course, have to wait for events to unfold: will the pipeline eventually be laid on time and within the stipulated cost limits? If yes, Quattrocchi will have been proved right in his argument that the decision will stand the country in good stead. If not, the country will pay a heavy price indeed. But either way, the governmental flip-flop of going down first one road, then turning round and opting for another could have been avoided.

Peerless helps people to be self-reliant

Today I am really very happy. At last, I could build a house, though small, of my own.

I never dreamt of building my own house. Because, I had never been a big guy, just a middle-class man having a moderate income. With that I had to manage everything — including daughter's marriage and proper education of my son.

Besides, I had no savings excepting a Peerless Certificate and that too of a very small amount.

This brought me in contact with Peerless. And it is Peerless who showed me the way to fulfil my long cherished dream.

Today, I am a Peerless Inspector. A member of a large family. And I am happy, for I have achieved what I aspired for. With the help of Peerless of course!

You too, can build your future with us — Peerless.

India's Largest Non-Banking Savings Company

WEST BENGAL

Principled Loss

DOES it matter whether a cat is white or black so long as it catches mice? In Left Front-ruled West Bengal, the answer is apparently yes. For the manner in which a row has kicked up over inviting a private company to join hands with a state-owned TV manufacturing company suggests that the Marxists couldn't careless about whether the cat catches mice or not so long as it is red.

Red before results seems to be the slogan in another case as well, involving a proposal to set up a joint sector power generating agency. Although the Industrial Development Bank of India (IDBI) promised money if the joint sector venture was set up, the Government of the power-starved state has been strangely unresponsive while at least three other state governments—Gujarat, Tamil Nadu and Bihar—are going ahead with similar joint ventures.

Both cases erupted last month with acrimonious exchanges among the Left Front partners. The Industries Department had thought it would promote the development of an electronics industry in the state by asking the National Insulated Cable Company (NICCO) to join hands with the state-owned Webel TV in order to help improve Webel's hard-pressed financial situation and get things moving. Instead, there were cries of a sell-out. The CPI(M)'s party organ *Ganashakti* ran an article on trade union opposition to the move while the party's national paper, *People's Democracy*, warned against attempts to dilute state ownership of the public sector.

West Bengal's Forward Bloc Industries Minister Nirmal Bose is therefore hard put to explain the obvious logic of the decision: "The Government is not selling its share in Webel TV, we are only associating NICCO for raising more funds to expand the company." But Sujoy Bhattacharya, president of the employees union of the West Bengal Electronics Industrial Development Corporation (WBEIDC, which owns Webel TV, is unconvinced, and says the move is a "private sector conspiracy and an attempt to knock out Webel TV as a competitor in the lucrative TV market."

Nevertheless, the logic of the proposal cannot be denied. Webel TV has been struggling along with a turnover of barely Rs 50 lakh a month and has been in the red so far, unable to raise the money needed to expand. The induction of NICCO is part of a growth plan, with NICCO committed to contributing Rs 25 lakh to the company's share capital and a further Rs 49 lakh being raised from the public, so that the company's share capital is raised from Rs 25 lakh to Rs 1 crore (with the state Government chipping in with an additional Rs 1 lakh).

P.S. BANERJEE

WBEIDC staff protesting proposed changes in Webel TV

NICCO's participation will mean not only a quadrupling of the capital base but also the induction of fresh Japanese technology (from Sharp), and the reorganisation of operations so that a scattered group of workshops is brought under one factory roof in the Salt Lake industrial estate on Calcutta's eastern fringe. Says NICCO's Managing Director Rajive Kaul: "We have been talking to the Government for the past two years about our efforts to diversify into electronics through Webel," and he hopes to multiply the company's turnover tenfold in a year's time.

However, Sujoy Bhattacharya of the employees union sticks stoutly to his guns, pointing out that of the six joint sector subsidiaries of the electronics corporation, only one is making money. But it is clear that his opposition is essentially ideological, because he adds: "How can the Left Front, which has been demanding the nationalisation of all units whose management has been taken over by the Government, now do an about-turn and hand over a public sector unit to private sector control?"

The state Power Department's efforts to set up a new joint sector power generating agency have similarly failed to meet with the approval of the Left Front's CPI(M) bosses. A state government official explains: "We need funds desperately for completing the second 680 mw stage of the super-thermal power plant, because we have got only Rs 350 crore for the seventh plan when the project cost is Rs 600 crore." The IDBI has agreed to finance the remainder provided the Government sets up a new company, preferably in the joint sector, but the Government has so far not responded. In fact the IDBI has even relented recently and agreed to finance a wholly state government-owned corporation, but there is no response to this proposal either.

The virtues of this dog in the manger attitude are hard to find. Last year, for instance, the state electricity board managed to increase its power generation by just 1 per cent even though an additional 210 mw units went on stream. In contrast, the private sector Calcutta Electricity Supply Corporation increased its generation by 15 per cent during the same period. Some state power department officials have argued that in the light of this record, a new power agency headed by professional managers with private sector backgrounds would be able to deliver better results. But the problem with this approach, however, seems to be that the cat would no longer be red.

Does your tubelight wink at you?

Elektron doesn't – because it means business.
At the flick of a switch, an Elektron tubelight lights up at once. No flickering, no winking.

When a tubelight flickers, it usually means that the arc inside a tubelight has either not stabilised or is contaminated. In an Elektron tubelight the raw materials that go into its making are minutely checked and inspected to avoid such an eventuality. Also, we impose strict quality control at every stage of manufacture – with steps taken to eliminate any defect – however insignificant.

All of this adds up to make the best tubelight there is: Elektron.

And that's a fact you really can't wink at.

Introducing Televisions from ORSON

BLACK AND WHITE TELEVISION

COLOUR TELEVISION

SONY TV - 201 ID 51 cm. MONOCHROME TELEVISION

- Built-in AVR (Automatic Voltage Regulator)
- Earphone socket
- Convenient sliding controls.
- Contemporary styling with rich wooden cabinet.
- Superb picture quality with sharp & bright images.
- Long life due to highly reliable tropicalised components which undergo the strictest quality inspections.

A spectacular success story
Today in India, Sony Black & White Television and Stereo Music Systems are manufactured at Orson's factory in Bombay — opening new vistas in home entertainment. And Sony have chosen Orson on the basis of technical competence and service strength — both truly of international standards.

Three colour televisions
Now Orson proudly offer three state of the art colour televisions of superior quality and contemporary styling. Televisions manufactured at one of India's most modern factories, equipped with sophisticated soldering machines and instrumented assembly lines, all housed in an airconditioned dust-free environment. And rigorous tests ensure uniform quality — all this, backed by effective after-sales-service, whenever you need it.

"Linytron" circuit with space-age high performance chassis
Equipped with improved IC chips and low-noise FET, the "Linytron" High Performance chassis offers higher sensitivity, fidelity and ultra-stability when voltage fluctuates. The result is brighter and sharper colour picture quality anytime, while fewer components mean extended reliability.

Other features
- **Auto search tuning system**
- **Quick start picture and sound.**
- **Built-in AFT (Automatic Fine Tuning), ADC (Automatic Degaussing Circuit) and AGC (Automatic Gain Control) for stable reception.**
- **Stylish cabinet designs with elegant woodgrain finish.**

Ask your nearest Orson dealer to give you a demonstration of Orson Colour Television — models ranging from standard colour models to sophisticated remote control master-pieces. All this and Orson after-sales-service at your beck and call.

In Trichur: money is business

KERALA

Banking on a Boom

THE STATE finance minister frets and fumes, bankers curse, the Reserve Bank worries and the State Government plans a crackdown. The focus of all this attention is Kerala's latest money mushroom: private finance companies which charge such sharp interest rates that they are known in local parlance as "blade companies".

In the cutthroat business of instant finance, these companies have certainly flourished. Calicut University economist B.A. Prakash estimates that in Trichur alone some 1,500 finance companies have amassed deposits totalling a stupendous Rs 100 crore. And the state convenor of the Small Financiers Federation, V.V. Augustine, reckons that statewise deposits range between Rs 1,000 crore and Rs 1,500 crore.

A boom it certainly is—but there seems to be a lot more to it than meets the eye. As Finance Minister K.M. Mani said: "These companies do not have a safe footing nor sound background nor principles." While it would be less than fair to imply that all those engaged in private finance are of dubious reputation or use less than honest methods, there's no doubt that many of the get-rich-quick stories that abound in a state flush with remittances and savings from the Gulf money boom from across the Arabian Sea are rooted in these so-called blade companies.

The core of the boom is the rates of interest offered and charged. While there are genuine loan companies, others obtain money from depositors in the form of loans for which promissory notes are issued. On paper an interest rate of 9 per cent is paid, but with some companies an extra 20 to 22 per cent is alleged to change hands under the table. This takes interest earnings to over three times the 10 per cent on bank deposits, which explains why lakhs of depositors head for their offices. Says K.R. Nair, a retired government official who has sunk over Rs one lakh in one company: "I know it is highly risky to put my life's savings in these companies. But the greed in every man for better returns tempts him to invest."

"Due to the Reserve Bank credit squeeze, traders found they could not get loans from banks while private financiers advanced lakhs over a promissory note."

M.O.JOHN
president, Kerala Small Financiers' Association

Even so, higher interest rates are only half the story. Some of these companies borrow high and lend higher. Businessmen affirm that they borrow at 36 to 48 per cent, though the promissory notes issued may well show only 12 per cent. What is remarkable is the money has takers—with some reason. Explains M.O. John, rice merchant and president of the Kerala Small Financiers' Association: "The Reserve Bank credit squeeze in the last couple of years was one of the major reasons for the blade company boom in Trichur. Traders found that they could not get a loan from a bank without influence, while private financiers advanced lakhs just over a promissory note." The Trichur example could be applied to the entire state, leading naturally, to the fact that the number of finance companies and unregistered financiers has spiralled to about 15,000 today. Arguing that the business he represents is neither to be scoffed at nor dubious, Sajan Varghese of Oriental Finance and Investment Company says: "People are not fools to invest their money with us. I hardly know any of my depositors but they seem to have tremendous faith in my company because they know their investments are safe."

If the depositors are happy, there are plenty of others who are upset. Congress(I) MLA Thachadi Prabhakaran, who is president of the Kerala State Cooperative Bank, paints a dark picture indeed when he claims that "the blade companies have sounded the death-knell of the cooperative banks in the state. Our deposit mobilisation is far below expectation owing to the more attractive interest offered by these agencies."

Harihara Iyer, chairman of Dhanalakshmi Bank, a scheduled bank, echoes these fears. "The Reserve Bank of India (RBI) and the Government should do something about these mushrooming companies because they are eating into our deposits," he points out. But there is little the RBI can do, limited as it is by its own stipulations. As one official ex-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

plained, "Only limited private financing companies come under the purview of the Banking Regulation Act, 1949, and since these companies are partnership firms, the Reserve Bank has no control over them." And though the rules specifically restrain any firm, individual, or groups of individuals from using the words 'bank', 'banking', or 'banking company' for the purpose of carrying on business, they still cannot do anything about financing agencies proclaiming themselves bankers or investors. As another RBI official says, "We cannot do anything about semantic quibbles."

While Finance Minister Mani leaves sufficient room for doubt regarding these finance companies when he says that "commercial banks in the country would be able to meet the genuine credit requirements of the business sector and therefore how far these finance companies are legitimate is anybody's guess", he is nevertheless quite wary of writing them all off. "It does not necessarily follow that they are actually indulging in fraud," he reasons.

But critics of the loan companies carp that they generate black money, break banking laws, and at times, leave their depositors high and dry. Some of them are alleged to pocket the 16 to 26 per cent difference between what they pay their depositors and what they charge their lenders, obviously without declaring the amounts to tax officials. It is not easy, either, to comprehend the actual turnover of these companies. Charges a senior official of the RBI in Trivandrum: "By managing two ledgers of the same account, the private financiers operate with scant respect for banking laws and in the process manage to generate crores in black money."

More alarming, according to banking circles, is the fact that non-resident Indians, mostly living in the Gulf, are sinking their money in these agencies. P.T. Thomas, manager of the State Bank of Travancore's Sasthamangalam branch and secretary of the Indian National Bank Officers' Congress, says: "The blade companies are wooing non-residents in a big way. Some of them even go to the Gulf, collect the funds, and deposit them in foreign banks as dollars. In gross violation of RBI rules they pay them or their relatives in India in rupees."

"I hardly know any of my depositors but they seem to have tremendous faith in my company because they know their investments are safe."

SAJAN VARGHESE
owner, Oriental Finance and Investment Co.

Not all financiers, however, have the same degree of credibility and instances are legion of operators disappearing with large sums of money. While the Kerala Police have made just the occasional arrest, Home Minister Vayalar Ravi feels that it is difficult to sort the wheat from the chaff, since most financiers stay ahead of the law. Still, the Government has lined up an amendment to the Kerala Money-lenders' Act in an attempt to regulate individuals, firms and non-incorporated associations that accept deposits, restricting the number of deposits to 250. Within two years of notification of the Act, the agencies will be required to readjust the accounts and repay the excess deposits. But Kannam Rajendran, a CPI MLA spearheading the movement against these financiers, holds that "it remains to be seen how the blade companies will return the deposits they have invested in real estate, plantations, and speculative business."

The proposed amendments appear to have shaken private financiers in Trichur, coming as they do in the wake of the extensive raids by income-tax authorities following the controversial Elite International Hotel deal of P.N. Shankaranarayan (INDIA TODAY, January 15, 1984). Shankaranarayan's disclosures referred to cash received from and paid to various private finance companies, apparently leading to the closure of several companies. He later formed a borrowers' association and allegedly refused to pay interest on loans taken. Private finance companies, unable to go to court, were forced to cut interest rates on deposits in Trichur. A director of a dozen private finance companies admitted that in the coming months they would probably be able to offer only 20 per cent on deposits because, he feared, there may be no takers at lending rates of 36 per cent.

Yet the fact remains that government servants, teachers, and businessmen continue to flock to these financiers—reflecting an attitude that will take some beating down. And though Industries Secretary Arun Kumar is determined to plug the loopholes, he confesses that the lacunae in the law keep many of them afloat. "We are alerting the people of the legal implications through newspaper advertisements," he points out lamely.

So the private financiers may yet have the last laugh. As Roy Mathew, one of the best-known names in the business, puts it: "We have been in this business since our grandfather's time. No government can successfully implement a law to stop money-lending because it is centuries old." And in this case, old has certainly been minting gold.

ADVERTISING

Sudden Exit

IRONIES in the advertising business strike hard and often. Eighteen months ago when Tara Sinha was appointed president and chief executive of India's second-largest advertising agency, Clarion Advertising Services (billings for 1984-85: Rs 22 crore), she was regarded as the new Cinderella whose magic wand would propel the company to pastures new. Last month, the same board of Clarion directors who since 1979 had been persuading Sinha to leave her prestigious job with the Coca-Cola Corporation in the United States and take over Clarion in India, summarily terminated her services. Reason: she turned down the board's repeated requests to relinquish her appointed rank and become managing director, an apparent elevation which nevertheless would cut substantially into her perquisites, namely residential accommodation, as they would come within the purview of the limits laid down by the Government for board-level appointments.

Sinha's sacking came after a long passage of bitter and acrimonious wrangling. Her claim was that the board, by pressurising her to become managing director, was reneging on the terms and conditions ratified in her five-year contract as president and chief executive of Clarion. The board's charges against Sinha were more serious: in a letter dated October 22, 1984, the Chairman of the board S.N. Banerjee accused her of preferring the status of employee of the company rather than its director for "monetary considerations", and rejected her proposal that the company advance a loan of Rs 5 lakh to rent her brother's house in Delhi as her official residence and undertake repairs and extensions. The board claimed that suitable alternative accommodation could be found; Sinha said it could not, as the monthly Rs 10,000 allowance the company offered her for housing would be eaten up by taxes.

The further irony about Sinha's peremptory dismissal was that even as the squalid dispute over suitable accommodation was about to break out, she had tentatively accepted the post of managing director; she found the proposed job unacceptable only when she learnt of the supersession of "the previous commitments by the company" the managing directorship would entail.

While both members of the Clarion board and Tara Sinha went into purdah last fortnight following her stormy exit, their supporters were busy spilling the beans, with senior company officials leaking the confidential correspondence between the two. And the fiercely competitive and high profile advertising trade was agog with rumours that Sinha had left to start her own advertising agency, taking with her several important Clarion accounts. What on the surface appeared to be a quarrel over terms between Sinha and a board made up of lofty-minded elders (film maker Satyajit Ray is a member though he hasn't attended a board meeting in years) turns out to be a struggle for control of the company's fortunes.

While the Clarion board found Tara Sinha's financial demands difficult to meet, they are hard pressed to justify her sacking on professional grounds.

By all accounts, the 53-year-old Sinha is a formidable manager, her cool exterior containing aggressive salesmanship and wide-ranging experience in the field of advertising and marketing of 30 years. Like board chairman Banerjee, she was one of Clarion's founder directors back in Calcutta in the 1950s, and only left in 1973 when she was invited to join the external sales division of Coca-Cola in Atlanta, Georgia. Her protagonists in the agency claim that she returned for two reasons: sentiment for a company she had helped found and a desire to get back into the mainstream of Indian advertising.

Sailing back into the Clarion fold in October 1983, she briskly began to steer the company on a course of major reorganisation and expansion, stirring up its stagnant waters along the way. Last year, Clarion's Calcutta-based vice-chairman Subroto Sengupta and its Bombay chief of operations Christopher Passanah left in a huff (INDIA TODAY, September 30, 1984) and Sinha set about making aggressive bids to grab new accounts and raid number one rival Hindustan Thomson Associates (HTA) for key personnel. The number of senior creative directors went up from two to eight (four came from HTA) and she also bagged HTA's media director Paul Nayyar. The company's billings rose from Rs 17.65 crore in 1982-83 to the present Rs 22 crore, a cumulative increase of over 23 per cent.

The key new clients the agency acquired under her stewardship included Indian Shaving Products (the Gillette-Poddar collaboration), Modern Homecare Products (Johnson Wax-Modi collaboration), Wimpy, the Festival of India, three products by Reckitt Colman and several by Richardson Hindustan. Sinha's crowning achievement was that she lost not a single account and, in fact, stemmed the agency from bleeding. The major Food Specialities (Nestle products) account which Clarion had for long handled had been lost just before her arrival; she not only managed to retrieve it by acquiring new Maggi products but also obtained the new Nestle coffee brand called Master Roast.

Significantly, while the Clarion board found her financial demands difficult to meet, they are hard pressed to justify her sacking on professional grounds; in fact, her proposed elevation as managing director was ostensibly designed to increase her executive authority. "It was an impossible situation," admits a Bombay-based executive of Clarion, "she wanted all the privileges of a non-director with all the authority of absolute boss." Sinha's followers admit that she was not ashamed to demand her pound of flesh—she had fought for, and received, the one per cent commission on company profits permitted under Company Law Board rules—for a job she was good at.

Last fortnight, however, she was said to be holding out for a settlement, failing which she could sue the company for breach of contract. But it was clear to all that Clarion's loss could well be Sinha's gain, especially if she succeeded in walking off with chunks of the agency's best business.

INFLATION in wholesale prices has accelerated sharply last fortnight following the hikes in petroleum prices in the budget; consumer prices have so far held steady. Money supply and bank credit to firms have been sluggish. Foreign exchange reserves declined and the trade gap widened last month. The share market continues to boom but the bullion market was stable.

ALL DATA are seasonally adjusted. The current trend is completed on the basis of the past six months data to which a regression is fitted.

Wholesale Price Index

1970-71 = 100

Current Trend
5.8% p.a.

Wholesale prices surged upwards nearly 2 per cent after weeks of relative stability due to sharp increases in the prices of fuel and power.

Consumer Price Index

1960 = 100

Current Trend
6.7% p.a.

The consumer price index held steady, registering a 0.3 per cent increase in February, about half the trend rate.

Commercial Bank Credit

Rs Crores

Current Trend
14.0% p.a.

Commercial bank credit was up 0.7 per cent last fortnight speeding up marginally in comparison with the the long term trend.

Money Supply M3

Rs Crores

Current Trend
19.2% p.a.

Money supply recorded little change over last fortnight decelerating sharply over the previous week.

Foreign Trade of India

Rs Crores

Current Trend
4.8% p.a. Exports
4.3% p.a. Imports

The trade gap widened by about Rs 50 crore last month while both imports and exports maintained the trend growth rate.

Foreign Exchange Reserve

Rs Crores

Current Trend
10.1% p.a.

Foreign exchange reserves declined by half per cent last month leading to a deceleration in the long term trend rate of growth.

Share Price Index

1970-71 = 100

Current Trend
37.5% p.a.

Optimism in transport equipment and tea plantation securities drove share prices a booming 4.8 per cent last fortnight.

Closing Gold Prices

Rs per 10 gms

Current Trend
12.4% p.a.

Gold prices dipped last week and came up again, in the process recording no net change over the last fortnight.

THE MARKETS

Holding Firm

THERE is no silver lining without a cloud. The market is still in a bullish mood but doubts are creeping in. The recent steady rise—the index is up by more than 10 per cent since the budget—may be too much of a good thing and there are many people who feel it may not last. Those with long memories say that the first four months of 1977 had also seen a similar aggressive bull phase but it was followed by a precipitous slide which wiped out in as many months every gain totted up.

Is history about to repeat itself? Almost certainly not, if you can be certain about anything in the share market. The conditions today are entirely different. The tax cuts in the budget are not a flash in the pan and more cuts are on the way. Businessmen are happy with the new regime which seems quite sincere about rolling back the control and permit raj and leave things reasonably free for private industry to operate in. But the important part is that there is much more money about than was the case eight years ago. And because of the abolition of estate duty and heavy reduction in wealth tax, a great deal of black money is about to surface and find its way into the legitimate market.

Chart by B.K. SHARMA

Corporate reports have been more or less according to expectations, with quite a few bonus issues thrown in. More are on the cards, Century Spinning being one. The share picked up substantially in the last couple of weeks, but it was not the only one. Among the quantum jump scrips are Chloride India, Hindustan Lever, Cyanamid, DCM, of course, but in this case the reasons are different, Indian Hotels, Indrol, Ion Exchange, Mather & Platt and Sandoz. They have probably just moved up with the tide and may sink when the tide is out, but it could also be something else. When the whole of the market is on the boil as it has been for the last few weeks, it pays to keep an eye on those scrips which seems to be more active than the others.

The current buoyancy is likely to be helped by the new seventh plan which, all said and done, is no different from the previous plans. But the proposed outlay of Rs 180,000 crore is a bullish factor even when it is cut back by about 10 per cent or so, as it might be. There are of course the usual fears about inflation —some crystal gazers say that we are in for a 15 per cent price hike before the year is out—but inflation is not a bad thing provided it doesn't get out of hand. When it does get out of hand, consumer goods companies are a better hedge against inflation than those making capital plant and equipment. Hindustan Lever and Food Specialities rather than Guest Keen Williams. But inflation is still a long way off and it never pays to worry about such things when the bulls are still firmly in control.

KISHORE KUMAR

The Last Encore

THE PARADOXES are infinite. The man cannot read a word of music yet last year recorded over 300 songs. He is middle-aged, frizzy-haired and looks like a paan-chewing babu but has been through four stormy marriages to outstandingly beautiful film stars. He is the most sought-after artiste in the film industry, and also the most reclusive. He is a gifted comedian yet he prefers to spend his spare time watching horror movies.

Last month, Kishore Kumar, the pasha of playback singing and movieland's most eccentric inhabitant, came up with the biggest paradox of them all — announcing his retirement when he is poised at the peak of his astonishing career. The announcement, as is the case with most things the man does, was greeted first with scornful scepticism and then with mounting disbelief. "The man cannot quit. How can he when he is in the high noon of his career?" queries a dazed Rahul Dev Burman, the country's top music director. Snap comes the answering retort: "The sun cannot get more vertical after that, can it?"

As a swan song, it is typically Kishore. At 56, with two heart attacks, four tempestuous marriages and an unending string of playback hits (with a reported fee of Rs 35,000 for a three-and-a-half minute film song), the man with the golden voice has finally taken the decision to call it quits and return to his roots—his little-known hometown of Khandwa in Madhya Pradesh.

His sudden exit leaves a yawning void. Even on the wrong side of 50, Kishore is undoubtedly the king, the astonishing range and clarity of his voice undiminished. The number of songs he recorded last year constituted nearly three-fifths of all the 500-odd songs grafted onto the sound-tracks of the 153 feature films made in 1984. That alone leaves him head and shoulders above any of the contemporary crop of male playback singers like Nitin Mukesh, Manhar Udhas, Sabbir Kumar and Mohammed Aziz. In fact, if his heart attack in 1982 and his celebrated moods had not slowed him down, Kishore would still be recording five songs a day as he used to.

Photographs by SADANAND

Yet, it is the singer not the song that has created the legend. His capacity to "turn voice into invoice" as one film producer says unkindly is best symbolised by the framed slogan that features prominently in his drawing-room. It reads: "I want money". Although a millionaire, Kishore's reluctance to pay taxes is a byword in income tax circles. His palatial and heavily-guarded bungalow at Juhu has been the target of innumerable raids and the singer currently has tax arrears of Rs 17 lakh. In one such raid in 1982, determined taxmen attacked the walls of his house with crowbars and metal detectors. Says son Amit Kumar, himself a playback singer of repute: "It's a hard job to bind my father down to anything—rules, regulations, relations."

But in his own zany, unconventional way, Kishore revolutionised playback singing in Indian films. His singing style marked a dramatic departure from the established, ritualistic sameness of film music. Says Kalyanji, the senior partner of the famed Kalyanji-Anandji music director duo: "Before Kishore, the songs used to be pretty but they'd hang out of the script and stay there like some external adornment. It is Kishore who made us aware of the possibility of integrating the song to the script and to the general tone of the entire film." For the film *Don*, Kishore stuffed a paan into his mouth to sing the hit, *Khaike paan Banaraswala*. Bappi Lahiri, the leading music director, recalls that when he sang for the title track of the 1984 release, *Sharabi*, Kishore deliberately embellished the song with a "subtle, tipsy slur".

For the last 20 years, that voice has

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ranged over such diverse films like *Guide*, *Amar Prem*, *Hare Rama Hare Krishna* to the more recent releases like *Tohfa*, *Himmatwala* and *Maqsad* and his latest song for the G.P. Sippy film, *Saagar*, thus establishing him as an indispensable pillar of the entertainment industry. Says Arun Amin of Music India: "It's amazing how Kishore has survived the changing fashions—classical, folk, Negro, Punjabi, rock and roll, disco. He has changed colours like a chameleon slithering through a variety of foliage." Adds Kishore's brother and veteran actor Ashok Kumar: "For many years now, Kishore has sung the most frequently hummed tunes of the country. That is because of the arrow-like accuracy of his voice and the clarity of his expression which is a by-product of his mature ability to act."

Kishore began his career as a singer-actor back in 1951 but it did not take the industry long to realise his true potential —that of a talented mimic, something his lawyer father had realised much earlier. As a child, Kishore used to entertain his father's guests by imitating the late K.L. Saigal. As a child, he also displayed his other 'magnificent' obsession—money. He charged his father one rupee for each mimicry session.

From mimicry to playing the comedian was a short and inevitable step. But it was not till two decades later that he managed to find his true niche, as a playback singer. His breakthrough came with *Aradhana*, the 1969 hit, where the folksy and catchy tunes of S.D. Burman and Kishore's superbly controlled voice blended to create box-office history. The theme song, *Roop tera mastana*, was sung with an erotic edge new to Indian film music but perfectly in setting with the romantic theme of the script and a new singing star was born. Says Rajesh Khanna, the hero of the film: "I feel that if I were a singer, I'd have sung the song exactly like he did, with the same timbre, the same dramatic modulation."

But it was really the Tamil producer-director M.V. Raman who first saw in the dark Bengali boy, the touch of genius. That was in the '50s when Kishore was singing for Raman's film, *Bahar*. Raman was impressed with Kishore's slightly eccentric way of singing. Says Kishore: "Raman liked that funny streak in my personality and my capacity to execute madness artistically." Raman cast him in his next venture, *Ladki* and the spate of films that followed firmly established Kishore as the industry's top comedian hero.

In 1958, Kishore produced and starred in *Chalti Ka Naam Gadi*, as he says, to "balance out" the unexpected profits from his earlier Bengali hit film, *Lokuchuri*. *Chalti* ran for 25 weeks and in one year, seven films with Kishore in the lead role had scored jubilee runs, a record unsurpassed by any comedian so far.

Chalti was another milestone in his life. It was on the *Chalti* sets that he met Madhubala, the famous screen siren. Kishore had barely obtained his divorce from his first wife, Ruma. Kishore was smitten with Madhubala and the outcome was inevitable—marriage. But unknown to Kishore, his lovely bride had a perforated heart and she was soon bed-ridden. As

INTERVIEW

"Show-biz doesn't suit me"

KISHORE Kumar's high-walled, tree-lined bungalow near Bombay's Juhu beach is as well-recognised a landmark as the beach itself. Its security is impressive: no visitor is allowed until the sentry at the gate has obtained his master's permission through a red intercom whose parallel lines abound in all the lavishly—if not garishly—upholstered rooms of the building. Even after being cleared at the gate, entry into the drawing-room is regulated by a retinue of nine domestic hands. It is impossible to relax in that room: the cushions on the sofa are too thick; the cuckoo clock on the wall is too shrill; and a picture-card mounted on a frame menacingly reads—I want money.

"That's meant for producers": the bespectacled singing wizard, clad in a printed lungi-kurta, says before settling down for an interview with INDIA TODAY *Principal Correspondent* SUMIT MITRA. *Excerpts:*

Q. ***Which of the following are you first—director, actor, singer?***

A. Actor. I am an actor who sings off screen for another actor. That is what playback singing is all about. Songs should follow the state of mind of the actor on screen. It can be grammatically perfect, you know, with all those embellishments that the *ustads* are good at, only if you're singing for a film on, say, the life of Tansen.

Q. ***But if you're constantly acting as a singer don't you think that you run the risk of losing a consistent singing style?***

A. Who cares for singing style in films really. K.L. Saigal had the best style, but today's audiences will not accept the unreality of a ceremonial piece of music every now and then. We playback singers develop a lot of vanity. We tend to think of ourselves as singers independent of the script.

Q. ***Aren't you handicapped by not being a trained musician?***

A. Very little. I have a good memory, and that helps. When that fails there is always a tape-recorder to fall back on. In the early days I used to rely on a personal system of notations where the letters on high notes kept rising above the line. But that really called for extra long sheets. But you don't need notations in Indian music really. You need them when you're using harmony.

Q. ***Is it not abhorrent that songs should be an integral part of Indian commercial cinema even though we Indians are not a particularly musical people?***

A. Who am I to object to songs? It is my livelihood. But its responsibility lies with the film makers who, after 50 years of sound film, have not been able to give cinema an identity of its own. If you ask the directors the same question, they'll put the blame on the audience. But the film-goers have been conditioned to expect a boy and a girl to burst into song when they meet. When a man and a woman roll over each other on velvet grass in Kashmir valley, you expect them to make love—not sing in the voices of Kishore Kumar and Lata Mangeshkar.

BHAWAN SINGH

"The tax raids, the complicated laws and by-laws, the hassles—they all make popularity a punishable offence."

Q. ***People here talk of your aloofness towards other singers—like the late Mohammed Rafi, and Lata Mangeshkar.***

A. That is utterly baseless. I had great regard for Rafi, a singer of a rare calibre. Lata is the goddess of singing; she fully knows about my admiration for her. I think what is more frequently criticised is not my attitude to colleagues but my attitude to singing for films. Playback singing is fun and good money. But it's no big art really; only the film and record people glorify it with all those gold and silver discs given to singers. I wish I could take all of them to the goldsmith and draw the metal out.

Q. ***Are you really quitting?***

A. Good question. But yes. Absolutely yes.

Q. ***What do you think of the next line of playback singers?***

A. Mostly imitators of their more successful predecessors. Nitin Mukesh and Manhar are the poor man's Mukesh. Sabbir Kumar and Anwar are the poor man's Rafi. Bhupinder, Suresh Wadkar—they have styles of their own but are yet to be accepted.

Q. ***Why are you quitting films?***

A. I am 56. I had a heart attack three years ago. And I need rest. I don't want to retire after people have begun wondering whether I'm still there. And show business doesn't suit me any longer. Look at the prohibitive taxes for those who are really successful. The tax raids, the complicated laws and by-laws, the hassles—they all make popularity a punishable offence.

Q. ***So that's the reason?***

A. One of them. Actually I'm tired of this life in Bombay. I just want to start over again at my old place, in the company of all those little people whom I grew up with. If I sing, I want to do it for myself.

Q. ***Has Indian playback singing any future?***

A. Commercially, yes. Artistically, no. You don't expect music to be brilliant when the films are so bad. Actually the B-movies that are doing good business now cater to an audience which wants a lot of noise to fill the soundtrack...and a lot of feminine flesh to fill the optical track. Jeetendra, Sridevi...what kind of film and what kind of music do you expect with these ingredients? The industry is full of shopkeepers who're out to make money—not art.

Q. ***Who is the best music director you worked with?***

A. S.D. Burman. I owe everything to him.

Q. ***And the worst?***

A. I'll tell you after I reach Khandwa (his hometown where he wants to retire).

Q. ***One last question. Are you happily married?***

A. Yes...at last. But (with a wry grin) that's what I've always said.

The *Chalti* trio and their families celebrate the film's success

her health sunk so did Kishore's career graph. "I was distracted. My rating as an actor dropped and I was invited to act only in B movies," he recalls. But there was, in the tragedy, an unexpected bonus. Forced to concentrate on something that didn't take up all his time, Kishore took to playback singing. The rest, as they say, is history.

It took him nine years to get over Madhubala's death in 1969 but he did it in his own inimitable style. One day in 1977, he called up Yogita Bali, then the current pin-up girl, and proposed to her on the telephone. He had known her for just two months and she was 26 years his junior. The marriage lasted less than a year. One fine morning she left the house saying she was going to visit her mother. She never returned. The gossip rags had a field day and Kishore went through a tortuous divorce settlement before zooming in on actress Leena Chandravarkar whom he married in 1981.

Lata, R.D. Burman, Kishore and Asha: odd man out

His eccentricity arouses mixed feelings in the industry. R.D Burman says that Kishore's is a split personality, on the one hand a slightly mad joker and on the other, a hard, practical man, a superb professional, who will do anything to extract the best price for his talents. Others like producer Manmohan Desai have sworn never to have anything to do with the man. "The man can really get petty. He has only money on his mind." Adds singer Asha Bhosale: "I have met him frequently but I always wonder how little I know him. He lives in a world of his own."

That is quite literally true. Gouri Kunj, Kishore's all-marble palatial house in Juhu, resembles the fabled Xanadu. Entry is strictly by appointment and that too after the sentry at the gate has confirmed the visitor's bona fides with his master over the intercom. Even then, visitors go through at least seven other domestics before meeting the master.

He is obviously a difficult man to work for. Secretaries have left him in droves with the result that Amit, his son from his first marriage, manages his father's affairs. The three brothers, Ashok, Kishore and Anup, who formed the rumbustious comic trio in *Chalti*, meet occasionally but Kishore is essentially an intensely private person who prefers to avoid family gatherings or glittering film parties.

When not recording at the studio, Kishore, with wife Leena and son Sumeet, three, sits at home watching a horror film from one of the 3,000 video cassettes in his collection. When Leena and the sons are out Kishore walks in the garden and talks to the chinar trees. His favourite is called Hari-Niranjan, a 30-foot specimen who, says Kishore, "knows all the secrets of my money and my loves".

Kishore's latest escapade, to his roots at Khandwa where he plans to "spend all afternoon swinging in a hammock under a mango tree", when he still has years to go as a money-spinner, is inexplicable. Evidently, despite the continuing promise of musical monopoly, Kishore, like all successful people in show business, is afraid of the pitfalls of the glamour trade, its hidden pockets of quicksand. "I'm going gold today," he says, "but what happens if I go lead tomorrow?" But then, that has always been his most famous personal hallmark; to quit when he is ahead rather than fade out as an ageing and loony lothario.

INDO-PAK RELATIONS

A New Resolve

"YOU ARE fortunate to have found such a dynamic, young, forward-looking prime minister at a critical juncture in your history," observed Pakistan's effable foreign minister, Sahabzada Yakub Khan in the course of an exclusive discussion at the Pakistan Embassy in New Delhi on April 20. "He gave the distinct impression that he is genuinely interested to improve India-Pakistan relations to a point where we can work together on bilateral as well as multilateral issues. Prime Minister Rajiv Gandhi will find us fully responsive to any initiative he may take to rebuild the relationship."

Most of what Yakub Khan told INDIA TODAY was off the record. In the third year of his foreign ministership, Yakub Khan is a mature diplomat, a disarming mix of cordiality and caution. However, Yakub Khan is now an "elected" member of General Zia's recently inaugurated "representative" regime. Last year, there were rumours in the corridors of the US State Department that Sahabzada Yakub Khan "may not last long" as Pakistan's foreign minister. It is good for Pakistan and India that he continues to be foreign minister perhaps with more authority than before to conduct Pakistan's relations with her neighbour India and other foreign countries.

SANDEEP SHANKAR

Rajiv receives Yakub Khan in Delhi

At the meetings of the NAM coordinating group in New Delhi, Yakub Khan's statements were no less positive about ostracising South Africa from the civilised community and extending all possible help to SWAPO in its 20-year-old struggle for Namibia's independence than the articulations made by Indian spokesmen. Yakub Khan pointed out that on a fairly large number of international issues, Pakistan and India did work together at the UN and NAM. Palestine, the concept of a zone of peace in the Indian Ocean and Namibia, for instance. When one comes to think of it, the mass media in neither country ever mention these issues. What they do highlight, however, are the issues that divide India and Pakistan. Afghanistan and Kampuchea, for instance.

Yakub Khan's 45-minute meeting with Prime Minister Rajiv Gandhi was taken up mostly with Afghanistan and bilateral relations between Pakistan and India. Yakub Khan followed up these two issues in his longer talks with chairman G. Parthasarathi and Khursheed Alam, minister of state. Yakub Khan did get the impression that the Indian prime minister was in search of a comprehensive regional policy his government could pursue with coherence and consistence over the next five years.

For the present, however, the two countries' approach to improving relations, which is a shared objective, remains different. India appears to attach more importance to "ground issues" like trade and commerce, freer human movements, freer flow of information, knowledge and ideas. Pakistan doesn't object to this style. It has, in fact, offered a number of confidence-building proposals, such as conclusion of an anti-terrorist treaty which would include immediate mutual extradition of hijackers, and consultations among commanders of border regions on issues like extremists of either country escaping to "sanctuaries" in the other. None of these proposals has India rejected or accepted for discussion. What Pakistan wants is that alongside these "ground" issues, political talks should also continue with greater earnest because the two reinforce each other. India has no objection to this style, but no great enthusiasm either. So when the political talks will be resumed would be determined by the two foreign secretaries when they get together at Thimpu, capital of Bhutan, in May for the SARC foreign ministers' meeting.

It is interesting that Rajiv Gandhi should borrow from the Chinese inventory of diplomatic vocabulary the concept of "step-by-step" while thinking of improving relations with Pakistan. The Chinese will probably pace up their "step-by-step" tactics to some kind of a long jump in the near future in normalising relations with the USSR. The India-Pakistan amity engine can at best be expected to take a frog leap forward.

It has been heard in the corridors of South Block that in May last year, the two countries had "virtually" resolved their differences on the two obstacles to a treaty, namely, bilateralism and bases. Indian officials have claimed that the final drafting of the clause pertaining to the bases was left to the Pakistan foreign office together with an unqualified gesture of trust: "Whatever draft you send us, we'll accept it." Pakistani sources, however, have a different story to tell. They concede that the issues in dispute were thoroughly discussed and the areas of differences substantially narrowed down. But points of difference still remained, which Pakistan hoped would be removed at the next round of talks in Delhi. That round was "indefinitely postponed" by India.

On Afghanistan, the Pakistan Government, on mature thinking, has determined that what Mikhail Gorbachov told General Zia at their 55-minute meeting in the Kremlin was "not a threat", but an expression of concern at reports that the US might obtain Pakistan's cooperation in escalating the level of fighting in Afghanistan. The Pakistan Government is not likely to agree to any such American move. With partial revival of political life in Pakistan, new public attitudes may soon shape up towards the country's involvement in the Afghanistan issue. In Pakistan's perception, the Soviet stand has hardened since 1983, but UN sources have told Islamabad that Moscow seriously wants the next round of "proximity talks" to make progress. The Pakistan foreign office and the new cabinet will have to work out a positive strategy for the next round which will be held in May or June. In New Delhi, Yakub Khan and his Afghan counterpart crossed each other's shadows several times but did not even say hello to one another. Proximity hasn't reached the stage of even a handshake as yet, not at any rate on the soil of New Delhi.

Some days are so hot, you get running warm water without switching on the geyser.

That's the kind of heat only Amtrex can handle.

Amtrex is specially designed to handle temperatures as high as 45°C. It cools effectively even in peak summer — when all other machines struggle to cope.

Most air conditioners work well when it isn't too hot — but they can't handle more than 40°C. When temperatures rise above 40°C, you need a machine with greater cooling capacity.

Extra cooling power

At very high temperatures, Amtrex keeps you really cool. In Delhi, for instance, Amtrex survives peak summer without the help of water. In cooler cities like Bombay, the extra capacity of Amtrex makes it the most effective. Even on the hottest day of the year, even in overcrowded rooms, Bombay will never use the full cooling power of Amtrex.

This extra cooling power is generated by giant-size cooling coils, and an optimised air conditioning cycle that cools more air, faster.

Who's bought Amtrex?

Amtrex has already found its way into some of the best offices and homes in India. Gwalior Rayon Silk (Wvg.) Co. Ltd. Hoechst India Ltd. Diners Club India Pvt. Ltd. Bank of India. Ahmedabad. Orkay Polyester Ltd. Indian Merchants Chamber. Shri Dinesh Mills Ltd. Crown TV — Televisions & Components Pvt. Ltd. Alliance Francaise. Lohia Machines. Hinditron Computer Systems Pvt. Ltd. Saurashtra Paints Ltd.

HIMACHAL

We have everything a Holiday needs and one thing that you will admire..... Heart Warming Hospitality.....

THE HIMACHALI PEOPLE

A friendly happy people who are always ready to spare you a moment. Share a smile or a friendly cup of tea, hospitality comes naturally to them.....

SCENIC SPLENDOUR

Discover a lush valley, take an exhilarating walk to a hill top, breathe deeply of the clean mountain air. Crystal clear lakes, hot springs and meandering rivers are part of nature's glory.

A TREKKER'S TREAT

Whether it be a long 18 day stretch or a single day's camping trip, don't miss out on trekking, a chance to come closer to the basic joys of living.

A PILGRIM'S PARADISE

Ancient Hindu temples and Buddhist monasteries stand witness to the rich Himachali heritage and are symbols of the infinite and the eternal.

BIHAR

Tribal Trouble

THE FIRST official reaction to the brutal killing of 15—possibly more—tribals last fortnight in the village of Banjhi ensconced in the patently poverty-ridden Santhal Parganas region was, strangely, negative. But not for long. Even as Home Minister S.B. Chavan in Parliament turned down a demand for a probe into the circumstances of the incident, Bihar Chief Minister Bindeshwari Dubey flew to the troubled spot, announced a judicial inquiry, and deputed Minister of State for Welfare Thomas Hansda to camp there and restore peace.

The seemingly prompt action on the part of the chief minister was to be expected, to say the least, for in the dock were the police. This time by firing upon and killing, upon their own admission, 15 Santhals on April 19 in Banjhi village of Sahebganj district. What compounded matters was the gunning down, among them, of a one-time Jesuit priest, Anthony Murmu, 55, a former member of the Lok Sabha who earned a berth in 1977 on the Janata Party ticket.

Banjhi is a non-tribal village dominated by Bhagats (a business community) and Muslims and serves as the pulse for the approximately 25,000 Santhals who live in 20 villages surrounding it. Dependent on the *dikus* (a term used contemptuously by the Santhals for them) for their daily bread and exploited relentlessly by them, there is little love in their hearts for the 'outsiders'. But what makes last fortnight's incident horrifying is the manner in which the killings were conducted. If the accounts of the tribals are to be believed, the victims were caught and shot in cold blood, abetted by the *dikus*. Simon Marandi, a Jharkhand Mukti Morcha (JMM) MLA, recalls how Father Anthony and Madan Murmu were first locked up in the panchayat bhavan, and then transferred to a godown by the *dikus* and police. Tortured and finally shot dead, the two men were killed by the Bhagats, claims Shiboo Soren, another JMM leader.

Sahebganj Police Superintendent B.C. Pandey, however, explaining away the eruption of violence as just another manifestation of age-old mistrust existing between the locals and outsiders, maintained that the Santhals had raided Banjhi village to loot firewood from a Muslim household. And when the villagers resisted, the Santhals had apparently set off a rumour that they had been fired upon and started to fiercely beat upon their drums—a traditional signal of alarm. Very soon, a mob 10,000-odd strong had congregated, blocking the main road connecting Sahebganj with Dumka, the divisional headquarters, and then went on a rampage through Banjhi. By the time the subdivisional officer, Hari Narayan, had arrived on the scene complete with police posse, Pandey claimed the entire village was in flames. The contingent was met with a hail of arrows—compelling the police to return fire first with teargas and lathicharge, and then bullets.

K.M. KISHAN

Murmu's widow with Soren (extreme right) and Marandi to his right

While Pandey contended that Father Anthony had been instrumental in instigating the tribals in order to earn the sympathy of the JMM following his failure to secure a Congress(I) ticket, the locals' perception of the man was quite the contrary. For them, Father Anthony was a man of peace, who had renounced his priesthood in 1972 to better serve the cause through politics. Widow Bibiana Baski, 30, clutching their five-year-old son Clement to her breast, said tearfully: "He was about to join the Congress(I)." And on that fateful day, Father Anthony had allowed himself to be persuaded by the Santhals to visit Banjhi to pacify his people and allay the grievances of the *dikus* and the police. He paid with his life.

The official version implicating the Santhals in wholesale arson is hotly denied by Shatrughan Sinha, a teacher and CPI member of the state's Legislative Council. The only representative of any opposition party to visit the spot, he claims that the post office and other buildings were razed to the ground by non-tribals themselves in order to lend credence to the police story.

Trouble has, in fact, been brewing ever since the authorities had settled a big pond in the middle of Banjhi village in favour of a rich and powerful Mahajan Moti Bhagat, thus closing an avenue of livelihood by fishing for the impecunious Santhals. After some haggling, however, Bhagat permitted them use of one part of the pond, warning them specifically off the other saying poisonous snakes lurked in those waters. What actually emerged was the decomposed body of a tribal. Enraged, they attacked Bhagat's house and, according to non-tribal shopkeeper Ashok Kumar Pandey, set it on fire. Bhagat says that the next day, March 26, they would have destroyed the entire village—but were prevented from doing so only by the intervention of the police. Peace then held until April 15 when, supposedly instigated by Soren and Marandi, they destroyed a shop at Dighi and some railway property at Telo two days later. The killings of April 19 followed.

The Santhals' woes are as old as the forests that once sheltered them and their desire for revenge is slowly mounting. The judicial inquiry is set to investigate the circumstances and sequence of the police firing, and also to establish whether the incident was pre-planned. But the Santhals intend to conduct their own parallel probe. Wearing a set expression on his face, Soren revealed that he had asked for a village-by-village census to determine the exact number of Santhals killed—for a start. Like so many children of the soil, the Santhals too are an innocent and tolerant people. But once their pride is hurt and antipathy aroused, they will act. And that can breed anger and revenge.

INDIAN AIRLINES

Computer Chaos

COMPUTERS can do a great deal, as everyone knows. But few could have reckoned with the chaos that the Sperry 1100/82 fourth-generation computer would cause as the country's domestic carrier finally entered the computer age last month.

In Hyderabad one day last month, dozens of passengers landed up at the city's Begumpet Airport with confirmed tickets, only to find that none of them had any seats on the flight: the computer had overbooked. In Delhi, businessman P.Shiv Sarma could not get any information on his position in the waiting-list because, he was told, the new booking system is not designed to give passengers this information. Failing to get his wait-list ranking even at the airport on the morning of the flight, Shiv Sarma finally bought himself an executive class ticket. Back in Hyderabad, a prospective passenger could not get his seat confirmed for three days because "the computer is down". The reservations manager said he could not do anything about this because the manual booking system had been dismantled. And in Bombay, a journalist waited eight hours for a confirmed seat before finally giving up. At Amritsar, which has to communicate with Delhi by teleprinter, even a passenger who was at the top of the waiting-list had to wait for three days and yet his waiting-list number didn't change. All wait-listed passengers were asked to go and take a chance at the airport. Ultimately the plane took off with more than 20 seats empty. Since the discontinuance of the system of allotting a seat quota to different on-line stations, passengers at stations like Amritsar which have only teleprinter links to the central computer centre in Delhi are automatically put on the waiting-list.

These examples have been multiplied a hundredfold over the last month, and the letters columns in newspapers have been full of complaints provoked by the chaos resulting from a hasty and ill-prepared leap into the technology of the late twentieth century.

The excuses now come tumbling out faster than a computer print-out: the failures are not of the computer but the post and telegraph department's communications links; if the computer does go on the blink at the main reservation office in Delhi, it is because there is no stand-by generator to protect against the inevitable power cuts; there aren't enough terminals at the Bombay city booking-office so a queue builds up; the tickets are still manually written, and the staff take much too long over this so the time saved on the computer is immediately lost; and so on and on.

PRAMOD PUSHKARNA

Passenger queues at IA booking-office: wait-listed

In Bombay, an airline official complained that the city booking-office had only eleven terminals when twice that number were needed. "The average time taken to process one request is now 15 minutes, whereas the earlier manual system took only five minutes," he said. The microwave link to the main computer in Delhi has a response time of five seconds, but the parallel satellite link-up has proved inordinately slow. A second superfast microwave link is all too often inoperative, another official explained.

"There's nothing wrong with the computers, it is the post and telegraph communication lines that are acting up", says IA's Director of Operations, Captain P.N.Reddy. And installing a stand-by generator at the booking-office in Delhi is a problem because the office space has been rented from a dozen different property owners, who cannot all be persuaded about the need for a generator.

The resulting chaos is cheerfully admitted. S.K. Sengupta, IA's adviser on computers and data communications, said that last fortnight the Bombay circuit was down for half a day, Hyderabad remained cut off for one or two days, and the Bangalore line too gave some trouble. Passenger experience suggests that the breakdowns have been far more frequent, and longer lasting. But there can be no answer to why the airline did not anticipate the problems it has run into, especially since it has taken three years for the computer reservation system to be installed: the Government had cleared the project in mid-1982.

Officials working in other airlines do not buy the IA argument that all this amounts to little more than teething problems. An Air-India official said IA was unwise in introducing the system at the peak of the summer holiday rush. In fact, Air-India too initially faced similar problems with communication links. The representative of a foreign airline said IA had simply not planned properly: it should have retained its manual booking system till the new system was well established.

The IA brass is now working overtime to try and make good. New wireless links between the main P&T stations and IA's reservation centres are planned, and ticket-writing will also be mechanised. The reservation counters have been instructed to give passengers their position on the waiting list, and a new mini-reservation office is planned in Delhi with a generator back-up.

When all these will materialise, and how far they will solve the problems remain to be seen. But last fortnight, senior IA officials were putting a cheerful face. Sengupta said he was not unduly perturbed by the criticism, and insisted that any new system with such a wide network of terminals is bound to have initial problems. He also felt the system could be refined using the daily feedback on how well or badly it was functioning. But till all this happens, most passengers will wonder whether, apart from the intermittently instant information about seat availability, anything has really been achieved so far by IA's attempted take-off into computerland.

We're really pulling out the stops.

More non-stop London flights than anyone else.

Altogether we operate fourteen flights a week to London from India – that's more than any other airline. And eight of these are non-stop flights – that's also more than any other airline.

But it's not just in non-stop flying that we excel. Our service is non-stop too. Both on the ground, with our Indian Visitors Service, and in the air, with Indian stewardesses and vegetarian meals, we provide a thoroughly professional and caring service. No wonder we're the world's favourite airline.

BRITISH AIRWAYS

The world's favourite airline.

The fortune of your family is in your hands

Our engineers burned a lot of midnight oil. So that you would need to burn up less fuel. Avanti 150 cc Scooter gives you an unmatched fuel efficiency of 55 km/litre. A result of the latest automotive technology and years of engineering experience.

Because safety is so very important, Avanti's centrally mounted engine ensures perfect balance– doesn't pull you to one side. This stability is vital when you have to straighten up after taking a turn.

The widest wheelbase—1305 mm—resists skid at sharp corners.

You have power at your command—to carry loads and go up the steepest slopes.

Make sure your scooter is an Avanti. For the economy, power and safety you owe to yourself and your family.

AVANTI 150 cc Scooter, and the 50 cc Moped manufactured in technical collaboration with

AGRATI-GARELLI S.p.a., Italy.

Sold & serviced by
Expo Machinery Limited
Pragati Tower, 6th Floor, 26 Rajindra Place, New Delhi-110 008

TV COMMERCIALS

Viewing the Viewers

SUDDENLY there are so many of them: single girls coping with single boys, an overloaded family coming to grips with overloaded emotions, clean-cut officers chasing unidentified flying objects across space, and a high-life socialite talking to other socialites in a 'purr'fect accent. And the ads: before during and after, touting everything from soaps to ghee to colour TV's. By one estimate, nearly a quarter of television time is taken up by advertisement spots and over a dozen sponsored programmes which go out to a theoretical audience of 33 crore all over the country on an estimated 5 million TV sets. The trouble is no one knows who is watching what, when and why.

Over the next few weeks, the first indications of audience likes and dislikes will be pouring in from all over India as nearly half-a-dozen research and marketing agencies tinker with TV rating systems. The Marketing Research and Advisory Service Pvt Ltd (MRAS) is working with Doordarshan on a massive once-a-year survey which will cover 40 towns and reach 40,000 households. The Indian Market Research Bureau (IMRB) is tinkering with a similar probe spread over 11,500 people in the four metropolises as is Pathfinders, another Bombay-based consumer information group. Scientific Analysers of Market Information and Research (SAMIR) a company of the Reliance Textile Industries group is concentrating on Bombay for a "continuous daily audit" on TV viewership. Says Ranjit Chib of MRAS: "There's tremendous demand for this kind of survey. After all, if you're spending Rs 1.60 lakh on a two-minute spot you want to put it next to a programme which people will watch."

First off the mark is SAMIR, with weekly reports. Its system is deliberately simple: 100 households in three income groups contacted every day in Bombay. Each asked to recall, over the last 48 hours, when they switched on the TV set, and the appropriate 15-minute intervals on a data sheet ticked off. Unlike other and more sophisticated surveys, SAMIR's field operators do not ask the families which programmes they watch—the argument is that this could introduce bias.

The results, which are available to anyone for an annual fee which ranges between Rs 15,000 and Rs 25,000, confirm what everybody suspected—that sponsored and film-based programmes are the most popular. For instance SAMIR's findings for the week March 11 to March 17, 1985, show that twice as many people switched on their TV sets when it was time for *Hum Log*, *Yeh Jo Hai Zindagi*, *Khandaan* and *Ados Pados*, the durable *Chitrahaar* and the feature film than for *Sunder Maze Ghar* and *Dyandeep*. Significantly, Hindi soap and comedy serials score heavily over their English counterparts. Says SAMIR Chief Executive G. Parthasarathy: "Although the findings are no surprise, they reassure advertisers they know now that their money is going in the right places."

But SAMIR's rather simplistic methods are quantitative rather than qualitative and the other surveys will be probing much deeper and wider. IMRB whose television rating points study will be done two or three times a year and so, for Rs 15,000, is looking at both primary TV-owning households and secondary audiences (people who watch TV in other homes) and will ask about specific programmes as well as time slots aided by prompt cards. Says Project Director Katy Merchant: "The trouble with the when-did-you-switch-the-TV-on routine is that no one might be watching the set and this could lead to inflated figures for some programmes." She has a point there. SAMIR's results show that on Sunday, 97 per cent of families had their sets switched on during the Marathi news, but as it comes between two segments of the feature film, how many actually watched is debatable.

Even as researchers debate how exactly to find out whether people are really interested in how the *Khandaan* tycoon destroys his rivals, they are unanimous on one point: the mechanised methods adopted in the West, such as meters inside specially constructed sets to record timings, are too sophisticated for India. "The meter would introduce a definite bias and would be too expensive to install and maintain," says Parthasarthy. Besides, the question-and-answer method is cheaper in India with its single channel than in the West, with its multiplicity of channels.

The research agencies are sinking several lakhs each into the surveys and are reported to be breaking even before the first reports are out. MRAS claims to have already roped in about 25 clients. IMRB says it has "received a number of enquiries" but SAMIR admits that it has got only a handful. Chib feels that this is only the beginning of TV rating in India and that with the current consumer boom and the rapidly spreading reach of television, the market cannot but grow. "We will still have a long way to go in terms of people approached. In Britain the BBC survey touches a million people every year," he points out.

There is only speculation on whether the surveys will cause rescheduled or changed programmes according to public taste. One advertiser comments: "As Doordarshan goes by 'social objectives' and not what the public wants, ratings are meaningless". An indication of the TV monopoly's interest in audience research can be had from the fact that of the Rs 20 lakh budgeted for the audience research unit, Rs 17.5 lakh went on salaries. It appears that others have to do for Indian television what it cannot do for itself.

CHANDRALEKHA

Breaking the Bonds

TO RESOLVE the contradiction between traditional dance and reality has been a long, lonely and unending journey for Chandralekha, the silver-haired danseuse-feminist who has been described as the doyenne of thinkers in Indian dance. Often compared to Isadora Duncan for the total freedom of spirit in her life-style, Chandralekha gave up performing in public 14 years ago in the belief that Bharatanatyam had arrived at a dead end, saturated as it was in the dust of obsolete religion and mythology.

Last year, she returned from her self-imposed exile to present a dramatically unconventional choreography in *Primal Energy* at the East West dance encounter in Bombay. And now, she has once again burst through into brilliance with *Angika*, her latest choreographic work. Nothing like it has been seen on the Indian dance stage and for good reason. *Angika* represents a major departure from traditional dance.

Divesting classical dance of its esoteric and ornamental trappings, Chandralekha's *Angika* reinterprets dance as a balance of poetry and power in the human body. By drawing upon the collective experience of the physical traditions of martial arts, yoga and dance, Chandralekha has managed to synthesise several elements into a joyous celebration of the body. This historical, anthropological, almost anthropomorphic exploration of the tradition of body language was conceived in six startling sequences of pure magic.

The group of Bharatanatyam exponents from Rukmini Devi's Kalakshetra, young exponents of Kalaripayattu, the martial art of Kerala, and practitioners of yoga fused together to create images visually so overwhelming that a *tillana* will never seem the same to followers of Indian dance. Exulted fellow dancer Kumudini Lakhia: "In three minutes, Chandra has stripped Bharatanatyam of 500 years of hypocrisy." Last December, when *Angika* was previewed in conservative Madras, half the audience rushed backstage after the performance to discuss excitedly Chandralekha's efforts to, in her own words, "strip Bharatanatyam of all that is merely decorative, ornamental and sentimental and return to the essence of form, to reach out and re-discover the vibrant and vital language of the body".

Though in her 50s, Chandralekha's creativity seems boundless. Says her close friend, film director Hrishikesh Mukherjee: "Rarely in life does one come across such a unique personality. She has never borrowed ideas, they all spring from within her. She has the potential of being one of the finest writers in the country." Certainly, Chandralekha's accomplishments are astonishingly varied: a novella called *The Street*, a book of poems *Fire, Counter Fire*, containing her own drawings, dozens of posters and illustrations, and the choreography for *Devadasi*, *Navagraha*, *Tillana* as well as the Mayurbhanj Chhau dances in Kumar Shahani's film, *Maya*

Darpan. In collaboration with Andy Warhol, Merce Cunningham and David Tudor, she has produced a film on body culture for the Metropolitan Museum of Modern Art and has made another film on dance for the BBC. She also designed the immensely popular pavilion 'The World is my Family' for the 1969 Gandhi centenary celebrations for which she read almost every letter the Mahatma had written.

As *Angika* demonstrated, the only sign of age is her cascade of silver hair. Her face is still mobile and alive and her body unbelievably lithe. "All my life," she says, "I have been anticipating that something is about to happen, something that belonged to the realm of imagination." She has been a non-conformist from a very young age, spurning conventions of education and marriage. Today, she refuses to talk about her past or her family. "It is of no relevance today. I lead the life of an independent woman surrounded by friends."

Her introduction to dance came in the early '50s when, fresh out of law school, she met Harindranath Chattopadhyaya, the poet and writer who was then 58 years old. Recalls Chattopadhyaya: "The first time I saw this thin lovely girl with the long black hair I knew she was someone special. I could see the spark in her." From that first encounter, he "took charge of her mind" and her personal life. He introduced her to dance guru Ellappa Pillai who used to conduct the great Balasaraswati's recitals. Within a short time, Chandralekha had blossomed into one of the leading dancers of the day along with Mrinalini

Sarabhai, Shanta Rao, Kamala Laxman and Vyjayanthimala.

Her personal life was, meanwhile, achieving equal publicity. She moved in with Chattopadhyaya and shortly after, a shy sculptor called Dashrath Patel also entered their lives. The intense, triangular relationship became a celebrated *menage a trois* though Chattopadhyaya angrily brushes aside any talk of a sexual relationship as "so much damn nonsense". According to him: "Sex as such hardly exists. Each time you create something beautiful you have in fact something akin to a sexual experience."

In 1973, when her guru Ellappa Pillai died, she moved away from dance and plunged into painting, writing and design. She formed the cooperative, Skills, along with journalist Sadanand Menon and Dashrath Patel to teach low cost commu-

nication methods. Yet, it was almost inevitable that she would return to dance. "I moved away not from dance but from the false values in dance today which has made it almost a spectacle. I seek to restore the vital link between body and nature, body and work, body and ritual. Life and art have to mix."

Her long absence from the dance arena was not entirely of her own making. Her unconventional approach to dance made organisers wary of inviting her to major dance festivals. "They were scared of me. I would be a threat to the status quo ideology of dance," she says. It was Dr George Lechner of the Max Mueller Bhavan organiser of the East West dance encounter, who invited her and her troupe to perform in Bombay, thus bringing her back where she belonged.

Chandralekha is convinced that

solo dance is out and is now only concerned with group work and dance to project togetherness and emphasise her unshaken belief that a dancer cannot remain isolated "like a hothouse flower" from the mainstream of life. "If many of today's leading dancers have not reflected on the need for change it is partly because they are trapped in the system and are themselves its perpetrators," she says. After years of single-minded effort, Chandralekha seems to have finally succeeded in finding expressions of a new image of the dancer and the dance.

RAJASTHAN

Crippling Scourge

Water may give life but in 6,000 villages of Rajasthan water is also giving sickness. Fluorosis, a slowly debilitating disease that is caused by an excess of fluoride in drinking water, has already permanently crippled over 3.5 lakh inhabitants of the desert belt, and, with no help coming from the Government, it looks like the deadly disease is going to cripple several more. INDIA TODAY *Correspondent* RAMESH MENON *travelled over many of the afflicted areas to see where nature, and man, had been unkindest. His report:*

IN THE sweltering heat, under a poorly thatched roof in Lunva village of Barmer district, lies Motaram, 50, trying desperately to ward the flies off his face by twitching his muscles. He cannot move his hands or his legs and the flies continue to prey on his body. Motaram was once a healthy man but for the last 19 months he has been completely bedridden, a victim of fluorosis, and growing more helpless everyday.

Dargi, 60, lives in a nearby shanty. Her body is a twisted mass of limbs. She lives, but more as a vegetable than a human being, sentenced to her bed, dependent on others, and with nothing to

Teeth discoloured by fluorosis (below) and (right) a victim: desert ailment

look forward to.

At first sight, Manmal, a 38-year-old shopkeeper in the same village, looks perfectly normal. He can stand upright and even walk straight, but he cannot bend down as his bones have stiffened and in the years to come he will get worse.

Manmal, Dargi and Motaram are only three victims of the irreversible and crippling disease. There are countless more. Recently when the district administration checked up 100 villagers of Lunva and the surrounding countryside, it found that all of them were suffering from the same disease. Last year, the Barmer Lions Club organised a dental check-up for 80,000 children. To its horror it discovered that as many as 70 per cent of the children had already moved into the first stage of fluorosis.

In Nagaur, an entire area has been locally nicknamed *banka patti* (bent strip)—most of the villagers here have turned into hunchbacks because of fluorosis.

There is a morbid resignation on the faces of the villagers; their only consolation—that life can't get any worse. The Government, on its part, is hardly aware that a problem exists at all and it is a measure of its apathy that state officials have seldom ventured into the state's desert regions to document the real extent of fluorosis. Even youngsters like Lakharam, 28, of Barmer district have accepted that clean, fluoride-free drinking water will remain a dream. Once in a while, though, during election time come hopes of health and during the last polls, local candidates brought in shining new pipes to convince gullible villagers of their promises of potable water. But elections came and went, and the unused PVC pipes still glimmer in the noonday sun.

An entire area has been nicknamed "*banka patti*" (bent strips). Most of the villagers here have turned into hunchbacks.

It isn't much that the villagers ask from the Government—only water. To their simple minds, development is synonymous with villages that have acquired potable water. Punmaram Bishnoi, 22, insists that the backward Sanchor town of Jalore district is "forward and developed" simply because it now has good and clean drinking water brought in by a government scheme.

In most of the 6,000 affected villages, however, the wretched peasants have accepted that their thirst for good, clean water will remain unquenched. In 1962, Devaram the then sarpanch of Lunva wrote to the Government that villagers were getting maimed due to an excess of fluoride in the village well. A spate of letters and reminders followed. But it was only last year, 22 years after that first letter, that the Government dug a tube-

Digitized by Arya Samaj Foundation Chennai and eGangotri

well and potable water flowed into the village for the first time. The happy villagers sang and danced and celebrated, but for many of them by then, fluoride had already attacked their bones.

The most frightening aspect of the disease is that once it finds a home in the body, it does not leave it. Although it sometimes takes up to 20 years for the disease to completely manifest itself, it starts its destruction almost immediately. Fluoride is not absorbed into the bloodstream, it has an affinity for calcium, so it deposits itself on the bones, especially between the joints. Slowly the movement between the joints becomes restricted and pain develops. One by one, the different parts of the body become stiff and useless.

A child who has been drinking water with a high fluoride content, finds that his teeth discolour and acquire brownish, yellowish spots by the time he is 10. This is the first visible sign. If he does not stop drinking the same water, he can get permanently crippled. By the time he is 25, his bones start getting stiff and he feels like an old man. In some cases, due to the compression of nerves by awkwardly growing bones, paralysis sets in. Said a pathetic Bhimaji, 28, from Lunva: "We have lost out on our youth. When we get up in the morning, our whole body is stiff. The joints loosen out only after half an hour of movement. What will become of all of us?"

While most villagers have accepted their own fate, they worry for their children. Moti Durga, 50, a Barmer farmer, cannot look sideways because he has had a stiff neck and spine for the last 20 years. But he is not worried for himself. Said he sadly: "Our life has been ruined. I will die soon anyway, but what will happen to our children, our bright-looking children?" The bright-looking children smile blissfully as they play in the desert sun. But the smiles reveal rotting and discoloured teeth.

Just how rampant the problem is, is uncertain. The Government has not bothered to keep any statistics on the disease and some officials even deny that it exists at all. Said Health Secretary R.J. Majithia: "What is fluorosis? I have never even heard of it." Later, after talking to health officials, Majithia said the fluorosis was not a health problem since it was a water-borne disease; it was the Public Health Engineering Department's responsibility to supply drinkable water. Majithia's attitude typifies the insensitivity of the Government to the silent suffering of lakhs of villagers. Officially, they just do not want to look at the problem and no measures have been taken to ensure that coming generations do not contract it.

THE ONLY authentic information comes from the Defence Laboratory in Jodhpur which has found, through surveys, that fluorosis is concentrated in the districts of Jodhpur, Bhilwara, Jaipur, Nagaur, Bikaner, Udaipur, Barmer and Ajmer. While permissible limits for fluoride content laid down by the World Health Organisation and the Indian Council of Medical Research is just 1.5 parts per million (ppm), 16 districts in Rajasthan have a fluoride content which is much higher, in some places like *banka patti* up to 15 times higher. The presence of fluoride in water is actually necessary for the healthy growth of bones and teeth—several brands of toothpaste, for instance, use fluoride as an ingredient to make stronger teeth—but when it exceeds 1.5 ppm, it has a disastrous effect.

Fluoride is a natural element that gets into water through underground rocks. While it is a natural phenomenon, villagers suspect that in some areas it is aided by man. In these areas a series of mud check dams were constructed, and before long the fluoride content in the water rose. Said Dr Raghuveer Singh of the Jodhpur Medical College: "The sudden pressure of collected water has disturbed the balance of nature and today innocent villagers are paying for such projects."

Even if the Government decides to take immediate action now, it will take years to bring good water and health to the villages. An analysis of 5,000 water samples by the Defence Laboratory revealed that 91 per cent of the water was unfit for human consumption since it contained much more than the accepted limit of 500 ppm of dissolved solids, in some cases escalating up to 2,500 and 10,000 ppm. Some of the 6,000-odd affected villages are in the heart of the desert and just one pipeline for one village could cost a staggering amount.

The Defence Laboratory has developed a desalination and defluoridation kit, used mainly by soldiers in desert terrain. But it costs Rs 100 to create six litres of potable water, hardly the kind of expense that the indigent villagers can bear. The Government so far has chosen not to hear their soft cries for help. Said Jalore Chief Medical Health Officer Dr P.R. Parihar: "It is not a serious problem here. I have not come across any fluorosis cases." Just a few kilometres from his office, many crippled, helpless villagers are going to have to accept that clean, drinking water is not their birthright.

Yours for years

Apcolite Super Acrylic Emulsion from Asian Paints

Apcolite Super Acrylic Emulsion doesn't just give your walls a proper smooth finish and an attractive sheen. It also ensures those beautiful looks stay that way for years. Here's why:

100% Pure Acrylic Emulsion

Apcolite Emulsion is a superior, 100% pure acrylic formulation. That's why it's tough enough to withstand the extremes of any weather — on both interior and exterior surfaces. Year after year.

Fungus Resistance

Yes. Apcolite Emulsion is specially formulated to prevent fungus growth. Even in the monsoon or the most humid climate. Just one more reason why they stay good looking. For years.

Longer lasting beauty

Apcolite shades don't fade. What's more, they're easily washable. So your walls keep that freshly painted look. For years.

Computer matched perfection

Muted pastels. Brighter, bolder hues. The rich radiance of the whitest white. Each shade computer matched to perfection. So that there are no colour variations from batch to batch. Ever.

Apcolite Super Acrylic Emulsion. The luxurious look that lasts. For years.

A spectrum of excellence **asian paints**

SIEMENS

Digitized by Arya Samaj Foundation Chennai and eGangotri

Why would anyone send a current plunging into the void?

A 'void' — a high vacuum — is the strongest di-electric medium available. This makes it ideal for interrupters used for switching high-tension currents.

Vacuum Circuit Breakers complement and complete Siemens' wide range of switchgear. They offer many inherent advantages over older technologies. Their comparatively maintenance-free operation and facility for multiple auto-reclosure, for instance, could effect substantial cost savings in industrial and rural power distribution systems.

Vacuum Circuit Breaker being inspected.

Siemens India employs over 7,000 people at 8 factories and 27 sales centres around the country. The Company's expert team of manufacturing, sales and service engineers are dedicated to the highest standards of quality assurance.

Siemens' Vacuum Circuit Breakers are just one example of international technology being specifically tailored to meet the needs of Indian industry. Similar successes have been recorded in industrial electronics for control and automation, thyristor controlled drives and medical engineering.

SPACE RESEARCH

The Cosmic Quest

FOR THE star-gazers it promises to generate much excitement. *Anuradha* may not be the sexy starlet with thundering thighs but when it launches into space nestled in the open bay of Spacelab 3 on board the space shuttle *Challenger* this fortnight it will be the first to eye the sky for an uninterrupted 90 hours to record the flow of low energy cosmic rays heading towards the earth. In this, the latest Indian experiment in search of the origin of cosmic rays, the special detector *Anuradha* is expected to gather vital information on the nature of cosmic radiation which, many cosmologists and particle physicists believe, may not only be responsible for the nature of the universe and the violent processes by which galaxies as well as individual stars and planetary systems evolve, but eventually the death of the universe.

The origin of cosmic rays—which are actually a very energetic radiation of fundamental particles, including protons of very high energy, travelling at speeds very close to that of light towards the earth—is not known with certainty. Some appear to emanate from the sun, but the phenomenon has continued to intrigue scientists since the Austrian Victor Hesse reported the discovery in 1912. The propensity of the particles to travel untold light years of space unimpeded makes cosmic ray studies both appealing and difficult. Scientists concerned with the evolution of the universe have developed a number of tools with which to explore the phenomenon ever since Hesse flew with balloon-borne instruments. Ground-based radio telescopes, balloon-borne sensors and a variety of trackers with the advent of satellite-borne detectors and equipment buried in deep mines have added new facets and knowledge on cosmic rays. The actual origin, however, remains a mystery.

Designed and developed jointly by scientists of the Tata Institute of Fundamental Research (TIFR), Bombay and the Physical Research Laboratory (PRL) Ahmedabad, *Anuradha* is essentially a steel grey cylinder 53 cm tall, with a diameter of 48 cm, weighing 45 kg. It contains two stacks of hyper sensitive wafer-thin (one-fourth millimetre) discs of CR-39—the commercial name for allyl diglycol carbonate. Any cosmic particle passing through the stacks will leave its signature from which the identity, energy and time of arrival can be deciphered accurately. It will gather two kinds of data—one stored in the detector stacks and the other telemetered from the Spacelab 3 computer to the hub of activity at the Payload Operations Control Centre in Houston through a special telecommunications satellite. A combined analysis of the data will give the scientists information on the time and direction of each particle.

Says Professor Sukumar Biswas, the experiment's principal investigator and head of TIFR's Cosmic Ray and Space Physics group: "*Anuradha* represents both change and continuity in our cosmic rays studies. This continues our earlier work with a small size detector flown for 74 days on the exterior of the Skylab in 1973." This study had, for the first time, revealed information that the anomalous low energy cosmic ray particles have different characteristics as compared to those of high energy. The TIFR-PRL team concluded that low energy cosmic rays must be originating from sources and through processes distinctly different from those of high energy cosmic ray. The Skylab studies were further corroborated by the findings of the space probes Pioneer 10 and 11. The results prompted the TIFR-PRL team to accept an invitation for developing a space probe to take a free ride in the Spacelab.

For the Indian scientists a tricky task was to make *Anuradha* compatible with other Spacelab 3 passenger experiment. It had to be custom-built with special features to help the crew command this and other experiments simultaneously. The TIFR-PRL team and engineers of the Bhabha Atomic Research Centre, Trombay and the ISFRO Satellite Centre, Bangalore, took four years to shape *Anuradha*. Though originally scheduled for launch in May 1983, technical snags and other delays staggered the shuttle schedules to *Anuradha's* advantage. It will now be in flight when solar activity is close to its minimum, making it easier to record the low energy particle tracks. *Challenger* will be launched into an orbit of about 370 km above the earth and the advantage with *Anuradha* flying in Spacelab 3 is that it can be recycled like the laboratory and the spacecraft.

The findings of *Anuradha*, however, will not be finally known when the five-man team led by Biswas returns with data in mid-May. It will take almost a year to process and know the results of the last seven years' work on the Rs 50-lakh experiment. But as a young TIFR scientist said: "We are internationally recognised for our contribution to cosmic ray studies but major findings are never made in earthly time."

ON OUR STAFF AT ORIENTAL INSURANCE, WE HAVE A TOP-FLIGHT TEAM OF CIVIL, CHEMICAL, MECHANICAL, ELECTRICAL AND PROCESS ENGINEERS . . .

WHO DON'T WORK FOR US.

They've all been trained to work for you.

That's right. The Risk Management Consultancy Cell at Oriental Insurance is manned by some of the best technical experts and underwriters in the country.

Their job : to identify, analyse, evaluate and help to minimise just about any business risk — in just about any business.

At Oriental our team offers turnkey consultancy starting from the very concept stage to the commissioning of the project and thereafter.

Because of their specialised technical background and experience, they may recommend improvements in your shop floor layout to minimise the threat of accidents or fire . . . . . to optimising the efficiency of your men and machines.

From helping you locate a security leak to protecting your business from any other peril.

They will help you reduce your risk potential, minimise or help you avoid losses — thereby reducing your insurance costs.

And if the need ever arises for claim settlement we not only offer you free advice in claim documentation, your claim settlement is expedited as our team has a complete knowledge of your plant, processes and your functioning. In fact, we have been often known to settle claims within a fortnight after completion of all formalities.

Come, discuss your project with us. We can share with you our experience and what gains we have achieved for our clients.

Our clients range from Petrochemicals to Textiles to Civil Construction to Power Generation and many other industries.

Remember, Oriental Insurance pioneered the Risk Management Consultancy concept in India. We have a wealth of experience that we could put to use for your benefit.

And all this at no extra cost.

Let our team of consultants start working for you.

For Free Consultancy, call 45091, 40525.

Write in for your free copy of "What every businessman ought to know about the hidden threat to his business"

RISK MANAGEMENT CONSULTANCY CELL

The best brains — ready to work for you.

EMBLEM OF EXCELLENCE

Excellence of our coaching for IIT – JEE.

Year after year many of Brilliant's students rank among the Top Hundred in IIT – JEE. In the '84 JEE, 9 of Brilliant's students were placed among the All-India Topmost Ten. Brilliant's Y.G. FILE, a hot favourite with the examinees, is a treasure chest of the most challenging problems.

Excellence of our notes & questions for MBBS Entrance.

Each year Brilliant's candidates win Top Ranks in the Entrance Tests of many of the prestigious medical colleges. In 1984 the No.1 positions in JIPMER, AFMC, MGIMS, KERALA, went to Brilliant's students. Brilliant's Question Bank for Medical Entrance is deservedly famous. Self-scorers, a valuable new feature from '85.

Excellence of our study-scheme for MBA Entrance.

In the very first year, Brilliant's Master-Mind Series attracted hundreds of MBA aspirants, who have now testified to the high utility of the series in the context of the entrance exams of IIM, XLRI, BAJAJ, AIMA, etc.

Excellence of our course material for IAS Prelim.

10000 multiple choice questions, continually being updated, answer the requirements of the General Studies Test. Succinct notes and realistic test papers on 8 of the optional subjects.

Excellence of our exercises for the TOEFL exam.

We have just introduced our lesson papers for the TOEFL exam, after the grand manner and tradition of Brilliant.

BRILLIANT'S SERVICES TO THE EXAMINEES INCLUDE CLASS-ROOM LECTURES, POSTAL LESSONS, DOUBT-LETTER SCHEMES, CONTACT PROGRAMMES, ON-THE-SPOT TESTS, SEMINARS, QUESTION BANKS, SELF-SCORERS ETC.

BRILLIANT TUTORIALS

MAYURI

A Profile in Courage

THERE is a Telugu film, *Mayuri* (dancer) that seems to have captivated the Andhra Pradesh moviegoing public like few others before it. Made by media moghul Ramoji Rao, the film is about a young paraplegic college girl's courageous battle to overcome her handicap and resume her tragically interrupted career as a Bharatanatyam dancer. The real reason for the film's surprising success, however, is that it is based on the true life story of the film's lead player, Sudha Chandran.

Even without the film's dramatic appeal, the Sudha Chandran story had already captured the popular public mind. Involved in a bus accident near Tiruchi in Tamil Nadu in May 1981 when she was barely 17, Sudha's feet were trapped under the seat and she suffered fractures of her right femur and left ankle. Unhygienic medical care at a local hospital compounded the injuries and when she was eventually shifted to Vijaya Hospital in Madras, gangrene had set in in the right leg. Faced with no other choice, the doctors amputated the leg below the knee.

At first, it seemed the young Bombay collegian's dancing career had come to a tragic end. But Sudha had other ideas. "I was determined to return to Bombay on two legs and not on crutches and dance again," she says. In her mind, however, she knew the impossibility of the task. Her doctors had already told her that even walking on an artificial limb would be a long and painful process.

Five months after the amputation, she returned to Bombay to resume her studies and start the slow and agonising process of physiotherapy. Her body had stiffened after lying in bed for over 20 weeks and hobbling around with a wooden leg with her back arched, she presented a pitiable sight. But her grit and determination only strengthened. While still recuperating in hospital, she had read about Magsaysay award winner Dr Pramod Karan Sethi and his widely-acclaimed 'Jaipur foot'. In end-1981, she wrote to Sethi who

Daring to dream, Sudha in *Mayuri* finds her feet, learns to walk and dances once more

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...gently invited her to Jaipur.

She arrived there confident that Se-...'s intention would allow her to walk ...rally again but what she really ...ed to know was whether she would ...ble to dance again. When she put the ...ction to Sethi with trepidation, he un-...atingly answered "yes". Recalls ...dha: "That three-letter word worked ...magic. At first I thought he was being ...le but when I went around the limb-...g and rehabilitation centre I realised ...was possible. My confidence grew when ...raftsman making the limbs jumped ...n from a height and showed me his ...s. They were both artificial."

...Sudha's case, Sethi had to modify ...normal 'Jaipur foot' to make it more ...ble for dancing and sudden shifts in ...body weight. The normal foot is made ...ordinary vulcanised rubber with a ...r of nylon cord. The section above the ankle is constructed with aluminium beaten into shape with a wooden mallet. For Sudha, Sethi and his craftsmen had to impart more spring into the limb.

Armed with new-found confidence, Sudha returned to take up where she had left off. But her dance guru, K.S. Ramaswamy Bhagavathar, was unnerved. "It was difficult to see her enduring the pain and the dancing made her bleed. But she had courage and determination," he recalls. On January 28 last year, 20 months after the amputation, Sudha's grit and courage were dramatically rewarded—she gave her first public performance. In a tribute to those who had helped her battle her way back to the stage, she gave a second charity performance to help raise funds for a new limb-fitting centre at Bombay's J.J. Hospital.

Today, Sudha runs her own dance school in Bombay while trying to improve her own technique. "The challenge is greater in learning while teaching," she says modestly. Her instant success in *Mayuri* has not affected her at all—she still remains the wide-eyed student but filled with a new resolve to inspire others with the story of her life. Not a day passes without the phone in her Vile Parle apartment bearing requests from callers in Andhra Pradesh asking her to dance or merely to speak to youth groups about her experiences. Tamil and Telugu publications have featured her on their covers and other film offers have poured in. But typically, Sudha says: "I had a horrifying experience but what the world fails to understand is that the handicapped need no sympathy, they need to be encouraged in whatever they do." Words of a wise one indeed—and one who has suffered and fought back.

FOOTBALL

Money Game

INDIAN football may seem to be at its nadir. But Indian footballers have never had it so good. Though their lack-lustre performances in the pre-World Cup matches against Bangladesh, Thailand and Indonesia lost India the opportunity to play for football's biggest prize, players like Krishanu Dey, Bikash Panji, Sudip Chatterjee and Biswajit Bhatacharjee are, ironically, the best-paid footballers the country has ever had. Calcutta's big three among football clubs—Mohun Bagan, Mohammedan Sporting and East Bengal—have reportedly staked about half a crore of rupees to grab as many of these "stars" as possible.

The irony is that not one paisa of all this money has been spent for the greater glory of the game or the country, only to further each club's efforts to become the local champion. Says the Secretary of the Indian Football Association (IFA) Pradyut Dutta: "The attitude of the big three clubs today unfortunately is to beat the others at any cost. Money, violence and politics have now entered Calcutta football." And the biggest spender was East Bengal which disbursed an estimated Rs 24 lakh, shelling out Rs 2.5 lakh to retain stopper Manoranjan Bhattacharya and between Rs 1.3 lakh and Rs 1.4 lakh to obtain striker Krishanu Dey and linkman Bikash Panji from arch-rival Mohun Bagan. East Bengal also managed to buy over Jamshid Nasirri from Mohammedan Sporting.

"Money, violence and politics have now entered Calcutta football."

PRADYUT DUTTA
secretary IFA

Mohun Bagan, on the other hand, could dish out only Rs 16 lakh and got star strikers Mihir Bose and Kartik Sett from East Bengal and Subir Sircar and Pradip Talukdar from Mohammedan Sporting. The poorest harvest was reaped by Mohammedan Sporting, which had only Rs 8 lakh to offer and not only lost a few players but managed to entice players only from Maharashtra, Rajasthan and the local club, Tollygunge Agragami. What is worse, by just trying to retain some of its better players Mohammedan Sporting is now deep in debt. At present it owes more than Rs 1 lakh to the IFA.

The two bigger clubs are not better off and have been forced to hike membership renewal fees. They are also planning to demand more for participation in national tournaments. "Don't quote me, but if many members do not renew their membership this year, we will be bankrupt," says a Mohammedan Sporting official. Surprising despite the money the players are still officially amateurs, an essential criterion for participating in the World Cup.

But so blatant has the auctioning of players become that this year club officials were carrying on negotiations while the players were still in training for the pre-World Cup matches. The chief coach of the Indian football team, Areen Ghosh, had bitterly complained that the club officials were disturbing the players' concentration while striking deals with them. His colleague Santo Mitra has deplored the lack of ethics among the players. With the club transfers and the big money being scheduled for just after the pre-World Cup matches, most of them naturally did not want to pull a muscle while playing for the country.

"The rules have to be amended," says the IFA's Dutta, "so that the transfers take place only in the lean month of December." Apart from this he is also planning to make it mandatory for a player to remain in one team for at least two years. "This will enable clubs to train and feed the players for the next season, something they do not do now since there is no guarantee the player will stay with them," explains Dutta.

But the Indian team's dismal recent performances and sordid monetary transactions have succeeded in opening a few official eyes, especially in West Bengal football. "Our only hope are the young, who can still learn to play a better game," says Dutta. Coaches and club and association officials, realising they can do little about the hardened world of upper division players, have now started moving to make the lowest division, the fifth, a nursery for nurturing potential talent. This might give the country a chance to see decent football.

Historical Tapestry

PAINTINGS FROM THE AKBAR NAMA
BY GEETI SEN
Published by Lustre Press
(Price: Rs 295; Pages: 176)

THE *Akbar Nama* is among the major historical texts on the Indian past. Not only is it the chronicle of the reign of Akbar which would in itself lend it importance but it also reflects a large spectrum of the thought and activity of that time. The style is eulogistic but this has to be viewed as a genre in the historical biography of that period. Abu'l Fazl, the author and a contemporary at Akbar's court, relates the history of mankind from Adam to Akbar. This not only provides a chronology for the Mughals but also a perspective on Islamic historiography. The treatment of the reign of Akbar includes incidents which the king personally regarded as worth recording thus giving an insight into Akbar's view of his own life. The text also describes various aspects of government from a detailed consideration of revenues from the various provinces of the empire to food prices, wages, military organisation, and the imperial household. These sections have yielded data for analyses of Mughal economic history.

The illustrations to the biographical sections of the *Akbar Nama* were commissioned from the leading artists of the time some of whom were employed by the court. This is indicative of the patronage which the Mughal emperors extended to the art of book illustration and the superb styles of painting which resulted are a compliment to this patronage. Apart from their topical interest the illustrations included in this book present a remarkable perspective on miniature painting in the sixteenth century. The book is based on a manuscript from the collection at the Victoria and Albert Museum in London. Some of the paintings carry the imprint of the Persian style as in the exquisite composition of an interview between the royal emissary and the rebel, Bahadur Khan, painted by Farrukh Beg (Plate 37). Much more Indian in feeling is the superb depiction of the court with ambassadors from Badakshan and the Deccan. This painting resulted from the combined efforts of Miskina, Sarwan and Madhu, suggesting the appropriateness of referring to an atelier as the source of the painting rather than referring to the individual artist. Nevertheless a little more biographical information on the artists would have been of added interest.

An illustration from the *Akbar Nama*

The detailed study of such a manuscript has an art historical interest which is the substantial study of this book. The author draws attention to the significance of social history as well which she rightly feels can be derived from these paintings. However this aspect could have been investigated more fully. Social history would have required some comment on the various social groups depicted and the pictorial symbolisation of their relationships. Such an analysis would require some identification of the social identities of the groups depicted and a wide reference to other sources of the period which might authenticate the identification. The considerable detail in each illustration calls for a range of discussion on a large area of Mughal social life. In the picture illustrating the battle between two rival groups of *sanyasis* at Thanesar (Plates 42-45) one would have liked to know more about the Kurs and the Puris beyond the fact that the latter seem to have been Vaishnavites. Battles between *sanyasi* groups at places of pilgrimage for the establishing of an order of precedence were frequent, but the pictorial representation of these is rare. The very depiction of the royal hunt, where the deer seem to virtually leap out of the frame, brings to mind the question of why the cheetah has now become extinct in India.

The selection of paintings indicates the many facets of Akbar's interests apart from vividly recalling episodes from his life. The collection becomes the pictorial counterpart to the literary chronicle and inevitably one wonders whether it is substantially descriptive or an idealisation. The beauty of the paintings and their liveliness makes such an analysis both possible and pertinent. Geeti Sen's text is suggestive of these aspects but a fuller development of them would have been more satisfying. Nevertheless it makes a worthwhile book for the general reader and will, one hopes, encourage the more intellectually curious to turn to the *Akbar Nama* itself.

or a bank that's a real pleasure to visit.

The choice is entirely yours.

You can continue to put up with the noise and the confusion every time you visit your bank.

Or you can find a bank that treats you the way a bank should.
With a little courtesy.
A little attention.
And a little enthusiasm.

At HongkongBank you will find all three in plenty. What you won't find is the aloofness that some people seem to read into an international name.

Walk into our nearest branch. Look around and see the difference for yourself.

And make your choice.

RAGHU RAI

HARI OM GULATI

Raza, Sakina, and the Begum; and (left) Malcha Mahal: station in life

◆ Notice those passengers who sleep and eat on railway platforms? Well, there's one family that has been sleeping, eating and living at the New Delhi railway station for well over 10 years—and they're not waiting for a train either. Her Highness **Begum Wilayat Mahal of Oudh**, along with her son Prince Ali Raza, daughter Princess Sakina, three servants, and 11 labradors, came on a train from Lucknow—where she had been ousted from her ancestral property—and stayed on at the station, simply because she had nowhere else to go. Home for her royal highness has been the verandah of a waiting room where she has no light, no fan and no bed to sleep in, although she has furnished it with her priceless Persian carpets. After having been a lady-in-waiting so long, the Begum has at last been allotted a home by the Government—Malcha Mahal. Malcha Mahal is really only a forgotten stump of a Delhi monument, overgrown with weeds and infested with lizards and bats. A real home for the Begum, it seems, is going to remain a castle in the air.

◆ At eight, he was too small to hold the guitar he wanted to learn to play. Instead **Jagdish Mistry** was handed a violin and today, at 22, the boy from Bombay has the distinction of being one of the few young violinists who have had the opportunity of training and playing with the master himself—Yehudi Menuhin. Last fortnight, it was Bach to basics in Bombay when Mistry—who lives in London—came home to play. "This is home," he said even though he admitted that one could not live off western music here; he plans to continue at the Guildhall School of Music in London where he is training. And what is Menuhin like? Oh, "grandfatherly and gentle," pat comes the answer.

Dimple and Rishi: fixed formula

◆ In 1974, everything turned Bobby: Bobby scooter-rickshaws, Bobby rubber chappals, Bobby haircutting salons. Roadside Romeos switched from "Hi baby" to "Hi Bobby". Now, 11 years later, the couple—**Dimple Kapadia** and **Rishi Kapoor**—who generated all that love in the air are going to have a go at it again in Ramesh Sippy's *Saagar*, slated to bring a wave of romance back to the grimy, violent world of contemporary cinema. To help them along, Sippy has created an entire fishing village on the shores of Marve beach complete with tavernas, churchyards, stray dogs and piglets—to film, "not a movie spectacle," according to Sippy, "but an intimate love story". *Saagar* should also give Dimple the chance to tide over her previous flops. The spell has been cast. But will the magic work?

Mistry: coming home

◆ Renu looks glum, Raja looks bored and Friday evenings are just not the same anymore. Last month, when **Shafi Inamdar**—hero of television's most popular sitcom *Yeh Jo Hai Zindagi* left the confines of the idiot box for the bigger and more lucrative world of big screen cinema, he left behind a vacuum that even his mountainous chachi from Meerut (Farida Jalal) has not been able to fill. However, Shafi, whose presence on the national network had grown as comfortable as an old shoe, insists that his family has not broken up and that he's "only temporarily discontinued acting in the show". He has gone with the whim, true, but he promises to return. In the meanwhile, he also needs time off to make sure that his real family does not break up. "I have a wife too, you know."

The Return of Terrorism

After months of relative inactivity, the spectre of Sikh terrorism was made visible again last fortnight. The bomb blasts that rocked parts of north India also exposed the hollow core of Akali unity and placed a dangerous question mark over the future of the Punjab crisis.

COVER STORY 22

Tarnished Image

The G.M. Shah Government in Jammu & Kashmir faces serious charges of corruption and nepotism, detailed in damning memorandums sent to the Central Government recently. The memorandums list several cases against Shah and members of his ministry.

INVESTIGATION 76

Death of a Jet-setter

The suicide of Sayajirao Pratapsinh Gaekwad, a scion of the erstwhile Baroda royal family, on the French Riviera shocked the international jet set whose company he frequented. But his death also shed light on his bizarre life-style.

GLOBE-TROTTING 89

Trading in Blood

With the demand for blood in hospitals far exceeding supply, an organised and macabre racket involving blood banks and exploited donors is flourishing unchecked. More serious is the fact that in many cases the blood is diseased.

HEALTH 92

A Crucial Crossroads

Pakistan's march away from military rule continues haltingly and the forthcoming budget session of the national assembly will be crucial. Alongside, suspicion continues to grow in India that Pakistan is running camps for Sikh terrorists.

NEIGHBOURS 106

Under a Cloud

The moratorium placed on three private banks last fortnight plunged the banking industry into its biggest crisis in over two decades, and pointed to the deep rot undermining the stability of Indian banks while sapping confidence in other private banks.

SHEER INDIFFERENCE

The children featured on the cover of your magazine will never smile again. And reading the report ('State of Siege', May 15) one wondered whether one was in India or Sri Lanka. This leads to another thought: how can our leaders think of mediating in Sri Lanka when their own house needs to be put in order?

What sort of democratic system is this that allows those responsible for carnage and violence to remain in power? If there is an election in the near future, one can confidently predict that the ruling party will be routed for the simple reason that it really makes no difference who rules: the law and order situation is allowed to go out of control.

Bangalore A. BRITO

■ Police excesses following the anti-reservation agitation have probably touched an all-time high. More shocking was the the Government's attitude. Gujarat is like a chess board in which the Government and the opposition are making pawns of the people, especially those of Ahmedabad. But these pawns are not lifeless and if the power game continues, democracy will be in danger. Instead of indulging in cheap tricks, our veteran leaders and politicians should try to live up to their promises made so generously at election time.

Satna (MP) JAIDEEP MITTRA

■ The reservation policy is a purely vote-catching exercise that is causing irreparable damage to a society badly in need of integration. It is obvious that in our supposedly democratic society, university places and government jobs should be obtained purely on merit. Certainly there are great cultural and "environmental" differences between the downtrodden communities and the rest of society but these can be nullified by economic aid given according to economic status and not according to caste.

Many Indians are now suffering because they were not born Harijans!

London SHILPA SAMANT

■ Had there been an opposition government in Gujarat, the Centre would not have hesitated in clamping President's rule. If Solanki is dismissed at this juncture, the opposition parties would capture another state when elections are eventually declared. The Congress(I) does not want to create another Andhra Pradesh. Rajiv Gandhi isn't all that "clean". As for Solanki, he has neither shame nor conscience when he declares "I will stay on."

Madras SUNDAR SRINIVASAN

■ The dictum "Hear no evil, speak no evil and see no evil" has one loophole. The clause "Do no evil" is missing. Independent India has spawned a generation of politicians who "do evil" and then refuse to see, hear, or speak of the evil results.

Abysmal poverty and illiteracy have given them the means to bleed India to death. They can come to power without doing anything for the people. They specialise in giving away things that were never theirs. They divided Indians into separate 'vote banks' and gave them religious fanaticism, communal hatred, linguistic fervour and caste privileges over the aspirations, sweat and blood of other equally unfortunate Indians.

The Akalis are now trying to consolidate the 'Sikh vote bank' at the expense of the nation. The Solanki Government got elected on the 'reservation vote bank'. Janardhan Poojari fed bank money to his vote bank. Devraj Urs had donated somebody else's land to his vote banks in Karnataka. The list of "evil-doers" with lofty ideals is endless.

It is high time some real benefits like drinking water and electricity to all villages, free education and books to the backward classes and rural employment opportunities are provided. The people are sick of politicians of all hues. Ahmedabad is only the tip of the iceberg.

Belgaum P.R. SHETTY

■ The anti-reservation stir is completely justified. Backwardness does not come with caste alone, backward people are there in all castes. Those belonging to the so-called backward classes are given many amenities, apart from reservations. Those belonging to the so-called forward castes are opposed only to reservations because these are made at the cost of their own interests.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The backward classes have been given special amenities for decades now. But if all this has not brought even one of those people forward, what is the use of these concessions? And if our political leaders are so determined to implement the reservations policy, why don't they reserve the posts of president, prime minister, and chief ministers as well? If these are too important for politicians to be reserved, then college seats, jobs and promotions are just as or even more important for the common man.

It is more relevant for our government to try and destroy the very concept of the caste system. It can make a start in this direction by encouraging inter-caste marriages and taking other such measures.

Bangalore N.B.S. REDDY

QUEER LOGIC

Having minted enough money and at age 56, Kishore Kumar ('The Last Encore', May 15) says show business does not suit him. He recorded over 300 songs last year with a reported fee of Rs 35,000 per song—yet he grudges paying income-tax. A funny man nobody understands or appreciates. While he holds that the industry is full of shopkeepers out to make money, not art, one wonders if he is not one of them. What has he done for the sake of art?

Hassan O.P. RAMAN

BALL GAME

In the cover story 'The Turning Point' (April 30) you are right in saying that the Centre by conceding the demand for an inquiry into the Delhi riots after Mrs Gandhi's assassination has clearly put the ball back in the Akali court. In my opinion, the battle between the Government and the Akalis—with the Government giving gallantry awards to Operation Bluestar soldiers and yielding to an inquiry only on the threat of an agitation; and the Akali leader, Harchand Singh Longowal publicly glorifying Mrs Gandhi's assassins, and yielding to the pressure of the extremists—is a very immature manner of handling the situation.

Jabalpur AJIT HIVALE

■ The Government has shown the right approach in its bid to solve the Punjab tangle by making the recent announcement, and now much depends on the Akalis. The prospect of elections in Punjab in fact seems to be the main obstacle to a settlement.

Hazaribagh Bihar SANJAY ABHISHEK

■ The Akali leaders should stop making provocative statements and instead reciprocate the Centre's gesture. Rhetoric will certainly not take them anywhere, it will only complicate matters. In this context, Governor Arjun Singh's statement that "any confrontationist approach is not only harmful to the country as a whole but also to this prosperous state of Punjab" is valid and should be understood in the right spirit.

Madras A. SESHAGIRI RAO

WISE ONE

Jathedar Harcharan Singh Mahalon personifies reason and wisdom ('They were no Heroes', April 30). May his tribe increase. On the other hand, Rajiv Gandhi's recent statement about helping only states with Congress(I) governments indicates a lack of reason and wisdom.

Bangalore VINOD KUMAR B.

■ Thank you for the interview with Giani Harcharan Singh Mahalon. Such interviews make our country stronger and more secular. Akalis in their craze for power have forgotten the noble principles of Sikhism. They will have to pay for this.

Bombay JAGJIT P. SINGH

ABSURD REMARKS

Apropos of your Comment ('Peace Offering', April 30) the initiative taken by the Government is laudable. But what the Akali leaders are doing may once again open wounds that were just starting to heal. Statements suggesting reconstruction of the Akal Takht only reveal the callous selfishness and absurdity of the released Akali leaders. The Akal Takht is a holy shrine, not a child's toyhouse to be constructed, broken down and reconstructed.

Jalandhar RITU MALHOTRA

LETTING LIVE

'Is Calcutta Dying?' (April 30) was revealing. Calcutta has been moribund now for many years and Rajiv Gandhi's statement only made the country more aware of this bitter truth. Instead of viewing the statement as a criticism of their city, Calcuttans should be happy that there is atleast someone at the Centre who spared a thought for Calcutta and the miserable plight it is in.

Chandigarh ARINDAM DUTTA

■ The article portrays a one-sided picture with some stray photographs taken in and around Calcutta thrown in. After the partition, Calcutta has had to bear the brunt of a vast influx of refugees from erstwhile East Bengal. Besides, people from different states, especially in the east, come to this city in search of jobs and Calcutta, despite her teeming numbers, doesn't refuse them. After all, live and let live goes the proverb. There has been no attempt to plan a constructive revival of this city. Arguments that there has been no proper planning for this and counter-arguments only serve to hinder the development of the city. It is high time a positive effort was made in the right direction.

Hindmotor, West Bengal KANAD GHOSH RAY

■ The photofeature was excellent —thanks Raghu Rai for snapping the bitter facts of life. But he should have photographed Chowringhee area during peak hours (for traffic jams), during the monsoon (for the poor drainage system), and during rush hour when buses, trams and trains go packed beyond belief (for the population explosion). All these are daily bread for the average Calcuttan.

Needless to add, Calcutta is still the cheapest city in the world where even a person earning a meagre Rs 200 a month can lead some kind of a life. Besides, the glorious past of this city and her people can never be forgotten. Instead of only blaming each other, the Central and state governments should come together to restore Calcutta to her former splendour.

Digboi DINESH KUMAR CHOUDHURY

FREE WILL

In his lamentations over the sad state he expects India to be in when the new age dawns in the year 2000, Jay Dubashi ('India 2000 AD', April 30) makes invidious comparisons with China. The progress of China has been remarkable indeed, but China is a totalitarian state which can mobilise its masses to carry out state i.e. party policy at any and all times. And if you are Chinese and don't like that policy you have only to speak out to find out what totalitarianism is.

India as a democracy is committed to freedom as a vital ingredient in the life of each citizen. So it is torn by a hundred conflicting pressures. Lincoln stated the basic dilemma of all free people: "How can a state be strong enough to maintain itself yet not so strong as to crush the liberties of its people?" China is one example for the third world to emulate, in our time. India is another. Everyone is free to choose.

One thousand two hundred and ninety nine industrialists want to give you some advice ...

ULKA-D-PCRA-058

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Check your boilers and furnaces. They're burning into your profits."

The 1299 industrialists would be delighted to put the names of their companies in this advertisement. And so would PCRA. Unfortunately, space does not allow this. So let's discuss the problem instead.

The problem. It is a serious one.

Every year precious fuel oil worth Rs. 270 crores is unnecessarily wasted by industrial units in boilers and furnaces. The reasons? Inefficient and outdated design, careless maintenance and operating habits.

However, 1299 industrial units consulted PCRA and responded to our advice. The result? A fuel oil bill reduction of 10 to 20%. This itself has resulted in a saving of Rs. 90 crores per annum. And, as we are not yet self sufficient in oil, it is the saving of another precious resource: foreign exchange.

"Prehistoric" Boilers

Another specific study conducted by PCRA revealed that if 2000 "prehistoric" (we apologize if you think that's too strong a word) boilers are replaced, 2,00,000 kilo litres of fuel oil can be saved, in foreign exchange. In rupee terms it is equivalent to Rs. 60 crores, at current prices.

PCRA's Free Services

PCRA offers solutions within the framework of a three tier strategy: short, mid and long term efficiency programmes. PCRA also offers professional technical services to help you implement these solutions in all three phases. If necessary, PCRA also hires independent specialists to recommend energy efficient solutions for you. This too is free.

Energy efficient devices

PCRA's activities include the design of energy efficient devices. A well-known example is the Burner developed for PCRA by the Indian Institute of Petroleum. Todate, 650 of these Burners have been installed, saving fuel oil worth approximately Rs. 2 crores annually.

A solution from the Oil Industry Development Board

To help industrialists switch to more efficient boilers, the OIDB created a revolving fund of Rs. 9 crores. If you are eligible, you can get a long term soft loan from this fund. In this context, a special programme that has been successful is our "Boiler Replacement Scheme".

Remember, in energy efficiency programmes "change" pays for itself immediately. A new, efficient two tonne boiler, for instance, will pay for itself in less than 2 years. And from then on, the recurring annual saving is pure profit.

The beneficiaries: Your company. Your shareholders. Your consumers. Your country.

If you save fuel oil there are 4 direct beneficiaries.

Your company benefits with a lower fuel bill of 10 to 20%.

Your shareholders benefit because your company does.

Your consumer benefits. Because the cost you add to your final product due to carelessness or habit will cease to become mandatory.

Our country will save invaluable foreign exchange. And, the ambitious programmes we have for oil self sufficiency could be realised sooner.

All this is enough reason for you to get in touch with us today.

PCRA is a government sponsored organisation and a representative of India's petroleum companies in areas related to conservation. PCRA's four major conservation targets are the Industrial, Agricultural, Domestic and Transport sectors.

PCRA's services are free. Savings achieved by PCRA through conservation exceed Rs. 100 crores per annum.

Power transmission lines that talk

Power Line Carrier Communications from BPL. For better management of electrical power.

Simply put, it means an effective voice and data communication system that uses existing power lines in the Electricity Board network.

In operation for over 12 years in Electricity Board networks all over the country, Power Line Carrier Communication units help monitor and control critical factors in electrical power management.

Communication electronics from BPL also means Telemetry, Supervisory and Control Systems, Telephone and Switching Equipment.

There are other vital areas that BPL serves too. With Instrumentation (Industrial, Medical & Measurement), Computers, Components, Office Automation and Consumer Electronics.

Behind this diverse product range is a vast corpus of knowledge that BPL has acquired over the last two decades. This knowledge has been integrated through technical tie-ups with international brand leaders like Siemens, West Germany; RFL, U.S.A. and Trench Electric, Canada. And through an infrastructure that's unique only to BPL: Seven integrated factories, three R & D groups, in-house manufacture of critical components, a nationwide marketing network and an independent company exclusively employed for servicing. The result? Products that are better suited for local conditions. And user needs.

Yes. Satisfying user needs is, ultimately, the only objective BPL has.

Doublespeak

IF GEORGE Orwell had been around, he'd probably be chuckling at the recent jamboree of the Congress Party in Delhi's Talkatora Stadium. The spectacle of the ruling party embroiling itself in a largely semantic debate over whether or not it must in its resolutions endorse socialism, the public sector and all that, was a typical example of the doublespeak that Orwell long ago warned against. But no one in the Congress(I) seems to have paid him the least heed: the redrafted resolution was a classic example of the typical, dubious triumph of oldspeak over newspeak and confusion over clarity.

Unfortunately, however trite the language of the debate, it is no laughing matter. For it reveals an unwillingness to face facts and an all too ready recourse to shibboleths and mantras. If Congressmen persist with their mistaken impression that the party's clichéd slogans are the touchstone of its ideology, they will be unable to move with the times, to recognise the changing world for what it is, and participate with success in the modernisation of this ancient land.

It is all very well to swear by socialism, to swear by the public sector and by the industrial policy resolution of 1956. But such loyalty to these slogans ignores some very basic points. First, in the last three decades, enough crimes have been committed from the shelter of these slogans to make them meaningless. Was Mrs Gandhi's nationalisation wave of the early 1970s any more socialist than her subsequent denationalisation and liberalisation measures? Was the stranglehold of the permit raj a better interpretation of Nehru's ideas as expressed in the 1956 resolution than the relative freedom he himself gave the private sector in the 1950s?

Second, with these slogans in command, Indian industry and economy have attained a certain maturity, a not unimpressive rate of growth. But they have outlived their usefulness, and for the last few years they have become counter-productive, restraining rather than regulating, keeping on an unnecessary leash the enormous productive forces that are raring to go. The policies of old need to be looked at critically. The public sector has served a vital function: it has created a basic infrastructure, provided key raw materials and given the economy industrial muscle. But today it is largely unprofitable and inefficient, and too much of it is an unacceptable drain on scarce public resources. Its role and direction deserve to be critically reassessed.

Similarly socialism. That much abused word, which found its way into the Constitution only at the end of the third decade of Independence, has for a long time been nothing more than a fig-leaf. In truth, India has never been socialist unless socialism consists merely of having a large public sector and controls, and an unimpressive net of welfare measures which pale before what really socialist countries have and aren't even a patch on what out-and-out capitalist countries have put together.

And third, there is no evidence that the Government in office wants to bend in the direction dictated by the economic resolution adopted by the AICC(I) session. In his interviews, Prime Minister Gandhi has outlined an economic approach which is anything but socialist. His emphasis on modernisation and letting people get on with the job underlies all the policy initiatives the new Government has taken —in electronics, in computers, foreign trade and, of course, the budget. The entire thrust of the new Government has been towards liberalisation, efficiency, more production, better distribution.

Why, then, this apparent backtracking? Party resolutions have in the past seldom meant very much; they don't usually work their way into policies and are generally routine obeisance to the ruling ideological deity. What has probably happened is that in the wake of the Congress(I)'s electoral defeats in recent by-elections, a large enough section of the party felt it necessary to fight the unwelcome label it seems to have been stuck with of being a party for the rich and no longer for the poor.

It is a myth that the Indian electorate is taken in by words and slogans unless they correspond to its own perceptions of the reality. And, the reality is that the Congress(I) won power not because it was seen to be for the poor but because it was the only party with a leader capable of forming a stable government in the unique circumstances of the last election.

If anything, the party's nervousness reveals a lack of self-confidence. Nobody expects the new policies to have immediate results, but it would be a grave mistake not to give them enough time to run their course. And the answer to these labels doesn't lie in word-play in resolutions. It lies in down-to-earth action: in keeping prices in check, in unearthing black money, in punishing the crooked however wealthy or well-connected, and in rewarding the honest, particularly those who toil long and hard for a pittance. Economic resolutions can't feed, clothe and house the poor; only greater production, better distribution and judicious anti-poverty programmes can do that job.

If the Congress(I) is really worried about popular perceptions of its ideology, it can do no better than to pursue its policies—not resolutions—with vigour, though keeping an eye out for pitfalls. And if it believes in the policies that it has announced in the last few months then it must stand up and be counted instead. Otherwise it will not be able to play its due part in delivering the goods.

NGEF Brushless Alternators.
The perfect match for your diesel engines.

Incorporating superior AEG-TELEFUNKEN technology

Minimise maintenance downtime, maximise production by insisting upon NGEF Brushless Alternators. The ideal match for your diesel engines.

NGEF Brushless Alternators are manufactured in collaboration with AEG-TELEFUNKEN, West Germany. Their advanced design eliminates sliprings and carbon brushes, thus practically eliminating maintenance downtime.

With the use of the electronic voltage regulator, NGEF Brushless Alternators guarantee a steady state voltage regulation of ±0.5% as against ±2% normally offered by other manufacturers. Due to quick voltage response, starting of motors is smooth and stalling is eliminated. The Gensets can be operated in parallel and/or connected to grid.

Get wise to the powerful qualities of reliable performance. Insist upon NGEF Brushless Alternators.

Countrywide network offers excellent after-sales service.

Range of Manufacture:
8 kVA to 1640 kVA in 415 Volts and 500 kVA to 1000 kVA in 3300 Volts and 6600 Volts at 1500 rpm for 50 Hz and 1800 rpm for 60 Hz.

Give us an idea for a great cause and win Rs. 1 lac in prizes

India is potentially a colossus. The citizen have great faith in the future of the Country, but past experiences have left us quite disillusioned. Many have bright and original ideas to solve the problems but there seems no way to get these across.

The new government has suddenly infused great hopes, but there are yet no signs of great happenings. Unless quick decisions are taken and implemented, much will remain a pious hope only.

It is now the time for the conscientious, particularly the retired personnel, journalists, academicians and the experts to come forward and give a helping hand by sending us ideas/suggestions which can take the Country forward. We shall have these examined by a panel of experts and if found suitable, you would not only win a prize but have the satisfaction of its reaching the right quarters. A total amount of Rs. one lac is offered in prizes with individual prizes upto Rs. 5000/- depending upon the value of the idea/suggestion.

The ideas/suggestions may cover all major activities of the government like industry, commerce, agriculture, housing, rail and road transport, education, telephone, postal, tourism, banking, income-tax, sales-tax, law, labour, family planning, rural and urban unemployment, eradication of corruption, discipline and ethics, youth welfare, public sector undertakings, UPSC, DDA, MCD, DTC, Army, Navy, Airforce, BSF, Police and others.

These ideas/suggestions will be selected mainly on the basis of their originality and innovativeness. These must be practical and capable of being implemented within a period of 3-6 months. These will be suitably edited, compiled and forwarded to the government.

The write-up may contain more than one idea/suggestion but must pertain to **one subject** only, clearly specifying the problem and its precise solution. It should be as brief as possible and of not more than 400 words. Two copies, typed in double space along with your name and address are to be sent, so as to reach within 10 days of the issue of this advertisement, at the following address:—

You won't see the advanced colour technology we've put to work behind.

But you can watch it bring those colours alive up-front.

Introduce your eyes to the controlled brilliance of Sonodyne Telecolor — as captured on the Colormatic Super and the new Colorchrome.

Both these hi-performance models are fronted by the latest innovation in picture tube technology — a breakthrough that breathes more life into colour.

The new picture tube incorporates larger illuminated phosphors, making for added colour brilliance.

Also featured is an in-line electron beam gun, which hones picture outlines to sharp focus. So you can watch colours so alive, they bring home a sense of 'being there'.

There's more hi-tech built-in than meets the eye, besides.

Like the electronic memory touch-tuning which allows you to select pre-tuned stations simply by depressing any channel selector button.

And the chassis' computer-aided design, which makes for an exceptionally low failure rate.

Now, isn't it time you auditioned Telecolor yourself?

NUTS AND BOLTS

■ New cars are all the rage these days and the Maruti promises to be the forerunner of a breed of India-made runabouts. However, Indians have lost none of their craze for imported glitter on wheels, as was evident in a customs case recently. Two brothers thought up an ingenious scheme. They went abroad and bought three cars of a famous make. The cars were then taken apart abroad, nut by nut and bolt by bolt, and the pieces so obtained placed in large crates stencilled 'Spare Parts' and loaded onto a ship bound for India. The papers were deliberately fudged and when the crates arrived in India the customs immediately confiscated them.

Some months later, when the confiscated 'Spare Parts' were put up for auction, the brothers were present with their bid and carted the whole lot away to a secluded garage. Two weeks and lots of greasy elbows later the cars had been put together again and were on the road, having been sold to proud buyers. It was only when the transport authority discovered that the cars had never officially been imported into India that the brothers and their do-it-yourself kit were taken into custody. Talk of Indian ingenuity.

MARBLE BUST

■ It was Lord Elgin who, by taking a lot of marbles from Greece, raised an international controversy over the right of a country to preserve its heritage, a controversy made considerably more interesting when Melina Mercouri added her bit of spice to the demand. A man we shall call Suraj is no Lord Elgin and a commemorative stone no Elgin marble, but the principle's the same.

Not that Suraj is a man of principle. Had he been he wouldn't have turned up with a cart on a south Delhi road and started digging up two blocks of marble placed there in memory of Nasser of Egypt. The slabs were embedded in brickwork and Suraj went to considerable trouble removing and hefting the stones onto his cart.

However, rickety wooden carts are not meant to carry solid marble. The Egyptians knew this and used the backs of slaves when they built the pyramids, and Suraj's cart collapsed. One of the blocks crashed down and broke. To cap it all, a passer-by noticed what he was up to and told the police who are now trying to find out why Suraj wanted the marble slabs in the first place.

BULL DOZING

■ Bulls have a heartening do or die air about them and the fellow who walked into Laxmi Narain's house in Palam village in Delhi was quite out of the ordinary. While Narain and the rest of the family were out, the large creature coolly strolled into the house, took a constitutional around its four rooms, and then made for the fresh air of the terrace.

What goes up must come down but that rule doesn't apply to bulls and this one found himself stranded on the terrace all dressed up and nowhere to go. Narain came back and found he had a problem. Efforts to coax the bull down did not succeed and it spent the entire Sunday contemplating the stars. The next morning, after brushing his teeth, about which he is very particular, Narain called the fire brigade.

Meanwhile, a doctor gave the bull sedatives and when the firemen and an army of villagers got to it, it was slumbering babefully. Its feet were tied with rope and Operation Bullstar began with dozens of sweaty villagers risking hernias trying to swing the bull to the ground. It wasn't easy but then nothing ever is and finally the bull was back on the grass, its eyes still tightly shut as it dreamed of china shops.

SLIGHT BLIGHT

■ Gold is out of reach and silver too, it seems, has vanished from the market. So what are the poor, deprived shopkeepers to do? One innovative merchant in the short-changed town of Akberpur devised his own unique method of coping with the tragic loss. Instead of waiting hours at banks for small change, he decided to stock up on Nirodhs instead. So much easier to get than a 25 paisa coin, and good for the country and her teaming millions too, he figured. And so his happy customers no longer went home with small coins but with little yellow packets. Before long the small town of Akberpur began to grow visibly smaller.

And all was going well —till a haughty, doughty grandame walked into the

store to make a purchase. Ac--customed to habit, the beaming shopkeeper dipped into his toffee box with an air of deep benevolence and instead of the change she was expecting, plonked the offending contraceptive into her palm. Well, to cut a long story short: the lady stormed out and the friendly neighbourhood grocer is still nursing his wounded cheek.

25 YEARS OF ENGINEERING EXPERTISE IN INDIA'S CORE INDUSTRIES NOW COMES TO YOU IN ONE COMPLETE KIT

25 years ago a team of 16 workmen led by a man of dynamic enterprise set up a small Cast Iron Foundry in the industrial township of Bhilai. That was the beginning of Bhilai Engineering Corporation Limited (BEC), one of the earliest engineering ancillaries of the Bhilai Steel Plant.

Today, BEC is a technologically advanced Integrated Engineering Complex, providing vital inputs and services to a number of major industries in the country's core sector — Steel, Mines, Cement, Power, Heavy Industries and the Railways ... to name a few. BEC has also made a mark in the international market through exports of Steel Plant Equipment to Egypt, Bangladesh and the USSR.

A proven track record of engineering expertise in India's core industries

Baptised in the Steel Industry, BEC has pioneered the indigenous manufacture of items like Coke Oven Castings, Ingot Moulds, Sinter Cars, etc. (in the Private Sector). Outside the Public Sector, BEC has manufactured the largest quantities of Ingot Moulds, Heat Resistant Coke Oven Castings, Sinter Cars and Rolling Mill Roller Table Frames for the Integrated Steel Plants. BEC is one of the select few to manufacture such critical inputs for the Railways as Casnub Bogies, Couplers, Axle Boxes, Traction Motor Magnet Frames, etc.

Two and a half decades ago, BEC's equipment started replacing Russian equipment in the Steel Plants in India. Today such equipment are being exported to the USSR under stringent quality control and time-bound programmes.

The Pursuit of Perfection

In its pursuit of perfection, BEC has built up an infrastructure for excellence:

- A dedicated team of 1300 top-class professionals — engineers, technicians, workmen and other vital personnel
- Modern facilities for Steel and Alloy Steel castings, Grey Iron and Alloy Iron castings, fabrication, machining and assembly — all in the same premises
- Stringent quality control measures and testing facilities
- First-hand experience in major projects, working closely with technical experts from India and abroad
- Design and engineering expertise for metallurgical and mineral processing equipment, materials handling projects, environmental engineering and a host of other industries.

It is all this that has created an environment of excellence at BEC. For 25 years. Excellence that is now yours to avail in one complete kit.

Introducing the car that's compact enough to spell economy and big enough for comfort.

Time was when you really didn't have a choice. And you quickly settled for what little you got. Only to find little was really too little for comfort.

Now the Premier 118 NE makes the matter of choice more satisfying.

Space to stretch in

The Premier 118 NE comfortably seats three at the back. And with extra legroom, you don't feel you are being squeezed into a toy car. It's the ideal size for a family – both as a city car and for out-of-town driving. Add to it a powerful pick-up, smooth gear change and a well-suspended body - and you'll see why driving can suddenly become a new experience.

Fuel stretching

The modern 4-cylinder 1.18 litre Nissan engine ensures a powerful pick-up and high fuel efficiency – upto 17 kms. per litre (according to the Government of India test procedures). Compare that with any other car on the road – and see if it doesn't spell economy.

From Premier Automobiles – of course!

The Premier 118 NE combines the sturdy body of the Fiat 124 and a modern, fuel-efficient 1.18 litre engine designed in collaboration with Nissan. PAL engineers have tested and perfected the model to suit Indian climates and road conditions.

After all, we've always given you the better car. Now, with new horizons opening up on the car scene, isn't it natural the better choice should come from us?

PREMIER 118 NE

It makes a lot more carsense!

Many happy returns.

When Thai became airborne in 1960, our philosophy was simple. Only the best of people would run the airline. Only the best aircraft would make up the fleet.

And the standard of service would be of the gracious, traditional kind. Thai's Royal Orchid Service took off and hasn't stopped climbing since.

Our pioneering spirit has flourished, too, since we opened up Kathmandu and Bali in the late 1960's.

We were one of the first to establish a special business class.

We introduced the first non-stop flights to Europe. And established a north-west gateway to America.

Served by an ever-expanding fleet of magnificent 747Bs and wide-bodied A300s. Thai's route network now includes over 40 cities in 32 countries across four continents.

Many happy returns, many happy departures.

New horizons in time.

Rado DiaStar «Anatom» – an amalgam of the latest scratchproof technology and anatomic-functional design.

Revolutionary design. Based on a revolutionary idea. The overriding concept of the new Rado collection is the convex sapphire crystal, diamond-polished on both sides. Rado has thus been able to take this revolutionary leap into a new era of styling and design.

The perfect match – the perfect anatomic solution. The anatomically formed sapphire crystal is the result of years of research and development. And well worth the effort. For the first time it became possible to create a watch which perfectly fits the human wrist. A perfect match and a truly anatomic solution. Characteristically Rado.

RADO

THE PUNJAB CRISIS

The Return of Terrorism

MAY 10, 6.19 pm: Rameshwar Dayal, a 66-year-old resident of Delhi's trans-Yamuna colony of Gandhinagar, cannot recall a day in 40 years when he missed going to the temple in the evening. May 10 started out no different. But as he walked the familiar street, an explosion ripped the evening calm. "This was louder than any Diwali *patakha* and I did not know what else to do except run. Everyone else was running away," he recalls. But three of his neighbours weren't as lucky: they died when a bomb camouflaged as a transistor radio went off. It had been picked up and brought home by a child.

7.25 pm: Mukhtiar Singh, 38, a cheerful driver of the Uttar Pradesh State Roadways Corporation was preparing for the 220 km run to Ramnagar with his bus packed to capacity. "I don't even recall how exactly it happened, it was such a shock," he says, lying in a ward of Delhi's Jayaprakash Narayan Hospital. "I was just about to get into the driver's seat when the blast threw me away and I found myself in hospital," he said, still dazed 48 hours after the tragedy. His bus notched up the highest toll of seven for any single explosion on that bloody night.

7.45 pm: Vijay Sabharwal, 33, had had a hard day in the office and confesses to having been speeding home "making full use of the wide Africa Avenue" when all hell broke loose. "First I thought the DTC bus in front of me had burst a tyre and instinctively jammed the brake-pedal. But then smoke billowed from the bus, a woman shouted *khoon, khoon* (blood, blood) and passers-by made a mad rush towards the bus." The toll was one dead and six injured.

May 11, 8 am: Bhola Chowdhury, a 23-year-old fish-seller in Chittaranjan Park, the sprawling Bengali enclave

Victims of bomb blasts (above) and an injured survivor: dangerous phase

Map by B.K. SHARMA

along the southern extremities of New Delhi, had gone as usual to answer the call of nature in the empty plots behind his jhuggi. "He couldn't believe his luck, having found such a 'nice' transistor in a rubbish heap but I told him this had to be some kind of a trick as no one would throw away such a new gadget. But he didn't listen to me nor did my daughter, my dear Gudiya," recalls Bhola's brother-in-law Arjun, breaking down. His curious daughter, who turned on the radio, was among the five mangled bodies in the miserable hut.

Suddenly last week-end, Delhi became a minefield. It began with a blast at Gandhinagar which, for a while, was dismissed by senior policemen as a gas cylinder burst. But doubts were soon laid to rest as the police control room was besieged with panicky calls reporting an explosion every few minutes. Ambulances screamed through the city, fire-tenders clanged their way past the thick Friday evening traffic and the scene, as a duty magistrate now recalls, "was so much like what the Americans show you in their disaster movies."

In the melee of ambulances, fire-tenders and police patrol cars, a number of staid Ambassador cars were quickly making their way to South Block. They carried top officials rushing back to their offices to man panic stations, and ministers to attend the meeting of the Union cabinet's Political Affairs Committee called by Prime Minister Rajiv Gandhi to discuss the second biggest crisis he was facing in his six-month rule. Soon enough, instructions were going out as crash messages on the inter-state police wireless. This time, the Centre was telling all states, there was to be no repeat of the November reprisals against the Sikhs. The army was asked to stand by to help the civil administration in Delhi and a message sent to Haryana Chief Minister Bhajan Lal to cut short his US visit and return to take care of his communally sensitive state. Said a senior civil servant: "The prime minister told the Cabinet that the objective of the terrorists is to cause riots and we won't let that happen at any cost." Delhi's Acting Police Commissioner, Ved Marwah, who suddenly found himself in the hot seat, affirmed: "Whoever planted these bombs intended to kill innocent people. They

Photographs by RAGHU RAI

Digitized by Arya Samaj Foundation Chennai and eGangotri

want to start communal trouble and it is imperative that we control this, otherwise we will simply be playing into their hands."

No one was underestimating the terrorist challenge this time. "This is a new and dangerous phase of Punjab terrorism and its consequences could be grim," said Union Home Minister S.B. Chavan 24 hours after the outrage began. But he was aware of the obvious implications of the new phase in terror tactics. Conforming to the pattern that has become sickeningly familiar now, the extremists wanted to sabotage the conciliatory process which seemed to be going rather steadily after Akali Dal Chief Harchand Singh Longowal's visit to Delhi—in spite of the turmoil in Akali politics set off by the sudden dissolution of the various Akali factions by Joginder Singh, Jarnail Singh Bhindranwale's father, and the mass resignations by top Akali leaders that followed soon after.

The bombings did two things right away: they served notice that terrorism was back with literally a bang and that those who masterminded them intended to seize the initiative just as they had in the months leading up to Operation Bluestar almost one year ago.

Second, they quickly vitiated the atmosphere and even people who were appreciative of the Government's placatory approach till then began to question it now. Delhi's dark week-end seemed to put off indefinitely the prospect of any talks between the Government and representatives of the Akalis, stalling a process that had in its own stop-go fashion been inching forward. Not only had Joginder Singh's coup denuded the Akali ranks of credible leaders, there was now little incentive to open talks at precisely the moment when terrorists seemed to have a free run of the streets of the national capital and so many other cities all over northern India.

The entire operation was extraordinarily well planned. The men behind the outrage, it seems, had studied the map of Delhi rather well. Explosions rocked colonies along Delhi's periphery keeping the police on the run. Transistor radios left by "absent-minded commuters" in the DTC buses were carried into the heart of the city where they exploded in the hands of curious, innocent passengers who picked them up to take home or simply inspect. The whole operation was cleverly designed to create panic, kill people and add that vital, nerve-racking element of unpredictability which made it virtually im-

Damaged buses at ISBT (above) and a booby-trapped transistor radio

possible for the police to cope.

On that fateful May 10 evening, Delhi was firmly in the grip of the Fifth Horseman syndrome. In the east, across the Yamuna, Gandhinagar and the river bank saw two quick explosions and immediately the scene shifted northwards. The target was well chosen: the most heavily populated place in Delhi at that point of the day when thousands of commuters congregate at the Inter-State Bus Terminus (ISBT) to catch home-bound buses. On May 10, Friday, the crowds were even thicker. Thousands more were there, waiting for buses that would take them to week-end re-unions with their families. "Over 50 buses leave the terminus every five minutes between 6 and 7," recalls Tejwant Singh, a member of the ISBT staff and adds, "surely, the terrorists wanted to cause a stampede which could have killed dozens." But somehow the crowds kept their cool as scores of buses were driven out of the terminus in a steady procession and parked along Ring Road for a quick going over by the police.

Swinging in an anticlockwise direction westwards, the scene of action shifted to the Government press in Mayapuri, then Mangolpuri which saw some of the worst rioting in November and, to top it all, came the explosion that ripped apart the insides of the DTC bus on route No. 610, on Africa Avenue, in the heart of south Delhi. If the residents of the more prosperous south Delhi had any illusions about being left in peace these were shattered the next morning as transistors exploded in the colonies of Chittaranjan Park and Kalkaji, completing the ring of death and terror that gripped the capital.

On the evening of May 10, while Delhi Police officials were still marvelling at the extremists' organisational ability in creating so many incidents simultaneously in all parts of the city, top officials in the Home Ministry and Cabinet Secretariat monitored more disturbing news from elsewhere. In Haryana, a series of explosions—that stretched from Kurukshetra in the north to Sirsa in the far western corner of the state bordering Punjab and Rajasthan, left at least 10 persons dead. In Uttar Pradesh the Himachal Express brought death to Meerut city as a bomb blew up one of the compartments. There was no respite the following morning with transistor-bombs notching up more deaths in places as far apart as Ghaziabad, Unnao and Moradabad in Uttar Pradesh and Sriganganagar and Alwar in Rajasthan. Said an intelligence official, bleary-eyed from an unbroken vigil of 48 hours: "You can even see a symbolic message in the way the terrorists have kept bombs in trains leaving Delhi. It is a clear case of retaliation for the deaths of Sikhs in trains reaching Delhi last November."

THERE was, however, one vital difference this time. For the first time since extremism raised its head in Punjab about four years ago, the terrorists had decided to be calculatedly indiscriminate in their choice of quarry. As security men pointed out, a bomb kept in a bus or a train would kill anybody, Sikh or non-Sikh. Said Marwah: "Their idea was to spread panic without taking too much risk. So they picked on soft targets indiscriminately."

Just as clear was the objective behind the whole exercise. All along, since the beginning of the Bhindranwale phase, the Punjab terrorists have tried to set Sikhs and Hindus at each other's throats. They had expected the bombings in Delhi, Haryana and Uttar Pradesh to revive the monster of November when hordes consumed by anti-Sikh rage —spontaneous and inspired by politicians —ravaged colonies in Delhi. Similarly, in Punjab the terrorists struck at prominent Hindu targets in Hindu majority towns like Khanna (near Ludhiana), Dhariwal in the border district of Gurdaspur and Hoshiarpur, anticipating quick mob violence from the Hindus—which is just what they need to trigger off a Sikh backlash in the Punjab countryside, something they have failed to engineer despite four years of desperate machinations.

In Punjab, to an extent, there were disturb-

PRAMOD PUSHKARNA

Digitized by Arya Samaj Foundation Chennai and eGangotri

ing signs that they had succeeded in stirring up trouble. In all three cities where they killed prominent Hindus—Khanna, Dhariwal and Hoshiarpur—Hindu mobs went on a rampage, burning Sikh shops and attacking Sikh passers-by. All three towns had to be put under curfew for days together. At Dhariwal, mobs threw two Sikhs in a canal and they barely managed to swim away to safety. But the reaction was stiffer at Hoshiarpur. State Lok Dal chief Balbir Singh who was shot dead on May 10 was also a leader of his Saini community and his lifelong association with the Dayanand Anglo Vedic (DAV) educational movement had given him a large student following. As his body lay in the city's DAV College building mobs went berserk, lynching a Sikh home guard.

The bomb attacks coincided with inflammatory propaganda. Reports in the more shrill sections of the Jalandhar press suggested that Hindus in Punjab were gathering arms. A front-page box story appeared in *Akali Patrika* on May 11, saying that Hindus had imported thousands of German revolvers with the complicity of customs men and were storing these in temples to be distributed when necessary and that some of these arms were used by the rioting mobs at Dhariwal.

The degree of terrorist planning, as a security expert points out, goes well beyond the small time hit-and-run tactics hitherto employed. The terrorists who unleashed last fortnight's violence were obviously working to a grand design, and, equally obviously were being coordinated and controlled by some kind of a central comand possibly inspired and aided by elements abroad. Exercises are on in intelligence circles in Delhi and Punjab to trace the key leaders and officials are scanning through the lists of suspected extremists still at large.

Sources in Amritsar assert that the current spate of activity is being organised by people who escaped from the Golden Temple complex during Operation Bluestar. These include key activists like Bhai Kanwar Singh, who headed the group called Akal Federation, Sukhdev Singh Babbar, the chieftain of the Babbar Khalsa which has been reading out new hit-lists to newspaper offices on the telephone, and Balbir Singh, the self-styled secretary-general of the "National Council of Khalistan".

Besides, intelligence agencies have been trying to track the movements of people like dismissed IAS officer Gurtej Singh Brar who was close to Bhindranwale and has since been declared a pro-

Relatives of bomb blast victims: soft and random targets

claimed offender. While confessing to a lack of precise information, practically all intelligence officials now claim that the extremists have completed their regrouping process. And they all point the finger westwards, in the direction of Pakistan (See page 108).

The loudest claims on the Pakistani connection are made by the Punjab Police. Said Director-General K.S. Dhillon in Chandigarh: "We have definite information that the smuggler-extremist-spy nexus is very active and that Pakistan is not only providing training and motivation but also commando support to indulge in killings on this side of the border." While similar assertions have often been made in the past and lack supporting evidence, Dhillon says his conclusions are based on the interrogation of a large number of suspects caught close to the Indo-Pakistan border during the past fortnight or so.

According to officials in Amritsar, of the 20 smugglers arrested in the course of the last fortnight, at least four are spies and six have close links with extremists. The more significant cases include Faqir Singh of Gurdaspur who told interrogators that he, along with Ajit Singh and Kharag Singh, crossed over to Pakistan where the group was picked up by men of the Special Services Group. After a three-hour jeep drive they were taken to a house where two more Sikh youths, Amrik Singh and Rajinder Singh, were housed. All of them were indoctrinated with Bhindranwale tapes and secessionist literature published abroad and were finally given arms with instructions to go and kill Hindus. Faqir Singh is alleged to have told his interrogators that they were looked after well but never allowed to go anywhere, and that a hefty Pakistani officer warned them that if they did not kill Hindus then their own families would be eliminated.

Similarly, in Jammu the police claim to have confessional statements of several young Sikhs including Swaran Singh and Dalip Singh who say they escorted six persons across the border. They have allegedly confessed that they were made to shave their beards and cut their hair, were given training in the use of arms, provided the addresses of link-men all over Punjab and promised hefty sums as rewards for carrying out terrorist acts. According to these two the refrain in Pakistan was that Sikhs were being exploited by Hindus, and that now they should be avenged.

Last week, the Jalandhar police killed Chur Singh, a suspected extremist, in an encounter and recovered from him a .32 revolver with markings reading "A.M. Ibrahimji and Sons, Peshawar and Rawalpindi". To counter the challenge, various intelligence and security agencies have decided to set up joint headquarters at the border towns of Sriganganagar, Gurdaspur and Ranbirsinghpura near Jammu.

But if the intricacies of the terrorrist network baffled security officials, political observers too were no less stumped, unable to fathom the real import of the political explosions that convulsed Sikh politics last fortnight. In the space of just 12 days the Akalis had undergone three major phases of change, each one throwing the party into a tailspin. At the end of it all no one in the Akali Dal could say for sure where he, or his party stood.

It began, curiously enough on May 1 with the pro-extremist group led by Jagdev Singh Talwandi using Bhindranwale's father to stage the kind of coup that could have had Longowal and his loyalists screaming "Mayday". In a way, Longowal's troubles were also of his own making. In one of his weaker moments in early April, when he had gone to pay his respects to Joginder Singh, Longowal had given him a letter authorising him to take any steps he considered necessary to bring about *panthic* unity—unity in the faith—that much vaunted but perpetually elusive objective of Akali politics. This boomeranged on him.

Armed with a similar letter from Talwandi, Joginder Singh dissolved both "factions" of the Akali Dal, appointing a new nine-member ad hoc committee to run the affairs of the party. In this, besides Longowal, Tohra,

Photographs by RAGHU RAI

Digitized by Arya Samaj Foundation Chennai and eGangotri

Talwandi and himself, he included his second son Jagjit Singh Rode, and the new All India Sikh Students Federation (AISSF) President Manjit Singh who also happens to be a brother of Bhindranwale's lieutenant Bhai Amrik Singh who died during Operation Bluestar. Besides, there was former IAS officer Gurtej Singh Brar, sacked and imprisoned IPS officer Simranjeet Singh Mann and former IFS officer Harinder Singh who has sought asylum in Oslo —the three men dismissed derogatorily as the "allied services club" by Longowal supporters.

Akali leaders (from left) Longowal, Badal, Tohra and Barnala: rethinking strategy

Initially, Longowal's reaction to the coup was one of anger and dismay. "This is unconstitutional and uncalled for," he said, and called a meeting of Akali Dal representatives from all over the state on May 17 to put Joginder Singh's formula to vote. Confident of majority support, Longowal was sure he would be able to turn the tables on Joginder Singh.

Such hopes were dashed quickly when even his key lieutenants began to advise him against a confrontation with Joginder Singh at that stage. Said former chief minister Prakash Singh Badal who is generally considered close to Longowal: "The Sikh mood, hurt and rebellious at the moment, is all for the Baba." A demoralised and disconsolate Longowal decided to call off the May 17 meeting, for once seeming to throw in the towel. Joginder Singh returned to Amritsar from his village Rode near Moga, to announce triumphantly: "The two Akali Dals have merged. There are no factions. There is complete unity and the future course of action will be announced very soon."

Tohra (left) and Joginder Singh: power struggle

Politically, it is still too early to say what Joginder Singh, now a frail 83-year-old, stands for. In fact it is also not clear whether he is now acting on his own or is being manipulated by someone from behind the scenes. But he has certainly caught the fancy of the militant Sikh youth, pushing his son's resurgent image to the hilt.

Even his rhetoric is evocative of Bhindranwale. He sits in his modest, dust-covered house which does not even have the luxury of a boundary wall and lectures endless streams of congregating youngsters. He abuses the Congress(I) constantly, saying: "It has indulged in systematic annihilation of the Sikhs in Delhi and elsewhere. We are today a subjugated people trying to regain our lost pride, to heal our wounds ourselves. There is no word of sympathy for us even in the parliament." And he is equally harsh on the Akali leaders whom he accuses of betraying the panth often, adding: "Many of them are cheats." He also has little faith in the judicial inquiry into the Delhi riots. Says he: "Only a fool expects justice from a person who commits atrocities. Can the killer himself be the judge as well?"

Akali leaders find Joginder Singh's rhetoric daunting and his panthic credentials unchallengeable. Though they now hate his guts they are themselves guilty of having propped him up initially. At one time, last month, all roads in Akali politics led to Rode as each one of the senior leaders, including Longowal, met him and tried to get him to intervene on his behalf.

In this rush, many Akalis revealed how fragile their loyalties are. Badal, who has always been seemingly with Longowal, went to Rode and told Joginder Singh that he and his supporters were with him. Besides his acknowledged stature in the party, Badal commands a strong following in Faridkot district, which is his constituency and his aquiescence immediately added to Joginder Singh's popularity in the area. However, Joginder Singh spurned repeated courtship offers from Gurcharan Singh Tohra, the mercurial president of the Shiromani Gurudwara Prabandhak Committee (SGPC) who has manipulated Sikh politics from the sidelines for over a decade now.

Following the logic that the enemy's enemy is a friend, Badal seems to have decided to support Joginder Singh in order to neutralise Tohra who had unnerved other leaders with his populistic ploy of announcing the reconstruction of the Akal Takht. Making no secret of this approach, former development minister and key Badal supporter, Atma Singh, told INDIA TODAY: "We must get rid of this foxy, corrupt character from the presidentship of the SGPC. Only then can the affairs of the panth be put on the right track." He even went to the extent of hailing the formation of the ad hoc committee as an act "in the interest of both Hindus and Sikhs". But more than that, the Badal group thought this was its best chance of countering Tohra even if it meant going along with hardliners for a while.

It is in that sense that the terrorist bombs have strengthened the hands of the Longowal camp. As indignation over the blasts spread all over the country, it seemed that the extremists had overstretched themselves. An outrage as indiscriminate as this got most of the Sikhs upset too. Khushwant Singh demanded stern action against "the bunch of thugs" responsible for the killings and even Joginder Singh had to come out openly in condemnation of the killings—though he appended to it the usual alibi that it was the work of the Congress(I) out to defame the Sikhs.

In the changed atmosphere, Longowal threw his last hand. His Man Friday, former MP Balwant Singh Ramoowalia read out an eloquent statement in Chandigarh on Longowal's be-

The Electrical Business Group of Voltas

Voltas' technology stays in line with current developments. Because Voltas does not have to rely on hand-me-down technology from one foreign associate. Voltas directly draws on state-of-the-art technology from the best in their own field the world over. Like Merlin Gerin, May & Christe, Research Cottrel and Ames Crosta Babcock. That is why it was Voltas which introduced SF6 circuit breakers in some of India's major projects. Vizag Steel, Chettinad Cements, Tata Electric, Priyadarshini Cements, BEST and BSES — to name a few.

Along with the technology, Voltas has the commitment which starts at the top. A management attitude that filters down to everybody, all along the line. Making the impossible happen. Like the new Bajaj Auto plant. Production could not start till delivery of switchgear and ducting. An order normally taking 6-8 months was executed in 12 weeks!

Combined with these is the capability backed by sophisticated manufacturing facilities and quality control techniques. With professionals who are dedicated to super-normal activity. They form a power house of 200 trained engineers and 1800 support personnel. With the experience to put together individual products or complete turnkey projects. Capability attested by the orders got from Panipat and Kota Thermal Power Plants and acceptance by Engineers India Ltd for the Hazira Jagdishpur pipeline.

We at Voltas have proved ourselves with technology, commitment and capability. With one goal before us.

Your confidence is our most important goal.

The tyres we race are the tyres you buy

It's true! The very same tyres that you use on city-roads, are repeatedly tested by MRF on race and rally tracks around the country.

There's a simple reason why. On a race-track a tyre is subjected to severe torture and strain. In just six hours on the track, a tyre goes through more than half its life. Something that would take more than a year on a city road.

Which means we get our test results that much faster. And you get an improved product that much quicker.

It's a testing technique developed by our collaborators B F Goodrich of the USA, people who build tyres for the NASA Space Shuttle Programme.

And since MRF tests city-tyres on the race-track, you can be sure that when we win, you too are winning. With tyres that are setting new standards for grip, handling, mileage, durability and sheer staying power.

At the end of the race, it's over to the MRF technicians... Testing for heat build-up in a tyre with an electronic pyrometer.

The race-track is our laboratory.

MRF TYRES

Tyres with Muscle

MRF Tyres are made in technical collaboration with B F Goodrich Company of U.S.A.

half, announcing his resignation from the presidentship of the Akali Dal. Calling himself a patriotic, peace-loving Sikh, Longowal accused "certain selfish elements within the party" of exploiting the situation by pitting brother against brother. At long last, it seems, Longowal had decided to take a clear stand against the extremists.

The changed situation had also seemingly forced Badal to rethink his own strategy. He now decided that as the leader of the Akali Dal legislature party he should follow in Longowal's footsteps. And so indeed did Tohra who proved to be a man in too much of a hurry as he, immediately afterwards, got the SGPC to reject his resignation in spite of the dissenting note from two of its members.

Longowal and his supporters were,

TRANSISTOR BOMB

Deadly Ploy

IT WAS sophisticated, but not too sophisticated, powerful yet not packing any remarkable explosive strength. It was, quite simply, an effective instrument of murder. That is how an explosives expert described the kind of device used by the terrorists in their attacks last fortnight.

Experts from the forensic science laboratories, the army's bomb disposal squad and the Special Frontier Force have all been marvelling at the simplicity of the terrorist contraption which, in layman's terms, consists of nothing more than a plastic transistor radio casing, a cylindrical, four or five-inch-long bomb connected to a nine-volt battery which, in turn, is switched on by turning the volume knob in the "radio".

The bomb itself is a thick lead cast containing about 200 grams of explosive mix. This, contrary to earlier belief, is not of a particularly sophisticated composition. The greenish powder, according to initial analysis, is a mix of potassium chloride, aluminium powder and sulphur. More or less similar mixtures are often used to make large fire crackers used by marriage parties. But what makes the device so deadly is the thick lead casing that bursts into small splinters under the impact of the explosion causing death and injury all around.

In fact, in all the cases of explosion that occurred in Delhi, hardly any damage was caused to property. The buses in which bombs burst are intact except for some damaged seats and window-panes. Many of the huts in which the fake radios went off still stand unscathed. As an army expert said, this is a classical anti-personnel device, to some extent like the Molotov cocktail.

Experts are intrigued by the detonator used in the bomb. This is unlike the kinds of detonators used by building contractors or even ordnance factories in India. The flat metallic slab, connected to the battery with two wires, lights the fuse setting off the bomb. Experts think the detonator in the terrorist bombs is of foreign make, but its origin is unknown.

Experts also express surprise at the fact that most of the batteries in the recovered transistors are foreign-made, carrying the brand-name of Philips. Although this is not of too

Diagram by B.K. SHARMA

much consequence, as foreign batteries are often available in India, it is puzzling that the terrorists did not opt for one of the numerous local brands. While a few radio casings bear the National Panasonic logo, most others carry the unfamiliar brand-name of "Sober". However, the police are quite sure that all the casings have been manufactured locally and they have been conducting intensive interrogations at Delhi's Bhagirath Palace and Naraina markets, where hundreds of small manufacturers assemble transistor radio sets.

Some intelligence officials see similarities between the explosive device used in the week-end blasts and the ones used by Assamese terrorists to kill over 30 people in Guwahati's Fatasil market in 1982 and as many at the railway station the following year. Only those were much bigger, used casings of steel instead of lead, and were detonated with time devices connected to small clocks. If anything, the workmanship was of a higher order. Said an intelligence official: "In this case we are not worried about the expertise. The Nagas used much more sophisticated plastic explosives to blow up trains in Assam in the '60s. The worrisome aspect is tactical, of using transistors as an attractive booby-trap." However, the so-called bombs found near Parliament House were no more than bundles of explosive powder crudely tied in cloth and hessian, incapable of causing anything more than a loud bang.

In fact, the Delhi administration had been anticipating a bomb attack. As a consequence, the army had been asked to base a company of its bomb disposal experts in the capital. The administration, therefore, was not caught unaware as it was three years ago in the wake of the discovery of a much cruder device planted by Manipur's outlawed Peoples Liberation Army (PLA) in Palika Bazaar. But it was unprepared for the number of bombs.

Officials do not rule out similar attacks in the future. "It's time", said an officer, "that we developed the Northern Ireland mentality. No one will ever touch an unidentified object there." He points out that letter bombs have been used in India before.

The terrorists' idea is to create a fear psychosis. As they are now likely to adopt a different tactic, the police have advised parents to instruct their children not to pick up anything lying around. But even the most optimistic policemen concede that there can be no foolproof defence against a terrorist ploy. This indeed is one situation where the suspicious will have a better chance of survival.

Digitized by Arya Samaj Foundation Chennai and eGangotri

however, playing it cool. Their effort to summon a delegates' meeting on May 17 had been pre-empted by Joginder Singh. But his resignation had now given them the best possible excuse to call for a similar exercise on May 22. "I hope to God the meeting comes about, for it would clearly prove who is the leader in the Akali Dal even now," a Longowal supporter said. But even the Longowal camp realises that to the delegates, the meeting and beyond will be far from smooth.

Even if Longowal's men hold the meeting and get those who attend it to reject his resignation, it will still leave him in a far from comfortable position. In fact it will take some clever manoeuvring on his behalf to prevent a slide back to the old confused state of subservience to the extremists. The biggest threat will obviously be from Joginder Singh. Meanwhile, Tohra too will need watching. He has already opened an entirely new front by announcing the reconstruction of the Akal Takht. This plan may appeal to the Sikh hardliners but would be provocative for the Government and for the sake of communal harmony.

The coming weeks, thus will be crucial from the point of view of Akali politics. The internecine power struggle is now in a decisive stage and Longowal is waging a last-ditch battle, awaiting the outcome of the May 22 meeting (*see interview*). If he wins, it could give him confidence and ability to firmly veer away from hardliners, something he has lacked so far. But if Tohra or Joginder Singh win this, the latest battle of wits, the Government will be faced with a daunting task. Policy planners in Delhi and officials in Delhi sit with their fingers crossed.

But their helplessness with the Akali politics apart, the least the officials can do is look at their own backyard and do something about the state of demoralisation and inefficiency that plague the police and the administrative machinery.

Extremism of the kind seen in Delhi and elsewhere last week became possible because the security machinery in Punjab failed to contain it within the state. In fact they also failed to give adequate notice of such a large-scale exodus of the extremists from the state. Officials point out that while the problem will have to be finally sorted out politically, there cannot be much improvement even on the law and order front unless the morale and efficiency of the Punjab administration is improved.

Time and again, that point has been made by top government functionaries. Former governor B.D. Pande said so and the outgoing senior advisor R.V. Subrahmaniam, an Assam veteran, stressed it in

H.S. LONGOWAL

"I don't fear anything"

ALONG with Parkash Singh Badal, Gurcharan Singh Tohra and Jagdev Singh Talwandi, Harchand Singh Longowal constitutes the quartet that has reigned supreme in Sikh politics for over a decade now. But there is one vital difference—unlike them, he is not a career politician. He was, as he says, a humble preacher for decades after "I was picked up by men of God while I was just a child and taught to be a preacher of Gurbani". His supporters also point out that neither he nor his relatives have ever held office and that he reluctantly assumed the mantle of president of the Akali Dal in the wake of a virtual anti-Badal revolt by Talwandi. Initially, the Akali veterans considered him a pliant tool hailing from the state's politically conscious Malwa region, who had an untarnished image and no great political acumen. And for some time Longowal remained the figurehead he was meant to be.

But times changed with Bhindranwale's appearance on the scene, a phenomenon which ultimately saw him and Longowal operate from the Golden Temple complex, one leading a band of armed men and the other running the Akali Dal morcha that saw over 3 lakh people court arrest. Unavoidably, however, the differences between the two grew and Longowal lived an uneasy two years of sparring. Bhindranwale frequently dismissed him derogatorily as "shanti da punj" (messenger of peace) and with his fiery rhetoric won the Sikh youth away from the Akali Dal to his camp.

Longowal: waiting game

Longowal's image suffered even further with Operation Bluestar in which he was widely accused of having surrendered to the army "like a coward". Ever since his release from detention in Udaipur two months ago, he has been engaged in a desperate campaign to rehabilitate himself. The crucial question in Akali politics thus remains what it has been for three years now: is Longowal finally down and out, or is he still holding his own?

Last fortnight the guesswork became even more pronounced. Longowal faced a coup of sorts from Bhindranwale's ageing father Joginder Singh and, initially, threatened to retaliate. But he bounced back by shrewdly submitting his resignation in the wake of the bomb attacks in various parts of the country's northern states.

Biding his time till May 22 when the district jathedars of the Akali Dal meet to consider his resignation, Longowal, on paper, commands the majority there. A confirmed bachelor, he lives in the gurudwara at Longowal village near Sangrur in Punjab and makes day-long trips across the countryside addressing gatherings and meeting followers.

Although the police have warned him repeatedly of the threat to his life, he has asked the governor to withdraw his armed police escort. Longowal is neither down nor out as Chandigarh Correspondent GOVIND THUKRAL *discovered. He tracked Longowal down to his native village Gidriani in Sangrur district and found him uncharacteristically assertive in the course of a 90-minute interview. Excerpts:*

Q. *Why did you and your senior colleagues like Badal and Tohra choose to resign? Were you scared of extremists or did Baba Joginder Singh's popularity worry you?*

A. We decided to resign our positions to help the *panth* and the Akali Dal forge unity. I am man of God who neither fears anything nor causes fear in anyone's mind. By resigning, we have shown that we do not want to cling to our posts. I had offered to quit soon after my release

Cracking down on terrorists in Chandigarh

the report of the committee he headed on the Punjab administration. Yet, as bombs shook Delhi, the Government's reaction was of the knee-jerk variety rather than mature surefootedness. For example:

▶ R.V. Subrahmaniam was asked to resign and was replaced by S.S. Dhanoa, till now the chief secretary. P.H. Vaishnav of the Punjab cadre was made the new chief secretary.

▶ Inducted as adviser was Shiva Swarup, director-general of the Central Reserve Police Force giving the Punjab administration an unprecedented mix of two police officers (the other one is Surendra Nath) an army general and an IAS officer.

▶ In a flurry of transfers over 60 gazetted officers were shuffled. But more curious was the way transfers of the district

from jail and had asked the jathedar of the Akal Takht to nominate someone else. This renunciation of positions would infuse new blood in the Akali Dal. In this hour of great crisis, this is in the interest of the country, Punjab and the Sikhs. Please write in that order.

Q. ***But don't you think that quitting at this hour of crisis is like leaving the party in the lurch?***

A. You will see, this will make the Dal stronger. Someone who would have merely been pulling our leg is now there to guide and lead us. We accept him as our leader and let him show his worth. Baba Joginder Singh will have to shoulder responsibility. His first statement condemning the bomb blasts shows that he will have to act responsibly.

Q. ***You claim that yours is a democratic party with a proper constitution. Baba Joginder Singh is not even its primary member. How do you accept him as your leader?***

A. He has been part and parcel of the Sikh faith and will follow the policies of the Akali Dal. No one is above the programme and policy of the Dal. If he does not subscribe to that he will not be acceptable to the Akali Dal. Our programme is to fight with *lok shakti* (people power) and not with *loh shakti*, (gun power). The fight is for the unity and integrity of the country, for the betterment of Sikhs within it and for the betterment of Punjab. Make no mistake about it.

Q. ***Baba Joginder Singh made an alleged Congress(I) supporter Inderjit Singh Sekhon general secretary of his Akali Dal. Can you have faith in a leader having links with the Congress(I) which you describe as the country's enemy number one?***

A. That is true. Several people, including a lawyer, have brought documents to show this man's dubious role. He will have to go. Such people have no place in a party of martyrs.

Q. ***Do you really think that your partymen will accept Baba Joginder Singh's leadership? The district jathedars have been summoned to Amritsar on May 22 to consider your resignation. Suppose they reject it?***

A. Ours is a democratic party. The general house is supreme. Its directions will be carried out by everybody. Only the Akal Takht is above it. As for the resignation, I shall consider the issue when it comes up.

Q. ***But why did you cancel the general body meeting you had summoned originally on May 17?***

A. It was not in the interest of the *panth*.

Q. ***You often speak about the crisis facing the country. Please explain.***

A. The ruling party has been consistently following anti-people policies and dividing people on communal and caste lines. Look at what happened in Gujarat. At least there Rajiv Gandhi cannot blame the Sikhs for violence as he has been doing so far in Punjab and many other parts of the country. The fountainhead of violence in Punjab is the Congress party.

Q. ***Do you have evidence to support that charge?***

A. Are you aware that Gurinder Singh, the alleged terrorist caught by the police in Chandigarh after a six-hour gun-battle, was deliberately killed ? He told interrogators that though he had committed six murders and attacked AICC(I) General Secretary Raghunandan Lal Bhatia, he was acting on behalf of a senior Congress(I) leader. A senior police officer told me that he had unsuccessfully sought the governor's permission to arrest two Congress(I) MLA's who he thought were behind violence in the state. Let there be a judicial probe into the Punjab events by a Supreme Court judge. Let there be a national commission. We will prove our charges. Why is the Government so hesitant? Let Rajiv Gandhi take courage. It will help the countrymen understand who is against integrity. It is a pity that our protectors themselves are plundering the country and causing divisions.

Q. ***You have painted a dismal picture. What is the way out of this?***

A. The right-thinking Indians, the opposition parties and some good people in the ruling party must assert themselves unitedly, speak out the truth and fight for the unity and integrity of the country before it is too late. Let us keep the country's interest and not power politics in the forefront. Earlier Jayaprakashji had saved us. Now we have no one left with us. I have requested the opposition leaders to join hands on some programme and get rid of this party that is destroying the country.

Advani-Oerlikon is here.

From Gnats and Kirans to MIGs and Jaguars...some of the most sophisticated aircraft in the world will soon be filling the gaps in the Indian skies. The country's fighting strength will never be the same again.

Engineered by Hindustan Aeronautics Limited, in accordance with stringent international specifications, these supersonic aircraft will delineate a bold new thrust in indigenous technology. Calling for the finest in men, materials and workmanship...as well as the pioneers of welding in India:

Advani-Oerlikon, the company that's designed and developed for HAL, TIG and Submerged arc equipment; made to world standards. As well as our own.

No other name in welding has identified itself so significantly with the changing face of India as has Advani-Oerlikon. It is the name that has helped make possible the most diverse of projects. From giant telescopes and sophisticated submarines to atomic plants and strike aircraft. Eloquent testimonials to the nation's engineering feats.

And to Advani-Oerlikon's welding expertise. Backed by a comprehensive range of welding products and services. Tailor-made to meet the most exacting individual specifications.

When it comes to your next welding job, remember there are no guarantees that cover quality, ingenuity and expertise. Except the name Advani-Oerlikon.

police chiefs of Amritsar and Jalandhar, Bua Singh and S.S. Virk ordered just a week back, were cancelled.

Officers in Chandigarh complain that this kind of arbitrariness adds to the insecurities of men already living under fear of retribution from terrorists. In the same vein they mention the virtual takeover of key jobs in the state by officers drawn from other state cadres. While Dhanoa was brought in from Bihar, the invasion in the police has mainly been from Madhya Pradesh. The director-general, inspector-general (intelligence) and DIG (administration) are all from the Madhya Pradesh cadre of the IPS. Now Arjun Singh's appearance on the scene has also brought in two more joint secretaries and his ADC, an IPS officer. What irks Punjab officers even more is the fact that the governor has even brought junior officers and constables for his personal security from Madhya Pradesh.

It is against this background that they consider the elevation of Vaishnav as chief secretary a kind of victory. And now with a few successes in encounters in the districts and catches at the border, they expect the Government to repose faith in them. Among the encounters, they make particular mention of the capture of Gurinder Singh in Chandigarh after a pitched firefight that left two police sub-inspectors dead.

Similarly, Delhi Police too had something to congratulate themselves about. On the basis of a tip-off from the residents of New Delhi's West Patel Nagar locality, they raided the house of Kartar Singh Narang, a prominent income-tax lawyer and arrested three alleged extremists and unearthed a large dump of explosives, including manuals on assembling bombs and gadgets that connect the lot with the recent blasts. Said a Delhi Police officer: "These people seem to be the real kingpins of the extremist network in Delhi. You may expect more breakthroughs soon." But as in the case of Gurinder Singh, here too the police seemed to be in a bit of a rush. Mohinder Singh Khalsa, one of the arrested men, died in custody and although the police blamed his death on the injuries suffered during the raid on the house it is believed that he could not stand interrogation and died.

Narang being escorted to court (top) and army unit at his residence

Men like Gurinder Singh and Mohinder Singh are much too valuable to be lost like this. Moreover, such deaths leave the Government open to the charge of deliberate murder in order to conceal facts that it could find embarrassing. It is only through careful interrogation of such suspects that the police and intelligences can hope to penetrate the extremist groups and pre-empt their designs.

There is also unanimity in all circles that terrorist activity invariably comes when conciliatory efforts seem to be succeeding, and now if the Government decides to succumb to the pressures from hardliners within its own ranks it will be doing just what the terrorists want. Summing up this viewpoint, former union minister Inder Kumar Gujral says: "The difference between the moderates and extremists in the Akali Dal is bound to continue. The Government should see how it can circumvent the extremist objective of stalling a settlement." Adds retired Lieutenant-General Jagjit Singh Aurora, in the same vein: "The Punjab problem has to be solved regardless of the terrorists. No one has control over the terrorists anyway. If a dependable leadership emerges out of the tussle between the ad hoc committee and the moderates, the Government can negotiate with it. If that does not happen the Government should make a unilateral declaration by May 20. If the Government is generous enough the people of Punjab will accept it."

In government circles, on the other hand, a few doubts still seemed to linger. "Our recent generosity and conciliatory approach should not be mistaken as a sign of weakness," said Union Home Minister S.B. Chavan. Much now depends on how the Government responds. In any plan that it works out, its biggest long-term challenge will be to prop up the moderates while the terrorists are put down in the firmest manner possible. This will not be easy, nor can anything be taken for granted considering the fickle nature of Akali politics in the past. But more than anything else, it will be the popular perception among the Sikhs of the Government's bona fides in wishing to settle the Punjab problem on terms they consider honourable that the future depends. The Government has gone a long way in trying to appeal to the broad Sikh masses. Even as it makes sure that there is no communal retribution for the action of the terrorists, it must seize the opportunity offered by the bombs of Delhi to isolate and pursue the terrorists while it battles on to win the hearts and minds of the Sikhs.

CONGRESS(I)

On the Back Track

THERE were three Nehrus at one place, not to speak of the Gandhi. The portraits of the Mahatma, Nehru and Mrs Gandhi, drawn to dimensions much larger than life, formed so inviting a backdrop to Rajiv Gandhi, the young helmsman of the nation and the ruling Congress(I), that the flash bulbs would not stop popping at the meeting of the All India Congress(I) Committee (AICC-I) at New Delhi's Talkatora Stadium last fortnight.

The occasion indeed called for celebration. It was the first meeting of the 695-member AICC(I) with Rajiv in the chair. The session, apart from ratifying the appointment of Rajiv as the party president last year, also marked the eight-month-long run-up to the centenary-year meeting of the party to be held in Bombay on December 28 this year.

The two-day session, which was dovetailed into a function at the Indira Gandhi Stadium marking the inauguration of the centenary celebrations, and a public rally at Ramlila Grounds where Lata Mangeshkar sang patriotic numbers, could have passed off as a mere jamboree if members had suddenly not decided to question some of the fledgling Government's new policies. The carnival spirit and the predictable bouts of eulogy to the new leader were all there; yet there were times when the mood was decidedly less than festive. The first indication that a section of partymen were reluctant to part with the vocabulary of past years, at least in official resolutions, came with the reports of great resentment at an extended meeting of the Congress(I) Working Committee (CWC) over a brief, no-frill draft economic resolution placed before it by the four-member drafting committee of the party. As it is customary, the four members, West Bengal Pradesh Congress(I) Committee President Pranab Mukherjee, former Punjab chief minister Darbara Singh, Union Defence Minister P.V. Narasimha Rao and AICC(I) General Secretary Shrikant Verma, had prepared the draft on the basis of policy briefings from the Union Finance Minister Vishwanath Pratap Singh. "No change was made to the finance minister's briefing at that stage," Mukherjee later said.

The draft was remarkable for its avoidance of the traditional homilies to socialism: in fact, the word was not mentioned even once. But what really seemed to have dropped like a ton of bricks was a sharp sentence which read: "Policy instruments relevant to one stage cannot be treated as permanently sacrosanct...nor are they ends in themselves." This, together with the total silence of the draft on the continuance of the anti-poverty programmes, was considered by some members of the CWC as the clear sign of a quick march to the right.

The themes that were vigorously introduced into the draft by prominent members of the CWC, reportedly led by Mukherjee, are:

▶ "The public sector is the sheet-anchor of India's progress";

Rajiv addressing delegates at the AICC(I) meet: semantic changes

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

▶ "Our aim is not to acquire technology for the sake of technology. Our objective is to see that the technology to be used is relevant to our basic social and economic concerns. Our foremost objective is to apply modern technology in agriculture and in such productive sectors that employ large numbers of people";

▶ "The AICC(I) expresses concern on the unwarranted upward trend in the prices of some commodities. While seasonal factors contribute to this trend...the behaviour of prices of certain commodities indicates that some unscrupulous elements are taking advantage of the situation"; and

▶ "We must avoid heavy external borrowing and make all-out efforts to mobilise resources."

The background to the debate at the CWC was evidently prepared by a large number of party MP's—45 according to one estimate—writing directly to the prime minister to complain that the budget, and the price revision of basic items, had triggered a price spiral. The correspondents, who are mostly from Bihar and Uttar Pradesh, also mentioned that common people in their constituencies had become restive as a result of the price-hike. Significantly, many of them are of the Congress(I) old guard who have lost their influence after being dropped either from power or from prominence by Rajiv.

PRAMOD PUSHKARNA

Apparently the message of their communication to the prime minister struck a sympathetic chord at the 12-member CWC, the composition of which has been changed only to a limited extent since Rajiv took over as the party president last November. "It was a frank and democratic discussion on the basic policies of the party," says R. Gundu Rao, the controversial former chief minister of Karnataka who is still a member of the CWC. But Rao, Mukherjee and others were reportedly insisting on a thorough revision of the draft economic policy so that the AICC(I) members could be reassured that there was no policy reversal on the cards. Of crucial significance is a sentence that was deleted from the draft: "The strength of the growth impulses of the economy through absorption of modern technology and through appropriate fiscal and legislative changes is imperative to sustain the tempo of industrial development."

A CWC member explained later that the term "fiscal and legislative changes" could be misinterpreted as "a signal for diluting our basic commitment to socialism". And so strong was the attachment of the Congress(I) leaders to accepted semantics of the past decade that the paragraph on Indo-Soviet relations in the resolution on international affairs was expanded to put in a few laudatory statements about the Soviet Union being "our trusted friend in varied vicissitudes". Even the political resolution of the AICC(I), proposed by Uttar Pradesh Chief Minister N.D. Tiwari, restated that socialism was the "chosen path" of the Congress(I).

The mood of the session, however, was palpably subdued compared to what such festivities usually are. The AICC(I) secretariat gave out an attendance figure of 525 out of 695 elected and co-opted members, including CWC members, PCC(I) chiefs and leaders of the Congress(I) legislature parties. But even members admitted that a good section of the crowd was "fake" and "mobilised" by the local Congress(I) leadership of Delhi. Even badges were distributed not strictly according to status. What caused some heartburn amongst seasoned Congressmen was the presence of Ahmed

Patel, parliamentary secretary to Rajiv, all along on the main stage at Talkatora Stadium with a badge pinned on his kurta which was meant for only CWC members.

Even the festooning and putting up of arches and buntings were on a lower key. The only bright spot to the ritualistic session was a 'cultural evening' on the final day in course of which Priya Ranjan Das Munshi, MP from West Bengal, sang Tagore songs to the accompaniment of a full orchestra and Oscar Fernandez, the other parliamentary secretary to the prime minister, clearly running out of musical ideas, sang a distinctly off-key *By the River of Babylon* to the lackadaisical strumming of guitars. The public rally at Ramlila Grounds was well-attended. But there were rows upon rows of hired buses testifying to the resources of the reception committee. And taking no chances, Lata Mangeshkar was billed for the evening.

On the whole, the AICC(I) was tepid and conservative. However, the triumph of conservatism over the pulls of time is nothing new at the AICC(I). For that matter, the resolutions adopted at the Calcutta Congress in 1983 hardly reflect the policy changes that Mrs Gandhi herself had begun since her return to power in 1980—the decision to borrow from the International Monetary Fund (IMF) and the policy of encouraging investment by non-resident Indians being some of them. But, by accepting in toto the traditional and time-worn Congress phraseology, Rajiv gave an impression of hastening slowly, and defused the sullen resentment of a few malcontents within the party.

Though rendered almost inaudible by the din of orchestrated praise for Rajiv and Mrs Gandhi, the bitterness of the sulking Congressmen found occasional expression. K. Brahmananda Reddy, the Andhra Pradesh leader left high and dry, channelised his ire discreetly through a theoretical diatribe against "elitism" and not doing enough "for the villagers". C.K. Jaffar Sharief, former minister of state for railways, and Brajamohan Mohanty of Orissa were even more vitriolic than Reddy: both of them made bold to say that anti-poverty programmes of the party should take priority over modernisation. Finally Rajiv himself provided the soothing touch when he compared the Congress(I) to the Ganga, saying that "like the great river" the party too is a "melting-pot" of ideas.

If nothing else, the session proved that the party and its young president are not yet on the same wavelength. Or, looked at another way, it needs further remoulding if Rajiv seeks instant endorsement of his ideas—particularly on the economic front. Mrs Gandhi did not have to face this problem ever since she made public her 'Stray Thoughts' at Bangalore and split the party in 1969 to fashion it according to her own taste. When the problem arose again in 1978, she split it again.

PRAMOD PUSHKARNA

Rajiv with Tripathi and Darbara Singh: living with the legacy

But Rajiv began with a party which he had inherited, not what he had created from below. Of late he has attempted to bring about a few stray changes in the CWC, such as inducting three new members. They are K. Karunakaran, chief minister of Kerala; Hiteswar Saikia, chief minister of Assam; and A.B.A. Ghani Khan Chowdhury, AICC(I) general secretary who, however, had become a CWC member not for his party post but on his own right. Ironically, V.P. Singh, who is reputed to have the closest mental rapport with the prime minister among all other cabinet ministers, is not even a member of the CWC.

"A generational change in the Congress(I)," said Rajendra Kumari Bajpai, one of the AICC(I) general secretaries, "can begin only through fresh organisational elections." Mrs Gandhi had promised party elections half a dozen times since 1980, but never followed it through. But Rajiv announced at the AICC(I) that the list of Congress(I) members would be published before the party convention in December, and elections would take place in 1986.

Pending the party elections, which alone can enable him to drastically overhaul the personnel at all key places in the Congress(I), Rajiv is lately taking keen interest in restructuring the Youth Congress(I). His hand was evident in the manner of selection of Anand Sharma, the 31-year-old Himachal Pradesh youth leader, as the new Youth Congress(I) president replacing an over-aged and somewhat lack-lustre Tariq Anwar. Sharma's clinching qualification was that he was not propped up by any lobby in the party. Sharma's surprise appointment was followed by posting of a new and unexpected array of political beginners as general secretaries, notably M. Ramesh, only 26 and the youngest member of the Kerala Assembly, and Mamata Bannerjee, the 27-year-old MP from West Bengal. Said Sharma: "Rajivji has given me a new team to work with and I am grateful."

But Rajiv, being the president of the AICC(I) himself, cannot have the same advantage as that of Sharma. He was so entirely taken aback by the criticism by party members of his economic policies and budget that he had to speak to the AICC(I) members summoning the most persuasive of languages. Later on, Shivraj Patil explained the Government's technological policy, and Mukherjee was summoned to defend the budget.

Mrs Gandhi could always afford to take the party for granted because of her unique stature in the party as well as her ability to address the people directly, without the agency of the party. Rajiv is still the most popular leader the country has. But time alone can bring his popularity to the extent of making him independent of the party. Till then, he has to learn to live with an AICC(I) which is his legacy from his mother, and wait till the promised organisational elections sweep most of them away.

PM's SECRETARIAT

Teething Troubles

WHEN the old order changeth, it yields place to new. However, in the formidable edifice of the Union Government, which knows how to take changes in its stride, the only department quick at switching gear to match the personality of the boss is the Prime Minister's Secretariat. And for good reason. The three rows of high-ceiling rooms on the first floor of the capital's South Block are the seat of the prime minister's power, the engine-room of the Government.

Changes indeed were occurring rather too rapidly. Last fortnight, V.S. Venkatraman, the pleasant-mannered special assistant (SA) to the prime minister, who had been appointed only four months ago on the belief that the secretariat needed faceless yet rule-abiding bureaucrats rather than odd job men like former SA to the prime minister, R.K. Dhawan, quietly quit the office to shift to the safe haven of the Commerce Ministry. "The reason for my leaving the Prime Minister's Secretariat is entirely personal," Venkatraman told INDIA TODAY. But there was the inevitable 'other side' to the story: such as his lack of the knowledge of who's who in the party, and his inability to gauge the unstated preferences of his master, Rajiv Gandhi.

The man who rode into office earlier occupied by Dhawan and Venkatraman is Vincent S. George, a former pool typist of the All India Congress(I) Committee (AICC-I) who had been loaned to Rajiv when he became MP in 1981. But, probably in deference to the fact that George was too rough-hewn a replacement for Venkatraman, a man who had become private secretary to the late Lal Bahadur Shastri, his post was downgraded to that of the private secretary to the prime minister. It was really a quantum jump backwards, because the institution of the SA to the prime minister meant much more than the ability to take fast dictation.

Rajiv's broom swept deeper inside. In an announcement that took the Congress(I) circles by storm, Makhan Lal Fotedar, the high-profile political aide appointed by the AICC(I) to assist Rajiv as the party president, was nominated to the Rajya Sabha. The move looked like being preparatory to his passage to oblivion because his main work, that of safeguarding the nexus between the prime minister and the party, was promptly apportioned to Ahmed Patel, one of the three newly-appointed parliamentary secretaries to the prime minister.

Fotedar had never been a part of the official secretariat, though he was always an integral part of the inner coterie of the late Mrs Gandhi, and for some time later on, of Rajiv too. His departure, together with the exit of Dhawan in January, marked the final break of Rajiv with his inherited past. Fotedar and Dhawan had never made a harmonious team, but Mrs Gandhi had reposed so much of her trust in the tough Kashmiri politician that she had made him a witness to her personal will as far back as 1981.

A lot of people seem to think of Dodsal as just a pipeline construction company. In fact, a major part of Dodsal's activities involve plant construction. Dodsal takes on entire projects single handed: Civils. Mechanicals. Electricals. Instrumentation. Everything up to commissioning and start up. To date, over 75 projects worldwide. **Across South East Asia, Africa, India and the Middle East, this Indian company is sketching a new skyline for the earth.**

TURNKEY PROJECTS BY DODSAL

The Bulk Oil Storage Depot, Malaysia: Detailed engineering, supply and construction of civils, mechanicals, electricals and instrumentation.

The Fish Farm Project, Iraq: Complete engineering, supply and construction of the pumping stations and a horizontal centrifugal split-casing pump system (Cap: 500 lit/sec). As well as design, engineering and construction of a 30 metre intake canal.

DODSAL'S PLANT DIVISION: THE TRACK RECORD

In just 25 years, Dodsal has emerged as a major international force in plant construction.

Over 75 projects worldwide: Refineries. Petrochemical and fertilizer complexes. Industrial and steel plants. Nuclear and thermal power stations. Oil and gas field facilities. And desalination plants.

Every single project completed on or ahead of schedule.

Dodsal has a mobile task force of 500 engineers and 3,500 technicians. And equipment bases in Singapore, Baroda and Muscat.

THE UMM-AL-NAR DESALINATION PLANT

This plant, awarded to Dodsal by SIDEM of France, is currently under construction in Abu Dhabi.

Work areas include total mechanical erection of equipment, piping and structurals. 500 kilometres of cable work. Expansion and flaring of 22,000 tubes. Copper nickel welding. And steel shot blasted, corrosion-resistant internal painting.

OTHER DIVISIONS:

Pipeline ■ Manufacturing ■ Transmission towers ■ Civil engineering ■ Operation and maintenance.

COME ON FOLKS! THE SHOW'S ABOUT TO BEGIN WITH SANYO'S VTC-R10PS

Create a home theater of fun and wonderful memories the whole family will enjoy together.

Bring your family into the adventure of exciting video, and give them the experience of creating a home network for themselves. Tune into both PAL and SECAM broadcasts and receive a myriad of UHF/VHF channels world-wide from countries using these systems. Capture the shows you don't want to miss with the 8-Day/1-Event Programmable Timer. Convenience in control and editing is yours with the 10-Function Remote Control Unit, including the Still Image Playback which lets you stop the action scene by scene. Other functions, such as full color picture search, auto rewind, and digital tape counter, plus other convenient controls, give your family a hand in touching the world. It's always showtime with Sanyo!

VRC 100P PAL Betamovie single-unit portable color video camera with 3.35-hour recording

VTC-R10PS PAL/SECAM Betacord video cassette recorder

VTC-R4ME PAL/SECAM/NTSC-3.58/NTSC-4.43 Betacord video cassette recorder

The broom did not relent last fortnight. The last remnant from the past to be swept away was Vijay Shankar Tripathi, an ambitious Indian Administrative Service (IAS) officer in the secretariat who had quit the cadre in 1983 to permanently join Mrs Gandhi's bandwagon. Tripathi's renewable contract expired on April 30. Though he really does not have much of a job in the new-look secretariat, his exit, if it comes, will remain unsung.

With the relics from the past gently but firmly put away, Rajiv's state of the art secretariat now has no civil servant at its pinnacle. This is a dramatic U-turn in policy since Shastri introduced the office of the principal secretary to the prime minister in 1965 and chose L.N. Jha, one of the seniormost civil servants of the time, for the job.

Venkatraman

Fotedar

Alexander

However, when P.C. Alexander, principal secretary to Mrs Gandhi, resigned early this year in the wake of the spy scandal, he was hurriedly relieved of his post and no other principal secretary has been appointed. The secretariat today is virtually headed by Arun Singh, the affable, Doon School and Cambridge-educated senior parliamentary secretary to Rajiv. Thus, at an unripe age of 40 and without any standing in the bureaucratic hierarchy, Singh has to coordinate for Rajiv, his childhood friend, the functions of practically all the departments in the Union Government.

With Alexander no longer there, the secretariat now is no doubt a bit less stiff upper-lipped than it used to be. Its personnel make a homogeneous team: its members are mostly in their late youth, just as the prime minister is, and many of them also share the now-familiar public school or Oxbridge orientation.

Leaving aside the prime minister, himself a Doon School alumnus, the other products of the school in the secretariat are: Arvind Pandey, son of former Punjab governor B.D. Pandey and joint secretary looking after economic affairs; Wajahat Habibullah, director at the external affairs desk; Mani Shankar Ajyar, joint secretary for information; and Arun Singh, the acknowledged master of ceremonies.

In fact, except H.Y. Sharda Prasad, the information adviser to the prime minister who holds the rank of a secretary, there is no other grey-haired bureaucrat in the secretariat, the seniormost of the remaining lot being G.K. Arora, the additional secretary who coordinates with all non-economic ministries. The team is as well-knit as any other old boys' club. It does not lack in enthusiasm. All that it lacks is maturity and experience.

The first sign of maladroitness of the prime minister's close advisers came in with the inexplicable double-mindedness with which Arjun Singh was installed the chief minister of Madhya Pradesh and then, within a day, was sent packing to Punjab as governor. This faux pas in early this year took everyone, including Arjun Singh himself, by total surprise. Though no official explanation was forthcoming for the volte face, it bred the suspicion of wavering minds.

It could still have been written off as the teething troubles of a government of greenhorns had such blunders not kept piling upon each other. But soon thereafter the Prime Minister's Secretariat took the strange decision of clearing the names of defence personnel for bravery awards in recognition of their roles in the June 1984 'Operation Bluestar'. Though the investiture ceremony saw no mention of the controversial action at the Golden Temple, the citations did. And it exacerbated communal passions at a time when moderation alone held the key to the solution of the Punjab problem. It was most probably an unconscious mistake. Still the damage was done.

The ministries cannot possibly be made to carry the can for such follies because practically all decisions of the Government are still vetted by the Prime Minister's Secretariat just as they used to be in Mrs Gandhi's time. A recent example of such mishandleing came when a new deputy chief of the army was appointed superseding two officers of the rank of lieutenant-general. Since deputy chiefs are customarily appointed on the basis of seniority, the two affected lieutenant-generals were up on their feet protesting against the decision. The Government immediately got cold feet and elevated the two generals to the rank of deputy chief, buying peace but losing face.

The political front also presented such identical spectacles of haphazard thinking. In the thick of the Gujarat agitation, B.K. Nehru, the governor, was summoned back from his holiday in Switzerland, obviously in anticipation of promulgation of the President's rule. But, as Nehru succeeded in meeting the prime minister after two days of waiting, he was merely told to proceed to Gandhinagar and stay put at the Raj Bhavan. What was at stake was not Nehru's holidays in the Alps but the Government's capacity to act decisively.

There were similar instances of such official flip-flop galore. Pranab Mukherjee, though summarily dropped from the new cabinet, and castigated by Rajiv himself for being "goody-goody" and "not tough", was made the president of the West Bengal Pradesh Congress(I) Committee. This is despite the fact that Ahmed Patel, acting on behalf of Rajiv, had contacted a large cross-section of partyment on choosing the PCC(I) cheif, and Mukherjee was nobody's favourite.

The reins of the party and the Government were all along held tightly by the late Mrs Gandhi who pioneered the concept of combining the twin offices of the prime minister and the AICC(I) chief. Her grip over partymen was strong enough to ensure that at least party MP's did not talk at cross purposes on the floor of the Parliament. But the recent budget session witnessed the novel spectacle of ministers being heckled from the treasury benches, Congressmen attacking each other, and party MP's raising topics that could only embarrass the Government.

The most trenchant attack on the Railway Ministry, for instance, came from A.B.A. Ghani Khan Chowdhury, the former railway minister who had been shunted off since the last Lok Sabha elections, to the AICC(I) as one of its general secretaries. So outrageous was the tone of the attack of Bhagwat Jha Azad, a former Union minister and a Congress(I) MP, on Abdul Ghafoor, the minister for works and housing, that the speaker had to expunge most of Azad's outpourings from the proceedings. Equally bizarre was the spectacle of K.K. Tiwari, a voluble Congress(I) member of the Lok Sabha who is often regarded as spokesman for powerful coteries inside the Congress(I), taking up the cudgel against the President of India in a criticism that lacked both substance and grace.

Another slip-up at the top was best illustrated by the perverse error of the Government in forgetting the name of Shastri while trying to move a bill for commemorating prime ministers who had died in harness, but only Jawaharlal Nehru and Mrs Gandhi were mentioned in the bill.When opposition member Madhu Dandavate brought it to the notice of the Government that Shastri too had died in office, H.K.L Bhagat, the minister for parliamentary affairs, beat a hasty retreat, withdrawing the bill on the plea that it called for discussion outside the House. "It seems", says Dandavate, "that there is nobody at any level at the Centre who does any comprehensive thinking."

Yet there is no dearth of talents in Rajiv's inner circle, comprising his secretariat and his parliamentary secretaries, including Singh, Patel and Oscar Fernandez. Their jobs are demarcated: Singh being the conduit between Rajiv and the Government; Patel linking him with the party; and Fernandez dealing with MP's and parliamentary affairs. A proud addition to Rajiv's 'think-tank' is Montek Singh Ahluwalia, the suave Oxford-educated economist who is regarded as the lynchpin for many of the Government's recent moves at liberalisation of the economy. Arora and R. Vasudevan also make a low-key yet vigilant team that keeps Singh posted daily on matters ranging from defence to law and order. Singh undoubtedly casts his shadow on the secretariat, yet access to the prime minister is not guarded for any of its ranking members.

What is missing is the fulcrum personified earlier in the galaxy of senior servants that led the secretariat; L.K. Jha, P.N. Haksar, V. Shankar, and, later on, Alexander. An officer of the 1948 vintage, Alexander was taken on board by Mrs Gandhi precisely for his seniority and experience. It enabled him to constantly feel the pulse of the bureaucracy in India. The bureaucracy, however maligned, is the only institution that has a reservoire of collective experience to work out for the chief executive, that is the prime minister, the available options and their implications.

If the new system gets over its incipient problems and shows success, it can signal a welcome de-bureaucratisation of the prime minister's office. But if such follies as are in evidence now keep multiplying, then it is not the secretariat, or any of its executives, but Rajiv himself who has to accept the blame.

—SUMIT MITRA and PRABHU CHAWLA

KERALA

Suicide Scandal

IT MIGHT have been passed off as just another suicide death but when 36-year-old Ramani Menon was declared dead in a Trivandrum hospital on May 3 after she had consumed lethal pesticide, the shock waves were felt throughout the academic community in Kerala. Not only did the suicide raise a number of questions on the running of privately-managed schools in general, but it also disturbed the calm of the local Carmel Convent of which Ramani's daughter, Vandana, was a student —the suicide followed the refusal by school authorities to promote Vandana from standard nine to 10.

Ramani (top) and Vandana: strong feelings

Vandana, said to be a brilliant student, had been detained in the ninth standard because she was three marks short of the minimum pass mark in mathematics though she had first class marks in all other subjects. According to her father, C.B. Menon, an engineer at the Vikram Sarabhai Space Centre, she was deliberately detained because she did not pay for the school bus donation fund and did not take special tuition classes arranged by the convent authorities. While the headmistress of the school turned down Ramani's requests, she said she would permit Vandana to sit for re-examination in the subject in June when the minimum essential test (MET) would be held.

The MET, held after schools reopen for the academic year, is conducted for failed students in all schools in Kerala. The students, however, are required to score at least 90 per cent marks in the subject they are being re-examined for. Many schools are alleged to use this opportunity to secure huge donations from students who wish to be promoted. School authorities also often arrange special tuitions for students—again after charging an exorbitant fee.

The Carmel Convent as a practice, it is alleged, fails average students in the ninth standard so they can secure a cent per cent first class result for the final year Secondary School Leaving Certificate (SSLC). Said M.R.T. Nair, a college principal: "By not allowing average students to attend the tenth standard these convents claim they have very good coaching, which results in anxious parents rushing to the school with fat donations to get children in."

The convent authorities, meanwhile, claim that Vandana was only an average student. Said Menon: "I have been signing her progress card so far but the new progress card submitted by the authorities shows my wife's signature, which has been forged." He also alleged that his daughter was detained because she had only paid Rs 508 of the Rs 1,000 demanded for the school bus donation. Sister Rene, the headmistress who initially refused to meet the press, later conducted a press conference to clear the issue. The management, she maintained, had not collected any compulsory donations from parents though it had accepted interest-free loans for the purchase of the bus. She denied that the school authorities insisted on students taking tuition from school teachers.

The public outcry that followed the suicide was volatile. The Carmel Convent was stoned by an angry mob of college students. State Education Minister T.M. Jacob immediately ordered an inquiry into the incident. "We will withdraw recognition of the Carmel Convent if the report proves that corrupt practices existed in the school," he said.

Of the 11,726 schools in the state, 7,288 are privately run, mostly by missionaries. Though many of these schools receive aid from the Government some reportedly demand donations from teachers as well as students who wish to join the school. Two schools have been derecognised since Ramani's death. Indeed it may not be just the future of a single school that now rests on the probe, it may be the end of an entire system of education.

Yours for years

Apcolite Super Acrylic Emulsion from Asian Paints

Apcolite Super Acrylic Emulsion doesn't just give your walls a super smooth finish and an attractive sheen. It also ensures those beautiful looks stay that way for years. Here's why:

100% Pure Acrylic Emulsion

Apcolite Emulsion is a superior, 100% pure acrylic formulation. That's why it's tough enough to withstand the extremes of any weather — on both interior and exterior surfaces. Year after year.

Fungus Resistance

Yes. Apcolite Emulsion is specially formulated to prevent fungus growth. Even in the monsoon or the most humid climate. Just one more reason why they stay good looking. For years.

Longer lasting beauty

Apcolite shades don't fade. What's more, they're easily washable. So your walls keep that freshly painted look. For years.

Computer matched perfection

Muted pastels. Brighter, bolder hues. The rich radiance of the whitest white. Each shade computer matched to perfection. So that there are no colour variations from batch to batch. Ever.

Apcolite Super Acrylic Emulsion. The luxurious look that lasts. For years.

OBM/4657

A spectrum of excellence **asian paints**

TRIPURA

Trouble Prone

WITH its tiny size, its isolated location, its lowest per capita income, its rugged terrain and an absolutely stagnant economy, Tripura has long been an obscure border state dimly remembered only for its tangy pineapples and its Marxist Government—fire-eating but fairly inefficient. Of late, however, the state has acquired the new and doubtful distinction of being the prime trouble-spot in the North-east, threatening to remain a seat of extremist violence in the zone even after the 20-year-long legacy of trouble in neighbouring Mizoram is settled through peace talks between the Centre and rebel leader Laldenga.

The difference is: while Laldenga has accepted the Indian Constitution, the Tripura National Volunteers (TNV), the underground militant group of tribals now preaching secession, believes in an "independent Tripura", freed from the Indian Union and rid of its nearly 1.5 million non-tribal Bengali settlers. Though heavily outnumbered, the six lakh tribals are well spread out over two-thirds of the state's territory.

And the TNV, though small in size, is determined enough to paralyse the state. Its activity has spurted following the announcement by the Left Front Government that it would hold elections to the autonomous district council, comprising 68 per cent of the state's area where 31 per cent of the population—mostly tribals—lives. The elections are likely in June, but the TNV guerrillas are now fully in command of the villages, the forest tracks and the roads that snake along between hills. Since an amendment to the Constitution in January this year, by which the autonomous district council in Tripura was included in the Sixth Schedule, the TNV has feverishly stepped up its activity, killing 31 men in attacks and ambushes. The objective being not to allow either the Left Front or the moderate tribals to take over control of the autonomous district council.

Bijoy Hrankhal

Though sporadic killings had been going on previously, the goriest of this year's incidents happened at the hamlet of Satraichara in the North Tripura district. On March 19, seven non-tribals of the locality had stepped into the tribal-dominated interior pockets for fishing. All seven, including a 12-year-old, were bayoneted to death. It was two days before the state police and Central Reserve Police Force (CRPF) parties could arrive. But their arrival was greeted with further violence. On April 5, the guerrillas ambushed with deadly accuracy a police vehicle that had pulled up at the same spot: three policemen, five CRPF personnel and a Home Guard were mowed down by the TNV men in an operation that lasted only a few minutes. No one was arrested and panic was so pervasive that no witness came forward to identify the assailants.

Patrolling a Tripura street: combating extremism

This was only the repetition of a pattern of violence in Tripura. Last year, the TNV had killed 62 people, including 21 members of the security forces, but only one of its members was shot dead in retaliatory action. In February this year, its killer squads liquidated Binanda Jamatia, an important former extremist who had come overground and had joined the Marxists, in a daring action even though Jamatia was protected by the state police.

So widespread is the panic caused by the extremists in Tripura that the buses of the state-owned corporation would not ply along the roads just beyond the capital of Agartala after four in the afternoon. Forestry operations in the state ground to a halt as the TNV began selecting the unarmed forest guards as its targets. Over 60 per cent of teaching posts in rural schools cannot be filled up because non-tribal teachers do not dare go to the villages and invite the prospect of getting killed. Even the morale of the police force has sunk low: there are reports that in some areas of the South Tripura district police personnel have been generously donating to the coffers of the extremists to stay away from trouble.

The mastermind of the TNV is Bijoy Hrankhal, a 30-year-old tribal leader who in 1982 assumed control of the underground movement. Hrankhal is a Christian, a rarity among the Tripura tribals and, being a Kuki, he is ethnically a close cousin of the Mizos. Hrankhal is also better educated than his compatriots, having been schooled at Shillong's Don Bosco. He joined the Tripura Upajati Juba Samiti (TUJS), a moderate political party of the tribals, in the mid-'70s. But he always had his own ideas on the subject of tribal autonomy. In 1979 he met Laldenga in Delhi and was instantly converted to extremism. Around then he began putting together the nucleus of the TNV from among the ranks of the tribal poor, mostly school drop-outs of an impressionable age who were easily swayed by Hrankhal.

Before his escape to the Chittagong Hills, Hrankhal had remote-controlled the ethnic riots of June 1980 in which over 2,000 people—mostly Bengalis—were killed. But the Left Front Government of Chief Minister Nripen Chakraborty pussyfooted over his trial, and he escaped from literally under the nose of the state Government even though it was trying to placate him by offering him soft loans from the state-run rural bank. Says Nagendra Jamatia, general secretary of the TUJS and an MLA: "Bijoy Hrankhal is a Frankenstein created by the Marxists. They hoped that the Frankenstein would only kill us, but

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

now he is eating his maker."

Hrankhal's *singlung* (meaning the place of work) is at Thangnang, deep inside Chittagong Hill Tracts in Bangladesh and 30 km from the rebel Mizo National Front (MNF) tactical headquarters at New Lanka.

It is from their sanctuary under the benign eyes of the Bangladesh army that Hrankhal's men have been operating in the past few years. Now they have spread out to the northern borders as well, dotting the state's 839-kilometre-long international border with over 10 "transit posts", or smaller sanctuaries where the rebels can escape after operations within Tripura. The men are not many—between 150 and 200. But they have to their advantage the inhospitable terrain, the jungle cover and the inefficiency of the state law and order machinery. Says Nilmani Sarkar, a Bengali trader at Teliamura, only 43 km from Agartala: "The raj of Agartala does not go beyond the roads. If the state cannot protect the life of a witness living in a village, why should anyone come forward to give evidence?"

Ironically, the ruling Communist Party of India-Marxist (CPI-M) is the only political party in the state armed with a strong organisation among the tribals—the decades-old Tripura Gana Mukti Parishad with 55,000 tribal families listed among its members. And the Left Front Government has a strong tribal representation: Dasarath Debbarman, president of the Parishad and veteran leader of the tribal uprising against the former rulers of Tripura till the princely state's annexation in 1951, is now the deputy chief minister in Chakraborty's cabinet.

In 1980, when ethnic hatred caused by years of tribal alienation from land first engulfed Tripura, the Centre had recommended strong measures, including deployment of the regular army. But the CPI(M), wary that it might recoil on its own support base among the tribals, resisted army deployment and instead adopted a lenient approach towards the extremists with the hope that they could be persuaded to play ball with the state Government. Of the 500-odd people arrested in connection with the 1980 riots, cases have been kept alive only against 23. A number of the those let off by the police are members of CPI(M)'s lower committees.

The Left Front's conciliatory policy towards the extremists paid only short-term dividends. The most spectacular of its gains was the surrender of Binanda Jamatia, a front-ranking extremist, with 73 of his followers to the state Government in 1983. Chakraborty himself presided over the function held to mark the surrender. As usual, the cases against Jamatia and his followers for offences ranging from murder to sedition were dropped. Jamatia was overnight made a member of the central committee of the Parishad. As long as the wave of surrenders lasted, 296 extremists came overground. The state Government employed 103 of them in its various departments, another 100 were given help to either start businesses or farm.

The party unit at the state is gripped by an insoluble leadership crisis. Chakraborty is in such indifferent health that he is often laid up in bed for days together.

THE PARISHAD can still draw votes for the CPI(M) candidates from the tribal constituencies, testified to by the fact that 15 of the 17 reserved tribal assembly segments (constituencies) witnessed the Left Front candidates gaining leads in the last year's Lok Sabha polls. But, as a Parishad leader himself put it candidly: "It is one thing to vote for a political party and another thing to turn against long-term tribal interests. After all, as long as the Left Front is in power, the security forces would not dare disrupt the tribal way of life and resort to large-scale torture, as they are doing in Mizoram and Manipur."

The front is now stridently opposing a Central suggestion that the Disturbed Areas Act be extended to the whole state and the regular army be deployed. Instead it wants three or four more battalions of paramilitary forces to be placed under its command. On April 15, the front resorted to the overused Marxist weapon—a 24-hour general strike—to stress their demand for more paramilitary forces. The Congress(I), not to stay behind, also called for a bandh on the same day—though only for 12 hours—demanding army deployment and promulgation of the Disturbed Areas Act in the state. Says Ashok Bhattacharya, the controversial Pradesh Congress(I) Committee president: "The Left Front Government should be removed in the national interest. There is no short cut to it."

That is definitely a prescription for overkill because the Marxist support base in the state is already shrinking. In 1978, the Front wrested power from the Congress by winning 56 of the 60 seats in the state Assembly. Five years later the Front's strength shrank to 39. In the 1984 Lok Sabha polls, Front candidates won in only 30 of the states's 60 assembly segments including the 15 reserved segments. Thus the Front could win only 15 of the 43 open constituencies where Bengali non-tribals are in a majority. The demographic reality of Tripura, with its overwhelmingly large settler population is such that no party can rule the state without the support of the Bengalis.

In fact the Bengalis had accepted the CPI(M) after years of misrule by the Congress during which unemployment spiralled, law and order broke down and cynicism crept into every sphere. But the wheel is about to turn full circle because the Left Front Government did nothing except provide some cosmetic relief. The Front responded to the unemployment problem by staffing the Government with more and more people—5,000 every year—but there was no concerted attempt to tap the state's potential revenue earners: fruits for canning, processing and export; high quality rubber for value-added use. The Centre compounded the neglect by refusing the licence for a paper mill, by dilly-dallying over a second jute mill and by refusing to extend the railhead beyond Dhar-

The Vedas enshrine quality of life

Atharva Veda

This last book of the Vedic canons, is a household book of prayer for better life, and is an unforgettable art of enchantment and magical charms.

A garment is the symbol of sovereignty and freedom. The royal robe wraps the king for authority and responsibility. Brahaspati covers Soma with the royal attire. So he becomes protector of his people against oppressions and deprivations. To his people he appears resplendent and heroic in achieving eminence.

*Atharva Veda has ample references to our rich heritage. Even today, **Mayur** fabrics uphold the same splendid tradition.*

At Keltron Controls too, we're always restless to conquer new horizons.

Today, Keltron presents a total integrated control capability comprising fourth generation digital distributed control systems, state-of-the-art process computers and a range of application software, process models and optimization packages.

Within just five years of inception, Keltron controls have revolutionized process control technology in the country. Bringing the expertise of an international stalwart in the field.

The entire corporate effort at Keltron Controls has been to achieve self reliance in technology, production and R&D.

Leaders
India's first successfully commissioned totally automatic control system at the Tuticorin Thermal Power Plant was installed by Keltron Controls.

R&D
Keltron stakes nearly 6% of the total turn-over in R&D. This impressive investment has a record to match. Keltron Controls have made significant advances on the Controle Bailey design. Our list of developments include Surveillance Monitors, Alarm Annunciation Systems, Microprocessor based Temperature Scanners, Sequence of Events Recorders and Programmable Logic Controllers.

Infrastructure
At Keltron Controls, we have systematically built up a complete infrastructure of our own manufacturing bases. From minor components to major equipment such as pressure transmitters, pneumatic operators, converters, monitors. We also have the backing of Keltron's Cybernetics Division for microprocessor based systems, engineering work stations, colour graphics, networking and software.

9020 System
The present 9020 system of Controle Bailey endorses a sophisticated third generation design. Its most notable features are split architecture to facilitate more efficient control panel layout, the personalization facility and surveillance monitors that simplify maintenance and reduce downtime.

This system, effectively indigenised and upgraded by our R&D has proved to be an unprecedented success wherever it has been setup.

The system also offers the full range of completing items: Deltapi transmitters (Kent Teighi), water and gas quality analysers (BBK), Turbodem Logic Controllers (CGEE ALSTHOM), Capacomp indicators (Cammille Baeur), PWM based UPS (BBS).

Projects
Today, our orders strength exceeds Rs.108 crores and includes the country's major corporations such as BHEL, IOC, HPCL, Malabar Cements, Bhilai and Vishak Steel Plants, Kribhco Fertilizers, power plants for the states of Gujarat, Tamil Nadu, Andhra Pradesh, Uttar Pradesh, Madhya Pradesh, Karnataka, Haryana, Maharashtra.

Our large fleet of top-flight engineers can immediately get cracking on your projects. Lead time for execution can be as low as six months.

Future
A quest for ever more refined systems has our engineers engrossed in wider explorations. To develop advanced Programmable Controllers, Microprocessor based Voice Annunciation Systems and Data Loggers.

Now our sights are set on more ambitious fourth generation digital distributed control systems: Hitachi's HIACS 3000 & BBK's P4000.

No matter how good the present, we are always working for a better future at Keltron.

KELTRON
CONTROLS

Discover Nepal

Blaze Tours & Travels invites you to Nepal. With 10 Holiday Packages — from Rs. 250 to Rs. 2600. For 4 days and 3 nights in Nepal.

Nepal, the mountain kingdom

Picture for yourself a holiday resort surrounded by imposing mountains. Take the special mountain flight and see the glorious Mt. Everest from the air. Plan a sightseeing trip of exotic temples and ancient, tranquil monasteries. Blaze will show you around.

Stop a while, shop a while

Kathmandu's New Road will dazzle you. With its stores laden with goods from around the world. Each shop is a treasure trove of things you've always wanted. And best of all, Indian Rupees are welcome everywhere.

Lady Luck awaits

The only casino in the sub-continent is in Nepal. And it's quite an experience. Roulette, blackjack, pontoon, slot machines, paplu, rummy and more. Winner takes all.

Blaze gives you the best

Blaze is an established name with 24 offices all over India. Staffed by travel professionals who will plan your trip with care and competence. And the Blaze staff in Kathmandu will look after you .... all the way.

Contact your local Blaze office today.

No passport, visa or foreign exchange requirements for travel to Nepal.

5-star luxury

Blaze offers you a great choice of hotels — 5-star luxury or inexpensive economy. Either ways, it's a bargain.

BTT BLAZE TOURS & TRAVELS PVT. LTD.

looking after you... all the way

manager, only 17 km into Tripura from the Assam border but a good 200 km from Agartala.

"Tripura has always been discriminated against by the Congress. It is more now because the Left Front is in power," says Bhanu Ghosh, the general secretary of the CPI(M)'s Tripura state committee. But, though Ghosh would be the last person to admit it, the party unit at the state is gripped by an insoluble leadership crisis. Chakraborty, its pillar as well as its architect, is 79 now and is in such indifferent health that he often has to be in bed for days together. Chakraborty, together with Dasarath Debbarman and 73-year-old Labour Minister Biren Datta, regarded as the party's "ruling troika", are in such bad health that all of them were absent from work for most of last fortnight in April. Says Bhupen Datta-Bhowmik, a bitter critic of the Left Front who edits *Dainik Sangbad*, Tripura's largest-selling Bengali daily: "The main constituency of the Marxists—the backward classes among both tribals and Bengalis—has now seen that the Left Front cannot deliver the goods and that jobs do not grow on trees. And the Marxists are too old and too sick to change now, to take bold new steps, to rise above circumstances."

With no state backing to improve the economy of Tripura, the main thrust of economic survival among the Bengalis is towards jobs and land, both of which are limited. Significantly, the acts of extremist violence are almost invariably sparked along areas where tribals have been recently alienated from their land. Hrankhal's men may not yet have mass support in the tribal areas but they are surely gambling on the tinder-box situation created in the state because of the growing pressure on tribal land, dwindling resources and the state's general stagnation.

The TNV proposes drastic remedies —like turning out all those who entered the state after 1949. The state Congress(I), on the other hand, was opposed to the very concept of autonomous district councils till very recently. Meanwhile, the CPI(M) party bosses, operating from their spick and span office in otherwise seedy Agartala are caught in a cleft stick: they are unable to reconcile the conflicting interests of the Bengalis and the tribals. Till now, the way out remains the speedy economic development of India's poorest state. If that is delayed, the state may—in a much less cheerful sense that Marx had predicted—just wither away.

—SUMIT MITRA in Agartala

CALCUTTA

Fairy Tale

CALCUTTA's 'angel of victory' poised perkily on the dome of the Victoria Memorial, has started revolving once more. Although, typically, nobody really knows when the mechanism moving the angel stopped functioning the defect was only noticed in 1978. Last fortnight's announcement came as a pleasant surprise for the sentimental Calcuttans; the fact that a gust of wind on the wings of the angel will make it 'fly', also somehow spells better times.

But the memorial's curator Professor Hiren Chakaraborty sees the process of its rehabilitation as a fairy-tale beginning March 1983 when the trustees announced a reward of Rs 10,000 to anybody or any organisation that could get the angel going. The response was overwhelming. "We were flooded with a wide range of offers, from ordinary maistries, from companies and even foreign experts," Chakraborty recalls, leading to the problem of who would finally be selected to do the job. The absence of technical records pertaining to the mechanism only confounded matters further.

PRADEEP SHAH

The angel on Victoria Memorial: good omen

Help came from an unexpected quarter. And old British engineer, whose name the curator cannot seem to recall, wrote in all the way from Edinburgh that, among other things, the figure of the angel had been designed by an English sculptor called Lindsay Clarke and cast into bronze by George Mancini. The final three-and-a-half tonne sculpture was shipped from Cheltenham, England, to India in 1920.

Armed with sufficient information, the trustees set up a three-man expert committee in the middle of last year to choose a competent agency to undertake the repair work. Architect K.N. Pathak, structural engineer Arup Mukherjee, and mechanical engineer Madhusudan Bhattacharya, all from Jadavpur University, then settled on Jessop and Company, which waited for the monsoon to pass. There on the job, S.J. Robertson soon got into the act—he jacklifted the angel and its one-and-a-half tonne revolving shaft inserted into the dome and discovered that the years of neglect had jammed the bearings, causing the shaft to tilt by three-quarters of an inch. According to the memorial's administrative officer S.K. Dasgupta: "This was a dangerous condition since the five-tonne weight, instead of revolving, was straining on the dome which could have cracked."

It was also discovered that the mercury in the bearing case, provided to prevent lightning from fusing the bearings and dirt from clogging them, had mysteriously disappeared. The problem having been located, it took four months to set right. However, "the whole operation hardly cost us anything," says the curator. Jessop provided their services free of cost, the Victoria Memorial Trust having to pay only for some mercury and oil.

By February the angel was seen to be revolving but the trustees decided to play safe for another two months and a few more signs of movement before breaking the news. Musing over the happenings of the last so many months, Chakraborty remarks: "Now that the angel has started moving, some people are even insisting that one day the trumpet held in its hand will also blow." That will indeed be the day for Calcutta.

The Biggest Advance in Fourth Generation Computer Technology

is also the smallest

Introducing

MICRO GALAXY

to fit your needs . . . space . . . budget

The height of fourth generation computer sophistication — now miniaturised to meet your needs. Your space. Your budget.
The famed muscle power and proven reliability of the Galaxy 21, confirmed by about a 100 installations and reaffirmed by mounting repeat orders, is now brought to you in a more compact form — the MICRO GALAXY from DCM Data Products.

Hi-Tech-Low Cost

In addition to the advantages of miniaturisation — the MICRO GALAXY offers you a choice of Operating Systems. Including the internationally renowned CP/M compatible OS — opening out a rich world of software applications for you.

Software Parade

For guaranteed data security and higher throughputs — there is the UNIX-like filing system of MULTOS with the ever adaptable BASIC and a host of languages — COBOL, PASCAL, FORTRAN — strictly conforming to international standards, protecting your investment through transportability.

Follow the World Leaders: Use latest 'Removable Winchesters'

Traditionally, Winchester drives are sealed and fixed. But technology has moved on and DCM's MICRO GALAXY offers you the world's latest — the 'Removable Winchesters' — exactly the same drives as offered by gaints such as **AT&T and Honeywell** on their product lines. This technological innovation offers you the most reliable back-up, eliminating the necessity for expensive Mag tapes/Streamers or the lesser dependable Floppies.

Do you want to create time?

It has an on-line symbolic debugger which cuts down on development time, thus actually creating productive time. Increasing your programmer productivity by 500%. The Micro also offers you standard DBMS similar to the world famous CINCOM TOTAL.
Rich communications software offers you distributed processing through the networks of Spectrums, DCM-Tandy TRS 80 Models 4s and MICRO GALAXYs.

Readymade... or Tailormade

A host of hi-performance application packages come with the MICRO GALAXY. But if you believe in tailormade packages, DCM's team of experienced system engineers will customise programs to meet your needs.
And all this technological convenience comes to you with the reliability of the famed DCM support service — to give you the confidence you need today and must have tomorrow — optimising your investment — now and forever.

Act Now! Don't let Technology pass you by.

MAHARASHTRA

Fuelling Fears

THE LATE Y.B. Chavan once lamented that "Bombay is a part of Maharashtra but Maharashtra is not a part of Bombay." That sentiment is still shared by many Maharashtrians, who now account for only about 35 per cent of the city's population and consequently feel they are slowly being squeezed out of jobs and housing by a tide of outsiders. Many demands for the exclusion of foreigners have been raised in the last decade. Yet the city's non-Maharashtrian majority had no reason for worry till Shiv Sena chief Bal Thackeray successfully played on this feeling of resentment and triumphed in the Bombay Municipal Corporation (BMC) elections last month.

Last fortnight, Thackeray made his intentions clear. At a victory rally in the city's sprawling Shivaji Park he stormed: "All those who came here after 1974 will be kicked out." Anxiety turned to near panic when Chief Minister Vasantdada Patil seemed to publicly support Thackeray by saying there was need to restrict entry into the city. Even though Patil later clarified that he was merely repeating what experts had been saying all along his statement, coming as it did in the wake of Thackeray's threat, served only to further fuel non-Maharashtrian fears.

Thackeray's and Patil's statements raised the expected furore. In Parliament Prime Minister Rajiv Gandhi was compelled to state categorically that there would be no restrictions on free entry into Bombay. And Thackeray admitted in an interview that his eviction plan could not be implemented without the cooperation of the Central and state governments. He promised, however, that he would tackle the problem of unauthorised squatters on a war footing. "The BMC can do a lot if it implements its demolition programme mercilessly." As for the squatters, he says: "Let them quit the city. We won't provide them transport. Sometimes you have to use force to benefit the people."

There is no denying that many of Bombay's problems are widely perceived as arising out of a burgeoning population. Home to 4.1 million people in 1961, the city has now more than doubled its population and civic amenities today meet only a fourth of the need. Madhav Gadkari, editor of *Loksatta*, feels: "There is no alternative to restricted entry—not just from outside the state but from within Maharashtra itself. Unfortunately the whole issue has been given a Maharashtrian versus non-Maharashtrian image." And retired high court judge R.R. Bhole says: "The Constitution does not say a person can move into any house and occupy it. Ultimately the interests of society are paramount over those of an individual."

However, more liberal sections of the city's residents were outraged that the suggestion of restricted entry was even being discussed seriously. Bombay People's Union for Civil Liberties (PUCL) president and eminent jurist H.M. Seervai came out strongly against what he termed a wholly unconstitutional measure. PUCL secretary Sydney Pinto pointed out that the cosmopolitan nature of Bombay had acted as a magnet for people of talent and enterprise, making it the biggest financial and industrial centre in India. And lawyer Indira Jaisinh, who in 1981 filed a writ against demolitions undertaken by the BMC, felt the sharp increase in the city's population was due to natural causes rather than migration.

Thackeray haranguing an audience: playing to the gallery

HOSHI LAL

But Thackeray says: "Our movement is not an Assam for the Assamese type of agitation. My call is don't share our joys only, share our sorrows also. I will accept even Muslims if they qualify." At the same time he insists that Bombay's name should be changed to Mumbai. "We will pass a resolution to this effect. We don't bother whether anyone likes it or not. Whose permission was taken before Madras was changed to Tamil Nadu?"

The only solution to save the city, as Gobind Talwalkar, editor of the *Maharashtra Times*, sees it is to launch a massive low-cost housing scheme, but in this area the authorities have been extremely negligent. And last week the Central Government's allocation of a mere Rs 50 crore for the five-year plan to improve the city, against the state Government's request for Rs 1,000 crore, only succeeded in adding to the Bombay citizens' feeling of neglect.

GARMENTS

Material Benefits

FOR OVER 40 garment exporters from Ludhiana, it's been a rags to riches and almost back to rags story. But the story took several long years to tell. In 1972, the infamous rags case—where garment exporters imported crores worth of "rags" as raw material and sold them as second-hand western clothing—first rocked the Parliament. In 1975, the Public Accounts Committee (PAC) demanded a judicial probe. In 1982, after considerable time and money had been spent on the trial, the CBI case was abruptly and noiselessly dropped by the Government. And now, 13 years after the story began, some action has finally been taken against the guilty garment exporters.

The action, some say, hardly fits the offence. Following an internal review ordered by the joint controller of imports and exports, partial debarment proceedings have been ordered against 18 of the 40 firms that had been served notice under Section 8 of the Imports and Exports Act. These include: Punjab Kesari hosiery factory, Surinder industries, Raj Parmukha hosiery factory, C.L. Jain hosiery mills, International woollen mills, TCM woollen mills, Rai Bahadur knitting works, Oswal woollen mills, Seth weaving factory, Marjara hosiery factory, Kansal hosiery factory, Ajay woollen and textile mills, Baldev knitting and weaving mills, Nagesh hosiery, Guide knitwear and Belsize knitting mills. All these firms have been debarred for a period from two to five years. Seventeen other cases have yet to be decided.

Although it has ended with a whimper, the rags case started with quite a bang. It became the national scandal of the '70s. The garment exporters were misusing their import quota to sell the rags, worth crores, directly to garment retailers in metropolitan cities. Under the Imports Handbook issued in the early '70s, the exporters were indeed permitted to import rags as raw material on the basis of their export performance. However, many of the firms doing so were woollen mills and could not possibly have used these rags as raw material. Rags are actually used by shoddy and blanket manufacturers. Once imported, the firm owners sold their rags directly to retail outlets all over the country, and why not, since what they called raw material was actually second-hand jeans and other fashionable western apparel much in demand all over the country.

Since the amount of material being shipped in daily was worth several crores, newspapers avidly followed the story and in '72, the ever-alert Jyotirmoy Bosu raised the issue in a call attention motion. At his vociferous best in the Parliament, Bosu said: "Where is the CBI, sir? It is nothing but a pocket edition of the people in power...this is nothing but a hoax." In March '73, the Government ordered an inquiry by the CBI.

However harsh Bosu's allegations may sound, they had some element of truth in them. The CBI, which set up a separate cell to investigate the case, discovered that there was more to it than met the eye. A letter of authority (LOA) given to one of the firms, Greatway, revealed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that the original licence was the State Trading Corporation's (STC) and an LOA was given to the firms. What was interesting was condition No. 4 in the letter which clearly stated: "The imported goods will be processed in the factory of the letter of authority holder."

The CBI registered 43 cases in various courts. The firms, many with influential connections, kept getting the dates of hearing postponed. Said a leading garment exporter who did not want to be named: "It was well-known that the imports were within the knowledge of the Government. Many of us attended a meeting in Delhi where a minister was also present. Not surprisingly, the minutes of that meeting actually disappeared." Other firms also testify to the fact that the Government had been in the know all along.

Some firms, like Greatway, fought the issue in court, tooth and nail. Greatway argued that since the licensee was actually the STC, it was up to it to impose any conditions about the use of imported raw material. Documents signed by S.K. Jutshi, controller of imports and exports, in fact, seem to suggest that the rags were being officially allowed in. In reality, it turned out, there was no formal agreement between STC and the garment exporters.

Bosu: starting the probe

While the CBI inquiries were still going on, Jyotirmoy Bosu, heading the PAC went into the issue separately. The PAC inquiries brought out the following facts:

- The registered exporters were allowed to import only raw wool in April 1966. Only one month later, this was changed to allow them to import raw wool and rags. "The liberalisation and the lack of proper control by STC over registered exporters encouraged the latter to bring in serviceable garments in collusion with suppliers and customs officials."
- The capacity of the shoddy sector to use rags was 11.7 million kg although imports of 15.01 million kg and 17.5 million kg, far in excess, were made. "There seems to be no check or review of the replenishment scheme under which the imports of rags were allowed to be used by those who need them."
- The committee found that the Law Ministry had been consulted on November 23, 1972 but it expressed its dissatisfaction with the opinion of the Law Ministry that second-hand clothing can also be taken as rags.
- Finally, after noting the "limited scope of the CBI inquiry", the PAC demanded a judicial inquiry by a Supreme Court judge.

That was in 1975. The CBI inquiry, however, carried on and over the years, several witnesses testified, voluminous documents were seized and chargesheets filed. The CBI was convinced that it had a solid case but at the fag-end of the trial in March '82, just before any kind of verdict could be reached, the Government abruptly dropped the case. The reasons offered: that it would not be in the interest of export promotion to pursue the case; and penal action by the department would serve the ends of justice. Moreover, a spokesman stated that according to the current policy replenishment licences are freely transferable and in view of the change in policy the withdrawal of the case becomes desirable.

So that was that, it seemed. Said an angry Metropolitan Magistrate A.K.Garg: "It is amusing that the Government should ask for termination of proceedings after lakhs of public money have been spent on investigation and prosecution. High-ranking government officials postponed their daily duties and travelled long distances in order to appear in court as witnesses and a special court was kept sitting for seven to eight years to record statements."

The 43 garment exporters, however, who had been holding their breath for those seven or eight years, heaved a long sigh of relief. If convicted—CBI was prosecuting under Section 120 B of the Indian Penal Code and Section 5 of the Imports Act—they might have had to face a two-year jail term. By withdrawing the criminal case, the Government also ignored the report of the PAC that had demanded a probe by the Supreme Court.

Now, after all these years, the denouement has come—and it is still somewhat of a relief to the garment exporters. Partial debarment for a couple of years is certainly a fate better than imprisonment in jail. Said one trade spokesman: "Public memory is always short. When such scandals come up, there is a CBI inquiry but years later people forget about it." Especially if there is a little help from the Government.

—RAJU SANTHANAM

CPI

Off Notes

BY ANY reckoning, the morale of the dissidents in the Communist Party of India (CPI) should be at its nadir. They have consistently opposed the party's anti-Congress(I) line since the 1978 Bhatinda congress, in vain; they have watched in dismay as the party entered into conclaves and electoral adjustments with an opposition more 'reactionary' than the Congress(I). They had hoped therefore that the recent electoral reverses would have induced a major review of the party's policies.

But they have been disappointed. The national council, the party's highest policy-making body in the interregnum between party congresses, has met twice this year and there is nothing to suggest that serious introspection is felt necessary. Nor have their ranks increased; they have always numbered around 20 in the 149-member council.

Yet the mood among this small group (including luminaries like ideologue Mohit Sen, parliamentarian Kalyan Sundaram and trade unionist S.G. Sardesai) is of quiet optimism. For in the aftermath of a succession of poll reverses (the party's Lok Sabha strength is down from 13 to six, and it has lost out in some of its Bihar strongholds), they are clearly pushing for a change in the party's "blindly" anti-Congress(I) line. Indeed, they already spot small but significant shifts in the party's stand. For instance, they say, the party's periodic calls for the unity of all "anti-imperialist" forces would earlier specifically exclude the Congress(I) but this caveat has now been dropped. Thus, while earlier CPI leaders would be censured if they shared a public forum with any Congress(I) leader, senior partyman and head of the World Peace Council Romesh Chandra recently addressed an omnibus peace forum meeting along with Srikant Verma, AICC(I) general secretary.

But the dissidents' cannon shot so far has been a bitterly critical document submitted by Sardesai last February which the leadership has not yet circulated within the party. It was made available to INDIA TODAY by sources other than the dissidents and is by far the most comprehensive and persuasive indictment of the party leadership. Starting with the categorical assertion, "This document rejects the present party line," the 40-page, approximately 25,000-word critique written by the ailing septuagenarian from his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sickbed, also outlines an alternative policy. In essence, the Sardesai document states:

▶ That the CPI has lined itself behind a political conglomeration in which "pro-imperialist and reactionary" forces dominate. Says Sardesai: "During the last three years, we have joined hands with reactionaries, communalists, casteists, known US agents, to attack the national bourgeois leadership. I shudder at this monstrous crime which will make Marx, Lenin and Engels turn in their graves."

▶ That the party had become an "ideological charlatan" by supporting casteist forces like the Lok Dal. Charan Singh is described as "a notorious Jat casteist (who) hates Chamars and agricultural labourers and poor peasants, many of whom are Chamars."

▶ That the party erred in taking up cudgels for the Akali Dal against Mrs Gandhi. "We treated a communal party and its movement as a democratic patriotic force with some religious aspersions. That was wrong." He argues that all communist parties should break with parties based "covertly or overtly on caste and religion", including the Telugu Desam. (The inclusion of NTR's party in the list is interesting because the CPI had an electoral accord with it in the assembly elections.)

▶ That the party's original mistake was to ally with the Indira Gandhi Congress in 1971. The CPI's policy between 1952 and 1967, of supporting the progressive policies of the Congress but opposing both the Congress and its "bourgeois" policies was the right policy and should again be taken up. The point, says Sardesai, is not that the CPI should not oppose the "anti-people" policies of the Congress(I) but whether this should be done from the "anti-imperialistic and democratic" side or the "right reactionary, pro-imperialistic" side.

Sardesai concludes by saying that mass action on "anti-people" issues is the only way out for the party. The country's problems cannot be solved, he says, unless the CPI's "parliamentary activity is consciously and determinedly subordinated to direct mass actions all over the country".

This conclusion is currently the only point on which there is near unanimity within the party. Even Indrajit Gupta, MP and president of the All-India Trade Union Congress (AITUC), feels that the party has laid far too much stress on electoral politics. The party's national council even went so far as to adopt a resolution to that effect.

But the leadership is otherwise in no mood to meet the dissidents half-way. In an interview with INDIA TODAY, party General Secretary Rajeswara Rao refuted many of their contentions. The CPI, he said, opposes the Congress(I) even though the other parties share many of its defects, because it is the ruling party and can thus do more harm to the people.

Rao, a remarkably fit 67-year-old whom Sen calls a "forceful personality", was especially aggressive in refuting the allegations against the Lok Dal and the Telugu Desam. "Who says the Lok Dal is a casteist party?" he asked. "The Lok Dal is a party of backward classes, of peasants. And, anyway, does the Congress(I) not indulge in casteism?" His defence of NTR, whom Sardesai has called a "Hindu communalist", also ran along similar lines. "NTR is not a communalist. He does his own thing but so what? Didn't Mrs Gandhi go to open a Bharat Mata temple?"

Many of the dissidents feel that the party will change tracks only if Rao quits... the leadership and the dissidents have been in disagreement so long that there is hardly any dialogue between the two groups.

He was similarly aggressive when asked if the CPI saw the recent overtures by the Communist Party of the Soviet Union (CPSU) to the Congress(I) and the CPI(M) as a sign of disapproval of the CPI. "It is the CPSU's look-out if it wants to have contacts with the Congress(I) and the CPI(M). How do we come into the picture? Are we their agents?"

It is clear that as long as Rao remains the general secretary the party is not going to soften its anti-Congress stand. It is being said in party circles that when Rao met Rajiv Gandhi in March to discuss the Punjab problem he came away impressed with the prime minister's deferential manner of talking to elders. But Rao asserts that the CPI still squarely opposes the Congress(I). "The party has changed for the worse," he says. "It is still as undemocratic—why is it supporting a ministry of defectors in Kashmir? And some of its policies on the economic field are positively dangerous."

Many of the dissidents feel that the party will change tracks only if Rao quits his post. Some press reports have suggested that at the last national council meeting Rao even offered to resign in a bid to patch up differences. But Rao denies this with his customary vehemence. "Why should I resign," he countered, "when my policies are that of the party?"

Rao does not deny, however, that his resignation has often been demanded in national council meetings. In fact, the leadership and the dissidents have been in disagreement for so long that there is hardly any dialogue between the two groups any more at party meetings; the discussions are more like slanging matches. Nor is this war of words confined to party fora. Dissidents have gone to the extent of talking to the media and bringing out pamphlets airing their differences with the party establishment. The April national council took the extraordinary step of issuing a stern note warning dissidents to desist from such anti-party activities.

But the dissidents continue to insist that the party's policies have not served its interests. Their ranks may lack numbers but not conviction. As one of them, who did not wish to be quoted, said, "In the first Parliament the communists were the largest opposition party with A.K.Gopalan as our leader. Today we have NTR's Telugu Desam in that position. What have we come to?" They will continue to oppose the party line but what success they achieve will only be clear by next February when the next party congress will be held in Patna. Till then, the battle of words will continue.

JAMMU & KASHMIR

Protest Politics

FOR Farooq Abdullah, the ousted chief minister of Jammu and Kashmir, the decision to launch an agitation against the Shah Government was a final and irrevocable one. Chief Minister G.M. Shah, after meeting with Prime Minister Rajiv Gandhi, had left the capital with a new lease of life (INDIA TODAY, April 15). Last fortnight, the Kashmir bandh was held in response to the call for the "restoration of democracy." It was organised by the six-member opposition front spearheaded by Abdullah. Shops and commercial establishments downed their shutters and the valley assumed a pacific mantle with no untoward incidents of violence. Said a victorious Abdullah: "The people have given their verdict against the puppet Government. They have registered their protest Gandhian style. Let us see how far they can sustain this government without the help of the people."

Abdullah wasn't far off the mark. Even though the state's Deputy Chief Minister, D.D. Thakur, asserted at an informal press briefing that over 90 per cent of the shops in the valley remained open and that Srinagar shut down because shopkeepers were threatened, it was clear to any visitor that the front's call had been widely heeded. Whether this was an indication of support for its demand for the dismissal of the ten-month-old Shah Government, imposition of governor's rule and fresh elections, remains to be seen. But it also indicated that Abdullah was able to ensure his hold on the valley by organising the bandh—and keeping it peaceful.

In fact, the state Government had resorted to large-scale arrests in anticipation of the bandh in an unsuccessful effort to render it ineffective. In the absence of Chief Minister Ghulam Mohammad Shah, who chose to be in the US it was left to Thakur to take command. Governor Jagmohan was asked to return to Srinagar from New Delhi quickly and the authorities arrested over 500 workers and leaders including two MLA's. In Jammu, over a dozen political leaders holding a peaceful dharna were lathi-charged, leaving two seriously injured. Trade and commerce organisations were pressurised to abstain from the bandh and public opinion was roused against such a measure. In an effort to influence various trade organisations, ministers lectured them on the damage a bandh would cause.

BHAWAN SINGH

An empty Srinagar street: peaceful protest

Abdullah's plunge into agitational politics was prompted by a combination of factors. Emboldened by his success in the Lok Sabha elections, in which his rival, the National Conference (Khalida) was mauled, he sought unsuccessfully to talk the prime minister into dismissing the Shah Government. For over six months, he has staved off pressures from within his party to opt for a confrontation with the Centre—in the hope that the politics of postponement would finally give way to assembly elections. His resolve was strengthened by Governor Jagmohan's report to the Centre on the alleged misrule of the state.

Moreover, the NC(K) has failed abysmally to establish itself as a political party in the valley. In the last ten months there has been minimal political activity. The state Government earned the dubious distinction of becoming the only one ever to request an MLA from an opposition party to move a 'vote of thanks' on the governor's address. The reason: there is no ordinary MLA in the treasury benches because all of them are ministers and by convention, a minister cannot move a resolution. Most of the districts do not have a formal party set-up. And it was precisely this structural weakness that enabled the NC(F) to ensure a bandh even in NC(K) and Congress(I) strongholds like Anantnag, Kulgaon and Pulwama.

Opinion on whether to support the Shah Government remains divided in Congress(I) ranks. While the Mufti Mohammed Syed section, having benefited from Shah's Government, is in favour of its continuation, the opposing faction led by senior Congress(I) leaders like Trilochan Dutt feels that Shah is indulging in the very same corrupt practices Abdullah was accused of. Far from being able to contain anti-national activities, the NC(K) released over a dozen pro-Pak elements just before the Lok Sabha elections. Shah's administrative failures have, in fact, antagonised intellectuals and non-political organisations as well.

Not surprisingly then, Abdullah is determined to launch the second phase of his agitation from next month. Mass arrests apart, on the agenda is a hunger-strike to be led by his mother, Begum Abdullah. He asserts: "We will not allow the people to be governed by corrupt elements who have no mandate from the people to rule. While the people are with me and my party, only the Congress(I) is with the Shah Government."

With more trouble in the offing, the Centre has begun consultations on how to deal with a situation that threatens to snowball into a major confrontation. One section of the Congress(I) has proposed that Abdullah form an NC(F) government, with the Congress(I) lending support from the outside. Abdullah has, however, spurned the offer fearing it would undermine his personal credibility with the Kashmiris, leaving the Congress(I) in the unenviable position of being unable to play the role of an effective opposition or of a partner in the administration.

ASSAM

Running Out of Steam

LAST fortnight, when Prafulla Mohanta and Bhrigu Kumar Phukan, the two battle-scarred generals of the All Assam Students' Union (AASU) which had launched the agitation against foreign nationals six years ago, arrived in the capital for negotiations, they and government officials had no problem making each other's acquaintance. For they have really been talking a bit too frequently, if not fruitlessly. Mohanta and Phukan, who are president and general secretary, respectively, of the AASU, accompanied by Biraj Sarma of the All Assam Gana Sangram Parishad (AAGSP) and Kumud Sarma, the impetuous interpreter-cum-adviser to the AASU team, hopped from guest-house to guest-house under an inexplicable veil of secrecy. But when they met the officials, particularly Union Home Secretary R.D. Pradhan, the two parties indeed got down to talking—on a pattern that is familiar by now—in circles.

The talks began way back in February 1980, only to lapse into a dead silence after January 1983 when elections were announced with disastrous consequences. The broken line was picked up last year by the former cabinet secretary, Krishnaswamy Rao Sahib, to be followed through, after his retirement by Pradhan. Negotiators have changed; but not the basic approach of keeping the talks down to an open-ended and exploratory level. The Centre's stand has changed as frequently as that of the AASU, issues that appeared to have been sorted out have resurfaced again, and what had seemed to be the end often turned out to be the beginning.

This time round, the talks became futile as soon as the Union Government told the AASU representatives that it was in principle opposed to the denial of voting rights to anyone, not to speak of some one million settlers whose disenfranchisement is being sought by the leaders of the movement. This is a reversal of what Rao Sahib had suggested: he gave the impression that the Centre might disenfranchise for five years those who had moved across from Bangladesh for the period between an agreed cut-off date in the '60s and March 25, 1971. The talks bogged down then on what would be the 'cut-off date': Rao Sahib said it could be in 1967, but the AASU insisted on June 16, 1965, because that was the date when some administrative orders prohibiting illegal entry of East Pakistanis had been issued. And Rao Sahib favoured five years' disenfranchisement whereas the AASU said it should be for 20 years. And since the talks were 'informal', with nothing put down on paper, the Government has now taken back what it gave earlier. "The idea of disenfranchisement is a tricky one: the validity of all intervening elections gets a knocking in that event", said an official.

Thus the talks were deadlocked practically at the same stage where they had begun more than five years ago, with the Centre not budging from its early stance that it would not accept the responsibility for either deporting or disenfranchising people who had crossed over before March 25, 1971—the day India and the new-born state of Bangladesh entered into an understanding that regulated the flow of people across their boundaries. And now the AASU and the Centre are talking with their wires crossed.

Phukan (left) and Mohanta: clinging to the past

What has really changed in the interim is that time has taken its toll on the movement that had once paralysed the Brahmaputra valley, raising the bogey of long-drawn ethnic strife in one of India's farthest but sensitive corners, stalling the democratic process, and leading to a protracted bloodbath that climaxed with the massacre at Nellie in 1983. It was begun by a generation of students who have now passed into their middle youth, though their leaders are still clinging on to the campus life with the hope of staying on in the political limelight.

Nothing emphasised the generational changes more poignantly than the formation with Assam Chief Minister Hiteswar Saikia's backing in March of the All Assam Elected Students Representatives Union (AAESRU). The AASU described it as "a handiwork of the chief minister and Congress(I) agents". But the boot was clearly on the other foot because the AAESRU was formed by student leaders who were recently elected in union elections: 82 elected union presidents or general secretaries of Assam's 168 college unions have already defected to it.

On the other hand, Mohanta and Phukan were elected to the AASU leadership as early as 1979. The rules of the AASU say that only six months' extension can be allowed to the office-bearers in 'special circumstances' after the expiry of their one-year term. But elections in the AASU have been held up for years on the plea that the leadership of Mohanta and Phukan was indispensable in the context of the movement. Mohanta, though registered as a lawyer, lives at the students' hostel of Guwahati University because he is enrolled for his master's degree in law. Phukan, also a hostel inmate, is not even a regular student. Many of the AASU office-bearers are still in the post-graduate department of the university entirely for political reasons. At any rate, had the university authorities not been pliable, they would not have ad-

BHAWAN SINGH

AAESRU office-bearers: the new force

mitted some of them to higher classes because their academic records are not very good.

"The present leadership of the AASU has little moral right to represent anyone. It neither represents all Assam, nor is it legally unionised", said Saikia with the confidence of the winning duellist commenting on his fallen victim. But the formation of the AAESRU has clearly knocked the bottom out of the AASU claim to speak on behalf of the entire state. The Muslims had left the AASU early in 1983, realising from the experience of Nellie that the movement was indeed being led by forces that could be dangerous for a religious minority. Now the revolt of the AAESRU, with the abundant representation of Nepali, Bengali, 'other backward classes' (OBC) and tribal students in it, has put the AASU back to its real constituency: the 'true blue' Assamese of the Brahmaputra valley who are a hopeless minority of Assam's 1.46 crore population.

Gone are the days of the sudden and total 'janata curfews', announced at short notice; also gone is the element of fear in the heart of the minorities in Guwahati city as well as in the villages and small towns. The AASU's abiding existence in public life is not yet challenged, but it is no longer the law unto itself that it once was. Mohanta, Phukan, AASU adviser Lalit Rajkhowa: they are all now a gentler lot, perhaps sadder too.

The Congress(I) has applied a two-pronged strategy to subdue the AASU. It has used both pressure tactics and also maintained an atmosphere of cordiality in order to take the sting away from the movement. Saikia has all along been the Congress(I)'s 'mailed fist', dealing shattering blows at the AASU and the leaders of the movement he has consistently thought to be "mischievous". At the same time, however, no efforts were spared to win the militants over. Nripen Goswami, a fire-eating leader of the Asom Jatiyatabadi Dal, a constituent of the AAGSP, joined the Congress(I) last year, and is reputed to be the main organiser of the AAESRU. Desertions from the AASU have been frequent lower down at the district level. And most significantly, the old belligerence of the AASU towards the Centre has worn thin.

The man who has put on a smiling face on behalf of the Centre is Bhisham Narayan Singh, the Assam governor whose proven skill at mediation had earned him the crucial role of the intermediary between Mrs Gandhi and Charan Singh at a time when their temporary alliance caused the downfall of the Janata government. It is Singh who carried the bouquet from Mrs Gandhi to Charan Singh as the first gesture of Mrs Gandhi's intention to split the Janata.

Saikia (left) and Governor Singh: the carrot and the stick

Bhisham Narayan Singh, even operating from within the constitutional confines of a governor, has rebuilt the bridge between the Centre and the AASU. He has met the AASU boys privately, and has been a conduit between them and the Centre. Unlike Saikia, he is a soft-liner who is believed to advocate the line of changing the heart of the militants. At the main *bihu* festival in Guwahati last month, the organisers, admittedly sympathetic to the AASU cause, did not invite Saikia but made it a point to welcome Singh warmly.

Saikia's methods are demonstrably more tough. When the AASU had given the call for a boycott of the Republic Day parade, and some of the National Cadet Corps (NCC) contingents from different schools had actually failed to turn up, Saikia immediately got the schools de-recognised. Even last month, avenging the insult of not being called to the *bihu*, Saikia organised a parallel *bihu* where the most distinguished guest was A.K. Antony, the All India Congress(I) Committee (AICC-I) general secretary in charge of the north-eastern state units.

The Prime Minister, Rajiv Gandhi, conferred with both Saikia and Singh recently in a bid to formulate a strategy for Assam which possibly combines the carrot with the stick. Nor is there any possibility of Rajiv accepting the AASU's main political demand—that of the dismissal of the Saikia Ministry on the ground that too few people had participated in the 1983 assembly elections that led to the installation of the ministry. The AASU still sarcastically refers to it as the 'so-called government', but the ministry has given back to the people what they desperately needed: peace. And a normal economic life. The per capita income of the Assamese, which had dipped to the low level of Rs 533 (at 1970-71 prices) in 1981-82, at the height of the movement, has moved up to Rs 580 now, an all-time high. Last year witnessed a 20 per cent rise in employment in the organised private sector. Examinations have become punctual and the different communities have at last been reconciled to living together.

There are clearly not many takers for the grandiose AASU plan to either disenfranchise or deport lakhs of Assam's recent settlers. As Saikia says: "Which is their next port?" On the other hand, the AAESRU has come up with its own demand that instead of deporting or disenfranchising anybody, 80 per cent of the assembly seats and jobs be reserved for the "original people" of Assam who had come in before 1951. "We only want a weightage to be given to the original people in jobs and in the democratic set-up, but let everyone who came to Assam before March 25, 1971, stay on here," says Dudu Datta, the young president of the AAESRU. But the AASU is still likely to be on the scene, though more as a historical relic. And the more its leaders talk, the less they seem likely to achieve.

WEST BENGAL

Test of Strength

THE WEST Bengal Congress(I)'s modest headquarters in central Calcutta's Wellesley Square, after seven years of virtual disuse, is once again bustling with activity. Till recently the haunt of a few Congress old-timers, local lads and the occasional leader with time to kill, the office since last fortnight has been transformed into a campaign centre of a party preparing for its first major battle: elections to the Calcutta Municipal Corporation.

It is not just that the newly revamped state unit of the Congress(I) has been spurred to action by its unrelenting political rival, the Left Front, the change also reflects a new style of functioning demanded by the party high command. The new look is accentuated by the West Bengal Pradesh Congress(I) Committee's new leader, former finance minister Pranab Mukherjee, and the prominence of men like Ajit Panja and Priya Ranjan Das Munshi, who have long been in the state's political shadows.

The Left Front's decision to hold the Calcutta Municipal Corporation elections after almost 16 years was prompted by a desire to test the emergent leadership of the state Congress(I). Determined to prevent further erosion of its existing political support and alarmed by its debacle in the last Lok Sabha poll, the Marxists are on the look out for an opportune moment to hold a snap assembly poll. Congress(I) leaders like Priya Ranjan Das Munshi are convinced that the Marxists do not intend to wait for another two years before going in for the elections scheduled for the early part of 1987.

The logic is obvious. Currently, as Pranab Mukherjee admitted after his party lost all the three seats in the April assembly by-elections, "the CPI(M) still has tremendous hold in the state's rural areas". Moreover, as Left Front chairman Saroj Mukherjee pointed out, "the people of the state are no longer swayed by the sympathy wave and are withdrawing their support from the Congress(I)". Should the Marxists win or get half the seats in the municipality, their obvious course would be to go in for a snap poll later this year or early next year.

The CPI(M) strategists, says a leader of one of the smaller front constituents, have argued that even if the Congress(I) does come to power in the municipality with a slim majority, it would still be ultimately advantageous for the Left Front. "The present dissensions within that bourgeoisie party will plunge the municipality's administration into chaos and disillusion the electorate," he says.

BHAWAN SINGH

Munshi (left) and Pranab Mukherjee: the conflict within

Dismissing this contention, Ajit Panja, the Congress(I) leader in charge of the municipal polls, says: "If we win the municipal polls it will be only the first step." The party, says Panja, is ensuring that respectable candidates from all sections of society are nominated. Whether the party will succeed in choosing proper candidates and ensuring that rival interests do not abort its chances of success, however, remains a very big question.

Till just a couple of days before the last date for filing nominations, the PCC(I) headquarters had been deluged by almost 900 applications from party hopefuls. This worked out to almost six candidates for each of the 141 municipality seats. The entire situation has been further complicated by the emergence of two major rival blocks within the PCC(I) within days of its formation. This time it is not the long standing rivalry between the two former Union ministers—Pranab Mukherjee and A.B.A. Ghani Khan Choudhury that has engendered the rift. Ironically, the two have actually united in an attempt to counter the influence of the rising star of West Bengal Congress(I) politics—Priya Ranjan Das Munshi.

On April 29, Pranab Mukherjee met Somen Mitra at the residence of former Nadia district Congress(I) Committee president, Ananda Mohan Biswas, to form a front against Das Munshi and his mentor, Union Law Minister Asoke Sen. Subsequently, Ghani Khan Choudhury also affirmed his support and now with Subrata Mukherjee also in their group, Pranab Mukherjee is working to ensure that Das Munshi's connections in New Delhi do not unduly affect state politics.

The suggestion that Pranab Mukherjee could be replaced by Das Munshi is countered by WBPCC(I) Treasurer Rajesh Khaitan: "Pranab is the real choice, otherwise it would mean playing around with a volatile state like West Bengal, which cannot be the high command's intention." Nevertheless, Congressmen openly talk about Pranab Mukherjee's inability to constitute district committees or make any major appointments.

Dissensions within the PCC(I) are further compounded by old rivalries. Satya Ranjan Bapuli, soon after his appointment as a PCC(I) committee member resigned because his old rival, Gobinda Naskar, was also given a berth in the committee. Arguing that he did not resign in protest, Bapuli says: "I merely cleared space for the induction of another leader from my area who, I felt, would be able to better serve the interests of the party." The leader Bapuli had in mind was Monoranjan Haldar, the Scheduled Caste MP from Mathurapur, who despite having considerable support in south 24 Parghanas was not given a berth in the committee.

Indeed, inadequate representation from the state's rural areas in the PCC(I) leadership has worried a large section of the party leaders. From three north Bengal districts, for instance, there is only one local leader in the PCC(I). Such imbalances and the formation of rival blocks do not augur well for the party in West Bengal. In the circumstances, Das Munshi's remark last fortnight that groupism would not affect the party's fortunes could turn out to be too sanguine.

ORISSA

The Family Fall-out

FOR SIX years Orissa Chief Minister Janaki Ballav Patnaik has been performing a remarkable feat: keeping his family and his state together, not an easy task to accomplish when a ministry is dominated by family members who don't see eye to eye. Now his empire is falling apart and the chief minister can only look on helplessly. The blows came one after another: first, the disastrous results of the assembly by-elections last fortnight—where Patnaik's candidates lost all three seast, including the coveted Khurda seat, and the very next day, a high court judgement that labelled Niranjan Patnaik—a close relative of the chief minister and No. 2 in the cabinet—as a "habitual bribe-giver". Niranjan resigned but by that time an irreparable split had already occurred in the ruling family clique.

Patnaik has survived setbacks in the past but this time, said a party source, "he is facing a family coup and the finale of the whole drama might turn out to be a political tragedy." The dramatis personae in the family drama are Patnaik, his influential wife Jayanti, Basant Kumar Biswal—the "super chief minister" who was suddenly deposed by the high command on the eve of elections—and Niranjan. The power struggle that climaxed last fortnight has been going on for a long time now between Biswal and Niranjan. Both enjoy immense clout with the chief minister: Biswal has been close to the family for 30 years and Niranjan's younger brother is Patnaik's son-in-law who also runs the newspaper *Sambad*.

The judgement that brought about Niranjan's resignation was over a vigilance case filed in April 1979 in which a mining officer Shashi Bhushan Kar was found guilty of accepting a bribe of Rs 2,000. At that time Niranjan was running iron ore mines at Joda in Keonjhar district and the bribe had been given to Kar by his manager. It was found that the manager had also been paying a monthly bribe of Rs 1,000 to the mining officer. The lower court found Kar sole guilty and sentenced him to one year's rigorous imprisonment. The officer appealed to the high court, and last fortnight, Justice B.K. Bahera of the Orissa High Court, in his 47-page judgement, stated that "bribe-giver was as much a party to the crime as the government servant who took the bribe".

An offended Niranjan immediately sent in his resignation to the chief minister on the grounds of "political propriety". Patnaik first tried to protect Niranjan by delaying the acceptance of his resignation. That is when Biswal and his group moved in and under their pressure, Patnaik finally accepted the resignation. Biswal and Niranjan have been at loggerheads for the past three years, each creating a personal following in the party. Biswal blamed Niranjan when he was denied a party ticket and never forgave him for that. Jayanti Patnaik openly sided with Biswal but Niranjan was in the privileged position of being No. 2 in the Government. When the crushing high court judgement came, Biswal saw his chance to move back to power.

(From left) Niranjan Patnaik, J.B. Patnaik, and Biswal: power struggle

When Niranjan handed in his resignation, Patnaik rushed to the governor and consulted both Advocate-General Gangadhar Rath and the Law Minister Gangadhar Mahapatra. Rath stated that the indictment of Niranjan was "unwarranted". That sparked off another controversy. Two more cases were filed in court by citizens—one, a contempt case against Rath for calling the high court observation "unwarranted" and another against both Patnaik and Rath, for disclosing official secrets as the advocate-general's advice was supposed to be confidential.

By that time, party legislators—divided into Niranjan and Biswal groups—also moved in. One group headed by chief whip Sheikh Matlub Ali urged Patnaik not to accept Niranjan's resignation since he was urgently needed to assess the drought situation in the state. This statement was published in *Sambad* and signed by 10 legislators. Meanwhile, Biswal trying to prove that he had a greater following, arranged another statement signed by 18 MLA's and eight former MLA's criticising the remark of the advocate-general.

Through all this the chief minister decided to keep a tactful silence. His aides declined an interview with INDIA TODAY, saying: "He is not available, he is sick". The signs however were clear enough: Biswal was growing in power and seemed slated to become party president from party treasurer. At the AICC(I) session in Delhi, Jayanti openly consulted Biswal while Niranjan was cold-shouldered. Party officials disclosed that Biswal was also instrumental in getting Jayanti a Lok Sabha seat. His ploy apparently was to compel Patnaik to ask Rajiv Gandhi to rehabilitate him or else, to tender his own resignation as chief minister.

Biswal has clearly made himself quite indispensable to the chief minister. He has tried, and apparently to a great extent succeeded in convincing Patnaik that his political survival, in fact, depends largely on him.

Niranjan, on his part, is trying to move the Supreme Court to expunge the offending remark against him in the high court judgement, but it is doubtful if he will succeed. He has been in trouble before. In 1981, the Opposition filed a case against him on the grounds that Niranjan was supplying iron ore to the state Government which amounted to a corrupt practice under the People's Representation Act. At that time, Niranjan transferred the business to one of his brothers and won the case on a technical ground, but this time round it seems unlikely that he will come out that easily. The hapless chief minister has also offered to appeal against the judgement. Obviously he is still trying to maintain a balance between the demands of his two powerful relatives, Biswal and Niranjan. But in doing so, he may just topple over himself.

SHUKDEV BACHECH

At a relief camp in Bapunagar: caught in the crossfire

GUJARAT

Continuing Violence

CASTE wars, communal conflicts, the people versus the police—at least one of them, and mostly all three, has held centre stage in Gujarat for the last three months. The turbulence which began as an anti-reservation stir in February has taken several baffling—and deadly—turns, with the toll rising to 103. Last fortnight promised mayhem as usual. First the state Government employees threatened to go on strike against the roster system but had the thunder stolen from them when their colleagues, the panchayat employees, actually struck work; the promised negotiation with the anti-reservationists did not come off; the Madhavsinh Solanki Government and the police, still suspect in the eyes of the people, proved unable to prevent random stabbings and arson. The resilient city of Ahmedabad was limping back to normalcy. Curfew was all but lifted in the volatile walled city and two of the five relief camps were closed when suddenly an explosive situation developed in the walled city and gave the crisis yet another alarming turn.

Late on the night of May 8 communal clashes mysteriously erupted in the Muslim-dominated Dariapur and Kalupur areas. One of the eight killed was sub-inspector M.T. Rana who was shot dead when he went up on a roof. The shooting, unusual in communal clashes, indicated that there were caches of private arms, and the police launched a thorough combing operation. Predictably, complaints of harassment poured in from residents and two Muslim Congress(I) MLA's threatened to resign if an inquiry was not ordered into police "atrocities". They were mollified with the promise of a party inquiry but the situation in the walled city was not so easily contained.

In spite of a dusk-to-dawn curfew, 14 cases of stabbing were reported on May 10. Tension mounted as rival bandh calls were given by anti-reservationists and Muslims—the former to mourn the killing of Rana and the latter to grieve for their dead. The Rangila police station in Shahpur was attacked by a mob. Panic stricken Muslims migrated to the relief camps in the city's outskirts. Lt-General Ranjit Singh Dyal, chief of the southern command, flew to the city from Pune for the second time in 10 days. Finally, on May 12 Solanki did what the harassed citizens of Ahmedabad had long been demanding: he handed over control of the walled city to the army.

But Operation Black Bull could not have had a more inauspicious start. By the end of the day, half the city's 2.5 million population was living under an indefinite curfew and still 19 people had died in stabbings and firings. Private arms were being freely used and the portents were ominous.

The fresh communal flare up took primacy but Solanki's Government had its plate already full of problems. Top of the list was the strike by the state's 156,000 panchayat employees who have been demanding a phased abolition of the roster system which guarantees accelerated promotions to the Scheduled Castes and Scheduled/Tribes (SC/ST). Abbas Patel, general secretary of the Panchayat Employees' Confederation spearheading the strike, says the panchayat employees are the worst sufferers of the roster system because the reservation quota is abnormally high in districts where the SC's dominate (like Mehsana) or the ST's are in a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

majority (like Dang).

But Patel speaks only for the *savarna* (higher) castes. Feelings run equally strong among the SC's/ST's. As Janbandhu Kosambi, 45, president of the Gujarat Dalit, Adivasi, Baxi Panch and Minorities Pro-reservations Karamchari Samiti, says: "We will not let the Government modify the roster system without taking us into confidence. The roster exists because the quotas are not filled." The samiti wants the roster system extended to the 85 backward classes identified by the Baxi Commission in 1976. Clearly, the have-nots are far more aware than they were in 1981, when Gujarat was last buffeted by an anti-reservations agitation. Warned Kosambi, "We will not let the Solanki Government forget that the massive mandate which elected it was due to its January decision to increase reservations in colleges by 18 per cent."

That decision may not be the only one the state Government may regret. Reportedly, the state Government bought peace with its employees by promising to release the report by a commission headed by H.T. Sadhwani, a former chief secretary, to look into the anomalies of the roster system. Solanki had headed off the 1981 agitation by appointing the commission and promised to implement its recommendations with retrospective effect, government employees claim. The report was submitted two years ago and high caste government employees, obviously aware that the report was in their favour, have been agitating for its release while the lower caste employees, equally aware of its contents, have been warning that the Government cannot expect to take them for granted.

The former's keenness is understandable. The report had not been released till late last fortnight but INDIA TODAY managed to get a copy of it. The Sadhwani Commission has made three main recommendations: that SC/ST employees also should put in a minimum period of service before they become eligible for promotion; that if in any of the four classes of government service the SC/ST quota of jobs is filled then the roster system and the carry forward (by which reserved promotions not filled are added to the next year's quota) should be suspended, and that if any SC/ST officers get priority in selection grade posts under the roster system then that many posts should be created for the unreserved categories.

Even as the state Government stalled on releasing the Sadhwani Commission report, Home Minister S.B. Chavan advised the state governments to refrain from increasing the reservation quotas till the Centre could work out a consensus on reservations for the backward classes. The announcement was greeted with relief in Gandhinagar with the state Government confident that the anti-reservation agitation would now be called off since its January decision had been put in cold storage for an indefinite period. Negotiations with the students' Navrachna Samiti and the parents' Vali Mahamandal, who are jointly spearheading the agitation, were awaiting the former's state-wide convention on May 13 but it was definite that the agitation, though muted last fortnight, would be called off. "The Central Government's decision makes no difference," Shankerbhai Patel, president of the Mahamandal, said. "We are still demanding that the Government give us a promise that reservations will be totally abolished by 1989." The feeling was echoed by Gaurang Shah, spokesman for the Navrachna Samiti, who points out that since the Centre's concession did not come during negotiations it would be difficult for the samiti to claim victory and persuade its followers to call off the agitation. Shah, who could not find a venue for the samiti's convention for four days as organisers did not want to displease the state Government, has another reason to carry on the fight. "If we bow down now then state terrorism will become a fact of life," he says.

There was more good news for the anti-reservationists from Delhi. The majority of a five-member constitution bench of the Supreme Court, which addressed itself to the whole issue of reservations following a Karnataka Government petition, felt that economic backwardness and poverty, and not caste, should be the criterion for reservations. Reflecting the widespread ambivalence on this emotive matter, the judges delivered five different opinions running into 202 pages, but refrained from giving a common guideline. Chief Justice Chandrachud feels reservations should continue for the next 15 years after which a means test should be applied. O. Chinappa Reddy observed that reservations had "engendered a spirit of self-denigration among the people" where there was a race to claim that "we are more backward than you".

Governor B.K. Nehru said over radio and television that the police had behaved in a manner "unbecoming to a uniformed service".

The Gujarat Government, meanwhile, was talking with different voices. Governor B.K. Nehru said over radio and television that the police had behaved in a manner "unbecoming to a uniformed service", an admission that neither Solanki nor Chavan had conceded. It was later learnt that Nehru's admission was inadvertent—he had overlooked adding that the police were working under great provocations. Meanwhile at the AICC session in Delhi, Solanki, after accusing the Opposition yet again of being behind all the violence, charged that a "secret meeting" had been held in Bombay where the anti-reservationists had conspired with some "foreign forces" and representatives of the Opposition and resolved to spread the agitation to other states. When asked by a pressman to identify the conspirators, he snapped: "Why ask me, ask Madhu Mehta?" Apparently, he was referring to one of the public discussions that Mehta's Hindustani Andolan periodically holds. This meeeting had been addressed by Gaurang Shah and Shankerbhai Patel.

Once again, Solanki was tilting at windmills while the state teetered from one crisis to another. Fired by his ambition to see the state's backward castes at the top of the power structure, heady with his sweeping mandate in the elections, lonely at the top and compelled to depend on the advice of the Machiavellian ex-home minister Prabodh Raval and still to regain his equilibrium after the arrest of close friend Mrugesh Jayakrishna on smuggling charges, Solanki seemed to be staying in power only because Delhi was preoccupied with Punjab. But it was becoming increasingly evident that if a healing touch was to be applied to Gujarat, Solanki was a stumbling block.

JAMMU & KASHMIR

Tarnished Image

FORTUNE is widely believed to favour the brave, but in the verdant hills and valleys of idyllic Jammu and Kashmir it pays to be related either by blood or political impulse to those pulling the strings. Chief Minister Ghulam Mohammed Shah and his 18 cabinet colleagues were instrumental in pulling down the Farooq Abdullah government on the very grounds that now, ironically, loom large before them: charges of large-scale nepotism and corruption. The matter peaked last fortnight when President Zail Singh, Prime Minister Rajiv Gandhi, and Home Minister S.B. Chavan each received a memorandum detailing irregularities supposedly committed by the state Government to the eventual advantage of leaders of the National Conference (Khalida). Included in the list of beneficiaries was Shah's son.

The charge that the Shah Government has been pushing financial assistance to the Tycoons group of industries owned by the chief minister's second son Muzaffar, 30, and three partners, is perhaps the most serious of the numerous allegations listed. According to the memorandum, state departments and public sector undertakings are being pressurised into providing not only financial support but generating orders as well for Tycoons, which peddles anything from bricks to barbed wire and is an agent for Delhi and Bombay-based consumer product companies.

Floated in 1980, Tycoons came into prominence in March this year when it was permitted to purchase over 3,000 tonnes of coal from the state-owned Kalakote mines at a price 25 per cent lower than the prevailing market rate. According to official sources, the entire consignment of 9,000 tonnes was sold at Rs 375 per tonne to Tycoons and two other companies, Srinagar Coal Traders and R.D. Traders, as compared to the earlier rate of Rs 514.50. The deal, clinched without floating formal tenders or advertising in the newspapers, followed a situation in which the coal lay unsold in the mines and authorities were unable to pay their employees. While coal traders claim that all three dealers would make a profit of over Rs 60 lakh, a Tycoons partner Din Mohammad Wani claimed: "We bought the coal from the mines at a price at which it was available to everybody and they did not show any favour to us."

But the deal was not all that simplistic, as borne out by the comment of fellow partner Altaf Ahmed. Admitted Ahmed, 30: "I was sitting in a hotel in Jammu when I was informed that coal was available in the mines. J&K Minerals who owned the mines were not in a position to pay even the telephone bills. I placed an order for 3,000 tonnes and gave them an advance cheque for Rs 2 lakh." However, neither he nor mines officials were able to explain why the entire stock had been sold to only three dealers when others were ready to buy at Rs 450.

Coal is not the only carrot. To go by a documented memorandum of the Jammu and Kashmir Bank Employees Union, Tycoons has found free and liberal favour in the matter of loans and in fact raised the money for its coal transaction from a nationalised bank. Operating on nine different bank accounts, Tycoons, as on March 31, 1985, had bank loan arrears of over Rs 23 lakh, doubling its position of a little under Rs 12 lakh last year. Even as its repayments were pending since 1981, in February the company was extended the rare facility of a trust account by the Jammu & Kashmir Bank in which it was sanctioned an overdraft limit of over Rs 10 lakh to buy coal. Ignoring the trust account stipulations that the borrowed amount be repaid after sale of the coal consignment, the company managed to up its coal account arrears from Rs 5 lakh last year to Rs 10.55 lakh this year. When some officials and unofficial directors of the bank started scrutinising the accounts of this company last month, they were summarily dismissed (*see box*).

Denying these allegations, Wani says: "We have no money to repay the loans. Everyone accuses us of grabbing government orders. But only we know how we are able to sustain our business in which we made massive losses from the beginning." Ahmed goes on to elaborate: "Only because the chief minister's son is our partner is our company attacked."

The Government has also been accused of dubious dealings in the sale of resin. Against a prevailing market price of Rs 11 per kg, the Shah Government is alleged to have allotted some 27,000 tonnes of the commodity to four major and 20 small-scale units at an astoundingly cheap Rs 5.58 per kg. The Sheikh Abdullah government had, in 1979, reached a 10-year agreement with some local industries to supply this scarce commodity at Rs 2.60 per kg, with a price

RAGHU RAI

Chief Minister G.M. Shah was instrumental in pulling down Farooq Abdullah on the very grounds that now loom large before him: charges of nepotism and corruption.

review after five years. When the time for review came up in October 1984, resin consuming units were asked to quote their prices. While the small-scale industries offered to buy the stock at Rs 7.50 per kg, the state Government prevaricated and appointed a resin allotment committee to recommend prices. For reasons that are unclear, the committee recommended that resin be sold at Rs 3.90 per kg excluding taxes and Rs 5.58 including taxes to the original allottees and 19 others. Says National Conference (Farooq) General Secretary Sheire Nager: "The state Government has lost over Rs 10 crore in taking this blatantly partisan decision," adding that even extraction cost was higher than this selling price. However, Industry Minister Sana-ullah Dar maintains that "we have got Rs 5 crore more from this decision. If we had not given resin to them, they would have gone to court and we would have lost even this money."

The Congress(I) too has been hewing chunks of its benefits for supporting the Shah Government. Thanks to the inexplicable decision of Maruti Udyog Limited to appoint a second dealer in a city where bookings came to hardly 1,500 and thanks to the clout enjoyed by Maulvi Ifteqar Ansari, leader of the 26-member Congress(I) Legislature Party, his cousin Zaffar Hussain has been blessed with a plot of land to construct his showroom. The piece of land, allegedly belonging to the Durganag Trust, was made over by a cabinet decision on October 22, 1984, after which the Revenue Department issued a formal approval stating that sanction was accorded to the lease of state land "for a period of 40 years on payment of premuium equal to the market rate prevalent in the vicinity to be determined by the deputy commissioner, Srinagar, plus the usual ground rent".

The land use of the plot was then changed from "establishment of government offices" to "commercial" and Ansari went on to start a business venture, Ansari Motors, together with Ifteqar's brother Abid. Durganag Trust moved the court for a stay order on construction on the plea that the land had belonged to it for the last 80 years. Said S.K. Kaul, president of the trust: "We have been robbed of our land by the state Government. They don't care for even stay orders and are indulging in illegal activities to keep themselves in power."

brush aside charges of underhand dealings. "The distribution of Maruti cars is a public requirement," said Deputy Chief Minister D.D. Thakur, "and the state Government has to ensure that this public issue is performed in the state without any hurdles. The Maruti car belongs to a premier public sector undertaking and if someone demands land from us to sell the product, we have to give it to him." Added Ifteqar: "No favour has been done me. I have paid the market rate. I am being maligned because I represent pro-India forces in the valley."

If the question of land allocation is a matter of purely political expediency, the charges levelled against the Shah Government in the case of appointments to various posts spell a show of unqualified goodwill towards friends, relatives and

Abid and Ifteqar: Ansari brothers fringe benefits

J&K BANK

Bizarre Battle

IT'S A bizarre battle and the parties involved no less imposing than the Shah Government and the non-official directors of the Jammu & Kashmir Bank Ltd. The battle is over a seemingly simple question: who should be the new chairman of the bank? While the state Government is determined to appoint S.M. Din—the controversial managing director of the state-owned Jammu & Kashmir Financial Corporation (JKFC), the nine-member board of directors has rejected Din's nomination outright on the basis of several complaints of financial irregularities that are pending against him in the state's Vigilance Department.

The state Government must have strong reasons for wanting Din as chairman since it is certainly going to great lengths to ensure his appointment. Last month, when the board refused to ratify the cabinet's decision, the state Government removed all the five non-official directors during an extraordinary meeting of the shareholders of the bank. The removal posed no problem: the Government has 90 per cent voting rights. But the non-official directors bounced right back with a stay order from the court against their removal from office before the expiry of their term. Said Sheikh Nazir, an elected board member: "The Government seems to be in a hurry to remove us because we will not approve either controversial appointments or irregular loans to the friends and relations of the rulers."

Nazir is perhaps right in his allegation. Din does not have an exactly lily-white record. A highly controversial bureaucrat, he advanced loans to various political leaders during his tenure as general manager of the bank. These included the chief minister's son Muzaffar Shah and leader of the Congress(I) legislature party Maulvi Ifteqar Ansari. It was during Din's tenure that Ansari's firm, Ansari Carpets, received an initial loan of Rs 30,000 which was later raised to Rs 7.50 lakh in 1980. The loans have not been cleared so far. In 1980, Din is also alleged to have helped Muzaffar with his newly-floated Tycoons Enterprises by advancing loans which also remain uncleared today.

In fact, Din's last two years in office as general manager were largely spent distributing loans without proper security to various pro-National Conference and Congress(I) leaders and in appointing their relatives to sensitive posts. Finally, in 1980, various trade unions presented a detailed representation against Din to the then chief minister Sheikh Abdullah who forwarded it to the Vigilance Department. For over two years, the Vigilance Department took no action. The employees union again represented to Abdullah's son and successor Farooq in 1983. He sent it to the Home Department for further investigations. Before any investigations could be completed, however, Abdullah was toppled and Din sent on deputation to the JKFC as managing director. There too, he is alleged to have appointed the sons of certain cabinet ministers as loan officers of the corporation.

On January 18, 1985, to clear the way for Din's new appointment as chairman, the state Government issued an order appointing him as one of the directors of the bank. Banking officials disclose that a person against whom vigilance cases are pending cannot normally be appointed a director in the bank where he has served. In Din's case, this practice was ignored and once he was appointed director, the state Government also devised a new way to bring him in as chairman.

Out of the blue, it decided to implement its policy of terminating the services of those who were re-employed after retirement. In this case the axe was to fall on Mohammed Amin, the serving chairman who was on re-employment and whose term was due to expire only next year. Interestingly the Government decided to recommend Amin's termination and Din's appointment on January 30, 1985, the very day a meeting of the board of directors was to be held. Said Jalil Ahmed Khan, commerce and finance secretary: "The state Government has taken a policy decision to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

acquaintances. These charges have become so strident that even Congress(I) leaders have started resenting the manner in which ministers and leaders of the NC (K) have been indulging in favouritism. Bhim Singh, MLA and leader of the Panther's Party, filed a writ petition in the Jammu & Kashmir High Court alleging that "thousands of persons have been appointed throughout the state without (the holding of) any interviews or procedures or without any reason or classification whatsoever in total disregard of the merit of the deserving candidates. None of the posts was filled through the so-called recruitment boards."

In fact, the Shah Government abolished all district-level recruitments soon after it came to power, and evolved its own system of appointments through ministerial recommendations. A case in point is the appointment of the sons of Education Minister Ali Mohammed Naik and Industry Minister Dar as loan officers of the state-owned Jammu & Kashmir Corporation. Appointed by a letter dated March 19 on salaries over Rs 2,000 these two fresh graduates got their jobs against the claims of senior officials within the organisation and for which five years' experience as accounts executive is required.

ALTHOUGH Dar comments that he will "quit not only politics but even the state if it is proved that I have influenced the selection of my son", the writ petition now lying before the judge lists six other specific instances of nepotism. They are the appointments of:

- Housing Minister Ghulam Mohammad Badrawahi's son as deputy secretary in the secretariat, superseding the claims of five others, and a son-in-law as deputy general manager in the state forest corporation;
- Revenue Minister G.N. Kochak's nephew as deputy secretary in the Law Department;
- Excise Minister Gurbachan Kumari Rana's sister as a social welfare officer although she is not a subject of Jammu & Kashmir, and her husband as deputy commissioner (food), Jammu;
- Hospitality Minister Jagjivan Lal's brother-in-law as assistant director, hospitality and protocol.

As Professor Rattan Lal, a senior teacher and active member of the Naya Kashmir Forum, points out: "The powers of recruitment have been usurped by the ministers and their offices and residences have been practically converted into employment agencies. In many cases the ministers are issuing orders of recruitment when in fact they should have been done by the departmental recruitment boards." Things have rarely been at such a low ebb, but it is significant that the Government has not responded with a

cancel the order of re-employment issued in the past and in this context they have also decided that Shri S.M. Din should be the next chairman of the J&K Bank Ltd." Curiously enough, Din was also due to retire in May this year.

Jalil Khan requested the chairman to place his letter for "consideration" before the directors. But when the board met in the evening the same day, it rejected both the resolutions moved by Khan. Neither did it approve the termination of Amin's services nor the appointment of Din. Even the Reserve Bank of India's(RBI) nominee on the board M.M. Kalwani voted against Din's appointment. Ultimately the board resolved to ask the state Government to send in three names from which it would choose one as chairman.

The state Government took that decision as an insult and decided to teach the non-official directors a lesson. Two days later, Chief Secretary Mir Nasurulah and Finance Secretary Khan requisitioned an extraordinary meeting of the bank's government shareholders. Surprisingly, the bank's chairman was not asked to call the meeting, but the two officials summoned it themselves on March 25, 1985 and put on the agenda: the removal of all the non-official members who had voted against Din's appointment.

When the meeting was held, the Government inducted new directors who were either Congress(I) men or National Conference (Khalida) activists or else those who dealt with the bank as businessmen. The state Government justified its decision with a simple statement. "We took this unpleasant decision of removing the non-official members of the J&K Bank's board," said Deputy Chief Minister D.D. Thakur, "because they were responsible for obstructing the normal functioning of the board."

Sheikh Nazir and the others who were removed from the board went to the court and received a stay order. But even then, the Government carried on clearing the desk for Din's appointment. On April 6, 1985, the Finance Department wrote a letter to the Vigilance Department demanding all the details on the cases still pending against Din. A section of the bank staff alleged that this was being done so that all cases against Din could be dropped and the way completely cleared for his appointment as the chairman of the J&K Bank.

The RBI, however, has chosen to concur with the board's point of view and has asked the bank to send it a panel of names of which it will tick one as chairman. While the moves and countermoves are being made in the Srinagar valley, Chief Minister Shah has been away in the US. He will return to his state on May 20—and then, the bank battle should take its most interesting turn.

reply in the high court to Singh's petition. And the chief minister has since ordered that appointments be made through recruitment boards.

There is little doubt that money has flowed the way of obliging individuals connected with the state Government. During Shah's 10 months in power, the Government and its various public sector undertakings recruited 4,000 persons for various posts without first advertising or holding interviews. In the process they added Rs 8 crore to the Government's wage bill in spite of the existence of an overdraft of Rs 28 crore from the Jammu & Kashmir Bank. Consequently, there were allegations that over Rs 2 crore had been shelled out by aspirants. A teacher appointed for only one year admitted to having paid Rs 5,000. Of the 400 teachers recruited recently, over 60 lack the mandatory educational qualifications. Frustrated youth set the education department's office in Srinagar on fire last fortnight when they discovered their names missing from the list of successful candidates—some of whom had not even appeared for the interview. Education Minister Naik said that it was "normal to appoint teachers on an ad hoc basis but have been appointed on merit".

But time has proved that merit is, in fact, the least consideration. And it is not surprising that this is a negligible factor in the matter of admissions—particularly to medical colleges. In stark testimony to the muddle, admissions to over 50 seats in the post-graduate course at the Government Medical College (GMC), Srinagar, have not yet been finalised although admissions opened in September 1984. Admission rules lay down that due weightage be given to marks obtained in the MBBS exams and performance at the interview, with some seats reserved for those having served in rural areas. No mention is made of those having served in rural areas abroad. The bombshell was dropped four days before the tests and interviews were to be held. An order dated November 22, 1984, and signed by J.P. Kesar, commissioner and secretary for health, said: "For seats reserved for field category candidates... rural service abroad, certified as rural service by the concerned medical authority and endorsed by the Indian embassy, would also be taken into account."

Once more, those affected went to court. Charging that the order was passed in order to accommodate the relatives of ministers and bureaucrats, 38 junior doctors filed a writ petition in the high court challenging it. Those who were likely to benefit from the new amendment were named as:

- Manzoor Ahmed, nephew of Ghulam Ahmed, principal secretary to the chief minister;
- Khalida Rasool, daughter of Ghulam Rasool Kar, ruling Congress(I) Rajya Sabha member;
- Amjad Abbas, brother of Maulvi Ifteqar Ansari, Congress(I) leader.

Bungalow allotted to G.M. Shah's sister: conflicting claims

All three, the petitioners stated, had worked abroad—Manzoor in Pakistan, where he had also studied, Abbas in Iran, and Khalida in the Gulf. The high court stayed the order. The Government, for its part, has not yet released the list of admitted candidates.

Health Minister Mahboob Beg admitted that the Government would hold re-tests in two weeks. Maintaining that this decision had been taken by the cabinet, he remarked that he had received some complaints about the manner in which brilliant students had been poorly graded in the tests. The junior doctors remain unmollified. Says Dr Ranjan Kachru, a petitioner: "How can the whole list be scrapped on the basis of one or two complaints? Obviously they have ulterior motives." Doctors also question the validity of government commenting on the work of professionals. As a senior GMC doctor said: "The complaint should be sent to us for follow-up action. They didn't bother to do so. Why?" As for Beg's reassurance, another doctor retorted: "He has to ignore the order or face contempt of court... Now we will have doctors with MD and MS degrees."

One more aspect of the state Government's influence came to light last month when Bishambar Dass Mangotra complained in writing to police that he had been evicted from a palatial house in exclusive Gogji Bagh and that the house was now occupied by the sister of G.M. Shah, and his nephew instead. Mangotra claimed that he had been living in the house for 20 years and that the house had originally been leased to Ram Lal Gupta in 1941 for 40 years. In 1981, Mangotra applied for transfer and extension of the lease in his name in accordance with the rules governing such cases in Jammu & Kashmir. No action was taken, even on a second application in 1982.

Meanwhile the widow of Gupta's son laid claims on the 4-canal property and house, leading to a government probe. The consensus had been, according to Mangotra, that it should be given to him. While the case was pending in court, the Shah Government moved into the act in September 1984, allotting half the property to the lady and claiming the rest and house for itself. Mangotra then obtained a stay from the high court. Leaving the matter in the hands of his advocate M.H. Beg, Mangotra left for Jammu on holiday. He claimed that during his absence Shah's sister and nephew accompanied by 20 other members of the family, assistant commissioner (Nazool), Srinagar, and a posse of 60-80 policemen moved into the house. According to Mangotra, "The assistant commissioner told me that he was carrying out his operation under the directions of Muzaffar Shah, the chief minister's son." But a state government officials commented: "Nothing illegal has been done in this case and no one has pressurised us".

If indeed there is little pressure and less that is illegal in the state of Jammu & Kashmir, Shah and his coterie will be hard put to offer convincing arguments for the fact that more and more organisations are seeking redressal through the court or sending representations with their woes to the Centre. The Centre, for its part, seems to be resting content on the explanations it has called for from Shah over the last two months. But Shah last fortnight was in the US, and as the charges reach a crescendo, it is, ironically, the image of the Centre that is being irreparably tarnished, and not that of the state Government—which, in any case, was writing on a smudged slate. —PRABHU CHAWLA in Srinagar

Yes, but if you buy it, every picture you get will be your reward.

The MINOLTA Photophone AF-E is one of the newest cameras in the world. The camera you'd choose if you were shopping today in Singapore or Dubai or New York. (The only problem is if you bought it abroad, you could end up paying a lot more for it!)

The MINOLTA Photophone AF-E incorporates the most sophisticated state-of-the-art technology. It uses a computing unit to make it possible for an amateur photographer like you to take pictures without any hassles... and, as important, without any mistakes.

Let's highlight a few of its high-technology advantages.

MINOLTA Auto-Focussing System

The camera has the MINOLTA Infra-red Auto-Focussing System. As you press the shutter, an infra-red beam shoots out from the camera to your subject and returns to a camera sensor that automatically adjusts the focus.

Auto-Exposure Control

As you are taking the picture, a silicon photo-diode cell senses the light conditions... and instantly adjusts the shutter speed and lens opening.

Automatic Switchover Flash

You don't even have to worry about when to switch on the flash. A camera sensor decides when the light is inadequate and automatically fires the flash for you.

Auto-Loading System

Film loading is easy and problem-free. All you do is lay the film across the spool and shut the back of the camera.

Automatic Winding and Rewinding

After each frame, the camera automatically winds the film to the next frame. Auto-winding is so quick that even continuous shooting is no problem. At the end of the roll the camera locks automatically to prevent double exposures. Rewinding is as simple as sliding the rewind switch at the base of the camera.

Frankly, the MINOLTA Photophone AF-E is definitely not a camera for everyone.

But it could very well be the only camera for you.

The Uptron S-1650 has been designed to take throughput to dizzying levels.

For starters, there are separate processors for separate functions — seven to be precise. These perform I/O operations, transfer data to and from memory, between memory and peripheral devices and communicate with the user. Such a symmetrically optimised architecture naturally leaves the CPU free to do what it does best — number crunching. Additional support is provided to the CPU by a numeric co-processor that works with it in a unique dual-clock architecture.

In its full-blown configuration, the Uptron S-1650 is a 16 terminal system that supports twenty printers and a wide array of peripheral devices. It's one of the few systems that allows batch processing from any terminal, in a multiuser environment. It also permits foreground/background processing on a terminal.

Each set of eight terminals is handled by a 16-bit microprocessor. This ensures uniformly fast terminal response times, no matter what the number of terminals.

The memory also superbly serves a multi-user, time sharing environment. It is interleaved 1:8, dynamically partitioned and the block sizes are configurable.

So make no mistake about it. The Uptron S-1650 is the fastest 16-bit computer in a multi-user environment. The fastest.

To know more about it, write to Uptron. Fast.

UPTRON

S-1650.

The New India range of assurance covers

1. Personal Accident
2. Hospitalisation & Medical Expenses
3. Domestic Package Policy
4. All Risks Insurance
5. Burglary & House Breaking
6. Fire Insurance
7. Combined Fire & Theft
8. Passenger Flight
9. Public Liability
10. Carrier's Liability
11. Bullock Cart
12. Pump Set
13. Pedal Cycle
14. Horse
15. Engineering Insurance
16. Professional Indemnity
17. Workmen's Compensation
18. Multi Perils
19. Fidelity Guarantee
20. Plate Glass
21. Business Interruption
22. Cash in Transit
23. Marine

and many more.

Whether it's a 30,000 tonne freighter in mid-Pacific or a slow-moving bullock cart in Tiruchirapalli

New India offers you all the assurance you need against loss of goods in transit.

It's amazing the distances New India will cover to give you assurance you can depend on.

Whether it's for a valuable consignment coming to rest on the sea bottom instead of reaching London. Or a bullock cart load getting damaged in some remote village in India.

Our Loss of Goods in Transit policy can secure you against unexpected financial blows anywhere in the world.

You name it . . . we'll insure it

We have the widest range of assurance covers . . . more than 74 different schemes . . . ranging from covers against petty theft, forgery, arson, riots and strikes to professional indemnity, marine, accidents, illness to baggage, travel assurance, machinery breakdowns, T.V. sets, cycles and even rabbits.

And the premiums are a mere pittance when you consider the total value you are insured for.

We have a work-force of 14,000 people to service your needs from a network of 493 branches, 149 divisional offices, 11 regional offices in India and 29 offices around the world.

Call or write to your nearest New India office. We'll be glad to give you complete details.

NEW INDIA ASSURANCE
A subsidiary of the General Insurance Corpn. of India

So much security. For so little.

SAYAJIRAO GAEKWAD

Death of a Jet-setter

AT THE resplendent resort of Cannes, the *creme de la creme* of international cinema had gathered for the world's most prestigious film festival, a luminious assemblage of movie stars, producers and directors gathered to cast a critical eye on the best that international cinema had to offer. But barely a few miles away was unfolding a real-life drama that was more horrific and spine-tingling than a Hitchcockian plot adorned with the lurid trappings of a Brian de Palma. In a village in the ultra-chic resort of Cagnes-Sur-Mer, lying spread-eagled on his pink-sheeted bed in a pool of blood with a kitchen knife in his throat and surrounded by candles he had lit, lay the body of Sayajirao Pratapsinh Gaekwad, a member of the erstwhile Baroda royal family.

The son of the second wife of the late maharaja of Baroda, Sayajirao's gory death appalled not only the elegant citizenry of Cagnes-Sur-Mer but also sent shock waves across the lush Cote d'Azur. Habitues of the plush nightclubs and casinos of Cannes and Nice and owners of the luxurious yachts berthed in Juan Les Pins and Monaco read with disbelief the news about the gruesome death of "Princey".

For years, the 40-year-old hedonist had been a conspicuous figure in the ambit of the international jet set: tall and dark and flashing priceless family jewels, Sayajirao frequented the smartest nightclubs and restaurants. His handsome face, extravagant life-style and impeccable French accent were so familiar in the more exclusive European watering holes that he was fondly and universally known as "Princey".

As dramatic as was the way he lived his life, so was its end. One of his closest friends, a painter named Maguy, who had the keys to his 10-room house named Je t'aime (I love you), discovered his body last fortnight surrounded by the burnt-out candles he had lit to illuminate his last moments. The French police quickly ruled out the possibility of murder: there were no signs of intruders or a physical struggle nor was there any evidence of robbery in the well-appointed house.

But if the French press expressed surprise at the suspected suicide, friends and relatives in India, where he was born, and France and England, where he spent most of his life, were not. In recent years, the high-stepping and opulent life-style had run out of steam and the fluorescence of his nocturnal image had dimmed considerably. He was also a homosexual—he was a chronic frequenter of gay bars and his experiments with drugs had made his life both reckless and outlandish. He favoured bizarre, multi-coloured trousers and tops,

More like floating when you're flying

TWA's new Ambassador Class seats are a new experience.

No other business class has seats like these. They're new. The widest business class seats. They're exclusive to TWA's 747 Ambassador Class.

To sit in them is to float. Perfectly relaxed. They curve to support every part of your body. There's even a special leg and foot rest.

Flying to and from America will never be the same again. You can really relax on the flight. Work in comfort. Sleep serenely.

Of course these seats are only six across. There's plenty of leg room and plenty of space all round.

Try the new experience of floating to the USA. Fly TWA's 747 Ambassador Class. For more information, see your Travel Agent or call TWA (Bombay) at 223081

covered himself with shimmering jewellery and once dyed his hair green. He had also painted his Austin a metallic purple to match his favourite ensemble—a violet leather outfit. Recalls Usha Rathore, a granddaughter of the erstwhile maharaja of Burdwan who lives in London: "He arrived in Bombay in 1974 with a French boy-friend in tow, lived in the best suite at the Taj Mahal Hotel, threw tantrums for not getting champagne in the Coffee Shop at 3 a.m. and had a little troupe of page-boys in white silk following him around." Rathore adds that he came to India to find himself an Indian wife but in reality the only woman in his "sad and savage life", as another friend in London puts it, was his mother, Sita Devi, who caused a scandal in the mid-'40s when she left her Muslim husband to marry Sayajirao's father after a brief encounter at the Bombay racecourse. The maharaja reciprocated her affections by transferring large sums of money and a great part of the fabulous hoard of family jewellery from the Baroda state treasury to Sita Devi in Paris.

Sayajirao was only three when Sita Devi whisked him off to Paris in 1948. There the duo ensconced themselves in a grand apartment in the Avenue Victor Hugo. Elderly Parisians still remember the elegant parties that were thrown there in the late '60s where champagne was served in solid gold urns with armies of liveried servants in attendance. Mother and son used to book the entire Maxims nightspot and arrive in a white Rolls-Royce. "Everybody who was anybody flocked to their parties", recalls a French aristocrat who was a neighbour and grew accustomed to being driven around by Princey in the Rolls and fed delicious curries and the ripest of mangoes.

THE GOOD times lasted till the money ran out. Sita Devi's health rapidly deteriorated and she has been virtually bedridden in a Paris flat in recent times. Several times in the last few years, Princey was mugged in Paris streets for the flashy jewels he always sported and in 1973 he moved into the small picturesque village called Haut-de-Cagnes where he started frequenting the local bars. The fact that he was adored by the local residents was apparent in their reactions to his death when contacted by INDIA TODAY. "Princey never talked about his royal pedigree, he was such a gentle soul but he was still an eccentric bird," says one resident. He lived alone in the villa among dwindling objets d'arts and had recently become addicted to cards. Sometimes he would bestir himself into sudden spurts of activity inspired by changing moods.

For a while, he even worked as a bartender in gay bars in Nice and St Tropez and his homosexual tendencies left him with few friends. Coupled with his declining fortunes and overcome with depression, Princey's drinking bouts grew in proportion. Says a local waitress who often waited on him: "He had a prodigious capacity for champagne and, more recently vodka." In recent weeks, he talked often about death. Adds a friend who recently saw him in Cannes: "He seemed genuinely depressed about the future, about his mother's illness and the lack of funds." In one such moment of depression, Princey evidently succumbed to the call of the past, drawing all the curtains in the house—and on his wasted life.

BLOOD BANKS

Trading in Blood

DELHI'S Guru Datt, a craggy-faced unemployed textile worker, practises a gory profession. He sells his blood for a living, 12 to 13 times every month. It is no wonder that 34-year-old Guru Datt already looks nearer 50; his sunken, lustreless eyes bespeak a life that appears to be fast ebbing away.

In Madras, a 38-year-old coolie, Chelladurai waits patiently in line outside the blood bank of a government hospital. He too sells blood to supplement his meagre wages from manual labour. Chelladurai does not realise that his weak and emaciated state is the result of all too frequent blood-letting. Nor does his neighbour in the queue Kathirvelu; after throwing up his job in a shop the starving Kathirvelu was lured to the door of a commercial blood bank by the promise of easy money. Kathirvelu, at 21, is an early entrant into the ranks of professional blood sellers. But the blood banks catch them even younger. Like 13-year-old Naushad, a rag-picker of Chandni Chowk, Delhi. Having sold his blood three times in the past four months Naushad is on his way to becoming a professional blood seller. He may never grow into manhood.

All over the country there are many Guru Datts, Chelladurais and Kathirvelus; their weakness and helplessness is being exploited by privately run blood shops euphemistically called commercial blood banks. People like Guru Datt and Chelladurai are also the reason why so many hospital patients in this country contract hepatitis (jaundice) after a blood transfusion. Most doctors are not willing to face up to the harsh truth that professional blood sellers—indigent, diseased, drug addicted or just plain criminals—are walking repositories of infection. The blood they sell often carries this infection into the veins of critically ill patients, thereby jeopardising their chances of recovery.

The blood trade abounds in malpractices, profiteering and a callous disregard for the health of the blood donor and recipient. How else would it be possible for professional blood sellers like Guru Datt to sell blood 12 times a month when only one blood donation is permitted in three months. A tacit conspiracy between professional donors and commercial blood banks allows the former to lie about the state of their health, and the latter to avoid testing the blood for the germs of disease. To illustrate this nexus the Secretary of the Blood Donors Welfare Association, Jagdish Bhardoj, alleges that the association's executive member Nand Lal, a TB patient, regularly sells blood and it is accepted without demur by Delhi's commercial blood banks.

All commercial blood banks are not uniformly guilty of malpractice, but some hair-raising stories are narrated by professional donors. Guru Datt swears that on a couple of occasions he himself has been bled for two or three bottles at one sitting by a private blood bank near Connaught Place, outside which he and other donors recently demonstrated for higher rates. The blood bank owner vehemently denies this charge, but last month's agitation by the blood sellers opened a Pandora's box of charges and counter-charges and allowed onlookers a peek into the capital's murky blood trade. At one end is the blood seller, or professional donor, and at the other end the commercial blood bank. In between are a host of intermediaries, doctors and hospital staff whose collusion with the private blood banks makes it possible for the business to thrive. And thrive it does, what with buying blood between Rs 15 and Rs 50 a bottle and selling it to patients for anything between Rs 100 and Rs 400 a bottle. The rates for blood may vary from city to city, but everywhere it is a profitable business which has made wealthy men of blood bank owners. One such person in Bombay reportedly specialises in taking beggars off the streets, bleeding them and exporting the blood to the Middle East. Ten years ago, Bombay was chosen by some multinational companies to set up blood fractionation plants to process the blood of professional donors and export the products. The Government banned any export of blood products following an uproar in Parliament.

The way some blood banks function is best illustrated by an incident in Amritsar. A person walked into the blood shop outside the gate of

A blood donation poster

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the emergency ward of the V.J. Hospital and asked if O–RH Negative blood was available. The attendant in the shop said yes, it was available. Was it stored in the grimy dilapidated refrigerator standing in the corner? "No," said the attendant, "we don't believe in storing blood. I will send my assistant with you to our bleeding centre on Lawrence Road and they will give you *taaza* (fresh) blood drained from a donor in your presence." True enough, a mile away several poor unemployed persons were milling outside the bleeding centre waiting to be bled for Rs 40. The blood shop attendant extolled the virtues of warm blood as proudly as a milkman may boast of freshly extracted milk from a cow.

Desperation is the key ingredient in blood transactions. Desperate for money, the poor blood seller agrees to be bled. At the other end, desperate relatives of the patient agree to pay any amount for the blood that is needed. There are no moral qualms about charging inordinately high prices for blood of a rare group.

Tragically, patients and their relatives are either unaware of the hazards of diseased blood or, at wit's end, they will take any blood that is available. And the blood most readily available comes from the denizens of the city's skid row. Whether it is Delhi or Bombay, Bangalore, Madras, Hyderabad or Amritsar, blood sellers like Guru Datt or Chelladurai usually hang around the public parks, dharamshalas, railway stations and bus stands. In Delhi the main hang-outs are Company Bagh, Red Fort, Old Delhi Railway Station and the inter-state bus terminal. Guru Datt describes how he was introduced to the blood trade. He was sitting in Company Bagh several years ago when the *dalal* (middleman) of a blood bank approached him and said, "If you need money I can get it for you". The curious Guru Datt followed the *dalal* to the blood bank and joined the crowd of needy people clamouring to be bled. "They gave me Rs 15 but the *dalal* took away Rs 2 as commission. The blood bank gave me a date 90 days away for the next donation but whenever the need for blood arose they would send the *dalal* to round me up along with other donors." Like others of his tribe he would do the rounds of the blood banks in town. They always asked him to return 90 days later, but when he came back sooner they would take his blood anyway but put a different name on the bottle.

Because the same donors are bled repeatedly under different names the number entered in the registers of the private blood banks is many times more than the actual number of donors. Dr Arvind Lal, who owns one of the oldest blood banks, says there are about one lakh donors in Delhi and his bank alone has 15,000 to 16,000 on its registers. But Bhardoj insists there are only 5,000 donors in Delhi and about 2,000 floating donors who migrate to the capital

BHAWAN SINGH

in winter from neighbouring states. Bhardoj, who claims he sells his blood 17 times every month, explains that the association was formed to prevent the exploitation of jobless teenagers who are now being introduced to blood selling by the rapacious *dalals* of the commercial blood banks. "We have been rendered diseased, disabled and dependent on blood-letting," says Bhardoj, "and we don't want our children and other teenagers to be corrupted." Nearly 500 of Delhi's professional donors have been stricken with hepatitis or venereal disease because most private blood banks do not use disposable syringes, says Bhardoj.

THERE is a serious shortage of blood in the country and that is why the substandard blood collected by commercial blood banks finds ready customers. According to the estimates of the Indian Society of Blood Transfusion and Immuno-Haematology (ISBTI), the country requires 3.5 million units of blood every year, but only 1.5 million units are collected leaving a deficit of 2 million units. The ISBTI's Founder-President and Professor of Blood Transfusion at Chandigarh's Post-Graduate Institute of Medical Sciences, Dr J.G. Jolly, says hospitals cope with the deficit by transfusing less blood than the patients should ideally get. This does not harm the patient but may delay his recovery. More worrying than the deficit, says Jolly, is the fact that nearly half the blood collected in the country is from professional blood sellers like Guru Datt and Nand Lal.

The dangers of infected blood are obvious. The viral hepatitis which killed nearly 1,000 persons in Ahmedabad last year spread mainly through transfusion of infected blood and the use of unsterilised syringes in the city's hospitals. Out of the 135 patients who died in hospitals, at least 26 had earlier received blood transfusions. And this happened in Gujarat which is less dependent than other states on the blood of professional donors. Elsewhere "there are many Ahmedabads just waiting to happen," commented a leading Delhi surgeon.

Actual figures of post-transfusion hepatitis caused by the blood of professional donors are hard to come by because there is little or no follow-up of transfusion cases. Internationally, blood from professional donors has been proved to carry a ten times greater risk of hepatitis infection when compared with voluntarily donated blood. This is because an al-

Donor giving blood: crass commercialism

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

truistic voluntary donor would not lie about any infectious disease he may have had. The incidence of post-transfusion hepatitis in India is suspected to be much higher than the international average.

Mrs Kanta Saroop Krishen, ISBTI secretary-general, squarely blames the medical profession for this state of affairs. "This is a big racket and it exists because the medical profession is totally indifferent about the quality of blood being transfused. Who is patronising the commercial blood banks?" she asks angrily. "Doctors are still directing patients to these blood banks without making the effort to inform them that it is not safe." If only doctors took a stand on this, commercial blood banks would close down, says Krishen.

Complains Dr Jolly: "It's very regrettable that most of the blood required by Army and Railway hospitals comes from commercial donors. These are organised services and can work for voluntary donation, but they don't make the effort." Even health ministers have refused to recognise the danger of blood from professional donors. When officials of the ISBTI met Raj Narain in the late 1970s to plead for a ban on professional blood donors, he chided them saying: "*Array in gareebon ka khoon nahin logay to unki dehaari kaise chalegi.*" (if you don't take their blood how will these poor people be able to earn their livelihood).

BUT NOW there seems to be some rethinking in the Health Ministry, at least about reorganising blood transfusion services. The ministry has sought the Planning Commission's approval to start a national blood transfusion service which will train staff in blood transfusion and fractionation, undertake motivational campaigns to propagate voluntary donation, and run a national and several regional blood transfusion centres. "We are totally opposed to commercial purchase of blood," said Health Ministry Joint Secretary P.R. Dasgupta, "but a blanket ban on professional donations may not serve any useful purpose at this stage other than perhaps aggravating the situation."

There are no rules to prevent or promote professional donors, complains Dr (Mrs) S.K. Sandhu, director of health services in the Delhi Administration. Like prostitution, commercialisation of blood has a moral dimension. "It is the degraded morality of the donors and the people running blood banks. We cannot do anything about this moral crisis." Dr M.L. Gupta of the Indian Red Cross Society agrees: "Nobody in a civilised society has the right to purchase anybody's blood. It is a living tissue and should come as a free gift." Gupta feels that those who buy blood from private blood banks are "exploiting someone's poverty or helplessness". The only way out is voluntary blood donation and Gupta insists all VIP's who come to inaugurate his blood donation camps should first donate blood to set an example. Rajiv Gandhi, Jagmohan, Chandra Shekhar and Atal Behari Vajpayee have so-far been enrolled as blood donors. But public involvement in the

Blood donors staging a dharna at the Delhi Boat Club

BHAWAN SINGH

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

voluntary programme is shamefully low, says Gupta. Delhi manages to collect barely a quarter of its blood needs from voluntary donors. If every citizen donated blood only once in his lifetime, patients and their relatives would not need to patronise the blood shops. One reason for the popular dependence on blood shops is the readiness of the Railways, Central Government Health Service and Employees State Insurance to reimburse its members the entire cost of blood. This encourages the patient's relatives to buy blood rather than donate it themselves. Behind this attitude lies ignorance and selfishness.

The ignorance arises out of prevailing myths about the effect of blood donation. Dr Jolly says men ask him if a blood donation would affect their virility. Others enquire if their life span would be shortened by the blood loss. Most people just do not know that one blood donation every three months is completely harmless: the body replenishes the fluid loss within 48 hours and the red blood cells in a couple of weeks. If only people jettisoned their unreasonable fear of donating blood, the voluntary movement would really catch on as it did in Chandigarh which collects all the blood it needs from voluntary donations. This is the work of some social workers who formed the Chandigarh Blood Bank society several years ago. Enthusiastic college and university students unflinchingly provide the blood. This experience spurred Dr Jolly into starting ISBTI as a forum to campaign for voluntary blood donation. But while the society was pleading for action against professional donors, Delhi's biggest commercial blood bank carried the battle to Chandigarh by securing permission to open a branch there. "This blood bank is going to cut at our roots," fears Jolly. A delegation of the society met Mrs Indira Gandhi in December 1983 to plead for a ban on registration of new commercial blood banks, propagation of the voluntary donation message on the electronic media and special screening and safeguards to prevent the dreaded disease AIDS from spreading in India. Dr Jolly warns that with professional blood donors holding sway, India is just ripe for AIDS.

Why? Because the Government machinery in most cities is just not equal to the task of supervising the operations of blood banks. In Delhi for example, Mrs Sandhu candidly admits that with the existing staff, the Drug Controller's office "cannot carry out satisfactory checks and we don't have an independent laboratory of our own to check the blood samples that we collect". Keeping an eye on the blood banks is only a small part of her department's function. With a staff of only 19 persons it has to keep tabs on 250 licensed drug manufacturing units, 400 cosmetic manufacturing units and nearly 100 Ayurvedic and Unani drug units, besides over an estimated 6,000 chemists shops.

BHAWAN SINGH

Having sold his blood three times in the past four months Naushad, 13, is on his way to becoming a professional blood seller. He may never grow into manhood.

In Bangalore and Hyderabad the authorities don't seem to have any control over commercial blood banks. Bangalore faces a large demand for blood from over 150 private nursing homes. This blood invariably comes from the commercial blood banks: the city's wealthy elite therefore get the worst possible quality of blood while poor patients in government hospitals get healthy blood as most government blood banks are allowed to bleed only voluntary donors. Says Dr J.N. Vajifdar, director of Bombay's Red Cross: "The poor get very good blood and the rich often get very poor blood" because hospitals like Jaslok and Breach Candy depend mostly on blood supplied by commercial blood banks. Even Red Cross donor cards which entitle the voluntary donor to free blood for him and his family are sold by panwallahs outside Jaslok Hospital. In Delhi, police constables are known to sneak into a commercial blood bank to sell their blood rather than donater it.

Are commercial blood banks really indispensable? Dr Lal, the owner of one in Delhi, contends: "If the Government were in a position to supply blood we would not be here." Adds Dasgupta of the Health Ministry: "Present day requirements of blood are not being met by voluntary donation." Counters an angry Krishen: "Would any doctor recommend an adulterated drug if the real thing is not available?" The blood of profes--sional donors, she insists, is definitely hazardous and often fatal for the receiver. In support, Dr Jolly says that even if commercial blood banks carry out all the tests—and they don't because some tests are very expensive—it is still not possible to detect all types of hepatitis. Even with the most sophisticated tests, blood banks in the United States can detect only about 80 per cent of the Hepatitis–B virus in blood. The rest escapes detection and afflicts the blood recipient. In any case, the test carried out here cannot detect Non–A and Non–B types of hepatitis. "So screening for Hepatitis–B alone is not a foolproof way to detect infectivity in blood," warns Jolly. All the more reason to play safe and administer healthy blood obtained from voluntary donors. Otherwise the chances are that the blood bought from a commercial blood bank may have come from an aplasia–afflicted Guru Datt or a tubercular Nand Lal. Aplasia is common in regular blood sellers: their bone marrow loses its power to create new red blood cells, the body's immune mechanisms are shattered and they can fall prey to any infection. Walking germ banks like Guru Datt, Chelladurai and Nand Lal pass on the infection to anyone who receives a transfusion of their blood. In the words of Dr Jolly: "Can this be allowed?"

It's the next best thing to your own private plane.

When you're on a hectic business schedule, the last thing you need is a hectic flight.
But you do need convenient flights and plenty of them.
So, while we can't quite promise the flexibility of having your own aircraft, we can promise the most convenient schedules in the Far East and more flights to and from Hong Kong than any other airline. Our flights from Hong Kong, for example, arrive in Bombay at 20:30.
We can also promise a relaxing journey and, what's even more important, a relaxed arrival.

Arrive in better shape

UNITED STATES

Discovery of India

GENERAL Motors is quietly exploring the Indian market for a local collaborator to build diesel engines. Honeywell is scanning the Indian horizon for computer manufacturing. ITT is expecting to make a breakthrough in telecommunications manufacturing with an Indian partner. PepsiCola and IBM—notwithstanding past debacles in their fields of business in India—are getting ready to set full sail for the attractively beckoning commercial shores of India.

There is no doubt about it. The Fortune 500 have begun to discover India. Their interest in doing business in India—on Indian terms—is deep, genuine, serious. It is also very recent. And it has been stimulated dramatically by Prime MinisterRajiv Gandhi's popular image here as a dynamic and practical leader as well as his new budget initiatives which have been trumpeted enthusiastically in the American press and the US House of Representatives.

"A couple of years ago," says Susan B. Magee, vice-president of India International Inc, "I had a lot of interest from Indian firms looking for American partners to do business with in India. But we'd get very little response from American firms. I remember in one case—even though it was a perfect opportunity for an American firm in that field to make money in India—we went through 18 American firms to hook up with an Indian collaborator before we got a single positive response. Now it's just the opposite. We have US firms coming to us to find business partners for them in India."

India International Inc, a Washington-based organisation, specialises in doing market research, finding suitable Indian and US partners to collaborate in a field of endeavour, and then sees the partnership through to fruition. The kind of drawing power that India seems suddenly to have developed was illustrated recently by a conference on "US-Indian Business Opportunities" organised by India International Inc. It proved to be a sell-out.

Hundreds of businessmen from America's top firms—including several prominent Fortune 500 executives—attended the two-day seminar. And the speakers included heavy hitters like Commerce Secretary Malcolm Baldridge, Under-Secretary of State Michael Armacost, World Bank South Asian Vice-President David Hopper, Overseas Private Investment Corporation President Craig Nalen, and Control Data Corporation Vice-President Hugh P. Donaghue.

The cost per participant was $145. "Two years ago you probably would not have been able to fill half the room even if you gave out the tickets for free," observed Magee. She said she organised the conference in response to persistent questions from US businessmen who, since the assassination of Mrs Indira Gandhi, had approached her organisation with questions like: "Will India hang together? What will be the new investment climate like?"

Magee said that the need for a high-level conference received a further impetus from the way Rajiv took quick and decisive control of the Indian Government. "People all over the country were surprised and impressed," she said. "Also President Reagan had been taking positive steps to improve relations between the two countries. There had been a recent agreement to sign a new memorandum of understanding (MOU) to facilitate the flow of previously forbidden high technology from the United States to India. All this needed to be put in perspective."

Interviews with sources who attended the conference—which was closed to the press—as well as with key government officials reveal some of the following trends and developments in Indo-US commercial relations on the eve of Rajiv's visit.

Baldridge (left) with Reagan: high level initiative

Both India and the US, while recognising that there will be political differences between the two regarding their often conflicting interests in the South Asian region, agree that commerce, trade and scientific cooperation are the best areas for expanding their overall relationship for mutual benefit.

The interest in India is really a two-way street. There has been a surge of general American interest in India during the last year which has coincided with India's own interest—starting under Mrs Gandhi in the 1970s—in importing American technology to meet its economic development needs. This process has accelerated under Rajiv Gandhi whose positive image abroad and economic liberalism have filtered into the American business community. India has an obvious preference for US technology because the US is still the world leader in technology, it has a large market for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

buying back products made in India under joint collaborations, and Indians and Americans share common things such as their democratic traditions and higher learning acquired by hundreds of thousands of Indians in American universities.

THE INABILITY of the US to clear high technology exports to India was a serious impediment to more trade and investment. The MOU—while it will not automatically grant every Indian request for high technology—is a clear signal to everybody in the American bureaucracy that they take a positive look at all requests for trade with India involving high-tech exports. "The bias is now in India's favour and not against it as was previously the case," one official explained. As of now more than half of all the computer applications—worldwide—from US companies awaiting export clearance from the US Government because of their potential defence-related use are for the Indian market. The clearance process is now being speeded up.

The US will continue to be India's largest single trading partner in the foreseeable future. Total US direct investment in the Indian market is about $600 million and is expected to move up. The two countries do more than $4 billion annual trade with each other with the balance—largely because of recent oil exports, being in India's favour. And India has approved more projects for collaboration from the US than for any other single country. Experts predict that future collaborative ventures between the US and India will be in the areas of food processing, petrochemicals, telecommunications, computers, ethylene propylene, printing machinery, power plants, non-stick Teflon products, industrial valves, medical instruments, machine tools, rechargeable batteries and fertilisers. In fact the US is sending a high-powered government-sponsored trade mission to India in 1986 to explore joint ventures in the telecommunications field.

The new Indian budget won universal accolades. World Bank experts predicted that India will see such rapid industrial progress during the next decade that even the miracle of the green revolution will pale in comparison. But India will need more resources to finance this great leap forward, and will have to increase its exports to 8.5 per cent of its gross national product. Otherwise India will have to borrow and its debt service ratio is expected to rise from 12 per cent to about 22 per cent. India's private sector will be under the gun to deliver.

This last aspect was also addressed in a lengthy report in the latest issue of the prestigious *Foreign Policy* magazine. In a major article entitled "The Indian Miracle", the authors said: "The perception of India as a hopelessly poor society no longer reflects reality. Major economic progress, especially in the last 10 years, has brought not only economic growth but also increased diversification and reduced vulnerability to bad

MALCOLM BALDRIDGE

Signalling a New Era

THE 26TH Secretary of Commerce of the United States, Malcolm 'Mac' Baldridge, arrives in New Delhi this fortnight for extensive discussions with Prime Minister Rajiv Gandhi and his aides covering trade and commerce between India and the United States. Baldridge, 61, is considered a member of President Reagan's innermost circle of cabinet advisers and his visit is being interpreted in Washington as one more step to open wider what the Reagan Administration considers to be a "window of opportunity" for vastly improved relations between the two countries. During his talks Baldridge is expected to lay the groundwork for some of the discussions that will take place between Rajiv and Reagan when the Indian prime minister visits the US in June.

Baldridge discussed his visit, the prospects of more trade between the two countries as well as the Reagan Administration's reaction and response to the budget and economic reforms now under way in India during an interview with Washington Correspondent INDERJIT BADHWAR. Excerpts:

Q. *You stated recently that it was your impression that Rajiv Gandhi's Government was opening up a new era in US relations. What did you mean?*

A. Prime Minister Rajiv Gandhi represents a new generation of leaders whose view of the world, as well as of domestic economic matters, is not tied to the thinking which prevailed in India immediately after independence in 1947 and continued into this decade. The prime minister and many of his closest advisers are more geared toward modern technology and private sector initiatives to provide the products and services required for a nation of 750 million people. With these developments taking place in the Indian economy, there is a basis for a new era of expanding commercial ties between our countries.

Baldridge: 'windows of opportunity'

Q. *Is this view shared by the President and other colleagues in the Cabinet, and do you get the same sense from Congress? In particular, from the more conservative members of that body, who have not been previously very*

weather and other shocks. Prospects are good now for India to achieve significant sustained growth through the 1980s and beyond...."

BUT THE article warns that any drastic shortfalls in concessional aid "beyond those already anticipated by India and factored into the Sixth Five-Year Plan and financing strategy would threaten India's movement toward a more open economy. A premature shift from public concessional to private non-concessional borrowing could force India to either incur a dangerously high debt service burden, or more likely, given India's fiscal conservatism, to put the brakes on the country's development. Neither option is in the interests of India or the West. At a minimum, the reduction in IDA funding for India should be gradual and access to IBRD (the World Bank's hard loan window) should be increased."

According to reliable sources several high-level State Department memos have been sent to the White House suggesting that President Reagan look favourably on the Indian Government's requests for continued concessional borrowing. The matter is expected to figure prominently during Rajiv's visit to the United States as it did during Mrs Gandhi's visit in 1982. India's share of IDA borrowing is expected to plummet from an all-time high of 40 per cent to less than 20 per cent because of the competition for the increasingly scarce concessional dollar.

According to government officials here, the Reagan Administration will not precipitously pull the rug out from under India on the concessional aid issue. The Reagan Administration is impressed with Rajiv's new economic policies and recognises that it does not want to derail the interest of American businessmen in that new and exciting market. But the Americans will impress upon India the need to supplement and create more of its needed resources by increasing exports and encouraging foreign investment. Foreign investment, they argue, not only brings with it technology and market expertise but also saves as well as generates foreign exchange if it is export-oriented.

The US also argues that it has absorbed more than 50 per cent of the growth of exports from developing countries, and that giving American markets to developing countries is better than giving aid. But the Reagan Administration is now in a more practical mood in its dealings with India. This mood was succinctly summed up in the *Foreign Policy* magazine article: "India's economic growth and development and governability...are essential conditions for regional stability, regional self-management, and inter-regional strategic collaboration. And it is especially in these areas that the United States has an interest in cooperating with India....In the coming years there can be no sensible US policy toward India until American officials grasp the geopolitical and commercial significance of India's new economic success at home and abroad."

enthused about India....?

A. President Reagan and other members of his cabinet recognise the gradual but positive changes that have occurred in the Indian environment since prime minister Indira Gandhi visited the United States in 1982. It is impossible to speak for all Members of Congress, but there is no question that India's growing number of friends in Congress recognise the mutual advantages of a closer relationship.

Q. ***What strikes you as the most significant aspect of the economic reforms now under way in India? Why do they make India a more attractive market for American companies than it has been previously?***

A. Recent economic reforms, particularly liberalisation of imports, reduction of customs duties on capital equipment imports, encouragement of the introduction of new technology, and elimination of licensing requirements for 25 industries are major steps that will support private sector initiatives and unshackle the capabilities of the private sector.

American firms have been doing business in India for years. Generally speaking, there is a great deal of mutual respect between Indian and American businessmen. One of their major problems has been the slow decision-making process in the Indian bureaucracy. If government controls are limited, I am certain that the US businessman's perception of the Indian market will be considerably improved.

Q. ***What do you view as the most exciting prospect/development in the Indian market? Is it now considered more sophisticated than earlier? Outside the Rajiv Gandhi initiatives, what has contributed to this late awakening among US businessmen to the prospects of the Indian market?***

A. The most encouraging development in the Indian market is the realisation by government officials as well as private sector businessmen that excessive controls and regulations are a drag on economic growth. Western officials and businessmen are impressed with the growth that has occurred in the industrial and agricultural sectors since Indian independence. India has reached a level of development that can profitably absorb the sophisticated technology available from abroad. In the past, US businessmen were discouraged by government controls and policies. With a more positive environment, US businessmen are prepared to allocate the time and money required to explore and analyse the huge potential for business collaborations. The increasing number of US trade promotion activities in India on the one hand and on the other the regular visits of Indian trade groups to the US have made the US business community more aware of opportunities in India.

Q. ***What do you expect to achieve in India?***

A. I plan to convey to Prime Minister Gandhi the President's interest in improved relations and explore with him ways and means to strengthen bilateral trade and investment. In addition, I hope to return to Washington with first-hand knowledge of the economic and administrative reforms which Prime Minister Gandhi is advocating and how we can support these reforms.

Q. ***You have stated that a more open Indian economy is in the interests of both countries. What is the Administration prepared to do to help India realise its prospects for continued growth in the 1980s?***

A. One of the major aims of my visit is to determine areas for cooperation and other measures that will support the prime minister in his efforts to achieve faster economic growth by eliminating unnecessary controls and encouraging modernisation of the economy.

With regard to concessional multilateral aid, I believe India's access to such aid should be considered in relation to the needs of all countries, including those that cannot sustain borrowing except on highly concessional terms. The Administration continues to support a substantial input of World Bank resources to India, which is the bank's largest single borrower.

H.M. ERSHAD

"My record is not bad"

*BANGLADESH President H.M. Ershad has had more than one brush with democracy. This fortnight's local government elections will be his fifth "attempt" to reintroduce civilian rule to Bangladesh. Politicians inside the country or observers outside don't see these efforts as having any great seriousness of intent. Last month, as the count-down began to the latest round —the elections are due on May 16 to 20—*KARAN THAPAR *of London Weekend Television's Eastern Eye Programme met Ershad for more than an hour in Dhaka's Bangabhawan. Dressed in a cream safari suit and looking very much the general in mufti, Ershad answered a wide range of questions on his professed aim of restoring civilian rule to his country and the army's future role. Excerpts from the interview:*

Q. *President Ershad, to many observers your particular plans to restore democracy in Bangladesh have often seemed just like a thinly disguised attempt at keeping yourself in power. How would you answer this charge?*

A. It's not true, and I think I have proved it in the past, when I permitted political activity without the political parties asking for it, and gave them concessions so that they could participate in the election and we could establish a democratic system in the country. Therefore, what you've just said is not true.

Q. *The referendum that you held last month to secure your own position as President was widely reported as a sham. People said that very few voters had actually turned out at the polls on that day. How do you explain that?*

A. You must know that before that I tried my best to bring them to elections, and whatever demand they put up to me, I met all of them, one after the other.

Q. *These are the political parties you are talking about.*

A. Yes. When they did not come for election I had no other alternative or option open to me but to go to the people and ask for their mandate, and....

Q. *So the referendum was, in your eyes, a last desperate move.*

A. Yes, to get the people's support on whatever I've done, the programmes I've set up, whether the people accepted them or not.

Q. *Why, then, did you arrest political leaders while holding the referendum, particularly the two women heading your two main opposition parties?*

A. We've not arrested anybody.

Q. *But aren't they under house arrest?*

A. They are—only their movement is restricted, that's all. Because we wanted the people to be able to vote freely without interference from anybody.

Q. *And their freedom would have restricted the people from giving their free mandate.*

A. You see it's not very difficult to create some problem here or there, to create some scare. They tried their best of course. They exploded one or two bombs here and there but that didn't keep the people away, and whatever they may say—that the turnout was poor—the people did come and they did vote for me and for my policies.

> **"If the people decide that they need my leadership in the next few years, I will naturally consider it."**

Q. *You said earlier that opposition leaders were not arrested, their movement was restricted. What is the distinction between the two?*

A. Only the two ladies' movement was restricted, because of security reasons. The way they behaved, destroyed government property, incited people.... after all this, people expected they would come for election. And when they did not come, naturally I thought that the people's sentiment was against them and they may have been harmed.

Q. *And do you have plans now to release them, at some point?*

A. *Insha Allah* (God willing) we will release them after the Upazilla elections.

Q. *When do you plan to hold national elections, and particularly the parliamentary ones?*

A. It will depend largely on the course of events in the future. After the Upazilla elections, naturally we'll have to go for national elections.

Q. *Will they be this year?*

A. You must know one thing that in our country, normally, elections are not held in the summer season because of the rains, and it is very difficult from the point of view of the system. Therefore no elections can be held before November.

Q. *But will they be held in November?*

A. It will depend again on the course of events, the political parties.

Q. *You're not going to commit yourself on that.*

A. No. I have already called for elections four times, which had to be postponed because the political parties, the opposing political parties, did not take part in the elections, because of their attitude.

Q. *Well, one of the reasons they say they didn't participate in the earlier four elections is because they believe that elections held under martial law would not be free and fair. Will the elections which you are going to hold later this year be under martial law?*

A. Let us go back to the history. In 1970 when we were under Pakistan, elections were held under martial law and....

Q. *Would you accept that as a precedent, what happened under Pakistan?*

A. I'm just explaining to you, and this very Awami League which took part in the elections as the opposition political party accepted the mandate of the people. After that even when we became an independent nation elections were held under martial law, and why this time the elections will not be fair under martial law I couldn't understand.

Q. *The next elections, then, will also be under martial law.*

A. It has to be, because the constitution is suspended and there has to be some law to run this country. Therefore, the martial law cover has to be there.

Q. *What if the Opposition boycott the elections?*

A. I'm sure some sense has come into them by now, and they will come forward for the election.

Q. *You're quite confident.*

A. I'm quite confident, because they thought I'm weak and if they pushed me a little more I would no doubt just abdicate and hand over power to somebody.

Q. *There's a lot of speculation in Dhaka that you will be one of the candidates in the presidential election....*

A. I did not commit so far.

Q. *Are you about to?*

A. I have got the mandate to run this country until the elections are held, and again I would like to say that the future course of events will decide whether I'll be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

candidate or not.

Q. What are the factors you would like to see fulfilled before you decide whether you will be a candidate or not?

A. That I said will depend on the course of events. After the Upazilla elections naturally there will be political activity going on in the country, and if the people decide that they need my leadership in the next few years, I will naturally consider it.

Q. And chances are that you probably will stand.

A. It again depends on the people.

Q. Why do you believe the army should be associated with the running of the country?

A. Again, you go back to the creation of this nation, the history. The Bangladesh army fought for a political cause, they fought to create a new independent state and that is a political cause. And after that is over, the country has been created, independent Bangladesh, you can't just keep the army away because it naturally would like to be associated with the progress of the nation for which it fought and lost lives.

Q. You are saying, that the army now has a right to be associated because....

A. If everyone has a right, why not the army?

Q. Your critics point out that most senior officers who were involved in the 1971 liberation war are now no longer present in the Bangladesh army high command. They've either been purged, killed or posted abroad. On whose behalf do you make this claim?

A. I'm a member of the armed forces.

Q: It's on behalf of the armed forces.

A. Naturally.

Q. In the last 10 years of army rule, the military share in the national budget has increased from 13 per cent to almost 38 per cent. It's often said that over that period some of the most prized jobs came under control of army officers or sometimes former army officers. For instance, it is said that 90 per cent of the state sector jobs are with army officers, as also 60 per cent of ambassadorial jobs. Does that record justify military rule?

A. How many of our officers are in prized jobs, I don't know. There is a shortage of talent in the country and most of the officers are retired army officers who are now on contract in certain sectors of the Government, and I'm sure they are helping the Government in many ways. I'm telling you that we are not unjustly grabbing something from the civilian rule. Most of the army officers who have been appointed to some particular job are qualified for that. Ambassadorial jobs you said—we have a fixed quota for it, I think 20 per cent is reserved for army persons.

Q. Who are the other forces in Bangladesh society that should be involved in determining the future of the polity?

A. Everyone of us, everybody from every profession should have some say in the administration in this country.

Q. Including civilian politicians.

A. Of course, surely.

Q. And the parties you have banned.

A. Everybody should have some say to run the country.

Q. What you are talking about is some system of power sharing between civilian politicians and the army.

A. I told you already it is not power sharing—we want to be discussed, we want to contribute in the policy making, all the future plans of the country and also in the development work because we are a united disciplined force.

Q. Would the army want to be associated with the running of the country by having a role in the cabinet or would it be in terms of an army officer being President?

A. No, not at all, not at all.

Q. Do you have any specific plans of how the army should be associated?

A. That I said parliament should sit down and decide. I've left it to them.

Q. You have no ideas of your own that you want....

A. No, I have my ideas about that, but let the parliament decide.

Q. Would you share them with us?

A. I strongly feel that I will be able to convince them that if they want progress for the country, if they want to utilise the disciplined force for the development, they should consider this.

Q. If the system you are talking about were to come into being and if you were also to become president, your critics say that what you would be doing is perhaps shifting from your present position as a military dictator to the position of a civilian dictator.

A. I am not a military dictator.

Q. But it is a martial law regime.

A. It is a martial law regime. People asked me to come and take over this country. You must know history also...and for this we are not responsible—it is the politicians who are responsible. They failed to administer this country and deliver the goods and therefore the whole country, as a matter of fact, asked the military to take over and we just obliged them. And I think I did not do a bad thing by obliging the people of this country and my record over the past three years has proved that.

Zia (left) and Prime Minister Junejo: signs of change

PAKISTAN

A Crucial Crossroads

A NEW democratic order is replacing martial law. We have made a very long haul before reaching this phase of the restoration of democracy. This transition period is crucial."

For one caught so irretrievably in the eye of the impending political storm Mohammed Khan Junejo could hardly have put it more audaciously. The six-footer from Sind stands at the most crucial crossroads in Pakistan's chequered history of governance. One road, steeply inclined, can take the country to some degree of democracy and another to a tumble downhill, stuffing it in the unrelenting clutches of the military.

For many in Pakistan today Junejo is a symbol of the grudging yet welcome change which President Zia-ul-Haq has been forced to make. But the hardboiled political observer, incurably cynical after three decades of near-misses, sees it as no more than a shrewd gambit on Zia's part to shed the albatross of martial law without losing any of his dictatorial clout. Either way Junejo, appointed prime minister on probation by Zia and now awaiting his endorsement by the new, partyless national assembly represents this change. As a western diplomat in Islamabad summed it up, "Junejo may be a stooge and this assembly a miserable pack of jokers. But the mere fact of their being there means a definite change. At least Pakistani officials can now talk in terms of such things as having to get a budget passed by a parliament."

That bare fact, of change, is not contested even by the worst critics of Zia's new democratic doctrine which dissidents contemptuously dismiss as "Ziocracy". They may question the degree of change and Zia's ultimate intentions but agree that he is now faced with some people in the national assembly who are keen to prove themselves as being more than the military's camp-followers. The March election may not have sent many great politicians to the assembly but even the feudal lords who have got in made self-righteous promises on restoration of democracy. They have no choice now but to at least demonstrate that they are pushing in that direction. One consequence is the more than 20 privilege motions that the new MNA's (Members of National Assembly) have put up are to be debated during the budget session in the coming month of Ramadan.

Late last fortnight, both Zia and Junejo were acknowledging this change. Zia in his own shrewd manner when he promised to lift the martial law in case his cabinet recommended it and Junejo by invoking divine intervention. Speaking to a large gathering in the faraway Baluchistan town of Quetta he said: "People want democracy and let us hope God will help us in this holy task." The new mood was aptly summed up by well-known *Nawa-i Waqt* columnist Ata-ul Haq Qasmi: "I would not say democracy has finally been ushered in. But what we have today, after the elections, is a lesser evil. When you promote a lawyer to judgeship he on his own becomes a different person. The same could happen to our rulers now."

There were indeed some pointers to change. Civilian officials replaced at least two army officers, Lt-General Abdul Hamid Khan, the federal information secretary and Brigadier Fuad Zaman, provincial secretary of planning in Punjab. The provincial governors, all officers of the rank of lieutenant-general, were told by the General Headquarters (GHQ) to prepare for retirement as soon as they relinquished their posts and there was a general mood of insecurity among the brass. "The fear," said a senior Islamabad official, "is that Zia may now find it difficult to contain the forces he has unleashed. People are enthused by the new promise and want democracy. And the assembly has plenty of young people who will keep pushing for change." Echoing the same sentiment an American diplomat commented: "We are not suggesting that Zia is a great democrat. But now he will not be

"This is a bonsai democracy, kept in the show-window for the Americans to admire. This is a neonatal situation. Nothing has been delivered so far."

Assembly Speaker Fakhr Imam and wife Abida Hussain: act of independence

able to put the genie back in the bottle."

The first indication—indeed the only one so far—of the new assembly defying Zia came in the form of the election last month of Syed Fakhr Imam Shah, a 42-year-old agricultural economics graduate from California University, as speaker of the assembly. In bold opposition to Zia's candidate he won the only office where Zia had chosen to hold an election rather than appoint his own man. And even if the margin of victory was just eight votes it was of great symbolic value, "an act of independence" as Imam puts it, if not of defiance. "I am a believer," says he and adds, "there is going to be a slow fade-out for martial law. This assembly is full of middle-of-the-road people and that should be good."

The crucial question, however, is who will win the loyalties of these middle-of-the-road people, many of whom are politically uninitiated and thus open to manipulation if not coercion. The fear in liberal circles is that, in case the democracy-seekers set a fast pace at this stage it will only scorch them as Zia could pull out all stops and supersede the assembly. As Sajeda Abida Hussain Imam's wife who happens to be the only woman MNA elected from an unreserved seat, said: "To me the name of a person (read Zia) and where he stands is not as important as a steady transition to democracy. We should not rush things."

"In Pakistan the forum for democratic revival has always been the streets...But if democratic means fail, there is a real danger of Pakistan breaking apart."

GHAUS BUX BIZENJO
MRD convenor

BESIDES apprehension of interference from Zia, the moderates in the assembly have another reason for worry. The various political parties constituting the powerful Movement for Restoration of Democracy (MRD) boycotted the election. They reject the new assembly. Sooner or later they will resume their war with Zia and, for democracy's sake, it will be unfortunate if the new assembly is also to range itself on Zia's side of the fence. But the MRD also realises that despite its boycott call, over half of the voters participated in the election and its strategy is not to take on the MNA's right away. It will wait for what it sees as inevitable: a confrontation between Zia and at least some of the MNA's or, if that does not happen, for the people to get totally disillusioned with them.

From Lahore to Karachi, practically every MRD leader talks of the MNA's in sympathetic terms, as pawns in Zia's end-game. "These poor, destitute orphans, *Yeh garib bebas to bebas hee rahengey* (these helpless people will remain helpless)," says Ghaus Bux Bizenjo, veteran Baluch leader and MRD convenor. On the MRD strategy vis-a-vis the assembly, he is slightly defensive, saying, "People voted alright. We do not want to harass these poor MNA's who will themselves be forced to fight Zia ultimaltely. Our enemy is the army." This was also the essence of a consensus evolved at a national MRD convention held in Karachi late last month.

The MRD leaders, who happen to be Zia's most bitter opponents, argue that his offer of democracy is like a leopard promising to change its spots. They are banking on the prospect of quick popular disillusionment unleashing a groundswell of support, enabling them to revive the movement in the course of time. "People will see through this game very fast," says MRD leader and former Punjab minister Aitzaz Ahsan in Lahore, asserting, "what you see today is bonsai democracy, created by Zia to be put in the show-window for the Americans to admire. This is a neonatal situation—nothing has been delivered so far." Ahsan reels out the long list of presidential orders and constitutional amendments through which, he says, Zia has made the assembly redundant. Says he: "Zia has the national security council which can dissolve the assembly, he appoints the prime minister and the governors, and governors appoint provincial chief ministers. He is empowered to constitute military tribunals even when there is no martial law. Who has he fooled in the bargain?" The MRD leaders' basic argument is that the election was at best a tactical feint planned by the United States administration to please the anti-dictatorship lobby in Washington.

They point out that during Sri Lanka President Jayewardene's visit to Islamabad, Junejo was put sixth in order of precedence, after the President, chairman of the chiefs of staff committee and the three service chiefs. "What kind of a prime minister is he, whom the generals do not even salute?" asks dissident poet Habib Jalib. But the dissidents' main problem now is, they have been left without a forum. Says

Bizenjo: "This is an alarming situation where the army does not budge from power and people won't budge from their right to democracy. If this continues the other nationalities (Baluch, Sindhi and Pakhtoon) will get further disillusioned, take recourse to undemocratic means and Pakistan will disintegrate. In any case the forum for democratic revival in Pakistan has always been the streets."

Besides Zia, the dissident ire is directed at the US which, they say, is using Pakistan as an expendable pawn in its South Asia strategy. Again, Bizenjo is their most eloquent spokesman: "The Americans want to undo the Iranian and Afghan revolutions and destroy Pakistan by using up its people and resources to

SIKH EXTREMISTS

The Outside Force

BELIEVE me," said the young artillery captain in Peshawar, referring to the series of cantonments along the 160-km route to Rawalpindi, "this is one of the largest concentrations of military installations in the world."

There couldn't be much exaggeration in that. A signboard at the foot of the Attock bridge proudly announces the approach of the "home of armour", the headquarters of the Pakistani armoured corps. The massive Pakistan Aeronautics complex almost gets lost in the maze of the myriad infantry units designated by mere figures on the signboards that also warn, grimly: "Entry prohibited without valid permits." It is in some of these bunched up units, Indian authorities believe, that the Pakistani forces are training over a thousand young Sikhs to serve as a fifth column in Punjab.

So emphatic is the assertion on the Indian side, and the denial in Pakistan, that it is virtually impossible to sift fact from fiction on the question. In India, for example, it is popularly believed that retired Lt-General A.A.K. Niazi, who led the Pakistani surrender following the creation of Bangladesh in 1971, has been put in charge of the clandestine operation. This has often been stated in the newspapers and, on the face of it sounds plausible enough. If the Pakistanis were to choose the right kind of person to train rebellious Sikhs, who could have better motivation than Niazi, the man who suffered such humiliation at the hands of the Mukti Bahini trained by India?

But INDIA TODAY's inquiries in Lahore do not exactly mark Niazi as the villain. He is old, a wee bit overweight and very frustrated with the fact that he has been unfairly labelled the loser of 1971, whereas he claims, "my last order was to fight to the last man and last bullet but the General Headquarters ordered surrender."

Niazi is a man with a visible feeling of victimisation. He spends most of his time at his farm near Mianwali with an occasional, low-profile presence in his modest house at Shami Road in the Lahore cantonment. With a mixture of skepticism and plenty of conviction he laughs away the charge, saying, "Yes people tell me newspapers in your country have been saying that. What can one do? I am keeping busy farming and lying low with my mouth shut."

But Indian officials, while accepting the innocence of Niazi, now point to certain events last month that serve as vital pointers. First of all Raghunandan Lal Bhatia, the AICC(I) general secretary, who had been making loud noises about the presence of Pakistani commandos in Punjab was shot in his house. A week later the Amritsar police captured two Sikhs, Joginder Singh and Kahn Singh who confessed to having been trained in Pakistan. They say they were smuggled across the border along with at least 50 others to spread out over Punjab and possibly even Delhi.

Similarly, the Border Security Force occasionally catches the odd Pak-trained terrorist infiltrating across the line of control in Kashmir. Interrogation reports establish a trend—that a number of small groups of Sikhs who fled from the Punjab countryside are getting sabotage lessons at some Pakistani cantonments. There are no large, demarcated camps. These groups stay inside regular cantonments close to the North West Frontier Province (NWFP) and in the Pakistan Occupied Kashmir areas. Indian sources mention the name of Brigadier Imdad Hussain Khan as the man "looking after" them.

JANG

Gurcharan Kaur, Kulwant Kaur and Sham Singh: ominous presence

Pakistani officials do not deny the presence of some Sikh "refugees". In fact they have told some visiting American academics that the number of such "refugees" exceeds 2,000. But they indignantly deny the charge of running training camps. Suggesting that these doubts had already been removed, Abdus Sattar, additional secretary in the Pakistan Foreign Ministry says: "We now feel that our relations have come out of the trough in which they had fallen last year following the events in Amritsar."

But Indian complaints are not confined to the camps. The Pakistanis continue to patronise a number of "Khalistan" campaigners abroad and that bothers India a great deal.

Last month the Pakistan Government made a show of goodwill by sending away Pritam Singh, Queen's Counsel, from the Karachi airport. But they did

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

make Israel the most dominant power in the whole region." In fact, in post-election Pakistan, this is the dissidents' main line of attack and the clamour for direct talks with the Karmal regime in Afghanistan is becoming louder with even a number of MNA's joining it and proposing to table resolutions to this effect in the budget session.

"Any sensible leader in Pakistan today," says Iqbal Haider, the Karachi-based chief of Quami Mahaze Azadi, an MRD constituent, "would talk to Karmal directly and stop harassing the Soviets." Even people in the higher echelons of the Government have now begun to worry about this new campaign on Afghanistan which is catching the popular fancy

not stop a number of others who attended the trial of Sikh hijackers in relays (INDIA TODAY, May 15). Also, despite the Pakistan Government's protestations to the contrary, Ganga Singh Dhillon had visited Pakistan in the last week of March and stayed with Shujat Hussain, a member of the National Assembly and a son of the late Chaudhri Zahoor Elahi, Dhillon's old friend whom Ayub had assigned the task of cultivating Sikh separatists in the '60s.

Time and again Indian authorities have protested against Dhillon's frequent visits to Pakistan and Rajiv Gandhi has even personally taken up the issue with Zia. Even Shujat Hussain confirms his continuing visits.

Niazi in 1971

In the course of a long conversation on the lawns of his imposing house in Lahore's exclusive Gulberg locality, he said: "Yes Dhillon came to Pakistan last month. But now he has stopped staying with the President whom he knows through his wife (both Zia's and Dhillon's wives are from East Africa). He was also a friend of Chaudhri Sahib's and stays with us in Lahore."

A direct consequence of this access to foreign-based separatists is the anti-India campaign directed at every jatha of Sikh pilgrims visiting Pakistan. Because of the uproar following the anti-India demonstrations led by Bhindranwale's nephew Jasbir Singh in January, these campaigners have remained relatively restrained. But they still distribute anti-India pamphlets and incite the pilgrims against Indian officials accompanying them.

Among these foreign Sikhs were Gurcharan Kaur Khalsa and Kulwant Kaur, from British Columbia in Canada who also attended the Sikh hijackers' trial. Brazenly displaying her interest in the Indian pilgrims Kulwant Kaur said: "This bunch consisted entirely of the Congress(I) Sikhs. We have just one message for them. Go and tell your masters that they have pricked the tail of a sleeping lion. They cannot escape unscathed now." Added Sham Singh, a Pakistani Sikh escorting the women: "Our Sikhs left such marvellous shrines to go and live with you in India and all you gave them is death and destruction."

A relatively recent entrant on the scene, Sham Singh adds a new dimension to the problem. He hails from Thatta, 80 km from Karachi, and is one of the 4,000-odd Sikh families that remained in Pakistan after Partition. Most of these families live in NWFP, concentrated mainly in the valley of Swat and mix with the local population.

A few families in Sind, on the other hand, are closer to their religious roots. It is among these that the Pakistanis are looking for recruits. Sham Singh now spends most of his time shuttling between Panja Sahib and Nankana Sahib, and is also often seen at the Thada Sahib gurudwara in Lahore. He has been indoctrinated well and reacts angrily to the suggestion that a Pakistani Sikh like him should keep away from Indian politics, saying: "We also have Hindus in Pakistan. Won't they be upset if Varanasi and Haridwar were destroyed? There are Muslims living all over the world. Don't they think and feel the same way about Jerusalem?"

Indian officials are resigned to the prospect of people of his kind mixing around with the jathas in the future to embrass the Government. Worse, they think, these Sikhs are being used to indoctrinate the odd Sikh who crosses the border into Pakistan. A number of Sikh traders who happen to visit the shrines in the course of routine business visits are surprised to find granthis or other traditionally-dressed Sikhs ask them questions such as: "From where did you manage to cross the border? Are they looking after you adequately."

The Pakistanis, on the other hand, argue that if their intentions were dishonest they would not propose an anti-terrorism treaty with India under which forces of two countries could even act jointly to prevent trans-border movement of terrorists. "The fact is that 12 Pakistani terrorists, convicted and given long sentences by a Vienna court, began their journey from India. They even acquired their fake passports there," says Sattar, making a counter charge. He goes on to add that the men who hijacked a PIA aircraft to Kabul in 1982 too had started from India.

Indian officials deny the allegations. According to South Block spokesmen Austria has formally told S.K. Singh, Indian envoy there and ambassador-designate to Pakistan, that investigators found no link between the terrorists and anyone in India. The hijackers, on the other hand, had merely transited in India—they never left the transit lounge of the airport.

In the same vein Indian spokesmen point to the Pakistani dilly-dallying in extraditing two suspects in the Mhatre murder case who, Scotland Yard says, are in Pakistan. On this even the Pakistanis are on the defensive. Said Sattar: "In principle we have decided to extradite them. But it is a long legal process and this is also a case of double extradition. There are separate rules between Pakistan and Azad Kashmir."

More than this, however, what is causing embarrassment to Pakistan is the pressure from the International Civil Aviation Organisation (ICAO). The organisation is seeking an explanation as to why the Government handed over a pistol to the hijackers of the Indian Airlines aircraft at Lahore last year. Interpol says that the pistol was part of a consignment imported by the Pakistani Government from West Germany in 1978. Pakistan claims that the pistol had later been disposed of as scrap and may have fallen into wrong hands but this convinces neither Interpol nor ICAO and least of all India.

On the issue of terrorism, thus, the air between Delhi and Islamabad is far from clear. And unless this is first cleared all efforts at quiet diplomacy and joint commissions may ultimately come to nought.

because, as a western diplomat in Islamabad explains, no one in Pakistan dares to covet war with the Soviet Union and they all want the Afghan refugees, who are dominating the entire carpet, truck and (most vitally) heroin trade, to go back.

In fact, it was out of concern on this score that Deane R. Hinton, the US ambassador in Islamabad, jumped the gun last month by publicly stating that any suggestion of "direct talks with Karmal would amount to a betrayal of the Mujahedeen". He went so far as to ridicule the MRD, which has been making this demand, as a bunch of people "who always sought democracy but boycotted the election." While the Pakistan Government maintained an embarrassed silence, the dissidents immediately seized the opportunity, demanding Deane's recall and quoting this as evidence of the US interference. Said Wali Khan, pleading for a departure from the American-inspired Afghan policy: "God forbid, if there is a superpower conflict in the region there is every chance of Pakistan becoming the battlefield much to the detriment of NWFP and Baluchistan." But on Afghanistan both the dissidents and MNA's are bound to run into a wall. The support to the Mujahedeen is central to Zia's foreign policy and means a lot to the military regime in terms of dollars and weapons.

It is even possible that a growing demand for peace on the Afghan front may just give the military the excuse to pull down the shutters and stop the wild football match, as Zia once described democracy. The troubles in Afghanistan are now as vital to the military rulers' sustenance as the bogey of an Indian attack, that overused ploy employed so effectively over the decades. Now, with pressures from the people, the new assembly and even the democratic lobby in the US building up, the army brass would indeed be looking across the Khyber for an escape route.

Also, now that the political battlelines are in the process of being drawn, the brass-hats are unlikely to call quits before trying their luck. They have ruled Pakistan for a long time and are much too deeply involved in political stakes to return to the barracks now. They have all along been the super-elite of Pakistan, a fact evident in the size of defence officers' houses in the major cities, their life-style and wages, something their envious Indian counterparts perpetually complain about.

Control in Islamabad makes things easier for the Pakistani soldier. While the best jobs at home are reserved for them—one general heads both the multi-crore Water and Power Development Authority (WAPDA) and the Board of Cricket Control—the forces have also been able to cash in on the Gulf boom. Says Jamal Rashid, an analyst based in Lahore: "With military training missions in 23 countries and over 26,000 troops in Saudi Arabia, Pakistan has the largest mercenary army in the entire third world."

"What kind of a prime minister is he, whom the generals do not even salute? This is democracy of the graveyard, a shameful farce."

HABIB JALIB
Dissident poet

Mercenary services obviously mean big money. A Pakistani major in Saudi Arabia gets the equivalent of 70,000 Indian rupees a month and keeps the bulk of it, barring a 30 per cent contribution to the government pensionary fund. An ordinary sepoy too makes Rs 7,000. So vital are the stakes that the Pakistanis have even been quietly swallowing the humiliation of being told by the Saudis to recall the Shia soldiers from their units. Of late there has been a clamour for the termination of this arrangement. "This is what the Americans want," says Ahsan adding, "The Americans know we have the only army in the whole Muslim world that is capable of absorbing modern technology. So they want to use us as mercenaries for ever." A return to civilian rule threatens this arrangement and that adds to the generals' insecurities.

To counter this, they can draw upon resources and support extending far beyond the limited world of khaki-clad ranks. An academic in Lahore points out that the army draws sustenance from not merely its own armed strength but also from the vast army of ex-servicemen which still remains involved with serving soldiers through the Fauji Foundation, Pakistan's legendary soldiers' cooperative that does everything—from collecting donations on flag days to running sugar mills and is responsible for providing the Pakistani soldier the bulk of his post-retirement benefits and resettlement. The generals expect the foundation to command the loyalty of rural ex-servicemen. There are many in Pakistan who believe that the generals have already gone as far as they had wanted to. "We do not even laugh at the *fauji* jokes any more, for the joke is finally on us," grunted a Lahore lawyer.

Yet the coming months will see the generals under increasing pressure with even the non-MRD politicians wanting the revival of at least the party system. As Pir Pagaro, president of the Muslim League said, "It is in Zia's own interest to return to the party system. Ultimately the soldiers will tire out and surrender to us. The GHQ is hardly capable of coping with the process of democratisation." But GHQ may have an entirely different view of the situation. It was not without purpose that Zia, in his election-eve rush of constitutional amendments gave himself sweeping powers under the emergency clauses where he can, besides other things, dismiss the national assembly with no questions asked. That threat will prevent the more ambitious MNA's from going too far too fast.

Either way, the situation is ripe for political conflict. Broadly, Pakistani politics will proceed along three coordinates in the weeks to come. There is the insatiable ambition of the military brass, the newfound enthusiasm and compulsions of the members of the new national assembly and the tenacity of the belligerent MRD men. For Zia, ironically, there is challenge from each one of the three. From the dissidents who want his blood, from the assembly that wants his khaki-shirts back in the barracks and from the soldiery that is wary of his dabbling with democracy. If he emerges victorious from this round he would have won the biggest gamble of his life.

Experience the exclusive attention you get at your club. On Air Canada's Business Class—30,000 feet high.

At Air Canada, we believe that by understanding your needs better, we can fulfil them more effectively. So take a look at what you'll find on Air Canada's Business Class.

More cabin-crew

There are more cabin-crew for every passenger on our route: to give you the exclusive attention you get at your club.

Roomy seats

Air Canada's Business Class seat has the same width, recline and legroom as a First Class seat on most other airlines. Arranged in a 2 + 2 + 2 format to give you the privacy you get at your club.

Non-stop flights

There's more: Air Canada flies non-stop to London and Singapore, direct to Toronto, three times a week. Leaving Bombay at a convenient time and arriving at the other end in daylight.

Come. Experience a flight that's more than just a way of cutting down on travel time.

Fly Air Canada's Business Class. And your club flies with you.

AC/5/28

AIR CANADA

Toronto—London—Bombay—Singapore

For bookings, contact Air Canada, Hotel Oberoi Towers, Tel: 202-7512, 202-7632. Or your travel agent.

When it's 40°C outside your employees surely deserve better than this.

Refreshing, ice cold drinking water. A basic need throughout the year, especially in the summer months. Yet so often ignored.

In offices and shops. Schools and colleges. Banks and hospitals.

A glass of cold water probably does more for work efficiency than you'd imagine.

To get the best out of your employees, give them the best.

An Usha Water Cooler.

It's the water cooler that all other water coolers are measured against. Because of its sleek and streamlined body. Its sturdy heart, the compressor which carries the famous Shriram stamp.

Its vast range, which offers a model to suit every taste and requirement.

A range that has found its way to 15 countries all over the world.

And of course the Usha name, with an unblemished reputation for high quality products.

Small wonder that Usha is the largest selling water cooler in the country today.

And if you're concerned about work efficiency, it's a name worth looking into.

USHA

WATER COOLER

India's largest selling 'thirst-quencher'.

A high quality product from the house of Shriram.

You can take chances with your luck. But if you want security of your luggage trust Safari.

Are they really worth it? Those anxious hours at airports or when you are away from your hotel room? When fear lurks in your mind that somebody has opened the bag and made off with the valuables inside.

The six-lever vault lock of Safari is specially designed for maximum security. As the key turns, a pilfer-proof slide engages into locking position to secure your bag. The locking slide is encased in a steel channel completely protected from tampering. Screwdrivers, knives or even more fearful implements in professional hands are known to have failed in opening the Safari lock.

Safari. It survives.

SRI LANKA

A New Dimension

SRI LANKA'S ethnic upheaval has now acquired another dimension that threatens to impose further strains on the island's social fabric. The three weeks of tension and violence in the eastern province between Tamils and Muslims which left 50 people dead is likely to have consequences that are both grave and unpredictable. Last fortnight, the area slowly limped back to normalcy with the reopening of 130 of the region's 200 schools. But the physical and psychological scars still remain.

In physical terms, the toll is enormous. Though senior officials from Colombo are currently touring the province to assess the damage, over 2,000 homes and buildings, mainly shops, have been destroyed, with the loss in housing alone estimated at Rs 70 million. Some 25,000 refugees, rendered homeless by the violence, have been given shelter in the unopened schools.The majority are Tamils who fled their homes when violence broke out in towns like Karaitivu, Eravur, Akkaraipattu, Katankudi and even the outskirts of Batticaloa, the provincial capital.

The psychological damage is perhaps far greater. Tamil-Muslim violence on this scale is unprecedented. The last serious riots involving the Muslim community occurred as far back as 1915 and were religious rather than political in nature. This is the first time that the island's main minorities, the Tamils who comprise 13 per cent of the population and the Muslims (6 per cent) have been locked in violent conflict.

The upheaval has also brought into question the role of the Special Task Force (STF), the elite commando unit trained by former British SAS personnel which is in charge of security in the region. The failure of the STF to contain the violence led to the dispatching of police reinforcements to the area more than a week after the outbreak of violence. Asked why the STF could not control the violence, National Security Minister Lalith Athulathmudali, however, told INDIA TODAY that well-armed terrorists had been operating in the area for several years and the STF faced many "logistics problems", specially that of mobility.

Map by B.K. SHARMA

The tension and violence between Tamils and Muslims in the eastern province threatens to impose further strains on Sri Lanka's social fabric.

Both Tamil and Muslim leaders, currently engaged in taking out peace marches in the area, are, however, convinced that the embittered STF preferred to stay aloof when the trouble erupted. There have also been hints that "external elements" were responsible for fanning the flames, a phrase used by Home Minister K.W. Devanayagam, a respected Tamil leader representing the local electorate, and by a Mulsim deputy minister.Meanwhile, S. Thondaman, minister for rural industries and president of the powerful Indian Tamil labour union, the Ceylon Workers' Congress (CWC), told President Jayewardene that seven buses and two jeeps carrying armed men he described as "undesirable elements" had gone to the eastern province from Colombo.

Senior officials in the province admitted that members of the Muslim population had been given guns but explained it away by saying that they were merely returning weapons confiscated under the emergency regulations. Evidently, Muslims had been feeling threatened by the growing presence of armed Tamil youths supporting the cause of Eelam and claiming the racially-mixed eastern province as their "traditional Tamil homeland". Says Athaluthmudali: "The real cause of the trouble is the resistance by the Muslims, specially the youth, to the northern terrorists and their separatist demand. When they failed to win over the Muslims, they resorted to the tactics they used in the north —robbery, assault, murder".

There is some truth in that statement. Muslim traders of the area hail from the affluent strata. Like the majority Sinhalese, Tamil militants regard the educationally-backward Muslims as a money-making community uninterested in politics or culture. But the new generation of Muslim youth, fired by ideological currents in the Arab-Islamic world, resent the Tamil attitude.

In that situation, political expediency could play a major role. Some Sinhalese politicians view the current tension as a means to win back Arab support and sympathy, diluted considerably in the wake of the introduction of Israeli "advisers" into Sri Lanka. Already, some newspapers in the island have hinted that the latest ethnic problem has been instigated at the advice of the Israeli personnel attached to Sri Lanka's intelligence organisations with a view to discrediting and undermining the Tamil extremists. However, the official *Daily News* warned against Sri Lanka becoming the cockpit of international conflicts. In the event, the current internal conflict is enough cause for alarm.

THE NUCLEAR OPTION

Ambivalent Stand

THE PERFORMANCE of ministers is often determined by the ministries they happen to hold. In the Indira Gandhi regime, Narasimha Rao made a good foreign minister. Now, in the Defence Ministry, he is probably bored to death for there's very little an Indian defence minister can do on his own initiative. Rao's only distinctive contribution to defence so far is a reference to Pakistan's efforts to make nuclear weapons which, he told the Lok Sabha, was "deliberately" planted in the traditionally secretive lack-lustre annual report of the Defence Ministry. A single sentence spoke of India's "concern" at Pakistan's "relentless pursuit of nuclear capability with the assistance and connivance of certain countries." This added a "new dimension to India's security environment," said Rao, and asked the MP's for their "enlightened" views on the matter.

Predictably, several voices cried out for the Indian bomb, just as it happened last year and the year before. The only difference was that the most eloquent advocate of the bomb this time was H.M. Patel of the Janata Party, while last year it was Madhavrao Scindia, of the ruling party! The minister, however, beat a hasty retreat in the face of the "enlightened" demand. In his reply to the debate, he just chose to ignore it! Nevertheless, *The Times of India* wrote in an editorial that "Parliament has at last begun to come to grips with the nuclear dimension of national defence", forgetting that it was as early as April 1979, when the Janata regime was still alive though very unwell, that the External Affairs Ministry had for the first time recognised that Pakistan's nuclear programme had "a nonpeaceful dimension", and that since 1964, when China went nuclear, members of Parliament, in their "enlightened" manner, have been relentlessly "gripping" with the nuclear dimension of national defence.

For 20 years India has been chewing over its nuclear option. If there is a peculiar dimension to this longest nuclear debate in history—it is that clear, categorical no-bomb declarations of successive prime ministers have been pitted against persistent demands of the bomb lobby for nuclear weapons.

In her own relentless pursuit of power, Indira Gandhi was almost as clearly categorical as Morarji Desai that India would not make nuclear weapons. Her most authoritative statement was made on the floor of Parliament in August 1984, barely 75 days before she fell to the assassins' bullets. "India will not deviate from its peaceful nuclear policy no matter what Pakistan does," Mrs Gandhi declared, adding, very wisely and correctly, that the nuclear issue could not be "viewed at the micro level." That is, at regional levels, but had to be fought out on a global scale by arousing world opinion against the nuclear arms race. Even the *Patriot*, with all its zeal and fervour for Mrs Gandhi, took her severely to task for "unilaterally renouncing the nuclear option." An echo of how most of the press had reacted to Morarji Desai's declaration at the UN Assembly Special session on nuclear disarmament in 1978.

But Rajiv Gandhi has been doing exactly what his two predecessors had done. He told the *Los Angeles Times* on February 22 that "... at the moment I don't see a situation arising when we would start up again making the bomb. Just the fact that Pakistan made a bomb would not make us change our policy. We don't want to become the same as the others." More recently, on April 24, in an interview given to Mushaheed Hussain, editor of the Islambad newspaper, *The Muslim*, Rajiv Gandhi categorically rejected the theory that nuclear weapons in the hands of India and Pakistan would stabilise peace in South Asia by creating a "balance of terror." He said, "I have never subscribed to the view that 'terror', balanced or otherwise, would stabilise anything. A nuclear arms race in the subcontinent would only subject both our peoples to the worst possible fate on earth."

The categorical views of the Indian prime ministers are not reflected in the statements made by foreign and defence ministers. For instance, in March 1984, the then defence minister S.B. Chavan, made a startling announcement in the Lok Sabha with barely a quorum present. In the face of conflicting reports coming from various sources, he said he had decided to "proceed on the assumption" that Pakistan had reached the capability frontier marked N, and had asked India's defence planners to take "appropriate" measures. No one even pressed him to clarify what he meant by "appropriate". However, Narasimha Rao, then foreign minister, referred to the same reports in a parliamentary statement only to tell the members by implication that he would not share his cabinet colleague's assumption. He would neither "brush aside" those reports, nor accept them "as gospel truth".

The Indian option will not be determined by public debate, nor at cabinet meetings. If ever India goes nuclear, the decision—a major political one—will be taken by the prime minister after consulting the service chiefs and his own close political advisors. One very strong reason against the option is that the United States and its nuclear allies have already made reluctant allowance for a junior society of "small nuclear powers" outside the Club of Five. Eighteen countries have been identified as possessing a stronger nuclear industrial base than had the United States in the early stages of the Manhattan Project. Of these six are "problem" states, probable founder members of the juniors' society. Amongst the six, four are said to be under rising pressure to go nuclear—India (which is under "notable" pressure), Pakistan (under the "greatest" pressure), Israel and South Africa. Not exactly heart-lifting company!

The Americans have taken the gloss of status and power off nuclear weapons when these come in the arsenals of "smaller" nuclear nations by the mid-'90s. None of the proliferators will be allowed to climb up the ladder of strategic power. Their "dirty deterrants" will keep them confined for a very long time to the regions in which they reside, exposing them to mutual annihilation at the worst, to frozen animosities at the best.

Some days are so hot, you can't hold the steering wheel without scorching your hands.

That's the kind of heat only Amtrex can handle.

Amtrex is specially designed to handle temperatures as high as 45°C. It cools effectively even in peak summer — when all other machines struggle to cope.

Most air conditioners work well when it isn't too hot — but they can't handle more than 40°C. When temperatures rise above 40°C, you need a machine with greater cooling capacity.

Extra cooling power

At very high temperatures, Amtrex keeps you really cool. In Delhi, for instance, Amtrex survives peak summer without the help of water. In cooler cities like Bombay, the extra capacity of Amtrex makes it the most effective. Even on the hottest day of the year, even in overcrowded rooms, Bombay will never use the full cooling power of Amtrex.

This extra cooling power is generated by giant-size cooling coils, and an optimised air conditioning cycle that cools more air, faster.

Who's bought Amtrex?

Amtrex has already found its way into some of the best offices and homes in India. Gwalior Rayon Silk (Wvg.) Co. Ltd. Hoechst India Ltd. Diners Club India Pvt. Ltd. Bank of India, Ahmedabad. Orkay Polyester Ltd. Indian Merchants Chamber. Shri Dinesh Mills Ltd. Crown TV — Televisions and Components Pvt. Ltd. Alliance Francaise. Lohia Machines Ltd. Hinditron Computer Systems Pvt. Ltd. Saurashtra Paints Ltd.

PARING DOWN

PFIZER is likely to join a long list of foreign drug companies that have voluntarily diluted their overseas shareholding to 40 per cent in order to get out of the clutches of the Foreign Exchange Regulations Act (FERA). The drug companies that have already done so are Parke Davis, Warner Hindustan, German Remedies, Hindustan Ciba-Geigy, May and Baker, and Organon, among others. Pfizer had believed that it could continue to grow despite FERA by staying in the area of high technology and priority drugs. But the company's New York headquarters feels otherwise. The Indian subsidiary's senior executives have tried to argue that with the national drug policy about to change, a dilution of foreign shareholding from the present 60 per cent may not be necessary, but the parent company remains unconvinced. The advantages of dilution are evident, in that many of the companies that have come down to 40 per cent overseas shareholding have been able to register large capacities in otherwise forbidden areas and expand their formulation activity.

BOOM TIMES

IT IS now boom time for jeeps. Maruti is getting ready to start the production of its jeeps, with a 970 cc engine. Mahindra and Mahindra has just introduced its new MM 540 model with a four-speed gearbox, a Peugeot engine and a new streamlined body. Next in line could be Hindustan Motors, said to be negotiating with Isuzu of Japan for its Trooper model. And Toyota and Nissan are also expected to introduce their versions of the jeep in the Indian market.

Meanwhile, Tatas are said to be negotiating with Mercedes and Audi for making one of these premium cars in India. The market for luxury cars is now believed to be much larger because bookings for Standard Motors' Rover 2000 have been way beyond expectations.

FAST MOVES

A NUMBER of industrial groups with sick units in their stables are planning quick steps to prevent any fall-out of proposed policy that will forbid the financial institutions from lending to such tainted groups. The favoured plan of action at the moment is merging sick units with healthy ones in the same group. The JK group is already implementing its decision to merge its sick battery and steel units with healthy companies, while the Modis may work out a similar arrangement for their textile unit. Such arrangements also lead to tax write-offs. However, this stratagem is not open to all the big groups, especially if the sick unit is too big to be merged into another. This is the case with Rohtas Industries, belonging to the Sahu-Jain group.

REVERSE POSITIONS

POSITIONS have been reversed regarding the future of the Mysore Iron and Steel Works (MISL), run by the Karnataka Government. For a long time, the Steel Authority of India Ltd (SAIL) was keen on taking control of the unit, with the state Government stoutly opposed to such a move. But with the company having slipped deep into the red, Hegde's Government is anxious that SAIL should take charge of the unit. Now SAIL is insisting that the state Government guarantee sufficient power supply for the unit and that the Centre must provide the funds for rehabilitating MISL. Meanwhile, steel demand has picked up.

STILL TOO BIG

THE REJOICING in corporate circles over the raising of the asset threshold for coming under the purview of the Monopolies and Restrictive Trade Practices (MRTP) Act may be misplaced. None of the original 20 large houses stands to benefit from the raising of the threshold from Rs 20 crore to

Chart by B.K. SHARMA

Rs 100 crore. Even among the top 75 large houses, the vast majority will continue to stay within the purview of the MRTP Act. Even companies as relatively insignificant as United Breweries and the Khatau group stay within the MRTP limit, since both have assets of over Rs 200 crore.

TYRE TROUBLE

TRUCK operators plan to go on the warpath once again over rising tyre prices. At a meeting held last fortnight, the All India Motor Transport Congress (AIMTC)—the apex body of the truck trade—decided in principle to haul tyre manufacturers into court on the price issue and to boycott the products of any one tyre company. The AIMTC is seeking legal advice on the strength of its case against manufacturers, and will decide in the next few days on which company's products are to be boycotted. The AIMTC claims that tyre manufacturers have jacked up tyre prices by Rs 1,300 to Rs 1,400 per truck tyre during the last few months over the levels prevailing last October, and charges that this has been done despite the Government having referred the issue of earlier price increases to the Bureau of Industrial Costs and Prices last May. Tyre manufacturers say that the demand for truck tyres has shown some improvement, but for car tyres is sluggish.

INDUSTRIAL TARGETS

Thinking Small

I SPENT a whole morning the other day at the booking office of Indian Airlines (IA) trying to get a seat on its Delhi-Bombay flight. Normally it takes no more than ten minutes, a bit longer if there is a rush, but this time we had to contend with a brand new computer which either did not like our names and spat them out or had other things on its mind. Every few minutes, the machine would go on a blink—which meant literally that it went to sleep—while IA officials went on pressing one button after another, mostly in vain. I came away with a ticket only to be told at the airport my name was not on the list.

A year or so ago, I was in Paris on a plane to Strasbourg, a small French town that is no bigger than our Chandigarh or Kolhapur. I was to return to Paris the same evening but was not sure about the reservation. It was therefore a pleasant surprise to find that the girl in Strasbourg not only had my name and address—and of course the reservation—but also my telephone number in Delhi. It was all over in two minutes and I was back in Paris in good time.

Indians seem to be particularly prone to Murphy's Law according to which anything that can go wrong will go wrong, and in fact does. Take the case of the fertiliser plant at Haldia which has been in the news lately as the Government is apparently thinking of selling it to private industry. It is not a small plant; it has cost more than Rs 400 crore so far and is losing money at the rate of Rs 150 crore a year, if not more. It is one of those stories that should make the *Guinness Book of Records* if the book accepted such ghoulish stories. To quote from a report in the *Statesman:*

"Although the deadline for the project was September 1, 1972, the preliminary work of earth-filling and civil engineering began only in October 1976. When the mechanical part was completed in 1978, the state Government failed to keep its commitment regarding supply of power. The plant authorities decided to instal their own generator, but that delayed the commissioning of the plant till January 1982. Beginning with the production of ammonia, the authorities went on to commission the nitro-phosphate plant in January 1983."

Even as the plant was limping along, an incredible act of indiscipline paralysed it altogether in September-October 1983. In September, the operators on duty at the control room of the ammonia plant left their charge over a dispute regarding the food from the canteen. With the control panel unmanned the gasholder of the unit collapsed.

When the oxygen-compressor of the plant was operated with a second gasholder without anybody gauging the damage to the first, the compressor caught fire and exploded in October. A second oxygen compressor met with the same fate in November. Since then, the ammonia plant, the nerve-centre of the entire project has been closed down.

> **We Indians seem to be particularly prone to Murphy's Law according to which anything that can go wrong will go wrong, and in fact does.**

Haldia is near Calcutta and there are other plants there, including a Rs 40-crore chemical plant operated by Hindustan Lever, that function quite satisfactorily. It is not clear what the West Bengal Government did to help the Haldia authorities, since the fact that it is in big trouble must have been known to them. Did Jyoti Basu or Ashok Mitra take up the matter with the Centre? Did they, or other representatives, go down there, to Haldia, that is, and try and put things right?

If they did, they have not said so. After all, a plant like Haldia brings a bad name to the state. If it is Haldia today, it could be Durgapur tomorrow, but that is not apparently how the politicians see these things. The West Bengal Government has been after the Centre for setting up a petrochemical complex at, guess where, Haldia, and the Centre has been turning it down. It cannot see how Haldia can be said to be a suitable location for a petrochemical plant when the government cannot or does not summon enough energy to help run a fertiliser plant half its size.

But that is not the point. The point is that while we are very good at abstract reasoning and macro-scale thinking, we seem to lose interest when it comes to small things that matter, forgetting that it is small things that add up to a big whole. For years the planning commission has been working out on its computer what it calls the input-output tables relating to plan in order to check the internal consistency of the plan framework. For instance, if you are going to produce so many tonnes of steel, you must have so much coal and power, and so on, and there our plans are wonderfully consistent in their targets. But the targets are rarely met, and the growth rates are seldom realised. But if a fraction of the energy that the planning commission puts into such esoteric exercises were actually expended in seeing that the targets were met, half our problems would be over.

And that means not only the big targets but all targets. The girl at Strasbourg seemed genuinely pleased to find my name in her terminal, and she read out my Delhi telephone number as if it was some kind of a secret code number. These are small things, just as the girl herself was a small cog in the giant Air France wheel, but they matter. At IA the officials gave the impression that they could not care less whether the computer worked or not. The West Bengal Government may also have treated the Rs 400-crore Haldia plant as if it was none of their concern. But it *was* their concern, not only because the plant is located in the state and therefore contributes to the state's economy, but also because the resources going waste were national resources, and therefore as much theirs as anybody else's. And resources do not grow on trees; they are created out of such things as Haldia and the computerised reservation system of Indian Airlines. Every little thing that works adds to national resources; and every little or big thing that ought to work but doesn't subtracts from it, no matter whether it is in the private sector or public sector and belongs to the Centre or the states. Unfortunately, that is not how we see it. We see the world in round big numbers: Rs 180,000 crore for the seventh plan, Rs 10,000 crore for West Bengal's plan and so on, forgetting that it is not the round numbers that decide our fate but small things like Haldia, before they turn into scrap.

MITASO PRIYA

MINI COOKING RANGE

"MITASO PRIYA"

is a three-in-one mini cooking range. An excellent blend of sophistication and operational efficiency this modern cooking appliance is a source of culinary pleasure. The triple functions of boiling, grilling and baking will be at your command to prepare an assortment of mouth watering sumptuous food.

SPECIAL FEATURES

BOILING BURNERS

There are twin boiling Brass Burner Tops with high thermal efficiency. A stainless steel Drip Tray for easy cleaning and a special Tawa is provided.

GRILL

The stainless steel grill burner with double positions serves both as a grill and an extra burner. Just reverse it and you'll get the burner! The grilling rack can be used from both sides · The rack is equipped for rotating the Skewers.

OVEN

Designed in an economical size the oven knob can be adjusted to obtain the required temperature needed for preparation of varieties of food. An ignition point is provided for easy & safe lighting up of the Oven.

DIMENSIONS

1. Length 80 cm
2. Width 45 cm
3. Height (including Rubber Grommets & Hood) 30 cm
4. Net weight 21.5 Kg approx.

RATING OF THE BURNERS

For use with liquified petroleum gases at 2.942 KN/m² (30 gf/cm²)

1. Small Burner — 1474 K Cal/hr.
2. Grill Burner — 1608 K Cal/hr.
3. Big Burner — 2064 K Cal/hr.
4. Oven Burner — 1206 K Cal/hr.

Total gas rating — 6352 K Cal/hr. or (input).

ALSO AVAILABLE

MITASO President
MITASO Double Burner
MITASO Single Burner
MITASO Bio-Gas
MITASO Canteen Burner

Introducing shortly — MITASO PREMIER COOKING RANGE

BANKING

Under a Cloud

A.K. BHATTACHARYA, general manager of the Lakshmi Commercial Bank, sits disconsolately in his office in the bank's New Delhi headquarters. He has a large fixed deposit with the bank for which he works, and does not know if or when he will be able to get back his money. "If I had known that there would be a moratorium placed on the bank, I would have pulled out my money immediately," he says ruefully.

Ved Kapur, a director of Lakshmi Commercial till last year, when he sold his 10 per cent shareholding, is in a similar plight: Rs 50,000 in his current account with the bank is at least temporarily out of reach, and a close relative has been ringing up about a Rs 10 lakh deposit that too is beyond reach. "Who knew that this would happen?" Kapur asks.

Hundreds of thousands of other depositors are in a similar plight following the biggest crisis in Indian banking since the Palai Central Bank folded up in the early 1960s. For apart from Lakshmi Commercial (among the largest private banks in the country), the Government of India has placed a similar temporary moratorium on two other banks: the Bank of Cochin and the Miraj State Bank. Between them, the three banks have deposits totalling over Rs 300 crore.

Small depositors are automatically protected by insurance cover that is provided by the Deposit Insurance and Credit Guarantee Corporation, but people with deposits of over Rs 30,000 may have troubled times ahead. Most of them will get back their money only in stages, and some of the money may never be returned: something like 10 per cent of the Bank of Cochin's deposits have been eaten up (Rs 5.86 crore), and over 7 per cent of Lakshmi Commercial's deposits have similarly been eroded (Rs 16.86 crore). In both banks, the paid-up share capital and reserves have been fully wiped out, so that their shareholders will get no compensation from the public sector banks that are now supposed to take them into their fold.

The crisis had been brewing for some time. More than 40 per cent of Lakshmi Commercial's loans totalling Rs 103 crore have been declared "sticky" (that is, loans which have overdue repayments). In the case of the Bank of Cochin, the sticky loans are more than half the total, and in the Miraj State Bank the figure is around 40 per cent.

Besides, Lakshmi Commercial had for a long time been unable to meet the stipulation that some 45 per cent of its deposits must be kept with the RBI and the Government, and as a consequence had been paying out huge penalties. For two years in a row, profits had been declared only by resorting to the revaluation of old assets. But by 1984, there was no room left for even this, and Minister of State for Finance, Janardhan Poojary said in Parliament that the bank was in the red by more than Rs 5 crore. The bank had in any case not been paying any dividends. The Miraj Bank had been resorting to similar financial legerdemain.

Inevitably, public faith in numerous other private banks was momentarily shaken. There were reports of runs on private banks in Kerala and the Traders Bank, a Delhi-based unit, found that some depositors in Jalandhar were asking for their money back. Worried officials of the Reserve Bank kept ringing up twice a day from Bombay to keep track of events, so that money could be rushed across to the bank in case there was a full-scale panic. But things soon quietened down.

Nevertheless, the action against the three banks pointed to a growing crisis in Indian banking, casting doubts on the viability of a substantial part of the industry. A highly-placed RBI official said that "we have been receiving alarming signals that at least a third of the private sector banks are fiddling figures to inflate profits and have on their hands a large number of sticky loans."

In 1983, as a case in point of private banks being in financial difficulty, the 57-year-old Dhanalakshmi Bank of Trichur reported profits of only Rs 42,000 on deposits of Rs 53.50 crore and advances of Rs 29.15 crore. The bank's annual report admitted that it "went through considerable strain due to steep increases in operational costs, administrative problems and factors beyond control." Said D.P. Chadha, president of the All India Bank Employees' Association: "Many private banks divert public funds to private purposes, and when they collapse cause thousands of jobs to be put in jeopardy."

There was every indication that all three banks now under a moratorium had been heading deep into trouble for some years, and that both the RBI and the Government should have acted earlier to stop the rot. RBI inspection reports had warned of impending trouble, pointing to irregular loaning practices, the window-dressing of accounts, the rising proportion of sticky loans and bad debts, the fact that large loans were being given to a few borrowers who had connections with the owners or directors, the evidence of weak management structures, the failure to observe basic banking commitments regarding maintenance of cash reserves with the RBI, the erosion of depositors' money, and much else. In some of the banks, additional RBI directors had been posted to keep a watch on developments, and Lakshmi Commercial's board had in fact been advised to merge the bank with

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

some other healthy bank.

The Miraj State Bank is owned by the princely Patwardhan family, whose members and companies owed the bank Rs 1.01 crore. And in the Bank of Cochin, an RBI inspection report had stated that "during the last quarter century or so, it would appear that there has been no bank in Kerala with such an alarmingly high percentage of sticky advances and such distressingly adverse operational features.... Many of the advances were granted on considerations other than those of prudent banking. With undue and undesirable pressure exerted on the decision-makers, the whole credit process started with a taint. Unviable projects which would not have stood the test of even a cursory scrutiny were liberally financed by the bank."

Lakshmi Commercial Bank: mismanagement

Among the leading lights of the Bank of Cochin is A.C. Jose, Congress(I) strongman and former speaker of the state Assembly. CPI(M) leader E.K. Nayanar has called for action against Jose, who is a director of the bank, for loans given to people and companies associated with him. The bank's former chairman, E.K. Andrew, is already facing charges in the court of Ernakulam's chief judicial magistrate for flouting rules and regulations in the grant of loans of over Rs 1.53 crore, following which the RBI had removed him in 1983. But Andrew claims that he was made a scapegoat by "certain powerful directors" of the bank.

In the case of Lakshmi Commercial, the bank's Opera House branch in Bombay had no fewer than 130 irregular or sticky loan accounts. Fully 50 of them were made at the manager's discretion, 35 have no documents attached, and 47 have no security whatsoever. There have also been numerous accusations concerning corruption. The head of a private finance company in Delhi said that when he once asked the bank for a loan, he was asked to pay a 3 per cent commission, which he refused. He was told subsequently that such demands were habitually made when anyone asked the bank for a loan. And a leading trade union leader in Delhi charged that officials in the bank often used to take Rs 5,000 for jobs handed out (the bank is heavily over-staffed) and varying sums going up to Rs 3,000 for transfers. Asked to explain these charges, S.R. Kapur (perhaps the most influential director of the bank till he left last year) said: "We had heard of these rumours, but there was no evidence to go by." Nevertheless, bank staff and some officers allege that the corruption reached right to the very top levels.

Bank of Cochin: questionable performance

RBI officials charged that inspection of the bank's records frequently showed an absence of basic credit appraisals and routine documentation. In numerous cases, money seemed to have been handed out merely for the asking. Ved Kapur tried last fortnight to explain the bank's decline as being caused by "management weaknesses", but the general impression in New Delhi was that the real reason was rampant corruption. A visit to the bank's main branch in New Delhi's Connaught Circus showed union posters up on the walls demanding that the management stop the lending of money to non-existent firms.

Staff indiscipline was widespread. S.R. Kapur said that people almost never came to work on time, that branches opened late and closed early, and that board meetings had to be held in hotels because otherwise agitated staff used to barge in with their complaints. Another director recalled that truckloads of policemen had to be summoned to the head office at least twice in the past to control agitating workers.

Lakshmi Commercial's directors clearly knew that the ship was sinking, and had been trying for some time to bail themselves out by selling their shares. Three years ago, they offered to hand the bank over to Punjab National Bank, also headquartered in New Delhi, provided PNB was willing to lend the bank Rs 30 crore that it needed to meet its deposit obligations with the RBI and the Government.

At the same time, the bank started negotiations with Canara Bank, and in fact went as far as passing a board resolution to take on Canara Bank's general manager in Delhi. For reasons that are not quite clear, both deals fell through, though a former director of Lakshmi Commercial said that PNB had offered to buy Lakshmi Commercial's Rs 10 shares for Rs 20 each.

Last year saw wholesale changes in the bank, with six directors leaving the board following a new law that no one could be a bank director for a continuous period of eight years. This meant that Ved

Sugar has been getting sweeter over the years.

And cheaper.

If sugar prices had kept pace with inflation, sugar would cost over Rs. 10 a kilo today.

Guess who's behind this sweet state of affairs?

The facts, just the facts.

In the last decade, prices in general have shot up 142%. And in the case of sugar? Only 77%.

In effect, sugar has been getting cheaper over the years. One thing accounts for this seemingly sweet state of affairs.

A crushing annual subsidy of Rs. 300 crores. By the sugar industry.

The Govt. picks up 65% of the sugar in India, at prices well below the cost of production. This is sold through ration shops. Here, prices are kept artificially low because the sugar industry subsidises them. To the tune of Rs. 300 crores.

The industry is expected to make up these losses by selling 35% of its produce in the open market. In practice, these losses seldom get made up.

The Govt. controls prices in the open market also, simply by dictating how much sugar should be dumped into it, and when.

One way road to disaster.

Of the 339 sugar mills in India, 166 are in the cooperative sector, 103 in the joint stock sector, and 70 in the public sector.

The outlook for all of them is bleak.

Losses in the last three years—suffered by mills in all sectors and all regions—are upwards of Rs. 800 crores. To finance these losses, the industry has had to borrow sizeable sums from the banks and State Govts. This is having a crippling effect on its finances. Consequently, payments to sugarcane growers are regularly getting delayed. A cash crop has become a credit one. Cane growers are suffering for no fault of theirs, and are naturally growing less and less sugarcane. Production of sugar has plummeted from a peak of 8.4 million tonnes in 1982-83, to 5.9 million tonnes today. India, which once exported Rs. 800 crores of sugar (1975,76), has now spent Rs. 200 crores (1984,85) of precious foreign exchange on imports.

This is the state of an industry which, by any international parameters, is productive and efficient! An industry which is the second largest in the country.

Is this in the interest of India?

INTERFACE-1001

Issued in the national interest by the Indian Sugar Mills Association.

"If I had known the real condition of the bank, I would not have bought its shares."

H.S. HANSPAL, *Congress(I) MP*

Kapur (son of the bank's founder), two promoter-directors of the bank and three others vacated their chairs. Having lost control, they decided to sell their shareholding en bloc to anyone willing to buy. There followed a long procession of interested parties, many of them attracted by the fact that the bank's total share capital was only Rs 25 lakh while it controlled deposits of more than Rs 200 crore. The first was a small sum to pay if it meant getting control of the second.

The prospective buyers included a non-resident Indian in London, a prominent cement dealer in Delhi, and even well-known industrialist Raunaq Singh. Singh was keen on getting control of the bank. So after checking out that his purchase of the bank would not be vetoed by the Government, he asked his son to go ahead and make the down payment and went on a tour abroad. The son had the good sense to double-check with a former chairman of Lakshmi Commercial, who advised strongly against having anything to do with the bank.

Raunaq Singh recalls that he was quite annoyed on his return to find that the deal had not been clinched. Then he too checked with a senior official in Punjab National Bank, who told him his son had been wise in keeping off. Says Singh: "I am very lucky that I did not buy the bank, otherwise I would have been in a mess today."

Through some months of such aborted sales, the market's assessment of the bank's worth seems to have been revised downward sharply. Some of the initial offers were for as high as Rs 100 per share. Eventually, the shares of the ousted directors were sold for just Rs 30 each to a group of Sikhs belonging to the Namdhari sect, whose spokesman appears to be H.S. Hanspal, Congress(I) member of the Rajya Sabha and a businessman in his own right.

THERE is persistent talk in New Delhi that one of the important new shareholders is Ratan Chadha, a non-resident who first went abroad as a hitch-hiker and eventually set up a multi-million dollar garment business in Europe. But Hanspal denied that Chadha owned any shares, and when asked whether he had heard of Chadha, replied enigmatically: "Not much." Chadha himself could not be reached on the telephone as he was shuttling between Germany, Holland and England.

Lakshmi Commercial officers said that Hanspal has emerged as the real power in the bank although he is not a director. But Hanspal, despite confessing that he had flown to Bombay to meet the RBI governor regarding the moratorium placed on the bank, insisted that he owned less than 1 per cent of the bank's shares. But, he added, "If I had known the real condition of the bank I would not have bought shares in it."

If the new ownership of Lakshmi Commercial Bank remains something of a mystery, there is no secret about the identity and character of the Bank of Cochin. Identified for a long time with the Catholic community in Kerala, the moratorium instantly provoked an uproar. The bishop of Kottayam filed a writ petition in the Kerala High Court against the moratorium, and pressure was mounted on both the Central and state governments to not merge the bank with the public sector Syndicate Bank, as had been announced.

Similar efforts were on in Delhi, with Hanspal undertaking some intensive lobbying to prevent Lakshmi Commercial's proposed merger with PNB. Hanspal argued that the Government's step was unwarranted ("The bank's situation had been improving").

But confidential figures concerning Lakshmi Commercial's functioning suggested that its condition was getting rapidly worse. The bank lost Rs 6.75 crore last year (no figures have been officially released) and a further Rs 2.29 crore in the first three months of 1985.

"I am lucky I did not buy the bank, otherwise I would have been in a mess today."

RAUNAQ SINGH, *Industrialist*

RBI officials pointed out that two chairmen in the recent past had tried to straighten affairs, but that both fell out with the bank's board. K.C. Mehra offered to resign three or four times before he finally left in less than two years of joining, and Premjit Singh had some temporary success in imposing discipline and making bank staff come on time before he left to become chairman of the Bank of Baroda. Singh too had clearly fallen out with the board, for over 50 cases of promotions and transfers that he cleared just before he left the bank were all reversed subsequently by the board. Hanspal said last fortnight that he would complain to the Government about Singh's decisions.

Meanwhile, there was considerable concern in PNB about the prospect of having to take charge of what a union office-bearer referred to as "a polluted bank like Lakshmi Commercial". For though one of PNB's general managers argued that the merger would extend PNB's network of branches by another 222 and therefore help future growth, others in the bank felt that Lakshmi Commercial was too far gone, its staff not used to functioning properly and its operational culture much too corrupted.

In Lakshmi Commercial itself, clerks idly sitting around looked forward to the prospect of getting the security that flows from being a part of PNB. But their immediate complaint was straightforward: no salaries had been paid for

The way sugar prices fluctuate, you'd think somebody manipulates them.

Who could it be?
The sugar barons?
The sugarcane growers?
The wholesalers?
Or the retailers?
Perhaps it is something altogether different.

It is a fact that sugar prices in India have simply not kept pace with inflation.

It is also a fact that sugar prices in the open market fluctuate like nobody's business, something the sugar industry is totally against.

One thing accounts for this oscillating behaviour.

A correct policy, but ...

It is this policy that makes the sugar industry subsidise controlled prices — to the tune of Rs. 300 crores.

As a result of the wrong implementation of this policy, the Govt. has dumped excessive sugar into the open market. This has further increased the losses incurred by the sugar industry.

For instance, this year, the industry has been forced to release 75% of its open market quota, in the first six months, at artificially low prices. Naturally, shortages loom on the horizon. And prices are bound to shoot up.

The role of imports.

The Govt. is planning to import sugar because of expected shortages. Fair enough.

But what's more crucial is how this sugar is brought to the end consumer.

If it is through State agencies, a repeat of 1980-81 can be expected. Then shortages persisted, despite imports. Prices shot up to Rs. 15 a kilo. Black marketeers flourished.

If it is channeled through ration shops, it will serve the purpose. That, in fact, is what the Govt. has been doing for the past two years. It works.

Apart from correctly utilising imports, the very state of the industry needs to be looked into.

One way road to disaster.

Of the 339 sugar mills in India, 166 are in the cooperative sector, 103 in the joint stock sector, and 70 in the public sector.

The outlook for all of them is bleak.

Losses in the last three years—suffered by mills in all sectors and all regions—are upwards of Rs. 800 crores. To finance these losses, the industry has had to borrow sizeable sums from the banks and State Govts. This is having a crippling effect on its finances. Consequently, payments to sugarcane growers are regularly getting delayed. A cash crop has become a credit one. Cane growers are suffering for no fault of theirs, and are naturally growing less and less sugarcane. Production of sugar has plummeted from a peak of 8.4 million tonnes in 1982-83, to 5.9 million tonnes today. India, which once exported Rs. 800 crores of sugar (1975,76), has now spent Rs. 200 crores (1984,85) of precious foreign exchange on imports.

This is the state of an industry which, by any international parameters, is productive and efficient! An industry which is the the second largest in the country.

Clearly, a lot needs to be done.
And time is running out.

April, how were people going to live?

The broader questions raised by the moratorium are, however, more worrying. How many other banks are in a similarly precarious condition? RBI officials maintained that at least one public sector bank in north India was in a bad way, with a large percentage of sticky accounts. A senior RBI official also confided that the rot set in when political appointees started crowding bank boards, and when RBI warnings about impending danger went unheeded by the Finance Ministry in the last few years. Most bank boards have been changed wholesale this year, but some appointments continue to worry the RBI: in a recent case, the Government appointed a banker as chairman of a nationalised bank despite the RBI strongly advising against such a step. Clearly, while most public sector banks are run far better than most private banks, the rot in the system is widespread. And unless corrective action is quickly taken, other banks could follow in the wake of Lakshmi Commercial, Bank of Cochin and Miraj State Bank.

ANDHRA BANK

Jaunt Study

BANK directors are now becoming "beneficiaries of the 20-point programme (TPP) loaning schemes" for the poor. The most conspicuous ones are three directors of the Hyderabad-headquartered Andhra Bank—Dudheshwar Kumar Mishra, 46, a Congress social worker from the obscure village of Dhawa in the Aurangabad district of Bihar, Khushi Ram, 64, a Delhi-based retired Central government official, and B.K. Mohanty, 53, a leader of the INTUC from Rourekela in Orissa. They have been touring the country on the ostensible mission of reviewing the implementation of the TPP by the bank in several states. But a senior executive of the bank objected to their travels, describing it as a "Bharat Darshan" and in an attempt to ground them, found himself in trouble.

The official, B. Srinivasa Rao, the deputy general manager looking after the agricultural finance and TPP schemes, is to face disciplinary action for his candid comments on the directors' tours and his refusal to sign their extravagant expense accounts. The row began with Rao's objections to the directors', all political appointees, excesses, while on monitoring missions. The official pointed out that the Union Finance Ministry had suggested a panel of directors be organised to review the TPP schemes in case the banks have difficulties in achieving the targets set by the Reserve Bank of India and the ministry. He emphasised that "very little purpose is served by the select visits to states where the bank had one or a few branches". Although the bank has an overwhelming 507 of its 642 branches in the state they chose to visit only six of these, in spite of the fact that most TPP schemes of the bank are implemented in the state itself.

During their staggered 38-day tour spread over 12 months they went to 33 branches of which only six are rural branches while the rest are located in state capitals and other urban and semi-urban centres where the loaning under the scheme to help the poor is nominal. Said Rao: "The bank has given Rs 108.46 crore to weaker sections under various programmes and of this, Rs 101.65 crore is accounted for by branches in Andhra Pradesh. Therefore, it is beyond my comprehension what the directors could have possibly gauged about the bank's performance by their travel in other states."

Srinivasa Rao

The "Bharat Darshan" jaunt of the directors began with a visit to the Tatanagar and Patna branches—the only ones in Mishra's home state of Bihar—and the latest was Jaipur—the only branch of the Andhra Bank in Rajasthan which has just 12 accounts under the TPP. The team then went to Kerala, Tamil Nadu, Karnataka, Goa, Madhya Pradesh, Uttar Pradesh, Delhi and Rajasthan besides a side-trip into Nepal after a visit to the Gorakhpur branch in Uttar Pradesh. The central region of the Andhra Bank comprising Madhya Pradesh and Uttar Pradesh seemed to be popular for they visited nine of the 15 branches including Bhopal, Lucknow, Agra and Varanasi.

Said one bank official: "They were by all accounts itinerant tourists and incidentally directors of the bank." A week-long tour of the south during which they visited seven branches cost the bank Rs 20,896.55 for their travel and hotel expenses.

Surprisingly, their reports about the visits are casual and impressionistic. About the Sheragada branch in the Ganjam district of Orissa they noted: "At the time of the visit to the branch there were about 12 customers, about half of whom belonged to the weaker sections. The committee was very happy to note that there were four women customers—two for loans and two for making deposits—even though the area is said to be very backward. Evidently, banking has reached the masses in this area through our bank." And the only suggestion they have come up with is to start a system of field inspection books in the branches giving details of each borrower, specific purpose for which the loan is taken, amount given and the progress of recovery. At a meeting of the board, in April, they moved a resolution commending the bank staff for their good work and recommended that cash awards be given as incentives for those bank staff who were actively helping to cross the targets.

At the same time they asked the bank's general manager and officiating chairman K. Arvind Reddy to pull up Rao for "his unwarranted comments showing a lack of maturity" Reddy has asked Rao for an explanation as to why he made "intemperate remarks" but he refused point-blank to budge from his earlier stand. Rao told INDIA TODAY: "The board resolution is further confirmation of the fact that the bank has been doing well with the loaning schemes and there was no need for a tour of the country by the directors. Their business is to lay down the policy and we will carry on with the work and they can raise questions if it is not done properly." But that is not the way things are working out just now.

For years the sugar industry has been squeezed out of shape.

Now the crunch is coming. Soon sugar could become very scarce in the open market. And even if it is available, it'll be at prices nobody will find sweet.

How could this happen?
Can anything be done?

The problem lies in the open market. That's where severe shortages loom. And that's where prices are threatening to sky-rocket.

Who's responsible?

The sugar industry is allowed to sell only 35% of its produce in the open market. This is to make up for the losses it incurs in subsidising sugar in ration shops — to the tune of over Rs. 300 crores.

Unfortunately, the Govt. has forced the industry to release 75% of its open market quota in the first six months.

The result? Not enough sugar for the future. Hence the impending shortages, and hence sky-high prices.

Something needs to be done. Immediately.

What can be done?

First, increase the open market quota to 50%. This will help in stabilising prices, and in reducing the expected shortages. Enough sugar in the open market will also keep the speculators at bay.

The Govt. is already importing sugar. This can make up for whatever shortages occur in ration shops.

But much more needs to be done if the sugar industry is to survive.

One way road to disaster.

Of the 339 sugar mills in India, 166 are in the cooperative sector, 103 in the joint stock sector, and 70 in the public sector.

The outlook for all of them is bleak.

Losses in the last three years—suffered by mills in all sectors and all regions—are upwards of Rs. 800 crores. To finance these losses, the industry has had to borrow sizeable sums from the banks and State Govts. This is having a crippling effect on its finances. FICCI

The Bogus Battle

IN THE chequered and increasingly fractious history of the Federation of Indian Chambers of Commerce and Industry (FICCI), there had probably not been a meeting quite like this one. Ramakrishna Bajaj, the outgoing president, was not invited because he was not considered heavyweight enough. Similarly excluded was the incoming president, D.N. Patodia. Only the maharajahs of Indian industry's princely club were present: Bharat Ram, K.K. Birla, Shriyans Prasad Jain, Hari Shanker Singhania, Ashok Jain, K.N. Modi, M.V. Arunachalam, P.V. Gandhi and S.K. Birla.

The agenda consisted of just one point: how to end the embarrassingly public bickering between FICCI's two groups of warring industrialists over the federation's "bogus" members, whose voting power was being used to determine the outcome of FICCI elections and thus to establish control over the federation.

On the one side was ranged a whole phalanx of industrialists accusing the Birlas and Modis of having amassed a vote-bank of bogus members. On the other, the Modis and Birlas were intent on arguing that all FICCI's members were genuine since they qualified under the membership criteria, that each member had one vote, and that there was nothing to bicker about.

The meeting, held in Bharat Ram's house in New Delhi's Diplomatic Enclave, began stormily. Temperatures rose quickly as charges and countercharges were traded. At one point, P.V. Gandhi and Singhania threatened to walk out of the federation, at which stage Modi said he would leave if that helped the organisation. But the high point was a heated tirade by the normally low-key K.K. Birla, who accused Ashok Jain of using the Bennet Coleman stable of newspapers (*The Times of India* and *The Economic Times*) to malign Birla and Modi. "If it happens once, that is all right," Birla said. "If it happens twice, it has to be with the proprietor's consent, and if it happens thrice it is with the proprietor's connivance. If this happened in my paper, I would fire the editor tomorrow." Jain responded by saying that that might be the way in which Birla ran his papers (including *The Hindustan Times*), but that his style was different. Birla then retorted by saying that editorial policies were laid down by the board of directors, and that an editor had to observe these policies.

K.K. Birla

K.N. Modi

"The Birlas and Modis reacted heatedly to the charge of bogus members while the others threatened to walk out of FICCI."

Ashok Jain, P.V. Gandhi, Bharat Ram

Bharat Ram and Arunachalam struggled to bring about an orderly discussion, and after a couple of hours some kind of a compromise package began to emerge. Briefly, the arrangement is that major decisions concerning FICCI will in future be first discussed/decided by an informal group of eight senior members, two drawn from each of the four geographical zones.

But it is far from clear whether this experiment in guided democracy will work. The zones themselves see tussles for control between the two groups (the eastern zone in particular is split down the middle), and the formation of such a group of eight only skirts, without confronting, the issue of bogus members. Whoever maintains control over these members therefore retains the ultimate voting clout that can be used in case a compromise fails.

The entire issue and the bickering between the two groups began four years ago, when a common relative of the Birlas and the Modis was defeated in the election for membership of the all-powerful FICCI committee. Incensed, the Birlas and Modis got together, shored up their position by enrolling new members (comprising previously unheard of associations of petty merchants in the small towns) and in the following year handed out a drubbing to the recalcitrant Bombay group. Thus began a fresh round of bogus enrolments by both sides, so that FICCI's total membership swelled from 478 in 1980 to 1,448 in 1982.

In an effort to end the bogus membership, FICCI then set up a committee to sort things out. But a new set of membership criteria took two years to hammer out, and then got stalled over the question of whether existing members should also be asked to qualify under the new criteria. As one leading light of the federation argued, "What is the point of keeping out additional bogus members if nothing is going to be done about people who have already enrolled bogus members?"

When this issue was sorted out, yet another hitch occurred: the registrar of companies refused to ratify the proposed change in FICCI's constitution, apparently at the instance of a leading industrialist who handed in a lawyer's advice questioning the legality of taking such a step.

Meanwhile, the time was coming around for choosing the vice-president for 1985-86 (who by FICCI convention becomes the president the following year). According to one of the warring groups, the Birlas and Modis decided unilaterally to pass up the south (whose turn it was to throw up the candidate) and instead to propose the name of R.P.

Has the time come to write the obituary of India's second largest industry?

The facts suggest so.

Sugar industry losses in the last three years are upwards of Rs. 800 crores. Production has plummeted from 8.4 million tonnes in 1982-83 to 5.9 million today. India, which once exported Rs. 800 crores of sugar (1975,76), has now spent Rs. 200 crores (1984,85) on imports.

Worse still, to finance these losses, the industry has had to borrow sizeable sums from the banks and State Govts. This is having a crippling effect on its finances. Consequently, payments to sugarcane growers are regularly getting delayed. A cash crop has become a credit one. They are suffering for no fault of theirs, and are naturally growing less and less sugarcane. And that's what is really scary. No sugarcane ... no sugar.

This is the state of an industry which, by any international parameters, is productive and efficient!

So has the time come to write its obituary?

The new economic order.

There is a mood of optimism in India.

The new Govt. has shown every intention of liberalising controls, removing irrational and counterproductive policies.

That is precisely what needs to be done in the case of the sugar industry.

The solutions.

First, and immediately, the industry should be allowed to sell 50% of its produce in the open market.

This will take care of the impending shortages in the open market, and the consequent sky-high prices. This will also keep the speculators at bay. The Govt. is already importing sugar. This can easily make up for whatever shortages occur in ration shops.

But for the industry to survive, much more needs to be done.

Make sure sugarcane growers find it profitable to cultivate sugarcane. APC (Agricultural Prices Commission) recommendations in respect of cane prices should be implemented without delay. A national policy needs to be formulated.

No industry can survive in the face of regular and staggering losses. Make sure it becomes profitable to produce sugar. Rationalise prices.

This will help the sugar industry in getting out of its present nosedive. Over a period of time, this will also help in building up buffer stocks.

Then, and only then, will the Indian sugar industry become stable. And only then can India go back to earning precious foreign exchange by exporting sugar.

To know more about what can be done to save the cane growers and the sugar industry, mail this coupon to:

Goenka, who belongs to the eastern zone. This promptly had the southern associations up in arms, while the Bombay group said enough was enough and came close to a decision to quit FICCI. Numerous industrialists threatened to boycott the federation's annual jamboree, scheduled for this fortnight, and word was passed around that the infighting had prompted the prime minister, the President, as well as the finance minister to pass up invitations to inaugurate the annual session.

Both the Modis and Birlas reacted heatedly to these charges. Modi told a journalist that anyone who wanted to get out of FICCI was welcome to get out, and S.K. Birla, the rising Birla star in chamber affairs, said: "A supposedly responsible newspaper group from Bombay seems to have taken a liking for yellow journalism since they are publishing reports on FICCI that have no relevance to the facts." A spokesman of this faction added that "Bombay has always dominated FICCI elections. Now that the Bombay syndicate can no longer control the elections, they are talking of bogus members. The changes in FICCI's constitution are illegal."

The first move for a compromise came from R.P. Goenka, who suggested that Bharat Ram take the lead in the matter. Earlier attempts to stop fighting and start talking had been cold-shouldered by the Birla-Modi combine. Said a Bombay industrialist who has been in the forefront of the battle: "Whenever we have tried to talk with them they have put things off by pleading other engagements." But this time round, there was a better response, though the various industrialists' replies to Goenka gave vent to their feelings. Bharat Ram warned in writing that "if we are not able to come to an effective solution in this matter, people would be free to act according to their conscience." Shriyans Prasad Jain regretted that the consensus of the past had given way to a situation where FICCI was "being run on the basis of bogus members", and a former president of the Bombay-based Indian Merchants Chamber said: "Only a third of the 1,600 member-associations are genuine." P.V. Gandhi was equally forthright in his comments: "We do not like to work with bogus members and purchased votes."

In fact, there had been a proxy fight between the two camps only a couple of months earlier, for the control of the Indian Merchants Chamber. Ashok Birla and his supporters, including Shantilal Somaiya, tried to oust P.V. Gandhi and company, apparently in order to reduce or dilute the Gandhi group's strength in FICCI. But the effort failed (INDIA TODAY, March 15), and that is when the war began hotting up before leading to the latest compromise move. The question of who will become vice-president next year has also been settled, with the south backing out and the way being almost cleared for Goenka.

Hari Shanker Singhania is hopeful about things now taking a turn for the better. "For the last two or three years, I have been unhappy about the way in which FICCI has been functioning, but now I hope there is a change of heart." Whether that hope is justified will be evident soon enough, at this fortnight's annual session. But so long as bogus members stay on the rolls, or new bogus members continue to be enrolled despite the slightly stiffer new membership criteria, FICCI's future can hardly be bright.

—T.N. NINAN and JAGANNATH DUBASHI with bureau reports

INDIA CEMENTS

Share Play

T.M. THOMAS, managing director of India Cements, is a puzzled man. His company's shares have shot up from Rs 29 to Rs 36 in next to no time, and Thomas cannot understand why. "We don't know who is buying," he admits. "The shares that are being bought now will be presented to us for registration only after two months."

While no one is any wiser than Thomas on the reason for the excitement on the stock market, the finger points to K.S. Narayanan and K.S. Raman, brothers who, along with N. Srinivasan, are all descendants of the company's original promoters. They had been ousted from the company between 1979 and 1981, when the financial institutions (which own more than half the company's shares) decided to bring in Thomas as a professional manager. In their various ways, Narayanan, Raman and Srinivasan have been trying since 1981 to get back into the company, with little luck so far despite some steady buying up of the company's shares. And matters now seem to be coming to the crunch, partly because Thomas' five-year term ends early next year.

Narayanan, it now turns out, had managed a minor coup in late 1983, when ITC gave up its bid to buy the company and returned the shares it had bought from the financial institutions. But what was unknown till now was that the cigarette giant had at the same time unloaded 25 lakh shares that it had bought on the open market, the buyer being Narayanan.

In recent months, Narayanan has bolstered his position in another significant way. Raman had for a while been aligned with Srinivasan in a bid to get control of the company, with the tacit support of the Dravida Munnetra Kazhagam (DMK), while Narayanan had been backed by the ruling AIADMK. In recent months, Raman appears to have switched sides, joining hands with Narayanan while Srinivasan has faded out of the picture. Since both brothers now have the support of the AIADMK, and with the Tamil Nadu Government itself having shown an interest last year in taking control of the company, the line-up now is more convincing than ever before.

The two brothers now talk of owning 12 per cent of the company's total shareholding, and that figure may have risen still further if they are behind the recent buying of India Cements shares. They have added strength in the fact that Narayanan has some affinity with the Congress(I) as well: he was one of the leading lights present at a meeting that Vice-President R. Venkataraman had recently with industrialists in Madras.

The crucial question now is whether the financial institutions will play ball. They own roughly 50 per cent of the company's shares, and no takeover of the India Cements management is possible without their consent. But with Thomas due to hand over charge next February, they will have to decide whether to appoint a fresh professional manager, or hand the company back to Raman and Narayanan. It is impossible to predict the institutions' move in this context, but the spurt in India Cements share prices probably means that the two brothers are to stake a serious claim for the institutions' favours.

omfort...

Shoes, sports shoes, slippers, sandals each in a class by itself ... created by Liberty with a fashion flair combined with super comfort to suit your life style this summer.

The anatomy of each of the above collection reveals the main features of different range of Liberty footwears:

Polyurethane sole: Soles made of molecular "crosslinked" polyurethane are best in the world. These are 3 to 4 times lighter than P.V.C., Rubber and leather. Besides, P.U. Soles are extremely flexible, soft yet tough. Therefore, you carry only minimum weight during your walks, strolls or jogging and thus avoid fatigue. Also, being resistant to abrasion, the soles retain their exact shape even after long use and maintain the balance of the body. This sole material also prevents heat generation which may harm the skin.

The uppers: Only the best quality of soft and fine leather treated and tanned carefully are used to make the uppers to keep the feet free from corns and callous.
The designs of Liberty can compare with the best available in international market in terms of style, shape, construction and colour.

Interior: In order to provide maximum overall comfort, each footwear is designed keeping in view the end use of the same. Cushion-collars; padded tongues; tread patterns for excellent traction, body balance and shock absorption; straps; buckles; nylon stitches; toe-holds; proportioned wedges with heel heights; perfect fit and style are the main features of these summer wears.

LIBERTY

your constant companion at home and outdoor.

Another Great Idea.

SYSTEM—5500W

In 1937, a man named Avery Fisher had a great idea. He would introduce the world's very first high fidelity audio system. That idea and others that followed began a tradition of great ideas that still continues today at Fisher, the company he founded.

One great example: the totally balanced Fisher audio component system featured above. Inside its awesome 180 + 180-watt* power amplifier, Fisher installed an extra large capacity transformer that provides an exceptionally stable power supply even at extremely high output levels. Also incorporated is an innovative double woofer speaker system that, together with the amplifier, reproduces an unbelievably rich sound over a wide dynamic range virtually without distortion. Designed especially for use in combination audio-video systems, the speakers also eliminate speaker-generated magnetic distortion in nearby TVs.

It's great ideas like this that help Fisher dominate 40 percent of the U.S. audio component market. Don't you settle for less. Get yourself a great idea. Get yourself a Fisher.

*R.M.S. Output Power with 0.009% T.H.D. at 1kHz.

COIN SHORTAGE

Crisis of Change

SORRY no change." This curt and often irritating reply is being heard with increasing frequency all over the country. And substitutes for small change have started finding favour: coupons in lieu of coins are gratefully accepted by bus commuters, stamp vendors urge customers to buy postage worth a round figure, restaurants issue their own brand of coupons and bunk boys pump in convenient-to-be-calculated amounts of fuel. Not to be outdone, clandestine dealers are making their own little millions selling pouchfuls of change with anything up to 25 per cent added on as commission. Says R.K. Kaul, deputy governor, Reserve Bank of India (RBI), somewhat perplexed: "It is difficult to accurately estimate the extent of the shortage but the system is gobbling up the coins as fast as our mints can make them." Now a desperately short-changed government is toying with the idea of importing coins minted abroad. Blank coins have been imported for some years now, but importing minted coins will certainly coin a new phrase in the country's currency history.

Not that coins are not turned out at home. In 1984-85 the three mints at Calcutta, Hyderabad and Bombay produced 1,097 million pieces of small coins—the figure excludes the one rupee coin—and production in the current year is expected to be 1,600 million pieces. But the estimated demand for 1985-86 is expected to be between 2,000 million and 2,600 million if reserves and replacement are taken into account. Says the official of a public sector bank: "Although the situation is not as grim as it was two years ago, the shortage will persist for some time."

Alarmed by the country's voracious appetite for the pieces of alloy, the Government, which runs the three mints, and the RBI which distributes the money through 1,755 coin depots and other centres, have got together to beef up both production and distribution. Policemen are required to guard currency consignments and with more of them available after the election, it is lifting stock faster from mints. Bulk consumers like retail trade associations, fair price shops, hotels, and restaurants are getting direct deliveries of coins and the coin depot network has been expanded with public sector banks pitching in by opening more outlets of their own.

But there is a limit to what the RBI can do on its own. With greater production obviously the key to a resolution of this dilemma, the Government, somewhat belatedly, has decided to take positive measures to meet the demand. These include:

- a Rs 20-crore mint with a capacity equalling that of the three existing mints put together to be set up in the New Okhla Industrial Development Area (NOIDA) on the outskirts of Delhi and commissioned in three years (when an RBI committee had predicted a shortage if new mints were not set up soon, the Government had claimed it lacked the funds);
- 22 coin presses with faster strokes to be installed in a phased manner in the existing mints;
- mints adopting a 54-hour week from a 48-hour week, with incentives for added production;
- imports of blank coins to be stepped up and possibilities of indigenous blank coin production explored;
- all denominations to be minted at every centre to facilitate quicker and more even distribution.

Chart by B.K. SHARMA

However, the import of minted coins was not immediately possible because the Coinage Act stipulates that coins not minted in the country cannot be put into circulation in India. It is likely, therefore, that a bill to amend the act suitably will be placed before Parliament. "If that is done," says an RBI official, "we could tide over the period before the NOIDA plant goes on stream without sweating too much."

But the current crisis is of the Government's own making. Owing to the lack of a formula, the RBI has been assessing the requirement of coins on a yearly, ad hoc basis. With the result that during a coin glut in the second half of the '70s—the RBI distributed 1,544 million pieces in 1973-74 and 717 million in 1977-78—the Government actually toyed with the idea of curtailing production. This was done in 1977-78 and the Government even thought of closing down the Hyderabad mint, the oldest in the country. But demand then rose steeply because, among other things, of a fall in the number of one rupee notes.

Strangely slack in the matter of minting more small money, the Government mints switched to the two-shift system only last year. Besides, the two-rupee coin turned out to be a bitter lemon because it looked exactly like the one rupee variety. Production of this coin was thus halted. Until such time, then, that the Government and the RBI actually get cracking, there will be little change in the present circumstances.

PEICO

Executive Cornucopia

"One owl will suffice to send the garden to seed, what fate awaits it with an owl on every branch?"

A MELANCHOLY couplet in the most unlikely of places: it adorns the cover of a 120-page red book brought out by the Philips Employees Union (PEU). The garden is the electronics leader PEICO Electronics and Electricals Ltd (1984 turnover: Rs 225 crore), better known as Philips India. The owls are senior executives and directors, blessed with fat salaries and perquisites. And perquisites are what the red book is all about. The result of a painstaking ferret job by the PEU, it exposes the jealously-guarded wonderland of managerial and directorial perks and privileges as nothing else has done before. Says Sudhir Vaidya, the chief of PEU's 800-odd members who these days walks around with a black armband and headstrap: "We have documented the manner in which the company's officers milk it for all it is worth."

Everything is here: massive loans at soft interest rates, huge interest-free deposits for executives' flats (quite a few owned by executives themselves), almost-new electronic goodies sold to officers at a tenth of the price, bloated liquor bills, liberal use of company cars, lavish farewell parties and so on. Their story is told, rather like the ache-and-tell letter-novels of pre-Victorian England, in 50-odd letters written over the last nine months to Chairman and Managing Director J. Seelan in language peppered with appealing hyperbole and quotable quotes. When asked if everything set down in cold print was correct, D.N. Ghose, director, personnel and industrial relations, answers: "What they say is perfectly correct. They should know, they have handled the paper themselves." He adds that all the practices and transactions are "auditable and taxable". And that "we have nothing to hide."

The executive cornucopia revealed by the letters is mouth-watering. Loans, for instance: 15 executives owe the company a total of Rs 30 lakh—both principal and interest—in house building loans issued under a scheme for senior executives just below director level. The PEU maintains that several people below the qualifying rank have obtained loans and alleges that after it started exposing them the management hurriedly asked them to pay up and erased them from the list. Many executives acquire flats with the soft loan money and then lease them on exorbitant interest-free deposit terms to the company. In fact, of the 180 flats which Philips has on lease in Bombay with deposits totalling Rs 1.5 crore, no fewer than 25 are leased from company executives, and although Ghose says the company has paid no deposit of over Rs 3 lakh, there are numerous instances of flats, both executive-owned and otherwise, being leased with interest-free deposits of more than that in addition to rent.

The leader is the first-floor flat hired for finance director R.Van Graafeiland, with exclusive swimming-pool and all, which comes with an interest-free deposit of Rs 45 lakh. The book records one senior manager staying in a company flat while his own flat was leased separately to Philips, with Rs 5 lakh paid as deposit. Another appears to have made a business out of this, leasing two flats to the company, and was on the point of negotiating for a third when the union's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

exposés, which began in 1984, apparently caused him to stop short. Ghose himself figures in the list because his son's flat in Calcutta has been leased along with a deposit of Rs 3 lakh. It is used as a transit camp.

The sale of costly equipment at less than give-away prices is another high point of the executive life-style at Philips. Under the "consignment scheme", executives are permitted to keep Philips equipment "belt-fresh" from the factory in their homes, with the option to buy it after three years or on retirement at 10 per cent of the original price—or at 40 per cent if the stuff was obtained less than a year earlier. But one senior executive when he retired took away Rs 26,000 worth of goods, including a 286-litre refrigerator for Rs 2,600 plus sales tax though he had received the consignment less than a year earlier. A director purchased Rs 4,000 worth of furniture which would have brought in at least five times that sum had tender bids been called for—but before he was appointed director—for afterwards the purchase would have required the permission of the company law board. Says Ghose: "We give the equipment for display in their homes so that guests can come into contact with our latest products." Retorts PEU General Secretary Kiron Mehta: "Are executive flats supposed to be showrooms and bargain basements?"

The list of perks runs on and on. About 50 executives in Philips are allowed company cars, and also to buy them at discount rates when they leave. A 1978 Ambassador went four years later for Rs 15,000, a 1981 Premier Padmini in 1983 for Rs 20,000, a 1982 Ambassador in 1984 for Rs 30,000. One such deal is especially revealing: an Ambassador car was bought in January 1982 at Rs 80,000 for the then technical director. Another Rs 16,000 was spent on accessories, including an air-conditioner. Two years later, the technical director resigned from Philips India and was slated for an assignment with the parent company in Holland. He bought the car, at a price which the letter is "ashamed to name" and requested that it be delivered to his brother in Pondicherry. A company driver was given Rs 3,000 and drove the car to Pondicherry in 15 days.

The high travel bills and other incidentals pale in front of such privileges, but one episode is worth mentioning. Senior executives on transfer to Bombay regularly run up tens of thousands of rupees in hotel bills. However, one officer in the advertising department took the cake. He is based in Bombay, and was to shift to another flat. While his flat was being done up he stayed in a local five-star hotel with his family, the company paying Rs 4,610 for four days stay. He then submitted a travel expense statement which stated that he had "visited Bombay".

Executive life is incomplete without entertainment and this is where Philips, or rather its bosses, does itself proud. Ghose admits that they buy foreign liquor from a "bootlegger" because it costs 40 per cent less than the "receipted" price. Currently, Philips has in stock 200-odd bottles which union officers claim have been hastily shifted from their resting place in the building to a discreet cupboard in one of the directors' homes. Most of the liquor appears to have been consumed by the Dutchmen, going by the vouchers. In one instance a director spent an evening with a guest over soft drinks and sent in a voucher for Rs 120.

Protesting employees: baring the perks

Parting is sweet sorrow, but Philips does everything it can to sweeten the separation. One manager, technical services, left Philips in mid-1984. The annual report shows he was grossing Rs 1,77,865 yearly. Besides lavish farewell parties, with the fun and games captured on video, he received Rs 3,000—towards a retirement gift, something nice in silver and his flat that had been leased to the company was renovated with new plumbing for Rs 45,000. He bought the company car, a cooking range and an air-conditioner at a hefty discount, carted away Rs 30,000 worth of electronics goods at a tenth of the price, and to top it all was paid Rs 3,000 for the month that he stayed elsewhere. Then he went and joined Philips' brash new competitor Orson Electronics Ltd the day after he retired.

Perks are an old story in executive circles—every company worth its salt pampers its bosses—but the PEU campaign has set a disturbing precedent. Although Seelan and his deputies shrug off the exposés as "nothing new" and "perfectly above-board" they are clearly disturbed and angered by the turn management-union relations have taken. At the moment the campaign is confined to the 800-member PEU, one of eight Philips unions, but company insiders fear that it could spread elsewhere. Says Ghose: "The letter campaign is designed to cut down our authority and establish a parallel power base." Vaidya denies this: "Our only objective is to save the company."

The rich-poor divide is not conspicuous in Philips. The 1984 annual report lists nearly 3,000 employees who earned over Rs 36,000. Among them is P.B. Saha, a junior assistant, who grossed Rs 39,860 and whose listed qualification is that he "can read and write." Admits Mehta: "I know that what I get here I can't get anywhere else." Adds Ramamrutham: "Even a sweeper collects Rs 2,500 a month."

Meanwhile, things are getting hotter. Last fortnight a union office-bearer was booked on the charge that he had asked an officer why he was looking at him: "*baghtos kai*" in Marathi. Vaidya brandishes a letter from the prime minister's office which says that the matter has been referred to the appropriate authorities. Unions of other companies including an engineering firm and a chemicals manufacturer were taking lessons from PEU on the novel strategy. And the Philips management in an effort to avoid future embarassment, has finally carted all sensitive documents away to a warehouse in the suburb and currently only one officer is in charge of all such transactions. But that is like closing the stable door when the horse has bolted.

Alitalia presents a great new service dedicated to India.

Two flights a week, Bombay-Rome direct.

The full capacity of our new A300 Airbus service is there for passengers originating in India. So you'll have no problems with seat availability... and your reservations can be confirmed immediately.
With cool, early morning departures, you'll arrive in Rome just after lunch, in good time for connections to Milan and the rest of Europe.
Fly with us any Thursday or Sunday.
Relaxing in super Airbus comfort, Alitalia style.
All the way.

daCunha/ALT/6/85

Alitalia

Alitalia is represented in Bombay, Delhi, Madras, Calcutta, Ahmedabad, Bangalore, Jullundur, Kanpur, Chandigarh, Kathmandu and Colombo.

SUGAR

A Brewing Crisis

FOR THOSE with a sweet tooth, the message was bitter indeed. The attention-grabbing advertisements that hit mainline dailies last fortnight warned that a sugar scarcity was round the corner, prices would hit the roof and the industry itself was in bad shape.

The advertisements, launched by the Indian Sugar Mills Association (ISMA), were not far off the mark. Sugar prices are poised to climb in the next few months from the current Rs 6 a kg to Rs 8 or higher. With open market sale stocks whittled down by government profligacy to less than two months' supply levels, the market cannot be fed adequately. Says an independent industry analyst: "We have to live with sugar priced at Rs 8 to Rs 9 a kg for the next one and a half years." And the industry is running scared that it will be blamed for the coming price surge. As an ISMA official puts it: "Sugar prices will go up and the industry will get a bad name for no fault of its own." Prices would shoot up even more were the Government not committed to a rescue act. Five lakh tonnes of sugar is being imported (four shiploads have already arrived) and anything over another five lakh tonnes is planned to be indented abroad.

Sugar prices have so far been pegged at artificially low levels by the Government, and the industry has been squeezed by low returns and high cane costs. The result, the industry claims, is that it has incurred a loss of Rs 800 crore in the last three years. While the figure may or may not be taken at face value, many sugar mills are working at below breakeven point. And with prices low, sugar consumption has outpaced production last year and this year. Worse, the Government has no cushion to fall back on since its buffer stock has been wiped out.

Clearly, a crisis is building up in the open sugar market (there is more than enough sugar to feed the ration shops). And the culprit here is the Government. The total amount of sugar available is supposed to be released by factories for distribution to ration shops and the free market in a 65:35 proportion. This is done on the basis of monthly release orders issued by the Union Food and Civil Supplies Ministry. Extra sugar is released every year in the September to December festival months, but last year even more than the usual amount was dumped in the market (*see chart*) in the months before the elections. And instead of tapering off supplies after January as has been the practice in previous years, the tempo has only slackened.

One explanation could be that the Government initially reckoned that sugar output would be in the region of 70 lakh tonnes, 11 lakh tonnes more than last year's production. But the production estimate was later lowered to around 62 lakh tonnes. Yet the Government blithely went on releasing generous quantities of sugar, though it must have been aware that a crisis was brewing. Last October the buffer stock of 10 lakh tonnes had been wiped out and the sugar year opened that month with a three-year stock low of 23.8 lakh tonnes. The Government imported a million tonnes in two lots, but even this was not enough to match the increased releases into the market. Quite evidently, prudence went out of the window in the desire to keep the consumer happy by pegging sugar prices low.

Chart by B.K.SHARMA

Pradeep Narang, managing director of Jagatjit Sugar Mills Co which runs sugar mills in Punjab, questions what he calls "the Government's obsession with keeping free sale sugar prices down." Narang and others in the industry say that over 80 per cent of the sugar sold in the open market is bought by bulk consumers like confectioners and soft drink manufacturers—and they can afford to shell out more.

The official position on the latest crisis is that there is no crisis, and there is enough of the sweetener to go around. Strictly speaking, that is true. The 83.8 lakh tonnes of sugar (this includes the carry-over stock but excludes imports) available at the beginning of the sugar year could easily meet the estimated consumption of around 75 lakh tonnes. Over 30 lakh tonnes of "levy" sugar is now available for distribution through the public distribution system at the controlled price of Rs 4.40 a kg. That is enough and more to maintain supplies at the normal monthly rate of 3.13 lakh tonnes till November. Where the crunch comes is in the free sale quota, and the Government is moving to fill the void by importing sugar.

The sugar industry is plugging the line that the shortage can be overcome if it is allowed to sell the surplus levy sugar in the open market. That would also help mills to recoup some of their losses on levy sugar. And industry men press home the point that imported sugar should be routed to ration shops to avoid the hanky-panky and sky-high prices of five years ago when sugar bought abroad was channelled to the open market. The Government has not so far bought these arguments. While it has the option of permitting mills to sell surplus levy sugar in the open market if prices get out of hand, it is wary of giving the green signal lest that should open the floodgates to profiteering by the industry. So the official strategy for the moment is to import sugar and get tough with traders who hoard sugar.

That may help tide over the shortage for the time being. But the industry's basic problem of low returns (levy sugar prices have risen far less than the issue prices of wheat and common variety rice) remains unresolved, by year-end sugar import bills for last year and this year will cross Rs 200 crore—all reflecting a paisa wise, rupee foolish approach which does not help the consumer in the long run.

PRICES

Reaching a New High

THE EUPHORIA is over. With prices hitting the roof, worried housewives across the nation are discovering that they have to spend more to run their homes than before the Central budget was presented in mid-March. And though lower income tax rates may have put more money into people's pockets, the additional cash often doesn't cover the fatter bills that have now to be footed. Says vexed Delhi housewife Usha Jain: "The budget liberalisations were an eyewash. We saved Rs 100 on income tax, but have to spend another Rs 300 to run our home—and that excludes clothes, medicines and entertainment." Urmila Vaidya, the wife of a government official in the capital, reckons that she now forks out at least Rs 250 to Rs 300 a month more (*see chart*) to keep her household going.

The budget has certainly nudged up prices. Food and Civil Supplies Minister Birendra Singh conceded in Parliament last month that the price rise could be traced to budget levies and earlier increases in "administered" prices. Official statistics too support the contention. The wholesale price index shot up by almost 2.5 per cent four weeks after the budget, possibly one of the biggest price surges since Charan Singh's budget of 1979. Price increases at the retail level may be higher. Indian Express price lists published a week before the budget and five weeks after show that dal prices have risen by 34 to 70 per cent, basmati rice by 47 per cent, sugar by 7 per cent and dhania powder by 11 per cent, though the prices of a few items like some varieties of rice have fallen too.

Budget levies have certainly contributed to the higher prices, but a host of other factors also are at play, including perhaps traders with an eye on the main chance of jacking up prices disproportionately. Undeniably, manufacturers have passed on the new taxes levied on them along with additional input costs. With petroleum prices up, petroleum byproducts become more expensive. Because naphtha is thus more expensive, plastics have become 14 to 15 per cent more costly, which in turn pushes up packaging costs. Vanaspati, for example, on which the Government has slapped another 5 per cent excise, retails for more than that because companies have to shell out fatter sums for the galvanised iron and steel drums in which it is transported. Explains J.C. Kapur, executive director of Shriram Foods and Fertiliser Industries, which produces vanaspati and chemicals: "All the inputs are more expensive. Railway freight, diesel, petrol and power rates have risen sharply." He estimates that factories in Delhi will be paying an additional Rs 55 crore because power rates were recently raised.

The story is repeated in other industries like chemicals and paper. And though downstream industries may not pass on all the costs, they will pass on some. In steel, prices have been raised twice during 1984-85, by 15 per cent.

The Government's explanation for the latest bout of inflation is that, while budget levies have contributed to higher prices, much of the price rise is seasonal. The Finance Ministry reckons on the basis of 12-year statistics that prices shoot up every year between March and August before tumbling from September onwards. Says Bimal Jalan, chief economic adviser to the Government: "What happens to the annual rate of inflation depends not on what occurs between March and August, but between September and March." He adds that seasonal price variations between March and August account for 4.2 per cent of the price rise. One cannot quarrel with this assessment, for prices of fruits, vegetables and edible oils fluctuate according to the time of the year. P.S.S. Narayanan, secretary of the Indian Vanaspati Producers' Association, points out that some edible oil prices have climbed because kharif oil supplies are drying up. There is also some evidence that the price spurt may be already over. For while the wholesale price index minus the seasonal factor rose by 1.9 per cent in the first two weeks after the budget, it did not rise at all in the following three weeks. The problem with such an analysis is that wholesale prices do not always reflect the reality of retail prices.

Meanwhile government officials and economists argue that the bulk of the post-budget price spurt is accounted for by petroleum (0.83 per cent) and sugar (0.13 percent).

Some of these arguments are clearly valid, but official calculations could be turned topsy-turvy by the purchasing power that has been or will be pumped into the economy. The personal tax concessions amount to some Rs 200 crore, and dearness allowance (DA) payments have fattened the wallets of Government employees. The rate of DA and the ceiling on bonus have been raised, and one public sector undertaking, Coal India, stands to lose Rs 200 crore on these and other counts. So coal prices may have to be raised if the company is not to wind up in the red this year. The Fourth Pay Commission report is also expected to recommend higher salaries for government employees. Finally, expectations of fresh price increases may have been fixed in the public mind. Clearly, inflation has become a hot issue in a season of discontent.

—PALAKUNNATHU G. MATHAI

Chart by B.K. SHARMA

	PRE-BUDGET	POST-BUDGET
Rajma (Rs per kg)	7.50	8.90
Rice (Rs per kg)	5.00	6.00
Sugar (Rs per kg)	5.50	6.50

AN UPTURN in industrial production coupled with bullish tendencies in the share market present a rosier picture for industry. The sharp price increase immediately following the budget has now petered out with no inflation recorded last fortnight. *ALL DATA are seasonally adjusted. Current trends are computed on the basis of the last six months data to which a regression is fitted.*

Wholesale Price Index

1970-71 = 100

Current Trend **6.3% p.a.**

Following the post-budget spurt prices have now begun to level off recording virtually no increase in the last fortnight.

Industrial Production Index

1970 = 100

Current Trend **5.7% p.a.**

Industrial production showed signs of recovery with a sharp increase in the last month mainly due to manufacturing and mining.

Manufacturing Output Index

1970 = 100

Current Trend **1.3% p.a.**

Impressive growth last month reversed a period of deceleration in manufacturing output. Electrical machinery, textiles are languishing.

Money Supply (M3)

Rs. Crores

Current Trend **18.1% p.a.**

Money supply rose substantially by 0.8 per cent last fortnight due mainly to an increase in government borrowings from commercial banks.

Comercial Bank Credit

Rs. Crores

Current Trend **13.0% p.a.**

Tightness in the credit market continued. Credit rose by less than 0.5 per cent last fortnight reinforcing the decelerating long term trend.

Share Price Index

1970-71 = 100

Current Trend **38.3% p.a.**

Buoyancy in the share market continued with shipping and aluminium securities rising sharply. Tea, rubber shares indicated a slow down.

Power Generation

Million Kwh.

Current Trend **5.3% p.a.**

Power generation showed a slight upturn last month after several months of stagnation thanks to nuclear power.

Closing Gold Prices

Rs. Per 10 gms.

Current Trend **15.6% p.a.**

A sharp increase of 1.5 per cent continued the long run bullish trend in gold prices that are now rising faster than the rate of inflation.

THE STOCK MARKET

Levelling Out

THE STOCK-market has at last reacted as it was bound to do and a technical correction has set in. The bulls are apparently anxious to reduce their commitments lest prices fall further. Some scrips have doubled in less than a month, even the so-called blue chips which often behave in a snooty fashion and are chary of moving with the herd. But some market circles have at last realised that after taking into account all prospects the prices had reached levels justified by the narrowing yields. In some cases, the yield was just 2 to 3 per cent.

There was obviously a lot of money about and not all of it could have come from the home market. The non-residents were evidently busy picking up volatile scrips and making money while the going was good. And so were the institutional investors who must have been astonished to find that the market could absorb anything that came on offer. It is possible that the current reaction may be short-lived while the markets catch up with the political situation.

However, it is unlikely that the market will ever go back to square one. The psychological factor is important. Our simple-minded analysts do not seem to appreciate the tremendous sense of release with which every announcement of decontrol is greeted in the corporate world and which must ultimately influence corporate performance. If it is computers or electronics today, it could be something else tomorrow, for there is nothing like hope to keep the share prices ticking.

Good days are ahead for the pharmaceutical companies if the new drug policy to be announced shortly is any guide. The committee which was formed to take an overall view of the pricing mechanism has apparently suggested an increase in the mark-ups from the current 45-55 per cent to 65-75 per cent, an increase of 35 to 45 per cent. The new policy will also make production of essential drugs compulsory, which may or may not be a good thing, as far as share prices are concerned, but which will certainly help those companies which are already in the essential drug business. Share prices of most pharmaceutical companies have been going up recently, Glaxo, for instance, having gained Rs 10 in the last one month or so. Cyanamid is also doing well, and so is Ranbaxy, though the latter could have done better had it come out with a bonus issue. But the new policy should help companies like Alembic.

A good deal of course depends on the financial institutions which have taken a breather as prices are on the high side. But once the bear hammering is over, they should also take a plunge and let the bulls in, unless the authorities take fright and close the gates, which they do from time to time when things are going a little too fast for them.

We're really pulling out the stops.

More non-stop London flights than anyone else.

Altogether we operate fourteen flights a week to London from India – that's more than any other airline. And eight of these are non-stop flights – that's also more than any other airline.

But it's not just in non-stop flying that we excel. Our service is non-stop too. Both on the ground, with our Indian Visitors Service, and in the air, with Indian stewardesses and vegetarian meals, we provide a thoroughly professional and caring service. No wonder we're the world's favourite airline.

BRITISH AIRWAYS

The world's favourite airline.

TELUGU GANGA PROJECT

Pipe Dream?

MUCH hoopla attended the signing of the Telugu Ganga accord between Tamil Nadu and Andhra Pradesh in April 1983. And when chief ministers M.G. Ramachandran and N.T. Rama Rao exchanged pens as souvenirs of the historic agreement the future certainly looked rosy. The ambitious multi-crore-rupee scheme was expected to irrigate arid areas of Andhra Pradesh and bring much-needed water to thirsty Madras city. However, even amidst the initial euphoria there were some who predicted that the project would be a financial sink-hole.

It turned out the naysayers weren't far off the mark. Very little has happened on the project in the ensuing two years and today the expected completion date—before 1990—seems to be extremely unrealistic. Though fulsome in his praise of the accord as an example of regional cooperation, Rama Rao has not put his money where his mouth is. Andhra Pradesh's resources crunch has not helped, so that contractors are reluctant to start work fearing delayed payments, and uncertainty about when agencies like the Planning Commission and the Central Water and Power Commission will give their approval has also hampered progress.

Tamil Nadu, predictably, showed greater enthusiasm at the start, and its cheque of Rs 30 crore towards the Rs 688-crore total cost of the project came a month after the accord was signed. But only Rs 9 crore was spent on the project by Andhra Pradesh that year and the rest was used to adjust its poor ways and means position. Wiser by that experience, Tamil Nadu held back further payments till it was convinced work on the project had picked up momentum. In 1984-85 Andhra Pradesh asked for another Rs 15 crore, which it received. Rupees 45 crore was then spent on buying machinery and excavation.

But at the start of this financial year Tamil Nadu discovered, much to its chagrin, that it had spent five times as much as Andhra Pradesh on the canal project.

Map by B.K. SHARMA

Work underway on the TGP: tardy progress

The matter came up in the Tamil Nadu Assembly last month, and state Agriculture Minister K. Kalimuthu was forced to assure members that Andhra Pradesh had been pressed to make adequate funds of its own available in the seventh plan, so that more water would be available for Madras "in the near future". The minister may have been a bit too optimistic, for Andhra Pradesh must set apart at least Rs 100 crore a year for the project till 1990.

The Telugu Ganga Project (TGP) is based on the concept of tapping excess floodwater during the heavy 45-day monsoon near Srisailam and carrying it through the Srisailam left branch canal passing through Kurnool and Cuddapah districts. It will then be dropped into the Pennar river at Chennumukapalli village, also in Cuddapah district. The flow down the river will be picked up at the Somasila dam and then passed on to the Kandaleru reservoir before it finally reaches Madras.

However, the slow pace of work in some districts and the pronounced activity at Somasila has deepened suspicions among some Rayalaseema residents that they may not get the water. The project plans to carry water to irrigate 5.80 lakh hectares of dry crops, but not paddy, in Kurnool, Cuddapah, Nellore and Chittoor districts of Andhra Pradesh and supply 15 TMC for the Madras city drinking water supply system. Allaying the Rayalaseema residents fears, project officials argue that the delay is caused by the wait for the National Environment Board's sanction for working on forest lands.

Rama Rao's lukewarm attitude to spending money on the project has given a weapon to those politicians interested in accusing his government of neglect. Says Congress (I) leader in the state Assembly M. Baga Reddy: "If Rama Rao does not give up the lopsided priorities on ineffective welfare schemes the state will be drained of its finances and the Telugu Ganga Project will be a late 20th century dream."

And indeed, though the project was initially touted as an example of regional self-help it soon became obvious that regional resources will be strained in putting it into effect. Later Rama Rao wanted the Central Government to pitch in. The Centre refused, pointing out that funds for irrigation are the responsibility of the states. Rama Rao next spoke of approaching the World Bank for aid. The only certainty is that the state is not sure where the funds will come from even if the project is delayed.

Says the TGP Board Chairman A. Krishnaswamy: "If the project is to be hit by the resources crunch it may well be realistic to set a fresh deadline for its completion." And discussions among various departments of the project seem to be a dialogue of the dumb unless the availability of funds is made known by the state Government. Rama Rao seems to be in no hurry and if Tamil Nadu presses hard it may be given water from the Pennar river long before the TGP is completed. With all the hurdles in the way of the project, it seems Rama Rao will have to renege on at least one of his promises.

THE NEW

Vijai SUPER mark II

Scooters India Limited

There's no 150 cc scooter to match it for ECONOMY POWER SAFETY.

FEATURES	Brand X	Brand Y	Vijai Super Mark-II
FUEL ECONOMY Kms/litres	40±6	40	56±6
POWER BHP	6.3	6.5	9.6
SAFETY Engine Mounting	Right hand side	Central	Centrally aligned

Its here. New Vijai Super Mark-II. The latest model from Scooters India Limited — successors to Innocenti of Italy. Pioneers in scooter manufacture. Vijai Super. The winner of Grand Prix in India and abroad.

Super Economy: 56±6 kms per litre

A new variable venturi carburettor, improved cylinder design, increased compression ratio and modified gear ratio impart optimum fuel economy. SAVING FUEL.

Super Power: 9.6 BHP

Goes from 0 to 60 kms in 12.75 seconds flat. Negotiates gradients with ease. And keeps ahead of others.

Super Safety

Centrally mounted engine, low centre of gravity and wider wheel base make it safer even at high speeds, on curves with load.

Super Durability

Modified material composition of cylinder, chrome plated piston rings and the use of solid lubricant enhance engine life. That is why it carries a warranty of 15 months or 10,000 kms (whichever is earlier) — the longest on any two wheeler.

It undergoes over 1,000 quality checks before it leaves the factory.

Vijai Super Mark-II. Distributed and serviced countrywide through 225 outlets.

Exported to many technologically advanced countries including Italy — its birth place.

THE NEW Vijai SUPER mark II

SADAR-I-RIYASAT
An Autobiography Vol 2: 1953-1967
BY KARAN SINGH
Oxford Press
Price: Rs 100; Pages: 168

THE TITLE of the book, the second volume of Karan Singh's absorbing autobiography, is somewhat misleading. The author was indeed *Sadar-i-Riyasat* or head of the state of embattled Kashmir throughout he 14-year period covered in the book ut that is only partly what the book is bout. It is more in the nature of a discovery of India, albeit a discovery with a mall d, just as Nehru's Discovery of ndia was with a capital D. As Singh nakes clear on nearly every page, Vehru is his mentor and the author not nly hews closely to the Nehru line in ndian as well as international politics ut seems to have unconsciously dopted the master's style too.

Nehru dies three years before the ook ends but he dominates the book ght from the very first page—Nehru is nentioned thrice on page 1—until the nd when the author is sworn in as tousm and civil aviation minister in Indira andhi's first cabinet. In between, Singh spends 14 years in Srinagar but it clear that his heart is not in the job, ther because it is not demanding ough or because he is merely a standfigure, while strings, and often heavy pes, are being pulled all the time from e city of Delhi.

Within a week of Sheikh Abdullah's ster and the installation of Bakshi hulam Mohammed as prime minister Jammu and Kashmir, Nehru meets kistan's prime minister Mohammad in Delhi and the two issue a curious tement approving the appointment a Plebiscite Administrator within e months. And all this behind the ck of the *Sadar-i-Riyasat* or even kshi, who, until he spoiled his copyok by making too much money, was lhi's latest blue-eyed boy. Bakshi res s and scores of VIP telephones are ged in Delhi and Srinagar, including or two in Teen Murti, but the crisis is defused, as are many others that follow in quick succession, while the author delivers one convocation address after another and cultivates his narrow circle of influential friends in the capital.

The prince, for that is what the author is, remains *hors de combat* throughout the series of crises that engulf the state from time to time and though familiar names crop up now and again, the reader is provided no more than an occasional peep into the state's curious affairs. This is a pity, for Kashmir is still something of a riddle for the average Indian and the author could have provided more than a running commentary, albeit from a ringside seat, on the goings-on there.

Throughout the period the author is embroiled in a personal crisis of his own, a crisis of the spirit, though that may not be how he would describe it. "With my curious childhood," he says at one point, "and the plunge into public life at the age of eighteen, I had missed an important ingredient, real friendship, and I felt an inner void." He seeks out an Englishman turned sanyasi called Ronald Nixon, who, as Shri Krishnaprem, becomes his guru. The guru has an ashram near Almora where, with the help of two disciples, also Englishmen, he dispenses spiritual wisdom. "I am not prepared to advise you on what to do or what not to do," the guru tells the author, "but do not lose the light that is within you. It is the only thing that will last."

Singh visits Almora every year for six years and seems genuinely happy to meet his guru. He also goes into a trance once or twice and claims to have seen Krishna—once as a baby and the second time as a youth—and also encounters a goddess—he doesn't say which—in various disguises. Karan Singh is evidently a complex character, far more complex than his secular guru, Jawaharlal. Soon after Nehru's death, when the author has to decide whether or not to get out of the state and plunge into national politics, he asks for "clearance" from his guru and only after that does he prepare the ground for moving, as he says, from the crown to the heart of India. The author was barely in his 30s when he went through all this, an age when a young man's fancies turn to more familiar pursuits. Karan is obviously cut from a different cloth, a genuinely Hindu cloth, in the fullest sense of that much maligned word, and that is what raises his autobiography to a level very close to that of Jawaharlal Nehru's classic.

—JAY DUBASHI

Devotee's Dues

ONE THOUSAND MOONS:
Krishnamurti at Eighty-five
BY ASIT CHANDMAL
Harry N. Abrahams Inc, New York:
(Price: not given; Pages 124)

GREAT teachers often inspire unusual offerings from their devotees. Ever since he first came into contact with philosopher and cult figure Jiddu Krishnamurti at the age of nine, Asit Chandmal has been something of a devotee. Chandmal is now 45 and Krishnamurti 90, and this lavishly produced volume is an offering to one who is not only a guru, but as the brief, highly personalised text seems to indicate, also a friend.

It is an unusual book, illuminating because Chandmal gets really close to his subject but disappointing at the same time because he is not an accomplished photographer. For a man whose life and teachings, both often controversial, have spanned so many decades, there is no dearth of written material either by him or about him.

Chandmal has sought to fill the gap that he sees: a visual portrait of the daily life of the philosopher. The text merely sets the context for the pictures which make up the book, pictures which have about them the quality of family snapshots. While it limits the aesthetic value of the book, this also gives it some merit. Chandmal has been able to get close enough to Krishnamurti to give an intimate if contrived look at the philosopher's life.

The book's 120 colour pages, beautifully printed, show Krishnamurti in his various surroundings, in India at the Rishi Valley School where the curriculum derives its inspiration from the philosopher's teachings, in Madras and Bombay, in California where he spends several months a year, in London and in Gstaad in Switzerland. They show him at work, in the privacy of his home, at leisure, with friends and among his followers. It is his followers who will value this book most; but they will also recognise that a truly fine pictorial biography of the man has yet to be produced.

THE CHEMISTRY OF SUCCESS

M.P. Carbide & Chemicals is setting up a plant to manufacture 18480 tonnes per annum of Calcium Carbide. This plant is located in Panna District of Madhya Pradesh a centrally notified 'No Industry District' enjoying 'pioneer' status.

Promoted jointly by the M.P. State Industries Corporation Ltd., and Raigarh Jute & Industries Ltd., part of the renowned Jalan Group of Calcutta, this Rs.9.68 crore project is in an advanced stage of completion. Commercial production is scheduled in July 1985.

The main Plant and Machinery required for the project are an Electric Reduction Furnace, designed, manufactured and supplied by Engineering Projects India Ltd., in collaboration with MANNESMANN DEMAG OF WESTGERMANY, and a Producer Gas fired Lime Kiln based on the design of WARMESTELLE STEIN UND ERDEN GmbH of WEST GERMANY, one of the leading Kiln manufacturers in the world. The Producer Gas Plants is based on the design of KERABADARF KERAMISCHE INDUSTRIE BEDARF GmbH of WEST GERMANY.

Calcium Carbide has an important function in the engineering industry. It is the basic material for the production of Acetylene Gas which is in constant demand for Oxy-acetylene Welding torches etc. It is also a primary agent in the composition of PVC and many industries solvents.

The site enjoys a central position within easy access to fuel and raw materials with the added advantage of being the only plant of its kind in Northern India.

Owing to locational advantage and keen interest expressed by large industrial consumers like BHEL, Indian Oxygen and Dhrangadhra Chemicals, the market for the product is virtually assured.

M.P. Carbide is soon entering the capital market with a public issue of 11,30,000 equity shares of Rs.10 each for cash at par — a formula for profitable returns of your investment.

HIGHLIGHTS

- Promoters with wide and diversified industrial experience
- Finest German technology — Mannesmann Demag, Warmestelle Stein UND Erden, Kerabadarf Keramische Industrie Bedarf
- Premium product — Assured market
- Ideal site — close proximity to major inputs and consumers.
- No gestation period — commercial production July, 1985.
- No power cuts for five years
- Complete sales tax exemption on purchase and sales for 9 years and power subsidy for five years.
- Tax benefits — 80CC, 80HH, 80 I and other benefits.
- Easy-liquidity — Listing on Indore, Calcutta, Bombay, Delhi Stock Exchanges.
- Ambitious future plans for manufacture of import substitute Carbide Desulphurisation Compounds.

GUJARAT PRESS

Working Under Fear

FOR THE *Gujarat Samachar*, the state's largest selling newspaper (Ahmedabad edition circulation: 300,000), it was business as usual last fortnight. The paper's premises were gutted by a police-led mob on April 22 and it was feared that the aggressive 51-year-old newspaper would not be able to come out for several months (INDIA TODAY, May 15). But when it was discovered that two of the paper's four sophisticated Harris N 800 printing machines could be salvaged, the management decided, in the words of the paper's 42-year-old Managing Director Smruti Shah, to "rise from the ashes like a phoenix". Against the earlier 12 pages, the paper that reappeared on May 8 had only eight; compared to the previous print run of 300,000, the two units, patched up with parts cannibalised from the other damaged units, struggled to print three-quarters the amount.

But what had not changed was the paper's tone, which has been sharply critical of the Madhavsinh Solanki Government. In a front-page editorial, Shreyansh Shah, managing editor and publisher, promised that the paper would continue to "walk on the straight road even if it led to bayonets". This facade of bravado, however, hid a mass of private fears. The Shahs, who own the paper, continued to receive phone calls threatening: "Last time we burnt your press; if you don't improve, next time we will kill you." G.H. Master, one of the two photographers who had taken the dramatic pictures of victims of police atrocities which had contributed largely to the police ire against the paper, had gone "underground" and had still not reported for work even though he was at home. "When I ring up his house, his family members tell me he has gone out of station but I know he is arranging pictures for us by calling up other photographers from his house," chuckled a sympathetic Shreyansh Shah. Jhaverilal Mehta, the other photographer, came to work only on May 22, a good 20 days after the attack. Reporter Devender Patel, who had written many of the anti-police reports, had moved his family from his house in the vulnerable Patrakar Colony to a friend's house; the family went home after three weeks. Other employees were similarly fear-stricken: half of the 40-odd employees who were present when the police-led mob burst on the paper were still refusing to do night duty. Smruti Shah voiced their fears when she said: "We don't know what they will do. Even today we feel they might kill us."

The Government, squarely in the dock as far as the Shahs are concerned, was holding out no assurances. Not so long ago the Shahs and Solanki were good friends. Even otherwise, most state governments maintain cordial relations with powerful newspapers. A sympathy call by Solanki on the Shahs would have been in order. But even three weeks after the tragedy, there had been no overtures from him. The bureaucrats had noted the unbending attitude of their master and the paper's reporters found many of them hostile, not because they disliked the paper but because they were worried about how the Government would interpret any courtesy they might extend. Police Commissioner B.K. Jha was still telling all and sundry about the "provocations" his men had been working under but had yet to offer a word of apology to the paper his men burnt down. When the *Gujarat Samachar* sent a representative on April 22 to file a first information report (FIR), he too had been beaten up. The paper wired its FIR the next day and last fortnight policemen came to record statements of eyewitnesses. No arrests had been made but this was hardly surprising. "I have no faith in their inquiry," said Shreyansh Shah, "considering that policemen had led the mob."

For their part, the Shahs were willing to face any inquiry in which the Gujarat Government was not represented into their paper's coverage of the police atrocities in Ahmedabad last month. Said Smruti Shah, who flew to Delhi last month along with her husband Shreyansh: "We told Rajiv Gandhi that we were willing to be hanged from (Delhi's) Vijay Chowk if any independent inquiry could prove anything wrong in our coverage." Even while the paper was reporting the police atrocities, it had printed a challenge to anybody to disprove its reports. Conscious that the paper is accused of exaggerating reporting, and aware that in 1981 the Editors' Guild had passed strictures against its coverage of that year's anti-reservations agitation, Shreyansh Shah says they decided to be doubly careful this time. "Reporters used to hold their stories till they were absolutely sure. The result was we were printing mainly follow-up reports. Even the police atrocities in Gomtipur were first reported in another paper but only the *Gujarat Samachar* is

being blamed."

•The siege mentality of the Shahs is understandable. The April 22 attack could well have taken their lives and those of the employees present who were all trapped on the top floors of the building. Shantibhai Shah, the paper's 66-year-old editor, had to cross over on a makeshift wooden plank and hide with a Parsi family for two hours. Bahubali Shah, Shreyansh's younger brother, jumped out of a window and ran to safety. Smruti Shah and her two sons were choking in the blazing inferno for an hour and had started on the *naukarwali* (counting beads, which the Jains do when they are dying) when they were rescued. Sitting in her office, Smruti Shah draws herself together as she recalls the day's incidents and shudders as she says: "I still tremble when I think of that day. Tell me, can any other chief minister or government be that perverted?"

Patel in the gutted *Western Times* office

Shah's sentiments are clearly not shared by the All-India Newspaper Editors' Conference (AINEC). AINEC was one of the five media bodies which rushed teams to the state to inquire if the Gujarat media, and the *Gujarat Samachar* in particular, had done anything to provoke a violent reprisal. All the reports agree that no provocation, however grave, could justify the attack, but the AINEC report cuts a lone furrow in blaming the press for its coverage of police excesses. There is no denying, it says, that the Gujarat press sees itself as a "propagator of certain vested opposition interests .... In the process the media seems to have followed the dictum of 'publish and be damned' irrespective of its impact on the general public." However, the report of the team of the National Union of Journalists (NUJ) arrives at just the opposite conclusion: "It is not worth having a press if it does not reflect the events as they happen. The press in Gujarat was only fulfilling its professional and social obligations to the people."

Similarly, the AINEC report also accuses the *Gujarat Samachar* of publishing "slanted" reports of police atrocities and substantiating them with photographs said to have been "doctored", a charge which Shreyansh Shah hotly refutes. "The AINEC report is a pack of lies written by paid people of the establishment," charges Smruti Shah. Her reference is to the fact that all three members of the team belong to papers owned by Congress(I) MP's: Vishwabandhu Gupta of the *Tej* group, Tushar Kanti Ghosh of the *Amrita Bazar Patrika* and K.K. Birla of *The Hindustan Times* group.

The NUJ team conducted its own investigations into the reports on police excesses and concluded that none of them had malafide intentions. As their report notes: "If the police had not committed atrocities, the press would not have reported them." The real tragedy was that neither the state Government nor the police showed any finesse in handling the press. Not only did they make themselves virtually incommunicado, not a single specific rebuttal was sent to the press challenging its reports of police atrocities. Further, as the combined team of the Indian and Eastern Newspapers' Society and the Indian Language Newspapers' Association told Solanki, the *Gujarat Samachar* was entitled to its opinion that the Government's reservations policy was wrong and to campaign against it; that if the paper's reporting was not fair and accurate the Government could have gone to the Press Council and that if it felt the paper's coverage was inciting violence it could have filed a criminal suit against it.

Vishwabandhu Gupta: differing note

Yet the Shahs have the consolation that their travails have become a *cause célèbre*. The gutting of the press and offices of the *Western Times*, a much smaller English daily (circulation: 13,000) which was devastated only because it was housed in the premises of the *Gujarat Samachar*, has not been mentioned in passing even in the local media. Its editor-proprietor, Ramu Mamlal Patel, 54, one of the few journalists running his own paper, today sits under a tarpaulin on the pathway separating the machine rooms (which also had 2,000 precious hand types) and his offices (where he had also kept his stock of over 4,000 books). "I am shocked out of my wits," says Patel, "and for the first time in my life do not know what to do." Patel claims that his losses amount to Rs 40 lakh.

What will be just as painful to restore is trust between the Gujarat Government and the state's most powerful paper. A beginning had yet to be made and clearly Solanki was not about to take the initiative. Talking to the NUJ team, he narrated the story of Evelyn Waugh's novel *Scoop* in which mediamen 'create' a war in the Balkan states by collectively concocting reports of one. Solanki's implications do not even need to be spelt out. There were other ominous signals. A senior government officer issued a veiled warning to the *Indian Express* and *Jansatta* which had been spared the *Gujarat Samachar's* fate by the timely arrival of the army.

The state Government seems surprisingly unaware that it is its duty to aid the media in carrying out its legitimate function of communicating and interpreting the day's events to its readers no matter how much that upsets it. Says George Verghese, editor of the *Indian Express* and president of the Editors' Guild (which too sent its team but whose report was awaited): "Pressmen are not busybodies poking their nose into other people's business. The press has a legitimate role in any civilised society and this role needs to be emphasised, not abdicated." Solanki, a former journalist, was yet to show he was sufficiently appreciative of the media's role.

WEST BENGAL

The Koran Controversy

CALCUTTA thrives on political and ideological controversy, but last month religion in the Marxist state had the administration in a panic when the high court admitted a writ petition seeking a 'ban' on the Koran and asking the West Bengal Government to forfeit all copies of the holy scripture in original Arabic or its translation in any other language. As Muslim organisations expressed anguish over the 'admission' of the petition by the high court and a wave of indignation went up nationwide, last week the Centre announced its decision to intervene in the matter and get the petition dismissed.

The controversy followed a 14-page writ petition moved by Chandmal Chopra and Setal Singh on April 14, in the court of Justice Padma Khastagir, under Article 226 of the Constitution, Section 95 of the CRPC, and sections 153(A) and 295(A) of the Indian Penal Code. Justice Khastagir issued a notice to the state Government, in the process stirring a hornet's nest. "Everything seems insane and absurd. No mortal on earth can challenge the holy scripture and no court in the world has any authority over it," said senior advocate Alhaj C.F. Ali. Court sources explained Khastagir's role by holding that she merely 'entertained' the petition, it was not admitted, and issued direction as she felt she should not turn down any petition.

What irked Muslims and non-Muslims alike was the way the petition was worded—it described the Koran as the "so-called religious book of the Muslims" and accused it of being "ex-facie guilty" of "inciting violence, disturbing public tranquillity, promoting, on ground of religion, feelings of enmity, hatred and ill-will between different religious communities". The petition quoted extensively from the text to support its contention. Muslim scholars and intellectuals, however, felt the references were taken out of context and mutilated in order to create confusion.

According to advocate Ali the reaction to the petition was spontaneous and about a hundred lawyers boycotted Khastagir's court. A move by over 70 advocates—both Muslim and non-Muslim—to pass an official resolution at the bar association asking all lawyers to boycott her court on May 6, however, ended in fiasco for want of support.

With tension mounting within the various Muslim organisations in Calcutta, the Jamait-e-Islami, a fundamentalist organisation, stepped in. Under the aegis of the Kerala Muslim Association of Calcutta, it convened a meeting of scholars and intellectuals from various organisations to consider the matter and decided to set up a Koran Defence Committee to spearhead the movement. The committee, however, decided not to become a party in the case. Committee General Secretary and Jamait President Syed Ali said: "We thought the case against the holy Koran being a sensitive subject should not be allowed to be handled by common Muslims. There are pressures to turn it into a public movement but we know how dangerous that could be, so we've tried to control the situation and contain it." Added Kerala Muslim Association chief K.A. Makkar: "Muslims in Calcutta are afraid that if they protest openly they would be harassed. This was why we have kept the movement away from the Muslim masses." While committee members were divided over the question of opposing the case in court, they did decide to counter the petition point-wise and educate the people on the teachings of the Koran to remove misunderstandings.

The state Government, on the other hand, took a clear stand. According to a spokesman of the state Judicial Department, the Government prepared an affidavit opposing the case saying that "the court has no jurisdiction to pronounce a judgement on the Koran, the holy scripture of the Muslims the world over, each and every word of which, according to Islamic belief, is unalterable". While seeking outright dismissal of the petition, the department maintained that there had never been such an application in existence in India and the writ had been filed with malafide motives.

What appeared most curious to Muslim leaders was the fact that when the court listed the petition for consideration on May 2 and called the parties, neither of the two petitioners appeared.

IMROZ AHMED

Syed Ali and the Koran Defence Committee: sensitive subject

Said Syed Ali: "The natural consequences of this should have been that the judge should have dropped the case. Justice Khastagir, however, instead of dropping the case, released it from her list and sent it back to the court of Chief Justice Satish Chandra."

Muslim organisations and a section of the Urdu press in Calcutta see the petition as a part of a wider conspiracy to create turmoil. Pro-Jamait daily *Akhbar-e-Mashrique*, which played up the issue, viewed that for the past some time linguistic and religious minorities were being provoked under an organised conspiracy and "it appears that the Left Front Government is also a party to it". But, according to sources in Calcutta, Prime Minister Rajiv Gandhi has already taken a serious view of it and asked the Law Ministry to intervene immediately. On May 10, following advice from state Advocate-General S.K. Acharyya that the matter be assigned to another bench, Chief Justice Chandra assigned the petition to Justice B.C. Basak who, on May 13, dismissed the petition, thus averting what could have been a serious communal crisis.

or a bank that knows how to treat a customer.

It's not really much of a choice.

You can continue to put up with the delays, the indifference, the crowds and the confusion.

Or you can find a bank that treats you the way a bank should. With a little courtesy. A little attention. And a little enthusiasm.

At HongkongBank you will find all three in plenty. What you won't find is the aloofness that some people seem to read into an international name.

Walk into our nearest branch. Look around and see the difference for yourself.

Is it much of a choice?

Aplab believes that only a diet enriched with R&D can promote technological growth. Every manufacturer needs the in-depth knowledge of the industry's fast-paced technology that only a continuous R&D can provide.

Aplab was, in fact, founded as an R&D establishment and called itself a 'laboratory'. Even today the tradition of painstaking research and imaginative application of scientific knowledge continues. R&D constitutes the strong foundation on which the entire edifice of Aplab is built.

Aplab is the only Indian Company which has provided reverse technology to the West. No other Indian Company today develops and successfully sells its instruments in West Germany and other European countries.

R&D is part of the growth of Aplab. It is a lifestyle to which it is totally committed. It is the only way to acquire technological expertise. And the only way we can give our customers the very best that they deserve.

◆ Juan Peron kicked her out of his bed to make way for the bewitching Evita, but **Alisha Chinai**—who played the upstaged mistress in Alyque Padamsee's rock opera on the Argentinian first lady—has returned to the limelight. The part-time actress, spare-time model has blossomed into a full-time singer. This month her first album *Jadoo* will roll into the market. "This is only the beginning," grinned Alisha, "I would like to make a career as a singing actress." She has already sung for two Hindi films now being made —*Tarzan* and Shyam Benegal's Goan melody *Trikal*. "So what happens now, where am I going to?" sang Peron's little reject. With Jadoo on her side —just about anywhere.

Alisha: magic in the air

◆ At a time when he should be pondering over the problems of trigonometry or out playing kabaddi, 14-year- old **K.P. Sudesh** has one and only one thing on his mind: **Amitabh Bachchan** (groan), what else? But even filmi obsessions can do wonderful things to young minds. Sudesh has been compulsively painting his idol for the last two years. "He thinks Amitabh, he talks Amitabh, he's even started looking like Amitabh," said Sudesh's father indulgently. Sudesh has his own reasons: "I feel Amitabh is part of my family." He will be holding an exhibition in Delhi soon to display over a 100 little masterpieces. And then, Sudesh's most treasured dream may just come true: why, if he asks him very nicely, Amitabh himself may come and inaugurate the show.

PRAMOD PUSHKARNA

Sudesh: idol mind

◆ At the crack of dawn last fortnight, **Raj Narain**, the impish president of the Rashtriya Janata Party left home for a party meet in Meerut. But the same night, when he drove back through the gates of 6, Teen Murti Lane, everything had changed. His precious party papers, battered-down cupboards, a forlorn portrait of himself and an assortment of other skeletons had been thrown into the lawns. Officials of the estate directorate had emptied the house of its last *gao-takiya* on the grounds that he no longer had the right to be there. "I arrived home only to find that Nadir Shah had been here before me," said the evicted netaji, who could have hit the ceiling if there had been a ceiling to hit. "I would have happily vacated if I had been given proper notice and alternative accommodation as a freedom fighter. Now I'll go to court." He has learned to live with power cuts, true, but he obviously still does not know that home is where the *haath* is.

Raj Narain: out in the open

◆ Dressed in a terrycot kurta-pyjama, his face freshly shaved, he looked like any other bridegroom. But that's where the resemblance ended. Last month, when **Malkhan Singh**—the dacoit who once terrorised the entire Chambal region—left Gwalior Central Jail to get married to Nirmala Devi, 25—it was a wedding the likes of which the city had never seen before. The bridegroom arrived accompanied by a 100-strong *baraat* of armed men. Instead of shehnais, gunshots rang out in celebration. And the wedding over, it was b[illegible] behind the iron curtain [illegible] Malkhan. He has left his [illegible] bride a small wedding pre[illegible] though: his seven-year [illegible] son Bahoran who had [illegible] living with his father in [illegible] ever since the dacoit's [illegible] wife died a year ago.

Malkhan Singh: bang-up affair
